To Whom it May Concern,

The only solution to the high-level radioactive waste (HLRW) problem is to not generate irradiated nuclear fuel in the first place. Our society's "preferred alternative" to nuclear power and the forever deadly radioactive waste it inevitably generates is efficiency and renewables, such as wind and solar power. As Dr. Arjun Makhijani, President of the Institute for Energy and Environmental Research, showed in his 2007 book Carbon-Free, Nuclear-Free: A Roadmap to U.S. Energy Policy, both fossil fuels and nuclear power can be completely phased out of the U.S. economy by 2040, and replaced by efficiency and renewables, without any further technological breakthroughs required, and for the same percentage of our Gross Domestic Product (GDP) as we currently spend on dirty, dangerous, and expensive fossil fuels and nuclear power.

Sincerely,

Caryn Graves
Berkeley, CA
