

Byron Environmental Audit – Request for Additional Information Response

Question #: HCR-1 **Category:** Historical and Cultural Resources

Statement of Question:

Provide a series of aerial photographs of the entire plant site and associated transmission line(s) (during pre-construction, construction, and post-construction periods) looking at levels of disturbance that occurred during construction or since operation, whether any historic structures or possible sites are present on the property, and identifying any recent projects that will require a review of additional documentation.

Response:

Aerial photographs of the plant site during the pre-construction and construction time frames are attached to this response. Also, in a letter dated February 1974, the Illinois SHPO stated that no cultural or historical sites of significance were located within the Byron project boundaries. A copy of the 1974 letter from the Illinois SHPO to the U.S. Atomic Energy Commission is attached to this response.

There are no ongoing or anticipated construction projects at Byron that would require review of additional documentation.

List Attachments Provided:

1. Aerial photographs
2. Letter from Illinois State Historic Preservation Officer (A. Dean) to U.S. Atomic Energy Commission (D. Muller) regarding review of environmental reports for Braidwood, Byron, and Clinton Stations, February 1974.

Docket Nos.: STN 50-454, STN 50-455
STN 50-456, STN 50-457
STN 50-461, STN 50-462

Mr. Daniel R. Muller
Assistant Director for Environmental Projects
Directorate of Licensing
U. S. Atomic Energy Commission
Washington, D. C. 20545

Dear Mr. Muller:

The environmental reports prepared by Commonwealth Edison on Braidwood Station (Units 1 and 2, Will County) and Byron Station (Units 1 and 2, Ogle County) and Illinois Power Company's environmental report on the Clinton Power Station (Units 1 and 2, De Witt County) have been reviewed. This review was made to determine what effect, if any, undertaking the Byron, Braidwood, or Clinton projects would have on cultural and historical sites of significance within or adjacent to project work boundaries.

Archaeological studies conducted on the project sites by members of the Illinois Archeological Survey for Illinois Power and Commonwealth Edison indicate the existence of archaeological sites within the boundaries of each of the three projects. Results of the archaeological surveys for each site should be included in the final environmental statements. The final statements should also indicate Commonwealth Edison's and Illinois Power's plans for archaeological salvage of the located sites and their plans for recording and salvage of archaeological sites which may be discovered during project construction.

It has been determined that, with the exception of the aforementioned archaeological sites, no cultural or historical sites of significance are located within the projects' boundaries. No National Register of

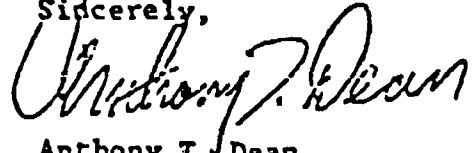

Mr. Daniel R. Muller

-2-

February

Historic Places sites are found within the project boundaries of the Braidwood, Byron, or Clinton Power Stations.

Sincerely,

Anthony T. Dean

Director

State Historic Preservation
Officer

Byron Environmental Audit – Request for Additional Information Response

Question #: HCR-2 **Category:** Historical and Cultural Resources

Statement of Question:

Provide a copy of the avoidance measures recommended by the Illinois State Historic Preservation Office (IL SHPO) for construction of Byron as referenced in Section 2.11.2 of the ER.

Response:

Attached is Section 2.6.1 from the Byron Station ER-OL, as amended January 1983 (ComEd 1981a, p. 2.6-1). This section states (1) that “[i]t was recommended [in the 1974 Phase II Archaeological Report] that the sites along the Rock River in the river screenhouse area be fenced and construction crews be instructed to remain 50 feet from the fence in order to avoid impact during construction activities,” and (2) that “[a]rchaeological site Oq-153 [sic], the only site near any construction activity, was fenced in the fall of 1976.” [Note: While the ER-OL refers to archaeological site Oq-153, current SHPO records refer to the same site as 11OG153.]

Also attached is a letter dated September 18, 1974, in which the Illinois SHPO acknowledged receipt and review of the Phase II Archaeological Report for the Byron Station site. The letter notes that “safeguards are being taken to protect the known archaeological sites and that construction crews will be instructed to remain a minimum of 50 feet from them.”

A copy of the Phase II Archaeological Report is attached to the response to Audit Needs Question HCR-12.

List Attachments Provided:

1. Section 2.6.1 from the Byron Station ER-OL, as amended January 1983 (ComEd 1981a, p. 2.6-1).
2. Letter from Illinois SHPO (A. Dean) to Commonwealth Edison (J.McCluskey), September 18, 1974.

2.6 REGIONAL HISTORIC, ARCHAEOLOGICAL, ARCHITECTURAL, SCENIC, CUTURAL, AND NATURAL FEATURES

This section reviews the findings of the historical study and the archaeological surveys of both the Byron Nuclear Generating Station - Units 1 & 2 (Byron Station) site and the transmission line rights-of-way.

2.6.1 Plant Site

There are no sites on the station property that are included or are eligible for inclusion in the "National Register of Historic Places" (Federal Register 1977a, 1977b), the "National Registry of Natural Landmarks" (Federal Register 1975; Resseguie 1977), or the other listings of locally significant sites.

Although six historic sites were listed for Ogle County in the "National Register of Historic Places" (see Table 2.6-1), none of these will be affected by the Byron Station. The "Historic American Buildings Survey" (Ison 1977) lists three structures in Ogle County (see Table 2.6-1), and again none of these will be affected by the Byron Station. The "Pictorial Archives of Early American Architecture" (Ison 1977) lists four buildings in Ogle County, none of which will be affected by Byron Station (see Table 2.6-1). |4

Many areas of local historical interest, however, do exist in the area. Table 2.6-2 lists and briefly describes these historic sites and markers located within 10 miles of the site as supplied by information from various local sources (see references).

In February 1974, Anthony T. Dean, State Historic Preservation Officer for Illinois, stated that no cultural or historical sites in the area would be affected by Byron Station. A copy of his comments is included in Appendix 2.6A.

An archaeological survey of Byron Station was conducted in June 1973 by the University of Wisconsin - Milwaukee, a member institution of the Illinois Archaeological Survey. Seven previously unrecorded archaeological sites and one previously recorded site were encountered. In 1974 test excavations were performed to further evaluate the sites so that procedures could be developed that would preclude any potentially harmful effects. It was recommended that the sites along the Rock River in the river greenhouse area be fenced and construction crews be instructed to remain 50 feet from the fence in order to avoid impact during construction activities. Archaeological site Oq-153, the only site near any construction activity, was fenced in the fall of 1976. In September 1974, the State Historic Preservation Officer of Illinois stated that no archaeological sites would be disturbed by the construction of the Byron Station. A copy of his comments is included in Appendix 2.6A.

2.6.2 Transmission Line Rights-of-Way

The historical sites of interest for the Byron East to Cherry Valley-Nelson transmission line right-of-way and the Byron South to Cherry Valley-Nelson transmission line right-of-way are the same as those listed in Subsection 2.6.1. The "Camling-Cline Mound Group," an archaeological site located in Section 10 of Rockvale Township in Ogle County, is being considered for nomination to the "National Register of Historic Places." The Byron North to Wempletown right-of-way is adjacent to the site but does not impact on it. This right-of-way also crosses into Winnebago County where the "National Register of Historic Places" lists 13 sites (see Table 2.6-3). These sites will not be affected by the Byron North to Wempletown right-of-way. There are no sites listed on the "National Registry of Natural Landmarks" for Winnebago County.

Archaeological surveys were conducted on these transmission line rights-of-way out of Byron Station. The results of the surveys were submitted to the Illinois State Historic Preservation Officer, and his assessment of transmission line impacts on historic and cultural resources is contained in letters dated May 12 and July 16, 1981. Copies of these letters were submitted in response to NRC Question 310.4, which is part of Amendment No. 1 to this ER-OLS.

The Byron North to Wempletown transmission line will be visible at the Rock River crossing.

Mr. J. P. McCluskey
Director of Environmental Affairs
Commonwealth Edison
Post Office Box 767
Chicago, Illinois 60690

Dear Mr. McCluskey:

On August 22, this office received the Phase II Archaeological Report for the Byron Station site. The Report has been reviewed and the Department is satisfied that no archaeological sites will be disturbed by construction activities detailed in your transmittal letter and surveyor's map. It is noted that safeguards are being taken to protect the known archaeological sites and that construction crews will be instructed to remain a minimum of 50 feet from them. Thank you for this opportunity of review and comment.

Sincerely,

A handwritten signature in cursive script, appearing to read "Anthony T. Dean".

Byron Environmental Audit – Request for Additional Information Response

Question #: HCR-3 **Category:** Historical and Cultural Resources

Statement of Question:

Provide any maintenance or avoidance measures currently in place for site 11OG153, or any other site within Byron site boundaries.

Response:

Specific avoidance measures have not been implemented for site 11OG153 or other archaeological sites within the Byron owner-controlled area because the Final Environmental Statement related to operation of Byron specifies no mitigation requirements for historic and archaeological sites on the Byron plant site (NRC 1982, p. 9-5) and states that “[o]peration of the plant will not result in any significant impact on historic and archeological sites in the area” (NRC 1982, pp. iv and 5-17).

Copies of the pertinent pages from NRC 1982 are attached.

List Attachments Provided:

1. Page iv from NRC 1982
2. Page 5-17 from NRC 1982
3. Page 9-5 from NRC 1982

- a. The additional generating capacity provided by operation of Units 1 and 2 of the Byron station will result in a significant savings in system production costs and will assist CECO in maintaining a diverse mix of generating resources (Sec. 2).
- b. The land use impacts will be small (Sec. 5.2).
- c. The Byron station will draw most of the water it consumes in operation from the Rock River; a small portion for the makeup water system will be pumped from wells. The average net use will be about 1.3 m³/sec (47 cfs), which is about 1% of the average annual flow; therefore, no water-use impacts are expected (Sec. 5.3.1).
- d. The chemical, thermal, and other waste discharges into the Rock River will be rapidly assimilated; hence, no adverse impacts on downstream water users or aquatic biota are expected (Secs. 5.3.2 and 5.5.2). The staff expects that applicable standards will be met.
- e. The plant area does not alter the flood plain of the Rock River or its tributaries in the vicinity to affect their flood-prone areas (Sec. 5.3.3)
- f. There will be a visible plume extending from the cooling tower most of the time; however, the ground-level fogging and icing caused by this plume will be negligible (Sec. 5.4.1).
- g. The potential for impacts on the terrestrial ecosystem, which could be caused by operation of the cooling-tower emissions, bird impaction, noise, or transmission-line effects, has been examined and no additional impacts are expected (Sec. 5.5.1).
- h. The potential for impacts on the aquatic ecosystem, which could be caused by impingement or entrainment, thermal discharges, or discharges of chemical and sanitary wastes, has been examined and are expected to be small (Sec. 5.5.2).
- i. Operation of the plant will not have an adverse effect on any rare, endangered, or threatened species (Sec. 5.6).
- j. Operation of the plant will not result in any significant impact on historic and archeological sites in the area nor along the transmission corridors (Sec. 5.7).
- k. The staff concludes that the primary socioeconomic impacts of plant operations are tax benefits and employment. Other socioeconomic impacts of operation are expected to be small (Sec. 5.8).
- l. No significant environmental impacts are anticipated from normal operational releases of radioactive materials. The estimated maximum individual dose for a member of the public subject to the maximum exposure will be very small compared to natural-background doses. As a result, the staff concludes that there should be no measurable radiological impact on members of the public from routine operation of the plant (Sec. 5.9.3).

5.7 Historic and Archeological Sites

Operation of the station will not result in any significant impact on historic and archeological sites in the area (FES-CP Section 5.1) nor along the transmission corridors (ER-OL, RQ 310.4). However, as directed in a letter from the State Historic Preservation Officer to the applicant (See Appendix H), care must be taken to avoid the known archeological sites in the transmission corridors during maintenance activities, and in the event that a future major ground disturbance related to the operation and maintenance of the transmission lines is anticipated at the sites, the applicant is required to consult the SHPO before taking action. The applicant shall provide copies of this correspondence to NRC.

5.8 Socioeconomics

The socioeconomic impacts of station operation are analyzed in Section 5.5 of the FES-CP with visual impacts covered in Section 5.1.2. The primary impacts of plant operation are tax benefits and employment. The tax benefits are estimated to be approximately \$11 million (1981 dollars) in 1985 when the station is scheduled to be completed. These annual revenues will be paid to nine local jurisdictions ranging in amount from \$4.9 million to \$10,900 (1981 dollars) as shown in Table 5.5. The plant will employ about 400 personnel when operating, with an annual payroll of \$10.9 million (1981 dollars). Approximately 25% of these will be local hires. There will also be 100 security force employees with an annual payroll of \$1,450,000 (1981 dollars). It is estimated that all of the security staff will be hired locally. (ER-OL, RQ 310.7.) The inflow of operating personnel will not significantly affect local services especially when compared to the number of workers required for the construction phase of the station.

Table 5.5 Byron station property taxes

Taxing Jurisdiction	1985 Estimated*
Ogle County	\$ 2,022,800
Rockvale Township	1,322,600
School District U-226	4,944,300
Byron Fire District	1,516,000
Junior College District 511	629,200
Oregon Park District	313,300
Byron Library District	45,900
School District U-220	199,200
Junior College District 52?	10,900
	<u>\$11,004,200</u>

*1981 dollars.

Source: ER-OL, Amendment No. 1, Table 8.2-1.

on the Byron station property had been buried by others prior to the acquisition of the property by Commonwealth Edison and has been reported to be cleaned up in a satisfactory manner by the Illinois EPA. Additional monitoring of ground-water wells will be conducted by the Illinois EPA to monitor the effects of dumping on adjacent property.

9.5.3.1 Aquatic (DI-2, CEC0-29, CEC0-32)

DI commented on Section 5.5.2.1. This section has been revised based on comments received from the applicant (see Appendix A). The applicant points out that neither the operational Section 316(b) demonstration study nor the concerns of the IDOC to be studied include entrainment. The applicant has committed to keep the Rock Island Field Office of the Fish and Wildlife Service informed of the findings from both the NPDES monitoring program and the special study addressing the IDOC concerns (according to a letter from C. L. McDonough, Commonwealth Edison Director of Environmental Assessment, to S. Chesnut, NRC Licensing Project Manager, March 9, 1982).

In response to the applicant's comments, the first sentence on page 5-16 has been deleted. Corrected information is in Section 5.5.2.2.

Section 5.5.2.2 has been revised to reflect the monitoring requirements specified by the NPDES permit and the applicant's agreement with the IDOC.

However, while Section 5.5.2.2 has been revised, the title has not been altered as suggested because the applicability of the information is stated in the first sentence of the revised text.

A new Section 5.5.2.3 has been added to clarify the separate monitoring program being conducted under the agreement between the applicant and the IDOC.

9.5.4 Historic and Archeological Sites (CEC0-33)

It was not the staff's intent to eliminate CEC0's communication with the SHPO but that SHPO and NRC be informed if archeological sites in the transmission corridors are to be affected by future activities. See revised Section 5.7.

9.5.5 Radiological (CEC0-35; HHS-1, -2; EPA-1, -2, -5; IDNS-3, -4, -5)

In response to CEC0 and IDNS, the staff's judgment that the calculated results of the consequences are more likely overestimates is based upon the following:

- (1) The release fractions of fission products, shown in Table 5.11, are believed to be conservatively high for those radionuclides that are dominant risk contributors. This is due to the complexities of modelling more accurately natural plate-out and aerosol agglomeration and settling tendencies within containment.
- (2) The meteorological dispersion model employed is believed to be conservative.
- (3) The staff's estimates of the effectiveness of protective actions, particularly evacuation times, are believed to be conservative.

Byron Environmental Audit – Request for Additional Information Response

Question #: HCR-4 **Category:** Historical and Cultural Resources

Statement of Question:

Provide a description of how historic and cultural resources are considered in land disturbing activities.

Response:

Exelon Generation has adopted a procedure applicable to nuclear power plants that provides a process for screening of proposed activities by responsible individuals to determine whether further evaluations for environmental impacts are warranted. [EN-AA-103] Examples of activities that would qualify for further evaluation and that could involve land disturbance include [EN-AA-103-F-02]:

- Changes to or installation of storm drains, ditches or swales (e.g., changes to culverts, removal/addition of vegetative cover, changes to grade, blocking stormwater pathways)
- Changes to or installation of dikes, dams or appurtenances
- Construction, demolition or abandonment in place of any site or non-generating facility buildings or structures
- Dredging or silt removal from intake structures or other structures
- Land disturbance of >1 acre for any one activity, well drilling, soil boring, or changes that would alter storm water runoff
- Paving of previously unpaved areas

Activities determined to warrant further evaluation are reviewed by Environmental personnel to determine whether the actual or potential environmental impacts of the activity are bounded by the environmental basis for the nuclear power plant. [EN-AA-103-F-02] In the case of a land disturbing activity, the cultural, historical and paleontological resources environmental basis for Byron Station has been summarized in a Cultural Resources Management Plan (CRMP), which identifies previously disturbed areas and the locations of known archaeological sites within the Station's boundaries. If the actual or potential impacts of excavation associated with the activity are not bounded by the environmental basis, then a supplemental cultural resources survey may be performed based on consultation with the State Historic Preservation Officer. [EN-AA-103-0001]

List Attachments Provided:

None

Byron Environmental Audit – Request for Additional Information Response

Question #: HCR-5 **Category:** Historical and Cultural Resources

Statement of Question:

Provide a description of the process for inadvertent discovery of historic and cultural resources.

Response:

If cultural, historic or paleontological resources are uncovered during an ongoing excavation at the Byron Station, the work would be stopped, appropriate notifications would be made, a cover would be positioned to protect the exposed resources from the elements, access to the area would be controlled with barriers and/or signs, and work would not resume until authorized by Environmental personnel. Also, Environmental personnel would coordinate the salvage or disposition of any recovered resources. [SA-AA-117]

List Attachments Provided:

None

Byron Environmental Audit – Request for Additional Information Response

Question #: HCR-6 **Category:** Historical and Cultural Resources

Statement of Question:

Provide a description of ComEd's transmission line management plan, including: timing of activities, danger tree removal and other clearing, inspections and repair activities conducted by ground vehicles, standard operating procedures or guidelines for the applicant and any contractors; erosion control procedures, technician training programs, and any regulations that restrict maintenance activities (e.g., looking for activities that could affect depth of disturbance, if any disturbance is necessary along the corridor).

Response:

In the Byron Station License Renewal ER, Exelon Generation applied the NRC regulations and guidance that were in effect at the time the Byron and Braidwood License Renewal Application (LRA) was submitted (May 2013) to define for which transmission lines environmental impacts should be analyzed. Under the previous regulations and guidance, the in-scope transmission lines for Byron license renewal included the transmission lines that were constructed with the station to connect it to the regional electricity grid. Such lines, which are all owned and operated by ComEd, are identified in the Byron License Renewal ER as follows:

- Byron to Wempleton (345-kV line extending north from the Byron switchyard)
- Byron to Cherry Valley (double circuit 345-kV lines extending east from Byron switchyard)
- Byron South (345-kv line extending south from Byron switchyard)

In June 2013, after the Byron and Braidwood LRA was submitted, the NRC finalized regulations that changed the requirements and guidance defining which transmission lines would be within the scope of license renewal environmental review. Under the new regulations, in-scope transmission lines are defined as transmission lines that connect the nuclear power plant to the substation where electricity is fed into the regional power distribution system and transmission lines that supply power to the nuclear plant from the grid [10 CFR 51, Appendix B to Subpart A, Table B-1, Footnote 4]. This definition is further explained in the Statement of Considerations for the final rule, which states that “those transmission lines that would not be impacted by a license renewal decision (i.e., those lines that would not be dismantled or otherwise decommissioned as a result of a plant terminating operations because its operating license had not been renewed) are considered beyond the scope” for the license renewal environmental review. [78 *Federal Register* 37296 – 37297; June 20, 2013]

Because the NRC will now apply the new regulations to define the scope of transmission lines for which environmental impacts are analyzed in the License Renewal Supplemental Environmental Impact Statement for Byron Station, Exelon Generation has revisited its original evaluation of the in-scope lines. Electricity generated at Byron Station is transformed from generator voltage to a nominal 345-kV transmission system voltage by the main power transformers. The main power transformers are connected via intermediate, on-site transmission lines to the on-site 345-kV Byron Station

switchyard. The location of the intermediate transmission towers on the site property is shown in Byron UFSAR (Exelon Nuclear 2010a), Figure 8.2-3. For ease of reference, a copy of the figure is attached to this response. Based on this information and that there are no other transmission lines that would be dismantled or otherwise decommissioned as a result of terminating operations at Byron, Exelon concludes that, under the new regulations, the intermediate, on-site transmission lines are the only in-scope transmission lines for the Byron license renewal environmental review. These transmission lines are located entirely within the station's protected area. Grounds management practices for that area are described in the Request for Additional Information Response HCR-7.

REVISION 9
DECEMBER 2002

BYRON STATION
UPDATED FINAL SAFETY ANALYSIS REPORT

FIGURE 8-2-3
PROPERTY PLAN

Byron Environmental Audit – Request for Additional Information Response

Question #: HCR-7 **Category:** Historical and Cultural Resources

Statement of Question:

Provide information on management around less-developed areas of the plant site, especially near known historic and cultural resources or near unsurveyed areas, if applicable.

Response:

Vegetation control at Byron station is the responsibility of the Facilities Maintenance Department. The following guidelines are used as the basis of operation for this activity.

- **Regular** - "Yard" areas both inside and outside of the PA are generally mowed on a regular basis to maintain a height of 6" or less. (e.g., training, plant entrance, shooting range)
- **Secondary** - Security sensitive areas inside and outside the PA are mowed less frequently to maintain vegetation at 12" to 16" or less. These areas are located outside from the center of the plant, and their boundaries depend on defensive strategies of the security force. Security supervision contacts facilities maintenance if the vegetation becomes overgrown to a point that it may hinder their activities. Facilities staff and security management tour these areas as needed to discuss possible issues or special requests. (e.g., along south road, natural draft cooling towers -- East side)
- **Outlying** – These are areas that are of less significance to security and the overall aesthetics of the site, but warrant some degree of vegetation control for work access, security inspections, or noxious weed control. These areas have a goal of being mowed twice per year. (e.g., North of main parking lot, outlying areas of shooting range)
- **Blowdown** – The blowdown line and 345 kv line to RSH areas have a goal of being mowed at least twice per year with more frequent mowing dependent on work activities and inspection access. These areas are also monitored for tree growth/infringement on the power lines.
- **Less developed** – Less developed, unsurveyed areas of station property not encompassed in the areas previously described are maintained only in response to special requests.

Note: The frequency of mowing activities is subject to weather, other work load, plant priorities, and staffing levels.

Note: The known historic and cultural resources indicated on the map in the Cultural Resources Management Plan are not maintained in any way differently than any of the other landscape in the immediate surrounding area.

List Attachments Provided:

None

Byron Environmental Audit – Request for Additional Information Response

Question #: HCR-8 **Category:** Historical and Cultural Resources

Statement of Question:

Provide documentation of construction projects that have occurred on the property since the construction of Byron to determine how historic and cultural resources were considered. Any documentation demonstrating compliance with existing environmental procedures would be useful. What materials are used by the staff to determine whether the SHPO should be consulted?

Response:

No construction projects have occurred at the Byron Station since existing procedures requiring environmental review of such projects were implemented, which occurred a few years after the merger in October 2000 of Unicom Corporation and PECO Energy Company to form Exelon Corporation. Prior to the merger, documentation of environmental reviews associated with construction on the Byron owner-controlled property was not archived.

For future reviews of proposed land-disturbing construction projects, Byron environmental personnel will review the cultural, historical and paleontological resources environmental basis for Byron Station, which has been summarized in a Cultural Resources Management Plan (CRMP). The CRMP identifies previously disturbed areas and the locations of known archaeological sites within the Station's boundaries. If the actual or potential impacts of excavation associated with the project are not bounded by the environmental basis, then the State Historic Preservation Officer would be consulted concerning the need for a supplemental cultural resources survey. [EN-AA-103-0001]

List Attachments Provided:

None

Byron Environmental Audit – Request for Additional Information Response

Question #: HCR-9 **Category:** Historical and Cultural Resources

Statement of Question:

Provide a percentage of disturbed and undisturbed land within the Byron Site.

Response:

Exelon Generation believes that areas occupied by the power block, switchyard, and other supporting facilities (approximately 154 acres) [Byron UFSAR Section 2.4.2.3, pp. 2.4-6a to 2.4-7] as well as the pipeline corridor (approximately 384 acres) [Byron UFSAR Section 2.1.1.2, p. 2.1-2] were all disturbed by original construction of Byron Station. These areas (approximately 538 acres total) represent 30 percent of the total Byron Station land area (approximately 1,782 acres) [Byron UFSAR Section 2.1.1.2, p. 2.1-2]. Approximately 47 percent of the total Byron Station land area (840 acres) has been leased for agricultural purposes. Such land is considered disturbed because most of it is tilled. The remaining 23 percent of the Byron Station land area (404 acres) is undisturbed land.

List Attachments Provided:

None

Byron Environmental Audit – Request for Additional Information Response

Question #: HCR-10 **Category:** Historical and Cultural Resources

Statement of Question:

Provide information about the percent of leased land within the Byron site; how much of the land within the Byron site is directly owner-controlled?

Response:

The Byron Station occupies approximately 1,782 acres of land. This area consists of the main site area and the pipeline corridor to the Rock River. The main site area occupies approximately 1,398 acres, while the corridor occupies the remaining 384 acres. [Byron UFSAR Section 2.1.1.2, p. 2.1-2] Approximately 840 acres (47 percent) of the total land area occupied by the Byron Station is leased for agricultural use. The power block, switchyard, and other supporting facilities under continuous surveillance occupy approximately 154 acres (9 percent) of the total station land area. [Byron UFSAR Section 2.4.2.3, pp. 2.4-6a to 2.4-7]

Regarding control of leased land within the Byron site, Exelon Generation generally retains an unrestricted right to enter, use, and dispose of the leased land for its business purposes and in the event of emergencies. Also, subleases are not allowed, and leases typically restrict use of the leased land solely to a designated purpose, such as for farming and agricultural purposes, for cultivating crops, and/or for pastureland. In addition, some leases may prohibit certain specific activities on the leased land, such as removing top soil, changing the original ground grade level, altering the natural water drainage pattern, and installing irrigation systems.

List Attachments Provided:

None

Byron Environmental Audit – Request for Additional Information Response

Question #: HCR-11 **Category:** Historical and Cultural Resources

Statement of Question:

Is there any formal cultural resource training for Byron staff?

Response:

Byron Station personnel receive no formal cultural resources training.

List Attachments Provided:

None.

Byron Environmental Audit – Request for Additional Information Response

Question #: HH-1 **Category:** Human Health

Statement of Question:

Provide NPDES monthly discharge monitoring reports for the past five years.

Response:

The NPDES monthly discharge monitoring reports for all months of years 2008 through 2012 and January through July 2013 are provided.

List Attachments Provided:

1. NPDES monthly discharge monitoring reports for January 1, 2013 through July 31, 2013.
2. NPDES monthly discharge monitoring reports for January 1, 2012 through December 31, 2012

Subject: Byron Station Monthly Discharge Monitoring Report

In accordance with National Pollutant Discharge Elimination System (NPDES) Permit Number IL0048313, issued January 24, 2011, we are submitting the Discharge Monitoring Report for Byron Station, Units 1 and 2. This report covers the period of January 1, 2013 through January 31, 2013.

Special Condition 14 of the NPDES permit requires the station to weigh the copper anodes at the end of the zebra mussel control season and to include the total mass of copper used in the discharge monitoring report. The zebra mussel copper ion skids were shut down on December 26, 2012. The anodes of the 0A copper ion skid were removed and weighed on January 24, 2013. The anodes of the 0B copper ion skid were removed and weighed on January 24, 2013. The total mass of copper used for zebra mussel control was 221 pounds.

If there are any questions regarding this report, please contact Ms. Zoe Cox, Environmental/Radwaste Supervisor, at (815) 406-3035.

Respectfully,

Benjamin P. Youman
Plant Manager
Byron Nuclear Generating Station

COMMENTS AND EXPLANATION OF ANY VIOLATIONS (Reference all attachments here)

1. Flows for January 2013 are estimated based on July 2012 values due to totalizers being Out of Service. The totalizers are an obsolete model and work orders are in place to find replacement totalizers and get them installed in the system.

COOLING SYSTEM BLOWDOWN (Outfall 001-0)
DISCHARGE MONITORING REPORT
For Exelon Byron Station
Permit IL0048313
January 2013
Page 2 of 3**

HYDRAZINE MONITORING:

There were no steam generator chemical cleaning solutions (or associated rinses) containing hydrazine discharged to the Cooling System Blowdown during the month of January 2013.

TOTAL QUANTITY DISCHARGED: N/A

TOTAL DURATION OF DISCHARGE: N/A

COMMENTS:

1. Sodium Hypochlorite and Bromine compounds were used this month.
2. There was no discharge of steam generator chemical cleaning wastewater containing hydrazine in this month.
3. Flow existed through this outfall 31 of 31 days.
4. Per Special Condition 24 the influent from the Rock River and effluent from Outfall 001-0 was monitored for Total Suspended Solids (TSS) this month. The Rock River TSS value was 4.3 mg/L on 01/14/2013. The CWBD TSS value was 3.9 mg/L on 01/14/2013.
5. Rock River flow for January 2013 was >2400 cfs therefore daily temperature calculations were not required this month. (Special Condition 12).
6. There was no discharge of the 126 Priority Pollutants from cooling tower maintenance chemicals in January 2013. (Special Condition 15).

Subject: Byron Station Monthly Discharge Monitoring Report

In accordance with National Pollutant Discharge Elimination System (NPDES) Permit Number IL0048313, issued January 24, 2011, we are submitting the Discharge Monitoring Report for Byron Station, Units 1 and 2. This report covers the period of February 1, 2013 through February 28, 2013.

If there are any questions regarding this report, please contact Ms. Zoe Cox, Environmental/Radwaste Supervisor, at (815) 406-3035.

Respectfully,

Benjamin P. Youman
Plant Manager
Byron Nuclear Generating Station

DISCHARGE MONITORING REPORT
For Exelon Byron Station
Permit IL0048313
February 2013
Page 2 of 2**

HYDRAZINE MONITORING:

There were no steam generator chemical cleaning solutions (or associated rinses) containing hydrazine discharged to the Cooling System Blowdown during the month of February 2013.

TOTAL QUANTITY DISCHARGED: N/A

TOTAL DURATION OF DISCHARGE: N/A

COMMENTS:

1. Sodium Hypochlorite and Bromine compounds were used this month.
2. There was no discharge of steam generator chemical cleaning wastewater containing hydrazine in this month.
3. Flow existed through this outfall 28 of 28 days.
4. Per Special Condition 24 the influent from the Rock River and effluent from Outfall 001-0 was monitored for Total Suspended Solids (TSS) this month. The Rock River TSS value was 160.7 mg/L on 02/11/2013. The CWBD TSS value was 5.6 mg/L on 02/11/2013.
5. Rock River flow for February 2013 was >2400 cfs therefore daily temperature calculations were not required this month. (Special Condition 12).
6. There was no discharge of the 126 Priority Pollutants from cooling tower maintenance chemicals in February 2013. (Special Condition 15).

Subject: Byron Station Monthly Discharge Monitoring Report

In accordance with National Pollutant Discharge Elimination System (NPDES) Permit Number IL0048313, issued January 24, 2011, we are submitting the Discharge Monitoring Report for Byron Station, Units 1 and 2. This report covers the period of March 1, 2013 through March 31, 2013.

If there are any questions regarding this report, please contact Ms. Zoe Cox, Environmental/Radwaste Supervisor, at (815) 406-3035.

Respectfully,

Benjamin P. Youman
Plant Manager
Byron Nuclear Generating Station

COMMENTS AND EXPLANATION OF ANY VIOLATIONS (Reference all attachments here)

1. Flows for March 2013 are estimated based on July 2012 values due to totalizers being Out of Service. The totalizers are an obsolete model and work orders are in place to find replacement totalizers and get them installed in the system.

COOLING SYSTEM BLOWDOWN (Outfall 001-0)
DISCHARGE MONITORING REPORT
For Exelon Byron Station
Permit IL0048313
March 2013
Page 2 of 2**

HYDRAZINE MONITORING:

There were no steam generator chemical cleaning solutions (or associated rinses) containing hydrazine discharged to the Cooling System Blowdown during the month of March 2013.

TOTAL QUANTITY DISCHARGED: N/A

TOTAL DURATION OF DISCHARGE: N/A

COMMENTS:

1. Sodium Hypochlorite and Bromine compounds were used this month.
2. There was no discharge of steam generator chemical cleaning wastewater containing hydrazine in this month.
3. Flow existed through this outfall 31 of 31 days.
4. Per Special Condition 24 the influent from the Rock River and effluent from Outfall 001-0 was monitored for Total Suspended Solids (TSS) this month. The Rock River TSS value was 10.0 mg/L on 03/04/2013. The CWBD TSS value was 5.6 mg/L on 03/04/2013.
5. Rock River flow for March 2013 was >2400 cfs therefore daily temperature calculations were not required this month. (Special Condition 12).
6. There was no discharge of the 126 Priority Pollutants from cooling tower maintenance chemicals in March 2013. (Special Condition 15).

Subject: Byron Station Monthly Discharge Monitoring Report

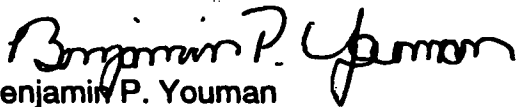

In accordance with National Pollutant Discharge Elimination System (NPDES) Permit Number IL0048313, issued January 24, 2011, we are submitting the Discharge Monitoring Report for Byron Station, Units 1 and 2. This report covers the period of April 1, 2013 through April 30, 2013.

On 4/17/13 at 13:57, the Stormwater Runoff Basin Overflow (Outfall 002) of Byron Station's NPDES permit began to experience flow conditions due to the excessive rainfall in the vicinity. This flow event lasted until 17:20 on 4/17/13. The estimated flowrate was 1000 gallons per minute for a total flow of 203,000 gallons discharged via Outfall 002. As required per the permit, Total Suspended Solids (TSS) and Oil and Grease samples were obtained and analyzed. The TSS results were 198 ppm and 195 ppm for an average concentration of 197 ppm. This exceeds the permit 30-day average concentration limit of 30 ppm and the daily maximum concentration limit of 100 ppm. The Oil and Grease result was 2.3 ppm. On 4/17/13 at 21:31 Outfall 002 again experienced flow conditions due to another extremely heavy rain event in the vicinity of Byron Station. This flow event lasted until 10:50 on 4/18/13. The estimated flowrate was 1000 gallons per minute for a total flow of 800,000 gallons discharged from Outfall 002 for this event. The total amount of discharge from Outfall 002 for the 2 events is 1,003,000 gallons. As required per the permit, an Oil and Grease sample was obtained and analyzed on 4/18/13. The Oil and Grease result was <1.40 ppm which when averaged with the previous result is an average concentration of <1.9 ppm. The Oil and Grease concentration met the 30-day average concentration limit of 15 ppm and the daily maximum concentration limit of 20 ppm listed in the permit.

In anticipation of the forecasted rain events Byron Station undertook proactive measures to reduce the water elevation in the Stormwater Runoff Basin by installing an additional pump, to supplement the pumping capacity of the existing installed pumps. Unfortunately the volume of water received overwhelmed the storage capacity of the Stormwater Runoff Basin and the capacity of the installed and supplemental pumping systems. In accordance with the station's NPDES permit on April 18, 2013 the Agency was notified of this Upset event by Mr. Zigmund Karpa, in accordance with Special Condition 11 and Standard Condition 12(f)(2) of the permit. Byron Letter 2013-0057, dated 4/22/13, was sent to the Agency to meet the 5-day follow-up reporting requirement of the permit conditions.

If there are any questions regarding this report, please contact Ms. Zoe Cox, Environmental/Radwaste Supervisor, at (815) 406-3035.

Respectfully,

Benjamin P. Youman
Plant Manager
Byron Nuclear Generating Station

COMMENTS AND EXPLANATION OF ANY VIOLATIONS (Reference all attachments here)
 1. Flows for April 2013 are estimated based on July 2012 values due to totalizers being Out of Service. The totalizers are an obsolete model and work orders are in place to find replacement totalizers and get them installed in the system.

COOLING SYSTEM BLOWDOWN (Outfall 001-0)
DISCHARGE MONITORING REPORT
For Exelon Byron Station
Permit IL0048313
April 2013
Page 2 of 2**

HYDRAZINE MONITORING:

There were no steam generator chemical cleaning solutions (or associated rinses) containing hydrazine discharged to the Cooling System Blowdown during the month of April 2013.

TOTAL QUANTITY DISCHARGED: N/A

TOTAL DURATION OF DISCHARGE: N/A

COMMENTS:

1. Sodium Hypochlorite and Bromine compounds were used this month.
2. There was no discharge of steam generator chemical cleaning wastewater containing hydrazine in this month.
3. Flow existed through this outfall 30 of 30 days.
4. Per Special Condition 24 the influent from the Rock River and effluent from Outfall 001-0 was monitored for Total Suspended Solids (TSS) this month. The Rock River TSS value was 38.1 mg/L on 04/08/2013. The CWBD TSS value was 11.1 mg/L on 04/08/2013.
5. Rock River flow for April 2013 was >2400 cfs therefore daily temperature calculations were not required this month. (Special Condition 12).
6. There was no discharge of the 126 Priority Pollutants from cooling tower maintenance chemicals in April 2013. (Special Condition 15).

Subject: Byron Station Monthly Discharge Monitoring Report

In accordance with National Pollutant Discharge Elimination System (NPDES) Permit Number IL0048313, issued January 24, 2011, we are submitting the Discharge Monitoring Report for Byron Station, Units 1 and 2. This report covers the period of May 1, 2013 through May 31, 2013.

If there are any questions regarding this report, please contact Ms. Zoe Cox, Environmental/Radwaste Supervisor, at (815) 406-3035.

Respectfully,

Benjamin P. Youman
Plant Manager
Byron Nuclear Generating Station

COMMENTS AND EXPLANATION OF ANY VIOLATIONS (Reference all attachments here)

1. Flows for May 2013 are estimated based on July 2012 values due to totalizers being Out of Service. The totalizers are an obsolete model and work orders are in place to find replacement totalizers and get them installed in the system.

COOLING SYSTEM BLOWDOWN (Outfall 001-0)
DISCHARGE MONITORING REPORT
For Exelon Byron Station
Permit IL0048313
May 2013
Page 2 of 2**

HYDRAZINE MONITORING:

There were no steam generator chemical cleaning solutions (or associated rinses) containing hydrazine discharged to the Cooling System Blowdown during the month of May 2013.

TOTAL QUANTITY DISCHARGED: N/A

TOTAL DURATION OF DISCHARGE: N/A

COMMENTS:

1. Sodium Hypochlorite and Bromine compounds were used this month.
2. There was no discharge of steam generator chemical cleaning wastewater containing hydrazine in this month.
3. Flow existed through this outfall 31 of 31 days.
4. Per Special Condition 24 the influent from the Rock River and effluent from Outfall 001-0 was monitored for Total Suspended Solids (TSS) this month. The Rock River TSS value was 11.2 mg/L on 05/06/2013. The CWBD TSS value was 3.1 mg/L on 05/06/2013.
5. Rock River flow for May 2013 was >2400 cfs therefore daily temperature calculations were not required this month. (Special Condition 12).
6. There was no discharge of the 126 Priority Pollutants from cooling tower maintenance chemicals in May 2013. (Special Condition 15).

Subject: Byron Station Monthly Discharge Monitoring Report

In accordance with National Pollutant Discharge Elimination System (NPDES) Permit Number IL0048313, issued January 24, 2011, we are submitting the Discharge Monitoring Report for Byron Station, Units 1 and 2. This report covers the period of June 1, 2013 through June 30, 2013.

If there are any questions regarding this report, please contact Ms. Zoe Cox, Environmental/Radwaste Supervisor, at (815) 406-3035.

Respectfully,

Benjamin P. Youman
Plant Manager
Byron Nuclear Generating Station

DISCHARGE MONITORING REPORT
For Exelon Byron Station
Permit IL0048313
June 2013
Page 2 of 2**

HYDRAZINE MONITORING:

There were no steam generator chemical cleaning solutions (or associated rinses) containing hydrazine discharged to the Cooling System Blowdown during the month of June 2013.

TOTAL QUANTITY DISCHARGED: N/A

TOTAL DURATION OF DISCHARGE: N/A

COMMENTS:

1. Sodium Hypochlorite and Bromine compounds were used this month.
2. There was no discharge of steam generator chemical cleaning wastewater containing hydrazine in this month.
3. Flow existed through this outfall 30 of 30 days.
4. Per Special Condition 24 the influent from the Rock River and effluent from Outfall 001-0 was monitored for Total Suspended Solids (TSS) this month. The Rock River TSS value was 29.3 mg/L on 06/10/2013. The CWBD TSS value was 3.0 mg/L on 06/10/2013.
5. Rock River flow for June 2013 was >2400 cfs therefore daily temperature calculations were not required this month. (Special Condition 12).
6. There was no discharge of the 126 Priority Pollutants from cooling tower maintenance chemicals in June 2013. (Special Condition 15).

Subject: Byron Station Monthly Discharge Monitoring Report

In accordance with National Pollutant Discharge Elimination System (NPDES) Permit Number IL0048313, issued January 24, 2011, we are submitting the Discharge Monitoring Report for Byron Station, Units 1 and 2. This report covers the period of July 1, 2013 through July 31, 2013.

If there are any questions regarding this report, please contact Ms. Zoe Cox, Environmental/Radwaste Supervisor, at (815) 406-3035.

Respectfully,

Benjamin P. Youman
Plant Manager

COMMENTS AND EXPLANATION OF ANY VIOLATIONS (Reference all attachments here)
 1. Flows for July 2013 are estimated based on July 2012 values due to totalizers being Out of Service. The totalizers are an obsolete model and work orders are in place to find replacement totalizers and get them installed in the system.

**ATTACHMENT TO
COOLING SYSTEM BLOWDOWN (Outfall 001-0)
DISCHARGE MONITORING REPORT
For Exelon Byron Station
Permit IL0048313
July 2013
Page 2 of 2**

HYDRAZINE MONITORING:

There were no steam generator chemical cleaning solutions (or associated rinses) containing hydrazine discharged to the Cooling System Blowdown during the month of July 2013.

TOTAL QUANTITY DISCHARGED: N/A

TOTAL DURATION OF DISCHARGE: N/A

COMMENTS:

1. Sodium Hypochlorite and Bromine compounds were used this month.
2. There was no discharge of steam generator chemical cleaning wastewater containing hydrazine in this month.
3. Flow existed through this outfall 31 of 31 days.
4. Per Special Condition 24 the influent from the Rock River and effluent from Outfall 001-0 was monitored for Total Suspended Solids (TSS) this month. The Rock River TSS value was 32.0 mg/L on 07/08/2013. The CWBD TSS value was 42.0 mg/L on 07/08/2013.
5. Rock River flow for July 2013 was >2400 cfs therefore daily temperature calculations were not required this month. (Special Condition 12).
6. There was no discharge of the 126 Priority Pollutants from cooling tower maintenance chemicals in July 2013. (Special Condition 15).

Byron Environmental Audit – Request for Additional Information Response

Question #: HH-1 **Category:** Human Health

Statement of Question:

Provide NPDES monthly discharge monitoring reports for the past five years.

Response:

The NPDES monthly discharge monitoring reports for all months of years 2008 through 2012 and January through July 2013 are provided.

List Attachments Provided:

1. NPDES monthly discharge monitoring reports for January 1, 2013 through July 31, 2013.
2. NPDES monthly discharge monitoring reports for January 1, 2012 through December 31, 2012
3. NPDES monthly discharge monitoring reports for January 1, 2011 through December 31, 2011
4. NPDES monthly discharge monitoring reports for January 1, 2010 through December 31, 2010
5. NPDES monthly discharge monitoring reports for January 1, 2009 through December 31, 2009
6. NPDES monthly discharge monitoring reports for January 1, 2008 through December 31, 2008

Subject: Byron Station Monthly Discharge Monitoring Report

In accordance with National Pollutant Discharge Elimination System (NPDES) Permit Number IL0048313, issued January 24, 2011, we are submitting the Discharge Monitoring Report for Byron Station, Units 1 and 2. This report covers the period of January 1, 2012 through January 31, 2012.

If there are any questions regarding this report, please contact Ms. Zoe Cox, Environmental/Radwaste Supervisor, at (815) 406-3035.

Respectfully,

**Timothy J. Tulon
Site Vice President
Byron Nuclear Generating Station**

DISCHARGE MONITORING REPORT
For Exelon Byron Station
Permit IL0048313
January 2012
Page 2 of 2**

HYDRAZINE MONITORING:

There were no steam generator chemical cleaning solutions (or associated rinses) containing hydrazine discharged to the Cooling System Blowdown during the month of January 2012.

TOTAL QUANTITY DISCHARGED: N/A

TOTAL DURATION OF DISCHARGE: N/A

COMMENTS:

1. Sodium Hypochlorite was used this month. Bromine compounds were not used this month.
2. There was no discharge of steam generator chemical cleaning wastewater containing hydrazine in this month.
3. Flow existed through this outfall 31 of 31 days.
4. Per Special Condition 24 the influent from the Rock River and effluent from Outfall 001-0 was monitored for Total Suspended Solids (TSS) this month. The Rock River TSS value was 11.5 mg/L on 01/02/2012. The CWBD TSS value was 16.5 mg/L on 01/02/2012.
5. Rock River flow for January 2012 was >2400 cfs therefore daily temperature calculations were not required this month. (Special Condition 12).
6. There was no discharge of the 126 Priority Pollutants from cooling tower maintenance chemicals in January 2012. (Special Condition 15).

Subject: Byron Station Monthly Discharge Monitoring Report

In accordance with National Pollutant Discharge Elimination System (NPDES) Permit Number IL0048313, issued January 24, 2011, we are submitting the Discharge Monitoring Report for Byron Station, Units 1 and 2. This report covers the period of February 1, 2012 through February 29, 2012.

If there are any questions regarding this report, please contact Ms. Zoe Cox, Environmental/Radwaste Supervisor, at (815) 406-3035.

Respectfully,

Benjamin P. Youman
Plant Manager
Byron Nuclear Generating Station

For Exelon Byron Station

Permit IL0048313

February 2012

Page 2 of 2

HYDRAZINE MONITORING:

There were no steam generator chemical cleaning solutions (or associated rinses) containing hydrazine discharged to the Cooling System Blowdown during the month of February 2012.

TOTAL QUANTITY DISCHARGED: N/A

TOTAL DURATION OF DISCHARGE: N/A

COMMENTS:

1. Sodium Hypochlorite was used this month. Bromine compounds were not used this month.
2. There was no discharge of steam generator chemical cleaning wastewater containing hydrazine in this month.
3. Flow existed through this outfall 29 of 29 days.
4. Per Special Condition 24 the influent from the Rock River and effluent from Outfall 001-0 was monitored for Total Suspended Solids (TSS) this month. The Rock River TSS value was 3.5 mg/L on 02/06/2012. The CWBD TSS value was 4.6 mg/L on 02/06/2012.
5. Rock River flow for February 2012 was >2400 cfs therefore daily temperature calculations were not required this month. (Special Condition 12).
6. There was no discharge of the 126 Priority Pollutants from cooling tower maintenance chemicals in February 2012. (Special Condition 15).

Subject: Byron Station Monthly Discharge Monitoring Report

In accordance with National Pollutant Discharge Elimination System (NPDES) Permit Number IL0048313, issued January 24, 2011, we are submitting the Discharge Monitoring Report for Byron Station, Units 1 and 2. This report covers the period of March 1, 2012 through March 31, 2012.

Pursuant to Byron Station's NPDES permit, the Station monitors the Total Suspended Solids (TSS) result for Outfall C01 (Wastewater Treatment Plant Effluent) twice per month.

On March 10, 2012, the TSS composite sample result for Outfall C01 was 37.9 mg/L and the duplicate result showed 39.6 mg/L. Reanalysis of the remainder of the March 10, 2012 sample showed 34.3 mg/L and 33.7 mg/L for the duplicate. Once the original analysis results indicated greater than 30 mg/L TSS, the Wastewater Treatment Plant (TR) was shutdown.

On March 13, 2012, the TSS composite sample result for Outfall C01 was 3.0 mg/L and the duplicate result was 2.5 mg/L.

The elevated TSS of March 10, 2012, did not endanger health or the environment. Byron Station has been reviewing potential causes of the elevated TSS at Outfall C01. The TR system uses two 30,000 gallon Collection Tanks to collect influent wastewater until enough water is collected to initiate the treatment process. In addition to the collection tanks, four settling ponds also collect influent wastewater for eventual TR processing. On March 10, 2012 the influent wastewater being processed at TR consisted primarily of TR settling pond water.

The TR settling pond water often presents a challenge to the TR treatment system specific to the removal of suspended solids. When processing TR settling pond water, additional operator attention is required to assure that the system performs as designed.

Several actions are being taken to prevent this event from occurring in the future. These include: implementation of operating procedure changes and creation of a new chemistry department procedure to perform a filter test of TR effluent approximately every 8 hours

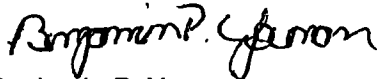

April 19, 2012
Byr Ltr 2012-0045
Page 2

whenever TR is processing water. This event and all actions associated with the event are captured in Byron Station's Corrective Action Program under Issue Report 1339223.

It appears lack of recognition of poor water quality being processed by the Wastewater Treatment (TR) plant is the main cause of the elevated TSS value.

If there are any questions regarding this report, please contact Ms. Zoe Cox, Environmental/Radwaste Supervisor, at (815) 406-3035.

Respectfully,

Benjamin P. Youman
Plant Manager
Byron Nuclear Generating Station

DISCHARGE MONITORING REPORT
For Exelon Byron Station
Permit IL0048313
March 2012
Page 2 of 2

HYDRAZINE MONITORING:

There were no steam generator chemical cleaning solutions (or associated rinses) containing hydrazine discharged to the Cooling System Blowdown during the month of March 2012.

TOTAL QUANTITY DISCHARGED: N/A

TOTAL DURATION OF DISCHARGE: N/A

COMMENTS:

1. Sodium Hypochlorite was used this month. Bromine compounds were not used this month.
2. There was no discharge of steam generator chemical cleaning wastewater containing hydrazine in this month.
3. Flow existed through this outfall 31 of 31 days.
4. Per Special Condition 24 the influent from the Rock River and effluent from Outfall 001-0 was monitored for Total Suspended Solids (TSS) this month. The Rock River TSS value was 20.8 mg/L on 03/12/2012. The CWBD TSS value was 3.7 mg/L on 03/12/2012.
5. Rock River flow for March 2012 was >2400 cfs therefore daily temperature calculations were not required this month. (Special Condition 12).
6. There was no discharge of the 126 Priority Pollutants from cooling tower maintenance chemicals in March 2012. (Special Condition 15).

Subject: Byron Station Monthly Discharge Monitoring Report

In accordance with National Pollutant Discharge Elimination System (NPDES) Permit Number IL0048313, issued January 24, 2011, we are submitting the Discharge Monitoring Report for Byron Station, Units 1 and 2. This report covers the period of April 1, 2012 through April 30, 2012.

On 4/25/2012 at 18:30 hours the Unit 2 Natural Draft Cooling Tower (NDCT) basin exhibited a wave-type flow pattern that caused cooling tower water to overflow from the tower and flow into the storm water ditch located on the east side of German Church Road. The wave-type flow pattern is believed to have been caused when the flow through the NDCT had to be re-configured due to a riser pipe break. The broken riser pipe was bypassed so repairs could be made.

The cooling tower basin overflow water flowed north in the storm water ditch and entered Woodland Creek via storm water Outfall 003, East Station Area Runoff. The estimated duration of the overflow is 30.7 hours at a flow rate of approximately 25 gallons per minute resulting in an estimated 46,100 gallons of cooling tower water flowing through Outfall 003. Analysis results of a sample of the cooling tower water obtained prior to entering the storm water ditch are summarized in the following table:

pH	Copper (mg/L)	Zinc (mg/L)	Chromium (mg/L)
8.75	0.011	0.007	<0.0021

Byron Station Operators took immediate measures to lower the cooling tower water level in the basin of the NDCT to try to mitigate the effects of the wave-type flow pattern and reduce the flow of water from the basin. Sandbags were also installed to stop the flow of cooling tower water to the storm water ditch.

If there are any questions regarding this report, please contact Ms. Zoe Cox, Environmental/Radwaste Supervisor, at (815) 406-3035.

Respectfully,

Benjamin P. Youman
Plant Manager
Byron Nuclear Generating Station

COOLING SYSTEM BLOWDOWN (Outfall 001-0)
DISCHARGE MONITORING REPORT
For Exelon Byron Station
Permit IL0048313
April 2012
Page 2 of 2**

HYDRAZINE MONITORING:

There were no steam generator chemical cleaning solutions (or associated rinses) containing hydrazine discharged to the Cooling System Blowdown during the month of April 2012.

TOTAL QUANTITY DISCHARGED: N/A

TOTAL DURATION OF DISCHARGE: N/A

COMMENTS:

1. Sodium Hypochlorite was used this month. Bromine compounds were not used this month.
2. There was no discharge of steam generator chemical cleaning wastewater containing hydrazine in this month.
3. Flow existed through this outfall 30 of 30 days.
4. Per Special Condition 24 the influent from the Rock River and effluent from Outfall 001-0 was monitored for Total Suspended Solids (TSS) this month. The Rock River TSS value was 44.3 mg/L on 04/09/2012. The CWBD TSS value was 1.9 mg/L on 04/09/2012.
5. Rock River flow for April 2012 was >2400 cfs therefore daily temperature calculations were not required this month. (Special Condition 12).
6. There was no discharge of the 126 Priority Pollutants from cooling tower maintenance chemicals in April 2012. (Special Condition 15).

Subject: Byron Station Monthly Discharge Monitoring Report

In accordance with National Pollutant Discharge Elimination System (NPDES) Permit Number IL0048313, issued January 24, 2011, we are submitting the Discharge Monitoring Report for Byron Station, Units 1 and 2. This report covers the period of May 1, 2012 through May 31, 2012.

On 05/03/2012 between 03:45 and 05:12 cooling tower water from the Unit 1 Natural Draft Cooling Tower (NDCT) basin flowed over the basin into the storm water ditch located on the east side of German Church Road. The flow was approximately 1.1 gallons per minute for an estimated duration of 87 minutes resulting in approximately 92 gallons of cooling tower water flowing through storm water Outfall 003, East Station Area Runoff. The cause of the overflow is a large number of NDCT fill packs fell into the cooling tower basin in a short period of time. This caused the delta level across the debris fence in the NDCT to rapidly rise from 0.5 feet to 2 feet which pushed the water out of the basin. Byron Station Operations personnel took immediate measures to lower the cooling tower water level in the basin of the NDCT to stop the overflow. In addition measures were taken to remove the fallen fill packs from the NDCT basin debris fence to lower the delta level across the fence.

If there are any questions regarding this report, please contact Ms. Zoe Cox, Environmental/Radwaste Supervisor, at (815) 406-3035.

Respectfully,

Benjamin P. Youman
Plant Manager
Byron Nuclear Generating Station

DISCHARGE MONITORING REPORT
For Exelon Byron Station
Permit IL0048313
May 2012
Page 2 of 2**

HYDRAZINE MONITORING:

There were no steam generator chemical cleaning solutions (or associated rinses) containing hydrazine discharged to the Cooling System Blowdown during the month of May 2012.

TOTAL QUANTITY DISCHARGED: N/A

TOTAL DURATION OF DISCHARGE: N/A

COMMENTS:

1. Sodium Hypochlorite was used this month. Bromine compounds were not used this month.
2. There was no discharge of steam generator chemical cleaning wastewater containing hydrazine in this month.
3. Flow existed through this outfall 31 of 31 days.
4. Per Special Condition 24 the influent from the Rock River and effluent from Outfall 001-0 was monitored for Total Suspended Solids (TSS) this month. The Rock River TSS value was 25.3 mg/L on 05/07/2012, 31.3 mg/L on 05/14/2012 and 22.8 mg/L on 05/29/2012. The CWBD TSS value was 2.1 mg/L on 05/14/2012 and 1.1 mg/L on 05/29/2012.
5. Rock River flow for May 2012 was >2400 cfs therefore daily temperature calculations were not required this month. (Special Condition 12).
6. There was no discharge of the 126 Priority Pollutants from cooling tower maintenance chemicals in May 2012. (Special Condition 15).

Subject: Byron Station Monthly Discharge Monitoring Report

In accordance with National Pollutant Discharge Elimination System (NPDES) Permit Number IL0048313, issued January 24, 2011, we are submitting the Discharge Monitoring Report for Byron Station, Units 1 and 2. This report covers the period of June 1, 2012 through June 30, 2012.

If there are any questions regarding this report, please contact Ms. Zoe Cox, Supervisor Environmental/Radwaste, at (815) 406-3035.

Respectfully,

Benjamin P. Youman
Plant Manager
Byron Nuclear Generating Station

HYDRAZINE MONITORING:

There were no steam generator chemical cleaning solutions (or associated rinses) containing hydrazine discharged to the Cooling System Blowdown during the month of June 2012.

TOTAL QUANTITY DISCHARGED: N/A

TOTAL DURATION OF DISCHARGE: N/A

COMMENTS:

1. Sodium Hypochlorite and Bromine compounds were used this month.
2. There was no discharge of steam generator chemical cleaning wastewater containing hydrazine in this month.
3. Flow existed through this outfall 29 of 30 days.
4. Per Special Condition 24 the influent from the Rock River and effluent from Outfall 001-0 was monitored for Total Suspended Solids (TSS) this month. The Rock River TSS value was 34.4 mg/L on 06/11/2012. The CWBD TSS value was 3.25 mg/L on 06/11/2012.
5. Rock River flow was <2400 cfs in June 2012 therefore daily temperature calculations were required during that time period. (Special Condition 12).
6. There was no discharge of the 126 Priority Pollutants from cooling tower maintenance chemicals in June 2012. (Special Condition 15).

 DISCHARGE MONITORING REPORT
 For Exelon Byron Station
 Permit IL0048313
 June 2012
 Page 3 of 3

Per Special Condition 12, in the event the Rock River flow is <2,400 cfs, daily calculations will be undertaken to demonstrate compliance with the water quality standard. The calculations are based on hourly measurements, averaged over a 24-hour calendar day for Rock River flow, main Rock River temperature, CW Blowdown flow, and CW Blowdown temperature values. Results of the calculations shall be reported in the DMR on a monthly basis.

Calculation results are in the following table:

Date	Average Rock River Flow (cfs)	Average CW M/U Temperature (F)	Average CW Blowdown Flow (gpm)	Average CW Blowdown Temperature (F)	Calculated Temperature at edge of mixing zone (F)	Water Quality Standard Temperature (F)
6/22/12	2286	75.6	16060	94.3	76.3	90
6/23/12	2325	75.2	16076	93.9	75.9	90
6/24/12	2353	75	16105	95	76	90
6/25/12	2248	75	15985	92	75.9	90
6/26/12	2250	73	15883	93	74	90
6/27/12	2290	74	15942	95	75.2	90

Subject: Byron Station Monthly Discharge Monitoring Report

In accordance with National Pollutant Discharge Elimination System (NPDES) Permit Number IL0048313, issued January 24, 2011, we are submitting the Discharge Monitoring Report for Byron Station, Units 1 and 2. This report covers the period of July 1, 2012 through July 31, 2012.

On 7/4/2012 and 7/8/2012 the U2 Natural Draft Cooling Tower (NDCT) basin overflowed as a result of plugging of the outfall screens caused by cooling tower fill pack debris. Operations took immediate corrective actions to lower the level in the flume and basin to stop the overflow condition. Additionally maintenance personnel were called in the clean the debris from the outfall screens. The cooling tower basin overflow water flowed north in the storm water ditch and entered Woodland Creek via storm water Outfall 003, East Station Area Runoff. The estimated duration of the first overflow event is 5.2 hours at a flow rate of approximately 20 gallons per minute resulting in an estimated 6,180 gallons of cooling tower water flowing through Outfall 003. Analysis results of a sample of the cooling tower water obtained prior to entrance into the storm water ditch are summarized in the following table:

pH	Copper (mg/L)	Zinc (mg/L)	Chromium (mg/L)
8.69	0.010	0.016	<0.0021

The estimated duration of the second event is 3.0 hours at a flow rate of approximately 50 gallons per minute resulting in an estimated 9,000 gallons of cooling tower water flowing through Outfall 003. Analysis results of a sample of the cooling tower water obtained prior to entrance into the storm water ditch are summarized in the following table:

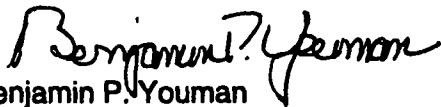

pH	Copper (mg/L)	Zinc (mg/L)	Chromium (mg/L)
8.63	0.007	0.008	<0.0021

August 24, 2012
Byron Letter 2012-0094
Page 2

Byron Station continues to closely monitor NDCT debris fence delta levels and replacement of cooling tower fill is being planned. Unit 1 NDCT fill replacement is scheduled to begin September 2012. It is expected that the changes to the tower fill should prevent future tower overflow events.

If there are any questions regarding this report, please contact Ms. Zoe Cox, Environmental/Radwaste Supervisor, at (815) 406-3035.

Respectfully,

Benjamin P. Youman
Plant Manager
Byron Nuclear Generating Station

DISCHARGE MONITORING REPORT
For Exelon Byron Station
Permit IL0048313
July 2012
Page 2 of 3**

HYDRAZINE MONITORING:

There were no steam generator chemical cleaning solutions (or associated rinses) containing hydrazine discharged to the Cooling System Blowdown during the month of July 2012.

TOTAL QUANTITY DISCHARGED: N/A

TOTAL DURATION OF DISCHARGE: N/A

COMMENTS:

1. Sodium Hypochlorite and Bromine compounds were used this month.
2. There was no discharge of steam generator chemical cleaning wastewater containing hydrazine in this month.
3. Flow existed through this outfall 31 of 31 days.
4. Per Special Condition 24 the influent from the Rock River and effluent from Outfall 001-0 was monitored for Total Suspended Solids (TSS) this month. The Rock River TSS value was 29.2 mg/L on 07/09/2012. The CWBD TSS value was 3.00 mg/L on 07/09/2012.
5. Rock River flow was <2400 cfs in July 2012 therefore daily temperature calculations were required during this time period. (Special Condition 12). Per Special Condition 12, in the event the Rock River flow is <2,400 cfs, daily calculations will be undertaken to demonstrate compliance with the water quality standard. The calculations are based on hourly measurements, averaged over a 24-hour calendar day for Rock River flow, main Rock River temperature, CW Blowdown flow, and CW Blowdown temperature values. Results of the calculations shall be reported in the DMR on a monthly basis. Calculation results are in the table on the following page.
6. There was no discharge of the 126 Priority Pollutants from cooling tower maintenance chemicals in July 2012. (Special Condition 15).

Subject: Byron Station Monthly Discharge Monitoring Report

In accordance with National Pollutant Discharge Elimination System (NPDES) Permit Number IL0048313, issued January 24, 2011, we are submitting the Discharge Monitoring Report for Byron Station, Units 1 and 2. This report covers the period of August 1, 2012 through August 31, 2012.

On 8/9/2012 the U2 Natural Draft Cooling Tower (NDCT) basin overflowed as a result of plugging of the outfall screens caused by cooling tower fill pack debris. Operations took immediate corrective actions to lower the level in the flume and basin to stop the overflow condition. Additionally maintenance personnel were called in to clean the debris from the outfall screens. The cooling tower basin overflow water flowed north in the storm water ditch and entered Woodland Creek via storm water Outfall 003, East Station Area Runoff. The estimated duration of the overflow event is 63 minutes at a flow rate of approximately 0.13 gallons per minute resulting in an estimated 8.3 gallons of cooling tower water flowing through Outfall 003. Analysis results of a sample of the cooling tower water obtained prior to entrance into the storm water ditch are summarized in the following table:

pH	Copper (mg/L)	Zinc (mg/L)	Chromium (mg/L)
8.39	0.014	0.044	0.004

On 8/30/2012, cooling tower water was seen coming out of the storm drain pipe located next to the U2 NDCT. The water had pooled on the ground and run underneath the barrier erected around the storm drain pipe to prevent this from happening. Maintenance personnel adjusted the catch containment devices for the temporary Mechanical Draft Cooling Towers which were the source of the pooling water. This stopped the flow of water entering the storm drain pipe. After walking down the area it was determined the water had pooled at the storm drain pipe exit and had not entered the drainage ditch nor exited via Outfall 003. The estimated duration of this event is approximately 2.0 hours at a flow rate of approximately 0.5 to 1.0 gallons per hour resulting in an estimated 2 gallons of cooling tower water entering the storm drain pipe. Analysis results of a sample of the cooling tower water obtained prior to entrance into the storm drain pipe are summarized in the following table:

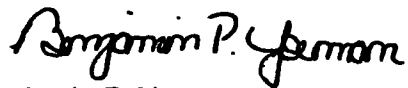

Copper (mg/L)	Zinc (mg/L)	Chromium (mg/L)
0.029	<0.0020	<0.0021

September 25, 2012
Byron Letter 2012-0106
Page 2

Byron Station continues to closely monitor NDCT debris fence delta levels and replacement of cooling tower fill is being planned. Unit 1 NDCT fill replacement has started as of September 2012. It is expected that the changes to the tower fill should prevent future tower overflow events.

If there are any questions regarding this report, please contact Ms. Zoe Cox, Environmental/Radwaste Supervisor, at (815) 406-3035.

Respectfully,

Benjamin P. Youman
Plant Manager
Byron Nuclear Generating Station

COMMENTS AND EXPLANATION OF ANY VIOLATIONS (Reference all attachments here)

1. Flows for August 2012 are estimated based on July 2012 values due to totalizers being Out of Service in August. The totalizers are an obsolete model and work orders are in place to find replacement totalizers and get them installed in the system.

COOLING SYSTEM BLOWDOWN (Outfall 001-0)
DISCHARGE MONITORING REPORT
For Exelon Byron Station
Permit IL0048313
August 2012
Page 2 of 3

HYDRAZINE MONITORING:

There were no steam generator chemical cleaning solutions (or associated rinses) containing hydrazine discharged to the Cooling System Blowdown during the month of August 2012.

TOTAL QUANTITY DISCHARGED: N/A

TOTAL DURATION OF DISCHARGE: N/A

COMMENTS:

1. Sodium Hypochlorite and Bromine compounds were used this month.
2. There was no discharge of steam generator chemical cleaning wastewater containing hydrazine in this month.
3. Flow existed through this outfall 31 of 31 days.
4. Per Special Condition 24 the influent from the Rock River and effluent from Outfall 001-0 was monitored for Total Suspended Solids (TSS) this month. The Rock River TSS value was 37.0 mg/L on 08/06/2012. The CWBD TSS value was 12.0 mg/L on 08/06/2012.
5. Rock River flow was <2400 cfs in August 2012 therefore daily temperature calculations were required during this time period. (Special Condition 12). Per Special Condition 12, in the event the Rock River flow is <2,400 cfs, daily calculations will be undertaken to demonstrate compliance with the water quality standard. The calculations are based on hourly measurements, averaged over a 24-hour calendar day for Rock River flow, main Rock River temperature, CW Blowdown flow, and CW Blowdown temperature values. Results of the calculations shall be reported in the DMR on a monthly basis. Calculation results are in the table on the following page.
6. There was no discharge of the 126 Priority Pollutants from cooling tower maintenance chemicals in August 2012. (Special Condition 15).

Subject: Byron Station Monthly Discharge Monitoring Report

In accordance with National Pollutant Discharge Elimination System (NPDES) Permit Number IL0048313, issued January 24, 2011, we are submitting the Discharge Monitoring Report for Byron Station, Units 1 and 2. This report covers the period of September 1, 2012 through September 30, 2012.

If there are any questions regarding this report, please contact Ms. Zoe Cox, Environmental/Radwaste Supervisor, at (815) 406-3035.

Respectfully,

Benjamin P. Youman
Plant Manager
Byron Nuclear Generating Station

COMMENTS AND EXPLANATION OF ANY VIOLATIONS (Reference all attachments here)

1. Flows for September 2012 are estimated based on July 2012 values due to totalizers being Out of Service. The totalizers are an obsolete model and work orders are in place to find replacement totalizers and get them installed in the system.

Permit IL0048313
September 2012
Page 2 of 3

HYDRAZINE MONITORING:

There were no steam generator chemical cleaning solutions (or associated rinses) containing hydrazine discharged to the Cooling System Blowdown during the month of September 2012.

TOTAL QUANTITY DISCHARGED: N/A

TOTAL DURATION OF DISCHARGE: N/A

COMMENTS:

1. Sodium Hypochlorite and Bromine compounds were used this month.
2. There was no discharge of steam generator chemical cleaning wastewater containing hydrazine in this month.
3. Flow existed through this outfall 29 of 30 days.
4. Per Special Condition 24 the influent from the Rock River and effluent from Outfall 001-0 was monitored for Total Suspended Solids (TSS) this month. The Rock River TSS value was 28.0 mg/L on 09/10/2012. The CWBD TSS value was 2.0 mg/L on 09/10/2012.
5. Rock River flow was <2400 cfs in September 2012 therefore daily temperature calculations were required during this time period. (Special Condition 12). Per Special Condition 12, in the event the Rock River flow is <2,400 cfs, daily calculations will be undertaken to demonstrate compliance with the water quality standard. The calculations are based on hourly measurements, averaged over a 24-hour calendar day for Rock River flow, main Rock River temperature, CW Blowdown flow, and CW Blowdown temperature values. Results of the calculations shall be reported in the DMR on a monthly basis. Calculation results are in the table on the following page.
6. There was no discharge of the 126 Priority Pollutants from cooling tower maintenance chemicals in September 2012. (Special Condition 15).

Subject: Byron Station Monthly Discharge Monitoring Report

In accordance with National Pollutant Discharge Elimination System (NPDES) Permit Number IL0048313, issued January 24, 2011, we are submitting the Discharge Monitoring Report for Byron Station, Units 1 and 2. This report covers the period of October 1, 2012 through October 31, 2012.

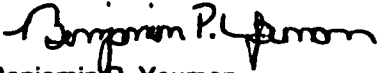

On 10/06/2012 at 11:20 hours a leak was discovered on the piping for the temporary mechanical draft cooling tower equipment. The plastic pipe fractured and water flowed from the crack at an estimated 5,000 gallons per minute. The majority of the water was retained by sandbags and the leak was isolated at 11:27. Approximately 30,000 gallons overflowed the sandbags and entered Woodland Creek via storm water Outfall 003, East Station Area Runoff. Analysis results of a sample of the cooling tower water obtained prior to entering the storm water ditch are summarized in the following table:

pH	Copper (mg/L)	Zinc (mg/L)	Chromium (mg/L)
8.68	0.033	0.018	<0.0021

The remainder of the leaked water was pumped back into the Unit 2 Natural Draft Cooling Tower basin.

If there are any questions regarding this report, please contact Ms. Zoe Cox, Environmental/Radwaste Supervisor, at (815) 406-3035.

Respectfully,

Benjamin P. Youman
Plant Manager
Byron Nuclear Generating Station

DISCHARGE MONITORING REPORT
For Exelon Byron Station
Permit IL0048313
October 2012
Page 2 of 3

HYDRAZINE MONITORING:

There were no steam generator chemical cleaning solutions (or associated rinses) containing hydrazine discharged to the Cooling System Blowdown during the month of October 2012.

TOTAL QUANTITY DISCHARGED: N/A

TOTAL DURATION OF DISCHARGE: N/A

COMMENTS:

1. Sodium Hypochlorite and Bromine compounds were used this month.
2. There was no discharge of steam generator chemical cleaning wastewater containing hydrazine in this month.
3. Flow existed through this outfall 31 of 31 days.
4. Per Special Condition 24 the influent from the Rock River and effluent from Outfall 001-0 was monitored for Total Suspended Solids (TSS) this month. The Rock River TSS value was 13.6 mg/L on 10/08/2012. The CWBD TSS value was 5.6 mg/L on 10/08/2012.
5. Rock River flow was <2400 cfs in October 2012 until October 24th therefore daily temperature calculations were required during this time period. (Special Condition 12). Per Special Condition 12, in the event the Rock River flow is <2,400 cfs, daily calculations will be undertaken to demonstrate compliance with the water quality standard. The calculations are based on hourly measurements, averaged over a 24-hour calendar day for Rock River flow, main Rock River temperature, CW Blowdown flow, and CW Blowdown temperature values. Results of the calculations shall be reported in the DMR on a monthly basis. Calculation results are in the table on the following page.
6. There was no discharge of the 126 Priority Pollutants from cooling tower maintenance chemicals in October 2012. (Special Condition 15).

Subject: Byron Station Monthly Discharge Monitoring Report

In accordance with National Pollutant Discharge Elimination System (NPDES) Permit Number IL0048313, issued January 24, 2011, we are submitting the Discharge Monitoring Report for Byron Station, Units 1 and 2. This report covers the period of November 1, 2012 through November 30, 2012.

If there are any questions regarding this report, please contact Ms. Zoe Cox, Environmental/Radwaste Supervisor, at (815) 406-3035.

Respectfully,

Benjamin P. Youman
Plant Manager
Byron Nuclear Generating Station

COMMENTS AND EXPLANATION OF ANY VIOLATIONS (Reference all attachments here)
 1. Flows for November 2012 are estimated based on July 2012 values due to totalizers being Out of Service. The totalizers are an obsolete model and work orders are in place to find replacement totalizers and get them installed in the system.

COOLING SYSTEM BLOWDOWN (Outfall 001-0)
DISCHARGE MONITORING REPORT
For Exelon Byron Station
Permit IL0048313
November 2012
Page 2 of 3

HYDRAZINE MONITORING:

There were no steam generator chemical cleaning solutions (or associated rinses) containing hydrazine discharged to the Cooling System Blowdown during the month of November 2012.

TOTAL QUANTITY DISCHARGED: N/A

TOTAL DURATION OF DISCHARGE: N/A

COMMENTS:

1. Sodium Hypochlorite and Bromine compounds were used this month.
2. There was no discharge of steam generator chemical cleaning wastewater containing hydrazine in this month.
3. Flow existed through this outfall 30 of 30 days.
4. Per Special Condition 24 the influent from the Rock River and effluent from Outfall 001-0 was monitored for Total Suspended Solids (TSS) this month. The Rock River TSS value was 5.5 mg/L on 11/12/2012. The CWBD TSS value was 5.0 mg/L on 11/12/2012.
5. Rock River flow was <2400 cfs starting on November 5, 2012 therefore daily temperature calculations were required during this time period. (Special Condition 12). Per Special Condition 12, in the event the Rock River flow is <2,400 cfs, daily calculations will be undertaken to demonstrate compliance with the water quality standard. The calculations are based on hourly measurements, averaged over a 24-hour calendar day for Rock River flow, main Rock River temperature, CW Blowdown flow, and CW Blowdown temperature values. Results of the calculations shall be reported in the DMR on a monthly basis. Calculation results are in the table on the following page.
6. There was no discharge of the 126 Priority Pollutants from cooling tower maintenance chemicals in November 2012. (Special Condition 15).

Subject: Byron Station Monthly Discharge Monitoring Report

In accordance with National Pollutant Discharge Elimination System (NPDES) Permit Number IL0048313, issued January 24, 2011, we are submitting the Discharge Monitoring Report for Byron Station, Units 1 and 2. This report covers the period of December 1, 2012 through December 31, 2012.

If there are any questions regarding this report, please contact Ms. Zoe Cox, Environmental/Radwaste Supervisor, at (815) 406-3035.

Respectfully,

Benjamin P. Youman
Plant Manager
Byron Nuclear Generating Station

**ATTACHMENT TO
COOLING SYSTEM BLOWDOWN (Outfall 001-0)
DISCHARGE MONITORING REPORT
For Exelon Byron Station
Permit IL0048313
December 2012
Page 2 of 3**

HYDRAZINE MONITORING:

There were no steam generator chemical cleaning solutions (or associated rinses) containing hydrazine discharged to the Cooling System Blowdown during the month of December 2012.

TOTAL QUANTITY DISCHARGED: N/A

TOTAL DURATION OF DISCHARGE: N/A

COMMENTS:

1. Sodium Hypochlorite and Bromine compounds were used this month.
2. There was no discharge of steam generator chemical cleaning wastewater containing hydrazine in this month.
3. Flow existed through this outfall 31 of 31 days.
4. Per Special Condition 24 the influent from the Rock River and effluent from Outfall 001-0 was monitored for Total Suspended Solids (TSS) this month. The Rock River TSS value was 12.0 mg/L on 12/03/2012. The CWBD TSS value was 4.2 mg/L on 12/05/2012.
5. Rock River flow was <2400 cfs starting on December 1, 2012 therefore daily temperature calculations were required during this time period. The Rock River flow was >2400 cfs from 12/20/2012 through 12/31/2012. (Special Condition 12). Per Special Condition 12, in the event the Rock River flow is <2,400 cfs, daily calculations will be undertaken to demonstrate compliance with the water quality standard. The calculations are based on hourly measurements, averaged over a 24-hour calendar day for Rock River flow, main Rock River temperature, CW Blowdown flow, and CW Blowdown temperature values. Results of the calculations shall be reported in the DMR on a monthly basis. Calculation results are in the table on the following page.
6. There was no discharge of the 126 Priority Pollutants from cooling tower maintenance chemicals in December 2012. (Special Condition 15).
