Subject: Environmental Impact Statement Comment (NRC)

I am sure many statements have been submitted concerning the treatment of waste have already been covered. I have no confidence in the guidelines submitted by the NRC in the future of waste disposal. My comment is that Fukushima, Japan be the standard by which we proceed In the future. What better lesson is there that we can learn from? The best solution is stop making nuclear waste and spend this money on alterative safe solutions. This would be the best gift that we can give to our future generation. I am already contemplating leaving my accumulations as a burden for my kids to deal with just as what I dealth with my parents possesions. We can make this easier.

Thank you.
