# NRC License SUA-1548, Docket No. 40-8964, Semi-Annual Effluent and Environmental Monitoring Report, July 1 through December 31, 2013

Dear Deputy Director:

In accordance with 10 CFR 40.65 and per License Condition No. 12.2 of Source Materials License SUA-1548, please find enclosed the Semi-Annual Effluent and Environmental Monitoring Report for the period July 1 through December 31, 2013. Copies of this report are also being forwarded to Mr. Douglas Mandeville, USNRC Headquarters and Mr. Tony Vegel, Division Director, Division of Nuclear Material Safety, Region IV.

If you have questions regarding the report, please contact me at (307) 316-7588 or by email at Josh\_Leftwich@cameco.com.

Sincerely.

Josh Leftwich Director, SHEQ Cameco Resources

# **ATTACHMENT A - Data Tables 1-12**

# **ATTACHMENT B - Safety and Environmental Review Panel Evaluations**

.

,

# 1 INJECTION RATES, RECOVERY RATES, AND INJECTION TRUNK-LINE PRESSURES FOR EACH SATELLITE FACILITY

Tables 1A through 1D of Attachment A contain injection and recovery rates and injection pressure data at the satellite facilities for the period of the report.

# 1.1 Satellite No. 1

Satellite No. 1 did not operate during the report period, as restoration activities in the A and B Wellfield are complete. An alternate concentration limit (ACL) license amendment for the completion of restoration of Mine Unit B was submitted May 22, 2013. On December 3, 2013, a public meeting was held to discuss NRC staff's acceptance review of Cameco Resources' (Cameco's) ACL request for Mine Unit B. Cameco is reviewing the discussion topics from the Mine Unit B ACL public meeting, evaluating NRC staff's comments and is in the process of drafting a proposed path forward. Therefore, no injection or recovery rates are available for the report period, as shown in Table 1A.

# **1.2 Satellites and Central Processing Plant**

The operating information for Satellite No. 2, Satellite No. 3, Satellite SR-1, Satellite SR-2, and the Central Processing Plant (CPP) are contained in Tables 1B, 1C, and 1D. The injection rates listed are the total recovery rates minus the purge flow bleed. The bleed from Satellites No. 2 and No. 3 is treated for uranium, radium and selenium removal and pumped to Purge Storage Reservoir #2 (PSR-2) prior to land application at the Satellite No. 2 Land Application Facility (Irrigator #2). Waste water brine from the reverse osmosis (RO) system at Satellite No. 2 is disposed by either deep well injection through a permitted waste disposal well, or treated and pumped to PSR-2 for further land application at Irrigator #2. Bleed from Satellites SR-1 and SR-2, and the CPP is disposed by deep well injection through permitted waste disposal wells.

# **1.3 North Butte Satellite Facility**

The operational data for North Butte Satellite is contained in Tables 1B, 1C, and 1D. The injection rates represent the total recovery rates minus the purge flow bleed. The bleed from the satellite is pumped to the deep disposal well for disposal or stored in the storage pond prior to deep disposal well disposal.

# 2 RESULTS OF EFFLUENT AND ENVIRONMENTAL MONITORING INCLUDING WATER QUALITY ANALYSES AND MONITORING REQUIRED BY THE WDEQ PERMIT FOR THE OPERATING IRRIGATION SYSTEMS

# 2.1 Stack Emission Surveys

All yellowcake processing activities (elution, drying and packaging) were conducted at the Smith Ranch CPP. The dryers at the CPP are zero emission vacuum dryers and do not require stack testing.

The Central Processing Facility (CPF) at the Highland Uranium Project has been refurbished with a zero emission vacuum dryer, which will not require stack testing, and is on stand-by status.

# 2.2 Air Particulate, Radon, and Gamma Radiation Monitoring

# 2.2.1 Smith Ranch-Highland

Smith Ranch – Highland (SRH) maintains an air monitoring program at six locations on and around the licensed area. The air monitoring stations are used to monitor air particulates, passive radon gas, and passive gamma radiation. Two of these stations (AS-4 and AS-5) were previously used to monitor downwind conditions of the Highland CPF and were operated only when yellowcake processing operations were active at the Highland CPF. The stations were reactivated in January 2012 to monitor conditions during construction activities at the Highland CPF. One additional station (AS-6) will be used to monitor conditions downwind of the Reynolds Ranch Satellite Facility once the facility is constructed and becomes operational.

The air stations are located as follows:

- Air Station No. 1 (AS-1; Dave's Water Well): This station monitors background conditions, upwind of both the Smith Ranch and HUP wellfields and yellowcake processing facilities.
- Air Station No. 2 (AS-2; Smith Ranch Restricted Area): This station monitors conditions downwind of the Smith Ranch CPP Restricted Area Boundary.
- Air Station No. 3 (AS-3; Vollman Ranch): This station monitors the nearest downwind resident to the Smith Ranch CPP Restricted Area.
- Air Station No. 4 (AS-4; HUP Restricted Area): This station monitors conditions downwind of the HUP CPF Restricted Area Boundary.
- Air Station No. 5 (AS-5; Fowler Ranch): This station monitors the nearest

downwind resident to the HUP CPF Restricted Area.

• Air Station No. 6 (AS-6; Reynolds Ranch Satellite Area): This station will monitor conditions downwind of the Reynolds Ranch Satellite Facility once the facility is constructed and becomes operational.

Monitoring at station AS-6 was not conducted during the report period since the Reynolds Ranch Satellite Facility has not been constructed. Monitoring of conditions at AS-6 will commence during construction of the facility and before it becomes operational.

Table 2 shows the air particulate and radon data collected at stations AS-1 through AS-5 during the report period. Review of data collected during the report period shows that the concentrations of all parameters are significantly less than the 10 CFR 20, Appendix B, Effluent Concentration Limits.

Table 3 shows the gamma radiation data collected at stations AS-1 through AS-5 during the report period. Review of data collected during the report period shows that gamma radiation levels were within the range of previously reported values.

# 2.2.2 NB Satellite Facility

North Butte maintains an Air Monitoring Station program at five various locations on and around the licensed area. The air monitoring stations are used to monitor air particulates, passive radon gas, and passive gamma radiation. Two additional passive gamma and passive radon gas stations are included in the license area.

The air stations, passive gamma, and passive radon gas monitoring stations are located as follows:

- Air Station NB8 (Phister Ranch): This station monitors the nearest residence to North Butte Satellite Area.
- Air Station NB9 (West Air Station): This station monitors background conditions, upwind from the North Butte Satellite Area.
- Air Station NB11 (North Butte): This station monitors the north side of the North Butte Licensed Area.
- Air Station NB12 (North East Air Station): This station monitors downwind conditions from North Butte Satellite and Well Fields.
- Air Station NB13 (Anadarko Rd): This Station monitors the south side of the North Butte Licensed Area.

- Environmental Station (Fenceline): This station monitors passive radon gas and passive gamma radiation only.
- Environmental station (Fenceline on Christensen Rd): This station monitors passive radon gas and passive gamma radiation only.

Table 2 shows the air particulate and radon data collected at air stations NB8, NB9, NB11, NB12, and NB13. In addition to the five air stations there are two additional environmental stations with radon data only. Review of data collected during the report period shows that the concentrations of all parameters are significantly less than the 10 CFR 20, Appendix B, Effluent Concentration Limits.

Table 3 shows the gamma radiation data collected at the five air stations and the two environmental stations for the report period. Review of data collection during the report period shows that gamma radiation levels were comparable to upwind background values at station NB9 and the control badge.

# 2.3 Water Sampling Data

# 2.3.1 SRH Groundwater and Surface Water Monitoring Stations

During the report period, monitoring was completed at 18 water wells and 10 stock ponds throughout the permit area. Water samples are collected from the water wells and stock ponds on a quarterly basis for analysis of uranium and radium-226. Table 4 provides the analytical data for samples collected during the report period. A review of data collected during the report period shows that five water wells (GW-5, GW-8, GW-13, GW-16 and GW-19) did not run during the report period. Water well, GW-19, was removed by the landowner sometime in the 4<sup>th</sup> quarter 2012 and can no longer be sampled. A review of data collected from the available water wells shows that the concentrations of uranium and radium-226 are well below the 10 CFR 20, Appendix B, Effluent Concentration Limits of  $3.0E-07 \mu Ci/mL$  and  $6.0E-08 \mu Ci/mL$ , respectively.

## 2.3.2 NB Groundwater and Surface Water Monitoring Stations

During the report period, monitoring was completed at two impoundments, eight surface water sites, and two wells throughout the permit area. Water samples are collected from the water wells, impoundments, and surface water sites on a quarterly basis for analysis of Suspended and Dissolved Natural Uranium, Thorium 230, Radium 226, Polonium 210, and Lead 210. Table 4 provides the analytical data for samples collected during the report period. A review of data collected during the report period shows that during the third quarter there were two (2) water wells (Beck and Brown #5) that were sampled, however there were two (2) impoundments (NBI2 and NBI6) and all eight surface water sites (NBSWS1, NBSWS2, NBSU1, NBSU2, NBSD1, NBSD2, NBSU4, and NBSD3) that

were dry and there was no water available for sampling. During the fourth quarter there were two (2) water wells, one (1) impoundment (NBI6), and one (1) surface water site (NBSU-4) with sufficient water for sampling. All other sample sites were recorded as dry. A review of data collected from the available water wells, surface water site, and impoundment show that the concentrations of Suspended and Dissolved Natural Uranium, Thorium 230, Radium 226, Polonium 210, and Lead 210 are less than the 10 CFR 20, Appendix B, Effluent Concentration Limits.

# 2.4 SRH Wastewater Land Application Facilities Monitoring

## 2.4.1 Soil and Vegetation Sampling

In accordance with License Condition 12.2 for the Satellite No. 1 and Satellite No. 2 Wastewater Land Application Facilities, soil and vegetation sampling of the irrigation areas is conducted in late summer of each year. The soil and vegetation data are collected to monitor and evaluate any adverse effects to the irrigation areas. The 2013 soil and vegetation sampling at the irrigation areas were performed in August.

Soil data from the Satellite No. 1 and Satellite No. 2 Wastewater Land Application Facilities are provided in Tables 5 and 6, respectively. Comparison of data from the report period over previous year's data shows a slight increase in the concentrations of uranium from the Satellite No.2 area; while radium concentrations showed little change. Uranium and radium concentrations are somewhat elevate at the Satellite No. 1 area over the previous year. The approved license applications for the facilities predicted that, at the end of operations, uranium concentrations in soil would be elevated above baseline, while radium concentrations would remain near baseline.

Vegetation data from the Satellite No. 1 and Satellite No. 2 Wastewater Land Application Facilities are provided in Tables 7A and 7B, respectively. Comparison of data from the report period over the previous year's data shows uranium and radium-226 concentrations at higher levels.

Cameco is in the process of evaluating the results of the 2013 soil and vegetation monitoring program to determine whether the apparent increases may have been caused by a change in sampling and/or analytical techniques, sampling and/or analytical error or attributed to higher levels of precipitation that occurred during 2013.

# 2.4.2 Irrigation Fluid

Cameco monitors the treated irrigation fluid that is disposed of at both irrigation facilities per the approved license application. Grab samples are collected at the discharge of PSR-2 during each month of operation and analyzed for various parameters. As noted in Table 8, Irrigator No. 1 did not operate during the report period.

Irrigation fluid data collected at Irrigator No. 2 is provided in Table 9. A review of the data indicates that the concentrations of uranium in the monthly grab samples were less than the 10 CFR 20, Appendix B, Effluent Concentration Limit of 3.0 E-7  $\mu$ Ci/ml. The concentrations of radium-226 were below the 10 CFR 20, Appendix B, Effluent Concentration Limit of 6.0E-08  $\mu$ Ci/ml.

# 2.4.3 Radium Treatment Systems

Cameco collects grab samples each month to ensure that the radium-226 treatment systems are adequately treating wastewater from Satellites No. 2 and No. 3 prior to discharge into PSR-2. No samples were collected from the Satellite No. 1 radium treatment system since Satellite No. 1 did not operate during the report period. The monthly radium-226 grab samples for Satellite No. 2 and No. 3 are collected at the discharge point of the selenium treatment plant. Review of the monitoring data provided in Table 10 shows that radium-226 concentrations were less than the 10 CFR 20, Appendix B, Effluent Concentration Limit of 6.00E-8  $\mu$ Ci/ml.

# 2.4.4 Soil Water Samples

In accordance with approved license application, Cameco collects soil water samples at the irrigation areas in June of each year and analyzes them for various parameters. A discussion of soil water monitoring for 2013 was presented in the previous Semi-Annual Effluent and Environmental Monitoring Report.

# 2.4.5 Satellite No. 1 Purge Storage Reservoir Monitor Well

A shallow monitor well, located southwest of the Satellite No. 1 Purge Storage Reservoir (PSR-1) is monitored at least weekly for potential seepage from the reservoir. There was no evidence of seepage during the report period. PSR-1 was dry for the entire period and it is not anticipated that water will be diverted to PSR-1 in the near future.

# 2.4.6 Satellite No. 2 Purge Storage Reservoir Shallow Wells

Shallow Wells No. 1 and No. 2 are located adjacent to the south and east sides of the reservoir, respectively. Water levels are measured on a quarterly basis and ground water samples are required on a semi-annual basis from the two shallow monitoring wells located adjacent to PSR-2. Cameco conducts quarterly sampling of both wells. In addition, twelve new monitoring wells were installed around the perimeter of PSR-2 for supplemental internal investigation regarding PSR-2. The wells are designated MW-1S through MW-12S. Monitoring of the wells was conducted in August and November 2013. Table 11 contains the data for samples collected during the report period.

# **3** SAFETY AND ENVIRONMENTAL EVALUATIONS

All safety and environmental evaluations made by the Safety and Environmental Review Panel (SERP) and resulting changed pages to the Operations Plan and Reclamation Plan of the approved license must be submitted on an annual basis. During the period January 1 through December 31, 2013 Cameco completed the following Safety and Environmental Evaluations

1. SERP No. 04/12-4: <u>Approval of Health Physics Technician</u> (Approved 2/21/2013)

The SERP approved a Health Physics Technician in Training as a Health Physics Technician. The qualifications and training met the requirements outlined in NRC Regulatory Guide 8.31 for a Health Physics Technician.

- SERP No. 10/12-2: <u>North Butte Operating Plan</u> (Approved 11/8/2012) The SERP clarified information in the North Butte Operating Plan on September 6, 2013.
- SERP 1/13-1: <u>Approval of Mine Unit 10 Wellfield Start-up</u> (Approved 1/2/2013) The SERP approved the commencement of uranium recovery activities in the Mine Unit 10 Wellfield, as required by Source Materials License SUA 1548, Condition 10.1.9
- 4. SERP 1/13-3: <u>Approval of Bale Burner Pilot Project</u> (Approved 2/20/2013) The SERP approved a pilot project to burn hay bales from vegetation harvested at the Satellite No. 2 Land Application Facility. If the project is successful, it will aid in disposal of harvested material previously stored at the Land Application Facility.
- SERP 4/13-1: <u>Approval of North Butte Satellite Facility Organization Chart</u> (Approved 5/28/2013) The SERP approved new organizational structure at the North Butte Facility, as

required by Source Materials License SUA-1548. The approval resulted in a change to Figure 9-1 of the NRC Operations Plan, and a copy of the changed page is included in Appendix B.

- SERP 4/13-2 <u>Approval of North Butte Satellite Facility Mine Unit 1 Wellfield</u> <u>Start-up</u> (Approved 4/25/13) The SERP approved the commencement of uranium recovery activities in the North Butte Mine Unit 1 wellfield, as required by Source Materials License SUA-1548, Condition 10.1.9
- 7. SERP 6-13/1: <u>Approval of the Use of Higher Capacity Resin Trailers, North Butte Satellite Facility</u> (Approved 6/12/2013) The SERP approved the use of 1000 cubic foot capacity trailers for transport of ion exchange resin from the North Butte Satellite Facility for processing at the Smith Ranch Highland facility. The design of the trailers was determined to meet all NRC, DOT and Smith Ranch requirements. As the NRC Operations Plan, Section 7.5.7.2 describes a typical capacity for the resin trailers, and does not result in a change in procedures, no page change is necessary.
- SERP 6/13-3: <u>Approval Health Physics Technician</u> (Approved 7/2/2013) The SERP approved a Health Physics Technician, In Training as Health Physics Technician. The qualifications and training met the requirements outlined in NRC Regulatory Guide 8.31 for a Health Physics Technician.
- SERP 7/13-1: <u>Approval of Mine Unit H Restoration Plan</u> (Approved 10/10/2013) The SERP approved the Groundwater Restoration Plan for the Mine Unit H Wellfield, as required by license condition 10.1.9 of Source Material License SUA-1548.
- 10. SERP 9/13-1: <u>Approval to Accept Ion Exchange Resin from Municipalities</u> (Approved 10/1/2013)

The SERP approved receiving and processing ion exchange resin from Community Water Systems (Municipalities) for removal of Uranium. The SERP determined that receipt of this material for processing fell within NRC Regulatory Issue Summary (RIS) 2012-06. The material accepted will be similar to resin already in use at the Smith Ranch Highland Facility.

11. SERP 10/13-1: <u>Approval for Tank Addition and Piping Modifications at the Central Processing Plant</u> (Approved 12/1-/2013) The SERP approved the addition of a 20,000 gallon conical tank and modifications to piping in the Central Processing Plant to perform elution and batch precipitations. This change will result in increased production efficiency and reduction of losses from overflow in the current tanking. The approval resulted in a change to Figure 3-4 of the NRC Operations Plan and a copy of the changed page is included in Appendix B.

12. SERP 11/13-1: <u>Approval of Tracer Research Project, Mine Unit 4</u> (Approved 12/2/2013)

The SERP approved a research project involving the use of tracers to promote growth of bacteria beneficial to restoration. The tracer results are analyzed and information is used to adjust and improve the restoration process. As no Safety, Health or Environmental issues not previously evaluated are expected, the SERP was approved to begin the project in Mine Unit 4, Header House 4-6.

Consistent with License Conditions 9.4(e), the above Safety and Environmental Evaluations and, if applicable, changed pages to the Operations plan of the approved license application, are included in Attachment B. The following page changes were made:

- From SERP 4/13-1: Figure 9-1 of the NRC Operations Plan (minor revision).
- From SERP 10/13-1: Figure 3-4 of the NRC Operations Plan (minor revision).

# **4 GAS HILLS AND RUTH ISL PROJECTS**

The Gas Hills and Ruth ISL Projects are licensed for commercial ISL uranium recovery activities as satellite facilities to the Smith Ranch-Highland Uranium Project. The projects remained non-operational during the report period. Effluent and environmental monitoring conducted during the report period consisted of baseline gamma, radon and air monitoring at the Gas Hills Site.

Other activities conducted during the report period consisted of quarterly inspections of the Ruth evaporation ponds in accordance with License Condition 10.2.2 of SUA-1548. Inspection of the perimeter fence, pond embankments, and pond liners yielded no deficiencies during the report period.
