Waste Confidence Meeting Charlotte 11

I would like to start with a little poem:

It was a dark and stormy night of the nuclear powers  
When the people fought the radiation showers  
And in spite of its friendly atom  
It had made no peace on the planet  
And hardly anyone could muster flower powers.

But then the NRC finally had a great vision  
And gathered their courage for a much greater mission  
They swallowed their pride,  
They took it in great stride  
And declared that NOW is the end of nuclear fission.

I'm here today raising my voice to be heard and to speak against mankind's greatest folly. I'm here AGAIN—showing up like a bad penny, but with all the cents that this little penny can muster.

Making sense of nuclear power is something that I NEVER have been able to do. No matter how I turn it around, I always end up with shaking my head and wondering how we came up with such a pea-brained idea.

We have had 50 years of wasted confidence and it is time for a real solution.

This GEIS is the generic environmentally ignorant sing-song that does indeed require a good spanking and ought to be filed where the sun don't shine and never to be heard of again. We deserve better than this.

This public meeting is supposed to be an important part of the democratic system, where the many voices are to be heard AND more importantly respected.

I promise you, the NRC, that the time has come when you will begin to feel the ire of us who has common sense and who realize how stupid this whole nuclear circus always has been.

I have absolutely NO CONFIDENCE in any solution to dealing with any more nuclear waste than to STOP making the darn stuff. And don't even consider some desperate ideas that the waste can be used as fuel in a new generation reactor. Give me a Break!!!

At this point you still have a small chance to redeem yourselves and MAYBE get a decent review in the future history books. Otherwise I can promise you that the next 6,000 generations will look back at your misguided activities with much disdain, anger and disbelief.

So stop being an embarrassment to the human race and show us the courage that will make us all smile and let out a big sigh of relief. It is time to get out of the diapers and grow into responsible human beings.

Putting a stop to the nuclear power generation will definitely show real leadership and true concern for the quality of life in the generations to come.

Yours adamantly

Ole P. Sorensen, Asheville NC
