**DOCKETED BY USNRC—OFFICE OF THE SECRETARY
SECY-067**

PR#: PR-51

FRN#: 78FR56775

NRC DOCKET#: NRC-2012-0246

SECY DOCKET DATE: 12/20/13

TITLE: Waste Confidence—Continued Storage of Spent Nuclear Fuel

COMMENT#: 00600

From: lisa zure [mailto:creativesuccess_com@yahoo.com]

Subject: Docket ID No. NRC-2012-0246

I absolutely reject NRC's waste confidence Draft Generic Environmental Impact Statement (DGEIS) and demand that you withdraw it for thorough revision. Based on the horrifying reality of nuclear waste and its toxic potential for thousands of years, I have NO confidence in NRC's waste confidence. The reality is, there is no reason on earth to continue with a "technology" that threatens life itself; the definition of "technology" should be "tools, created by humans to make their lives more livable." In reality, the nuclear "industry" and nuclear "technology" is destroying life. This is not a helpful industry, this is destructive industry based on false science.

I firmly believe that no industry should be allowed to continue creating wastes it has no ability to dispose of. In fact, I do not believe in any industry that creates more toxic waste. As stated before, this is destructive industry based on false (or incomplete) science. The truth is, neither the nuclear industry nor the Federal Government has an operating spent-fuel/high-level radioactive waste disposal facility in operation. Further, there is no "safe" method for disposing of nuclear waste. Therefore, it should not be allowed to manufacture any more of these wastes.

NRC should not be allowed to issue new reactor licenses, nor grant license extensions to old operating reactors ever. No state is a waste dump! We don't want any more high-level radioactive wastes coming "to or through" our state. The entire approach to nuclear waste endangers public and environmental health; the idea of transporting high-level, long-lived radioactive waste coming to proposed so-called "centralize interim storage" waste facilities ("parking lot dumps") is unsound. Some have suggested that a permanent, deep-geological high-level radioactive waste disposal facility be built and fully operational to deal with existing waste. But in any case, there is no justification to continue to create more nuclear waste. Ever.

In light of the ongoing and uncontrolled horrors of the Fukushima Nuclear Crisis, which continues to spew hundreds of thousands of tons of highly radioactive water into the Pacific Ocean for nearly three

years, with "sanctioned" plans to dump ALL the water into the Pacific, and continuing to burn unfiltered radioactive waste into the air, and the US-influenced IAEA and former NRC advisers to Japan recommending we "dump it all" into the ocean or store it in the deep sea; and no acceptable means of containment in sight, I cannot logically find any reason to continue to produce more nuclear waste. The nuclear "industry" and US government and other governments clearly do not know how to deal with the fallout of disasters, much less the ongoing waste product of an overpriced and inefficient energy industry that has proven itself, time and time again, to be ill-conceived.

Cancer is now the number one killer of children in the US, and the National Cancer Institute of Japan has sent brochures to all the children in elementary school telling them they should not fear cancer as almost everyone will die of cancer one day. How is nuclear a "safe" technology? In what world?

As a U.S. citizen, mother and professional, I am appalled that my government is involved in such a dangerous, unmanageable and out-of-control industry. Nuclear was a bad idea from the start, and now the waste problem will haunt us for generations. We can do better.

Respectfully,

Lisa Zure
