

May 11, 1988

Docket Nos.: 50-206

LICENSEE: SOUTHERN CALIFORNIA EDISON COMPANY
FACILITY: SAN ONOFRE NUCLEAR GENERATING STATION, UNIT NO. 1
SUBJECT: SUMMARY OF MEETING HELD ON MARCH 23, 1988 REGARDING FIRE PROTECTION TECHNICAL SPECIFICATIONS

On March 23, 1988, the NRC staff met with representatives of Southern California Edison (SCE) to discuss licensee's proposed technical specifications for fire protection. The meeting was held pursuant to notice issued on March 9, 1988. Those attending the meeting are shown in Enclosure 1.

The meeting agenda followed the Franklin Research Center's report of February 9, 1987 (transmitted to SCE on February 13, 1987) which compared each SCE proposal with the standard technical specifications for fire protection. The SCE proposed technical specifications are contained in letters dated June 8, 1984; December 17, 1985; April 1, 1986; and May 19, 1986.

Resolution was reached on most items. The following four issues remain to be settled:

1. Surveillance requirements for supervised and non-supervised circuits for fire detection.
2. Identification of all non-rated fire area boundaries that would be subject to periodic surveillance.
3. The question of plant shutdown following a 60-day period of inoperability of the dedicated shutdown system (DSS).
4. The 92-day surveillance interval for the DSS diesel generator.

SCE plans to submit a consolidated amendment incorporating all prior submittals and the resolutions reached at the meeting. Resolution of the above items remains to be determined. SCE plans to submit the consolidated amendment in about 30 days.
