**Re: Quarterly Report for 4th Quarter 2013 for the Lost Creek ISR Project
Permit #788 (BLM WYW-166318)**

Dear Ms. Bautz,

This Quarterly Report for the fourth calendar quarter of 2013 for the Lost Creek ISR Project has been submitted pursuant to Land Quality Division Rules and Regulation Chapter 11 Section 15(b) to provide a summary of:

- *Mechanical Integrity Testing (Ch11 Sect 15(b)(ii)).*
- *Wellfield Monitoring (Ch11 Sect 14).*

Mechanical Integrity Testing

During the 4th quarter of 2013 a total of 142 MITs were performed. Results are summarized on **Attachment I**. The MITs resulted in 123 successful tests with 19 failures. Wells with failed tests were managed as follows:

- The well was retested with a successful test;
- The well was repaired and retested with a successful test;
- The well was designated faulty after one or more tests and abandoned or to be abandoned; or
- The well was replaced with a well that passed the MIT.

Faulty wells were, or will be, plugged and abandoned in accordance with procedures described in the approved Permit Reclamation Plan Section 3.1. Several faulty wells were replaced as necessary. Of the 19 failed MITs, 9 wells passed retests. Wells which were reinstalled were given a letter designation with the well name (e.g. 1I280 was replaced by 1I280A) and tested according to procedures. MITs were performed in accordance with the approved Permit Operations Plan Section 3.4.

Wellfield Monitoring

Wellfield injection and production in Mine Unit 1 continued throughout the quarter with intermittent shut-downs. Lixiviant was generated by the addition of carbon dioxide (CO₂), and oxygen (O₂) to the injection stream. Samples from the injection circuit were analyzed for pH and bicarbonate and the results summarized on Table 1:

Table 1: Summary of Injection Fluid Quality for 4th Quarter 2013

| Sample ID | Average* pH (s.u.) | Average* Bicarbonate Ion (mg/L) |
|------------------------------|--------------------------|---------------------------------------|
| Injection HH1-1 | 7.2 | 511 |
| Injection HH1-2 | 7.3 | 556 |
| Injection HH1-3 | 7.2 | 520 |
| Plant Injection Circuit (IC) | 6.8 | 515 |

**Results averaged over the quarter*

Three (3) of the four (4) header houses were used for production as of the end of the 4th quarter. The injection rates and pressures for each header house manifold are provided on **Attachment 2**. Fluid level data from the Mine Unit 1 and regional monitoring wells is included on **Attachment 3**.

If you have any questions regarding this submittal please feel free to contact me at the Casper Office.

Sincerely,

Michael D. Gaither
Manager EHS and Regulatory Affairs
Ur-Energy USA, Inc.

* Manifold pressure is not indicative of actual well pressures. Flows to wells are throttled on an individual basis at each stub to keep injection pressure below the rated pressure for the well.

ND - No data

gpm - gallons per minute

psi - pounds per square inch
