1.2-1

Authorizations for Turkey Point Units 6 & 7

CHAPTER 1 INTRODUCTION

1.1 THE PROPOSED PROJECT

This section introduces the applicant and owner and provides a brief description of the proposed project, including descriptions of the site location, the selected reactor type and other plant design features, pre-application public participation activities, and major project activity dates.

Pursuant to the Atomic Energy Act of 1954, as amended, and Title 10 of the CFR, the NRC is responsible for licensing the construction and operation of domestic nuclear power plants. In accordance with the provisions of 10 CFR Part 52, Subparts B (Standard Design Certifications) and C (Combined Licenses), and supporting guidance, Florida Power & Light Company (FPL) has developed a COL Application for submittal to the NRC for construction and operation of two new nuclear generating units, Units 6 & 7, at the existing Turkey Point plant property in Miami-Dade County, Florida. The COL Application includes an Environmental Report (ER), in accordance with the provisions of 10 CFR Part 51 and the National Environmental Policy Act of 1969 (NEPA), as amended. The ER provides an analysis of the reasonably foreseeable impacts to the environment from site preparation, construction, operation, and decommissioning of Units 6 & 7.

This ER follows the content and organization of the NRC's *Standard Review Plans for Environmental Reviews for Nuclear Power Plants*, also known as NUREG-1555, Revision 0 (October 1999). Available draft revisions to this guidance have been considered, as practicable. Pursuant to 10 CFR Part 51, the NRC is required to perform a review of the environmental impacts of the construction and operation of Units 6 & 7; this ER supports that review. 10 CFR Part 51 requires that environmental impacts from the proposed project be evaluated and described in a concise, clear, and analytical manner. This report describes the project and potential alternatives and the methods and sources used in the environmental impact analysis.

Environmental issues identified in this ER are evaluated using a three-tier standard of significance as defined in 10 CFR Part 51, Subpart A, Appendix B, Table B-1, Footnote 3, as follows:

SMALL — Environmental effects are not detectable or are so minor that they will neither destabilize nor noticeably alter any important attribute of the resource.

MODERATE — Environmental effects are sufficient to alter noticeably, but not to destabilize, important attributes of the resource.

LARGE — Environmental effects are clearly noticeable and are sufficient to destabilize important attributes of the resource.

Turkey Point Units 6 & 7
COL Application
Part 3 — Environmental Report

1.1.1 PURPOSE AND NEED

FPL's purpose is to provide additional baseload generation to maintain system reliability, increase fuel diversity, and allow progress toward meaningful CO₂ emissions reductions. The need for Units 6 & 7 has been determined by the state of Florida as described in Chapter 8. The proposed action is for the NRC to authorize FPL to construct and operate two PWRs at the Turkey Point plant property.

1.1.2 PROJECT DESCRIPTION

This subsection provides a brief summary of project information. Subsequent sections, particularly Chapter 3, give additional details of the proposed project.

1.1.2.1 The Applicant and Owners

FPL is the owner of the Turkey Point plant property and the existing power plants. FPL would own proposed Units 6 & 7. FPL is the operator of the existing power plants and would be the operator of Units 6 & 7. The new units would be operated as baseload plants to supply the needs of the FPL service territory. Additional information about FPL is provided in Part 1 of this COL Application.

1.1.2.2 Site Location

The Turkey Point plant property comprises approximately 9400 acres in unincorporated southeast Miami-Dade County, Florida, east of Florida City and the City of Homestead and bordered by Biscayne Bay to the east. Currently located on the Turkey Point plant property are five FPL power plants: two natural gas/oil steam electric generating units (Units 1 & 2), two pressurized water reactor nuclear units (Units 3 & 4), and one natural gas combined-cycle steam electric generating unit (Unit 5). [Figure 2.1-4](#) shows the location of the Turkey Point plant property and regional features of the area. The new units would be constructed on an approximately 218-acre area (the Units 6 & 7 plant area) south of Units 3 & 4. [Figure 2.1-3](#) shows the location of Units 6 & 7 on the Turkey Point plant property. Additional information regarding the Turkey Point plant property and the Units 6 & 7 plant area is provided in [Section 2.1](#).

1.1.2.3 Reactor Information

FPL proposes to build and operate two AP1000 units, a nuclear plant design certified under 10 CFR 52, Subpart B. The total gross thermal MW output per unit is 3415 MWt with a nominal net electrical output of at least 1000 MWe. Additional details on the AP1000 design are provided in [Section 3.2](#).

Turkey Point Units 6 & 7
COL Application
Part 3 — Environmental Report

1.1.2.4 Cooling System Information

During normal operation of Units 6 & 7, waste heat would be dissipated by mechanical draft cooling towers. Two sources of makeup water are planned to replace cooling tower blowdown for Units 6 & 7. The primary source would be water reclaimed for reuse after processing by the Miami-Dade Water and Sewer Department, conveyed via pipelines to the Turkey Point plant property. An onsite FPL reclaimed water treatment facility would further treat the reclaimed water for use in the cooling system. When reclaimed water cannot supply the quantity and/or quality of water needed for the circulating water system, a second source for makeup water would consist of radial collector wells that would withdraw saltwater from under Biscayne Bay. Each radial collector well would consist of a central reinforced concrete caisson extending below the ground level with laterals projecting horizontally from the caisson. The well caissons would be located on the Turkey Point peninsula, east of the existing units.

Blowdown would control the accumulation of dissolved solids in the cooling system. Blowdown water would be discharged through the use of deep injection wells to the Boulder Zone, a cavernous, high-permeability South Florida geologic horizon located at depths of approximately 2800–3500 feet in the lower Floridan aquifer.

Descriptions of the cooling system, makeup water sources, and the anticipated modes of cooling system operation and discharge are provided in [Sections 3.3](#) and [3.4](#).

1.1.2.5 Transmission System Information

Eight 230 kV transmission lines currently connect the existing Turkey Point units to the transmission system by way of two corridors, one proceeding to the north and one to the west. Two new 500 kV circuits and three new 230 kV circuits would be built to connect Units 6 & 7 to the electric grid. Plans are for the new transmission lines to proceed from the a new onsite substation (Clear Sky), with the 500 kV circuits connecting to the existing Levee substation and the 230 kV circuits connecting to the existing Turkey Point, Davis, Miami, and Pennsuco substations. Final transmission routes are selected through the state of Florida's Power Plant Siting Act (PPSA) process. To the extent practicable, new transmission lines would be routed in existing rights-of-way owned by FPL, in many places adjacent to existing transmission lines. Additional information on proposed transmission corridors serving Units 6 & 7 is provided in [Sections 2.2](#) and [3.7](#). The proposed configuration of the transmission system for Units 6 & 7 is shown in [Figure 2.2-5](#).

1.1.2.6 Public Involvement

FPL has an active community and public outreach program. The outreach principles include:

Turkey Point Units 6 & 7
COL Application
Part 3 — Environmental Report

- Open, honest, and accessible communication with the general public and all key stakeholders
- Keeping state and local agencies and business organizations informed regarding the progression of the proposed project by meeting and briefing public officials from the affected area
- Using media opportunities to explain the project planning and licensing processes
- Actively soliciting input on proposed plans for the project, including any offsite facility and transmission and pipeline corridor location selection, and answering questions and inquiries that come to FPL. Special efforts are made in the ER preparation process to solicit and incorporate inputs on matters of environmental justice

These activities would continue as the regulatory review processes progress at the local, regional, state, and federal levels.

1.1.2.7 Schedule for Major Activities

No site preparation activities would occur until the site is certified under the PPSA and the required U.S. Army Corps of Engineers permits are obtained. The project schedule assumes a 69-month duration for preconstruction activities. Unit 6 construction would have an approximate 66-month duration for construction activities (48-month standard plant construction plus activities under NRC authority [e.g. slurry wall]) and an approximate 6-month duration for fuel load and startup. Unit 7 construction is planned to begin approximately 12 months after Unit 6 construction initiation and would follow an identical construction and fuel load/startup duration. Units 6 & 7 would initiate electric generation output in or about 2022 and 2023, respectively. A description of the construction schedule and milestone activities is included in [Section 3.9](#).

Turkey Point Units 6 & 7
COL Application
Part 3 — Environmental Report

1.2 STATUS OF REVIEWS, APPROVALS, AND CONSULTATIONS

In this section, the federal, state, regional, and local environmental protection licenses, permits, reviews, approvals, and consultations, collectively called authorizations, that are applicable to the proposed action to construct and operate Units 6 & 7 are identified. The information listed below is included in [Table 1.2-1](#) for each authorization:

- Jurisdictional agency
- Authority, law, or regulation that dictates the requirement
- Description of the requirement
- License or permit number as applicable
- Date of application or date issued
- Description of the activities covered

FPL is in the process of initiating actions to obtain the necessary authorizations. Appendix A contains copies of consultation letters and responses received to date. The bulleted items below describe some of the principal required authorizations.

- *Endangered Species Act of 1973* (16 U.S.C. 1531-1544, as amended) — The *Endangered Species Act of 1973* requires federal agencies to ensure that agency action is not likely to jeopardize any species that is listed or proposed for listing as endangered or threatened. Depending on the action involved, the Act requires consultation with the U.S. Fish and Wildlife Service (USFWS) about effects on non-marine species, the National Marine Fisheries Service (NMFS) for marine species, or both. Because of the proximity of the Turkey Point site to the Atlantic Ocean, consultation with the USFWS and the NMFS is required.
- *National Historic Preservation Act of 1966* (16 U.S.C. 470) — The *National Historic Preservation Act of 1966* requires that federal agencies that have the authority to license an initiative consider (before the license is issued) the effects of the initiative on historic properties or properties eligible for protection under the National Historic Preservation Act.
- *Federal Coastal Zone Management Act of 1972* (16 U.S.C. 1451-1456) — The *Federal Coastal Zone Management Act* imposes requirements on applicants for a federal license to conduct an activity that could affect a coastal zone. The Act requires the applicant to certify to the licensing agency that the proposed activity would be consistent with the state's federally approved coastal zone management program. FPL would certify to the NRC that the

Turkey Point Units 6 & 7
COL Application
Part 3 — Environmental Report

proposed project is consistent with the federally approved state of Florida Coastal Zone Management Plan.

- *Federal Water Pollution Control Act of 1972, as amended by the Clean Water Act of 1976* (33 U.S.C. 1251, et seq.), also known as the “Clean Water Act” —The *Clean Water Act, Section 401*, requires any federal license applicant, who plans to conduct activities that might result in a discharge into navigable waters, to provide the licensing agency a certification from the state that the discharge would comply with applicable Clean Water Act requirements; the *Clean Water Act, Section 404*, requires applicants proposing the discharge of dredge or fill materials into “waters of the United States” to obtain a permit for this activity from the U.S. Army Corps of Engineers.
- *Rivers and Harbors Act of 1899* (33 U.S.C.401 et. seq.) The *Rivers and Harbors Act, Section 10*, prohibits the creation of any obstruction, and prohibits the excavation or filling, within navigable waters of the United States without prior authorization from the U.S. Army Corps of Engineers.
- The Florida Power Plant Siting Act, Sections 403.501-403.518, Florida Statutes, mandates a site certification process for obtaining a single site-related license that will include state, regional, and local requirements for construction and operation of a power plant and associated facilities of the type and magnitude being proposed by FPL.

Preconstruction activities, according to NRC requirements, are those that may be initiated before a COL or LWA is issued. Pursuant to 10 CFR 50.10(c), “No person may begin the construction of a production or utilization facility on a site on which the facility is to be operated until that person has been issued either a construction permit under this part, a combined license under part 52 of this chapter, an Early Site Permit authorizing the activities under paragraph (d) of this section, or a LWA under paragraph (d) of this section.” NRC regulations at 10 CFR 50.10(a) define activities which are (and are not) considered to be construction. Activities not defined as construction may be initiated without prior NRC authorization. However, according to Florida PPSA requirements, no preconstruction or construction activity may occur before site certification is issued.

A COL applicant may begin certain preconstruction activities without prior NRC authorization before receipt of a COL or LWA, such as:

- Preconstruction plans and exploration activities such as soil boring/sampling, installation of monitoring wells, or installation of additional geophysical borings as defined in 10 CFR 50.10(a)(2) and the removal and/or relocation of existing facilities in the new plant footprint
- Site preparation activities such as installation of temporary facilities, construction support facilities, service facilities, utilities, docking and unloading facilities, excavations for facility

Turkey Point Units 6 & 7
COL Application
Part 3 — Environmental Report

structures and foundations, and construction of structures, systems, or components (SSCs) that do not constitute construction as defined by 10 CFR 50.10(a)(1).

On December 24, 2007, the Miami-Dade County, Florida, Board of County Commissioners approved Resolution Z-56-07 (Miami 2007), approving, with conditions, FPL's request for unusual use of the proposed plant site to allow construction and operation of Units 6 & 7 and ancillary structures and equipment.
