Dear Secretary,

Low probability does not equal NO probability. We need the strongest possible protections from nuclear waste. The world has already seen too many "low probability" nuclear accidents.

Ending radioactive waste generation is the single most important step we can take to minimize the risks surrounding its storage, and the NRC should revise its Waste "Confidence" document to ensure the speediest possible end to that generation. In the interim, NRC must mandate the immediate movement of waste that has been sufficiently cooled out of the pools to dry storage containers, and those should be hardened on-site (HOSS) to improve safety and security.

Alice Stevenson
