General Comment

It is extremely unsafe to continue to store the Spent Nuclear Fuel at the San Onofre site because of the vulnerability of the site location at the ocean's edge and the lack of adequate storage at the site. What could possibly happen would affect approximately 7.5 million residents and Southern California's major cities and render uninhabitable vast lands of the area and all of the wildlife. I strongly support finding a safe and permanent storage elsewhere.

Thank you for your immediate consideration,
