Washington, DC, 20003

General Comment

Petition to the Nuclear Regulatory Commission from members* of Public Citizen

We, the undersigned, call on the NRC to redo its draft environmental impact assessment and scuttle the proposed rule to remove nuclear waste issues from the reactor licensing process.

The NRC has not conducted an adequate environmental impact analysis as ordered by the Court of Appeals in New York. Nor does the Draft GEIS provide an environmental analysis that is sufficient to justify eliminating consideration of spent fuel disposal impacts or storage impacts from every licensing proceeding. Finally, the NRC's proposed finding that spent fuel can be safely stored indefinitely, rather than temporarily, is inconsistent with the Nuclear Waste Policy Act and federal policy. The NRC must conduct a new environmental impact study and suspend the proposed rule to prohibit licensing challenges based on high-level radioactive waste management issues.

*The attached file contains the name of the 4566 Public Citizen members who have signed the petition and additional comments from the signatories.

Thank you for your consideration.

Any waste should be recycled in some way. If it can't be recycled then it shouldn't be made at all.

PLC Repair

There is no such thing as "safe" nuclear waste. Just look at Hanford in Washington State and at what happened in Japan.

Failing to factor in the possibility of those facilities becoming targets thus enabling them to be exposed to the environment. Not an option... Back to the drawing board. Regardless of cost this issue MUST be resolved...

This sort of looking into the future and stating, definitively, that all looks rosy and marvelous to us! is unacceptable to anyone who has paid even the scantest attention to history. Please do not make this avoidable, costly mistake, particularly at the behest of people whose only interests are profits.

does Fukushima ring a bell?

No nuclear waste is safe, especially above ground. Don't allow anyone to add to the most deadly byproduct our society can produce.

Still got your head in the sand?

If the NRC, of all agencies, is not compelled by real science, the potential for tragedy in our civilization is boundless.

Public Citizen

No more nuke plants, coal fired plants, or NG fired plants, and get on with helping to see that planet Earth has a clean, green future. it's the right thing to do. Fossil fuels are the problem, bot the solution.

it is ridiculous to go ahead while piling up radioactive material that can and will affect the entire Earth.

An error in this storage plan is a forever error. So make sure it is a forever plan... not a political or easy plan. A new study by an independent board needs to be conducted so we ALL trust it.

Most of our nuclear power generators are located next to some water supply. Any leakage (look at Hanford, Wa.) would certainly contaminate that water supply. Earthquakes, tsunamis, accidental explosions, Boeing 787 falling from the sky: any of these could compromise nuclear waste storage and destroy nearby water/habitat. Don't perpetuate this unnecessary situation. Things decay over time. It's called entropy.

Radioactive waste is one of the most dangerous things that man has created. Storing it will cause many problems in the future.

We need renewable, non-polluting energy, not poison.

private sector doing great!

These deadly poisonous wastes are a threat to humanity, which isn't being taken seriously enough by the NRC!

I AM AMAZED THAT THIS IS STILL A PROBLEM. IS ANYONE AT WORK THERE?

The Court of Appeals in New York has ordered an adequate environmental impact analysis. This must be done. Suspend the rule to prohibit licensing challenges based on waste management issues.

Store nuclear waste safely. Better yet do not produce nuclear waste!

There has to be some accountability.

Go to the drawing board!

Radio active waste is a major public health and environmental problem. It can not be ignored, to become a problem for future generations. Please protect the public, not the narrow interests of the nuclear industry.

This is too serious an issue for decisions to be based on past and often imperfect, non-updated data.

Nuclear history is full of problems with storage of nuclear waste. As we have now seen at Fukushima there is no safe way to store spent fuel rods. Hanford is another example of storage problems. Until, or when the storage problem is solved there should be no more permits for nuclear reactors.

Cooper Leadership Coaching

R.U.F.F. -- Reirees Unite For the Future

If the NRC doesn't come to grips realistically with the waste problem, we must not have nuclear power in this country!
 Your mind free approach to nuclear waste storage will certainly solve the energy problem. The irradiated world will soon be free of life, therefore, no problem!

I'd like to leave my grandchildren a better place to grow. This spent fuel waste lasts a long time. You have to do better than leave it above ground. That conflicts with the Nuclear Waste Policy Act.

The now-well-known leeching of huge quantities of radioactive wastes, stored above ground at Hanford's nuclear reactor sites in Washington state, with little apparent forethought and regard for future contamination of vital drinking water sources, underground water table aquifers, and Columbia River water supplies (including the fish people eat out of that river system) SHOULD HAVE BEEN WARNING ENOUGH OF THE ACUTE AND CRITICAL DANGERS AND DAMAGES storing nuclear wastes above ground can, AND DO, represent to the public and environmental health we all depend upon! Is there any doubt about these dangers, or the need to find a safe method of storing nuclear wastes, so they don't kill us all, and allow terrorists to threaten our very existence? WAKE UP NUCLEAR COMMISSION! When are you going to do your jobs and stop irresponsibly passing the buck... avoiding your responsibilities?

We have an abundance of proof that shortcuts can be disastrous. This is one area where mistakes simply can't be made.
 Please get a handle on nuclear waste. We've been having this argument for over forty years and nothing has changed.

NRC must consider its role administering a whole system, which should be a closed system and include all products in every operation. And nuclear anything must be outlawed for all time.

Individual

Yvonne M	Hansen	78745 TX	Nuclear power is the promise of yesterday. The promise became a threat. The threat became reality and we have no reliable means to control the wastes. If we cannot control the wastes we have no right to despoil the planet to obtain an inferior source of power.
Gina	Pantier	98003 WA	There is not yet any safe way to store the nuclear waste far into the future. I don't think so nor trust your science. Start over using the world standards of nuclear safety.
Timothy	Mieyal	44134 OH	Please put the public health and safety first, above all other considerations.
Barbara	Howard	32134 FL	No more Fukushima's!
Emmylou	Reynolds	02860 RI	If people are sufficiently uninformed and ignorant to allow this blatant untruth, that spent fuel rods can be stored safely, indefinitely above ground, we will get what we deserve. Come on, people; tell the NRC not to cave in to the self-serving interests of the nuclear community. At the very least, make nuclear power as safe as possible.
Liz	Garratt	14222 NY	Japan is abandoning its entire nuclear program and going to wind and tidal energy sources instead. They learned from Fukushima. Have WE? Will we?

There is nothing generic about the disaster that will befall a community that hosts irradiated nuclear fuel for decades, centuries, millennia. There is nothing generic about a local environment, or its communities. Nuke licensing, uprate, or relicensing decisions should be made only based on a full EIS in each community, including all the alternatives to making more waste, and including the issue of storing high level radioactive waste indefinitely and its potential consequences, unmitigated by the fuzzy math of PRA that ignores actual spent fuel pool explosions and other disasters.

Absolutely nothing humans do is fail-safe. Opening our country to certain accidental or terrorist destruction because we don't know what to do with nuclear waste lead's to one solution - Discontinue nuclear energy and put our great ingenuity into renewable energy sources.

DESTRUCTIVE ENVIRONMENTAL HABITS OF THE 19TH AND 20TH CENTURIES DO NOT WORK IN THE 21ST CENTURY. WE ARE POISONING OURSELVES AND HARMING OURSELVES IN EVERY IMAGINABLE WAY.

You've killed and maimed thousands of American Indians by ignorant, slovenly conduct with uranium mining and waste. Stop killing people. That's the DOD's hobby, you sons of bitch's.

Resolve the Nuclear Waste problems before acquiring licenses to produce more.

Forget nukes. Join the rest of the progressive world and embrace renewables!

Shut them all down NOW.

Why isn't there accountability for the lethal waste, which Nuclear energy produces?

Find a BETTER solution.....this is nuclear waste!!!

Nuclear waste is a HUGE issue and must be adequately addressed in any environmental impact assessment.

Go back to the drawing board. Stop putting the American public at risk.

Henderson

The NRC must conduct a new and far more comprehensive EIS and in the very least suspend the proposed rule to prohibit licensing challenges until the completion of that EIS. That new EIS must include adequate time for full public review and comment and accumulative effect discussion.

Long-lived, lethal waste is one of the biggest problems with nuclear energy. To ignore this, and fail to conduct an adequate environmental analysis (Court-ordered, no less) is a dangerous, irresponsible dereliction of your duty.

I am shocked to learn the NRC has concluded that spent nuclear fuel "can be stored above ground forever." The most poisonous substances known, attractive to terrorists and profiteers alike sitting around for hundreds of years? I think this is shameful. The NRC must conduct an honest environmental impact study and suspend any rules permitting the storage of radioactive material above ground.

Considering the accelerating strength of storms, and disasters world wide, your new proposals for storing nuclear waste are preposterous.

Not accounting for the storage of nuclear waste is dangerous and makes no sense. Time to do the right thing!

If you people think living with on-surface nuclear waste is so safe, PUT SOME IN YOUR YARD AND LIVE WITH IT. And, be sure your children and pregnant wives play around it!

Do not want the problems Japan has currently.

Spent fuel can NOT be stored safely, over any amount of time.

Everybody knows that's just plain wrong! What the hell's the matter with you? Surely, Fukushima demonstrates that on-site storage of spent nuclear fuel can result in devastating environmental impacts.

It is vital that nuclear waste to properly stored as to protect our health

You need to produce a rule which will safeguard the public from potential hazards of nuclear waste. That requires a serious examination of the facts from the environmental perspective.

Our local "poster site", Rancho Seco, was closed and demolished because the plant and its spent fuel was such a threat to our citizenry it had to go! So much for the oversight of the NRC.

Disposal of nuclear waste from reactors is pretty much impossible. STORAGE of nuclear waste is the most likely option chosen --- and that creates serious environmental issues. The licensing process must be strengthened, not weakened. Remember Three Mile Island and Chernobyl. Fukushima is a radioactive disaster.

ALL public policy should have at least some basis in "common sense". This NRC policy about which we complain has none!

phoenix ventures

none

I was in Naval Nuclear Power. You should be ashamed to deny the hazards and prohibit dissent. The Japanese have learned respect; we must as well, before it is too late.

Dear members of the NRC, Please keep our environment safe for us to live in, thank-you, Sincerely, Mrs. Lisa Choy

I'm getting so discouraged! No one, especially like the NRC, is thinking of the future. It's as if all those who never consider the future know something that we don't. The by products of nuclear energy will not be safe in our life time, or even the life-times of future generations. How do we know if the storage solutions the NRC comes up with today will be safe in the future.

The NRC reminds me of an Ostrich with its head in the sand.

For almost 65 years you have been acting like a developer building high rise apartments, BUT without a functioning sewer system, only a promise of one being available eventually. We have been using those buildings for many decades and we are now up to our eyeballs with waste matter. It's time the NRC got REAL and stop allowing more waste to accumulate BEFORE that is an approved disposal site!! It only makes rational sense.

THINK HARDER THIS TIME.

It is absurd to suppose that containers for anything have a limitless lifespan, and implausible that containers will not disintegrate or leak during the exceedingly lengthy toxic lifespan of nuclear waste.

Fukishame on you.

Storing nuclear waste above ground is a health hazard,this should not be done.
The NRC must start over.

Explain how this would impact the Fukeshima power plant, in Japan and then
tell us how safe it would be!!!!
My question is, are you storing spent nuclear fuel near where you live?

James Mitchell Gabriel	Davis Ewing Riccio	30566 GA 33945 FL 21822 MD	The Gabriel Construct	Consider Fukushima re spent fuel storage.

Back to square one, folks! This time, do it right!
I will be submitting formal comments. Basically, when it comes to nuclear waste, the first imperative in munitions, electric power and fracking, is STOP MAKING IT!!!

It would be irresponsible of you to not conduct a new environmental study. Future generations of Americans need you to be responsible to this planet for them.

There is ample evidence to suggest that the above ground storage of nuclear waste is vulnerable to natural disasters in this era of climate change.

The NRC has been duly negligent for decades. The NRC should be mixed forever.

the Ave Project

Lazy doesn't fix the problem ! Make decisions that you would MAKE your Children live with, and your childrens children and their children and so on for damn near 10 thousand years !

If a foreign government placed this kind of time bomb on our soil we would go to war. Instead of waiting for the inevitable nuclear disaster let's do the best we can with a difficult decision, move the waste to dry casks and then to a remote and as safe as possible, location as quickly as is safe to do.

We who have grown up in the state of WA have watched over the decades the problems of Hanford and can attest to the critical need for safe spent fuel storage!

The NRC has been rewriting a rule for a year now that allows the agency to license reactors without accounting for lethal waste. The NRC is intent on determining that spent nuclear fuel can be safely stored above ground FOREVER without any foreseeable impact on public health and the environment. That's a totally ABSURD position!! The NRC's draft study & corresponding rule are provincial and caters to the nuclear industry's interests. It is inconsistent with current nuclear waste policy, and would further limit public participation in the reactor licensing process. ...NRC do your job and do it right--don't just CAVE to the nuclear facilities wantlist--you are a REGULATORY agency--your job is to protect the people against harm--nuclear radiation lethal!!! Fifty-seven accidents have occurred since the Chernobyl disaster, and 57% (56 out of 99) of all nuclear-related accidents have occurred in the USA.

We concerned citizens are watching, and expecting you to be accountable to us and to the environment we all must preserve for our very survival.

After Fukushima, most people would agree that there should be none of these facilities -- but, as long as they're around, we must rethink every aspect of safety. Nothing is more important than preventing another nuclear catastrophe.

If we moved completely to Thorium molten salt reactors, the nuclear waste is diminished to a small and manageable size.

There is NO "safe" way to store material that will be radioactive and therefore dangerous for nearly a million years. The HALF life is over 150,000 years.

storage must consider violent manifestations of weather and seismic disturbances.

What could the NRC be thinking? Even non-nuclear toxic waste sites are not safe!

Nuclear waste, stored as it is now, in ways way over crowded, and in a easy get for terrorists is not thinking. There is no safe way to store waste, so we have to protect the future by not making waste. NE Ohio would have no way of evacuating in case of a meltdown and we're a sitting duck just like Japan's disaster. The plants have NEVER even met the regs and the gov't is still giving them permission to operate.

I don't want juvenile thinking when it comes to potentially apocalyptic destruction from faulty nuclear storage. We should be developing alternate power, not continuing with the stupidity of nuclear power.

You believe that spent fuel can be safely stored above ground forever æ“ without any foreseeable impact to public health and the environment? Would you want it stored in your hometown, near your child's school, near a hospital, near your house? Are you willing to risk people's lives and radiating areas for thousands of years if one of these above-ground storage areas is damaged or exposed by a natural disaster or by accidental or purposeful human actions?? This is one of the most significant problems with nuclear power, what to do with the waste. There is NO good solution.

Does the name Fukushima mean anything to the NRC? Are you not aware that the transfer of the spent fuel rods from the collapsed housing of Reactor #4 is a disaster in the making? That such a difficult operation has never been done before, and that it risks contaminating the entire planet for millenia? Are you awake? You have absolutely NO viable plan for long term waste storage. To claim you do is disingenuous at best, and actually begs for stronger adjectives. Please do your jobs, and develop a viable plan for long term waste storage, or STOP LICENSING NEW REACTORS!
Why wasn't this done right?
The members of the NRC, their children and children's children will live with NRC's decision. I would prefer to bequeath a safer future for them.

Do it right the first time and you will not have to fix it later

agree w/absurdities

Please don't put our health at risk. Thank you for reconsidering.

The American People

In this climate changing reality, no-where is spent fuel safe from natural disasters...above or below ground!

Aboveground storage is a national security threat as well as a potential environmental catastrophe waiting, for thousands of years, to happen.

The incident at Fukushima should me sufficient evidence that we need much better control of nuclear reactors and nuclear waste.
Your porposed rule is a threat to me life. Perhaps it's time for a "stand your ground" law with repsect to nuclear power.

Since the Patterson ACT makes all taxpayers insurers, as such, we should have a right to limit one of nuclear energies most profound risks of harm/liability.

There is no safe long term storage method for concentrated nuclear material.
Stop polluting our planet before we all die a horrible death, even the rich who profit from atomic energy.

We don't need this, period.

Safe my ass. Are you really that fucking stupid? If so, put the waste storage tanks in your own damned backyard.

AFL-CIO

The problem with nuclear anything has always been what to do with the waste. I would just as soon outlaw the use of nuclear anything, but since that is impossible it MUST be dealt with. Figure it out! I know that there are people working on this problem. Make the people producing the waste work with them to get this resolved.

Did the NRC just sleep thru Fukushima?

Do your job and safeguard future generations!

The spent fuel rods cost must be accounted for. They are toxic and must be disposed properly.

I need only say one word: FUKUSHIMA. You guys need to get real about the danger nuclear power/waste presents to every citizen of this country and world!!

Did you know Canada wants to store nuclear in a waste site a mile from the Great Lakes. Do you want the largest fresh water lakes in the world to be radioactive?

Your client is the american public, NOT the nuclear industry.

Nuclear waste is deadly and expensive!

Japan anyone????????????

Is the NRC totally ignorant of the Fukushima nuclear disaster??? Or the Chernobyl disaster? Or Three Mile Island??? I live in an area near the San Onofre nuclear power plant with many spent fuel rods in it. The NRC was right to have the plant close, but there are NO specific plans that will keep the local populace SAFE from the radiation should something happen to the spent fuel rods. There are NO safeguards in place to guarantee that the company who operated the plant, So. Cal. Edison, will even have to make certain that they keep enough personnel at the site to oversee the conditions of the closed plant so that the public will be safe from any possible radiation leaks. This is an unconscionable oversight as Southern California has many earthquakes & the area around San Onofre is a high population center which bodes of disaster. The NRC must keep its mandate to PROTECT the American People. It is NOT there to placate the nuclear power industry; it is there to regulate them so that the American People will be SAFE.

We need to shut down every nuclear power plant in the world. After Fukushima and Chernobyl it is clear that the dangers of nuclear power far outweigh the benefits. The problem of what to do with the nuclear waste still has not been solved. The problem of what to do with tons of spent fuel rods suspended on the second story of a building (how could someone be so stupid?), as they are at Fukushima and Indian Point, has not been solved. Maybe we should make Jack Welch, ex-CEO of GE, deal with all that spent fuel and dump it on his private property. Surely he made enough money to build some kind of containment system. And he's been lionized as such a business genius, so let him deal with it.

I live in Washington State - as in Hanford. Enough said?

How can such a conclusion be valid? No one knows the long term effects.

Nuclear power is over. It never should have been developed and now that we know that the planet can never recover from it, you need to completely stop allowing it to be built or operated immediately. Your policy of externalizing the HUGE costs of nuclear power while privatizing the profits has contributed to the death of the planet by slowing the development of energy efficiency, rooftop solar and new solutions. Stop killing America: we need a new direction away from nukes.

It is never safe to store intact spent fuel -- spent fuel must be chemically neutralized. Until we know how to neutralize the dangerous material, storage must be temporary.

Any kind of reckless disregard for the dangerous potential of long-term storage of nuclear waste is utter social irresponsibility. Pay attention to what the science has learned about it over the last 50 years.

Instead of relaxing the controls over nuclear waste and accommodating nuclear power plants, the NRC should be defending American citizens against the contamination of our food & water supplies and the degradation of our environment. Nuclear power plants should be forced to spend some of their huge profits on research to find further uses of nuclear waste or invent ways to neutralize its effects on our planet!

How long should we continue to kick the can down the road on lethal waste disposal, leaving a horrible situation for our children to have to clean up? Please deal with the problem NOW!

As a resident of Washington state, I am all to aware of the terrible and unsolved nuclear waste problems at the Hanford reservation. Nuclear waste cannot be safely stored above ground. The costs of disposing of the waste safely and permanently must be part of any analysis of nuclear power plants. One fact that should end the use of EVERYTHING nuclear: We have no way to safely dispose of nuclear waste.

Are there any sane scientists working with you folks? Nuclear waste is NOT safe.....ever.

Disposal of the nuclear waste from a nuclear power plant is as big a problem as building the nuclear power plant with built-in and redundant safety features to drastically minimize the possibility of a nuclear catastrophe. if you haven't solved both issues, you do not have a viable plan. To pretend you do is idiocy!

All nuclear waste is a threat to the world.
We need nuclear energy, but it has to be safe.

Spent fuel is never safely stored!

Fukushima, Chernoby,they all have problems that never end. The taxpayer has to enjoy paying for their "real" insurance and take what happens as part of our lives (or perhaps half-lives) How many errors does the taxpayer have to endure until the NRC wakes up. Once a plant is closed the game isn't over because the spent rods live on. It is an insult to our nation to let this go on.

Kathleen	Callahan	23462 VA	Nuclear waste should always be considered given it's half-life.

Richard Medlock Art and Design

YOU ARE LIVING ON ANOTHER PLANET. NUCLEAR ENERGY MUST GO; TOO PRICEY, TOO DANGEROUS AND ALTERNATIVES EXIST. for the sake of our children!

Keep us safe! Go back to the drawing board.

What could possibly go wrong with above ground storage? Please, scrap this plan and start over...our health and safety are at stake.

Get it it RIGHT this time!! Dave

Nuclear issues are serious issues because radiation is dangerous, all decisions governing the disposal of nuclear waste as well as every other issue about nuclear power plants must be made responsibly, which means basing these decisions on science. The health of our nation and our planet is at stake.

Indefinite safe storage for spent fuel is technologically impossible. What on earth does the NRC mean by saying it's safe?

We need many less nuclear reactors, powerlines, substations, etc, in and around us, and this region. The TVA is obsolete and should possibly be replaced by the National Park Service and their clean energy and conservation partners working together to preserve/conserv our historic landscapes, waterways. We need an end to water privatization and more public waters protected! We do not need or want privatization of our gov agencies/services, on state/local/Fed, etc, and that needs to be scrutinized and possibly prevented (i.e. animal control services!). We need more nonelitests, strongly-adversarial-to-rightwingers, NewDEAL democrat alliance, coalition democrats to be scrutinizing the Chamber of Commerce and also help with our needs to produce more cleangreen solar, biodiesel energy and not try to hold it back and depress the economy further! We also need our public universities and colleges to allow more advocacy for students needs in thier higher education. Please protect the planet for FUTURE generations, K?

I am a well informed taxpayer citizen. I am aware that the Pacific ocean is being rapidly contaminated with nuclear poison beyond hope of repair as I write this. This is the biggest environmental disaster to hit our planet thousands of times over. For God's sake do what you can!

You're here to protect us - DO YOUR JOB.

Your draft is absurd

Isn't the disaster in Japan enough for you to want adequate EIA?! WE will be dealing with the fallout from that nuclear disaster for generations to come!! Do your job!!

Mr.

Seems like you need to rethink this issue for safety purposes - fracking is already doing it's dastardly deeds & we done need any more poisoning of the remaining waters we have. How about storing it in the safe facilities with all of the illegal ivory the US owns?
 What outside money group will benefit (and perhaps write) this horribly lax environmental policy? Seriously - nuclear waste is never safe and you want to put it above ground? In this country, follow the money. Shameful.

Nuclear waste IS very dangerous!!

The NRC's position on spent nuclear fuel is simply to ridiculous to merit any explanation as to why it is so. Akin to saying it can't be proven to be catastrophic as no catastrophe has YET occurred.
 "The problems of incompetent, corrupt, corporatist government are incompetence, corruption and corporatism, not government." - Jerome a Paris
 The modern conservative is engaged in one of man's oldest exercises in moral philosophy; that is, the search for a superior moral justification for selfishness.
 John Kenneth Galbraith "Republicans are the party that says government doesn't work, and then they get elected and prove it." - P.J. O' Rourke
 The only foes that threaten America are the enemies at home, and those are ignorance, superstition, and incompetence. - Elbert Hubbard
 If a nation expects to be ignorant and free, in a state of civilization, it expects what never has and never will be. - Thomas Jefferson
 "COMPASSION IS NOT WEAKNESS, AND CONCERN FOR THE UNFORTUNATE IS NOT SOCIALISM." - HUBERT H. HUMPHREY
 All Animals are equal, but some animals are more equal than others. George Orwell
 present technology will not support nuclear power safely.

Should not your first and most important consideration be the safety and health of our people and our environment????

Toxic waste will never be safe. Stop approving nuclear plants

Have you learned nothing from Japan's nuclear waste problems and the dangers of storing spent radioactive waste?

I agree completely with this petition.

Why haven't the NRC given more thought and support for pebble reactors? They are safer and cheaper to build.

NO MORE nuclear power plants---ever!!!

Nuclear waste in a threat to public health and the environment that will last for centuries. We cannot license nuclear power plants as long as there is no fail safe process for dealing with nuclear waste.

I live part year in Utah where there's lots of unmanaged radioactive tailings/waste from the arms race--lots of cancer, too. I guess you're thinking you're safe if you're somewhere else. Trouble is, the odds against all of us go up the more garbage we leave uncontrolled.
 No DAMN PIPELINE. LET CANADA KEEP THEIR FRACKIN' PIPELINE, WE DON'T WANT IT!!

Lake James Environmental Association

I have lived 20 miles west of the Perry Nuclear Power Plant since its construction in the 1970s. I opposed the plant's construction, arguing it would be immoral to build it before a site for the permanent storage of spent fuel was in place. My position has not changed. And now, your proposed rule implies that TEMPORARY storage ABOVE ground is tantamount to safe permanent storage below ground. That's ridiculous! Throw the rule out and start from scratch.

Please let us make nuclear as safe as possible. Japan is teaching us the consequences of not doing so.

Telemachos	Mavrides	85936 AZ	Living 60 miles from Hanford I've seen first hand what a total expensive failure and mess the government's nuclear waste program is. We should cease all nuclear energy programs immediately.

Libbe	Madsen	95454 CA	
Linda	Prostko	49316 MI	
Susan	Teitelman	97214 OR	
Michael	Donahue	25425 WV	All nuclear reactors should be shut down. There is no credible way to avoid the decades of damage a reactor meltdown is capable of producing. There is also no safe way to contain the nuclear waste. They are also a great drain on the economy. No company in the USA will insure any nuclear reactor. Only the US government will, and that support comes from the USA citizens taxes. It is extremely expensive, dangerous, and of great risk to allow nuclear reactors to operate at all. This country needs to focus on supporting and encouraging the great expansion of clean energy and the dependency on nuclear and fossil fuels. The oil and gas industry is destroying our planet. We need to change this NOW!!! Time is not on the side of all life on this planet unless we act NOW!!! The point of no return is upon us!

fracknot

I'll give you some chalk

I have NO CONFIDENCE in the NRC's waste confidence Draft GEIS!

As a research scientist who uses radioactive materials, I am well aware of the practical issues surrounding the safe storage and transport of even tiny quantities of radioactive waste generated by biomedical laboratories. Reactors generate vastly more waste, and reactor waste is far more radioactive and toxic than lab waste.

This proposed rule change seems as myopic as Japan's confidence in TEPCO's management.

This is so loony as to be a tea party decision. Back to the drawing board! Was it safe for Fukushima-Daichi? Of course not!

This is inviting nuclear disaster.

Our tax money was supposed to pay for a scientific conclusion, not a bout of wishful thinking!

What would be the consequences if in a future conflict someone dropped a bomb on an above-ground nuclear waste facility?

Really! Would they have been save in Japan? What about other possible natural disasters?

If you're going to create nuclear waste, you need to have a decent way to deal with it.

Radiation is dangerous to all when not properly handled.

Hanford will soon convert the Columbia into a glow-in-the-dark river. That will be permanent death for anything in and around the Columbia. 1940-2013 = an excellent example of "indefinitely".

I am a supporter of nuclear energy, but the issue of long term waste storage need to be addressed responsibly

What of the possibility of a hurricane, tornado, earth quake, flood, airplane crash or terrorist attack?

This, on the face of it, is absurd. To say that storing nuclear waste above ground forever is totally ridiculous. What about earthquakes, floods, tornadoes, hurricanes? There is NO totally safe place to store nuclear waste and we should be spending out time and money finding ways to create the energy we need without potentially poisoning the planet. Start over and do better next time.

Licensing challenges are crucial to the monitoring and regulation of this extremely dangerous industry. To prohibit challenges to the licensing is to prohibit free speech and an avenue of inquiry into this disastrous energy production method. New production of Nuclear waste must be halted ASAP and Plants need to be decommissioned. Subsidies to Nuclear companies need to cease and they must be made to begin the clean up and decommissioning of the plants before they see another penny of government aid. Any subsidies after that has begun should include retraining of nuclear trades people and workers in new safe energy technologies or other sectors of the economy. The NRC commissioners seem heavily biased and their studies are unduly optimistic and do not take into account or address a wide variety of worst case scenarios for which they have no plan or answer. Let's not forget that 15 million people or so live within a 50 mile radius of the Indian Point plant on the Hudson. Some of the fuel is in "dry" storage and some of it is in pools that are leaking into the river and surrounding dirt. Just downstream we had a tornado rip through a few years back. Then there was hurricane Sandy. Everyone remembers the World Trade Center attacks of 9/11. Indian Point is not prepared nor can it be for any number of man made or weather wrought disasters. 9/11; Katrina and sandy are all fine illustrations that our preparations and best planning cannot envision or prevent every mishap that might befall us. A nuclear mishap is something we cannot allow. We must close the plants down and hurry with the best and most long lasting encapsulation we can provide while researching safer better ways to contain the waste for the generations to come.

What is this world coming to? Beyond absurd! Next thing you know they'll issue a permit for construction on a faultline...good thing that never happened....oh yeah, I forgot!

There is NO PLACE on earth where these kind of deadly, devastating wastes can be disposed of with ANY degree of safety! With the unpredictability of earthquakes, tsunamis and other natural disasters how can ANYONE say these horrific wastes can be safely stored! Before ANY more waste is created YOU have to think about the danger to US, to ALL life, to OUR planet! Should we store the radioactive waste in the offices of the NRC?

				Eagle Yachts, Inc.	Regulation requires looking at the whole picture. Otherwise, it's not regulation; it's PR.
					We all know that storing nuclear waste is NOT SAFE ANYWHERE. Don't attempt to trick us with this false analysis. We will not be fooled.
				none	I do not think we are so careless as Japan, but even the possibility of problems is so awful.

Sometimes we can get so accustomed to the presence of a threat that we forget how lethal it might be. Remember the RMS Titanic? Her sinking was considered the greatest man-made disaster of her time. The social dynamics of the nuclear debate are similar. The risk of a catastrophic failure in a nuclear plant is very small, but the DANGER--the extent of the death and destruction that would result from the unlikely event--is too great to ever be allowed for consideration. You, the members of the NRC are faced with that exact situation. You are toying with a DANGER that civilized persons would never consider allowing to be brought into existence. Please act accordingly, swiftly, and with great and enlightened resolve. Thank you.

I VOTE AND I AM WATCHING

It's time to be responsible.

...and to the Plutocracy, I mean plutonium, I mean plutocracy for which it stands...
 There is no room for error where nuclear waste is concerned. It is imperative that proper safeguards be taken at all times!

R U Nuking FUTS?

Common sense tells you that above ground storage is potentially dangerous due to hurricanes, floods, bombs (they would be a target), and degradation from weather.

Elizabeth J	Dunham Noble	87505 NM 53716 WI	Sounds like the NRC is living in la-la land. Nothing bad will happen, huh? Tell that to the people living around the Fukushima plant in Japan.

		The Verona Duo	Stop endangering the rest of us!
			As it was from the beginning, nuclear waste has no effective, safe and affordable remedy.
			Let's all get real about the true science of nuclear energy--i waste simply CANNOT be stored safely above ground--this is a horrifying nightmare too terrible to imagine! The way to stop accruing more nuclear waste is to stop adding more reactors and to gradually shut down those that remain, as well as do FAR MORE in conservation by EVERYONE and develop more and better green technologies.
			I do not see how an intelligent person could even consider not including nuclear waste problems from the reactor licensing process. Nuclear waste is THE big problem.

As far as I know, there is no known way to effectively store nuclear waste. Until that time we should abandon the creation of any additional nuclear waste.

Nuclear waste cannot be stored safely above ground forever. Even kids know that. Especially Japanese ones.

Future nuclear energy development must be predicated on the ability to have safe long term disposal of nuclear waste. Without that we should not be pursuing this energy source. Why not do more research to develop thorium reactors??

You will get cancer, too! Please start over.

The disaster at Fukushima shows what serious environmental consequences can result from system failure at a nuclear power plant. Japan is now working to deal with spent-fuel rods, dangerously stored and presenting a real danger until they are more safely located. The NRC must make every effort to consider possible consequences to the environment from nuclear disaster -- it's part of your job.

It makes no sense to have a nuclear reactor without a safety policy for dealing with the waste. We've seen that Fukushima is a disaster which may have an ultimate meltdown any day. We, so far, have done no better except by random chance.

Dealing safely with nuclear waste has been missing from the discussion, since the beginning of that waste. Otherwise, we would never have gone down this path!

Why no analysis!

please people, will we never learn from history?

..HOMELAND DEFENCE JUST SPENT MORE ON BULLETS ,,THAN WERE EVER FIRED IN IRAQ,,GUESS THEY PLAN TO KILL ANY TERRORIST WHO GOES AFTER THESE EASY TARGET ABOVE GROUND NUKE WASTE SITES ,,HUMMMM,,YEP MAKES A LOT OF SENSE TO ME

the NRC should function in the public interest, not for the benefit of the nuclear power industry.

The problems in Japan should have served as a warning that Nuclear Reactors are not safe.

IAM 751

As canisters of this kind of waste have already been known to leak in several instances (one in Nevada and another off the coast of California that I know of for sure). Given this I think the NRC's claim that "Nothing bad will happen" is hollow and empty. The impact of such a site needs to be thoroughly studied, better research on canister construction needs to be done and the location of such a site needs to be somewhere isolated, but also easily accessible for monitoring, and if necessary, repairing leaking canisters. Thank you

Art			I strongly oppose nuclear power because the short-run and the long-run dangers are far too great. I live near the Columbia River. Runoff from the Hanford Reservation has reportedly entered the Columbia several times in the last decade - and probably far more unreported times. Much of the waste that has entered the groundwater and the river is stored in leaky above ground receptacles. Not addressing this issue, or dismissing it, is NOT acceptable.
Meryle A. Elbert Brandon	Korn Crary Kirk	97218 OR 44023 OH 75208 TX	Given the dangers posed by radioactive nuclear fuel, made ever so much clearer by the disaster at Fukushima, it should be made an urgent priority to get nuclear waste off of above-ground storage sites and buried for good. The NRC should comply with the existing laws that mandate sufficient environmental impact analysis, rather than choosing to ignore or subvert those regulations.

Oregon Field & Brush Mowing

This is too serious to be handed over to lobbyists. We need to weigh the dangers before we force thousands to suffer the consequences.

Radiation is never safe, no matter where it is stored but it is especially unsafe out in the open, above ground! How can you be so stupid as to think that it can. I can think of hundreds of scenarios that would made above ground storage unsafe! Where does Homeland Security stand on a plan like this? I tell you what - if you really believe this is such a safe and sane thing to do, how about we store the radiation in your backyard? I bet you wouldn't want it anywhere near you! An neither does anyone else!

Nuclear waste must be dealt with now, before we have a tragedy like Fukushima.

Nuclear waste is not like any other poison: it keeps its deadly qualities for thousands of years. It is far past time to stop the extremely dangerous above-ground storage of this waste. Ways must be found to store this waste in first-quality containers far below ground in areas not subject to earthquake.

I strongly oppose nuclear power because the short-run and the long-run dangers are far too great.

Your draft environmental impact assessment is TOTAL madness.

ALL HUMANS ON PLANET EARTH ARE EXPOSED TO THE SAME DANGERS AND IT NEEDS TO STOP. MAGGIE

Nuclear waste storage is a primary consideration and must be addressed in the siting of new nuclear plants or in permit renewals. The absurdity and the danger of ignoring this issue MUST end.

Nuclear fission plants should not be licensed until there is an effective way to deal with the lethal radioactive waste they produce. This deadly waste will remain a threat for 10,000 years and must not be allowed to be produced.

I live within 20 miles of an old decaying nuclear plant which the NRC has relicensed without regard for waste storage. We have no confidence in Entergy and no "emergency plan."

If the Federal Government can't regulate nuclear plants properly, then there should be no nuclear plants. Nuclear is too costly and too dangerous to be a viable source of energy.

If the NRC is going to behave like the Tobacco Institute, let's bury the NRC.

It is evident that there are many more risks involved with Nuclear Power Plants running safely and with the extreme dangers in the leakage and waste of these plants, than initially thought! PLEASE consider these factors as they may truly mean the lives and safety of our citizen! (yours and mine) Start Over with your eyes wide open and using all the information available! Thank you.
 Are all of you insane out of your mind? You should be shutting down these plants, because there is plenty of alternative clean energy and WE DON'T NEED THEM ANY MORE. FUKUSHIMA WASN'T ENOUGH FOR YOU?????

Start over and conduct a new environmental impact study!

Until spent nuclear fuel can be COMPLETELY NEUTRALIZED, the presence and operation of nuclear power plants will never be a viable alternative for the production of energy. By now, everyone in the universe should be aware of the catastrophe in the offing!!!

Would you seriously consider storing nuclear waste right next door to your house?

Safely stored above ground forever? No way!
Your children and grandchildren will have to live with the consequences you leave.

In the wake of the Fukushima accident, the US Government should be DOING MORE to PROTECT PUBLIC HEALTH and SAFETY, not less. OUR NATION IS RAPIDLY DEGENERATING (e.g. ALLOWING CORPORATIONS TO PROFIT AT THE EXPENSE OF WORKERS AND THE ENVIRONMENT). THIS TREND MUST BE REVERSED. RADIATION POISONING IS PROFOUNDLY DEADLY. CITIZENS DESERVE PROTECTION. DOCTORS DON'T NEED AN UNNECESSARY EXTRA BURDEN. REMOVING THE THREAT OF RADIATION POISONING IS AN URGENT GOAL. AS A TEMPORARY SOLUTION, ABSOLUTELY NO PROTECTIONS SHOULD BE EASED. THIS WILL ONLY FURTHER CONTRIBUTE TO AMERICA'S ONGOING DEMISE.

plutonium is death itself

This is THE biggest impact to the environment and MUST be part of the impact statement.

The half-life of some of the materials that must be stored is 250,000 years, and that's just the half-life. Are we prepared to preserve and protect such waste for that long?

It is essential that we not end up with Japan's problems with regard to nuclear fuel and radiation.

Wow! Talk about irresponsible!! The NRC needs an infusion of mental adjustments. Or, maybe just some ethics?

Nuclear waste... The only short-term solution has come from the multi-billion / trillion dollar solution the French came up with. Encasing each rod into super-thick ceramic casings to prevent radiation leakage. Short of that, is mere hand waving and gesticulation....

We must not remove nuclear waste issues from the reactor licensing process. Since it is impossible to safely dispose of nuclear waste, it will always remain a threat to our environment.

As a professional who worked in the (nuclear) utility industry for years, I KNOW what madness this is to simply kick the can on long-term safe nuclear waste disposal into the future. Pray for a tech fix? Pooh-pohh it as a mere engineering issue, Watson? Why not just use TEMP water pool storage FOREVER?? All madness. Please conduct a new and real EIS. And suspend the proposed rule that would only block (censor) licensing challenges based on UN-censor-able high-level waste management issues. We can not wishful think our way out of this one; ask the Japanese at Fukushima.

Radio Active waste is dangerous to mankind. Treating it as if it doesn't matter is wrongheaded. This is the primary reason to do away with nuclear power source. Fukushima should send red flags to all nations since it is a story yet to be ended.

NO NUKES...NO WAY... put "We the People" first instead of profits for your corporate masters...
Corruption reins supreme, These morons make up their own rules and their own facts whenever it's convenient for them. nuclear waste could be one of the most dangerous types of waste in known to man. anyone with any grey matter at all knows this. But once again GREED reins supreme and overrides any intelligent decisions or science backed knowledge. God save us from these idiots.

NRC has lost it's mind. They should be labeled as mentally incompetent. Because they are.
With the whole world watching to see what is going to happen at Fukushima, the NRC is denying the obvious. Americans want better safety provisions, in the licensing process, than what you are offering. Please start over, from the actual ground up!

N/A

Please, do a good job, for all of our sakes, and now is the time, not to delay, it is later than we think w/radioactivity, what about the cancer clusters around the country. Let's get going, and make Japan accountable, for not releasing info, when it is outlaw.

Ludicrous is my opinion about the NRC's findings. Anything can be written to justify the continuation of lethal energy production processes, but it doesn't make it fact-based.

COME ON MAN

You MUST address the permanent sequester of radioactive wastes. Do it now!

If the waste cannot be safely and permanently disposed, do not allow it to be produced.

Let's not cripple nuclear power, but let's also be responsible in the way we manage nuclear waste materials.

In my opinion the NRC will be needed less and less as we transform to renewable energy.

Can we really afford to act like the austrich that buries it's head so as not to see what it is afraid of? Fukushima-anyone?!

We need a satisfactory system for handling nuc waste. It is my firm belief that all radioactive material should be shipped to the moon, and I could name some politicians to go with the shipments and remain there as board of directors- that is, as we phase out nuclear and combustion energy products, stop their subsidies and use those resources to establish solar as our energy system.

This will not work for the majority of Americans. Please do the right thing

This is so ridiculously unacceptable that it would be funny if it weren't totally dangerous. You peope better stop with the nuclear energy. Are you aware that the leaks from the Fukushima disaster asre poisoning the Pacific Ocean? I mean, PLEASE, get some brains and do the right thing. Put yourselves out of business as far as dealing with waste goes.

I don't want to drink polluted water.

Quit subsidizing generation of radioactive waste.

Here's an idea I had years ago, when the problem of spent nuclear material first arose: Dilute the radioactive material with inert material (perhaps the detritus remaining after the radioactive ore was separated) and return it to the original site of the ore's extraction from the ground. The ores had been in their underground deposits for many centuries, without causing any problems to the local populace, so a greatly diluted ore shouldn't cause any more radiation danger to the locals than the original ores.

Did Fukushima teach you nothing? Anything nuclear is a threat to our country, especially above ground.

No one can convince us that the energy derived from nuclear power is ever worth the contamination by the most poisonous thing on earth. We are not talking decades here but thousands of years. We can only support the use of nuclear energy if it is produced from fusion - until then forget it.

Temporary ban on licensing plants with no safe way to dispose of their radiation. Also, moratorium on building new plants until safety plans proposed on how the plant would operate in the case of a regional power failure. After the on-going disaster of unparalleled damage and pollution into the ocean and ground all around the Daichi Fukushima plant in Japan, that will create death for who knows how many more years, you have the unmitigated lack of intelligence, foresight, and concern to allow the possibility of nuclear waste storage above ground indefinitely is criminal as well as insane. Go back to the very beginning of this inexcusable, irresponsible excuse for nothing and produce a draft consistent with Federal law and the Nuclear Waste Policy Act. In other words, do your JOB.

Have we not learned anything from the Fukushima disaster?

Fukushima

A fuel rod casing is about as thick as a credit card, and that and a pool of water are all that stands between us and disaster. What are you even thinking of? OR ARE YOU EVEN THINKING? SHORT-TERM MANEY CONCERNS HAVE BLINDED YOU TO POTENTIAL DISASTER!

Until there is a permanent and safe solution to the problem of nuclear waste disposal and/or storage, licensing challenges must be allowed.

To proceed with this fiasco in the wake of Fukushima is insane and criminal.

It's beginning to cost we the taxpayers big money (refer to Yankee Atomic in Rower MA where they won a \$73M settlement!) and we must consider the radioactive waste in the financial picture. It no longer equates!

There is no true "perpetual care" obligation for industrial/utility facilities. If a hazard will vastly outlive the facility, a permanent disposal option has to be established.

Get rid of nuclear plants! It is killing this country and the world! Look at Japan!
 Radiation is now heading to Alaska! Shut them all down!

Washington State is home to Hanford and is the nuclear garbage dump for the USA. Your EIA is wholly inadequate that it ignores the nuclear waste issues. Perhaps each of the representatives on the NRC should have all nuclear wastes shipped to your various states as permanent nuclear waste repositories.

How many Fukushimas must happen before spent fuel is properly regulated?

Nuclear wast issues pose a number of problems that are going to have to be managed for longer than any civilization has existed. I think these waste issues need to be examined again. A plan and legislation for long term management must be in hand. Even if the plan does not have all the solutions within immediate grasp there must be a roadmap to those solutions and it is vital that any temporary measures protect the public and the environment from the most anticipatable unforeseen circumstances. Temporary solutions must: Assure that waste is stored at secure and stable facilities in a way that no inadvertent instabilities with the material have the possibility of arising. Require that any temporary storage is conducted at facilities that are clearly remote from any nuclear facility and at a distance that would assure their continued secure management even in the event of a completely run away situation of any operating nuclear facility (Fukushima came within a hair of cascading in to a completely uncontrolled and unmanaged situation and it is the stored nuclear material at the site that could have taken it to a more unimaginable crisis than even a completely uncontrolled nuclear meltdown would pose... While the possibilities for uncontrolled nuclear meltdowns are remote they are not unimaginable.) Permanent solutions should also be subject to continued review for the identification and management of unanticipated problems with the material (I actually wonder if there are not unforeseen serious nuclear chemistry related problems that could arise at "permanent" underground facilities over time measured in hundreds, thousands and tens of thousands of years, for starters). Thank you for reviewing my concerns, Richard Gaines

Radioactive waste is dangerous and should not be stored above ground indefinitely.

Stop dodging the bullet and get real! The nuclear industry has never had a working plan for nuclear waste. A non-plan doesn't solve the problem.

yikes.

FUKUSHIMA! FUKUSHIMA? FUKUSHIMA.....

I worked on a grant about the health effects from the low level radiation releases at the Hanford Nuclear Site. NO nuclear power is safe.

If you want to prohibit challenges to radioactive waste management issues, then you know that what you are proposing for the storage of spent fuel is wrong.

What about "REGULATORY" do you not understand?

We can not afford any more nuclear disasters! Our world is under enough stress already.

If we take into account ALL the variables from "womb to tomb", for all energy sources, we wouldn't even begin to consider nuclear. Let's take corrective action NOW! Hey how's it going at Fukushima, anyway?

The need to deny is so great; it seems it will take a nuclear disaster before we wake up to nuclear holocaust. By that time, we will be dead. I hope this body remembers the film THE MORNING AFTER. Kindly think again and please keep us from blowing up our planet. Thank you.

Gee, how about making health and safety a higher priority than the nuke industry? Wouldn't that be something!

Nuclear waste is a factor in nuclear energy just as air pollution is for coal power plants. It does bad in the long run (and often in the short run too) to overlook the investigation and responsible address of such factors.

Nuclear power produces waste that accumulates instead of degrading. It is time that we move on to clean energy such as wind and solar.

We're talking about highly dangerous nuclear waste!

Are you paying any attention at all to the revelations of contamination still unfolding at Fukushima?

North Shore Move to Amend, MA

I SUGGEST WE DECIDE TO STORE THE WASTE IN THE HOMES OF THE NRC MEMBERS. IF ABOVE GROUND STORAGE IS SAFE, THEY SHOULD HAVE NO OBJECTION.
Thanks

Once our water and soil are contaminated, it is next to impossible to make it safe again. This is an issue that should be a priority for EVERYBODY

NRC, as mad as a hatter!

You have to be kidding! I hope they continue to use new 55 gallon drums as they only have to last 250,000 years.

how long must we wait for some intelligent, enlightened policy to evolve???

Leopold Group, S.E. Iowa chapter of Iowa Sierra Club

This Industry should have NEVER been ALLOWED to Start!! We Subsidize OUR OWN EVENTUAL DEMISE.... ANYONE once presented with the FACTS OF THIS TYPE of Industry and ITS DANGERS would CLEARLY VOTE TO STOP THIS "MADNESS"!!

No new licenses or license renewals until, at a minimum, the NRC comes up with safer on-site spent fuel waste management. Immediately shutdown all unsafe Fukushima, Japan-type reactors in the US. Immediately shutdown all reactors that are near fault lines and that are near our water systems.

none

Jerome

Katz

48203 MI

Nuclear waste aboveground is NOT safe. For example, ST Louis, MO is suffering from the worst cancer cluster in the USA because of improper storage of radioactive waste materials after the Manhattan Project. The barrels were stored above ground for a few decades during which the barrels rusted and leaked. They were then dumped in 4 different locations around the city... one of those sites is the Bridgeton Landfill... which is now burning.
<https://www.facebook.com/groups/stlaware/>
<https://www.facebook.com/groups/508327822519437/> St. Louis is about to suffer from the effects of a dirty nuclear bomb, when the landfill fire reaches those barrels of nuclear waste.

Has anyone talked to the Japanese? Oh that's riight, it's unamerican to be bilingual or to believe that we can actually learn from anyone on this planet who does not live in the USA. wake up!

Storing nuclear spent fuel above ground forever is insane. Where did you get this solution from Japan?

We live to close to take chances....

PROTECT THE AMERICAN PEOPLE.....THAT IS YOUR JOB..... NOT PROTECTION BIG CORP. !!!!! YOU WORK FOR US.....NOT THEM.....REMEMBER ????

Nuclear waste cannot safely be stored anywhere! Stop the madness, suspend all permits!

Keep nuclear waste from hurting anyone.

To think that disposing of nuclear wastes is not part of a nuclear reactor's licensing agenda is unethical and immoral, as these radioactive wastes are one of the earth's most dangerous environmental hazards.

			Storing spent nuclear fuel above-ground is indefensible in terms of environmental consequences. The NRC has shown NO evidence to support its claims that this material will have no environmental consequences. What are you thinking? This is the crux of the matter, that spent nuclear fuel remains radioactive and dangerous for thousands of generations and cannot be exposed to the environment! Back to the drawing board, guys -- you MUST justify your actions and provide valid reasons to protect our environment and our citizens.
			Get it "right" people. This affects ALL of us. Terri Vidal All of the decommissioning procedures and costs cannot be left for future generations.

Shame on the NRC. Stop letting these companies get away with mass murder..... Of our children and grandchildren, which will be the inevitable result of this practice, when the leaks begin in the near future. There is no justification for this. Only greed can be the reason.

A proposed rule to remove nuclear waste issues from the reactor licensing process gives the word "absurd" new meaning!

The NRC must conduct a new environmental impact study and suspend the proposed rule to prohibit licensing challenges based on high-level radioactive waste management issues.

So you have a magic wand that just changes reality? Or not actually. Toxic nuclear waste is not safe above ground, not safe anywhere actually so do it again with some reality thrown in. Or read up on Japan's recent experience.....

Nuclear waste is dangerous. It should be treated as such.

Need to get it right!
 THE NRC NEEDS TO BACK AND DO A THOUGH CHECK FOR NUCLEAR WASTE
 AND NOT DO A HAP HASARD JOB LOOKING FOR NUCLEAR WASTE

Boy do they think we're stupid. Bury where the sun never shines and stop allowing the use of weapons grade material.
 I attended training on nuclear safety while in the Army, and this makes NO sense. There must be complete transparency on all nuclear and radioactive materials and processes, with information available to the press and the public. We have a right to protect ourselves.

If nuclear power is ever to be an environmental solution, the problem of radioactive waste must be addressed.

You want to study nuclear waste? Chernobyl is an excellent place to start. Nature has reclaimed successfully the entire restricted area, radioactive bits too. Animals, birds and plants are thriving there. Check it out.

If terrorists can hijack jets and crash into the Pentagon and Twin Towers, how can above ground storage of nuclear waste be safe? Have you discovered a way to economically store waste which is 747 proof??

We have to stop using nuclear energy already. The most important thing is how we dispose of it safely. Do not make any rash decisions without knowing all the facts.
Why don't you store it in your backyard if it's so safe, NRC?!!

Nuclear plants should be phased out. NO new ones. We have alternatives such as rooftop solar and rooftop wind power that are viable and require no more "developed" land and almost zero negative effects on the environment. Re-licensing of nuclear plants should have to face public scrutiny, local and otherwise. I used to live next to Seabrook which was rammed down our throats. I now live in Las Vegas where Yucca Mt presents the same issues. All those who think nuclear fission is the way to go should have to live next to their "ideal". "Fine" if NIMBY (not in my backyard) is no way to run our country.

I know you don't have a good solution to safe storage of nuclear waste. However, this is NOT the answer!

Current "plans" show little evidence of "intelligent design" by program management and stands as an outrage to science-based process. The project must be re-evaluated with sufficient rigor to ensure durable, practical solutions.

I like Nuclear power but we must come up with a GOOD plan for dealing with the waste. We can't keep putting this problem off into the future.

The challenge for TEPEC to deal with fuel rods should counsel ALL CAUTION in the approach to nuclear waste in our country.

Camp Leguene is a perfect example of not dealing with the waste products. NUCLEAR waste is worse and you have done jack since...Hiroshima? TEPCO is another example of thinking "it can't happen here." Since you are called the Nuclear Regulatory Commission.....where is the REGULATING? By the way, why is radiation from an old uranium mine polluting the Grand Canyon, so that there is already water there which is unfit for drinking? If you truly believe that spent fuel is so safe.....then hey, store it at your house. :)

"Do your job correctly, and to the best of your abilities!" That's what my father told me, and I do! Thank you for doing yours!

Are you people at the NRC living on Earth? Do you somehow think you and your families are immune to the dangers of nuclear radiation? START OVER and come up with a viable plan. Better yet, stop producing more nuclear waste entirely.

Just one word: Fukushima.
As an environmental epidemiologist, I am appalled that no independent study has been done to assess above-ground permanent storage of nuclear waste and its likely impacts on human health.

Chernobyl, Fukushima, Crystal River, 'nuff said.

I cannot but believe that you think we are all mindless biobs. What you are asserting is absurd.

Apart from the first requirement of common sense, that is, verifying the safety of where to construct a nuclear plant, the next necessity is what to do with the waste. Why is that so difficult to work out. Time to back to the drawing board, gentlemen.

Use the information that exists TODAY..... Information about nuclear waste and its storage which may not have existed years ago. Protect our future!

Are we shortsighted enough to kill ourselves off with our nuclear waste? That wouldn't be too smart, would it?

THIS EARTH IS OUR ONLY HOME!!!!

Only a fascist government would be stupid enough to propose above ground storage of deadly nuclear waste and attempt to limit citizen participation in the licensing process.

A plan to safely dispose of spent nuclear fuel must be put in place. Nuclear waste isn't safe anywhere, especially above ground.

Are you out of your mind?! Would you live within a few blocks of such a facility? I thought not. Now, go back and do it right. The current environmental impact statement is bonkers. It's correct only if it doesn't include the science. They need to go back and redo it, so that the science is included!

Start over, NRC. Your draft study is not consistent with current policy & would limit participation even more severely of the public in the licensing of nuclear reactor. Obviously, the public cannot trust the NRC to protect us, which is your first responsibility, in your cowtowing to the industry.

If it is so safe to store nuclear waste above ground, perhaps we should store it in the nation's capitol where the Senate and House meet regularly? Or isn't it quite THAT safe? Would the headquarters of NRC be safer?

I don't know why we don't trust you on this !!! but we don't. I'm living across the mountains from Hanford. You need to deal with that and then we'll see. This is dangerous stuff (surprise) and you need to go back to the drawing board. There are a lot of people (with profit interests) that are poisoning the planet and if we keep going in that direction we will eventually arrive. We need TRULY CLEAN energy.

This is idiotic and only takes the pressure off YOU to actually do anything!

Nuclear waste is dangerous! Exhibit A: The Fukushima Daichi nuclear plant disaster.

We need a good and true environmental study! I am quite sure such would show that there is no safe way to store or eliminate nuclear/radioactive waste. We need to use more wind, solar and water power where they are available and cheap.

Nuclear waste is too dangerous to be stored anywhere it can be gotten to. Underground is bad, above ground is worse. All nuclear waste should be separated from the residual uranium and plutonium. The uranium and plutonium should be recycled into fuel. The radioactive actinides and Radon, radium, Xenon, cesium and potassium should all be transmuted to non radioactive isotopes by irradiation with neutrons. All of the separation and recycling of nuclear waste should happen within the secure enclosure of the reactor where the waste was created.

The decision that spent fuel can be stored indefinitely, rather than temporarily, is incredibly stupid and totally Orwellian. With all the gigantic, destructive typhoons, hurricanes, tornadoes and tsunamis our earth is increasingly subject to, the present method of storing spent fuel is a disaster in waiting.

Ah, come on guys this isn't best foot forward.

End Corporate-Fascism

I don't claim to be an expert, just because I have a Ph.D. in physics, with regard to storing nuclear waste. However, the information I have read and the studies I have taken tell me that the NRC is dead wrong. I would suggest that the NRC contact Japan as well as several European countries instead of relying on the lobbyists from the power companies for their facts as well as conducting an extensive study.

Please make the time to do an adequate environmental impact analysis. This is critical for our long-term safety and future for our children and grandchildren. Mistakes in this area will reap serious, deleterious consequences that most likely will not be reversible. We must act on real facts, on scientific evidence that a comprehensive environmental impact analysis will provide. Next - it is ludicrous and criminal that you are considering prohibiting licensing challenges on high-level radioactive waste management issues! Wasn't our country founded on principle of free speech? Isn't that one of our basic rights? Please eliminate the proposed rule on this.
Are you people insane; you must be joking! This is why there should be NO NUKES.

You can't store it anywhere, it out lives whatever and wherever you store it.

Nuclear waste can't be safely stored.

Stop gambling with the safety and even the lives of present and future generations by naively arguing that somehow we will magically come up with an answer to this problem of nuclear waste which has plagued us for well over fifty years.

Start over and get it right. You're playing with peoples' lives.

WAYNE FLOTTMAN

Nuclear is SO wrong!
 Nuclear waste has been dumped for decades. There are no safe methods, least of all dumping containers in the oceans! Special measures using thick lead walls immersed in water in a deep ground pit can contain RA for extended time periods.

Please stop procrastinating and find a permanent repository for spent nuclear waste.

Member, Coalition for Open Democracy,
 New Hampshire

Suggest you hire some real scientists and engineers for this type of study. And throw in a couple of geologists and geophysicists.

Louise Rufus	Dahlgren Moore	55369 MN 63112 MO	University of Florida	Would you want to live close to one of these storage facilities? Do you want one near your closest river? Remember when they have opened these storage containers in the past and found them empty or leaking? NOTHING LASTS FOREVER INCLUDING STORAGE TANKS. FIND ANOTHER WAY. NUCLEAR WASTE LASTS FOREVER. MAYBE WE SHOULD STOP CREATING IT.
Debbie norris Jonathan Kelsea	Gilliam williams Clapp York	97206 OR 32605 FL 02645 MA 46222 IN		It's obvious that there is no workable policy for nuclear waste. We need to stop burying our heads in the sand and tackle this problem. The first order of business is to stop creating a problem which we have no way of dealing with. Please start over: the current plan for storing spent nuclear fuel above ground is unacceptable.
Karen	Jacobsen	12063 NY		American exceptionalism: money trumps common sense and science. ALWAYS
Mary Jane Cynthia Mary	Hyde Ballard Shaughnessy	17837 PA 49855 MI 46217 IN		Even entertaining the idea that nuclear waste can be stored safely above ground makes no sense. Disposing of spent fuel is an ever growing crisis in the making. It is imperative that a new environmental impact study be done.
Jake	Jacobs	96740 HI		By a nuclear effect the world's dams are causing nuclear reactors to explode like at Fukushima. Thus above ground spent fuel storage is suicidal to all life. Thus SOS all you nuclear nations.
Sarah lynn Chris	Joslin coffey-edelman Callahan	02556 MA 11746 NY 59801 MT		Terrorists could get at it.
Ramaswami Phil David greg John George Mary	Kumar Mitzkavich Bell rupert Sweeney Hite Dosch	400007 ot 17552 PA 21218 MD 55803 MN 34653 FL 22150 VA 55804 MN	Greater Lafayette (IN) Rebuild the American Dream	
Roberta Gabriel William Kicab Priscilla	Schonemann Abate Perritt Castaneda-Mendez Delaney	47906 IN 11717 NY 12118 NY 27517 NC 19096 PA		I think it's outrageous that the NRC can say that spend nuclear waste can be left above ground without impacting the environment. Even low lever radiation is harmful and cancer causing. Let's do the study again and this time get it right!
Thomas Emma Karen	Ronan Spurgin Hussey Woollams	19137 PA 14818 NY 48118 MI

The temporary "solution" of storing nuclear waste above ground does not make sense to me. I understand that it is in violation of the Nuclear Waste Policy Act. It was predicated on the assumption that we would have a permanent storage site in the foreseeable future. That assumption has proved to be wrong. I urge you not to allow new permits which are dependent upon above-ground storage of nuclear waste!

Stop funding nuclear energy and allowing it to be part of the nations's energy plan. It has been proven to be costly and unsafe. Transportation, storage, and production are all contrary to the interests of the U.S.

You can't keep avoiding the issue of what to do with nuclear waste it just doesn't go away by avoiding it.

SEIU - RETIRED

Oh my God - Rethink this idea big time. There is really no safe way to store nuclear waste.
Why the NRC is deviating so far from established policy and practice? Why has the NRC not honored the order of the Court of Appeals in New York? Why have no independent studies/analyses been conducted? Do we have to "follow the money" to find out the answers?

Nuclear waste is still radioactive. It is not safe in any form.
Please, take a little longer and get it right!

Are you guys nuts? Go do your job, find SAFE storage for spent nuclear fuel
and DON'T allow ANY more new plants until you do that!

Therapists for Peace & Justice

NUCLEAR WASTE is your number one problem! DEAL WITH IT!

My husband was one of the geologists who tried to protect people and the environment from atomic fall out. He died way too young probably from being exposed. Please protect my children and grand children. His comment when we left his well paying government job to join the Peace Corps was "this is for expiation for my sins" is always with me.

enough toxic contamination

Since we cannot currently build a container that will outlast the radioactivity of nuclear waste, how can we POSSIBLY safely store nuclear waste above ground? Unless we just don't care about future generations.

We need a real plan.

Please move in a direction that protects the public.

I feel you do this whole business which you need to know about, unannounced, posted 11/18/13 on billmoyers.com. Then please reconsider your decision to "remove nuclear waste issues from the reactor licensing process" and to "prohibit licensing challenges" as such actions would NOT protect the public health or limit potential environmental damage and would absolve you of any accountability. "Later this month, Tepco is expected to begin the delicate task of removing over 1,500 spent fuel rods from reactor number 4, which was heavily damaged by the March 2011 explosion. The rods contain radiation at levels 14,000 times greater than what was released when America dropped an atomic bomb on Hiroshima. It's a highly dangerous operation that has never been attempted on such a scale before, and a key part of decommissioning the facility, which could cost \$50 billion and take 40 years. "The fuel rod removal effort is expected to take 13 months to complete, but experts warn that putting the radioactive rods into safe storage won't be easy. If any of the 15-foot, 660-pound rods break or are exposed to air, huge amounts of radioactive gasses could be released. Should there be another natural disaster like the earthquake Suzuki warned of, those rods could set off a catastrophic reaction that would be more dangerous than the meltdowns the plant has already experienced. "Tepco said they are sure the operation will go off without a hitch, though the company's struggle to contain radioactive water, a power failure at the plant caused by a rat chewing through a cable and a second power failure accidentally caused by workers who were attempting to rat-proof the power cables, have some experts worried that the company's not up to the task. "Former nuclear engineer Michael Friedlander says Tepco may be playing down the dangers of the operation. "The thing that keeps me up late at night is that they're getting ready to unload the spent fuel in unit four," said Friedlander, who spent 13 years operating US nuclear plants. 'It has the potential if it doesn't go well to create a very, very serious accident,' he

I don't trust the NRC/ I am getting so I hardly trust anyone in the government anymore.
 It's time for honesty and commitment to safety and security. Have the courage to admit that the old plan is inadequate, and come up with something that will work.

Safely stored indefinitely above ground???? Really?? The stuff is toxic and there is no way it can be stored safely anywhere safely. This has been proven time and again.

And we worry about Iran!

Also, please reconsider opening Yucca Mountain.

Storing nuclear fuel on an earthquake falt as it is at diablo canyon ,San Luis Obispo, is not safe--ita is inaane.

It is preposterous and irresponsible that this issue is still being argued -- and the NRC must conduct a ne.ew study and suspend the proposed ful

Wildcat Research Inc.

Government Regulatory organizations need to put the taxpayers first when making decisions, not the companies that they might work for next.

We can't let this slide further; time is growing short and mother nature is threatening more.

I spent most of 2011 in Japan because of a family illness (my son, who lived there for 25 years, was diagnosed with leukemia the week of the March 11 disaster) I went there in March, We do not need such events here or anywhere else.in the world.

The NRC and other agencies have been trying for years to find a safe, semi-permanent storage option for nuclear waste. Yucca Flats, a huge salt mine, and so on -- and they're still looking for options. There are no good, safe earthly options. No one wants it near them. No storage method is safe from calamity. No nuclear energy is the option. Stop generating lethal toxic waste and there will be no future worries for hiding it away. Short of that, nuclear energy producers should not be granted renewals of licenses.

If you cannot account for the lethal waste, then do not build it.

We, the undersigned, call on the NRC to redo its draft environmental impact assessment and scuttle the proposed rule to remove nuclear waste issues from the reactor licensing process.

This would be catastrophic!

We've got only one (small) planet, we can consider it's about time to take care of it, and stop doing no matter what.
