

UNITED STATES
NUCLEAR REGULATORY COMMISSION
WASHINGTON, D.C. 20555-0001

December 20, 2013

To Those on the Enclosed List

SUBJECT: REQUEST FOR ADDITIONAL INFORMATION REGARDING RESPONSE TO BULLETIN 2012-01, "DESIGN VULNERABILITY IN ELECTRIC POWER SYSTEM"

On July 27, 2012, the U.S. Nuclear Regulatory Commission (NRC) issued Bulletin 2012-01, "Design Vulnerability in Electric Power System" (Agencywide Documents Access and Management System (ADAMS) Accession No. ML12074A115), to all holders of operating licenses and combined licenses for nuclear power reactors. In addition, Watts Bar Nuclear Plant, Unit 2, is addressing the issues identified in the bulletin as part of the licensing process. Bulletin 2012-01 requested information about each facility's electric power system designs, in light of recent operating experience involving the loss of one of the three phases of the offsite power circuit (single-phase open circuit condition) at Byron Station, Unit 2.

On February 15, 2013, the NRC staff completed the review of licensee responses to the bulletin and issued a summary report (ADAMS Accession No. ML13052A711). Since then, the NRC staff has held several public meetings with the industry to discuss the open phase issue and options for resolving it.

On October 9, 2013, the Nuclear Energy Institute (NEI) submitted an industry initiative document (i.e., Strategy Paper) to support the resolution of the open phase issue described in Bulletin 2012-01 (ADAMS Accession No. ML13333A147). The NEI document also addresses recent operating events involving loss of a single phase of electric power at the Bruce nuclear power plant in Canada and loss of two phases of electric power at the Forsmark, Unit 3, in Sweden. The initiative was approved by the NEI Nuclear Strategic Issues Advisory Committee and addresses all operating plants.

The NRC staff is requesting additional information (enclosed) from licensees to verify that they have completed interim corrective actions and compensatory measures and to determine the status of each licensee's long-term corrective actions. Please provide a written response, signed under oath or affirmation, to the enclosed request for additional information by February 3, 2014.

et al.

REQUEST FOR ADDITIONAL INFORMATION

FOR

BULLETIN 2012-01, "DESIGN VULNERABILITY IN ELECTRIC POWER SYSTEM"

On July 27, 2012, the U.S. Nuclear Regulatory Commission (NRC) issued Bulletin 2012-01, "Design Vulnerability in Electric Power System" (Agencywide Documents Access and Management System Accession No. ML12074A115), to all holders of operating licenses and combined licenses for nuclear power reactors. In addition, Watts Bar Nuclear Plant, Unit 2, is addressing the issues identified in the bulletin as part of the licensing process. Bulletin 2012-01 requested information about each facility's electric power system designs, in light of recent operating experience involving the loss of one of the three phases of the offsite power circuit (single-phase open circuit condition) at Byron Station, Unit 2.

In order for the NRC staff to complete its review of responses to the bulletin, the following additional information is requested:

1. Provide a summary of all interim corrective actions that have been taken since the January 30, 2012, event at Byron Station, Unit 2, to ensure that plant operators can promptly diagnose and respond to open phase conditions on the offsite power circuits for Class-1E vital buses until permanent corrective actions are completed.
2. Provide a status and schedule for completion of plant design changes and modifications to resolve issues with an open phase of electric power.

et al.
