The Nuclear Regulatory Commission would better serve the nuclear power industry by vigorously developing methods of neutralizing radioactive waste, as discussed herein.

Comment added there Nov.21 from Gary Vesperman, also entered at:

<https://secure3.convio.net/river/site/Advocacy?pagename=homepage&cmd=display&page=ActionAlertTakeNPage&id=439>

My list of radioactive waste neutralization methods includes the electrino fusion power reactor, Hawkings' generator of cold electricity, collective ion accelerator, dematerialization using highest powered positive ions ever, photo-deactivation using gamma rays, implosion machine which duplicates ball lightning, Radha Roy's transmutation process, Barker's method, Gillembarado's method, Keller catalytic process, transmutation of low-level nuclear waste into glassy substance with super high voltage, Brown's gas, combining Brown's gas with bucking magnetic fields inside a plasma ball, Bearden's method, Russian process using liquid lead bismuth to trigger transforming in the form of neutrons, accelerator-driven transmutation

of waste, Brown's gas-metal matrix process, photoremediation, ZIPP fusion process, RIPPLE fission process, low-energy nuclear transmutation electrolytic cells, plasma induced/injected transmutation, Kervran reactions, Monti process, higher group symmetry electrodynamics, plasma gasification melting, low-energy nuclear remediation with ultra-low momentum neutron generator, flame-free incineration in a catalyzer, John Hutchison's raygun, and fusion-fission hybrid reactor. More information on many of these methods is available at www.padrak.com/vesperman.

The Department Of Energy refuses to neutralize radioactive waste because of its insane policy of preserving its supply of bomb-grade uranium and plutonium for manufacturing nuclear weapons.

The Nuclear Regulatory Commission would better serve the nuclear power industry by vigorously developing methods of neutralizing radioactive waste.

Free Energy by popular demand helps address Fukushima issues to US Department of Energy with "Three Rhetorical Questions" So Please Like DCW Facebook Comment on Tesla Energy Technologies For Public Meeting 21Nov13 DoE Google Hangout "free energy by popular demand"

Subject: help address Fukushima issues with a quick Facebook comment supporting my DoE Edison-Tesla 21Nov13 Debate "three rhetorical questions"

Importance: High

If you want to do something potentially very important to help address the Fukushima issues and related nuclear industry problems like the current move to expand nuclear power globally, you can go as soon as possible to my US Department of Energy Facebook Page [Comment as copied below](#), to [Please Add Your Comment of Support](#) requesting an official DoE response to the issues raised in the below submission for their Nov.21st 9:30amPST [Google Hangout online meeting*](#) (live video streamed), related to forefront energy technologies and the government obstruction of proven technologies to neutralize radioactive wastes as described below.

Please go to the US DoE Facebook page and add a comment supporting mine here:
<https://www.facebook.com/energygov/posts/10152138151026802>

The more likes and comments added there to support my three rhetorical questions, the more possible to get a formal public response from the Energy Secretary to the various issues raised in them, "free energy by popular demand".

David Crockett Williams

Subject: DoE Edison-Tesla 21Nov13 Debate Questions

<http://energy.gov/articles/edison-vs-tesla-battle-energy-inventors> <--- [details about the *meeting are here]

US Department of Energy's November 21, 2013, Online Edison-Tesla Debate Questions Submission from Santa Barbara California, remembering JFK:

We of the Santa Barbara California Thrive Movement Chapter have three rhetorical questions to pose to the DoE's recognized energy experts for this Google Hangout session:

1) Isn't it true that Nikola Tesla not only invented a way to broadcast/transmit electricity without using wires, but also a way to tap into the Earth's rotation and commensurate rotational magnetic field to generate "free" electricity -- (analogous to a macro-scale Faraday "homopolar generator" as independently rediscovered in 1978 by Sai Baba Devotee Bruce DePalma and proven to have incremental "over-unity efficiency" by him, when his tests were witnessed by DoE representatives in 1979 in Santa Barbara, under sponsorship of the Sunburst Community founded by Paramahansa Yogananda's disciple Norman Paulsen, where DePalma's "n-Machine" was referenced by the US Department of Energy in its 1998 CNES [Comprehensive National Energy Strategy] report to Congress and the President as a device to potentially harness the energy field of space itself that DePalma discovered in his previous experiments showing inertial and gravitational mass variations induced by rotation and precession, and where his "n-Machine" was referenced in that CNES as a potential device to harness the theoretical Zero Point Energy Field of the quantum vacuum flux championed by DoE expert Hal Puthoff whose work as a laser physicist documented Uri Geller's paranormal abilities published in Nature Magazine's October 17, 1974 issue) -- as discussed in depth at recorded conferences, in so many Youtube videos and in books and articles at such websites as: <http://thrivemovement.com>, <http://globalbem.com>, <http://www.integrityresearchinstitute.org/tesla.htm>, <http://depalma.pair.com>, <http://brucedepalma.com>, <http://cheniere.org>, <http://newenergymovement.org>, <http://projectearth.com>; <http://tewari.org>;

2) Isn't it true that hundreds of such "free energy" technology inventions including and since Tesla's have been ordered secret by the US Government under dual-use secrecy restrictions because of military applications of this knowledge for advance electromagnetic weaponry so we cannot have these technologies developed for civilian purposes in the absence of a firmly determined and stable global peace because they are ordered secret and the inventors threatened with jail or worse if they do not keep quiet after filing a patent or submitting their research to DoE for analysis, as per example of the work of David Yurth and others on High Density Charge Clusters for radioactivity remediation systems like we need now for Fukushima cleanup where their results were independently validated by Los Alamos National Labs after submission to DoE and who were then threatened with confiscation and imprisonment under FISA if they continued to develop their technology, because government agencies are exempt from the restrictions that would otherwise protect an inventor's intellectual property, as is discussed about many dozens of such inventors and their inventions including other proven technologies to neutralize radioactive wastes as well as the so-called anti-gravity technologies as discussed in so many videos on Youtube and in articles and links posted at websites like: <http://www.padrak.com/vesperman>

3) If either 1) or 2) above is substantially correct, as many millions of Americans following the internet believe, and you tell us otherwise in this session, why should we believe you?

Many Thanks and Much Love for All, Our Prayers are With You,

David Crockett Williams
