December 1, 2013

I and my husband and son support the NRC Spent Fuel Storage Rule. Due to the NRC watching over PG&E, it has a very detailed and successful spent fuel management program and continues to safely store fuel via both its wet and dry cask storage systems. I am confident that layer upon layer of safeguards are in place to effectively manage and monitor the stored spent fuel.

I was on a tour of the Diablo facility and was able to learn and see for myself the safety measures. One way to calm the populace down is to tour the facility. There are so many mistruths flying around.

The Department of Energy has a responsibility to make good on its commitment to receive and safely store the spent fuel for the long term. By doing so, locally stored spent fuel could be safely removed to a single or regional locations controlled by and protected by the federal government. Thank you reading this letter.

Respectfully,

Laura Mordaunt
