## General Comment

Nuclear fuel, spent and otherwise is antithetical to life. The human race and the companies responsible must stop producing this toxic poison. There is no way to store it safely, though all in our power must be done to do so, while we research ways to "deactivate" it. Stop all production NOW this is the only sane and reasonable answer for the future. In the meantime, know that geologic, atmospheric and many geopolitical conditions are changing rapidly and there is no way to responsibly think that projections based on past relatively stable conditions can apply to the future... just notice big earth quakes, intensifying storms, geopolitical unrest, economic collapses, all around the world. The time is now or never. STOP NUCLEAR. It is not the answer, it is the lid on the coffin.
