

December 20, 2013

COMPANY: GENERATION MPOWER, LLC.

DESIGN: B&W MPOWER™ SMALL MODULAR REACTOR DESIGN

SUBJECT: SUMMARY OF NOVEMBER 19, 2013 CLOSED MEETING REGARDING
INTEGRAL ISOLATION VALVE (IIV) FOLLOWUP

On November 19, 2013, a closed meeting was held between the U.S. Nuclear Regulatory Commission (NRC) and Generation mPower (GmP) at NRC Headquarters, Two White Flint North, 11545 Rockville Pike, Room T-10A01 Rockville, Maryland. The purpose of this meeting was to discuss the integral isolation valve (IIV) follow up.

The meeting began with an introduction of the IIV Technical Report that Generation mPower submitted to the NRC on November 4, 2013. The contents of the report were discussed with the NRC staff. GmP discussed inservice inspection (ISI) and how they plan to use currently available inspection equipment and techniques. The NRC staff asked questions about leakage detection and radiation protection. They also asked for clarification about some topics they did not find in the IIV Technical Report. While the technical report was informative for the NRC staff, the staff informed GmP that in order to get a formal regulatory position, they should consider submitting a topical report with a clear description for the action requested of the NRC staff.

The meeting agenda and meeting attendees are included in Enclosures 1 and 2. Generation mPower did not present any slides, but the technical report is available through the Agencywide Documents Access and Management System (ADAMS). The ADAMS accession number for the Integral Isolation Valve Technical Report is ML13312A065. ADAMS is the system that provides text and image files of NRC's public documents. Documents are available electronically at the NRC's Electronic Reading Room at <http://www.nrc.gov/reading-rm/adams.html>. If you do not have access to ADAMS or have problems accessing the documents located in ADAMS, contact the NRC Public Document Room (PDR) staff at 1-800-397-4209, 301-415-4737, or pdr@nrc.gov.
