Attention: Mr. Harold B. Ray, Senior Vice President, Nuclear

Gentlemen:

This refers to the management meeting held between Southern California Edison Company and Region V management at the Region V office on March 1, 1991. Subjects discussed during the meeting are described in the enclosed Meeting Report. A copy of the meeting agenda is also attached.

The purpose of this meeting was to discuss Unit 1 design basis documents, single failure analysis, and restart issues; on-line maintenance and its implications; mid-loop operations; erosion-corrosion evaluations; and the results of the recent NRC setpoint methodology team inspection.

We are encouraged that you have taken steps to reassess the benefits of specific, routine maintenance tasks, with a slant toward minimizing the amount of time that safety-related equipment is removed from service with the associated unit in operation. We encourage your continued efforts in this area. Likewise, your initiatives to explore uses of Probabilistic Risk Assessment (PRA) information in the operation and maintenance of the site is viewed positively. With regard to your efforts to upgrade your access to design basis information, we desire to continue to follow your efforts and therefore, plan to periodically discuss the issue at future meetings.

In accordance with 10 CFR 2.790(a), a copy of this letter and the enclosed report will be placed in the NRC Public Document Room.

Should you have any questions concerning this report, we will be pleased to discuss them with you.

Sincerely,

R. P. Zimmerman for
R. P. Zimmerman, Director
Division of Reactor Safety
and Projects
