Docket: NRC-2012-0246

Consideration of Environmental Impacts on Temporary Storage of Spent Fuel After Cessation of Reactor Operation

Comment On: NRC-2012-0246-0456

Waste Confidence - Continued Storage of Spent Nuclear Fuel; Extension of Comment Period

Document: NRC-2012-0246-DRAFT-1288

Comment on FR Doc # 2013-26726

Submitter Information

Name: Warren StormThunder

General Comment

It's quite simple, really. As you have been warned by many government & scientific agencies, the grid is vulnerable to outages from three possible threats; a solar event, an electromagnetic pulse from a nuke exploding at altitude or a cascading power outage. Any of these would be very, very bad. Look at Fukushima (wear shades).

Risk "managers" always plan for the disaster, "lessons learned" and all that nonsense. Would you recognize a Black Swan if it flew into your face?

HARDEN THE GRID! SHUT DOWN THE GLOW TOMBS!
