INDEXES TO  
NUCLEAR REGULATORY  
COMMISSION ISSUANCES

January 1, 2006 through December 31, 2010

**U.S. NUCLEAR REGULATORY COMMISSION**

Prepared by the  
Office of Administration  
U.S. Nuclear Regulatory Commission  
Washington, DC 20555-0001  
(301-415-0955)

Available from

Superintendent of Documents  
U.S. Government Printing Office  
Mail Stop SSOP  
Washington, DC 20402-0001

A year's subscription consists of 12 softbound issues,  
4 indexes, and 2-4 hardbound editions for this publication.

Single copies of this publication  
are available from  
National Technical Information Service  
Springfield, VA 22161-0002

Errors in this publication may be reported to the  
Office of Administration  
U.S. Nuclear Regulatory Commission  
Washington, DC 20555-0001  
(301-415-0955)

## Foreword

Digests and indexes for issuances of the Commission (CLI), the Atomic Safety and Licensing Board Panel (LBP), the Administrative Law Judges (ALJ), the Directors' Decisions (DD), and the Decisions on Petitions for Rulemaking (DPRM) are presented in this document. These digests and indexes are intended to serve as a guide to the issuances.

Information elements common to the cases heard and ruled upon are:

- Case name (owner(s) of facility)
- Full text reference (volume and pagination)
- Issuance number
- Issues raised by appellants
- Legal citations (cases, regulations, and statutes)
- Name of facility, Docket number
- Subject matter of issues and/or rulings
- Type of hearing (operating license, operating license amendment, etc.)
- Type of issuance (memorandum, order, decision, etc.)

These information elements are displayed in one or more of five separate formats arranged as follows:

### 1. Case Name Index

The case name index is an alphabetical arrangement of the case names of the issuances. Each case name is followed by the type of hearing, the type of issuance, docket number, issuance number, and full text reference.

### 2. Headers and Digests

The headers and digests are presented in issuance number order as follows: the Commission (CLI), the Atomic Safety and Licensing Board Panel (LBP), the Administrative Law Judges (ALJ), the Directors' Decisions (DD), and the Decisions on Petitions for Rulemaking (DPRM).

The header identifies the issuance by issuance number, case name, facility name, docket number, type of hearing, date of issuance, and type of issuance.

The digest is a brief narrative of an issue followed by the resolution of the issue and any legal references used in resolving the issue. If a given issuance covers more than one issue, then separate digests are used for each issue and are designated alphabetically.

### 3. Legal Citations Index

This index is divided into four parts and consists of alphabetical or alpha-numerical arrangements of Cases, Regulations, Statutes, and Others. These citations are listed as given in the issuances. Changes in regulations and statutes may have occurred to cause changes in the number or name and/or applicability of the citation. It is therefore important to consider the date of the issuance.

The references to cases, regulations, statutes, and others are generally followed by phrases that show the application of the citation in the particular issuance. These phrases are followed by the issuance number and the full text reference.

#### **4. Subject Index**

Subject words and/or phrases, arranged alphabetically, indicate the issues and subjects covered in the issuances. The subject headings are followed by phrases that give specific information about the subject, as discussed in the issuances being indexed. These phrases are followed by the issuance number and the full text reference.

#### **5. Facility Index**

This index consists of an alphabetical arrangement of facility names from the issuance. The name is followed by docket number, type of hearing, date, type of issuance, issuance number, and full text reference.

## CASE NAME INDEX

### AMERENUE

COMBINED LICENSE; MEMORANDUM AND ORDER (Approving Settlement Agreement and Terminating Contested Adjudicatory Proceeding); Docket No. 52-037-COL (ASLBP No. 09-884-07-COL-BD01); LBP-09-23, 70 NRC 659 (2009)

### AMERGEN ENERGY COMPANY, LLC

LICENSE RENEWAL; MEMORANDUM AND ORDER; Docket No. 50-219-LR; CLI-06-24, 64 NRC 111 (2006); CLI-07-8, 65 NRC 124 (2007)

LICENSE RENEWAL; ORDER (Requesting Additional Briefs); Docket No. 50-219-LR; CLI-08-10, 67 NRC 357 (2008)

LICENSE RENEWAL; MEMORANDUM AND ORDER; Docket No. 50-219-LR; CLI-08-13, 67 NRC 396 (2008); CLI-08-23, 68 NRC 461 (2008); CLI-08-28, 68 NRC 658 (2008); CLI-09-7, 69 NRC 235 (2009)

LICENSE RENEWAL; MEMORANDUM AND ORDER (Denying New Jersey's Request for Hearing and Petition To Intervene, and Granting NIRS's Request for Hearing and Petition To Intervene); Docket No. 50-0219-LR (ASLBP No. 06-844-01-LR); LBP-06-7, 63 NRC 188 (2006)

LICENSE RENEWAL; MEMORANDUM AND ORDER (Denying NIRS's Motion for Leave To Add Contentions or Supplement the Basis of the Original Contention); Docket No. 50-0219-LR (ASLBP No. 06-844-01-LR); LBP-06-11, 63 NRC 391 (2006)

LICENSE RENEWAL; MEMORANDUM AND ORDER (Contention of Omission Is Moot, and Motions Concerning Mandatory Disclosure Are Moot); Docket No. 50-0219-LR (ASLBP No. 06-844-01-LR); LBP-06-16, 63 NRC 737 (2006)

LICENSE RENEWAL; MEMORANDUM AND ORDER (Granting Petition To File a New Contention); Docket No. 50-0219-LR (ASLBP No. 06-844-01-LR); LBP-06-22, 64 NRC 229 (2006)

LICENSE RENEWAL; INITIAL DECISION (Rejecting Citizens' Challenge to AmerGen's Application To Renew Its Operating License for the Oyster Creek Nuclear Generating Station); Docket No. 50-0219-LR (ASLBP No. 06-844-01-LR); LBP-07-17, 66 NRC 327 (2007)

LICENSE RENEWAL; MEMORANDUM AND ORDER (Denying Citizens' Motion to Reopen the Record and to Add a New Contention); Docket No. 50-0219-LR (ASLBP No. 06-844-01-LR); LBP-08-12, 68 NRC 5 (2008)

### ANDREW J. SIEMASZKO

ENFORCEMENT; MEMORANDUM AND ORDER; Docket No. IA-05-021; CLI-06-12, 63 NRC 495 (2006); CLI-06-16, 63 NRC 708 (2006)

ENFORCEMENT; ORDER (Approving Proposed Settlement Agreement and Dismissing Proceeding); Docket No. IA-05-021-EA (ASLBP No. 05-839-02-EA); LBP-09-11, 70 NRC 151 (2009)

### AREVA ENRICHMENT SERVICES, LLC

MATERIALS LICENSE; ORDER (Notice of Receipt of Application for License; Notice of Consideration of Issuance of License; Notice of Hearing and Commission Order; and Order Imposing Procedures for Access to Sensitive Unclassified Nonsafeguards Information and Safeguards Information for Contention Preparation); Docket No. 70-7015; CLI-09-15, 70 NRC 1 (2009)

### BABCOCK & WILCOX NUCLEAR OPERATIONS GROUP, INC.

ENFORCEMENT ACTION; MEMORANDUM AND ORDER (Approving Proposed Settlement Agreement and Dismissing Proceeding); Docket No. 70-27-EA (ASLBP No. 10-902-01-EA-BD01); LBP-10-18, 72 NRC 519 (2010)

## CASE NAME INDEX

CALVERT CLIFFS 3 NUCLEAR PROJECT, LLC  
COMBINED LICENSE; MEMORANDUM AND ORDER; Docket No. 52-016-COL; CLI-09-20, 70 NRC 911 (2009)  
COMBINED LICENSE; MEMORANDUM AND ORDER (Ruling on Joint Petitioners' Standing and Contentions); Docket No. 52-016-COL (ASLBP No. 09-874-02-COL-BD01); LBP-09-4, 69 NRC 170 (2009)  
COMBINED LICENSE; MEMORANDUM AND ORDER (Granting Motion for Summary Disposition of Contention 2); Docket No. 52-016-COL (ASLBP No. 09-874-02-COL-BD01); LBP-09-15, 70 NRC 198 (2009)  
COMBINED LICENSE; ORDER (Ruling on Intervenor's Proposed New Contention 10); Docket No. 52-016-COL (ASLBP No. 09-874-02-COL-BD01); LBP-10-24, 72 NRC 720 (2010)

CAROLINA POWER & LIGHT COMPANY  
LICENSE RENEWAL; MEMORANDUM AND ORDER (Ruling on Standing and Contentions of Petitioners North Carolina Waste Awareness and Reduction Network and Nuclear Information and Resource Service); Docket No. 50-400-LR (ASLBP No. 07-855-02-LR-BD01); LBP-07-11, 66 NRC 41 (2007)  
REQUEST FOR ACTION; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206; Docket Nos. 50-400, 50-261; DD-06-1, 63 NRC 133 (2006)  
REQUEST FOR ACTION; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206; Docket No. 50-400 (License No. NPF-63); DD-07-3, 65 NRC 643 (2007)

CBS CORPORATION  
MATERIALS LICENSE; MEMORANDUM AND ORDER; Docket No. 70-00698; CLI-07-15, 65 NRC 221 (2007)

CITY PUBLIC SERVICE BOARD acting for the CITY OF SAN ANTONIO, TEXAS  
COMBINED LICENSE; MEMORANDUM AND ORDER (Affirming Denial of Access to SUNSI); Docket Nos. 52-012-COL, 52-013-COL (ASLBP No. 09-883-06-COL-BD01); LBP-09-5, 69 NRC 303 (2009)

COGEMA MINING, INC.  
MATERIALS LICENSE RENEWAL; MEMORANDUM AND ORDER (Ruling on Petition for Review and Request for Hearing); Docket No. 40-08502-MLR (ASLBP No. 09-887-01-MLR-BD01); LBP-09-13, 70 NRC 168 (2009)

CONSTELLATION ENERGY GROUP, INC.  
LICENSE TRANSFER; MEMORANDUM AND ORDER; Docket Nos. 50-317-LT-2, 50-318-LT-2, 72-8-LT-2, 50-220-LT-3, 50-410-LT-3, 50-244-LT-2, 50-250-LT, 50-251-LT, 50-335-LT, 50-389-LT, 50-443-LT, 50-331-LT; CLI-06-21, 64 NRC 30 (2006)  
REQUEST FOR ACTION; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206; Docket No. 50-244; DD-06-1, 63 NRC 133 (2006)

CONSUMERS ENERGY COMPANY  
LICENSE TRANSFER; MEMORANDUM AND ORDER; Docket No. 50-255-LT; CLI-07-18, 65 NRC 399 (2007)  
LICENSE TRANSFER; MEMORANDUM AND ORDER; Docket Nos. 50-155-LT, 72-043-LT; CLI-07-19, 65 NRC 423 (2007); CLI-07-21, 65 NRC 519 (2007)  
LICENSE TRANSFER; MEMORANDUM AND ORDER; Docket No. 50-255-LT; CLI-07-22, 65 NRC 525 (2007)

CROW BUTTE RESOURCES, INC.  
LICENSE RENEWAL; MEMORANDUM AND ORDER (Ruling on Hearing Requests); Docket No. 40-8943 (ASLBP No. 08-867-02-MLA-BD01); LBP-08-24, 68 NRC 691 (2008)  
LICENSE RENEWAL; ORDER (Ruling on Motion to Admit New Contention); ORDER (Ruling on Motion to Admit New Contention); LBP-08-27, 68 NRC 951 (2008)  
MATERIALS LICENSE AMENDMENT; MEMORANDUM AND ORDER; Docket No. 40-8943-MLA (License Renewal); CLI-09-9, 69 NRC 331 (2009); CLI-09-12, 69 NRC 535 (2009)  
MATERIALS LICENSE AMENDMENT; MEMORANDUM AND ORDER (Ruling on Standing and Contentions of Petitioners Owe Aku, Bring Back the Way; Western Nebraska Resources Council; Slim Buttes Agricultural Development Corporation; Debra L. White Plume; and Thomas Kanatakeniate Cook); Docket No. 40-8943 (ASLBP No. 07-859-03-MLA-BD01); LBP-08-6, 67 NRC 241 (2008)

## CASE NAME INDEX

MATERIALS LICENSE AMENDMENT; MEMORANDUM AND ORDER (Ruling on Foreign Ownership and Arsenic Contentions and Other Pending Matters); Docket No. 40-8943 (ASLBP No. 07-859-03-MLA-BD01); LBP-09-1, 69 NRC 11 (2009)

DALE L. MILLER  
ENFORCEMENT; ORDER (Approving Proposed Settlement and Dismissing Proceeding); Docket No. IA-05-053 (ASLBP No. 06-846-02-EA); LBP-06-21, 64 NRC 219 (2006)

DARYL M. SHAPIRO  
ENFORCEMENT; MEMORANDUM AND ORDER; NRC Investigation No. 2-2006-17; CLI-08-6, 67 NRC 179 (2008)

DAVID B. KUHL, II  
REACTOR OPERATOR LICENSE; MEMORANDUM AND ORDER (Regarding Request for Hearing); Docket No. 55-62335-SP (ASLBP No. 09-891-01-SP-BD01); LBP-09-14, 70 NRC 193 (2009)

DAVID GEISEN  
ENFORCEMENT; MEMORANDUM AND ORDER; Docket No. IA-05-052; CLI-06-19, 64 NRC 9 (2006); CLI-07-6, 65 NRC 112 (2007); CLI-09-23, 70 NRC 935 (2009); CLI-10-23, 72 NRC 210 (2010)  
ENFORCEMENT; MEMORANDUM AND ORDER (Denying Government's Request To Delay Proceeding); Docket No. IA-05-052 (ASLBP No. 06-845-01-EA); LBP-06-13, 63 NRC 523 (2006)  
ENFORCEMENT; MEMORANDUM AND ORDER (Ruling on Motion To Compel Production); Docket No. IA-05-052 (ASLBP No. 06-845-01-EA); LBP-06-25, 64 NRC 367 (2006)  
ENFORCEMENT; INITIAL DECISION; Docket No. IA-05-052 (ASLBP No. 06-845-01-EA); LBP-09-24, 70 NRC 676 (2009)

DAVID H. HAWES  
SPECIAL PROCEEDING; ORDER (Approving Settlement Agreement and Terminating Proceeding); Docket No. 55-22685-SP (ASLBP No. 05-840-01-SP); LBP-06-2, 63 NRC 80 (2006)

DETROIT EDISON COMPANY  
COMBINED LICENSE; MEMORANDUM AND ORDER; Docket No. 52-033-COL; CLI-09-4, 69 NRC 80 (2009); CLI-09-22, 70 NRC 932 (2009)  
COMBINED LICENSE; MEMORANDUM AND ORDER (Ruling on Hearing Requests); Docket No. 52-033-COL (ASLBP No. 09-880-05-COL-BD01); LBP-09-16, 70 NRC 227 (2009)  
COMBINED LICENSE; ORDER (Ruling on Proposed New Contentions 15 and 16); Docket No. 52-033-COL (ASLBP No. 09-880-05-BD01); LBP-10-9, 71 NRC 493 (2010)  
ENFORCEMENT; MEMORANDUM AND ORDER; Docket No. 72-72-EA; CLI-10-3, 71 NRC 49 (2010)  
LICENSE MODIFICATION; MEMORANDUM AND ORDER (Ruling on Standing and Contention Admissibility); Docket No. 72-71-EA (ASLBP No. 09-888-03-EA-BD01); LBP-09-20, 70 NRC 565 (2009)

DHIRAJ SONI  
ENFORCEMENT; ORDER (Accepting Proposed Settlement and Dismissing Proceeding); Docket Nos. IA-08-023, IA-08-022 (EA-08-174) (ASLBP Nos. 09-882-02-EA-BD01, 09-881-01-EA-BD01); LBP-09-12, 70 NRC 159 (2009)

DOMINION NUCLEAR CONNECTICUT, INC.  
LICENSE RENEWAL; MEMORANDUM OPINION AND ORDER; Docket Nos. 50-336-LR, 50-423-LR; CLI-06-4, 63 NRC 32 (2006)  
OPERATING LICENSE AMENDMENT; MEMORANDUM AND ORDER; Docket No. 50-423-OLA; CLI-08-17, 68 NRC 231 (2008); CLI-09-5, 69 NRC 115 (2009)  
OPERATING LICENSE AMENDMENT; MEMORANDUM AND ORDER (Ruling on Petition To Intervene and Request for Hearing); Docket No. 50-423-OLA (ASLBP No. 08-862-01-OLA-BD01); LBP-08-9, 67 NRC 421 (2008)

DOMINION NUCLEAR NORTH ANNA, LLC  
EARLY SITE PERMIT; ORDER; Docket No. 52-008-ESP; CLI-07-23, 66 NRC 35 (2007)  
EARLY SITE PERMIT; MEMORANDUM AND ORDER; Docket No. 52-008-ESP; CLI-07-27, 66 NRC 215 (2007)

## CASE NAME INDEX

EARLY SITE PERMIT; MEMORANDUM AND ORDER (Granting Summary Disposition and Terminating Contested Proceeding); Docket No. 52-008-ESP (ASLBP No. 04-822-02-ESP); LBP-06-24, 64 NRC 360 (2006)

EARLY SITE PERMIT; INITIAL DECISION; Docket No. 52-008-ESP (ASLBP No. 04-822-02-ESP); LBP-07-9, 65 NRC 539 (2007)

DOMINION VIRGINIA POWER

COMBINED LICENSE; MEMORANDUM AND ORDER (Admitting Contention 10 in Part); Docket No. 52-017-COL (ASLBP No. 08-863-01-COL); LBP-09-27, 70 NRC 992 (2009)

COMBINED LICENSE; MEMORANDUM AND ORDER (Rulings on Motion to Dismiss Contention 10 and Proposed New Contention 11); Docket No. 52-017-COL (ASLBP No. 08-863-01-COL); LBP-10-17, 72 NRC 501 (2010)

DUKE ENERGY CAROLINAS, LLC

COMBINED LICENSE; MEMORANDUM AND ORDER; Docket Nos. 52-018-COL, 52-019-COL; CLI-09-21, 70 NRC 927 (2009)

COMBINED LICENSE; MEMORANDUM AND ORDER (Ruling on Petition for Intervention and Request for Hearing); Docket Nos. 52-018-COL, 52-019-COL (ASLBP No. 08-865-03-COL-BD01); LBP-08-17, 68 NRC 431 (2008)

DUKE ENERGY CORPORATION

REQUEST FOR ACTION; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206; Docket Nos. 50-369, 50-370, 50-413, 50-414; DD-06-1, 63 NRC 133 (2006)

EASTERN TESTING AND INSPECTION, INC.

ENFORCEMENT; ORDER (Accepting Proposed Settlement and Dismissing Proceeding); Docket Nos. IA-08-023, IA-08-022 (EA-08-174) (ASLBP Nos. 09-882-02-EA-BD01, 09-881-01-EA-BD01); LBP-09-12, 70 NRC 159 (2009)

ENERGYSOLUTIONS, LLC

IMPORT/EXPORT LICENSE; ORDER; Docket Nos. 110-05711 (Import), 110-05710 (Export); CLI-08-24, 68 NRC 491 (2008)

ENTERGY NUCLEAR FITZPATRICK, LLC

LICENSE TRANSFER; MEMORANDUM AND ORDER; Docket Nos. 50-333-LT-2, 72-12-LT (Consolidated); CLI-08-19, 68 NRC 251 (2008)

ENTERGY NUCLEAR GENERATION COMPANY

LICENSE RENEWAL; MEMORANDUM AND ORDER; Docket No. 50-293-LR; CLI-07-2, 65 NRC 10 (2007); CLI-07-3, 65 NRC 13 (2007); CLI-07-13, 65 NRC 211 (2007); CLI-08-2, 67 NRC 31 (2008); CLI-08-9, 67 NRC 353 (2008); CLI-09-10, 69 NRC 521 (2009)

LICENSE RENEWAL; MEMORANDUM AND ORDER (Requesting Additional Briefing); Docket No. 50-293-LR; CLI-09-11, 69 NRC 529 (2009)

LICENSE RENEWAL; MEMORANDUM AND ORDER; Docket No. 50-293-LR; CLI-10-11, 71 NRC 287 (2010); CLI-10-14, 71 NRC 449 (2010); CLI-10-15, 71 NRC 479 (2010); CLI-10-22, 72 NRC 202 (2010); CLI-10-28, 72 NRC 553 (2010)

LICENSE RENEWAL; MEMORANDUM AND ORDER (Ruling on Standing and Contentions of Petitioners Massachusetts Attorney General and Pilgrim Watch); Docket No. 50-293-LR (ASLBP No. 06-848-02-LR); LBP-06-23, 64 NRC 257 (2006)

LICENSE RENEWAL; MEMORANDUM AND ORDER (Ruling on Entergy's Motion for Summary Disposition of Pilgrim Watch Contention I, Regarding Adequacy of Aging Management Program for Buried Pipes and Tanks and Potential Need for Monitoring Wells To Supplement Program); Docket No. 50-293-LR (ASLBP No. 06-848-02-LR); LBP-07-12, 66 NRC 113 (2007)

LICENSE RENEWAL; MEMORANDUM AND ORDER (Ruling on Motion To Dismiss Petitioners' Contention 3 Regarding Severe Accident Mitigation Alternatives); Docket No. 50-293-LR (ASLBP No. 06-848-02-LR); LBP-07-13, 66 NRC 131 (2007)

LICENSE RENEWAL; INITIAL DECISION; Docket No. 50-293-LR (ASLBP No. 06-848-02-LR); LBP-08-22, 68 NRC 590 (2008)

LICENSE TRANSFER; MEMORANDUM AND ORDER; Docket No. 50-293-LT-2 (Consolidated); CLI-08-19, 68 NRC 251 (2008)

## CASE NAME INDEX

ENTERGY NUCLEAR INDIAN POINT 2, LLC  
LICENSE TRANSFER; MEMORANDUM AND ORDER; Docket No. 50-247-LT-2 (Consolidated);  
CLI-08-19, 68 NRC 251 (2008)

ENTERGY NUCLEAR INDIAN POINT 3, LLC  
LICENSE TRANSFER; MEMORANDUM AND ORDER; Docket No. 50-286-LT-2 (Consolidated);  
CLI-08-19, 68 NRC 251 (2008)

ENTERGY NUCLEAR OPERATIONS, INC.  
LICENSE RENEWAL; ORDER; Docket No. 50-271-LR; CLI-06-26, 64 NRC 225 (2006)

MATERIALS LICENSE AMENDMENT; MEMORANDUM AND ORDER (Ruling on Request for Hearing); Docket No. 70-36-MLA (ASLBP No. 10-894-01-MLA-BD01); LBP-09-28, 70 NRC 1019 (2009)

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- CLI-06-1 HYDRO RESOURCES, INC. (P.O. Box 777, Crownpoint, New Mexico 87313), Docket No. 40-8968-ML; MATERIALS LICENSE; January 11, 2006; MEMORANDUM AND ORDER
- A In Phase II of this materials license proceeding, the Commission denies review of an Atomic Safety and Licensing Board decision on groundwater protection, groundwater restoration, and surety estimates.
- B Where a Presiding Officer has reviewed an extensive record in detail, with the assistance of a technical advisor, the Commission is generally disinclined to upset his findings and conclusions, particularly on matters involving fact-specific issues or where the affidavits or submissions of experts must be weighed.
- C Post-hearing resolution of licensing issues must not be employed to obviate the basic findings prerequisite to a license, including a reasonable assurance that the facility can be operated without endangering the health and safety of the public.
- D Verification by the NRC Staff that a licensee complies with preapproved design or testing criteria is a highly technical inquiry not particularly suitable for hearing.
- CLI-06-2 FIRSTENERGY NUCLEAR OPERATING COMPANY (Beaver Valley Power Station, Units 1 and 2; Davis-Besse Nuclear Power Station, Unit 1; Perry Nuclear Power Plant, Unit 1), Docket Nos. 50-334-LT, 50-346-LT, 50-412-LT, 50-440-LT; LICENSE TRANSFER; January 31, 2006; MEMORANDUM AND ORDER
- A To qualify for intervenor status, a petitioner must, among other things, demonstrate standing. 10 C.F.R. § 2.309(d). As part of that demonstration, we require a showing that the petitioner “has suffered [or will suffer] a distinct and palpable harm that constitutes injury-in-fact within the zone of interests arguably protected by the governing statute [and that this] injury can fairly be traced to the challenged action” (here, the approval of the license transfer). *See, e.g., Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), CLI-96-1, 43 NRC 1, 6 (1996).
- B “Transmission services” is a concept central to our determination of standing in this proceeding; it refers to the transport of electricity on the wholesale market to local distribution companies. By contrast, the term “distribution” refers generally to the transport of electricity by local distribution companies to the end users of the electricity (e.g., homes, shops, office buildings, factories). *See generally Consumers Power Co.* (Midland Plant, Units 1 and 2), ALAB-452, 6 NRC 892, 973-74 & n.352 (1977).
- C “[T]he coordination services market is a market for the exchange of surplus electric power between utilities on a nonfirm basis and the joint and coordinated operation by utilities of their systems of generation and distribution, all with the purpose of achieving maximum efficiency and economies in their overall power supply operations.” *Toledo Edison Co.* (Davis-Besse Nuclear Power Station, Units 1, 2, and 3), ALAB-560, 10 NRC 265, 301 (1979) (opinion of Mr. Sharfman). *See also Midland*, ALAB-452, 6 NRC at 902-03 (citations and footnotes omitted): “‘Coordination’ refers to the electric power utilities’ practice of interchanging power and sharing responsibility for building new generating facilities to achieve economic benefits unattainable by an individual utility acting alone. The practice encompasses both ‘operational coordination,’ which is the unified control of generation and transmission facilities, and the sharing of one or more of reserve, emergency, maintenance, economy, dump, seasonal and time diversity power or energy, and ‘developmental coordination,’ which includes the cooperative planning of new facilities to allow their construction as joint ventures or on staggered time schedules.” As these definitions indicate, the vast majority of coordination services involve the supply of power rather than its transmission.
- D A statement purporting to show a real potential for injury sufficient for standing will be rejected if it is too vague and general. *See, e.g., GPU Nuclear, Inc.* (Oyster Creek Nuclear Generating Station), CLI-00-6, 51 NRC 193, 203 (2000). *See also Pacific Gas and Electric Co.* (Diablo Canyon Nuclear Power Plant, Units 1 and 2), CLI-02-16, 55 NRC 317, 337 (2002).

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- E Our rules require that motions be filed no more than 10 days after “the occurrence or circumstance from which the motion arises.” 10 C.F.R. § 2.323(a).
- CLI-06-3 PRIVATE FUEL STORAGE, L.L.C. (Independent Spent Fuel Storage Installation), Docket No. 72-22-ISFSI; INDEPENDENT SPENT FUEL STORAGE INSTALLATION; January 31, 2006; MEMORANDUM AND ORDER
- A Commission jurisdiction to reopen a proceeding continues until a license is actually issued. Until then, “there remains in existence an operating license ‘proceeding’” that can be “reopened.” *See Texas Utilities Electric Co.* (Comanche Peak Steam Electric Station, Units 1 and 2), CLI-92-1, 35 NRC 1, 6 n.5 (1992). The possibility of reopening an adjudicatory record terminates when the license is issued. Until that point in time, the Commission still has authority to add license conditions or to supplement an environmental impact statement (EIS) if intervenors or the NRC Staff uncover significant, previously unconsidered, and newly arising safety concerns or environmental effects.
- B For NEPA purposes, the “major federal action” triggering the Environmental Impact Statement (EIS) is issuing the license, not adjudicating the license.
- C When the record of a proceeding has long been closed, the burden on a party seeking to reopen the record is significant. The Commission need not reopen adjudicatory proceedings simply on a claim of new evidence. Of necessity there will be a gap in time between the closing of the record and the rendering of a decision. The hearing process would never end if the parties could demand the record be reopened any time new or additional evidence is found. *See Vermont Yankee Nuclear Power Corp. v. Natural Resources Defense Council, Inc.*, 435 U.S. 519, 554-55 (1978) (internal quotation omitted). *See also Northern Lines Merger Cases*, 396 U.S. 491, 521 (1970).
- D A supplemental EIS is needed where new information “raises new concerns of sufficient gravity such that another, formal in-depth look at the environmental consequences of the proposed action is necessary.” *Wisconsin v. Weinberger*, 745 F.2d 412, 418 (7th Cir. 1984). *See Marsh v. Oregon Natural Resources Council*, 490 U.S. 360, 374 (1989). The new information must raise significant environmental impacts that may affect the overall view of the project’s impacts. *National Committee for the New River, Inc. v. Federal Energy Regulatory Commission*, 373 F.3d 1323, 1330 (D.C. Cir. 2004).
- E The Environmental Impact Statement may need to be supplemented when new evidence shows there may be environmental impacts that were not analyzed in the initial EIS. A supplemental EIS is not necessarily required when the new information is mere additional evidence supporting the likelihood of an uncertain environmental impact that was considered in the EIS.
- F New evidence that potentially alters the financial cost-benefit analysis, but which does not show a significant impact on the physical environment, does not warrant supplementing the EIS. While economic benefits are properly considered in an EIS, NEPA does not transform financial costs and benefits into environmental costs and benefits.
- CLI-06-4 DOMINION NUCLEAR CONNECTICUT, INC. (Millstone Nuclear Power Station, Units 2 and 3), Docket Nos. 50-336-LR, 50-423-LR; LICENSE RENEWAL; January 31, 2006; MEMORANDUM OPINION AND ORDER
- A When a licensing board has already dismissed the case, the licensing board no longer has jurisdiction over a motion to reopen. *See, e.g., Philadelphia Electric Co.* (Limerick Generating Station, Units 1 and 2), ALAB-823, 22 NRC 773, 775 (1985).
- B Until a license has actually been issued, the Commission itself (as opposed to the Licensing Board) retains jurisdiction to reopen a closed case. *See, e.g., Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-06-3, 63 NRC 19 (2006); *Texas Utilities Electric Co.* (Comanche Peak Steam Electric Station, Unit 2), CLI-93-1, 37 NRC 1 (1993); *Texas Utilities Electric Co.* (Comanche Peak Steam Electric Station, Units 1 and 2), CLI-92-1, 35 NRC 1 (1992).
- C A difference of opinion over a scientific question does not constitute fraud or misconduct on the part of the NRC Staff.
- D A motion to reopen a closed proceeding must satisfy the requirements of 10 C.F.R. § 2.326.
- E A motion to reopen that does not satisfy the Commission’s procedural requirements but which arguably raises a significant safety or environmental issue may be referred to the Staff under 10 C.F.R. § 2.206.
- F In a license renewal proceeding, petitioners must demonstrate that an issue “focuses on ‘the potential impacts of an additional 20 years of nuclear power plant operation,’ not on everyday operational issues.” *Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-04-36, 60 NRC

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

631, 637-38 (2004), quoting *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), CLI-01-17, 54 NRC 3, 7 (2001).

- G A motion to reopen a closed proceeding must be timely. 10 C.F.R. § 2.326(a). A pleading cannot be timely when the petitioner does not explain why the motion was filed 11 months after the NRC terminated the case, 9 months after the petitioner first raised the particular issue in its comments, and 4 months after the Staff issued the final document containing the position the petitioner disputes.
- H If a party seeks to reopen a closed record and, in the process raises an issue that was not an admitted contention in the initial proceeding, it must also demonstrate that raising this issue now satisfies the requirements for a nontimely or “late-filed” contention. 10 C.F.R. § 2.326(d).
- I The NRC will not consider a last-second reopening of an adjudication and a restart of licensing board proceedings based on a pleading that is defective on its face.
- J Based upon an attorney’s previous disregard of the NRC’s practices and procedures, the Commission may order the Office of the Secretary to screen all filings bearing the offender’s signature and not to accept or docket them unless they meet all procedural requirements. 10 C.F.R. § 2.346(h).
- K An order denying a motion to reopen renders moot a petitioner’s request for leave to submit an amended petition to intervene.
- CLI-06-5 U.S. DEPARTMENT OF ENERGY (High-Level Waste Repository), Docket No. PAPO-00 (Pre-Application Matters); PRE-LICENSE APPLICATION MATTERS; February 2, 2006; MEMORANDUM AND ORDER
- A The threshold question in determining if certain items must be made available on the High-Level Waste Repository Licensing Support Network is whether the particular items fall within any of the three classes of documentary material, as defined in 10 C.F.R. § 2.1001.
- B Drafts of the license application are not Class 1, Class 2, or Class 3 documentary material under Subpart J, so the regulations do not require making draft license applications available on the Licensing Support Network.
- C Both Class 1 and Class 2 are tied to a “reliance” criterion. Class 1 covers information a party intends to rely upon in support of its position. Class 2 documentary material is material that the party in possession knows does not support its position. The material that falls within Class 1 or Class 2 is the underlying *independent* documentary material used (or not used if nonsupporting) by the Department of Energy in formulating its license application.
- D Class 3 documents are not tied to any “reliance” criterion. Class 3 documentary materials are “reports and studies” prepared on behalf of potential parties to the proceeding. Class 3 documentary material must satisfy two conditions. First, Class 3 documentary materials must be “reports and studies” that are relevant to the issues listed in the Topical Guidelines contained in Regulatory Guide 3.69. Second, the reports and studies must be relevant to the license application.
- E The question whether a draft is a “circulated” or a “preliminary” draft can arise in connection with Class 3 documentary material, although the Commission did not need to reach that question here. The distinction between “preliminary” and “circulated” drafts is a significant distinction in the Commission’s Subpart J regulations.
- F The purpose of 10 C.F.R. § 2.1003 is to define the *availability* of material, not to provide *definitions* of types of materials; definitions are contained in 10 C.F.R. § 2.1001. To be considered “documentary material,” a “basic licensing document” (10 C.F.R. § 2.1003(b)) must still meet the definition of Class 3 documentary material (10 C.F.R. § 2.1001).
- G The interpretation of a regulation, like the interpretation of a statute, begins “with the language and structure of the provision itself. Further, the entirety of the provision must be given effect. Although administrative history and other available guidance may be consulted for background information and the resolution of ambiguities in a regulation’s language, its interpretation may not conflict with the plain meaning of the wording used in that regulation.”
- CLI-06-6 NUCLEAR MANAGEMENT COMPANY, LLC (Monticello Nuclear Generating Plant), Docket No. 50-263-LR; LICENSE RENEWAL; February 2, 2006; MEMORANDUM AND ORDER
- A By our regulations, a notice of appeal must be accompanied by a brief. *See* 10 C.F.R. § 2.311(a). Failure to submit a brief, including legal argument and citations to the record, is reason enough to reject an appeal.

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- B The NRC follows judicial concepts of standing in its own proceedings. *See, e.g., U.S. Department of Energy* (Plutonium Export License), CLI-04-17, 59 NRC 357, 363 (2004); *Sacramento Municipal Utility District* (Rancho Seco Nuclear Generating Station), CLI-92-2, 35 NRC 47, 56 (1992).
- C The Board properly found no standing where Petitioner failed to demonstrate that it, or any of its members, would suffer any concrete or particularized harm from the proposed license renewal.
- D It is our customary practice to disregard briefs that contain personal attacks on the Board. *See, e.g., Metropolitan Edison Co.* (Three Mile Island Nuclear Station, Unit 2), ALAB-474, 7 NRC 746, 748-49 (1978); *Louisiana Power & Light Co.* (Waterford Steam Electric Station, Unit 3), ALAB-121, 6 AEC 319, 320 (1973). Insulting language does nothing to advance a petitioner's arguments or the Commission's review, and will not be tolerated.
- CLI-06-7 HYDRO RESOURCES, INC. (P.O. Box 777, Crownpoint, New Mexico 87313), Docket No. 40-8968-ML; MATERIALS LICENSE; February 27, 2006; ORDER
- CLI-06-8 ENTERGY NUCLEAR VERMONT YANKEE, LLC, and ENTERGY NUCLEAR OPERATIONS, INC. (Vermont Yankee Nuclear Power Station), Docket No. 50-271-OLA; OPERATING LICENSE AMENDMENT; March 3, 2006; MEMORANDUM AND ORDER
- A A pending hearing does not delay a licensing decision. NRC regulations instruct the Staff "to issue its approval or denial of the application promptly" once it completes its own review of the application, notwithstanding the "pendency of any hearing." 10 C.F.R. § 2.1202(a).
- B After publishing its proposed findings for public comment, the Staff made a "no significant hazards consideration" finding and issued the power uprate amendment.
- C The Intervenor's request did not meet NRC standards for a stay. Mere speculation concerning a nuclear accident does not demonstrate immediate and irreparable harm necessary for a stay.
- D An NRC Staff decision to grant a power uprate license amendment did not leave Intervenor without "effective redress," because the license amendment can be revoked or conditioned after a full hearing if the Board determines the license amendment should not have been granted.
- E Granting the license amendment prior to a Board decision did not circumvent Intervenor's right to a hearing. The Atomic Energy Act expressly authorizes the NRC to grant license amendments, and to make them immediately effective "in advance of the holding and completion of any required hearing," so long as the NRC determines that the amendment involves "no significant hazards consideration." *See* Atomic Energy Act § 189a(2)(A), 42 U.S.C. § 2239a(2)(A). *See also* 10 C.F.R. § 2.1202(a); 10 C.F.R. § 50.58(b)(6); 10 C.F.R. § 50.92.
- CLI-06-9 USEC, INC. (American Centrifuge Plant), Docket No. 70-7004; MATERIALS LICENSE; April 3, 2006; MEMORANDUM AND ORDER
- A The Commission's contention requirements are deliberately strict, and the Commission will reject any contention that does not satisfy these requirements. In NRC practice, "[m]ere 'notice pleading' does not suffice." Our rules call for "a clear statement of the basis for the contentions and the submission of supporting information and references to specific documents and sources that establish the validity of the contention."
- B The Commission's regulations governing appeals from the denial of intervention (10 C.F.R. § 2.311) provide for a notice of appeal with a supporting brief, and for a brief opposing the appeal, but do not provide for reply briefs.
- C The Commission will not permit, in a reply brief, the filing of new arguments or new legal theories that opposing parties have not had the opportunity to address.
- D Pursuant to NRC regulation (10 C.F.R. § 51.45(b)) "[t]he environmental report shall contain . . . a description of the environment *affected*," with impacts on the environment "discussed in proportion to their significance." This regulation does not require a discussion of *unaffected* areas or sites.
- E While it is true that no nomination or formal determination of eligibility is necessary to trigger a National Historic Preservation Act review, a site must be within the area of potential effects and the project must affect the site to trigger a review of that site.
- F Under the Commission's regulations, for issues arising under the National Environmental Policy Act, a petitioner must file contentions based on the applicant's environmental report. The petitioner may amend those contentions or file new contentions if the NRC draft or final environmental impact statement, environmental assessment, or any supplements relating thereto, differs significantly from the data or conclusions in the applicant's documents.

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- G Where a contention based on an applicant's environmental report is "superseded by the subsequent issuance of licensing-related documents" — whether an environmental impact statement or an applicant's response to a request for additional information — the contention must be "disposed of or modified." Thus, where a contention alleges the omission of particular information or an issue from an application, and the information is later supplied by the applicant or considered by the NRC Staff in an environmental impact statement, the contention "is moot."
- H The agency granting a license has the obligation to comply with the National Historic Preservation Act. Any contractual provision that purports to shift National Historic Preservation Act compliance responsibility from a third party to the prospective licensee cannot affect the NRC's statutory obligation to comply with that Act with respect to the licensing of the proposed project.
- I Under the National Environmental Policy Act, the consideration of alternatives is an integral part of the application process from the outset, with no preconditions. The National Historic Preservation Act also requires the NRC Staff to examine alternatives. But unlike the National Environmental Policy Act requirement, the National Historic Preservation Act requirement comes into play *only if* the project will have an adverse effect on historic properties, and *only after* that determination is made. In short, an adverse effect is a required precondition to the consideration of alternatives under the National Historic Preservation Act.
- CLI-06-10 USEC INC. (American Centrifuge Plant), Docket No. 70-7004; MATERIALS LICENSE; April 3, 2006; MEMORANDUM AND ORDER
- A The Commission affirms an Atomic Safety and Licensing Board decision that rejected all of the contentions submitted by Intervenors Portsmouth/Piketon Residents for Environmental Safety and Security (PRESS).
- B Since 1989, our contention rules have insisted upon some reasonably specific factual or legal basis for a petitioner's allegations. No contention will be admitted for litigation in any NRC adjudicatory proceeding unless the contention requirements are met.
- C We expect our licensing boards to examine cited materials to verify that they do, in fact, support a contention. But it is not up to the boards to search through pleadings or other materials to uncover arguments and support never advanced by the petitioners themselves; boards may not simply "infer" unarticulated bases of contentions. It is a contention's proponent, not the licensing board, that is responsible for formulating the contention and providing the necessary information to satisfy the basis requirement for a contention.
- D Absent extreme circumstances, we will not consider on appeal either new arguments or new evidence supporting a contention, which the Board never had the opportunity to consider.
- E When reviewing a license application filed by a private applicant, the agency may appropriately accord substantial weight to the preferences of the applicant and/or sponsor in the siting and design of the project and should take into account the needs and goals of the parties involved in the application.
- F Agencies need only consider those alternatives that can achieve the purposes of the project.
- G The mere fact that an application requests an exemption from a particular regulatory provision does not render an application deficient. Our regulations specifically allow the NRC to grant exemptions that will not threaten the common defense and security, or endanger life or property, and that are otherwise in the public interest.
- H An expert opinion that merely states a conclusion without providing a reasoned basis or explanation for that conclusion is inadequate because it deprives the Board of the ability to make the necessary, reflective assessment of the opinion.
- I Our page limits on briefs are intended to encourage parties to make their strongest arguments as concisely as possible. Thus, generalized claims followed by unelaborated references to oral arguments and multiple pages run afoul of our page limitation rules.
- J Contentions must be based on a genuine material dispute, not the possibility that petitioners, if they perform their own additional analyses may ultimately disagree with the application.
- CLI-06-11 HYDRO RESOURCES, INC. (P.O. Box 777, Crownpoint, New Mexico 87313), Docket No. 40-8968-ML; MATERIALS LICENSE; April 3, 2006; MEMORANDUM AND ORDER
- A The Commission has discretion to grant a petition for review, "giving due weight to the existence of a substantial question with respect to" any of the grounds listed (in the Commission's regulations) as potential justification for review. "Review of an initial decision . . . is purely discretionary . . . ."

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- B Legal determinations made on appeal in a case are controlling precedent, becoming the “law of the case,” for all later decisions in the same case, with only limited exceptions. The “law of the case” doctrine is “a salutary rule of policy and practice, grounded in important considerations related to stability in the decision[-]making process, predictability of results, proper working relationships between trial and appellate courts, and judicial economy.” A “prior decision should be followed unless: (1) the decision is clearly erroneous and its enforcement would work a manifest injustice, (2) intervening controlling authority makes reconsideration appropriate, or (3) substantially different evidence was adduced at a subsequent trial.”
- C Courts construe regulations in the same manner as they do statutes: by ascertaining the plain meaning of the regulation. “[A] basic tenet of statutory construction, equally applicable to regulatory construction, [is] that a statute should be construed so that effect is given to all its provisions . . . .” A “regulation should be construed to effectuate the intent of the enacting body. Such intent may be ascertained by considering the language used and the overall purpose of the regulation, and by reflecting on the practical effect of the possible interpretations.” “[A]dministrative history and other available guidance may be consulted for background information and the resolution of ambiguities in a regulation’s language . . . .”
- D We cannot apply new regulations retroactively absent clear evidence that Congress authorized, in the statute being implemented, the issuance of retroactive regulations, and that the statute intended the regulations to be applied retroactively.
- E While agencies may coordinate their National Environmental Policy Act and National Historic Preservation Act reviews, the reviews remain separate, and the regulations associated with each Act must be independently satisfied — “coordination” does not mean that National Environmental Policy Act regulations govern National Historic Preservation Act analysis or vice versa.
- CLI-06-12 ANDREW SIEMASZKO, Docket No. IA-05-021; ENFORCEMENT; May 3, 2006; MEMORANDUM AND ORDER
- A The Commission’s regulations do not provide a right to appeal interlocutory orders.
- B Section 2.341(f)(2) of 10 C.F.R. allows discretionary interlocutory review if the challenged Board decision threatens “immediate and serious irreparable impact” or “[a]ffects the basic structure of the proceeding in a pervasive or unusual manner.” The effect of the Board decision in this proceeding is “pervasive” and “unusual” — both in time and scope — because the Board’s March 2 Order stops the entire proceeding in its tracks and because the Commission and its boards have rarely, if ever, held an enforcement proceeding in abeyance for an indeterminate length of time.
- C In *Oncology Services Corp.*, CLI-93-17, 38 NRC 44 (1993), the Commission held that five factors need to be balanced when deciding whether to delay an enforcement proceeding: length of delay, reason for delay, prejudice to the recipient of the enforcement order, risk of erroneous deprivation, and recipient’s assertion of a right to a hearing.
- D The Commission usually defers to boards’ fact-based decisions. *See, e.g., Tennessee Valley Authority* (Watts Bar Nuclear Plant, Unit 1; Sequoyah Nuclear Plant, Units 1 and 2; Browns Ferry Nuclear Plant, Units 1, 2, and 3), CLI-04-24, 60 NRC 160, 189 (2004).
- E The Commission’s decision in *Oncology*, while not specifying the exact point after which a delay in an enforcement proceeding becomes unacceptable, does indicate that delay is particularly problematic in cases involving witness testimony. *Oncology Services Corp.*, CLI-93-17, 38 NRC at 53. In witness-intensive cases, delay would “be tolerable only if the Staff can demonstrate an important government interest coupled with factors minimizing the risk of an erroneous deprivation.” *Id.*
- F Enforcement cases are, by their very nature, fact-specific and typically rely far more on witness testimony than do licensing adjudications. For this reason, the Commission believes that the testimony of witnesses will likely prove significant in such proceedings. In theory at least, a long delay could result in the fading of witnesses’ memories and runs the risk of witnesses’ unavailability. *Id.*, CLI-93-17, 38 NRC at 59. *See also Dr. James E. Bauer* (Order Prohibiting Involvement in NRC-Licensed Activities), LBP-94-40, 40 NRC 323, 330 (1994), *petition for review denied on other grounds*, CLI-95-3, 41 NRC 245 (1995).
- G Where the length of the requested delay would depend on factors outside the Commission’s control, the absence of control weighs against holding the case in abeyance. *Hydro Resources, Inc.* (P.O. Box 15910, Rio Rancho, NM 87174), CLI-01-4, 53 NRC 31, 39 (2001).
- H The party supporting abeyance based on the pendency of a criminal case involving the same facts carries the burden of proof (10 C.F.R. § 2.325) and must make at least *some* showing of potential

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- detrimental effect on the criminal case. *See generally Oncology Services Corp.*, CLI-93-17, 38 NRC at 53-57.
- I The weight to be given the proponent's reason for seeking an abeyance turns on the quality of the factual record on which the proponent relies.
- J When issuing the Federal Rules of Criminal Procedure, the Supreme Court (with implicit congressional approval, 28 U.S.C. §§ 2072-2074) prescribed the disclosures necessary for a fair balance between criminal defendants' and prosecutors' interests.
- K The Commission (and its Board's) decision to pay heed to DOJ's concern about possible prejudice to its criminal prosecution in this case is driven to a considerable extent by the Commission's long-established policy — memorialized in a formal Memorandum of Understanding — of deferring to DOJ when it seeks a delay in our enforcement proceedings pending the conclusion of DOJ's own criminal investigations or proceedings. Memorandum of Understanding Between the Nuclear Regulatory Commission and the Department of Justice, 53 Fed. Reg. 50,317, 50,319 (Dec. 14, 1988). The Commission does not lightly second-guess DOJ's views on whether, and how, premature disclosures might affect its criminal prosecutions.
- L When determining whether good cause exists for holding a proceeding in abeyance, the decisionmaker "must consider both the public interest as well as the interests of the person subject to the immediately effective order," and "[t]he determination of whether a delay is reasonable depends on the facts of a particular case and requires a balancing of the[se] competing interests." *Oncology Services Corp.*, CLI-93-17, 38 NRC at 49-50 (footnote omitted).
- M An indeterminate length of the delay (the first *Oncology* factor) weighs against granting an abeyance, due to the delay's potentially adverse effect on testimony.
- N An actual assertion of a hearing right (*Oncology*'s fifth factor) weighs against granting the abeyance. But this factor is, by its nature, merely procedural, and consequently is of little importance when balancing real-life equities.
- CLI-06-13 PA'INA HAWAII, LLC, Docket No. 30-36974-ML; MATERIALS LICENSE; May 15, 2006; MEMORANDUM AND ORDER
- A The Commission's procedural rules allow an applicant (here Pa'ina) the right to file an interlocutory appeal of board orders admitting contentions, but only if the appeal challenges the admissibility of all admitted contentions. 10 C.F.R. § 2.311(c). *See also Exelon Generation Co., LLC* (Early Site Permit for the Clinton ESP Site), CLI-04-31, 60 NRC 461, 468 (2004). This procedural requirement is well established in Commission jurisprudence and in fact long precedes the promulgation of our current Rule 2.311(c), *supra*. *See* 10 C.F.R. § 2.714a(c) (2004) (rescinded); *Northern States Power Co.* (Tyrone Energy Park, Unit 1), ALAB-492, 8 NRC 251, 252 (1978) (challenges to the admissibility of less than all admitted contentions must "abide the end of the case").
- CLI-06-14 HYDRO RESOURCES, INC. (P.O. Box 777, Crownpoint, New Mexico 87313), Docket No. 40-8968-ML; MATERIALS LICENSE; May 16, 2006; MEMORANDUM AND ORDER
- A The NRC does not regulate conventional uranium mining. The Atomic Energy Act requires an NRC license to transfer or receive in interstate commerce any source material (such as uranium ore) only "after removal from its place of deposit in nature." Atomic Energy Act of 1954, as amended, § 62, 42 U.S.C. § 2092. This provision precludes the NRC from exercising jurisdiction over conventional uranium mining. *See, e.g., Rochester Gas and Electric Corp.* (Sterling Power Project Nuclear Unit No. 1), ALAB-507, 8 NRC 551, 554 n.7 (1978) ("the Commission's authority over uranium ore and other 'source material' attaches only 'after removal from its place of deposit in nature,' and not when the ore is mined," citing 42 U.S.C. § 2092 (emphasis removed)).
- B TEDE includes radiation from "licensed operations" and excludes preexisting "background radiation." 10 C.F.R. § 20.1301(a)(1). Thus, the plain language of the regulation excludes emissions not directly tied to licensed activity.
- C The bare ownership of land containing radioactive material is not part of the licensee's licensed "operation." An NRC license is not required to "possess" source material in the form of unprocessed and unrefined ore so long as the ore is not processed or refined. *See* 10 C.F.R. § 40.13(b).
- D Mine spoil is a subset of "naturally occurring radioactive material" (NORM) commonly known as "technologically enhanced naturally occurring radioactive material" or TENORM. Emissions from NORM are background radiation.

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- E At the time the NRC drafted the regulation defining “background radiation,” the term NORM was understood to include TENORM. This is evident from the definition’s history.
- F Radiation from unregulated “source material” is considered background radiation. All uranium and thorium is source material, but the NRC does not regulate source material in unprocessed ores and source material with insignificant concentrations of radionuclides.
- G “[T]echnical terms of art should be interpreted by reference to the trade or industry to which they apply.” *Louisiana Public Service Commission v. Federal Communications Commission*, 476 U.S. 355, 372 (1986), citing *Corning Glass Works v. Brennan*, 417 U.S. 188 (1974).
- H The NRC does not need a formal rulemaking to include technologically enhanced naturally occurring radioactive material (TENORM) in the category of naturally occurring radioactive material (NORM). The inclusion of TENORM as a subset of NORM was implicit at the time the regulatory definition of background was promulgated. There is no need for the NRC to draw fine distinctions among various classes of materials that it does not even regulate.
- CLI-06-15 LOUISIANA ENERGY SERVICES, L.P. (National Enrichment Facility), Docket No. 70-3103-ML; MATERIALS LICENSE; June 2, 2006; MEMORANDUM AND ORDER
- A The Commission considers a petition for review of two Atomic Safety and Licensing Board decisions, one a partial initial decision on the environmental impacts of depleted uranium disposal, and the second a related Board order ruling on summary disposition motions. The Commission affirms and supplements the Boards’ decisions, and supplements the NRC Staff’s Final Environmental Impact Statement (FEIS) discussion of the impacts of depleted uranium disposal.
- B Under NEPA standards and our environmental regulations it is appropriate to consider reasonably foreseeable environmental impacts of a proposed action, even if they are only indirect effects.
- C An NRC environmental impacts analysis of depleted uranium disposal impacts does not require a full-scale, site-specific licensing review under 10 C.F.R. Part 61. The Commission would expect that the appropriate state or federal regulatory authority, such as an Agreement State, will conduct any necessary site-specific evaluation to confirm that applicable radiological dose limits and standards can be met at a particular site.
- D While the Commission has discretion to review all underlying factual issues *de novo*, we are disinclined to do so where a Board has weighed arguments presented by experts and rendered reasonable, record-based factual findings. We generally step in only to correct “clearly erroneous” findings — that is, findings not even plausible in light of the record viewed in its entirety.
- E NEPA requires only that we consider “reasonably foreseeable” indirect effects of the proposed licensing action.
- F While a literal reading of 10 C.F.R. § 61.55(a)(6) would render depleted uranium a “Class A” waste (a category of low-level radioactive waste), the Part 61 rulemaking did not analyze the uranium enrichment waste stream. Therefore, the Commission in an earlier decision directed the NRC Staff, outside of this adjudication, to consider whether the quantities of depleted uranium at issue in the waste stream from uranium enrichment facilities warrant amending section 61.55(a)(6) or the section 61.55(a) waste classification tables.
- G Our contention-pleading rules direct petitioners to file their NEPA contentions based on the applicant’s environmental report. If, later, the NRC Staff’s draft or final EIS contains data or conclusions that differ significantly from the data or conclusions in the applicant’s documents, then petitioners may file new or amended contentions.
- CLI-06-16 ANDREW SIEMASZKO, Docket No. IA-05-021; ENFORCEMENT; June 2, 2006; MEMORANDUM AND ORDER
- A The Commission will reverse a licensing board’s determination on discretionary intervention only if the Board has abused its discretion. *Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-98-13, 48 NRC 26, 34 (1998) (“PFS”); *Public Service Co. of Oklahoma* (Black Fox Station, Units 1 and 2), ALAB-397, 5 NRC 1143, 1149, *reconsid’n denied*, ALAB-402, 5 NRC 1182 (1977). Under that review standard, the appellant faces a substantial burden. “It is not enough for [the appellant] to establish simply that the Licensing Board might justifiably have” reached the same conclusion as the appellant regarding the petition for discretionary intervention. *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), ALAB-952, 33 NRC 521, 532, *aff’d*, CLI-91-13, 34 NRC 185 (1991), quoting *Washington Public Power Supply System* (WPPSS Nuclear Project No. 3),

## DIGESTS

### ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION

ALAB-747, 18 NRC 1167, 1171 (1983). Rather, the appellant must persuade us “that a reasonable mind could reach no other result.” *WPPSS*, ALAB-747, 18 NRC at 1171.

B This agency has “broad discretion to provide hearings or permit interventions in cases where these avenues of public participation would not be available as a matter of right” — that is, discretionary intervention. *Public Service Co. of Indiana* (Marble Hill Nuclear Generating Station, Units 1 and 2), CLI-80-10, 11 NRC 438, 442 (1980), *aff’d*, *Save the Valley v. NRC*, 714 F.2d 142 (6th Cir. 1983) (Table). *See also* *Cities of Statesville v. AEC*, 441 F.2d 962, 976-77 (D.C. Cir. 1969).

C In exercising discretion in ruling on requests for discretionary intervention, the NRC’s presiding officers and licensing boards traditionally consider the following six factors, originally developed in case law but now codified in our regulations:

(1) Factors weighing in favor of allowing intervention [the “positive” factors] —

(i) The extent to which the requestor’s/petitioner’s participation may reasonably be expected to assist in developing a sound record;

(ii) The nature and extent of the requestor’s/petitioner’s property, financial or other interests in the proceeding; and

(iii) The possible effect of any decision or order that may be issued in the proceeding on the requestor’s/petitioner’s interest;

(2) Factors weighing against allowing intervention [the “negative” factors] —

(i) The availability of other means whereby the requestor’s/petitioner’s interest will be protected;

(ii) The extent to which the requestor’s/petitioner’s interest will be represented by existing parties; and

(iii) The extent to which the requestor’s/petitioner’s participation will inappropriately broaden the issues or delay the proceeding.

10 C.F.R. § 2.309(e)(1)-(2). *See also* *Portland General Electric Co.* (Pebble Springs Nuclear Plant, Units 1 and 2), CLI-76-27, 4 NRC 610, 616 (1976). The first of these factors — assistance in developing a sound record — is the most important. Final Rule: “Changes to Adjudicatory Process,” 69 Fed. Reg. 2182, 2201, 2220 (Jan. 14, 2004) (“Final Rule”). *See also* *Pebble Springs*, CLI-76-27, 4 NRC at 617.

D When a licensing board balances the six “discretionary intervention” factors, it must keep in mind that discretionary intervention is “an extraordinary procedure.” Final Rule, 69 Fed. Reg. at 2201.

E Because the NRC resolves discretionary intervention motions largely on their facts (*Pebble Springs*, CLI-76-27, 4 NRC at 616), NRC legal precedent is less helpful than on most other adjudicatory issues. As we stated in our seminal *Pebble Springs* decision, the practice of granting or denying discretionary intervention should develop “not through precedent, but through attention to the concrete facts of particular situations.” *Id.* at 617. *Accord* *Sacramento Municipal Utility District* (Rancho Seco Nuclear Generating Station), CLI-93-12, 37 NRC 355, 358, *clarified on other issues*, CLI-93-19, 38 NRC 81 (1993).

F “Abuse of discretion” is a high standard of review. The Commission routinely accords substantial deference to the Board on matters involving standing (*Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-99-10, 49 NRC 318, 324 (1999)) and also in the analogous area of credibility determinations (*Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-03-8, 58 NRC 11, 25-27 (2003)). Hence, the Commission does not lightly set aside a Board’s grant of discretionary intervention.

G Under the NRC’s rules, the “standing” requirement does not apply to petitions for discretionary intervention. Discretionary intervention comes into play only “in the event that the petitioner is determined to lack standing to intervene as a matter of right under [10 C.F.R. § 2.309(d)(1)].” 10 C.F.R. § 2.309(e). The Commission’s regulatory history makes clear that discretionary intervention was created to afford party status to petitioners unable to demonstrate standing: “Under current agency case law, the Commission may . . . allow discretionary intervention to a person who does not meet standing requirements, where there is reason to believe the person’s participation will make a valuable contribution to the proceeding and where a consideration of the other criteria on discretionary intervention shows that such intervention is warranted.” Final Rule: “Streamlined Hearing Process for NRC Approval of License Transfers,” 63 Fed. Reg. 66,721, 66,724 (Dec. 3, 1998).

H NRC procedural rules require a petitioner seeking to intervene as of right in NRC adjudication to demonstrate standing and to offer an admissible contention. 10 C.F.R. § 2.309(a), (d), (f). Although under our rules the “standing” requirement does not apply to petitions for discretionary intervention, the

## DIGESTS

### ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION

- “admissible contention” requirement does. Nothing in our rules of practice excuses a petitioner seeking discretionary intervention from proposing “at least one admissible contention,” a general requirement covering *all* petitions to intervene. 10 C.F.R. § 2.309(a). Absent this requirement, a discretionary intervenor would be free to litigate issues it had not raised. This incongruity would give a discretionary intervenor a participatory role much broader than that of an intervenor as of right (who may litigate only its own contentions or those of another intervenor that it has properly adopted). *Louisiana Energy Services, L.P.* (National Enrichment Facility), CLI-04-35, 60 NRC 619, 626-27 (2004); 10 C.F.R. § 2.309(f)(3).
- I        “[W]e d[o] not intend that a petitioner should be entitled to discretionary intervention without an issue of its own worthy of exploration in an adjudication.” *Pacific Gas and Electric Co.* (Diablo Canyon Nuclear Power Plant, Units 1 and 2), CLI-02-16, 55 NRC 317, 346 (2002). *See also Commonwealth Edison Co.* (Dresden Nuclear Power Station, Unit 1), LBP-82-52, 16 NRC 183, 194 (1982) (dictum).
- J        To be admissible, a contention must meet certain specificity and basis requirements and also must fall within the scope of the proceeding. 10 C.F.R. § 2.309(f)(1).
- K        The scope of an enforcement proceeding is narrow. Typically, enforcement orders limit adjudication to two issues only — whether the facts as stated in the order are true, and whether the proposed sanction is supported by those facts. *See, e.g., Alaska Department of Transportation and Public Facilities*, CLI-04-26, 60 NRC 399, 404-11, *reconsid’n denied*, CLI-04-38, 60 NRC 652 (2004), *petition for review docketed sub nom. Farmer v. NRC*, No. 05-70718 (9th Cir. Feb. 11, 2005); *Tennessee Valley Authority* (Watts Bar Nuclear Plant, Unit 1; Sequoyah Nuclear Plant, Units 1 and 2; Browns Ferry Nuclear Plant, Units 1, 2, and 3), CLI-04-24, 60 NRC 160, 203 (2004). *See generally Bellotti v. NRC*, 725 F.2d 1380 (D.C. Cir. 1983). For instance, an enforcement contention might appropriately address the factual underpinnings of the NRC Staff’s finding of violation (*see, e.g., North Anna*, ALAB-363, 4 NRC at 633) or the mitigating factors to be considered in determining the penalty. By contrast, a contention seeking to challenge the agency’s overall enforcement policy would fall outside the scope of the enforcement proceeding and therefore be inadmissible.
- L        The Board may reframe contentions, following a determination of their admissibility, “for purposes of clarity, succinctness, and a more efficient proceeding.” *Virginia Electric and Power Co.* (North Anna Power Station, Units 1 and 2), LBP-84-40A, 20 NRC 1195, 1199 (1984). *See also Philadelphia Electric Co.* (Limerick Generating Station, Units 1 and 2), LBP-82-43A, 15 NRC 1423, 1479, 1483 (1982). But the Board must not redraft an inadmissible contention to cure deficiencies and thereby render it admissible. *See Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1, 2, and 3), CLI-91-12, 34 NRC 149, 155 (1991). This bar against corrective redrafting is particularly compelling in the context of a request for discretionary intervention, for a Board rewrite of contentions undermines the very basis for granting discretionary intervention, i.e., the *Petitioner’s* demonstrated ability to contribute to the record. Such an action would be tantamount to raising a new issue *sua sponte* without the required prior permission from the Commission. 10 C.F.R. § 2.340(a); *Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), CLI-01-13, 53 NRC 478, 483 (2001).
- M        “[G]eneralized expertise, even scientific eminence, is an insufficient substitute for particularized knowledge of the issues actually in dispute.” *PFS*, CLI-98-13, 48 NRC at 35. The most vivid example of this practice is our refusal in *PFS* to allow discretionary intervention to a distinguished group of scientists — including six Nobel laureates — because their knowledge was not specifically relevant to the proceeding at bar. *See id.*, 48 NRC at 34-35, *aff’g* LBP-98-7, 47 NRC at 177-78. In justifying as “extraordinary [a] procedure” as discretionary intervention (Final Rule, 69 Fed. Reg. at 2201), the Board should identify the *specific* contributions that Petitioners could offer.
- N        A denial of a motion for discretionary intervention does not eliminate all possibility of Petitioners’ participation in the litigation; e.g., Petitioners could request permission to participate as *amici curiae* on appropriate issues (10 C.F.R. § 2.315(d)), and/or their representative could serve as an advisor to Mr. Siemaszko, or (if qualified) as an expert witness (*Diablo Canyon*, CLI-02-16, 55 NRC at 346; *PFS*, CLI-98-13, 48 NRC at 35).
- O        When issuing its discretionary intervention rule, the Commission characterized the “sound record” factor as “foremost” in importance, but also indicated that other factors, especially the last (inappropriate broadening or delay of the proceeding) could overcome it. *See* Final Rule, 69 Fed. Reg. at 2201. Consistent with this principle, prior adjudicatory decisions have typically examined all six discretionary intervention factors, regardless of the result on the critical first factor (“assist in developing a sound record”). *See, e.g., Tennessee Valley Authority* (Watts Bar Nuclear Plant, Units 1 and 2), ALAB-413, 5 NRC 1418, 1422-23

## DIGESTS

### ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION

(1977), *aff'g* LBP-77-36, 5 NRC 1292, 1296 (1977); *Ohio Edison Co.* (Perry Nuclear Power Plant, Unit 1), LBP-91-38, 34 NRC 229, 250-51 (1991); *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), LBP-90-24, 32 NRC 12, 16-17 & n.16 (1990), *aff'd*, ALAB-952, 33 NRC 521, *aff'd*, CLI-91-13, 34 NRC 185 (1991); *Cleveland Electric Illuminating Co.* (Perry Nuclear Power Plant, Units 1 and 2), LBP-81-24, 14 NRC 175, 179 (1981). Even so, the Commission is aware of no NRC decision allowing discretionary intervention in the face of a negative finding on the “sound record” factor.

P A policy of granting discretionary intervention whenever a petitioner has more experience or background than another participant or party could lead to complex and inappropriate comparative inquiries into various participants’, parties’, and lawyers’ resources and experience. An open-ended approach like this would also be inconsistent with the Commission’s view that “discretionary intervention is an extraordinary procedure, and will not be allowed unless there are compelling factors in [its] favor.” Final Rule, 69 Fed. Reg. at 2201. Discretionary intervention is meant to ensure a sound adjudicatory record, not simply to provide a second representative to assist (allegedly) ill-represented parties.

Q The Commission expects boards taking the extraordinary action of allowing discretionary intervention to set out specific findings on each pertinent factor.

CLI-06-17 NUCLEAR MANAGEMENT COMPANY, LLC (Palisades Nuclear Plant), Docket No. 50-255-LR; LICENSE RENEWAL; June 23, 2006; MEMORANDUM AND ORDER

A A reply cannot expand the scope of the arguments set forth in the original pleading. *Louisiana Energy Services, L.P.* (National Enrichment Facility), CLI-04-25, 60 NRC 223 (2004), *reconsideration denied*, CLI-04-35, 60 NRC 619 (2004). *Accord, USEC, Inc.* (American Centrifuge Plant), CLI-06-9, 63 NRC 433, 439 (2006). Replies must focus narrowly on the legal or factual arguments first presented in the original petition or raised in the answers to it.

B New bases for a contention cannot be introduced in a reply brief, or any other time after the date the original contentions are due, unless the petitioner meets the late-filing criteria set forth in 10 C.F.R. § 2.309(c), (f)(2). While a petitioner need not introduce at the contention phase every document on which it will rely in a hearing, if the contention as originally pled did not cite adequate documentary support, a petitioner cannot remediate the deficiency by introducing in the reply documents that were available to it during the time frame for initially filing contentions. Allowing new claims in a reply would defeat the contention-filing deadline and unfairly deprive other participants an opportunity to rebut the new claims.

C Petitioners would not be able to meet the criteria for filing amended or new contentions after the initial filing because the documentary material upon which the new or amended contention was based was not previously unavailable to the Petitioners. 10 C.F.R. § 2.309(f)(2)(i).

D A claim that the pads for storing spent fuel storage are defective is outside the scope of a nuclear power plant operating license renewal proceeding. *See Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 344 n.4 (1999).

CLI-06-18 PA'INA HAWAII, LLC, Docket No. 30-36974-ML; MATERIALS LICENSE; July 26, 2006; MEMORANDUM AND ORDER

A The Commission’s rules allow discretionary interlocutory review only when a licensing board certifies a ruling or refers a question, or when an interlocutory board ruling creates “immediate and serious irreparable impact” or “affects the basic structure of the proceeding in a pervasive or unusual manner. 10 C.F.R. § 2.341(f)(1), (f)(2)(i) & (ii).

B Settling some but not all contentions is a routine feature of NRC litigation; it does not affect the proceeding in a pervasive or unusual manner.

C “[A] licensing board’s [order] is final for appellate purposes where it either disposes of at least a major segment of the case or terminates a party’s right to participate; rulings which do neither are interlocutory.” *Public Service Co. of New Hampshire* (Seabrook Station, Units 1 and 2), ALAB-731, 17 NRC 1073, 1074 (1983), and cited authority.

D The burden of a settlement with an intervenor regarding NEPA issues falls on the NRC Staff (*Wetlands Action Network v. Army Corps of Engineers*, 222 F.3d 1105, 1114 (9th Cir. 2000), *cert. denied*, 534 U.S. 815 (2001)), and thus does not compromise Pa’ina’s hearing rights. It is the NRC, not licensee, that has the legal duty to perform a NEPA analysis and to issue appropriate NEPA documents. *See id.* *See also USEC Inc.* (American Centrifuge Plant), CLI-06-10, 63 NRC 451, 474 & n.144 (2006), citing 10 C.F.R. § 51.41. The Licensee complains about the resulting “extra expense [and] work,” the “procedural delays,” and the “greater uncertainty” associated with the purported bifurcation of this proceeding into an “EA track with a public meeting many months in the future” and “an evidentiary, trial-type hearing

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

with expert opinions on the non-environmental contentions.” But these are normal accoutrements of any hearing process involving NEPA. License applicants at the NRC assume the risk of imposition of these additional burdens. *See generally Consolidated Edison Co. of New York* (Indian Point, Units 1 and 2), CLI-01-8, 53 NRC 225, 229 (2001) (observing, albeit in another context, that “litigation inevitably results in the parties’ loss of both time and money”).

- E Third parties have no absolute right to veto settlements that the agreeing parties find to their advantage.
- F Settlements that are presumably based on an analysis of litigation risk and optimum use of the NRC Staff’s scarce resources are commonplace in litigation and have, in the past, received our approval. *Sequoyah Fuels Corp.* (Gore, Oklahoma Site), CLI-97-13, 46 NRC 195, 207-11 (1997).
- G The Commission has a longstanding policy of supporting settlements. 10 C.F.R. § 2.338. *See also Sequoyah Fuels Corp.*, CLI-97-13, 46 NRC at 205.
- H Administrative agencies and their adjudicators routinely approve stipulations and settlements to which fewer than all the parties in a case subscribe. We have done so ourselves, albeit in the enforcement context. *Sequoyah Fuels*, CLI-97-13, 46 NRC at 222-23. Indeed, our own regulations contemplate just such a possibility — requiring only “the consenting parties” to file the settlement with the board. 10 C.F.R. § 2.338(g).
- CLI-06-19 DAVID GEISEN, Docket No. IA-05-052; ENFORCEMENT; July 26, 2006; MEMORANDUM AND ORDER
- A The Commission usually defers to boards’ fact-based decisions. *Andrew Siemaszko*, CLI-06-12, 63 NRC 495, 501 & n.14 (2006).
- B Given the Memorandum of Understanding (MOU) between the NRC and the U.S. Department of Justice regarding the potential need to hold NRC enforcement proceedings in abeyance pending the conclusion of DOJ’s parallel criminal cases, the Commission is generally inclined to accommodate DOJ’s abeyance requests. Memorandum of Understanding Between the Nuclear Regulatory Commission and the Department of Justice, 53 Fed. Reg. 50,317, 50,318 (§ II) (Dec. 14, 1988). But the MOU does *not* specify an ironclad guarantee of such accommodation. The MOU reflects a clear understanding that DOJ must provide factual justification for delaying our own adjudicatory process and for imposing on the enforcement target the additional financial, professional, emotional, and other burdens that perforce accompany a delay in the resolution of an enforcement proceeding. Indeed, the MOU expressly calls on DOJ to provide the NRC Staff with factual support for an abeyance request — with “appropriate affidavits or testimony.” MOU, 53 Fed. Reg. at 50,319 (§ III.C.2).
- CLI-06-20 EXELON GENERATION COMPANY, LLC (Early Site Permit for Clinton ESP Site), Docket No. 52-007-ESP; SYSTEM ENERGY RESOURCES, INC. (Early Site Permit for Grand Gulf ESP Site), Docket No. 52-009-ESP; EARLY SITE PERMIT; July 26, 2006; MEMORANDUM AND ORDER
- A The Commission accepted review under its inherent supervisory power over adjudications. Because our licensing boards are conducting the first “mandatory” hearings this agency has held in more than two decades, additional Commission guidance was deemed appropriate. *See, e.g., Duke Energy Corp.* (Catawba Nuclear Station, Units 1 and 2), CLI-04-21, 60 NRC 21, 27 (2004).
- B The Commission vacated the Board’s demand for a complete narrative report summarizing the Staff’s review of the license application, directed the Board to focus on specific issues, and approved the use of indexes as a means to summarize the documents on which the Staff’s review relied.
- C The Commission approved the Board’s request for a list of all regulatory guides applicable to the Staff’s analysis, together with a list of all instances where potentially applicable regulatory guides were not used.
- D The Commission vacated the Board’s order to the NRC Staff to provide it with information relevant to instances where the Staff reviewer disagreed with his supervisor with respect to the license application.
- E The Commission held that while the Board may ask the Staff to produce ACRS documents that it reviewed in conducting its license application review, the Staff need not obtain additional ACRS documents that it never saw in conducting its review.
- F Whether the NRC Staff should be required to produce four paper copies of relevant documents is a matter best left for the Board’s discretion. The Commission denied the Staff’s request to vacate this portion of the Board’s order.

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- G In keeping with the Commission's expectation that the boards act promptly in concluding the hearing process, the Commission expects the boards in uncontested cases to issue their final initial decisions generally within 4, and at the most 6, months of the Staff's SER and FEIS issuances.
- CLI-06-21 FLORIDA POWER & LIGHT COMPANY, FPL ENERGY SEABROOK, LLC, FPL ENERGY DUANE ARNOLD, LLC, CONSTELLATION ENERGY GROUP, INC. (Calvert Cliffs Nuclear Power Plant, Units 1 and 2; Calvert Cliffs Independent Spent Fuel Storage Installation; Nine Mile Point Nuclear Station, Units 1 and 2; R.E. Ginna Nuclear Power Plant; Turkey Point Nuclear Generating Plant, Units 3 and 4; St. Lucie Nuclear Power Plant, Units 1 and 2; Seabrook Station; Duane Arnold Energy Center), Docket Nos. 50-317-LT-2, 50-318-LT-2, 72-8-LT-2, 50-220-LT-3, 50-410-LT-3, 50-244-LT-2, 50-250-LT, 50-251-LT, 50-335-LT, 50-389-LT, 50-443-LT, 50-331-LT; LICENSE TRANSFER; July 26, 2006; MEMORANDUM AND ORDER
- A Late-filing petitioners to intervene must satisfy not only our requirements that intervenors demonstrate standing (10 C.F.R. § 2.309(d)) and submit at least one admissible contention (10 C.F.R. § 2.309(f)(1)), but also our stringent requirements for untimely filings (10 C.F.R. § 2.309(c)) and late-filed contentions (10 C.F.R. § 2.309(f)(2)).
- B A petitioner's failure to read carefully the governing procedural regulations does not constitute good cause for the Commission to accept a late-filed petition to intervene.
- C Section 2.309(f)(1) of the NRC's procedural regulations provides that a petitioner "must set forth with particularity the contentions sought to be raised."
- D Although the Commission is disinclined to "step into the middle of a labor dispute" (*Power Authority of the State of New York* (James A. FitzPatrick Nuclear Power Plant; Indian Point, Unit 3), CLI-00-22, 52 NRC 266, 314 (2000)) or "involve [ourselves] in the personnel decisions of licensees" (*id.* at 316), the Commission has nonetheless recognized that there may be cases where employment-related contentions which are "closely tied to specific health-and-safety concerns or to potential violations of NRC rules[ ] can be admitted for a hearing" (*id.* at 315).
- E It is not enough under our contention-pleading rules — whose "hallmark" is "specificity" — simply to say that a merger will result in personnel reductions that will adversely affect safety. *Northeast Nuclear Energy Co.* (Millstone Nuclear Power Station, Units 1, 2, and 3), CLI-00-18, 52 NRC 129, 132 (2000). General assertions, unsupported by specific facts or expert opinion, that personnel reductions may adversely affect health and safety are inadmissible. *FitzPatrick*, CLI-00-22, 52 NRC at 315.
- F To establish standing, a petitioner must show (among other things) that its potential injury is fairly traceable to a grant of the application(s).
- CLI-06-22 LOUISIANA ENERGY SERVICES, L.P. (National Enrichment Facility), Docket No. 70-3103-ML; MATERIALS LICENSE; August 17, 2006; MEMORANDUM AND ORDER
- A We do not undertake a point-by-point review of the Board's factual findings. While we have discretion to review all underlying factual issues *de novo*, we are disinclined to do so where the Board has weighed arguments presented by experts and rendered reasonable, record-based factual findings. We generally step in only to correct clearly erroneous findings — that is, findings not even plausible in light of the record viewed in its entirety.
- B The Board's "reliability" approach is not a "new" standard. The Board did not act unreasonably when it examined LES's estimates for "reliability" — an inquiry consistent with verifying whether the estimates provided "reasonable assurance" for decommissioning funding.
- C Each decommissioning situation is unique; the reasonableness of costs and estimates must be assessed on a case-by-case basis. Our precedents, as well as NUREG-1757, call for objective, documented data, not self-serving conclusory statements.
- D Obtaining an estimate from an experienced third-party vendor is not the only way for an applicant to demonstrate that its cost estimate is documented and reasonable, although it clearly is one way to reach that end. If an arm's-length third-party estimate is unavailable, the balance of an applicant's showing must be sufficiently "reliable" — documented and reasonable — to carry the day.
- E The Commission does not credit arguments made for the first time in a reply brief.
- CLI-06-23 PACIFIC GAS AND ELECTRIC COMPANY (Diablo Canyon Power Plant Independent Spent Fuel Storage Installation), Docket No. 72-26-ISFSI; INDEPENDENT SPENT FUEL STORAGE INSTALLATION; September 6, 2006; MEMORANDUM AND ORDER

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- A A factual situation where there is ongoing construction of an independent spent fuel storage installation, but no loading of spent fuel, causes no imminent or irreparable harm justifying immediate Commission action. Such harm is the *sine qua non* of the kind of equitable relief sought.
- CLI-06-24 AMERGEN ENERGY COMPANY, LLC (Oyster Creek Nuclear Generating Station), Docket No. 50-0219-LR; LICENSE RENEWAL; September 6, 2006; MEMORANDUM AND ORDER
- A The scope of our 10 C.F.R. Part 54 safety review is limited to “those potential detrimental effects of aging that are not routinely addressed by ongoing regulatory oversight programs”; a license renewal review does not revisit the full panoply of issues considered during review of an initial license application.
- B Renewal applicants must demonstrate that they will adequately manage the detrimental effects of aging for all important components and structures, with attention, for example, to “[a]dverse aging effects [resulting] from [potential] metal fatigue, erosion, corrosion, thermal and radiation embrittlement, microbiologically induced effects, creep, and shrinkage,” which “can affect a number of reactor and auxiliary systems, including the reactor vessel, the reactor coolant system pressure boundary, steam generators, electrical cables, the pressurizer, heat exchangers, and the spent fuel pool.”
- C To the extent that any health and safety analyses performed during the initial licensing process were limited to the initial 40-year license period, the applicant must show that it has reassessed these “time-limited aging analyses” and that these analyses remain valid for the period of extended operation.
- D Review of a license renewal application does not reopen issues relating to a plant’s current licensing basis, or any other issues that are subject to routine and ongoing regulatory oversight and enforcement.
- E A Part 51 license renewal environmental review has both a generic component and a plant-specific component. In a generic environmental impact statement, the NRC has already considered certain environmental issues common to all (or to a certain category of) reactors. These issues are designated “Category 1” issues, and include such matters as onsite land use, noise, bird collisions with cooling towers, and onsite spent fuel storage. The site-specific environmental review does not routinely reconsider Category 1 issues, but requires applicants (and ultimately the NRC Staff) to assess certain site-specific, “Category 2” issues.
- F We have tailored our Part 51 environmental review requirements to provide an efficient and focused renewal-specific review, rather than duplicating the review required for an initial license.
- G To intervene in a Commission proceeding, including a license renewal proceeding, a person must file a petition for leave to intervene. In accordance with 10 C.F.R. § 2.309(a), this petition must demonstrate standing under 10 C.F.R. § 2.309(d), and must proffer at least one admissible contention as required by 10 C.F.R. § 2.309(f)(1)(i)-(vi).
- H The requirements for admissibility set out in 10 C.F.R. § 2.309(f)(1)(i)-(vi) are “strict by design,” and we will reject any contention that does not satisfy these requirements. Our rules require “a clear statement as to the basis for the contentions and the submission of . . . supporting information and references to specific documents and sources that establish the validity of the contention.” “Mere ‘notice pleading’ does not suffice.” Contentions must fall within the scope of the proceeding — here, license renewal — in which intervention is sought.
- I Under our rules, where (as here) the NRC Staff or the license applicant argues that the Board ought to have rejected all contentions, an appeal lies. An appeal also lies where (as here) a potential intervenor claims that the Board wrongly rejected all contentions.
- J We have discretion to grant interlocutory review at the request of a party in limited circumstances. However, “[t]he Commission’s longstanding general policy disfavors interlocutory review.” We recognize “an exception where the disputed ruling threatens the aggrieved party with serious, immediate, and irreparable harm or where it will have a ‘pervasive or unusual’ effect on the proceedings below.” We grant review under the “pervasive and unusual” effect standard “only in extraordinary circumstances.”
- K We give “substantial deference” to our boards’ determinations on threshold issues, such as standing and contention admissibility. We regularly affirm “Board decisions on the admissibility of contentions where the appellant ‘points to no error of law or abuse of discretion.’”
- L An (in effect) rewritten cumulative usage factor contention converted that contention into an impermissible new contention. Also, as formulated on appeal, another contention — “demanding an updated interconnection agreement” — did not match any of the three pieces that formed the original proposed contention. A person cannot raise new contentions for the first time on appeal to the Commission.
- M Section 50.55a(a)(3) expressly states that authorization from the Director of the NRC’s Office of Nuclear Reactor Regulation is required only when “alternatives” to the established requirements in

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- subsections (c), (d), (e), (f), (g), and (h) are used. Since the Applicant's change in cumulative usage factor is "already endorsed" by subsection (g), the approval requirements of subsection (a)(3) do not apply.
- N Section 2.311 is not applicable to the Board's refusal to supplement the basis of a contention or to add new contentions because the section applies only where a board decision rules on a request for hearing, petition to intervene, or selection of hearing procedures. It does not authorize appeals from an order refusing to supplement an admitted contention.
- O For a viable petition for review where a decision was not a final decision on the merits, the petitioner needed to make a case for *interlocutory* review under section 2.341(f). Under section 2.341(f), a petitioner must show that the issue for which interlocutory review is sought: "(i) [t]hreatens the party adversely affected by it with immediate and serious irreparable impact which, as a practical matter, could not be alleviated through a petition for review of the presiding officer's final decision; or (ii) [a]ffects the basic structure of the proceeding in a pervasive or unusual manner."
- CLI-06-25 PA'INA HAWAII, LLC, Docket No. 30-36974-ML; MATERIALS LICENSE; September 6, 2006; MEMORANDUM AND ORDER
- A Appeals under 10 C.F.R. § 2.311(c) must be filed within 10 days of service of the appealed order(s). 10 C.F.R. § 2.311(a).
- B Section 2.311 contemplates just one opportunity for license applicants to appeal contention admissibility rulings — at the outset of a proceeding, within 10 days after a Board grants a petition to intervene, and only if the license applicant argues the petition should have been "wholly denied."
- CLI-06-26 ENTERGY NUCLEAR OPERATIONS, INC. (Pilgrim Nuclear Power Station), Docket No. 50-293-LR; ENTERGY NUCLEAR VERMONT YANKEE, LLC, and ENTERGY NUCLEAR OPERATIONS, INC. (Vermont Yankee Nuclear Power Station), Docket No. 50-271-LR; LICENSE RENEWAL; October 10, 2006; ORDER
- A The Commission denies "petitions" for a "backfit order" filed by the Massachusetts Attorney General, noting that they amount to a request for enforcement action, and not a matter within the scope of a license renewal adjudication.
- B A request for an order to modify a license based upon an allegedly hazardous condition in the current spent fuel pool amounts to a request for agency enforcement action. Such a request is not suitable for a license renewal adjudication, but perhaps suitable for consideration under 10 C.F.R. § 2.206.
- CLI-06-27 PACIFIC GAS AND ELECTRIC COMPANY (Diablo Canyon Power Plant Independent Spent Fuel Storage Installation), Docket No. 72-26-ISFSI; INDEPENDENT SPENT FUEL STORAGE INSTALLATION; November 9, 2006; MEMORANDUM AND ORDER
- A We undertake reconsideration only when a party shows a "compelling circumstance," "such as the existence of a clear and material error in a decision, which could not have reasonably been anticipated" and that "renders the decision invalid." We apply this standard strictly, and do not grant motions for reconsideration lightly.
- B Where a party *itself* requested that *we* provide injunctive relief, we balanced the equities to decide *that* question — as any determination on the necessity for an injunction requires. To justify reconsideration of our denial of the request for an injunction, the motion for reconsideration had to support a rebalancing of the equities, which it did not.
- C Since the original motion for injunctive relief never mentioned 10 C.F.R. § 51.101(a), a motion for reconsideration of the denial of injunctive relief based on that section falls afoul of our prohibition against raising new arguments in a motion for reconsideration.
- CLI-06-28 SYSTEM ENERGY RESOURCES, INC. (Early Site Permit for Grand Gulf ESP Site), Docket No. 52-009-ESP; EARLY SITE PERMIT; November 9, 2006; ORDER
- CLI-06-29 HYDRO RESOURCES, INC. (P.O. Box 777, Crownpoint, NM 87313), Docket No. 40-8968-ML; MATERIALS LICENSE; December 14, 2006; MEMORANDUM AND ORDER
- A The Commission denies a petition for review of a Presiding Officer initial decision on the adequacy of a Final Environmental Impact Statement.
- B Not all new information that might emerge following issuance of an environmental impact statement requires a supplement to the impacts analysis. The new information must present a seriously different picture of the environmental impact of the proposed project from what was previously envisioned.
- C On fact-specific technical issues, where a Presiding Officer has reviewed an extensive record in detail with the assistance of a technical advisor, the Commission is disinclined to upset the Presiding Officer's findings and conclusions, particularly where the submissions of experts have been weighed. While the

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

Commission may choose on occasion to make its own *de novo* findings of fact, we generally do not exercise that authority where a Presiding Officer or Licensing Board has issued a plausible decision that rests on carefully rendered findings of fact.

- D The purpose of addressing possible mitigation measures in an FEIS is to ensure that the agency has taken a hard look at the potential environmental impacts of a proposed action. An EIS therefore must address mitigation measures in sufficient detail to ensure that environmental consequences have been fairly evaluated. An EIS need not, however, contain a complete mitigation plan. In addition, NEPA does not guarantee that federally approved projects will have no adverse impacts at all.
- CLI-07-1 ENTERGY NUCLEAR VERMONT YANKEE, LLC, and ENTERGY NUCLEAR OPERATIONS, INC. (Vermont Yankee Nuclear Power Station), Docket No. 50-271-LR; LICENSE RENEWAL; January 11, 2007; MEMORANDUM AND ORDER
- A The Commission customarily does not entertain discretionary interlocutory appeals, due in large part to a “general unwillingness to engage in ‘piecemeal interference in ongoing Licensing Board proceedings.’” *Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-04-31, 60 NRC 461, 466 (2004), quoting *Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), CLI-02-7, 55 NRC 205, 213 (2002).
- B The Commission’s procedural rules set a high bar for interlocutory review petitions, viz, a petitioner must demonstrate that the licensing board’s ruling at issue either “[t]hreatens the party adversely affected by it with immediate and serious irreparable impact which, as a practical matter, could not be alleviated through a petition for review of the presiding officer’s final decision; or . . . [a]ffects the basic structure of the proceeding in a pervasive or unusual manner.” 10 C.F.R. § 2.341(f)(2)(i)-(ii).
- C Outside the context of petitions for interlocutory review, the Commission may also take interlocutory review of questions or rulings that a licensing board either refers or certifies to the Commission under 10 C.F.R. §§ 2.319(f) or 2.323(f), respectively. See 10 C.F.R. § 2.341(f)(1).
- D The Commission will occasionally take review of an issue on its own motion, or *sua sponte*, where that issue is not otherwise before it on appeal. The Commission has used *sua sponte* review as a vehicle to address unappealed issues or orders, to set a specific timetable or otherwise customize our procedures for individual adjudications, to suspend a proceeding, to vacate an unreviewed board order after withdrawal of the challenged application, to decide whether to disqualify a presiding officer, to address an issue of wide implication, and to provide guidance to a licensing board.
- E The Commission announced in its 1998 *Statement of Policy on Conduct of Adjudicatory Proceedings* that it would, where appropriate, exercise its authority to instruct the board to certify novel license renewal issues. CLI-98-12, 48 NRC 18, 23 (1998). The Commission’s taking *sua sponte* review yields essentially the same result.
- CLI-07-2 ENTERGY NUCLEAR GENERATION COMPANY and ENTERGY NUCLEAR OPERATIONS, INC. (Pilgrim Nuclear Power Station), Docket No. 50-293-LR; LICENSE RENEWAL; January 11, 2007; MEMORANDUM AND ORDER
- A The Commission denies an appeal by an admitted Intervenor who seeks interlocutory review of one rejected contention.
- B Under 10 C.F.R. § 2.311, appeals are permitted under three circumstances: (1) where a petitioner challenges an order “denying” a petition to intervene and/or request for hearing; (2) where a party other than a petitioner challenges an order granting a petition to intervene, claiming that the petition should have been “wholly denied”; and (3) where a party claims that an order selecting a hearing procedure “was in clear contravention” of applicable Commission hearing selection criteria. Section 2.311 does not provide for interlocutory appeals by an admitted intervenor, and the Commission generally disfavors interlocutory, piecemeal appeals.
- C In exceptional instances, the Commission may in its discretion grant a petition for interlocutory review, where a party demonstrates that a ruling threatens it with immediate and serious irreparable impact, or affects the basic structure of the proceeding in a pervasive or unusual manner.
- CLI-07-3 ENTERGY NUCLEAR VERMONT YANKEE, LLC, and ENTERGY NUCLEAR OPERATIONS, INC. (Vermont Yankee Nuclear Power Station), Docket No. 50-271-LR; ENTERGY NUCLEAR GENERATION COMPANY and ENTERGY NUCLEAR OPERATIONS, INC. (Pilgrim Nuclear Power Station), Docket No. 50-293-LR; LICENSE RENEWAL; January 22, 2007; MEMORANDUM AND ORDER
- A Generic environmental impacts analyzed in the GEIS for license renewal are designated “Category 1” issues, for which the license renewal applicant is generally excused from discussing. 10 C.F.R.

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

§ 51.53(c)(3)(i). Generic analysis is “clearly an appropriate method” of meeting the agency’s statutory obligations under NEPA. *See Baltimore Gas & Electric Co. v. Natural Resources Defense Council, Inc.*, 462 U.S. 87, 101 (1984).

B The license renewal GEIS determined that the environmental effects of storing spent fuel for an additional 20 years at the site of nuclear reactors would be “not significant.” *See* NUREG-1427, “Generic Environmental Impact Statement for License Renewal of Nuclear Plants (May 1996),” at 6-72 to -75, 6-85. Accordingly, this finding was expressly incorporated into our regulations. *See* 10 C.F.R. Part 51, Subpart A, App. B, Table B-1, “Summary of Findings on NEPA Issues for License Renewal of Nuclear Power Plants.” Because the generic environmental analysis was incorporated into a regulation, the conclusions of that analysis are not subject to attack in an individual adjudication unless the rule is waived or suspended. 10 C.F.R. § 2.335(a), (b); *see also* *Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-01-24, 54 NRC 349, 364 (2001).

C One way to challenge a generic finding, or “Category 1” issue, in a particular license proceeding is to apply for a waiver where “special circumstances . . . are such that the application of the rule or regulation . . . would not serve the purposes for which the rule or regulation was adopted.” 10 C.F.R. § 2.335(b). In theory, Commission approval of a waiver could allow a contention on a Category 1 issue to proceed where special circumstances exist.

D Adjudicating Category 1 issues site by site based merely on a claim of “new and significant information,” would defeat the purpose of resolving generic issues in a GEIS.

E Where a petitioner argues that new information contradicts assumptions underlying the entire generic analysis for all facilities or a whole class of facilities, the appropriate remedy is a rulemaking petition. It makes more sense for the NRC to study whether, as a technical matter, the agency should modify its requirements for all plants across the board than to litigate in particular adjudications whether generic findings in the GEIS are impeached by a claim of new information.

F Pending resolution of a rulemaking petition, the NRC Staff may, where appropriate, seek the Commission’s permission to suspend the generic determination of a Category 1 issue and include a new analysis in the plant-specific environmental impact statements. *See* Statement of Considerations, Final Rule: “Environmental Review for Renewal of Nuclear Power Plant Operating Licenses,” 61 Fed. Reg. 28,467, 28,472 (June 5, 1996). If the rule is suspended for the analysis, each supplemental EIS would reflect the corrected analysis until such time as the rule is amended.

G A license renewal applicant need not discuss severe accident mitigation alternatives for generic — or “Category 1” — issues. *See Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), CLI-01-17, 54 NRC 3, 21-22 (2001). This makes obvious sense since “for all issues designated as Category 1 the Commission has concluded that [generically] additional site-specific mitigation alternatives are unlikely to be beneficial.” *Id.* at 22.

CLI-07-4 EXELON GENERATION COMPANY, LLC (Early Site Permit for Clinton ESP Site), Docket No. 52-007-ESP; EARLY SITE PERMIT; January 22, 2007; ORDER

CLI-07-5 USEC INC. (American Centrifuge Plant), Docket No. 70-7004-ML; MATERIALS LICENSE; February 1, 2007; MEMORANDUM AND ORDER

A The Commission directs the Atomic Safety and Licensing Board to revise its mandatory hearing schedule.

CLI-07-6 DAVID GEISEN, Docket No. IA-05-052; ENFORCEMENT; February 1, 2007; MEMORANDUM AND ORDER

A The question whether to hold an NRC enforcement proceeding in abeyance pending a related criminal prosecution is generally suitable for interlocutory Commission review because, unlike most interlocutory questions, the abeyance issue cannot await the end of the proceeding (it becomes moot).

B A petition seeking review of an order granting or denying such an abeyance motion meets our standard for interlocutory review because the appealed order would have an “immediate and serious irreparable impact which, as a practical matter, could not be alleviated through a petition for review of the presiding officer’s final decision.”

C In analyzing the abeyance question, we balance here the risk of harm Mr. Geisen could suffer from an abeyance order against the risk of harm DOJ could suffer from the NRC Staff moving forward in its enforcement hearing.

D Given the Memorandum of Understanding between the NRC and DOJ regarding the potential need to hold our enforcement proceedings in abeyance pending the conclusion of DOJ’s parallel criminal cases,

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

we are generally inclined to accommodate an abeyance request from DOJ as long as it provides at least *some* showing of potential detrimental effect on its parallel criminal case. Memorandum of Understanding Between the Nuclear Regulatory Commission and the Department of Justice, 53 Fed. Reg. 50,317, 50,318 (§ II) (Dec. 14, 1988).

- E Our regulations require that hearings regarding immediately effective enforcement orders be held expeditiously.
- CLI-07-7 SYSTEM ENERGY RESOURCES, INC. (Early Site Permit for Grand Gulf ESP Site), Docket No. 52-009-ESP; EARLY SITE PERMIT; February 15, 2007; ORDER
- CLI-07-8 AMERGEN ENERGY COMPANY, LLC (Oyster Creek Nuclear Generating Station), Docket No. 50-0219-LR; LICENSE RENEWAL; February 26, 2007; MEMORANDUM AND ORDER
- A The NRC is not obligated to adhere, in all of its proceedings, to the first court of appeals decision to address a controversial question. Such an obligation would defeat any possibility of a conflict between the Circuits on important issues.
- B The National Environmental Policy Act does not require the NRC to consider the environmental consequences of hypothetical terrorist attacks on NRC-licensed facilities. “Terrorism contentions are, by their very nature, directly related to security and are therefore, under our [license renewal] rules, unrelated to ‘the detrimental effects of aging.’ Consequently, they are beyond the scope of, not ‘material’ to, and inadmissible in, a license renewal proceeding.” Moreover, as a general matter, NEPA “imposes no legal duty on the NRC to consider intentional malevolent acts . . . in conjunction with commercial power reactor license renewal applications.”
- C “The ‘environmental’ effect caused by third-party miscreants ‘is . . . simply too far removed from the natural or expected consequences of agency action to require a study under NEPA.’” “[T]he claimed impact is too attenuated to find the proposed federal action to be the ‘proximate cause’ of that impact.” There simply is no “proximate cause” link between an NRC licensing action, such as (in this case) renewing an operating license, and any altered risk of terrorist attack. Instead, the level of risk depends upon political, social, and economic factors *external* to the NRC licensing process. It is not sensible to hold an NRC licensing decision, rather than terrorists themselves, the “proximate cause” of an attack on an NRC-licensed facility.
- D The NRC Staff’s Generic Environmental Impact Statement (GEIS) for license renewal has already “performed a discretionary analysis of terrorist acts in connection with license renewal, and concluded that the core damage and radiological release from such acts would be no worse than the damage and release to be expected from internally initiated events.” And, as required by the GEIS, the NRC Staff performed a site-specific analysis of alternatives to mitigate severe accidents.
- E As a legal matter, the specific characteristics of the facility now identified as special risk factors amount to new information, not part of the original contention, and improperly introduced for the first time on appeal.
- F Site-specific claims relating to the safe *ongoing* operations of a nuclear reactor are not matters peculiar to plant aging or to the license extension period. If information in hand suggests license amendments or other protective measures may be required for a nuclear plant, then a petition for relief under 10 C.F.R. § 2.206 (providing for petitions for enforcement relief) may be filed with the NRC.
- G If there is reason to believe that a departure from the NRC’s license renewal Generic Environmental Impact Statement and related regulations is warranted, then the remedy is a petition for rulemaking to modify our rules or a petition for a waiver of our rules based on “special circumstances,” not an adjudicatory contention.
- CLI-07-9 NUCLEAR MANAGEMENT COMPANY, LLC (Palisades Nuclear Plant), Docket No. 50-255-LR; LICENSE RENEWAL; February 26, 2007; MEMORANDUM AND ORDER
- A The National Environmental Policy Act (NEPA) does not require the NRC to consider the environmental consequences of hypothetical terrorist attacks on NRC-licensed facilities. *AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-07-8, 65 NRC 124 (2007). As a general matter, NEPA “imposes no legal duty on the NRC to consider intentional malevolent acts . . . in conjunction with commercial power reactor license renewal applications.” *Id.* at 129. The claimed impact is too attenuated to find the proposed federal action to be the “proximate cause” of that impact.
- B There is no basis for admitting this terrorism contention in this, or any other, license renewal proceeding. “Terrorism contentions are, by their very nature, directly related to security and are therefore, under our [license renewal] rules, unrelated to the ‘detrimental effects of aging.’ Consequently, they are

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- beyond the scope of, not ‘material’ to, and inadmissible in, a license renewal proceeding.” *AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-07-8, 65 NRC at 129.
- C Any new contention on the subject of terrorism in this proceeding would be inexcusably late. *See System Energy Resources, Inc.* (Early Site Permit for Grand Gulf ESP Site), CLI-07-10, 65 NRC 144, 146 (2007). Would-be intervenors must file contentions at the outset of the proceeding, on the basis of the applicant’s environmental report. 10 C.F.R. § 2.309(f)(2). An appeals court ruling does not constitute “new information” on which a party can base a new contention. *Grand Gulf*, CLI-07-10, 65 NRC at 146.
- CLI-07-10 SYSTEM ENERGY RESOURCES, INC. (Early Site Permit for Grand Gulf ESP Site), Docket No. 52-009-SP; EARLY SITE PERMIT; February 26, 2007; MEMORANDUM AND ORDER
- A Petitioners waived their right to pursue the NEPA-terrorism issue in this adjudication by not filing the contention on the basis of the environmental report. A late-filed contention can be admitted only when the information on which the amended or new contention is based was previously unavailable. 10 C.F.R. § 2.309(f)(2)(i). A change in the law controlling — in a different Circuit — does not constitute previously unavailable information to excuse late filing.
- B The National Environmental Policy Act (NEPA) does not require the NRC to consider the environmental consequences of hypothetical terrorist attacks on NRC-licensed facilities. “The ‘environmental’ effect caused by third-party miscreants ‘is . . . simply too far removed from the natural or expected consequences of agency action to require a study under NEPA.” Thus, a terrorist act is not “proximately caused” by the licensing of a regulated nuclear facility. *AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-07-8, 65 NRC 124, 129 (2007), quoting *Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-02-25, 56 NRC 340, 349 (2002).
- CLI-07-11 PACIFIC GAS AND ELECTRIC COMPANY (Diablo Canyon Power Plant Independent Spent Fuel Storage Installation), Docket No. 72-26-ISFSI; INDEPENDENT SPENT FUEL STORAGE INSTALLATION; February 26, 2007; MEMORANDUM AND ORDER
- CLI-07-12 EXELON GENERATION COMPANY, LLC (Early Site Permit for Clinton ESP Site), Docket No. 52-007-ESP; EARLY SITE PERMIT; March 8, 2007; MEMORANDUM AND ORDER
- A An initial decision authorizing a construction permit is considered stayed pending Commission action. 10 C.F.R. § 2.340(f). An early site permit is considered a partial construction permit, and thus requires action by the Commission even in the absence of any appeal from the Board’s Initial Decision.
- B The Commission has the authority to appropriately condition the license approved by the Board.
- C The NRC has broad legal authority under the Atomic Energy Act and has authority to independently verify the facts contained in an application. The Staff appropriately uses an audit system to prioritize the facts it will independently verify, taking into account whether the issue involves “first-of-a-kind analysis, use of new modeling techniques, application of new or revised review guidance, areas of higher significance based upon risk-informed reviews, or where the Staff’s independent analysis or technical experience and judgment does not support the analysis results of the Applicant.” *See* NUREG-0800, “Standard Review Plan for the Review of Safety Analysis Reports for Nuclear Power Plants” (1996), and Review Standard RS-002, “Processing Applications for Early Site Permits” (2004).
- D An application for an NRC permit must be made under oath or affirmation. *See* AEA § 182, 42 U.S.C. 2232. Section 186 of the Atomic Energy Act allows the NRC to revoke any license for a material false statement in the application. Thus, the NRC reasonably relies on its licensees and applicants to submit complete and accurate information. A violation of this requirement is a serious violation and can result in a range of enforcement actions.
- E Issues resolved in the ESP proceeding are treated as “resolved” in a subsequent construction permit or COL proceeding that references the ESP, unless a contention is admitted under narrowly specified conditions. 10 C.F.R. § 52.39(a)(2). For instance, a contention arguing that the proposed reactor does not fit into the site parameters of the ESP, or that the terms and conditions of the ESP are not met, is potentially admissible at the COL stage. But any challenge to the established terms and conditions of the ESP could only be raised as a petition to modify a license under 10 C.F.R. § 2.206.
- F Whether or not any petitioner challenges the construction permit, the NRC Staff will address each COL action item at the construction permit stage.
- CLI-07-13 ENTERGY NUCLEAR VERMONT YANKEE, LLC, and ENTERGY NUCLEAR OPERATIONS, INC. (Vermont Yankee Nuclear Power Station), Docket No. 50-271-LR; ENTERGY NUCLEAR GENERATION COMPANY and ENTERGY NUCLEAR OPERATIONS, INC. (Pilgrim Nuclear Power Station), Docket No. 50-293-LR; LICENSE RENEWAL; March 15, 2007; MEMORANDUM AND ORDER

## DIGESTS

### ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION

- A A motion for reconsideration must demonstrate “compelling circumstances, such as the existence of a clear and material error in a decision, which could not have reasonably been anticipated, that renders the decision invalid.” 10 C.F.R. § 2.323(e). The Massachusetts Attorney General has not demonstrated a “clear and material error” in our affirming the two Board decisions we were reviewing.
- B Our decision in CLI-07-3 was final as to the Massachusetts Attorney General’s only claims in the two license renewal proceedings. The Massachusetts Attorney General has no claim remaining in either adjudication. A request for judicial review must be brought immediately if at all. *See Environmental Law and Policy Center v. NRC*, 470 F.3d 676, 681 (7th Cir. 2006). She also has the option of awaiting an NRC decision in her petition for rulemaking. Agency decisions on rulemaking petitions are judicially reviewable. *See, e.g., Bullcreek v. NRC*, 359 F.3d 536 (D.C. Cir. 2004).
- C The mere potential that an issue may become moot in the future due to a rulemaking does not affect the finality of a decision resting on current law.
- D Only a “party” to a proceeding, or an interested governmental entity participating under 10 C.F.R. § 2.315, may file a request to stay proceedings pending a rulemaking under 10 C.F.R. § 2.802. The Mass AG did not offer an admissible contention and was never admitted to either of these two proceedings as a “party.”
- CLI-07-14 SYSTEM ENERGY RESOURCES, INC. (Early Site Permit for Grand Gulf ESP Site), Docket No. 52-009-ESP; EARLY SITE PERMIT; March 27, 2007; MEMORANDUM AND ORDER
- A It is appropriate to defer issues concerning the effects of short-term damage to the environment and the irretrievable commitment of resources to the construction permit or combined license stage. These effects cannot be meaningfully assessed at the ESP stage because such an inquiry requires weighing the short-term damage against long-term benefits of the project, and the long-term benefits cannot be assessed until the construction permit or COL stage. For the proposed facility, the precise electrical output of the unit, which will be selected at the construction permit phase, is not yet known. Similarly, an assessment of the irretrievable commitment of resources — i.e., construction resources — will not be known until a particular reactor design is selected.
- B Any power level selected at the COL stage other than the 2000-MWe target value used in the Environmental Impact Statement’s alternative energy analysis would constitute new information that, if found to be significant, would have to be evaluated at the construction permit or combined license application stage.
- CLI-07-15 CBS CORPORATION (Waltz Mill Facility), Docket No. 70-00698; MATERIALS LICENSE; March 29, 2007; MEMORANDUM AND ORDER
- A The Commission holds in abeyance a request for a hearing by CBS Corporation (CBS) on the NRC Staff’s denial of CBS’s application for a declaratory order which would relax cleanup standards at a Waltz Mill, Pennsylvania site or in the alternative, for an amendment to the materials license, which is held by Westinghouse Electric Company, LLC (Westinghouse).
- B The Commission will not be drawn into commercial contractual disputes, absent a concern for the public health and safety or the common defense and security, except to carry out its responsibilities to act to enforce its licenses, orders, and regulations.
- C The Commission is holding this hearing request in abeyance because Staff action may obviate the need for the Commission to address the hearing request presented by CBS for the Westinghouse license. Additionally, the commercial dispute between the two licensees may be resolved in binding arbitration before the Arbitration Panel.
- CLI-07-16 ENTERGY NUCLEAR VERMONT YANKEE, LLC, and ENTERGY NUCLEAR OPERATIONS, INC. (Vermont Yankee Nuclear Power Station), Docket No. 50-271-LR; LICENSE RENEWAL; April 11, 2007; MEMORANDUM AND ORDER
- A “Heat shock” falls within the scope of the Clean Water Act in the following way. Section 402(b) of that statute authorizes the Environmental Protection Agency to approve state programs for the issuance of National Pollutant Discharge Elimination System [“NPDES”] permits. 33 U.S.C. § 1342(b). The permits Vermont issues under its NPDES program impose “effluent limitations and other requirements on facilities that discharge pollutants into the waters of the United States.” For purposes of NPDES permits, “effluent” is defined as “[l]iquid waste that is discharged into a river, lake, or other body of water.” *Black’s Law Dictionary* (2d ed. 2001). *See also* Clean Water Act § 502(11), 33 U.S.C. § 1362(11). Congress intended the word “effluent” to include heat. 33 U.S.C. § 1326. Hence, “heat shock” falls within the parameters of the NPDES provisions of the Clean Water Act’s section 402(b).

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- B Pursuant to section 316(a) of the Clean Water Act, NPDES permits may address thermal discharges into bodies of water. 33 U.S.C. § 1326(a). Section 511(c)(2) of the Act precludes us from either second-guessing the conclusions in NPDES permits or imposing our own effluent limitations — thermal or otherwise. 33 U.S.C. § 1371(c)(2). Indeed, the Clean Water Act’s legislative history indicates that Congress, when enacting section 511(c)(2), *specifically* intended to deprive the NRC’s predecessor agency (the Atomic Energy Commission) of such authority. S. Rep. No. 92-1236, 92d Cong., 2d Sess. (1972) (Conference Report on S. 2770), *Legislative History* at 198.
- C Section 51.53(c)(3)(ii)(B) of our regulations on license renewal implements the statutory provisions cited above by providing, in relevant part, that “If the applicant’s plant utilizes [a] once-through cooling . . . system[ ], the applicant shall provide a copy of . . . [a Clean Water Act section] . . . 316a variance . . . or equivalent State permit[ ] and supporting documentation. If the applicant can not provide these documents, it shall assess the impact of the proposed action on fish and shellfish resources resulting from heat shock . . . .” 10 C.F.R. § 51.53(c)(3)(ii)(B). Our regulations also classify the effects of heat shock on the protection and propagation of fish and shellfish as a so-called “Category 2” environmental issue. This means that the NRC cannot treat heat shock generically but must instead address it on a case-by-case basis. *See* 10 C.F.R. Part 51, Subpart A, Appendix B.
- D The Commission can legitimately rely on a state permit which expires only 5 years into the 20-year renewal period.
- E The Commission’s rules prohibit collateral attacks on our regulations unless the agency grants a waiver of the prohibition. 10 C.F.R. § 2.335(a). *See, e.g., AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-07-8, 65 NRC 124, 133 (2007).
- F Section 51.53(c)(3)(ii)(B) of the Clean Water Act requires that an applicant submit the EPA section 316(a) variance or the equivalent state document. The regulation does not limit this requirement to those situations where the state permit expires within a period greater than 5 years. Nor could it, because section 402(b)(1)(B) of the Clean Water Act expressly prohibits any state from issuing an NPDES permit for a period longer than 5 years. 33 U.S.C. § 1342(b)(1)(B).
- G A licensee may satisfy the requirements of 10 C.F.R. § 51.53(c)(3)(ii)(B) in either of two ways: to evaluate, in its Environmental Report, the impacts on aquatic resources from entrainment, impingement, and heat shock, or to provide a copy of the current section 316(a) permit (issued by either the EPA or the state where the plant is located).
- H Congress has severely limited our scope of inquiry into section 316(a) determinations. All we may do is examine whether the EPA or the state agency considered its permit to be a section 316(a) determination. If the answer is “yes,” our inquiry ends.
- I Section 511(c)(2) of the Clean Water Act does not give us the option of looking behind the agency’s permit to make an independent determination as to whether it qualifies as a *bona fide* section 316(a) determination. That section expressly prohibits us from “review[ing] any effluent limitation or other requirement established pursuant to” the Clean Water Act.
- J The Atomic Safety and Licensing Appeal Board was disbanded in 1991, but its decisions still carry precedential value. *See Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), CLI-99-24, 50 NRC 219, 222 n.3 (1999).
- K We and our Appeal Board have repeatedly interpreted section 511(c)(2) as requiring us to take a section 316(a) determination at face value and as prohibiting us from undertaking any independent analysis of the thermal impact that a state environmental agency has already assessed.
- L Section 51.53(c)(3)(ii)(B) rests on the presumption that we need not — indeed *cannot* — review and judge environmental permits issued under the Clean Water Act by the EPA or an authorized state agency. Given this statutory limitation, it is questionable whether we have the authority to consider even the environmental impacts of such permits. *See generally Department of Transportation v. Public Citizen*, 541 U.S. 752, 754 (2004).
- M As we stated in *Seabrook* (another case involving both section 511(c)(2) and a once-through cooling system), the permitting agency “determines what cooling system a nuclear power facility may use[,] and NRC factors the impacts resulting from use of that system into the NEPA cost-benefit analysis.” *Public Service Co. of New Hampshire* (Seabrook Station, Units 1 and 2), CLI-78-1, 7 NRC 1, 26 (1978). And our instruction in *Seabrook* to Licensing and Appeal Boards is likewise equally applicable today: “In future cases where EPA [or, as here, a state permitting agency] has made the necessary factual findings for approval of a specific once-through cooling system for a facility after full administrative proceedings,

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

we expect our adjudicatory boards to do as we have done today,” i.e., defer to the agency that issued the section 316(a) permit. *Id.* at 28 n.42.

- N Only Category-2 environmental issues must be addressed in an Environmental Report (10 C.F.R. § 51.53(c)(3)(ii)) and may therefore be litigated at an adjudicatory hearing. *Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-07-3, 65 NRC 13, 20 (2007); *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), CLI-01-17, 54 NRC 3, 19 (2001).
- CLI-07-17 SOUTHERN NUCLEAR OPERATING COMPANY (Early Site Permit for Vogtle ESP Site), Docket No. 52-011-ESP; EARLY SITE PERMIT; April 17, 2007; MEMORANDUM AND ORDER
- A Section 2.332(d) of 10 C.F.R. distinguishes between safety issues and environmental issues with respect to the timing of the hearing (though not with respect to the timing of discovery). Our regulations give the presiding officer discretion to accelerate the merits hearing on safety issues, but not on environmental issues. Thus, while the Board may decide to proceed to an early hearing on the merits of safety issues — that is, before the NRC Staff finishes its safety evaluation — the Board “may not commence” a hearing on environmental issues before the final environmental impact statement has been issued.
- B As a general proposition, the Commission has the authority “to enter into case-specific procedural orders . . . to facilitate the efficient resolution of issues before the Board.” The Commission is willing to be flexible in the timing of National Environmental Policy Act hearings where special circumstances are present. But we see no basis for deviating from our regulations here.
- CLI-07-18 CONSUMERS ENERGY COMPANY, NUCLEAR MANAGEMENT COMPANY, LLC, ENTERGY NUCLEAR PALISADES, LLC, and ENTERGY NUCLEAR OPERATIONS, INC. (Palisades Nuclear Plant), Docket No. 50-255-LT; LICENSE TRANSFER; April 26, 2007; MEMORANDUM AND ORDER
- A The “issues” in license transfer proceedings constitute “contentions” under 10 C.F.R. § 2.309(f) and must therefore meet the standards for admissibility set forth in that regulation.
- B The Staff ordinarily does not participate as a party in the adjudicatory portion of license transfer proceedings. *See generally* 10 C.F.R. § 2.1316(b), (c).
- C To intervene as of right in any Commission licensing proceeding, a petitioner must demonstrate that its “interest may be affected by the proceeding,” i.e., it must demonstrate “standing.”
- D To demonstrate standing in a license transfer proceeding, the petitioner must
- (1) identify an interest in the proceeding by
    - (a) alleging a concrete and particularized injury (actual or threatened) that
    - (b) is fairly traceable to, and may be affected by, the challenged action (e.g., the grant of an application to approve a license transfer), and
    - (c) is likely to be redressed by a favorable decision, and
    - (d) lies arguably within the “zone of interests” protected by the governing statute(s).
- E The petitioner must also specify the facts pertaining to that interest. *See Port Authority of the State of New York* (James A. FitzPatrick Nuclear Power Plant; Indian Point, Unit 3), CLI-00-22, 52 NRC 266, 293 (2000); *Niagara Mohawk Power Corp.* (Nine Mile Point Nuclear Station, Units 1 and 2), CLI-99-30, 50 NRC 333, 340-41 & n.5 (1999) (and cited authority).
- F Any organization seeking “representational standing” (i.e., permission to represent the interests of its members) must show that at least one of its members may be affected by the Commission’s approval of the transfer (such as by the member’s activities on or near the site), must identify that member, and must demonstrate that the member has (preferably by affidavit) authorized the organization to represent him or her and to request a hearing on his or her behalf. *See FitzPatrick*, CLI-00-22, 52 NRC at 293; *Vermont Yankee Nuclear Power Corp.* (Vermont Yankee Nuclear Power Station), CLI-00-20, 52 NRC 151, 163 (2000); *GPU Nuclear Inc.* (Oyster Creek Nuclear Generating Station), CLI-00-6, 51 NRC 193, 202 (2000), and cited authority. The member seeking representation must qualify for standing in his or her own right; the interests that the representative organization seeks to protect must be germane to its own purpose; and neither the asserted claim nor the requested relief must require an individual member to participate in the organization’s legal action. *See, e.g., Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-99-10, 49 NRC 318, 323 (1999), and CLI-98-13, 48 NRC 26, 30-31 (1998), *petition for review filed sub nom. Ohngo Gaudadeh Devia v. NRC*, No. 05-1419 (D.C. Cir. Nov. 7, 2005).
- G If an organization does not identify the members it purportedly represents, the NRC cannot “determine whether the organization actually does represent members who consider that they will be affected by [the licensing action] . . . or rather, [i]s simply seeking the ‘vindication of its own value preference.’” *Houston*

## DIGESTS

### ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION

*Lighting and Power Co.* (Allens Creek Nuclear Generating Station, Unit 1), ALAB-535, 9 NRC 377, 389-90, *reconsideration denied*, ALAB-539, 9 NRC 422 (1979), and ALAB-544, 9 NRC 630 (1979). *See also Sierra Club v. Morton*, 405 U.S. 727, 739-40 (1972). And without written authorization for such representation, we would have no “concrete indication that, in fact, the member wishes to have [the organization represent its interests] in th[is] proceeding.” *Allens Creek*, ALAB-535, 9 NRC at 396.

H To demonstrate an interest based on proximity, a petitioner must provide greater specificity than merely stating that some of its members live, work, or engage in recreation “adjacent” to or “near” an NRC-licensed facility. *See, e.g., Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), CLI-94-3, 39 NRC 95, 102 n.10 (1994); *Atlas Corp.* (Moab, Utah Facility), LBP-97-9, 45 NRC 414, 426-27, *aff’d*, CLI-97-8, 46 NRC 21 (1997). We require fact-specific standing allegations, not conclusory assertions.

I Assertions that a member lives within the service area of the utility that operates a licensed facility or within the same county as the facility is insufficiently specific to justify a finding of standing.

J Organizations seeking to intervene in their own right must satisfy the same standing requirements as individuals seeking to intervene. *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), ALAB-952, 33 NRC 521, 528, *aff’d in relevant part*, CLI-91-13, 34 NRC 185, 187-88 (1991). This is because an organization, like an individual, is considered a “person” as we have defined that word in 10 C.F.R. § 2.4 and as we have used it in 10 C.F.R. § 2.309 regarding standing.

K Petitioners’ interest in the promotion of “economic use of energy” falls outside the zone of interests protected by either the Atomic Energy Act or the National Environmental Policy Act. *See Metropolitan Edison Co.* (Three Mile Island Nuclear Station, Unit 1), CLI-83-25, 18 NRC 327, 332 (1983). *See generally Envirocare of Utah v. NRC*, 194 F.3d 72 (D.C. Cir. 1999). Likewise, petitioners’ promotion of “the public interest, environmental protection, and consumer protection” are broad interests shared with many others (*see generally Sierra Club v. Morton*, 405 U.S. 727, 734-35 (1972); *Three Mile Island*, CLI-83-25, 18 NRC at 332) and too general to constitute a protected interest under these two statutes. *Three Mile Island*, CLI-83-25, 18 NRC at 332. Petitioners have shown no risk of “discrete institutional injury to [themselves], other than the general environmental and policy interests of the sort we repeatedly have found insufficient for organizational standing.” *International Uranium (USA) Corp.* (White Mesa Uranium Mill), CLI-01-21, 54 NRC 247, 252 (2001) (emphasis added).

L In essence, Petitioners seek to play the role of a “private attorney general” — a role that AEA § 189 — which grants a hearing right to those with an “interest” in the proceeding — does not contemplate. *Exelon Generation Co., LLC* (Peach Bottom Atomic Power Station, Units 2 and 3), CLI-05-26, 62 NRC 577, 579 & n.4 (2005), citing *Portland General Electric Co.* (Pebble Springs Nuclear Plant, Units 1 and 2), ALAB-333, 3 NRC 804, 806 n.6 (1976). *See also Curators of the University of Missouri* (TRUMP-S Project), LBP-90-30, 32 NRC 95, 103 (1990).

M The County and Township within which a licensed facility is located are local governmental bodies that, pursuant to 10 C.F.R. § 2.309(d)(2), need make no further demonstration of standing.

N Not all organizations with governmental ties are entitled to participate in our proceedings as a “local governmental body (county, municipality, or other subdivision)” under section 2.309(d)(2), in much the same way not all organizations with governmental ties were entitled to participate in our proceedings as governmental agencies under our former regulation, 10 C.F.R. § 2.715(c), regarding participation by nonparties. Under that former section, an advisory body that lacked executive or legislative responsibilities was determined by the Commission to be “so far removed from having the representative authority to speak and act for the public that [it did] not qualify” as a governmental entity for the purpose of section 2.715(c). *See Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), CLI-98-21, 48 NRC 185, 202-03 (1998).

O Commission practice requires each party to separately establish standing. *See Commonwealth Edison Co.* (Dresden Nuclear Power Station, Unit 1), CLI-81-25, 14 NRC 616, 623 (1981).

P We defer ruling on the admissibility of the contentions at this stage since we find that the arguments concerning at least one contention and the need for access to redacted information are sufficient to warrant our approval of the requested access. *FitzPatrick*, CLI-00-22, 52 NRC at 300 n.23. Petitioners are obligated to put forward and support contentions when seeking intervention, based on the application and information available. *See, e.g., Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-03-17, 58 NRC 419, 429 (2003). *See generally* 10 C.F.R. § 2.309(c) and (f)(2) (providing for admission of late-filed contentions if based on previously unavailable information). The Commission may decide the admissibility of such contentions or defer ruling on them, considering the

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

need for access to redacted information and other relevant factors. *See FitzPatrick*, CLI-00-22, 52 NRC at 296-319.

Q To demonstrate that contentions are admissible under Subpart M, a petitioner must “set forth the [contentions] (factual and/or legal) that petitioner seeks to raise, . . . demonstrate that those [contentions] fall within the scope of the proceeding, . . . demonstrate that those [contentions] are relevant and material to the findings necessary to a grant of the license transfer application, . . . show that a genuine dispute exists with the applicant regarding the [contentions], and . . . provide a concise statement of the alleged facts or expert opinions supporting petitioner’s position on such [contentions], together with references to the sources and documents on which petitioner intends to rely.” *FitzPatrick*, CLI-00-22, 52 NRC at 295; *Nine Mile Point*, CLI-99-30, 50 NRC at 342 (and cited authority). *See* 10 C.F.R. § 2.309(f). As we observed in *FitzPatrick*, “[t]hese standards do not allow mere notice pleading; the Commission will not accept the filing of a vague, unparticularized [contention], unsupported by alleged fact or expert opinion and documentary support.” In short, “[g]eneral assertions or conclusions will not suffice.” *FitzPatrick*, CLI-00-22, 52 NRC at 295 (internal quotation marks omitted).

R In a license transfer adjudication, petitioners who have been granted access to an applicant’s or licensee’s proprietary information must show that any new or revised contentions could not have been submitted without the requested access to the redacted proprietary information in the license transfer application. If petitioners cannot make this showing, then they will have to meet not only the contention requirements set forth above, but also the late-filing requirements set forth in 10 C.F.R. § 2.309(c).

CLI-07-19 CONSUMERS ENERGY COMPANY (Big Rock Point Independent Spent Fuel Storage Installation), Docket Nos. 50-155-LT, 72-043-LT; LICENSE TRANSFER; April 26, 2007; MEMORANDUM AND ORDER

A Although a petitioner’s claim of residence within 50 miles of the Big Rock Point ISFSI might entitle him to a presumption of standing based on his proximity if this were a reactor construction permit or operating license proceeding (*see Florida Power & Light Co.* (St. Lucie Nuclear Power Plant, Units 1 and 2), CLI-89-21, 30 NRC 325, 329 (1989); *Tennessee Valley Authority* (Watts Bar Nuclear Plant, Units 1 and 2), ALAB-413, 5 NRC 1418, 1421 n.4 (1977)), we have required far closer proximity in other licensing proceedings, including license transfer cases. We determine on a case-by-case basis whether the proximity presumption should apply, considering the “obvious potential for offsite [radiological] consequences,” or lack thereof, from the application at issue, and specifically “taking into account the nature of the proposed action and the significance of the radioactive source.” *Exelon Generation Co.* (Peach Bottom Atomic Power Station, Units 2 and 3), CLI-05-26, 62 NRC 577, 580-81 (2005).

B License transfers even for *operating* nuclear power plants typically involve little if any radiological risk, as there are generally no changes to the physical plant, its operating procedures, or its design basis accident analysis. The potential radiological risks associated with an ISFSI license transfer are even lower, because an ISFSI is essentially a passive structure rather than an operating facility, and there therefore is less chance of widespread radioactive release.

C An individual petitioner should not request to intervene in his own right and simultaneously authorize other petitioners to represent his or her interests. Such multiple representation might lead to confusion as to which of the petitioners was speaking for the individual; such confusion would be detrimental to the process of adjudication. *Northern States Power Co.* (Pathfinder Atomic Plant), LBP-89-30, 30 NRC 311, 316 (1989). By contrast, nothing precludes an individual from seeking to intervene both on his/her own behalf and as a representative of others. *See, e.g., Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), ALAB-952, 33 NRC 521, 530, *aff’d*, CLI-91-13, 34 NRC 185 (1991); *Commonwealth Edison Co.* (Braidwood Nuclear Power Station, Units 1 and 2), LBP-85-11, 21 NRC 609, 615 (1985).

CLI-07-20 SHIELDALLOY METALLURGICAL CORPORATION (License Amendment Request for Decommissioning of the Newfield, New Jersey Facility), Docket No. 40-7102-MLA; MATERIALS LICENSE AMENDMENT; May 30, 2007; MEMORANDUM AND ORDER

A The Commission’s regulations, in 10 C.F.R. § 2.309(i), require the presiding officer “within forty-five (45) days after the filing of answers and replies . . . [to] issue a decision on each request for hearing/petition to intervene, absent an extension from the Commission.” In general, we do not endorse deferring the consideration of proposed contentions because, in our view, prompt consideration of contentions promotes the efficient and complete development of the record while conserving resources. Prompt identification of all of the contentions also allows the parties to concentrate on matters truly at issue in a proceeding.

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

Prompt identification maintains the proceeding's primary focus on adequacy of the application at issue, and may induce — or enhance the prospects for — early settlement. But deferral may be appropriate in some very limited and exceptional circumstances.

B The Commission's regulations allow unsuccessful petitioners to appeal the denial of their intervention petitions. But appellants must make some argument that an appeal is justified. Pointing out errors in the Board's decision is a basic requirement for an appeal. Supporting information is to be provided at the time the contention is filed, not at a later date on appeal. Moreover, "[t]he purpose of an appeal to the Commission is to point out errors made in the Board's decision, not to attempt to cure deficient contentions by presenting arguments and evidence never provided to the Board."

C The Commission does "not look with favor on 'amended or new contentions filed after the initial filing.'"

CLI-07-21 CONSUMERS ENERGY COMPANY (Big Rock Point Independent Spent Fuel Storage Installation), Docket Nos. 50-155-LT, 72-043-LT; LICENSE TRANSFER; June 28, 2007; MEMORANDUM AND ORDER

A To succeed, a "petition for reconsideration must demonstrate a compelling circumstance, such as the existence of a clear and material error in a decision, which could not have been reasonably anticipated, which renders the decision invalid." 10 C.F.R. § 2.345(b). *See also Pacific Gas and Electric Co.* (Diablo Canyon Power Plant Independent Spent Fuel Storage Installation), CLI-06-27, 64 NRC 399, 400-01 (2006).

B A petitioner cannot satisfy our standing requirement by offering a vague claim of 50-mile "proximity" in an initial petition and later using a petition for reconsideration to fill in gaps with more specific information that was available all along. *See generally* 10 C.F.R. § 2.345(b) ("A petition for reconsideration must demonstrate a compelling circumstance, such as the existence of a clear and material error in a decision, which could not have been reasonably anticipated, which renders the decision invalid" (emphasis added)).

C In license transfer decisions issued subsequent to the *Vogtle* decision in 1993, the Commission's grants of standing based on a facility's proximity to a petitioner's residence have not approached the 40-42 miles at issue here. Indeed, the longest specific distance for which the Commission has granted proximity-based standing in a post-*Vogtle* license transfer case is 6–6-1/2 miles. By contrast, we have denied proximity-based standing in license transfer proceedings to petitioners within 5-10 miles, 12 miles, and 40 miles from licensed facilities. All these proceedings involved active, operating reactors. The Commission therefore denies the requested proximity-based standing claim in this case resting on a residence within 42 miles of an ISFSI or on occasional sailing trips within 15 miles.

D NRC licensing boards and the Commission itself have recognized proximity standing at such close distances where a petitioner "*frequently* engages in *substantial* business and related activities in the vicinity of the facility," engages in "normal, *everyday* activities" in the vicinity, has "*regular*" and "*frequent* contacts" in an area near a licensed facility, or otherwise has visits of a "length" and "nature" showing "an ongoing connection and presence." Conversely, the agency has denied proximity-based standing where contact has been limited to "*mere occasional trips* to areas located close to reactors."

CLI-07-22 CONSUMERS ENERGY COMPANY, NUCLEAR MANAGEMENT COMPANY, LLC, ENTERGY NUCLEAR PALISADES, LLC, and ENTERGY NUCLEAR OPERATIONS, INC. (Palisades Nuclear Plant), Docket No. 50-255-LT; LICENSE TRANSFER; June 28, 2007; MEMORANDUM AND ORDER

A A petition for reconsideration exceeds the 10-page limit specified in our regulations. 10 C.F.R. § 2.323(e), incorporated by reference into 10 C.F.R. § 2.341(d), incorporated by reference into 10 C.F.R. § 2.345(a)(2). The last of these regulations governs petitions for reconsideration of final Commission orders.

B A petition for reconsideration "must demonstrate a compelling circumstance, such as the existence of a clear and material error in a decision, which could not have been reasonably anticipated, which renders the decision invalid." 10 C.F.R. § 2.345(b). *See also Pacific Gas and Electric Co.* (Diablo Canyon Power Plant Independent Spent Fuel Storage Installation), CLI-06-27, 64 NRC 399, 400-01 (2006). Petitioners seeking reconsideration of a Commission order must demonstrate that the Commission has committed "clear" error, must do so by raising new arguments, and must not previously have been able to make those arguments. *Consumers Energy Co.* (Big Rock Point Independent Spent Fuel Storage Installation), CLI-07-21, 65 NRC 519 (2007).

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- C The Commission does not consider granting organizations proximity-based standing merely because their members' domiciles lie within the same zip code as the facility. This is far too imprecise a basis for standing. A "same zip code" test for standing is inappropriate, given that the sizes of zip-code areas vary greatly throughout the country.
- D In a license transfer case, a petition cannot, for purposes of standing, successfully claim injury based on the financial qualifications and assurances of the transferor.
- CLI-07-23 DOMINION NUCLEAR NORTH ANNA, LLC (Early Site Permit for North Anna ESP Site), Docket No. 52-008-ESP; EARLY SITE PERMIT; August 2, 2007; ORDER
- CLI-07-24 SOUTHERN NUCLEAR OPERATING COMPANY (Early Site Permit for Vogtle ESP Site), Docket No. 52-011-ESP; EARLY SITE PERMIT; August 30, 2007; MEMORANDUM AND ORDER
- CLI-07-25 PPL SUSQUEHANNA LLC (Susquehanna Steam Electric Station, Units 1 and 2), Docket Nos. 50-387-OLA, 50-388-OLA; OPERATING LICENSE AMENDMENT; October 5, 2007; MEMORANDUM AND ORDER
- A Issues concerning alleged violations of State law or regulations were outside the scope of, and not material to, an NRC power uprate proceeding. The Board did not err in finding that the NRC's adjudicatory process was not the proper forum for investigating alleged violations that are primarily the responsibility of other Federal, state, or local agencies. *Hydro Resources, Inc.* (2929 Coors Road, Suite 101, Albuquerque, NM 87120), CLI-98-16, 48 NRC 119, 121-22 (1998).
- B Water use issues that are under the jurisdiction of another agency, and which are not affected by any NRC regulation, are outside the scope of an NRC proceeding.
- C The Board appropriately rejected the contention of a petitioner who failed to support his premise that a river water intake valve is a safety-related system with information or expert opinion.
- CLI-07-26 PA'INA HAWAII, LLC, Docket No. 30-36974-ML; MATERIALS LICENSE; October 24, 2007; MEMORANDUM AND ORDER
- CLI-07-27 DOMINION NUCLEAR NORTH ANNA, LLC (Early Site Permit for North Anna ESP Site), Docket No. 52-008-ESP; EARLY SITE PERMIT; November 20, 2007; MEMORANDUM AND ORDER
- A The Commission approves the Early Site Permit for the North Anna facility.
- B In a mandatory ESP hearing, the NRC must address six issues:  
*Safety Issue 1:* whether the issuance of an ESP will be inimical to the common defense and security or to the health and safety of the public.  
*Safety Issue 2:* whether, taking into consideration the site criteria contained in 10 C.F.R. Part 100, a reactor, or reactors, having the characteristics that fall within the parameters for the site, can be constructed and operated without undue risk to the health and safety of the public.  
*Overriding NEPA Issue:* whether the review conducted by the Commission pursuant to the National Environmental Policy Act (NEPA) has been adequate.  
*NEPA Baseline Issue 1:* whether the requirements of section 102(2)(A), (C), and (E) of NEPA and the regulations in [10 C.F.R. Part 51, Subpart A] have been complied with in this proceeding.  
*NEPA Baseline Issue 2:* independently consider the final balance among the conflicting factors contained in the record of the proceeding with a view to determining the appropriate action to be taken.  
*NEPA Baseline Issue 3:* determine, after considering reasonable alternatives, whether the construction permit . . . should be issued, denied, or appropriately conditioned to protect environmental values.
- C NEPA Baseline Issue 1 requires that the NRC determine, among other things, whether it has complied with NEPA § 102(2)(C)(iii), which in turn requires the NRC to provide a "detailed statement" on "alternatives to the proposed action."
- D Although the CEQ's guidance does not bind us, we give such guidance substantial deference.
- E Our own examination of the entire administrative record leads us to conclude that the Staff's underlying review was sufficiently detailed to qualify as "reasonable" and a "hard look" under NEPA. Our discussion of this issue today adds necessary additional details and constitutes a supplement to the FEIS's alternative site review.
- F According to the courts, agencies may defer certain issues in an EIS for a multistage project when detailed useful information on a given topic is not "meaningfully possible" to obtain, and the unavailable information is not essential to determination at the earlier stage. The CEQ has likewise recognized that

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- information may be unavoidably incomplete or unavailable, and that under those circumstances, an FEIS can overcome this deficiency if it states that fact, explains how the missing information is relevant, sets forth the existing information, and evaluates the environmental impacts to the best of the agency's ability.
- G Where, as here, one or more particular environmental impacts cannot be meaningfully assessed at the ESP stage, those matters may be designated as "unresolved," provided they do not interfere with the Staff's ability to determine whether there is any obviously superior alternative to the proposed site.
- H Policy Statements are neither rules nor orders, and therefore do not establish requirements that bind either the agency or the public.
- I Executive Order 12,898 itself does not establish new substantive or procedural requirements applicable to NRC regulatory or licensing activities.
- J An FEIS is necessarily more concise than the underlying pre-FEIS analysis, as the explanation is intended to summarize the analysis in a manner both concise and understandable to the public. In *LES*, we explained that an FEIS's discussion need not be "elaborate or lengthy," but found a "conclusory statement on 'some negative impact' on property values, without explanation or analysis," to be plainly deficient.
- K NRC's NEPA process for preparation of an environmental impact statement mandates openness and clarity.
- L Given the fact-specific nature of environmental justice issues and inquiries, we believe that the methods and form of Staff review — including any decision whether to hold discussions with knowledgeable community and governmental representatives — is best left to the informed discretion of the Staff.
- M The Staff's explanation of how it reached its conclusions regarding environmental justice is rather cursory for a licensing action of this magnitude. However, in this instance, the Commission does not direct the Staff to supplement its environmental justice review, as the Commission otherwise might, because it believes that the review was sufficient and that such a supplement would constitute a purely academic exercise with little or no practical benefit.
- N The Staff's review did not clearly comport with the letter of the Commission's environmental justice Policy Statement, or with its internal Staff guidance. However, it appears to the Commission that the Staff's review satisfied the statutory and regulatory requirements of NEPA, in that it did take a "hard look" at the environmental impacts of the construction and operation of new units on the North Anna ESP site. On a practical level, its review was sufficient to identify significant environmental impacts that would fall heavily on a particular minority or low-income community.
- O For light-water-cooled reactors (LWRs), section 20.1301(e) would be the limiting standard, because a licensee within the uranium fuel cycle could not release the 100-mrem limit permitted by section 20.1301(a) without necessarily violating the 25-mrem limit of section 20.1301(e) that applies to the entire site.
- P Specific numerical guidelines for maintaining effluent releases ALARA for non-LWRs have not been developed. Unless and until such guidelines are implemented, whether a particular non-LWR design complies with ALARA requirements will be determined on a case-by-case basis in the context of a future COL or CP application referencing the ESP.
- Q In making its determination on the postulated source terms, the Staff did not, and need not, authorize the proposed reactors to release radioactivity in the amounts used in connection with the dose estimates. Rather, the Staff used conservative estimates to conclude that two new units bounded by the postulated source terms *could* comply with applicable radiation standards found in 10 C.F.R. Part 20. However, *actual compliance* with applicable radiation standards is deferred at the ESP stage, and can only be determined in a COL or CP proceeding, when the applicant must proffer necessary design information and proposed operational programs.
- R If a COL or CP applicant chooses to pursue a new reactor design before the Commission has set specific standards applicable to that type of reactor, then the applicant will be subject to the existing requirement of 10 C.F.R. § 20.1301(a)(1), and will further be required to demonstrate that its emissions will be ALARA pursuant to 10 C.F.R. §§ 50.34a, 50.36a, and 20.1101. While the design objectives found in Appendix I could potentially serve as guidance to the Staff in performing its review in this area, they would not bind such a CP or COL applicant.
- S Approval of an ESP does not — and is not intended to — approve the construction or operation of reactor(s) of any specific design at the proposed ESP site.

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- T Like permit conditions, site characteristics, and plant parameter values, the COL action items identify significant information requirements that do not affect the Staff's ability to make the requisite safety findings for issuance of an ESP, but nevertheless merit tracking and resolution during the safety review performed for a subsequent CP or COL application referencing the ESP. By contrast, the "representations, assumptions, and unresolved issues" discussed in the FEIS serve a different purpose. "representations and assumptions," as well as any other key assumptions that are captured within the text of the FEIS, help to form the basis for the Staff's "finality" determinations in the environmental arena during any subsequent CP or COL proceeding. However, they neither place limitations on the ESP or the ESP holder, nor bind a CP or COL applicant in the preparation of future applications referencing the ESP.
- U In the environmental context, the contents of the FEIS bound the reach of both issue preclusion and Staff inquiry into new and significant information in a future CP or COL proceeding referencing an ESP granted for the North Anna ESP site.
- CLI-07-28 ENTERGY NUCLEAR OPERATIONS, INC. (Indian Point, Units 2 and 3), Docket Nos. 50-247-LR, 50-286-LR; LICENSE RENEWAL; December 12, 2007; MEMORANDUM AND ORDER
- A In matters of case management, such as censure orders, the Commission generally defers to the Board.
- CLI-08-1 PACIFIC GAS AND ELECTRIC COMPANY (Diablo Canyon Power Plant Independent Spent Fuel Storage Installation). Docket No. 72-26-ISFSI; INDEPENDENT SPENT FUEL STORAGE INSTALLATION; January 15, 2008; MEMORANDUM AND ORDER
- A Before a petition to admit a late-filed contention can be granted, the five factors set out in the Commission's procedural rules must be balanced. The first factor — whether good cause exists to excuse the late-filing of the contention — is the most important factor. If "good cause" is not shown, a petitioner "must make a 'compelling' showing" on the four remaining factors. In this analysis, factors three and five — the extent to which the petitioner's participation may reasonably be expected to assist in developing a sound record and the extent to which this participation will broaden the issues or delay the proceeding — are to be given more weight than factors two and four — the availability of other means for protecting the petitioner's interest and the extent to which this interest will be represented by existing parties.
- B Even if late-filing criteria are satisfied, proposed contentions must still meet the Commission's admissibility standards.
- C A contention shall not be admitted if the Commission's admissibility requirements are not satisfied or if the contention, even if proven, would not entitle the petitioner to relief. This strict contention pleading rule is designed to focus the hearing process on genuine disputes susceptible of resolution, puts the other parties on notice of the specific grievances at issue, and restricts participation to "those able to proffer at least some minimal factual and legal foundation in support of their contentions."
- D The link between the National Environmental Policy Act (NEPA) and the Freedom of Information Act (FOIA) is spelled out in section 102(2)(C) of NEPA: copies of environmental impact statements "shall be made available to the President, the Council on Environmental Quality and to the public as provided in [FOIA] section 552 of Title 5." This includes information underlying environmental impact statements (or environmental assessments). But information that must be considered as part of the NEPA decisionmaking process may be withheld from public disclosure pursuant to FOIA exemptions.
- E The NRC has a statutory obligation to protect national security information. Hearings on the essentially limitless range of conceivable (albeit highly unlikely) terrorist scenarios could not be conducted in a meaningful way without substantial disclosure of classified and safeguards information on threat assessments and security arrangements and without substantial litigation over their significance. Such information — disclosure of which is prohibited by law — would lie at the center of any adjudicatory inquiry into the probability and success of various terrorist scenarios, and NEPA does not contemplate such adjudications.
- F While the Commission certainly agrees that in implementing its security program the NRC should take account of the National Infrastructure Protection Plan (NIPP), to which the NRC is a signatory, the Commission does not agree that the NRC must demonstrate compliance with the NIPP in its NEPA evaluation. The NIPP is concerned with security issues, not environmental quality standards and requirements — and it is environmental quality standards and requirements that 10 C.F.R. § 51.71(d) obliges the environmental analysis to address, not security issues.

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- CLI-08-2      ENTERGY NUCLEAR GENERATION COMPANY and ENTERGY NUCLEAR OPERATIONS, INC. (Pilgrim Nuclear Power Station), Docket No. 50-293-LR; LICENSE RENEWAL; January 15, 2008; MEMORANDUM AND ORDER
- A            A ruling granting summary disposition on a single contention, where other contentions are still pending in an adjudication, is not a “final” decision, and is not susceptible to Commission review.
- B            The provision expressly permitting immediate review of a “partial initial decision” is an exception to the Commission’s established policy of disfavoring interlocutory appeals. *See* 10 C.F.R. § 2.341(b)(1). *See* Final Rule: “Procedures for Direct Commission Review of Decisions of Presiding Officers,” 56 Fed. Reg. 29,403 (July 27, 1991). The rule making partial initial decisions immediately appealable codified the Commission’s longstanding practice of considering a Board order appealable where it “disposes of . . . a major segment of the case or terminates a party’s right to participate.” *See Public Service Co. of New Hampshire* (Seabrook Station, Units 1 and 2), ALAB-731, 17 NRC 1073, 1074-75 (1983), quoting *Toledo Edison Co.* (Davis-Besse Nuclear Power Station), ALAB-300, 2 NRC 752, 758 (1975).
- CLI-08-3      PA’INA HAWAII, LLC, Docket No. 30-36974-ML; MATERIALS LICENSE; March 17, 2008; MEMORANDUM AND ORDER
- A            The Commission addresses two questions that the Atomic Safety and Licensing Board certified to the Commission. The Commission concludes that contentions raising irradiator siting concerns are not barred as a matter of law, but must be adequately supported.
- B            The Statement of Considerations (SOC) for Part 36 indicates that in developing the Part 36 regulations, the NRC considered whether there was a need to impose limits on irradiator siting, but determined that no specific siting limitations were warranted. The SOC makes clear that the NRC explicitly considered whether there should be siting requirements because of potential floods, tidal waves, airplane crashes, or earthquakes, but concluded that irradiators could be located anywhere that local governments permit an industrial facility to be built. There is no evidence that the Commission intended to exempt underwater irradiators from its conclusion that irradiators can be built anywhere that local authorities permit an industrial facility to be located.
- C            The Part 36 Statement of Considerations does hold open the possibility that the NRC may choose, in an exceptional case, to conduct an irradiator facility siting review, if a unique threat is involved which may not be addressed by state and local requirements. But the general expectation was that the NRC would not need to conduct a special safety review of facility siting. Instead, both the Statement of Considerations and 10 C.F.R. § 36.1(a) stress the responsibility of licensees to satisfy all applicable state and local siting, zoning, land use, and building code requirements.
- D            The Commission often refers to the Statement of Considerations as an aid in interpreting our regulations.
- E            As guidance reached in a rulemaking following notice and comment, and endorsed by the Commission, the Statement of Considerations is entitled to special weight.
- F            The Part 36 rulemaking history leaves open the possibility that there could be a need for the NRC to review facility siting, on a case by case basis, if a unique threat is involved which may not be addressed by state and local requirements. Therefore, a contention calling for a siting safety analysis is not barred by the Part 36 regulatory scheme. But contentions challenging an irradiator facility’s siting must be sufficiently supported, in light of the Statement of Considerations’ conclusions. Petitioners must set forth, with adequate elaboration and support, a plausible claim that a proposed irradiator facility would not be adequately protective in the event of specific phenomena.
- G            The degree of support necessary for an irradiator siting contention will depend on how obvious a threat the asserted risk is, given the irradiator facility’s design and protective features (e.g., depth and dimensions, lack of volatility of sources, shielding provided by water and/or concrete, temperatures, pressure, impact, and other conditions the source assemblies have been tested to withstand, etc.).
- H            At the contention admissibility stage, it is not necessary to establish a general “probability threshold” for irradiators to assess in qualitative terms the significance and plausibility of particular asserted siting-related threats.
- CLI-08-4      PA’INA HAWAII, LLC, Docket No. 30-36974-ML; MATERIALS LICENSE; March 27, 2008; MEMORANDUM AND ORDER
- A            The Commission takes *sua sponte* review of the issue whether the NRC, under the National Environmental Policy Act (NEPA), must analyze the potential health effects of consuming irradiated foods. The Commission establishes a briefing schedule, and seeks the parties’ answers to two questions.

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- B Whether NEPA requires the NRC to consider potential health effects of consuming irradiated food raises the kind of broad legal question appropriate for Commission interlocutory review. In our 1998 *Statement of Policy on Conduct of Adjudicatory Proceedings*, CLI-98-12, 48 NRC 129, 130 (1998), we encouraged boards to certify, as soon as possible, novel legal or policy questions related to admitted issues. We also noted that we may exercise our supervisory authority over proceedings to direct boards to certify such questions.
- CLI-08-5 PACIFIC GAS AND ELECTRIC COMPANY (Diablo Canyon Power Plant Independent Spent Fuel Storage Installation), Docket No. 72-26-ISFSI; INDEPENDENT SPENT FUEL STORAGE INSTALLATION; March 27, 2008; ORDER
- A By law, disclosure of documents under the National Environmental Policy Act (NEPA) is expressly governed by the Freedom of Information Act (FOIA). Based on this linkage, we will not give the petitioners here NEPA-based access to documents exempt from disclosure under FOIA, even under protective measures.
- B Limited discovery may be allowed in a Freedom of Information Act (FOIA) dispute, but only if absolutely necessary to ensure a complete record and a fair decision. Discovery is sparingly granted in FOIA litigation — which ordinarily is resolved in summary disposition without discovery and without evidentiary trials or hearings.
- CLI-08-6 DARYL M. SHAPIRO, NRC Investigation No. 2-2006-17; ENFORCEMENT; March 27, 2008; MEMORANDUM AND ORDER
- A *Upjohn Co. v. United States*, 449 U.S. 383 (1981), holds that the communications between company employees and an attorney conducting an internal investigation presumptively fall within the attorney-client privilege.
- B The attorney-client privilege belongs to the client, not to the lawyer. Thus, the client may waive the privilege, either by an express waiver or by an implied waiver.
- C Implied waiver of the attorney-client privilege exists when a regulated company voluntarily discloses investigative materials to a government agency. In such cases, courts have assumed, without discussion, that the privileges were waived with respect to the particular agency to which the investigative materials were disclosed.
- D If a licensee has voluntarily provided information to the NRC, the voluntary nature of the submission is not compromised by the NRC's ability to conduct its own investigation into the same matter. The submission of information to a government agency is voluntary even if the company submitting the information feels pressure to do so as a result of its dealings with the federal government. *United States v. Massachusetts Institute of Technology*, 129 F.3d 681, 686 (1st Cir. 1997).
- E Implied waiver of the attorney-client privilege exists when the holder of the privilege places the report "in issue." Courts have held that if a company claims that the internal investigation establishes it has met its obligation, for example, the requirement to investigate a sexual discrimination charge, then the company has waived the attorney-client privilege associated with the internal investigation. *E.g., McKenna v. Nestle Purina PetCare Co.*, 2007 U.S. Dist. LEXIS 8876 (S.D. Ohio 2007); *McGrath v. Nassau Health Care Corp.*, 204 F.R.D. 240, 247-48 (E.D.N.Y. 2001); *Brownell v. Roadway Package System, Inc.*, 185 F.R.D. 19, 25 (N.D.N.Y. 1999); *Worthington v. Endee*, 177 F.R.D. 113, 118 (N.D.N.Y. 1998); *Harding v. Dana Transport, Inc.*, 914 F. Supp. 1084, 1096 (D.N.J. 1996). In effect, the company places the contents of the report in issue by claiming that the investigation is sufficient or that it meets regulatory requirements.
- F The work-product privilege covers only documents and tangible things that are prepared in anticipation of litigation or for trial by or for another party or its representatives. Fed. R. Civ. P. 26(b)(3).
- CLI-08-7 ENTERGY NUCLEAR OPERATIONS, INC. (Indian Point, Units 2 and 3), Docket Nos. 50-247-LR, 50-286-LR; LICENSE RENEWAL; April 30, 2008; MEMORANDUM AND ORDER
- A The Board here has not made even the threshold ruling on WestCAN's standing and contentions. Therefore, we consider WestCAN's Petition under our usual standard for review of an interlocutory Board order: whether the ruling threatens the petitioner with "immediate and serious, irreparable impact" or will affect the "basic structure of the proceeding in a pervasive and unusual manner." 10 C.F.R. § 2.341(f)(2).
- B A Licensing Board order canceling oral argument on the admissibility of petitioner's proposed contention did not cause serious and irreparable harm to petitioner. Oral argument on contention admissibility is not a "right."
- C Our rules provide that a petitioner must explain and support its contention in the petition to intervene. 10 C.F.R. § 2.309(f).

## DIGESTS

### ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION

- D A Licensing Board's refusal to hear petitioner's oral presentation on contention admissibility would not cause "irreparable" impact. If the Board rejects the petition in its entirety, then petitioner may appeal to the Commission at that time. 10 C.F.R. § 2.311(b). On the other hand, if the Board grants petitioner party status, but declines to admit some of its contentions, this would not constitute "immediate and serious irreparable impact." The rejection or admission of a contention, where the petitioner has been admitted as a party and has other contentions pending, neither constitutes serious and irreparable impact, nor affects the "basic structure of the proceeding in a pervasive and unusual manner." See, e.g., *Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-04-31, 60 NRC 461, 466-67 (2004). See also *Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), CLI-07-2, 65 NRC 10, 12 (2007); *Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-00-2, 51 NRC 77, 79-80 (2000).
- E Licensing Boards have broad discretion to issue procedural orders to regulate the course of proceedings and the conduct of participants. It is the Board's responsibility to "conduct a fair and impartial hearing according to law, to take appropriate action to control the prehearing and hearing process, and to maintain order." 10 C.F.R. § 2.319. The Commission generally will not interfere with the Board's day-to-day case management decisions, unless there has been an abuse of power. See, e.g., *Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), CLI-07-28, 66 NRC 275 (2007); *Consolidated Edison Co. of New York* (Indian Point, Unit 2), CLI-82-15, 16 NRC 27, 37 (1982). We see no abuse in the Board's actions here.
- CLI-08-8 PACIFIC GAS AND ELECTRIC COMPANY (Diablo Canyon Power Plant Independent Spent Fuel Storage Installation), Docket No. 72-26-ISFSI; INDEPENDENT SPENT FUEL STORAGE INSTALLATION; April 30, 2008; MEMORANDUM AND ORDER
- A By law, disclosure of documents under the National Environmental Policy Act is expressly governed by the Freedom of Information Act. Freedom of information Act litigation is ordinarily "resolved on summary disposition without discovery and without evidentiary trials or hearings," and discovery is sparingly used.
- B Five factors must be balanced (under our pre-2004 rules) before a petition to admit a late-filed contention can be granted. "The first factor — whether good cause exists to excuse the late-filing of the contention — is the most important factor." "If 'good cause' is not shown, a petitioner 'must make a 'compelling' showing' on the remaining four factors." "In this analysis, factors three and five are to be given more weight than factors two and four." If the late-filed contention criteria are satisfied, our next inquiry is whether the proposed contention is suitable for hearing.
- C It is not practical or legally required for the Nuclear Regulatory Commission to adjudicate the essentially limitless range of conceivable (albeit highly unlikely) terrorist scenarios, where the core evidence (threat assessment and security measures) is protected security information. The National Environmental Policy Act does not contemplate adjudications resulting in the disclosure of matters under law considered secret or confidential.
- CLI-08-9 ENTERGY NUCLEAR GENERATION COMPANY and ENTERGY NUCLEAR OPERATIONS, INC. (Pilgrim Nuclear Power Station), Docket No. 50-293-LR; LICENSE RENEWAL; May 16, 2008; MEMORANDUM AND ORDER
- A A Court order required the Commission to stay "the close of hearings" to afford the Commonwealth of Massachusetts an opportunity to request status as an interested state so that it would qualify to request a suspension of the proceeding under 10 C.F.R. § 2.802(d). "The close of hearings" refers to the close of the proceeding as a whole, including the Commission's ultimate decision on review, and not to the ministerial act of closing the evidentiary record. As the Commonwealth has already filed a notice of intent to participate as an interested state, it may petition to suspend the proceedings under 10 C.F.R. § 2.802(d) after the Board closes the evidentiary record.
- CLI-08-10 AMERGEN ENERGY COMPANY, LLC (Oyster Creek Nuclear Generating Station), Docket No. 50-219-LR; LICENSE RENEWAL; May 28, 2008; ORDER (Requesting Additional Briefs)
- CLI-08-11 U.S. DEPARTMENT OF ENERGY (High-Level Waste Repository), Docket Nos. PAPO-00, PAPO-001; PRE-LICENSE APPLICATION MATTERS; June 5, 2008; MEMORANDUM AND ORDER
- A The Commission denies a motion to disqualify counsel for conflicts of interests.
- B The Commission takes seriously any allegation that an unresolved conflict of interest or other ethical breach threatens the integrity of an NRC licensing proceeding, potentially leading to a biased result and potentially compromising public health and safety. We recognize that our regulations do not address conflicts of interest as such, but the absence of a specific rule does not interfere with our inherent supervisory authority over the conduct of adjudicatory proceedings before this Commission.

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- C We may not lightly interfere in arrangements made between parties and their lawyers. In investigations, for example, the D.C. Circuit has held that the NRC may not disqualify attorneys representing multiple witnesses unless it has “concrete evidence” that the attorney will obstruct and impede the investigation. While this standard does not require proof of wrongdoing, it requires more than mere concern or speculation.
- D The Commission could (among other remedies) disqualify a party’s counsel from participating in an NRC proceeding upon a concrete showing that a conflict of interest or other ethics concern would obstruct our obtaining a full range of necessary safety or environmental information, or would otherwise threaten the integrity of our regulatory process.
- CLI-08-12 U.S. DEPARTMENT OF ENERGY (High-Level Waste Repository), Docket No. PAPO-00 (ASLBP No. 04-829-01-PAPO); PRE-LICENSE APPLICATION MATTERS; June 17, 2008; MEMORANDUM AND ORDER
- A “The interpretation of a regulation, like the interpretation of a statute, begins with the language and structure of the provision itself.” Recourse to regulatory history is not necessary unless the language and structure of the regulation reveal an ambiguity that must be resolved. It is a fundamental precept that “the entirety of the provision must be given effect.”
- B Section 2.1003’s reference to “all documentary material (including circulated drafts but excluding preliminary drafts) generated by, or at the direction of, or acquired by” clearly “conveys that possession or control of the documentary material is a prerequisite [to] the duty to produce it.” Thus, as our regulations indicate, at the time it made its initial certification, the Department of Energy was required to place on the Licensing Support Network only extant material on which it intended to rely.
- C The use of the Licensing Support Network was intended, among other things, to “enable[e] the comprehensive and early review of the millions of pages of relevant licensing material by the potential parties to the proceeding, so as to permit the earlier submission of better focused contentions resulting in a substantial saving of time during the proceeding.” That is not to say that documents were not envisioned to be entered into the Licensing Support Network post-certification. The Licensing Support Network does not have to be frozen at the time of certification.
- D Our Subpart J rules do not provide for the filing of reply briefs in the context of appeals from interlocutory decisions (10 C.F.R. § 2.1015(b)). Nor do our Subpart J rules permit reply briefs in connection with appeals from initial or partial decisions of the presiding officer (10 C.F.R. § 2.1015(c)). When reply briefs are permitted, our rules provide explicitly for their filing (10 C.F.R. § 2.341(b)(3), or set strict conditions on their filing (10 C.F.R. § 2.323(c)).
- CLI-08-13 AMERGEN ENERGY COMPANY, LLC (Oyster Creek Nuclear Generating Station), Docket No. 50-219-LR; LICENSE RENEWAL; June 17, 2008; MEMORANDUM AND ORDER
- A Commission rules of procedure do not provide for a motion to stay issuance of a license while proceedings are pending before the Board. In practice, however, we have held that a motion to stay issuance of a license might be granted where the factors usually considered in granting emergency injunctive relief are satisfied, including the likelihood of success on the merits, irreparable harm, absence of harm to others, and the public interest. *Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-06-8, 63 NRC 235, 237 n.4 (2006).
- B Failure to address the four stay factors in a motion to stay issuance of a license is reason enough to deny the motion. *See State of Illinois*, CLI-90-11, 32 NRC 333, 334 (1990).
- C A party opposing a renewed license does not face “irreparable harm by the mere issuance of a renewed license, because the license may be set aside (or appropriately conditioned) even after it has been issued, upon subsequent administrative or judicial review. *See* 10 C.F.R. § 54.27(c); *cf. Vermont Yankee*, CLI-06-8, 63 NRC at 238.
- D In accordance with established practice, the Staff will issue a renewed license in contested proceedings only after notice to and authorization by the Commission. *See, e.g.*, Memorandum from Annette Vietti-Cook, Secretary, to William D. Travers, Executive Director of Operations re: Staff Requirements — SECY 02-0088 — Turkey Point Nuclear Plant, Units 3 and 4, Renewal of Full-Power Operating Licenses (June 5, 2002).
- CLI-08-14 U.S. DEPARTMENT OF ENERGY (High-Level Waste Repository), Docket No. PAPO-001 (ASLBP No. 08-861-01-PAPO-BD01); PRE-LICENSE APPLICATION MATTERS; June 17, 2008; MEMORANDUM AND ORDER

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- A A proceeding commences when a notice of hearing or notice of proposed action under 10 C.F.R. is issued.
- CLI-08-15 PROGRESS ENERGY CAROLINAS, INC. (Shearon Harris Nuclear Power Plant, Units 2 and 3), Docket Nos. 52-022-COL, 52-023-COL; COMBINED LICENSE; July 23, 2008; MEMORANDUM AND ORDER
- A The mere fact that the Staff asks an applicant for more information does not make an application incomplete.
- B Docketing decisions are not challengeable in an adjudicatory proceeding. Instead, in adjudicatory proceedings "it is the license application, not the NRC staff review, that is at issue." *Baltimore Gas & Electric Co.* (Calvert Cliffs Nuclear Power Plant, Units 1 and 2), CLI-98-25, 48 NRC 325, 350 (1998).
- C Petitioners may not attack Commission regulations in adjudicatory proceedings. 10 C.F.R. § 2.335(a).
- D Issues concerning a design certification application should be resolved in the design certification rulemaking and not in an individual COL proceeding. When a contention is raised in a COL proceeding that challenges information in the design certification rulemaking, licensing boards "should refer such a contention to the staff for consideration in the design certification rulemaking, and hold that contention in abeyance, if it is otherwise admissible." Final Policy Statement on the Conduct of New Reactor Licensing Proceedings, 73 Fed. Reg. 20,963, 20,972 (Apr. 17, 2008). If an applicant later decides not to reference a certified design, and instead proceeds with a site-specific design, any admissible issues would have to be addressed in the licensing adjudication.
- CLI-08-16 PA'INA HAWAII, LLC, Docket No. 30-36974-ML; MATERIALS LICENSE; August 13, 2008; MEMORANDUM AND ORDER
- A The Commission *sua sponte* reviews the legal question whether the National Environmental Policy Act (NEPA) requires the NRC, in an irradiator licensing proceeding, to consider the potential health effects of consuming irradiated food. The Commission concludes that NEPA does not require analysis of the potential impacts of an increase in the supply of irradiated food.
- B NEPA does not require an agency to assess every impact or effect of its proposed action, only effects on the environment. To be encompassed by NEPA, there needs to be a reasonably close causal relationship between a change in the physical environment and the effect at issue.
- C If a harm does not have a sufficiently close connection to the physical environment, NEPA does not apply, regardless of the gravity of the harm.
- D In the context of NEPA, one must examine underlying policies or legislative intent to draw a manageable line between those causal changes that make an agency responsible for an effect and those that do not.
- CLI-08-17 DOMINION NUCLEAR CONNECTICUT, INC. (Millstone Nuclear Power Station, Unit 3), Docket No. 50-423-OLA; OPERATING LICENSE AMENDMENT; August 13, 2008; MEMORANDUM AND ORDER
- A The Commission affirms an Atomic Safety and Licensing Board decision, which found inadmissible all submitted contentions.
- B A petitioner cannot seek to use a specific adjudicatory proceeding to attack generic NRC regulations and requirements, or express generalized grievances about NRC policies.
- C Petitioners may not seek to skirt our contention rules by initially filing unsupported contentions, and later recasting or modifying their contentions on appeal with new arguments never raised before the Board.
- D Generic NRC policies and standards, and the nature of the NRC Staff's licensing review, are not subject to challenge in an adjudicatory proceeding.
- E Petitioners cannot seek on appeal to revive a contention based on new arguments never presented to the Licensing Board.
- F The mere issuance of RAIs does not mean an application is incomplete for docketing.
- CLI-08-18 U.S. DEPARTMENT OF ENERGY (High-Level Waste Repository), Docket No. PAPO-00 (ASLBP No. 04-829-01-PAPO); PRE-LICENSE APPLICATION MATTERS; August 13, 2008; MEMORANDUM AND ORDER
- A The Commission has authority to issue case-specific orders modifying procedural regulations, including milestone schedules. *National Whistleblower Center v. NRC*, 208 F.3d 256 (D.C. Cir. 2000), *cert. denied*, 531 U.S. 1070 (2001).
- CLI-08-19 ENTERGY NUCLEAR OPERATIONS, INC., and ENTERGY NUCLEAR PALISADES, LLC (Palisades Nuclear Plant), Docket Nos. 50-255-LT-2, 72-7-LT; ENTERGY NUCLEAR OPERATIONS,

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

INC., and ENTERGY NUCLEAR FITZPATRICK, LLC (James A. FitzPatrick Nuclear Power Plant), Docket Nos. 50-333-LT-2, 72-12-LT; ENTERGY NUCLEAR OPERATIONS, INC., and ENTERGY NUCLEAR GENERATION COMPANY (Pilgrim Nuclear Power Station), Docket No. 50-293-LT-2; ENTERGY NUCLEAR OPERATIONS, INC., and ENTERGY NUCLEAR VERMONT YANKEE, LLC (Vermont Yankee Nuclear Power Station), Docket Nos. 50-271-LT-2, 72-59-LT; ENTERGY NUCLEAR OPERATIONS, INC., ENTERGY NUCLEAR INDIAN POINT 2, LLC, and ENTERGY NUCLEAR INDIAN POINT 3, LLC (Indian Point, Units 1, 2, and 3), Docket Nos. 50-003-LT-2, 50-247-LT-2, 50-286-LT-2, 72-51-LT; ENTERGY NUCLEAR OPERATIONS, INC., and ENTERGY NUCLEAR PALISADES, LLC (Big Rock Point Plant), Docket Nos. 50-155-LT-2, 72-43-LT-2; LICENSE TRANSFER (Consolidated); August 22, 2008; MEMORANDUM AND ORDER

- A Indirect transfers involve corporate restructuring or reorganizations which leave the licensee itself intact as a corporate entity and therefore involve no application for a new operating license. By contrast, a direct license transfer entails a change to operating and/or possession authority.
- B If the Staff approves a license transfer application prior to the Commission completing its adjudication, the application will lack the agency's final approval until and unless the Commission concludes the adjudication in the Applicant's favor. In the latter situation, the Commission's procedural rules leave license transfer applicants who have received Staff approval but are still awaiting the results of a Commission adjudication free to act in reliance on the Staff's order. *See generally* 10 C.F.R. § 2.1327. However, they do so at their peril in the event that the Commission later determines that intervenors have raised valid objections to the license transfer application. In such a case, the Commission may require that the license [transfer approval] be rescinded.
- C To intervene as of right in any Commission licensing proceeding, a petitioner must demonstrate that its interest may be affected by the proceeding, i.e., it must demonstrate "standing." To make such a demonstration, the petitioner must: (1) identify an interest in the proceeding by (a) alleging a concrete and particularized injury (actual or threatened) that (b) is fairly traceable to, and may be affected by, the challenged action (here, the grant of an application to approve a license transfer), and (c) is likely to be redressed by a favorable decision, and (d) lies arguably within the "zone of interests" protected by the governing statute(s) (here the AEA and the National Environmental Policy Act); (2) specify the facts pertaining to that interest.
- D Any organization seeking "representational standing" (i.e., permission to represent the interests of one or more of its members) must also show that at least one of its members may be affected by the Commission's approval of the transfer (such as by the member's domicile, work, or activities on or near the site), must identify that member by name, and must demonstrate that the member has (preferably by affidavit) authorized the organization to represent him or her and to request a hearing on his or her behalf. The member seeking representation must qualify for standing in his or her own right; the interests that the representative organization seeks to protect must be germane to its own purpose; and neither the asserted claim nor the requested relief must require an individual member to participate in the organization's legal action.
- E The NRC does not automatically assume that an organization member necessarily considers him- or herself potentially aggrieved by a particular outcome of the proceeding (an essential ingredient of standing). The statement indicating exactly how the member is aggrieved is an essential ingredient of a showing of standing.
- F Although the Commission abolished the Atomic Safety and Licensing Appeal Board in 1991, its decisions still carry precedential weight.
- G Were the Commission to accept and consider a belatedly submitted "representative standing" affidavit attached to a Reply Brief, the applicant would be deprived of the right to challenge the substantive sufficiency of the affidavit.
- H The Commission seeks, wherever possible, to avoid the delays (such as an additional round of pleadings) caused by a petitioner's "attempt to backstop elemental deficiencies in its original" petition to intervene.
- I The "representational standing" requirements apply to labor unions.
- J Damage to a nuclear power facility's reputation does not constitute a threatened injury to the interests of the Local's members who work at the facility.
- K The Commission may consider a petitioner's request for discretionary intervention only if at least one other petitioner has established standing and has presented at least one admissible contention.

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- L Proximity-based standing differs from traditional standing in that the petitioner claiming it need not make an express showing of harm. Rather, proximity standing rests on the presumption that an accident associated with the nuclear facility could adversely affect the health and safety of people working, living, or regularly engaging in activities offsite but within a certain distance of that facility.
- M In ruling on claims of proximity standing in license transfer adjudications, the Commission decides the appropriate radius on a case-by-case basis. The Commission determines the radius beyond which it believes there is no longer an obvious potential for offsite consequences by taking into account the nature of the proposed action and the significance of the radioactive source. The initial question is whether the kind of action at issue, when considered in light of the radioactive sources at the plant, justifies a presumption that the licensing action could plausibly lead to the offsite release of radioactive fission products from the reactors. The burden falls on the petitioner to demonstrate this. If the petitioner fails to show that a particular licensing action raises an *obvious potential for offsite consequences*, then the Commission's standing inquiry reverts to a traditional standing analysis of whether the petitioner has made a specific showing of injury, causation, and redressability.
- N A petitioner's status as an anti-nuclear advocate and a source of information for its community is insufficient, without more, to qualify it for organizational standing.
- O The role as a "private attorney general" is not contemplated under section 189a of the Atomic Energy Act.
- CLI-08-20 U.S. DEPARTMENT OF ENERGY (High-Level Waste Repository), Docket No. PAPO-00 (ASLBP No. 04-829-01-PAPO); PRE-LICENSE APPLICATION MATTERS; August 22, 2008; MEMORANDUM AND ORDER
- A The purpose of NRC adjudicatory hearings is to consider claims of deficiencies in a license application; such contentions are commonplace at the outset of NRC adjudications.
- B In conducting its "acceptance review," the NRC Staff does not consider the technical or legal merits of the application; rather, the Staff's preliminary review is simply a screening process — a determination whether the license application contains sufficient information for the NRC to begin its safety review.
- CLI-08-21 U.S. DEPARTMENT OF ENERGY (High-Level Waste Repository); PRE-LICENSE APPLICATION MATTERS; September 8, 2008; MEMORANDUM AND ORDER
- A As a general matter, the Commission disfavors the issuance of advisory opinions.
- CLI-08-22 U.S. DEPARTMENT OF ENERGY (High-Level Waste Repository), Docket No. PAPO-00 (ASLBP No. 04-829-01-PAPO); PRE-LICENSE APPLICATION MATTERS; September 8, 2008; MEMORANDUM AND ORDER
- A The Licensing Support Network functions as a mechanism for early collection of all extant documents that normally would be collected later through traditional discovery. We expect full compliance with our Licensing Support Network requirements as set out in Part 2, Subpart J, of our regulations.
- B The Licensing Support Network is intended to "provide potential participants with the opportunity to frame focused and meaningful contentions and to avoid the delay potentially associated with document discovery, by requiring parties and potential parties to the proceeding to make all of their Subpart J-defined documentary material available through the [Licensing Support Network] prior to the submission of the [Department of Energy] application." "[We expect] all participants to make a *good faith* effort to have made available all . . . documentary material by the date specified for initial compliance in section 2.1003(a) of the Commission's regulations."
- C Subpart J does not provide for the filing of amicus curiae briefs. Our general rule on amicus briefs, 10 C.F.R. § 2.315(d), as a formal matter applies only to petitions for review filed under 10 C.F.R. § 2.341 or to matters taken up by the Commission *sua sponte*, not to appeals filed, as here, under 10 C.F.R. § 2.1015.
- D Where 10 C.F.R. § 2.315(d) does apply, an amicus brief must be filed by the same deadline as the brief of the party whose side the amicus brief supports, unless the Commission provides otherwise. Permission to file an amicus brief under 10 C.F.R. § 2.315(d) is at the discretion of the Commission.
- E All motions, including a motion to file an amicus brief, are required to include a certification that the sponsor of the motion has made a sincere effort to contact the other parties and to resolve the issues raised in the motion (10 C.F.R. § 2.323).
- CLI-08-23 AMERGEN ENERGY COMPANY, LLC (Oyster Creek Nuclear Generating Station), Docket No. 50-219-LR; ENTERGY NUCLEAR OPERATIONS, INC. (Indian Point, Units 2 and 3), Docket Nos. 50-247-LR, 50-286-LR; ENTERGY NUCLEAR OPERATIONS, INC. (Pilgrim Nuclear Power Station), Docket No. 50-293-LR; ENTERGY NUCLEAR OPERATIONS, INC. (Vermont Yankee Nuclear Power

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

Station), Docket No. 50-271-LR; LICENSE RENEWAL; October 6, 2008; MEMORANDUM AND ORDER

- A Over several years, the NRC has developed a regulatory process to review power reactor license renewal applications that is efficient, thorough, and appropriately focused on certain aging effects that would not reveal themselves through performance indicators associated with active functions. The Staff's conduct of safety reviews for license renewal applications is governed by 10 C.F.R. Part 54, and principally guided by two documents: NUREG-1800, "Standard Review Plan for Review of License Renewal Applications for Nuclear Power Plants," Rev. 1 (Sept. 2005) (SRP-LR), and NUREG-1801, "Generic Aging Lessons Learned Report," Rev. 1 (Sept. 2005) (GALL Report).
- B The GALL Report identifies generic aging management programs that the Staff has determined to be acceptable, based on the experiences and analyses of existing programs at operating plants during the initial license period. The GALL Report was developed because the Staff discovered, in reviewing the initial license renewal applications, that many of the programs the licensee would rely on to manage aging effects during the renewal period were already in place during the initial license period. *See* NUREG-1800, Rev. 1, at 1.
- C Notwithstanding the requirement that motions initially be addressed to the Presiding Officer when a proceeding is pending (10 C.F.R. § 2.323(a)), in this case, the Commission addresses the motions pursuant to its inherent supervisory authority over agency proceedings. *See Pacific Gas and Electric Co.* (Diablo Canyon Power Plant Independent Spent Fuel Storage Installation), CLI-02-23, 56 NRC 230, 237 (2002).
- D The purpose and scope of a licensing proceeding is to allow interested persons the right to challenge the sufficiency of the application. The NRC will not litigate claims about the adequacy of the Staff's safety review in licensing adjudications. *See* Final Rule: "Changes to Adjudicatory Process," 69 Fed. Reg. 2182, 2202 (Jan. 14, 2004) (citing *Curators of the University of Missouri*, CLI-95-1, 41 NRC 71, 121-22 (1995), and prior agency rulings holding same). *See also Duke Energy Corp.* (Catawba Nuclear Station, Units 1 and 2), CLI-04-6, 59 NRC 62, 74 (2004); *Baltimore Gas & Electric Co.* (Calvert Cliffs Nuclear Power Plant, Units 1 and 2), CLI-98-25, 48 NRC 325, 349-50 (1998).
- E It is the applicant, not the Staff, that has the burden of proof in litigation. *Curators of the University of Missouri*, CLI-95-1, 41 NRC at 121.
- F It is neither possible nor necessary for the Staff to verify each and every factual assertion in complex license applications, including license renewal applications. The Staff's audit, or sampling, method of verifying a license renewal applicant's aging management programs, together with the other components of its review, enables the Staff to make the safety findings necessary for issuance of a renewed license. *See also* 10 C.F.R. § 54.13 (requiring, among other things, that information provided to the Commission by a license renewal applicant for a renewed license must be complete and accurate in all material respects).
- G The Federal Records Act (FRA) gives federal agencies some discretion in determining which documentary materials are appropriate for preservation as an agency "record." FRA, 44 U.S.C. § 3301; *see also* 36 C.F.R. § 1220.14.
- H According to an agency Management Directive which is in turn based on regulations of the National Archives and Records Administration, an agency employee's working file constitutes an "agency record" if it *both* contains unique information that underlies an agency decision, *and* it was also made available to other agency employees for purposes of helping to reach or support that decision. Otherwise, materials created by an employee for the individual's own use in performing his or her job, and which are not circulated (and are not otherwise required by NRC policy to be maintained), may be discarded at the employee's discretion. *See* Handbook 1, Management Directive 3.53 (Rev. Mar. 2007), at 19-20; 36 C.F.R. § 1222.34(c).
- I Suspension of licensing proceedings is a "drastic" action that is not warranted absent "immediate threats to public health and safety." *Vermont Yankee Nuclear Power Corp.* (Vermont Yankee Nuclear Power Station) CLI-00-20, 52 NRC 151, 173-74 (2000) (refusing request to suspend all license transfer proceedings involving a particular transferee while the Commission examined effects of ownership by limited liability companies).
- J While our regulations do not provide for a "motion to suspend" a proceeding, we have occasionally considered similar requests to suspend proceedings or hold them in abeyance in the exercise of our inherent supervisory powers over proceedings. For example, we considered similar motions presented to us in the wake of the September 11 terrorist attacks. We ultimately rejected such requests pending the Commission's comprehensive review of anti-terrorist measures at licensed facilities. *See Private Fuel*

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

*Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-01-26, 54 NRC 376 (2001). *See also Diablo Canyon*, CLI-02-23, 56 NRC 230; *Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), CLI-01-28, 54 NRC 393 (2001).

- K We expect licensees and license renewal applicants to adjust their aging management programs to reflect lessons learned in the future through individual and industrywide experiences. As new insights or changes emerge over time, we expect the Staff to require, as appropriate, any modification to systems, structures, or components that is necessary to assure adequate protection of the public health and safety, or to bring the facility into compliance with a license, or the rules and orders of the Commission. 10 C.F.R. § 50.109.
- L Reopening a closed record requires, among other things, a showing that the motion is timely. 10 C.F.R. § 2.326. A motion filed 4 months after release of the information on which it is based was not timely.
- M A motion “must address a significant safety or environmental issue.” Petitioners’ speculation that the Staff may have failed to identify a health or safety issue because its review was insufficiently thorough does not meet this requirement.
- CLI-08-24 ENERGY SOLUTIONS, LLC (Radioactive Waste Import/Export Licenses), Docket Nos. 110-05711 (Import), 110-05710 (Export); IMPORT/EXPORT LICENSE; October 6, 2008; ORDER
- A The Commission holds in abeyance an application for a license to import low-level radioactive waste from Italy for processing and ultimate disposal in Utah and an export license that would authorize the export back to Italy of any low-level radioactive waste that cannot be disposed of in Utah following processing. The Commission also holds in abeyance requests for hearing on these applications.
- B Under the NRC’s regulations governing imports and exports of nuclear materials, the Commission will issue a low-level radioactive waste import license if it finds that: (1) the proposed import will not be inimical to the common defense and security; (2) the proposed import will not constitute an unreasonable risk to the public health and safety; (3) the environmental requirements of Part 51 have been satisfied (to the extent applicable); and (4) an appropriate facility has agreed to accept the waste for management or disposal.
- C The NRC will not grant an import license for waste intended for disposal unless it is clear that a disposal facility, host state, and compact (where applicable) will accept the waste. An integral aspect of the Commission’s determination of a facility’s appropriateness for disposal of imported waste is whether the facility can actually accept that waste for disposal.
- D In light of litigation in federal court between the Applicant and the Northwest Compact over whether the disposal facility may accept imported low-level waste without the Compact’s authorization, the Commission held in abeyance further proceedings on the import application, accompanying export application, and hearing requests on the applications pending resolution of the legal dispute.
- CLI-08-25 U.S. DEPARTMENT OF ENERGY (High-Level Waste Repository), Docket No. 63-001; CONSTRUCTION AUTHORIZATION; October 17, 2008; ORDER (Department of Energy; Notice of Hearing and Opportunity to Petition for Leave to Intervene on an Application for Authority to Construct a Geologic Repository at a Geologic Repository Operations Area at Yucca Mountain)
- CLI-08-26 PACIFIC GAS AND ELECTRIC COMPANY (Diablo Canyon Power Plant Independent Spent Fuel Storage Installation), Docket No. 72-26-ISFSI; INDEPENDENT SPENT FUEL STORAGE INSTALLATION; October 23, 2008; MEMORANDUM AND ORDER
- A Subpart K (10 C.F.R. Part 2) implements the “totally new procedure” established by the Nuclear Waste Policy Act for adjudicating spent fuel storage controversies expeditiously. Subpart K allows the presiding officer to resolve factual and legal disputes, including disagreements between experts, on the basis of a brief discovery period and written submissions and oral argument — without a full trial-type evidentiary hearing. Under Subpart K and the Nuclear Waste Policy Act we resort to full evidentiary hearings “only” when necessary for “accuracy.”
- B The Commission’s rules, in 10 C.F.R. § 2.1113, do not provide for supplementing Subpart K presentations.
- C Under the National Environmental Policy Act, an environmental assessment, with its accompanying finding of no significant impact, constitutes an agency’s evaluation of the environmental effects of a proposed action — unless a more detailed statement is required. A more detailed environmental impact statement is not required unless the contemplated action is a “major federal [action] *significantly* affecting the quality of the human environment.”

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- D Hearings on alternate terrorist scenario claims could not be conducted in a meaningful way without substantial disclosure of classified and safeguards information on threat assessments and security arrangements and without substantial litigation over their significance. Such information — disclosure of which is prohibited by law — would lie at the center of any adjudicatory inquiry into the probability and success of various terrorist scenarios. The National Environmental Policy Act does not require the Commission to reveal sensitive government security information regarding the agency’s environmental analysis.
- E National Environmental Policy Act claims are governed by the Act’s own specific nondisclosure provision, as construed by the Supreme Court in *Weinberger v. Catholic Action League*, 454 U.S. 139 (1981), rather than by more general provisions in the Atomic Energy Act or in the Commission’s regulations. Under the National Environmental Policy Act, the Commission may withhold from public disclosure any information that is exempt under the Freedom of Information Act.
- CLI-08-27 ENTERGY NUCLEAR OPERATIONS, INC. (Indian Point, Units 2 and 3), Docket Nos. 50-247-LR, 50-286-LR; LICENSE RENEWAL; November 6, 2008; MEMORANDUM AND ORDER
- A As a general matter, a board ruling denying a waiver request is interlocutory in nature, and therefore not appealable until the board has issued a final decision resolving the case.
- B When considering whether to undertake “pendent” appellate review of otherwise nonappealable issues, the Commission has expressed a willingness to take up otherwise unappealable issues that are “inextricably intertwined” with appealable issues.
- CLI-08-28 AMERGEN ENERGY COMPANY, LLC (Oyster Creek Nuclear Generating Station), Docket No. 50-219-LR; LICENSE RENEWAL; November 6, 2008; MEMORANDUM AND ORDER
- A The Commission’s regulations, in 10 C.F.R. § 2.341(b)(4), provide that the Commission may grant a petition for review at its discretion, giving due weight to the existence of a substantial question with respect to the five considerations listed in the regulation.
- B As 10 C.F.R. § 2.326(d) makes clear, where a motion to reopen proposes a contention not previously part of the proceeding, the requirements for late-filed contentions set out in 10 C.F.R. § 2.309(c) must also be satisfied.
- C “[A] party seeking to reopen a closed record to raise a new matter faces an elevated burden to lay a proper foundation for its claim. Commission practice holds that the standard for admitting a new contention after the record is closed is higher than for an ordinary late-filed contention.” “New information is not enough . . . to reopen a closed hearing record at the last minute; the information must be significant and plausible enough to require reasonable minds to inquire further.” “The burden of satisfying the reopening requirements is a heavy one,” and “proponents of a reopening motion bear the burden of meeting all of [these] requirements.”
- D The plain language of 10 C.F.R. § 2.326(b) requires motions to reopen to be accompanied by affidavits of qualified experts presenting the factual and/or technical bases for the claim that there is a significant safety issue, together with evidence that satisfies the admissibility standards. A “mere showing” of a possible violation is not enough.
- E “The interpretation of a regulation, like the interpretation of a statute, begins ‘with the language and structure of the provision itself . . . [and] the entirety of the provision must be given effect.’” The standards governing motions to reopen appear in 10 C.F.R. § 2.326. Motions for summary disposition are governed by an entirely separate rule, 10 C.F.R. § 2.710. The summary disposition standards are not applicable to and do not replace the standards applicable to motions to reopen.
- F The party seeking reopening has the deliberately heavy burden, through its motion to reopen and accompanying affidavit, to demonstrate that the motion should be granted. Bare assertions and speculation do not supply the requisite support and a Judge’s dissenting opinion cannot substitute for the affidavit required to be submitted to the Board, with a motion to reopen, in the first instance.
- G A licensing board is not required to augment a deficient motion to reopen by performing supplementary technical analysis. In fact, “a Board is to decide the motion to reopen on the information before it and has no authority to engage in discovery in order to supplement the pleadings before it.
- H The Commission is generally disinclined to upset fact-driven Licensing Board determinations, particularly “where the affidavits or submissions of experts must be weighed.” Where, as here, a party merely complains that the Board improperly weighed the evidence and identifies no clear Board factual or legal error requiring further Commission consideration on appellate review, the Commission is disinclined to second-guess the Board’s assessment of the party’s affidavits.

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- I The Commission's rules and longstanding precedent bar discovery in connection with the preparation of proposed contentions.
- J The Atomic Energy Act's guarantee of a hearing on material issues is not without limitation. "[S]ection 189(a)'s hearing requirement does not unduly limit the Commission's wide discretion to structure its licensing hearings in the interests of speed and efficiency." The hearing right provided in section 189(a) is not automatic — the Commission's rules appropriately require the identification of specific factual support to justify reopening.
- CLI-08-29 ENTERGY NUCLEAR OPERATIONS, INC. (Indian Point, Units 2 and 3), Docket Nos. 50-247-LR, 50-286-LR; LICENSE RENEWAL; December 9, 2008; MEMORANDUM AND ORDER
- A Dismissal of a party falls within the "spectrum of sanctions . . . available to the boards to assist in the management of proceedings" under 10 C.F.R. § 2.319, although dismissal should be reserved for "severe cases." *Statement of Policy on Conduct of Licensing Proceedings*, CLI-81-8, 13 NRC 452, 454 (1981).
- B The Appeal Board has stated, albeit in *dictum*, that a Licensing Board is "clearly authorized" to dismiss a party who obstructs the discovery process, disobeys the Board orders, and engages in willful, bad-faith, and prejudicial conduct toward another party. *Long Island Lighting Co.* (Shoreham Nuclear Power Station, Unit 1), ALAB-902, 28 NRC 423, 428 (1988).
- C Dismissal due to counsel's malfeasance is a logical extension of the Board's disciplinary authority under 10 C.F.R. § 2.314(c) to reprimand, censure, or suspend from a proceeding any party or representative who "refuses to comply with its directions."
- D The Commission is generally loath to interfere with the Board's management of its cases, absent an abuse of power. *Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), CLI-08-7, 67 NRC 187, 192 (2008).
- CLI-09-1 SHIELDALLOY METALLURGICAL CORPORATION (Decommissioning of the Newfield, New Jersey Facility), Docket No. 40-7102-MLA (Amendment Request); MATERIALS LICENSE AMENDMENT; January 27, 2009; MEMORANDUM AND ORDER
- CLI-09-2 SHAW AREVA MOX SERVICES, LLC (Mixed Oxide Fuel Fabrication Facility), Docket No. 70-3098-MLA; MATERIALS LICENSE AMENDMENT; February 4, 2009; MEMORANDUM AND ORDER
- A The Commission grants the Staff's request for interlocutory review, finds that the Board overstepped the bounds of its authority, and reverses the Board's imposition of conditions and a potential sanction. The Commission also affirms the Board's dismissal of Contention 7. But the Commission further rules that if, within 60 days after the pertinent information that would support the framing of the contention first becomes available, Intervenors submit a particularized and otherwise admissible contention regarding the construction of the MOX facility, then the contention will be deemed timely without the need to satisfy the balancing test for late-filing requirements of 10 C.F.R. § 2.309(c) or the regulatory requirements in 10 C.F.R. § 2.326 for reopening the record if otherwise applicable.
- B Contention 7 satisfies the interlocutory review standard in 10 C.F.R. § 2.341(f)(2)(ii) in that the ruling "affects the basic structure of the proceeding in a pervasive or unusual manner." The Board's ruling derives from the unusual (perhaps unique) nature of this proceeding. During the earlier (construction) phase of this proceeding, we considered the requirements of the AEA, and determined that a "two-step" licensing (and hearing) process for a MOX facility was permissible. We went on to approve a procedural scheme crafted specifically for this adjudication. As a result, this proceeding is likely to generate Board rulings that "affect[] the basic structure of the proceeding in a pervasive or unusual manner" — which is just what happened here. Indeed, in our earlier *MOX* adjudication, we embraced the "affects the basic structure of the proceeding" rationale to justify interlocutory review of the "two-step licensing" issue.
- C The Board overstepped its authority when it imposed the two conditions and the potential sanction for any failure by the Staff or Applicant to satisfy them. Although dismissing a contention with conditions differs in form from admitting a contention with conditions, the two are the same in substance. Both essentially hold a contention in suspended animation — the first by declaring it "dead, but then, maybe not," and the latter by declaring it "alive, but then, maybe not." Consequently, the Board contravened longstanding NRC precedent that "a licensing board is not authorized to admit conditionally, for any reason, a contention that falls short of meeting the specificity requirements" set forth in our procedural rules. The Board must instead dismiss insufficient contentions outright.
- D The Board also acted without authority in instructing the Staff to give Intervenors notice of its intent to take certain administrative action (that is, issue a "completion" finding). Absent delegated authority,

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

which is not present here, our licensing boards lack authority to direct the Staff's nonadjudicatory actions. Boards also lack authority to establish prospective sanctions for any failure by the Staff and/or the applicant to comply with the Board's notice conditions. Any other conclusion would inappropriately permit the Board to do indirectly what it may not do directly, that is, to avoid applying our regulations concerning late-filed contentions (10 C.F.R. § 2.309(c)).

E Although the Atomic Safety and Licensing Appeal Board (ALAB) was disbanded in 1991, its decisions still carry precedential value. *See, e.g., Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), CLI-99-24, 50 NRC 219, 222 n.3 (1999).

F The Applicant is still in only the very early stages of construction, and is not slated to complete construction for a number of years. Consequently, information is not currently available (nor could it be) that would permit Intervenor to frame an admissible contention challenging specific aspects of construction. And for the same reason, Intervenor has not (nor could they have) carried their additional regulatory burden of presenting "facts or expert opinion" to support Contention 7.

G Because Intervenor's inability to satisfy our contention admissibility rules in this instance is due to factors beyond their control, we decline to require Intervenor to meet both our strict late-filing requirements and our even stricter reopening standards if Intervenor identifies safety issues during the upcoming years of ongoing construction. Rather, if Intervenor files a new or amended Contention 7, with supporting materials, within 60 days after pertinent information (be it a supplement to the application or some other document, such as a Staff inspection report) first becomes available, then the contention will be deemed timely filed and Intervenor will be absolved of their obligation to satisfy the late-filing requirements of 10 C.F.R. § 2.309(c). Likewise, under those same circumstances, Intervenor need not satisfy our regulatory requirements for reopening the record.

H Intervenor has an "ironclad obligation" to regularly and diligently search publicly available NRC or Applicant documents for information relevant to their contentions.

I Reopening the record is an "extraordinary" action. 51 Fed. Reg. 19,535, 19,538 (May 30, 1986). Because proponents of motions seeking to reopen the record bear a "heavy burden" (*Pacific Gas and Electric Co.* (Diablo Canyon Nuclear Power Plant, Units 1 and 2), ALAB-756, 18 NRC 1340, 1344 (1983) (quoting *Kansas Gas and Electric Co.* (Wolf Creek Generating Station, Unit 1), ALAB-462, 7 NRC 320, 338 (1978)), a waiver of the "reopening" requirements seems the most equitable course of action to take in this particular case.

CLI-09-3 TENNESSEE VALLEY AUTHORITY (Bellefonte Nuclear Power Plant, Units 3 and 4), Docket Nos. 52-014-COL, 52-015-COL; COMBINED LICENSE; February 17, 2009; MEMORANDUM AND ORDER

A The Commission reverses the Board's admission of two contentions, and declines to accept the Board's suggestion that the Commission consider instituting a "low-level waste confidence" rulemaking proceeding.

B The Commission generally accepts Board certifications or referrals. However, the agency's rules provide that the Commission will review referred rulings only if the referral "raises significant and novel legal or policy issues, and resolution of the issues would materially advance the orderly disposition of the proceeding."

C Routine rulings on contention admissibility are usually not occasions to exercise our authority to step into ongoing Licensing Board proceedings and undertake interlocutory review. The Commission does, however, have authority to review Board rulings *sua sponte*, in the exercise of the Commission's inherent supervisory authority over NRC adjudications, regardless of whether the Commission accepts the referral. Absent the instant referral, the Commission might well have declined to exercise that authority here. But with the issue already before the Commission, it considers the Board's rulings, and reverses the admission of both contentions.

D A board is free to decide this issue on a theory different from those argued by the litigants, *but only if* it explains the specific basis of its ruling and gives the litigants a chance to present arguments (and, where appropriate, evidence) regarding the Board's new theory.

E Absent a waiver, parties are prohibited from collaterally attacking our regulations in an adjudication. But the Commission does not grant waivers where the circumstances on which the waiver's proponent relies are common to a large class of applicants or facilities.

F A "waste confidence" rulemaking is not the appropriate instrument for resolving low-level radioactive waste issues, particularly issues of disposal.

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- G The questions of the safety and environmental impacts of onsite low-level waste *storage* are, in the Commission's view, largely site- and design-specific, and appropriately decided in an individual licensing proceeding, provided that litigants proffer properly framed and supported contentions. Indeed, a "low-level waste confidence" rule would not, if it followed the pattern set by the high-level waste confidence rule, alter any requirements to consider in the adjudicatory proceeding the environmental impacts of waste storage during the term of the license.
- H The Commission does not, however, rule out that, in a future COL proceeding, a petitioner could proffer an application-specific contention suitable for litigation on the subject of onsite storage of low-level radioactive waste.
- CLI-09-4 DETROIT EDISON COMPANY (Fermi Nuclear Power Plant, Unit 3), Docket No. 52-033-COL; COMBINED LICENSE; February 17, 2009; MEMORANDUM AND ORDER
- A Difficulties in coordinating action among volunteers and large public interest organizations and the challenge of simultaneously preparing for an environmental scoping meeting while drafting contentions did not constitute the good cause necessary to justify an extension of the deadline to file hearing requests or petitions to intervene, particularly when Petitioners will have had nearly 5 months to review the application by that deadline. 10 C.F.R. § 2.307(a).
- B Because Congress has explicitly prohibited the NRC from paying the expenses of or otherwise compensating intervening in its proceedings, the Commission could not grant Petitioners funds to prepare requests for access to safeguards information or sensitive unclassified nonsafeguards information.
- C Even if the Commission could waive the application fee for access to safeguards information, the mere fact that Petitioners were public interest organizations provides no special reason for departing from well-established NRC practice.
- D Petitioners' request for additional information on redacted portions of the combined license application is denied because the public record indicates the nature of the redacted information.
- E Although a 10-day deadline from the date of the hearing notice is reasonable for filing requests for access to safeguards information or sensitive, unclassified, nonsafeguards information, the Commission recognizes that the practice is a new one with which many petitioners may be unfamiliar. This along with Petitioners' companion requests for additional resources to support their requests for such information justify a 10-day extension to request access to the information.
- F The Commission policy of permitting the conduct of an adjudicatory proceeding on a combined license that references a design certification that the Commission has not approved does not violate the Atomic Energy Act of 1954, 10 C.F.R. Part 52, or judicial decisions.
- CLI-09-5 DOMINION NUCLEAR CONNECTICUT, INC. (Millstone Nuclear Power Station, Unit 3), Docket No. 50-423-OLA; OPERATING LICENSE AMENDMENT; March 5, 2009; MEMORANDUM AND ORDER
- A Commission regulations do not contemplate filing a vague, unsupported pleading as a "placeholder" for a more detailed pleading to follow. Such a filing would be tantamount to a "notice pleading," expressly prohibited by our rules of practice. See *Consumers Energy Co.* (Palisades Nuclear Plant), CLI-07-18, 65 NRC 399, 414 (2007), citing *Port Authority of the State of New York* (James A. FitzPatrick Nuclear Power Plant; Indian Point, Unit 3), CLI-00-22, 52 NRC 266, 295 (2000).
- B Petitioner's argument that a "new" contention must only meet the requirements for a new contention found in 10 C.F.R. § 2.309(f)(2), and need not meet the contention admissibility standards themselves, found in 10 C.F.R. § 2.309 (f)(1)(i)-(vi), is simply incorrect. The plain language of the rule requires each proposed contention to satisfy those requirements. *Pacific Gas and Electric Co.* (Diablo Canyon Power Plant Independent Spent Fuel Storage Installation), CLI-08-1, 67 NRC 1, 6 (2008).
- C Generally, once there has been an appeal or petition to review a Board order ruling on intervention petitions (or, where a hearing is granted, following a partial or final initial decision), jurisdiction passes to the Commission, including jurisdiction to consider any motion to reopen. See *Northeast Nuclear Energy Co.* (Millstone Nuclear Power Station, Unit 3), CLI-00-25, 52 NRC 355, 357 (2000); *Philadelphia Electric Co.* (Limerick Generating Station, Units 1 and 2), ALAB-823, 22 NRC 773 (1985).
- D A referral by the Secretary of Petitioner's motion to admit a late-filed contention effectively returned jurisdiction to the Board to rule on the motion. The Secretary's referral did not, however, reopen the already-closed record.
- E Issuance of a license amendment did not terminate the adjudicatory proceedings; proceedings on license amendments continue until they are over, even if the amendment is issued in the interim.

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- F While only a “party” to a proceeding may move to reopen a closed record, this does not mean that a petitioner who was never admitted as a party is excused from meeting the reopening standard. Commission rules of practice make it clear that the reopening standards — as well as the late intervention standards — must be met when an entirely new issue is sought to be introduced after the closing of the record. *See* 10 C.F.R. § 2.326(d).
- CLI-09-6 ENTERGY NUCLEAR OPERATIONS, INC. (Indian Point, Units 2 and 3), Docket Nos. 50-247-LR; LICENSE RENEWAL; March 5, 2009; MEMORANDUM AND ORDER
- A The Commission denies a petition for reconsideration.
- B The Commission grants discretionary interlocutory review only in extraordinary circumstances.
- C The Commission’s decisions have repeatedly held that increased litigation delay and expense do not justify interlocutory review of an admissibility decision. Absent highly unusual circumstances, the Commission has consistently declined to conduct interlocutory review of contention admissibility decisions.
- D When the Commission abolished the Appeal Board in 1991 and established a new appellate structure for reviewing presiding officers’ decisions, the Commission codified in 10 C.F.R. § 2.786(g) the existing standard governing interlocutory review pursuant to 10 C.F.R. § 2.718(i) and 2.730(f). In 2004, the Commission again revised its rules of practice, retaining this provision in the context of referrals and certifications to the Commission. 10 C.F.R. § 2.323(f)(1) (2008) (providing that the presiding officer may refer a ruling to the Commission if, in the presiding officer’s judgment, “prompt decision is necessary to prevent detriment to the public interest or *unusual delay or expense*,” or if the ruling involves a novel issue that “merits Commission review at the earliest opportunity”). This standard does not apply, however, to petitions for interlocutory review. Those are governed by section 2.341(f)(2).
- E The Commission has found no instance in NRC jurisprudence where either the Commission or its boards have ruled that expenses of any kind constituted “irreparable injury.” This issue arises most frequently in situations where a movant for a stay or interlocutory review claims “irreparable injury” based on excessive or unnecessary litigation expenses. The Commission has uniformly rejected such arguments.
- F The potential for litigation expense and delay is the kind of burden that licensees and applicants voluntarily assume when filing applications with the Commission.
- G To the extent Entergy may be subject to unreasonable or burdensome discovery requests in the future, it is free to seek relief from the Board, which has ample authority to prevent or modify unreasonable discovery demands.
- H Litigation efforts that a litigant considers unnecessary because they relate to a contention that the litigant considers to have been improperly admitted do not “affect the basic structure of this proceeding” at all — much less in “a pervasive and unusual manner.” Indeed, were the Commission to permit litigants to successfully invoke interlocutory review based merely on an assertion that the licensing board erred in admitting (or excluding) a contention, then the Commission would be opening the floodgates to a potential deluge of interlocutory appeals from any number of participants who lose admissibility rulings. This would eviscerate the Commission’s longstanding policy disfavoring interlocutory appeals.
- I In situations in which a board denies a petition to intervene in its entirety or grants a petition to intervene that, according to an opposing litigant, should have been denied in its entirety, the losing litigant has a right to Commission review under 10 C.F.R. § 2.311(b) or (c).
- J “The possibility that an interlocutory ruling may be wrong does not in itself justify interlocutory review.” *Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-01-1, 53 NRC 1, 5 (2001), *citing Sequoyah Fuels Corp.* (Gore, Oklahoma Site), CLI-94-11, 40 NRC 55, 61 (1994). “Incorrect interlocutory rulings may be reviewed, if necessary, on appeals from partial initial decisions or other final appealable orders.” *Private Fuel Storage*, CLI-01-1, 53 NRC at 5, *citing Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-00-2, 51 NRC 77, 80 (2000).
- K “[T]he Commission itself may exercise its discretion to review a licensing board’s interlocutory order if the *Commission* wants to address a novel or important issue . . . . However, the Commission’s decision to do so in any particular proceeding stems from its inherent supervisory authority over adjudications and *in no way implies that parties have a right to seek interlocutory review on that same ground.* *Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant), CLI-00-11, 51 NRC 297, 299 (2000) (first emphasis in original; second emphasis added).

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- L Indeed, if the Commission permitted such requests, there would be no limit to the arguments parties could present via interlocutory appeal — a result fundamentally at odds with the Commission’s expressed intent to limit such appeals.
- CLI-09-7 AMERGEN ENERGY COMPANY, LLC (Oyster Creek Nuclear Generating Station), Docket No. 50-219-LR; LICENSE RENEWAL; April 1, 2009; MEMORANDUM AND ORDER
- A Under the Commission’s rules, the granting of petitions for review is discretionary, given due weight to the existence of a substantial question with respect to the five considerations listed in 10 C.F.R. § 2.341(b)(4).
- B Under the Commission’s adjudicatory scheme, the licensing board’s chief function is carefully to review all of the evidence, including testimony and exhibits, and to resolve any factual disputes.
- C While the Commission has authority to make *de novo* findings of fact, it does not do so “where a licensing board has issued a plausible decision that rests on carefully rendered findings of fact.” The Commission’s “standard of ‘clear error’ for overturning a board’s factual finding is quite high,” and the Commission defers to its boards’ findings unless “clearly erroneous” — that is, “not even plausible in light of the record viewed in its entirety.” “[U]nless there is a strong reason to believe that in a particular case a board has overlooked or misunderstood important evidence, we will defer to its findings of fact.” “As for conclusions of law, our standard of review is more searching. We will review legal questions *de novo*. We will reverse a licensing board’s legal rulings if they are ‘a departure from or contrary to established law.’”
- D The Commission’s contention admissibility “requirements are deliberately strict, and we will give ‘substantial deference’ to our boards’ determinations on threshold issues, such as standing and contention admissibility,” and we will affirm “decisions on the admissibility of contentions where the appellant ‘points to no error of law or abuse of discretion.’”
- E While a board may view a petitioner’s supporting information in a light favorable to the petitioner, it cannot do so by ignoring our contention admissibility rules, which require the petitioner (not the board) to supply all of the required elements for a valid intervention petition (*see* 10 C.F.R. § 2.309(f)(1)). A board may not simply infer the bases for a contention. Failing to provide information required under 10 C.F.R. § 2.309(f)(1) bars admission of the contention.
- F The Commission’s “requirements for untimely filings (10 C.F.R. § 2.309(c)) and late-filed contentions (10 C.F.R. § 2.309(f)(2))” are “stringent.” “Section 2.309(c)(2) clearly provides that a petitioner ‘shall address’ all eight factors set forth in section 2.309(c)(1). . . . [F]ailure to comply with our pleading requirements for late filings constitutes sufficient grounds for rejecting intervention and hearing requests.” Decisions on nontimely filings require a balancing of the eight factors set forth in section 2.309(c)(1), the first of which, good cause for failure to file on time, is the most important.
- G New or amended contentions may be filed only with leave of the presiding officer upon a showing that satisfies the three criteria set out in 10 C.F.R. § 2.309(f)(2).
- H “New bases for a contention cannot be introduced in a reply brief, or any other time after the date the original contentions are due, unless the petitioner meets the late-filing criteria set forth in 10 C.F.R. § 2.309(c), (f)(2).” And, even if the late-filed contention criteria are satisfied, proposed contentions still must meet the threshold admissibility standards contained in 10 C.F.R. § 2.309(f)(1).
- I “Reasonable assurance” is not quantified as equivalent to a 95% (or any other percent) confidence level, but is based on sound technical judgment of the particulars of a case and on compliance with the Commission’s regulations. As the Board stated, our applicable regulations, 10 C.F.R. §§ 54.21 and 54.29, read together, “require AmerGen to establish an aging management program that provides ‘reasonable assurance’ that the Oyster Creek drywell shell will continue to perform its intended function consistent with the [current licensing basis] during the period of extended operation.” To satisfy this “reasonable assurance” standard, AmerGen must make a showing that meets the “preponderance of the evidence” threshold of compliance with the applicable regulations — *not* a 95% confidence level of compliance.
- J In the Commission’s adjudications, “[t]he ultimate burden of proof on the question of whether the permit or the license should be issued is . . . upon the applicant. But where . . . one of the other parties contends that, for a specific reason . . . the permit or license should be denied, that party has the *burden of going forward* with evidence to buttress that contention. Once he has introduced sufficient evidence to establish a *prima facie* case, the burden then shifts to the applicant who, as part of his overall burden of proof, must provide sufficient rebuttal to satisfy the Board that it should reject the contention as a basis for denial of the permit or license.”

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- K The Commission's contention admissibility and timeliness rules require a high level of discipline and preparation by petitioners, "who must examine the publicly available material and set forth their claims and the support for their claims at the outset." "There simply would be 'no end to NRC licensing proceedings if petitioners could disregard our timeliness requirements'" and add new contentions at their convenience during the course of a proceeding based on information that could have formed the basis for a timely contention at the outset of the proceeding. Our expanding adjudicatory docket makes it critically important that parties comply with our pleading requirements and that the Board enforce those requirements.
- L Petitioners may not raise entirely new arguments in a reply brief unless the standards for late-filed contentions are met. And even if those standards are satisfied, support for a contention must be provided when a contention is filed, not at some later date.
- M The requirements for applying Subpart G to a particular proceeding are set out in 10 C.F.R. § 2.700. The rule explicitly applies to *eyewitnesses*, not *expert witnesses*. The credibility of a witness testifying based on technical expertise is not the same as the credibility of an eyewitness to a past event.
- N The Commission's rules, in 10 C.F.R. § 2.311(d), set a *ten*-day limit for appealing the selection of a particular hearing procedure. An appeal cannot wait until a board issues a decision on the merits of a contention.
- O New information concerning safety may be new "evidence," but not necessarily raise a new "issue." A new "issue" is raised "only when *the argument itself (as distinct from its chances of success) was not apparent at the time of the application.*"
- P A petition for review does not automatically prevent issuance of a renewed operating license (*see* 10 C.F.R. §§ 2.340(a) and 54.31(c)). In uncontested operating license renewal proceedings, the NRC Staff is authorized to issue a renewed license once the Director of the Office of Nuclear Reactor Regulation has made the appropriate findings. When a proceeding is contested, the Staff, as a matter of policy, seeks Commission approval to issue the license, even though issuance of the license is not stayed by the petition for review.
- Q Motions to reopen are governed by 10 C.F.R. § 2.326, which requires satisfaction of three listed criteria (§ 2.326(a)) and also requires that the motion be accompanied by an affidavit that meets certain specific requirements (§ 2.326(b)). "The burden of satisfying the reopening requirements is a heavy one," and "proponents of a reopening motion bear the burden of meeting all of [these] requirements." "Section 2.326(b) requires motions to reopen to be accompanied by affidavits of qualified experts presenting the factual and/or technical bases for the claim that there is a significant safety issue, together with evidence that satisfies our admissibility standards. A 'mere showing' of a possible violation is not enough." The affidavit must contain specific factual and/or technical bases for the movant's argument that the three criteria of subpart (a) are satisfied. Expert affidavits must be presented by competent individuals with knowledge of the facts alleged or by experts in the appropriate disciplines and the evidence must meet our admissibility standards.
- CLI-09-8 PROGRESS ENERGY CAROLINAS, INC. (Shearon Harris Nuclear Power Plant, Units 2 and 3), Docket Nos. 52-022-COL, 52-023-COL; COMBINED LICENSE; May 18, 2009; MEMORANDUM AND ORDER
- A The Commission's contention admissibility requirements, as set out in 10 C.F.R. § 2.309(f)(1), obligate intervenors to "offer 'specific' contentions on 'material' issues, supported by 'alleged facts or expert opinion.'" Intervenors must provide "a clear statement as to the basis for the contentions and the submission of . . . supporting information and references to specific documents and sources that establish the validity of the contention." In evaluating petitions to intervene, licensing boards are "not free to ignore the contention admissibility requirements of 10 C.F.R. § 2.309(f)(1)," and contentions that do not satisfy the requirements must be rejected. The Commission defers to the Board's rulings on contention admissibility in the absence of clear error or abuse of discretion.
- B As the Commission stated in the New Reactor Policy Statement and reiterated in CLI-08-15, an otherwise admissible contention that raises challenges to information in a design certification rulemaking should be referred to the Staff for resolution in the rulemaking. This is a two-step process requiring, first, an admissibility determination, and second, a determination as to whether an issue should be referred to the Staff for resolution in the design certification rulemaking.
- C It is true that in the case of a genuine contention of omission the applicant may be able to cure the omission by supplying the missing information, thus rendering the contention moot. But the initial

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

burden of showing whether the contention meets the Commission's admissibility standards still lies with the petitioner.

D A board must thoroughly analyze whether the issues raised in a contention — assuming the contention is admissible — belong in the design certification rulemaking rather than in an adjudication. In this proceeding, the Board misallocated the applicable regulatory obligations when it referred the list of nine "omissions" to the Staff to "sort out" in the context of the design certification rulemaking. Indeed, the Board's choice to make the referral, without sorting it first, implicitly acknowledges that it has not examined each "omission" itself in order to determine whether it encompasses a generic design issue or a site-specific issue appropriate for consideration in an individual application. The universe of potential contentions in a combined license proceeding includes site-specific contentions that do not implicate issues appropriately considered in a design certification rulemaking; rote referral of contentions that are generally related to facility design to the Staff for resolution in rulemaking is not appropriate.

E Our rules do not provide for multiple requests for reconsideration of the same decision, and, even if they did, the arguments in a petition in a separate matter — which the petitioner in this proceeding now adopts but could have made earlier — do not provide a compelling substantive basis for reconsidering CLI-08-15. Nor does the pleading in the separate matter reset the clock for purposes of calculating timeliness.

F The Commission's rules permit the filing of combined license applications in advance of design certifications. The design certification rulemaking and individual combined license adjudicatory proceedings may proceed simultaneously, and issues raised in an adjudicatory proceeding that are appropriately addressed in the generic design certification rulemaking are to be referred to the rulemaking for resolution.

G The burden of participating in a proceeding is not a harm that can form the basis for holding a proceeding in abeyance. "[I]t has long been a 'basic principle that a person who invokes the right to participate in an NRC proceeding also voluntarily accepts the obligations attendant upon such participation.'" These obligations include participation within the schedule established for the proceeding despite the burden on a participant's time and resources and despite uncertainties engendered by the potential for new information.

CLI-09-9 CROW BUTTE RESOURCES, INC. (In Situ Leach Facility, Crawford, Nebraska), Docket No. 40-8943-MLA (License Renewal); MATERIALS LICENSE AMENDMENT; May 18, 2009; MEMORANDUM AND ORDER

A The Board appropriately followed the U.S. Supreme Court's ruling that treaties granting ownership of the Black Hills to the Sioux Nation had been abrogated by act of Congress and are no longer in effect. LBP-08-24, 68 NRC 691, 711-12 (2008), citing *United States v. Sioux Nation of Indians*, 448 U.S. 371, 382-83, 410-11 (1980). As the treaty was the only grounds supporting the Indian group's claim of standing, the Board correctly found that the Indian group did not have standing as a party to this proceeding.

B The Commission would not disturb the Board's ruling that an Indian Tribe had demonstrated standing due to interest in cultural artifacts onsite that could be affected by a proposed licensing action.

C The Commission declined to impose a requirement that petitioners show a nexus between interest upon which standing is based and the substance of petitioners' proposed contentions.

D Affidavits by an individual with standing authorizing an organization to represent him must be filed with specific reference to the proceeding in which standing is sought for the organization.

E In a materials licensing proceeding, petitioners have the burden to show a "specific and plausible means" whereby the licensing decision may harm them. Where there is no "obvious potential" for offsite harm, the petitioner must show a "specific and plausible means of how the challenged action may harm him or her." *USEC Inc. (American Centrifuge Plant)*, CLI-05-11, 61 NRC 309, 311-12 (2005).

F Applicant's arguments that petitioners' claims were unfounded in fact went to the merits of the contention and did not show that there was no genuine dispute over the substance of the contention.

G Petitioners' contention that NRC Staff had not consulted with the affected Indian tribe, as required by the NHPA, was premature. The Board erred in admitting the contention prior to the time for the Staff to act.

H Whether the petitioner has proved its claim is not the issue at the contention pleading stage. The Board simply has to find that each of the elements of contention admissibility is satisfied, and need not weigh the merits of the petitioner's arguments.

## DIGESTS

### ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION

- I To raise an admissible issue, “[a]llegations of management improprieties . . . must be of more than historical interest.” *Georgia Institute of Technology* (Georgia Tech Research Reactor, Atlanta, Georgia), CLI-95-12, 42 NRC 111, 120 (1995).
- J The Board erred in admitting a contention concerning the economic value of wetlands without requiring petitioners to demonstrate that the proposed licensing action or “no action” alternative would have any effect on wetlands.
- K There is no statutory or regulatory bar, per se, on a foreign-owned or -controlled company holding a source materials license, whether as a licensee or as a parent entity.
- L The Board erred in admitting a contention on adverse health effects of exposure to arsenic, where petitioners had not laid a foundation by showing that (1) the applicant’s operation has released, and will continue to release, arsenic into the groundwater; and (2) arsenic released from applicant’s operation has already reached petitioners; and (3) petitioners and others living in these areas have been exposed to arsenic released from applicant’s operation sufficient to develop the adverse health effects about which petitioners are concerned. Without more, petitioners’ arguments were speculative, and did not form the basis for a litigable contention.
- CLI-09-10 ENTERGY NUCLEAR GENERATION COMPANY and ENTERGY NUCLEAR OPERATIONS, INC. (Pilgrim Nuclear Power Station), Docket No. 50-293-LR; ENTERGY NUCLEAR VERMONT YANKEE, LLC, and ENTERGY NUCLEAR OPERATIONS, INC. (Vermont Yankee Nuclear Power Station), Docket No. 50-271-LR; LICENSE RENEWAL; June 4, 2009; MEMORANDUM AND ORDER
- A The Commission denies the particular relief requested in a request for direct Commission action, but acknowledges the petitioner’s concerns and explains how the Commission will address them.
- B Because NRC license renewal regulations codify environmental impacts conclusions for a number of generically reviewed issues, these issues normally fall outside the scope of individual license renewal proceedings. But our rules recognize the possibility of new and significant information calling into question prior generic findings, and our decisions have consistently pointed to the petition for rulemaking device as one means to alert the Commission to new information that may render a generic finding incorrect.
- CLI-09-11 ENTERGY NUCLEAR GENERATION COMPANY and ENTERGY NUCLEAR OPERATIONS, INC. (Pilgrim Nuclear Power Station), Docket No. 50-293-LR; LICENSE RENEWAL; June 4, 2009; MEMORANDUM AND ORDER (Requesting Additional Briefing)
- CLI-09-12 CROW BUTTE RESOURCES, INC. (North Trend Expansion Project), Docket No. 40-8943-MLA; MATERIALS LICENSE AMENDMENT; June 25, 2009; MEMORANDUM AND ORDER
- A The Commission defers to the Board’s determinations on the admissibility of contentions unless we find an error of law or abuse of discretion. *PPL Susquehanna LLC* (Susquehanna Steam Electric Station, Units 1 and 2), CLI-07-25, 66 NRC 101, 104 (2007); *see also AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-06-24, 64 NRC 111, 121 (2006); *International Uranium (USA) Corp.* (White Mesa Uranium Mill), CLI-98-6, 47 NRC 116, 118 (1998).
- B The Commission gives the Board’s judgment on determinations of standing “substantial deference” absent a “clear misapplication of facts or law.” *Sequoyah Fuels Corp.* (Gore, Oklahoma Site Decommissioning), CLI-01-2, 53 NRC 9, 14 (2001); *Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-99-10, 49 NRC 318, 324 (1999).
- C The Board did not act unreasonably in basing standing on potential harm from new operation that would be similar to harm petitioner claims he has suffered from existing operation.
- D Requirement to show “distinct new” harm from a license amendment application would not preclude standing to contest commencement of new operations at a separate site, where petitioner showed potential for harm to himself from new operation.
- E The Commission is “not inclined to disturb the Licensing Board’s judgment on standing,” “[a]bsent a gross misapplication of the facts or applicable law.” *Sequoyah Fuels Corp. and General Atomics* (Gore, Oklahoma Site), CLI-94-12, 40 NRC 64, 72 (1994). The Commission found no “gross misapplication” of facts or applicable law in the Board’s finding that petitioners had met their burden to show a “plausible chain of causation” of possible harm.
- F Proximity alone does not suffice for standing in materials licensing cases. *International Uranium (USA) Corp.* (White Mesa Uranium Mill), CLI-98-6, 47 NRC 116, 117 n.1 (1998).
- G The Commission does not entertain on appeal arguments not raised before the Board. *Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-04-22, 60 NRC 125, 139-40 (2004). *See also USEC Inc.* (American Centrifuge Plant), CLI-06-10, 63 NRC 451, 458 (2006); *Hydro Resources,*

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- Inc.* (2929 Coors Road, Suite 101, Albuquerque, NM 87120), CLI-00-8, 51 NRC 227, 243 (2000). The Commission cannot find “clear error” in the Board’s failing to acknowledge an argument that was not brought to its attention and to which the petitioners had no opportunity to respond.
- H A late-filed document that supports or provides a basis for a proposed contention should be considered using the late-filing factors of 10 C.F.R. §§ 2.309(c) and 2.309(f)(2).
- I Where a document relevant to the licensing proceeding was available on the agency public document management system, but not indexed by license number, the Board did not act unreasonably in finding that late-filing factors weighed in favor of the party seeking to introduce the document as late support for an otherwise timely contention.
- J A licensing board may reformulate contentions to “eliminate extraneous issues or to consolidate issues for a more efficient proceeding.” *Shaw AREVA MOX Services* (Mixed Oxide Fuel Fabrication Facility), LBP-08-11, 67 NRC 460, 482 (2008) (emphasis omitted). (*See id.* at 481-83 for a discussion of the board’s legal authority to reformulate contentions).
- K A board may not add material not raised by a petitioner in order to render a contention admissible. *Andrew Siemaszko*, CLI-06-16, 63 NRC 708, 720-21 (2006). *See also Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1, 2, and 3), CLI-91-12, 34 NRC 149, 155 (1991).
- L NEPA and the National Historic Preservation Act required NRC Staff to consult with interested Indian tribes as part of its review of the application. The fact that reviews had not yet taken place at the time the application was filed did not reflect a deficiency in the application. Absent a genuine dispute over the sufficiency of the application, the contention was inadmissible.
- M Our rules of procedure explicitly allow the filing of a new contention on the basis of the draft or final environmental impact statement where that document contains information that differs “significantly” from the information that was previously available. *See* 10 C.F.R. § 2.309(f)(2) (providing that, with respect to issues arising under NEPA, the petitioner may file new contentions “if there are data or conclusions in the NRC draft or final environmental impact statement . . . that differ significantly from the data or conclusions in the applicant’s documents”). *See Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), CLI-09-9, 69 NRC 331, 351 (2009).
- N The Board erred when it disregarded the rule that a reply cannot expand the scope of the arguments set forth in the original hearing request. New bases may not be introduced in a reply brief unless they meet the late-filing criteria set forth in our regulations. *See Nuclear Management Co., LLC* (Palisades Nuclear Plant), CLI-06-17, 63 NRC 727, 732 (2006).
- O Petitioners’ claim that a foreign-owned company would be more likely than a U.S.-owned company to export its product overseas fell outside the scope of the proceeding, where the applicant had not applied for a license to export recovered uranium.
- P Our regulations do not prohibit issuance of a materials license to a licensee wholly owned by a foreign parent. *See Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), CLI-09-9, 69 NRC at 361.
- CLI-09-13 SOUTHERN NUCLEAR OPERATING COMPANY (Vogtle Electric Generating Plant, Units 3 and 4), Docket Nos. 52-025-COL, 52-026-COL; COMBINED LICENSE; June 25, 2009; MEMORANDUM AND ORDER
- A Under the Commission’s rules, the Board may refer a ruling to the Commission if it determines that “prompt decision is necessary to prevent detriment to the public interest or unusual delay or expense,” or if the ruling involves “a novel issue that merits Commission review at the earliest opportunity.” The Commission will review a referred ruling only if it raises “significant and novel legal or policy issues, and resolution of the issues would materially advance the orderly disposition of the proceeding.” *See* 10 C.F.R. §§ 2.323(f), 2.341(f)(1).
- B When the unique circumstances of a case could result in the compromise of a participant’s hearing rights, the Commission has taken action to ensure that hearings are fair and accommodate the rights of participants.
- CLI-09-14 U.S. DEPARTMENT OF ENERGY (High-Level Waste Repository), Docket No. 63-001-HLW; CONSTRUCTION AUTHORIZATION; June 30, 2009; MEMORANDUM AND ORDER
- A Commission silence on matters not specifically considered on appeal constitutes neither approval nor disapproval of any individual unreviewed ruling. *See Baltimore Gas & Electric Co.* (Calvert Cliffs Nuclear Power Plant, Units 1 and 2), CLI-98-25, 48 NRC 325, 343 n.3 (1998) (citations omitted) (unreviewed Board rulings carry no precedential weight).

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- B** As a general matter, the Commission defers to Board rulings on contention admissibility in the absence of clear error or abuse of discretion. *See Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), CLI-09-9, 69 NRC 331, 336 (2009) (citing, *inter alia*, *Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 3), CLI-08-17, 68 NRC 231, 234 (2008)); *Progress Energy Carolinas, Inc.* (Shearon Harris Nuclear Power Plant, Units 2 and 3), CLI-09-8, 69 NRC 317, 324 (2009); *AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-06-24, 64 NRC 111, 121 (2006).
- C** A petitioner is limited to the contention as initially filed and may not rectify its deficiencies through a reply brief or on appeal. *Louisiana Energy Services, L.P.* (National Enrichment Facility), CLI-04-25, 60 NRC 223 (2004).
- D** Commission pleading rules permit contentions that raise issues of law as well as contentions that raise issues of fact. *See* 10 C.F.R. § 2.309(f)(1)(i).
- E** The Boards reasonably concluded that it was not necessary for petitioners to allege “facts” under section 2.309(f)(1)(v) or to provide an affidavit that sets out the “factual and/or technical bases” under section 51.109(a)(2) to support a purely legal contention. Therefore, the Commission found that the Boards’ interpretation and application of section 2.309(f)(1) contention admissibility requirements and section 51.109(a)(2) affidavit requirement were reasonable.
- F** Whether “excessive” safety design could lead to “licensing uncertainty,” unnecessary costs, or delays are not issues material to this licensing proceeding. There is no legal requirement that the Staff find that the proposed design is not “too conservative” or that the associated costs are not excessive as part of its safety review of the construction authorization application.
- G** Contentions that DOE lacks “management integrity” to operate a high-level waste geologic repository were impermissible challenges to the Nuclear Waste Policy Act (NWPA), and to actions by the President and the Congress under the statutory scheme established by the NWPA, and are therefore beyond the scope of this proceeding. In the NWPA, Congress designated DOE, an executive agency, as the body solely responsible for constructing and operating the Yucca Mountain repository.
- H** DOE is not a “person” for purposes of AEA § 11s.
- CLI-09-15** AREVA ENRICHMENT SERVICES, LLC (Eagle Rock Enrichment Facility), Docket No. 70-7015; MATERIALS LICENSE; July 23, 2009; ORDER (Notice of Receipt of Application for License; Notice of Consideration of Issuance of License; Notice of Hearing and Commission Order; and Order Imposing Procedures for Access to Sensitive Unclassified Nonsafeguards Information and Safeguards Information for Contention Preparation)
- A** The Commission provides notice of its docketing and consideration of the 10 C.F.R. Part 70 license application submitted by AREVA Enrichment Services, LLC (AES), for authorization to possess and use source, byproduct, and special nuclear material to enrich natural uranium by the gas centrifuge process at its planned Eagle Rock Enrichment Facility (EREF) to be built in Bonneville County, Idaho. In addition to providing notice of the application, the Commission also gives notice of hearing, Commission guidance on the conduct of the proceeding, and procedures for access to sensitive unclassified nonsafeguards information and safeguards information for contention preparation.
- B** Section 193(b)(1) of the Atomic Energy Act of 1954, as amended (AEA), requires that for license applications for uranium enrichment facilities, “the [Nuclear Regulatory] Commission shall conduct a single adjudicatory hearing on the record with regard to the licensing of the construction and operation of a uranium enrichment facility.” 42 U.S.C. § 2243(b) (2000). Sections 70.23a and 70.31(e) of 10 C.F.R. implement this mandate, declaring that before a uranium enrichment facility can be licensed, a hearing is required to be held on that license application.
- C** The matters of fact and law to be considered in a proceeding on an application for a license to construct and operate a uranium enrichment facility are whether the application satisfies the applicable standards in 10 C.F.R. Parts 30, 40, and 70, and whether the requirements of the National Environmental Policy Act of 1969 (NEPA) and the NRC’s implementing regulations in 10 C.F.R. Part 51 have been met. *See Louisiana Energy Services, L.P.* (National Enrichment Facility), CLI-04-3, 59 NRC 10, 13 (2004).
- D** When a proceeding involving an application for a uranium enrichment facility is uncontested, the Licensing Board will determine without conducting a *de novo* evaluation of the application: whether the application and record of the proceeding contain sufficient information to support license issuance; whether the NRC Staff’s review of the application has been adequate to support the finding to be made by

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

the Director of the Office of Nuclear Materials Safety and Safeguards; and whether the review conducted by the NRC Staff pursuant to 10 C.F.R. Part 51 has been adequate.

- E        Regardless of whether a proceeding on an application for a uranium enrichment facility is contested or uncontested, the Licensing Board will, in its initial decision, in accordance with Subpart A of 10 C.F.R. Part 51: (1) determine whether the requirements of section 102(2)(A), (C), and (E) of NEPA and Subpart A of Part 51 have been complied with in the proceeding; (2) independently consider the final balance among conflicting factors contained in the record of the proceeding with a view to determining the appropriate action to be taken; and (3) determine, after weighing the environmental, economic, technical, and other benefits against the environmental and other costs, and considering reasonable alternative, whether a license should be issued, denied, or conditioned to protect environmental values. *See National Enrichment Facility*, CLI-04-3, 59 NRC at 13; *see also* 10 C.F.R. § 2.104(b)(2)(ii).
- F        If the proceeding on an application for a uranium enrichment facility becomes a contested proceeding, the Licensing Board shall make findings of fact and conclusions of law on admitted contentions. Moreover, with respect to matters relating to the applicable standards of 10 C.F.R. Parts 30, 40, and 70, and the adequacy of the Staff's review pursuant to Part 51, but not covered by admitted contentions, the Board will determine, without conducting a *de novo* evaluation of the application: whether the applicant and record of the proceeding contain sufficient information to support license issuance; whether the NRC Staff's review of the application has been adequate to support the finding to be made by the Director of the Office of Nuclear Materials Safety and Safeguards; and whether the review conducted by the NRC Staff pursuant to 10 C.F.R. Part 51 has been adequate. *See National Enrichment Facility*, CLI-04-3, 59 NRC at 13; *see also* 10 C.F.R. § 2.104(b)(1)(i)-(iv) and (b)(2)(i).
- G        To intervene in an NRC proceeding, a petitioner must file a written petition for leave to intervene in accordance with the requirements of 10 C.F.R. § 2.309. In addition to setting forth with particularity the interest of the petitioner in the proceeding and how that interest may be affected by the results of the proceeding, the petitioner must also include at least one contention meeting the requirements of 10 C.F.R. § 2.309(f)(1). Failure of a contention to meet any of the requirements of 10 C.F.R. § 2.309(f)(1) is grounds for its dismissal.
- H        For each contention, the petitioner must assert an issue of law or fact that is within the scope of the proceeding and is material to the outcome of the licensing proceeding, meaning that the subject matter of the contention must impact the grant or denial of a pending license application. *See* 10 C.F.R. § 2.309(f)(1)(iv).
- I        For licensing decisions involving facilities located within the jurisdictional boundaries of the United States Court of Appeals for the Ninth Circuit, the NRC Staff will consider, as part of its NEPA analysis, the potential environmental consequences, if any, were a terrorist attack on the proposed facility to occur. *See Pacific Gas and Electric Co.* (Diablo Canyon Power Plant Independent Spent Fuel Storage Installation), CLI-08-26, 68 NRC 509 (2008).
- CLI-09-16    SOUTHERN NUCLEAR OPERATING COMPANY (Vogle Electric Generating Plant, Units 3 and 4), Docket Nos. 52-025-COL, 52-026-COL; COMBINED LICENSE; July 31, 2009; MEMORANDUM AND ORDER
- A        The Commission will give substantial deference to a board's rulings on contention admissibility in the absence of clear error or abuse of discretion.
- CLI-09-17    PA'INA HAWAII, LLC, Docket No. 30-36974-ML; MATERIALS LICENSE; August 13, 2009; ORDER
- CLI-09-18    SOUTH TEXAS PROJECT NUCLEAR OPERATING COMPANY (South Texas Project, Units 3 and 4), Docket Nos. 52-012-COL, 52-013-COL; COMBINED LICENSE; September 23, 2009; MEMORANDUM AND ORDER
- A        Section 2.311(d) of 10 C.F.R. permits an aggrieved litigant to seek interlocutory review of an order granting a petition to intervene, and/or request for hearing, on the question as to whether the request for hearing or petition to intervene should have been wholly denied.
- B        A necessary prerequisite for an appeal taken pursuant to 10 C.F.R. § 2.311 is that the Board rule on all pending contentions first.
- C        Where petitioners filed new contentions in advance of a board ruling on initial intervention petitions, no appeal under 10 C.F.R. § 2.311 lies until the board acts on all contentions.
- CLI-09-19    PA'INA HAWAII, LLC, Docket No. 30-36974-ML; MATERIALS LICENSE; September 23, 2009; MEMORANDUM AND ORDER

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

CLI-09-20 CALVERT CLIFFS 3 NUCLEAR PROJECT, LLC, and UNISTAR NUCLEAR OPERATING SERVICES, LLC (Calvert Cliffs Nuclear Power Plant, Unit 3), Docket No. 52-016-COL; COMBINED LICENSE; October 13, 2009; MEMORANDUM AND ORDER

A The Commission will reject any contention that does not satisfy its deliberately strict contention admissibility requirements. The Commission gives substantial deference to its boards' determinations on threshold issues like standing and contention admissibility, and will affirm decisions on the admissibility of contentions where the appellant points to no error of law or abuse of discretion.

B To demonstrate standing to intervene, the Commission's rules require a petitioner to state, and our boards to assess, the nature of the petitioner's right under the Atomic Energy Act, the National Environmental Policy Act, or other statute governing the proceeding, to be made a party; the nature and extent of the petitioner's property, financial, or other interest; and the possible effect of the outcome of the proceeding on the petitioner's interest. In assessing whether a petitioner has standing the Commission has long applied contemporaneous judicial concepts of standing, but the Commission is not strictly bound by judicial standing doctrines.

C We generally require the elements of the judicial concept of standing, that is, the requirement for a concrete and particularized injury that is fairly traceable to the challenged action and is likely to be redressed by a favorable decision, where the injury is to an interest arguably within the zone of interests protected by the governing statute, to be pled with specificity. But in certain circumstances — such as construction permit and operating license proceedings for power reactors — the Commission recognizes a "proximity," or geographic, presumption. In such proceedings, the Commission presumes that a petitioner has standing to intervene if the petitioner lives within, or otherwise has frequent contacts with, the zone of possible harm from the nuclear reactor. In practice, the Commission has found standing based on this proximity presumption if a petitioner (or a representative of a petitioner organization) resides within approximately 50 miles of the facility in question.

D The Commission's 50-mile "proximity presumption" is simply a shortcut for determining standing in certain cases. The presumption rests on the Commission's finding, in construction permit and operating license cases, that persons living within the roughly 50-mile radius of the facility face a realistic threat of harm if a release from the facility of radioactive material were to occur.

E The analysis of compliance with section 103d of the Atomic Energy Act is a function performed by the NRC Staff as part of its evaluation of the combined license application. The Commission's guidance directs the NRC Staff to consider an applicant to be foreign owned, controlled, or dominated whenever a foreign interest has the power, direct or indirect, whether or not exercised, to direct or decide matters affecting the management or operations of the applicant. The Commission has not determined a specific threshold above which it would be conclusive that an applicant is controlled by foreign interests through ownership of a percentage of the applicant's stock. Rather, these percentages must be interpreted in light of all the information that bears on who in the corporate structure exercises control over what issues and what rights may be associated with certain types of shares. Where the ownership interest is less than 100%, although the analytical focus remains on safeguarding security and the national defense, a variety of factors are given further consideration: the extent of the proposed partial ownership of the reactor; whether the applicant is seeking authority to operate the reactor; whether the applicant has interlocking directors or officers and details concerning the relevant companies; whether the applicant would have access to any restricted data; and details concerning ownership of the foreign parent company.

CLI-09-21 DUKE ENERGY CAROLINAS, LLC (William States Lee III Nuclear Station, Units 1 and 2), Docket Nos. 52-018-COL, 52-019-COL; TENNESSEE VALLEY AUTHORITY (Bellefonte Nuclear Power Plant, Units 3 and 4), Docket Nos. 52-014-COL, 52-015-COL; COMBINED LICENSE; November 3, 2009; MEMORANDUM AND ORDER

A The Commission will review referred rulings only if the referral "raises significant and novel legal or policy issues, and resolution of the issues would materially advance the orderly disposition of the proceeding." 10 C.F.R. § 2.341(f)(1); *see Tennessee Valley Authority* (Bellefonte Nuclear Power Plant, Units 3 and 4), CLI-09-3, 69 NRC 68, 72 (2009). *See also* 10 C.F.R. § 2.323(f) (the presiding officer may refer a ruling to the Commission if, in the judgment of the presiding officer, "prompt decision is necessary to prevent detriment to the public interest or unusual delay or expense, or if the presiding officer determines that the decision or ruling involves a novel issue that merits Commission review at the earliest opportunity"). Referred rulings were not reviewed because contentions were rejected by the Board due

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

to legal insufficiency. Therefore, early Commission review would not advance the orderly disposition of either proceeding.

- CLI-09-22 DETROIT EDISON COMPANY (Fermi Nuclear Power Plant, Unit 3), Docket No. 52-033-COL; COMBINED LICENSE; November 17, 2009; MEMORANDUM AND ORDER
- A The Commission's rules of practice provide for an automatic right to appeal a licensing board standing and contention admissibility decision on the issue of whether a request for hearing or petition to intervene should have been wholly denied.
- B The Commission will defer to the Board's rulings on standing unless the appeal points to an error of law or abuse of discretion.
- CLI-09-23 DAVID GEISEN, Docket No. IA-05-052; ENFORCEMENT; November 17, 2009; MEMORANDUM AND ORDER
- A Whether the party seeking a stay faces potentially irreparable harm is the most important factor considered in the Commission's determination whether to grant a stay.
- B The possibility that the prevailing party would use the Board's order in his favor to persuade a District Court to reconsider part of the penalty imposed on him in a parallel criminal proceeding did not constitute "immediate, irreparable harm" to the NRC Staff.
- C Party seeking a stay did not show an "overwhelming" probability of success on the merits of its appeal sufficient to overcome its lack of showing of irreparable harm.
- CLI-10-1 SOUTH CAROLINA ELECTRIC & GAS COMPANY and SOUTH CAROLINA PUBLIC SERVICE AUTHORITY (also referred to as SANTEE COOPER) (Virgil C. Summer Nuclear Station, Units 2 and 3), Docket Nos. 52-027-COL, 52-028-COL; COMBINED LICENSE; January 7, 2010; MEMORANDUM AND ORDER
- A The Commission's rules of practice provide for an automatic right to appeal a board decision wholly denying a petition to intervene.
- B The Commission will defer to the board's rulings on standing and contention admissibility unless the appeal points to an error of law or abuse of discretion.
- C The Commission generally extends some latitude to *pro se* litigants, but they still are expected to comply with the Commission's procedural rules, including contention pleading requirements.
- D The Commission will not consider information that is introduced for the first time on appeal in an attempt to cure deficient contentions.
- E Replies should be narrowly focused on the legal or logical arguments presented in the answers on a request for hearing/petition to intervene.
- F The Commission's contention admissibility standards do not call for a dispositive standard of proof for a contention or its bases, but rather, a clear statement as to the basis for the contention and the submission of supporting information and references to specific documents and sources that establish the validity of the contention.
- G The Commission's regulations allow an applicant — at its own risk — to submit a combined license application that does not reference a certified design.
- H Before a board may refer a design certification-related contention to the Staff and hold it in abeyance, the contention must first be admissible. If the contention is inadmissible in the first instance, no further action is required on the part of the board.
- I In a case involving an application to produce baseload power for a defined service area, NEPA's "rule of reason" would not exclude consideration of demand-side management as part of an alternatives analysis *per se*.
- CLI-10-2 PROGRESS ENERGY FLORIDA, INC. (Levy County Nuclear Power Plant, Units 1 and 2), Docket Nos. 52-029-COL, 52-030-COL; COMBINED LICENSE; January 7, 2010; MEMORANDUM AND ORDER
- A A licensing board may reformulate contentions to "eliminate extraneous issues or to consolidate issues for a more efficient proceeding." *Crow Butte Resources, Inc.* (North Trend Expansion Project), CLI-09-12, 69 NRC 535, 552 (citing *Shaw AREVA MOX Services* (Mixed Oxide Fuel Fabrication Facility), LBP-08-11, 67 NRC 460, 482 (2008) (emphasis omitted).
- B The Board did not err in reformulating a contention to state that the application failed to comply with 10 C.F.R. Part 51, rather than with the National Environmental Policy Act (NEPA). Strictly speaking, NEPA imposes requirements on the agency, while Part 51 imposes requirements on both a license applicant and the agency. Because NEPA, by its terms, places obligations upon the federal agency, not

## DIGESTS

### ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION

- the applicant, it is correct to say that an application violates section 51.45, not “NEPA.” The Board’s clarifying restatement is no basis for rejecting the substantive claims in a contention charging that the application violates “NEPA.”
- C Although NRC recognizes a difference between contentions of “omission” and contentions of inadequacy, the Board did not err in reading the contention as one of inadequacy despite the contentions’ occasional use of terms such as “failed to address.”
- D The Board did not make an impermissible “merits” ruling by observing that a contention was supported by the affidavit of an “expert.” This initial assessment is not dispositive of the expert status of the witness or the Board’s reliance on testimony provided by the witness. As the case progresses the Board will consider the proffered expert’s qualifications in further depth and accord her opinion appropriate weight.
- E The Board did not create a “new regulatory requirement” in finding that an application must show how the proposed facility will deal with long-term storage of low-level radioactive waste (LLRW). Safety regulations in 10 C.F.R. § 52.79(a)(3) require the COL application to describe the kinds and quantities of radioactive materials that will be produced in operating a proposed new power plant and to describe the “means for controlling and limiting the radioactive effluents and radiation exposures within the limits set forth” in 10 C.F.R. Part 20.
- F Given that proposed contentions were grounded in the partial closure of the Barnwell facility for the disposal of low-level radioactive waste (LLRW), contentions failed to show basis for including Greater-Than-Class C (GTCC) waste. GTCC waste is the responsibility of the federal government and has never been shipped to the Barnwell facility.
- CLI-10-3 DETROIT EDISON COMPANY (Fermi Power Plant Independent Spent Fuel Storage Installation), Docket No. 72-72-EA; ENFORCEMENT; January 7, 2010; MEMORANDUM AND ORDER
- A We do not consider arguments or new facts raised for the first time on appeal unless their proponent can demonstrate that the information was previously unavailable. *See, e.g., AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-07-8, 65 NRC 124, 132-33 & n.38 (2007), *aff’d, New Jersey Department of Environmental Protection v. NRC*, 561 F.3d 132 (3d Cir. 2009).
- B We generally defer to our licensing boards on issues of standing, absent an error of law or abuse of discretion. *See, e.g., Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), CLI-09-9, 69 NRC 331, 336 (2009).
- C In *Bellotti v. NRC*, the U.S. Court of Appeals for the District of Columbia Circuit upheld an NRC decision to limit the scope of an enforcement adjudication to the question of whether the order should be sustained. 725 F.2d 1380 (D.C. Cir. 1983). In subsequent enforcement cases, we have consistently followed the *Bellotti* approach. *See, e.g., State of Alaska Department of Transportation and Public Facilities*, CLI-04-26, 60 NRC 399 (2004). Under *Bellotti*, petitioners must provide factual support for their claim that injury could be redressed by a favorable Board ruling; that is, that they would be better off if the order were vacated. *See id.* at 406.
- D If a petitioner wishes to propose security measures in addition to those laid out in a Staff enforcement order, then the petitioner’s remedies are either to petition the NRC under 10 C.F.R. § 2.206 for further enforcement action or to petition the NRC under 10 C.F.R. § 2.802 to institute a rulemaking to impose broader security measures.
- E It is well established that the Commission has discretion under the Administrative Procedure Act to impose binding, prospectively applicable legal requirements by either rulemaking or adjudication.
- CLI-10-4 GE-HITACHI GLOBAL LASER ENRICHMENT LLC (GLE Commercial Facility), Docket No. 70-7016; MATERIALS LICENSE; January 7, 2010; ORDER (Notice of Receipt of Application for License; Notice of Consideration of Issuance of License; Notice of Hearing and Commission Order; and Order Imposing Procedures for Access to Sensitive Unclassified Nonsafeguards Information and Safeguards Information for Contention Preparation)
- A The Commission provides notice of its docketing and consideration of the 10 C.F.R. Part 70 license application submitted by GE Hitachi Global Laser Enrichment LLC (GEH), for authorization to possess and use source, byproduct, and special nuclear material to enrich natural uranium by a laser-based enrichment process at its planned GLE Commercial Facility to be built in the City of Wilmington in New Hanover County, North Carolina. In addition to providing notice of the application, the Commission also gives notice of hearing, Commission guidance on the conduct of the proceeding, and procedures for access to sensitive unclassified nonsafeguards information and safeguards information for contention preparation.

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- B** Pursuant to 10 C.F.R. § 70.23a and section 193 of the AEA, as amended, a hearing will be conducted according to the rules of practice in 10 C.F.R. Part 2, Subparts A, C, G, and to the extent that classified information becomes involved, Subpart I. The hearing will be held under the authority of sections 53, 63, 189, 191, and 193 of the AEA.
- C** The matters of fact and law to be considered in a proceeding on an application for a license to construct and operate a uranium enrichment facility are whether the application satisfies the applicable standards in 10 C.F.R. Parts 30, 40, and 70, and whether the requirements of the National Environmental Policy Act of 1969 (NEPA) and the NRC's implementing regulations in 10 C.F.R. Part 51 have been met.
- D** When a proceeding involving an application for a uranium enrichment facility is uncontested, the Licensing Board will determine without conducting a *de novo* evaluation of the application: whether the applicant and record of the proceeding contain sufficient information to support license issuance; whether the NRC Staff's review of the application has been adequate to support findings to be made by the Director of the Office of Nuclear Materials Safety and Safeguards; and whether the review conducted by the NRC Staff pursuant to 10 C.F.R. Part 51 has been adequate.
- E** Regardless of whether a proceeding on an application for a uranium enrichment facility is contested or uncontested, the Licensing Board will, in its initial decision, in accordance with Subpart A of 10 C.F.R. Part 51: (1) determine whether the requirements of section 102(2)(A), (C), and (E) of NEPA and Subpart A of Part 51 have been complied with in the proceeding; (2) independently consider the final balance among conflicting factors contained in the record of the proceeding with a view to determining the appropriate action to be taken; and (3) determine, after weighing the environmental, economic, technical, and other benefits against the environmental and other costs, and considering reasonable alternatives, whether a license should be issued, denied, or conditioned to protect environmental values.
- F** If the proceeding on an application for a uranium enrichment facility becomes a contested proceeding, the Licensing Board shall make findings of fact and conclusions of law on admitted contentions. Moreover, with respect to matters relating to the applicable standards of 10 C.F.R. Parts 30, 40, and 70, and the adequacy of the Staff's review pursuant to Part 51, but not covered by admitted contentions, the Board will determine, without conducting a *de novo* evaluation of the application: whether the applicant and record of the proceeding contain sufficient information to support license issuance; whether the NRC Staff's review of the application has been adequate to support findings to be made by the Director of the Office of Nuclear Materials Safety and Safeguards; and whether the review conducted by the NRC Staff pursuant to 10 C.F.R. Part 51 has been adequate.
- G** To intervene in an NRC proceeding, a petitioner must file a written petition for leave to intervene in accordance with the requirements of 10 C.F.R. § 2.309. In addition to setting forth with particularity the interest of the petitioner in the proceeding and how that interest may be affected by the results of the proceeding, a petition for leave to intervene must also include a specification of the contentions that the petitioner seeks to have litigated in the hearing. Those permitted to intervene become parties to the proceeding, subject to any limitations in the order granting leave to intervene, and have the opportunity to participate fully with respect to resolution of that person's admitted contentions.
- H** For each contention, the petitioner must assert an issue of law or fact that is within the scope of the proceeding and is material to the outcome of the licensing proceeding. Each contention must be one that, if proven, would entitle the petitioner to relief.
- CLI-10-5** SOUTHERN NUCLEAR OPERATING COMPANY (Early Site Permit for Vogtle ESP Site), Docket No. 52-011-ESP; EARLY SITE PERMIT; January 7, 2010; MEMORANDUM AND ORDER
- A** The Commission grants review on a discretionary basis, giving due weight to a petitioner's showing that there is a substantial question with respect to the five considerations listed in 10 C.F.R. § 2.341(b)(4).
- B** The licensing board's principal role in our adjudicatory process is carefully to review all of the evidence, including testimony and exhibits, and to resolve any factual disputes.
- C** The Commission does not exercise its authority to make *de novo* findings of fact where a licensing board has issued a plausible decision that rests on carefully rendered findings of fact. The Commission has discretion to review all underlying factual issues *de novo*, but is disinclined to do so where a board has weighed arguments presented by experts and rendered reasonable, record-based factual findings. The Commission defers to a board's factual findings and generally steps in only to correct clearly erroneous findings — that is, findings not even plausible in light of the record viewed in its entirety — where there is strong reason to believe that a board has overlooked or misunderstood important evidence. The Commission's standard of clear error for overturning a board's factual finding is quite high.

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- D As for conclusions of law, our standard of review is more searching. We review legal questions *de novo*. We will reverse a licensing board's legal rulings if they are a departure from or contrary to established law.
- E Decisions on evidentiary questions fall within our boards' authority to regulate hearing procedures. A licensing board normally has considerable discretion in making evidentiary rulings. The Commission reviews decisions on evidentiary questions under an abuse of discretion standard.
- F The separate purposes of the Commission's adjudicatory and National Environmental Policy Act (NEPA) processes should not be confused — contested proceedings litigate particular contentions that may include arguable NEPA-analysis shortfalls, whereas the Staff's NEPA analysis encompasses the full range of NEPA issues whether or not a contested proceeding even takes place.
- G The scope of a contention is limited to issues of law and fact pled with particularity in the intervention petition, including its stated bases, unless the contention is satisfactorily amended in accordance with the Commission's rules. Otherwise, NRC adjudications quickly would lose order. Parties and licensing boards must be on notice of the issues being litigated, so that parties and boards may prepare for summary disposition or for hearing. The Commission's procedural rules on contentions are designed to ensure focused and fair proceedings.
- H There is a difference between what an agency like the NRC must look at in order to evaluate cumulative impacts under the National Environmental Policy Act — regardless of any contentions that may be filed by a party — and the scope of a particular cumulative impacts contention, which may, as here, be a subset of the total array of cumulative impacts required to be examined.
- CLI-10-6 TENNESSEE VALLEY AUTHORITY (Bellefonte Nuclear Plant, Units 1 and 2), Docket Nos. 50-438-CP, 50-439-CP; CONSTRUCTION PERMIT; January 7, 2010; MEMORANDUM AND ORDER
- A Section 185 of the Atomic Energy Act, 42 U.S.C. § 2235, is the Act's only section that addresses construction permits. This section does not speak to reinstating construction permits which a licensee surrendered to the NRC prior to the construction permit's expiration date. Rather, section 185 states that a construction permit will not expire and no rights under the permit will be forfeited unless two circumstances are present: (1) the facility is not completed, and (2) the latest date for completion has passed. Therefore, reinstating a voluntarily surrendered construction permit does not conflict with the AEA's statutory language.
- B Section 185a of the AEA, 42 U.S.C. § 2235(a), addresses forfeiture: "Unless the construction or modification of the facility is completed by the completion date, the construction permit shall expire, and all rights thereunder be forfeited, unless upon good cause shown, the Commission extends the completion date." A licensee's voluntary surrender of a construction permit prior to that permit's expiration date does not constitute "forfeiture" under section 185.
- C The NRC possesses broad discretion to act under the AEA when the statute is otherwise silent. *See Siegel v. AEC*, 400 F.2d 778, 783 (1968); *Public Service Co. of New Hampshire v. NRC*, 582 F.2d 77, 82 (1st Cir. 1978) (some internal citations omitted); *see also Massachusetts v. NRC*, 522 F.3d 115, 126-27 (1st Cir. 2008). In the context of expired construction permits, the D.C. Circuit also found that the NRC may use its broad discretion of authority under the AEA to reinstate expired construction permits which the licensee inadvertently failed to renew. *See Citizens Association for Sound Energy v. NRC*, 821 F.2d 725, 731 (D.C. Cir. 1987).
- D Section 186 of the AEA, 42 U.S.C. § 2236, addresses revocation of licenses where there is wrongdoing on the part of the licensee. The voluntary surrender of a valid construction permit does not amount to wrongful activity which would warrant revocation.
- E Section 189 of the AEA, 42 U.S.C. § 2239, calls for a mandatory hearing for the granting of a construction permit, as well as a hearing upon request for the granting, revoking, or amending of any permit or license. The issuance of new construction permits requires a section 189 mandatory hearing. However, the AEA does not provide for a mandatory hearing for the reinstatement of previously issued construction permits, as a hearing already occurred when the permits were initially issued.
- F As a general matter, administrative agencies have inherent authority to change and modify their own prior decisions. *See generally United Gas Improvement Co. v. Callery Properties, Inc.*, 382 U.S. 223, 229 (1965); *Gun South, Inc. v. Brady*, 877 F.2d 858, 862-63 (11th Cir. 1989). The NRC's authority to reinstate previously surrendered construction permits is consistent with general administrative law practice.

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- G Notice-and-comment rulemaking is required only when the NRC is attempting to change a regulation. See *Citizens Awareness Network v. NRC*, 59 F.3d 284 (1st Cir. 1995); section 189 of the AEA, 42 U.S.C. § 2239.
- CLI-10-7 PPL BELL BEND, LLC (Bell Bend Nuclear Power Plant), Docket No. 52-039-COL; COMBINED LICENSE; January 7, 2010; MEMORANDUM AND ORDER
- A The Commission generally defers to Board decisions regarding standing and contention admissibility in the absence of clear error or an abuse of discretion. *Progress Energy Carolinas, Inc.* (Shearon Harris Nuclear Power Plant, Units 2 and 3), CLI-09-8, 69 NRC 317, 324 (2009); *Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), CLI-09-9, 69 NRC 331, 336 (2009) (citing, *inter alia*, *Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 3), CLI-08-17, 68 NRC 231, 234 (2008)); *AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-06-24, 64 NRC 111, 121 (2006).
- B A petitioner cannot rely on another board's finding of standing in a prior proceeding, even where the same licensed facility is involved.
- C A petitioner must make a fresh demonstration of standing for *each* proceeding in which he seeks intervention because a petitioner's circumstances may change from one proceeding to the next. *Texas Utilities Electric Co.* (Comanche Peak Steam Electric Station, Unit 2), CLI-93-4, 37 NRC 156, 162-63 (1993). See also *Crow Butte*, CLI-09-9, 69 NRC at 342-43 (organizational petitioner could not rely on affidavit authorizing representation that was executed with respect to one proceeding to authorize representation in separate proceeding involving the same license).
- D Unreviewed board decisions have no binding effect on a later board. See *Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-05-22, 62 NRC 542, 544 (2005); *Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), CLI-99-24, 50 NRC 219, 222 (1999).
- E The petitioner bears the burden to provide facts sufficient to establish standing. *U.S. Enrichment Corp.* (Paducah, Kentucky Gaseous Diffusion Plant), CLI-01-23, 54 NRC 267, 272 (2001) (citing *Commonwealth Edison Co.* (Zion Nuclear Power Station, Units 1 and 2), CLI-00-5, 51 NRC 90, 98 (2000)).
- F The sufficiency of a nonresident petitioner's "frequent contacts" is a determination that necessarily will require the Board to weigh the information provided. Therefore, a petitioner who seeks to base standing on contacts within a 50-mile radius of a proposed facility must provide enough detail to allow the Board to distinguish a casual interest from a substantial one.
- G A petitioner's lack of specificity concerning the nature, extent, and duration of his contacts with the area surrounding the proposed site is a sufficient basis to reject a claim of standing. *PPL Bell Bend, LLC* (Bell Bend Nuclear Power Plant), LBP-09-18, 70 NRC 385, 402 n.85 (2009) (citing *Shieldalloy Metallurgical Corp.* (Cambridge, Ohio Facility), CLI-99-12, 49 NRC 347, 354-55 (1999); *Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-99-10, 49 NRC 318, 324 (1999)).
- CLI-10-8 SHIELDALLOY METALLURGICAL CORPORATION (Decommissioning of the Newfield, New Jersey Site), Docket No. 40-7102-MLA (License Amendment Request); MATERIALS LICENSE AMENDMENT; January 7, 2010; MEMORANDUM AND ORDER
- A Section 2.342 of Title 10 of the *Code of Federal Regulations* applies to a stay of a decision or action of a presiding officer or licensing board. The movant must be a "party to the proceeding," which, in the context of section 2.342, refers to an adjudicatory proceeding presided over by a presiding officer or board.
- B Section 274 of the Atomic Energy Act of 1954, as amended, governs cooperation between the Commission and a state. That section authorizes the Commission, if certain conditions are met, to discontinue its regulatory authority over certain categories of material, which authority then is assumed by the state.
- C As a general matter, a policy statement announces what the Commission seeks to establish as policy, and does not bind either the agency or the public.
- D In reviewing a stay application, the Commission considers four factors: (1) whether the moving party has made a strong showing that it is likely to prevail on the merits; (2) whether the party will be irreparably injured unless a stay is granted; (3) whether the granting of a stay would harm other parties; and (4) where the public interest lies.
- E When evaluating a motion for a stay the Commission places the greatest weight on the second factor — irreparable injury to the moving party unless a stay is granted. The Commission requires a showing of a threat of immediate and irreparable harm that will result absent a stay.

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- F Without a showing of irreparable harm, the moving party must show that success on the merits is a virtual certainty to warrant issuance of a stay.
- G Agreement State Program compatibility designations are made as part of the rulemaking process. Submission of a petition for rulemaking under 10 C.F.R. § 2.802 is the appropriate mechanism for challenging the compatibility category of an NRC regulation after the final rule has issued.
- CLI-10-9 PROGRESS ENERGY CAROLINAS, INC. (Shearon Harris Nuclear Power Plant, Units 2 and 3), Docket Nos. 52-022-COL, 52-023-COL; COMBINED LICENSE; March 11, 2010; MEMORANDUM AND ORDER
- A The Commission has discretion to allow oral argument upon the request of a party made in a petition for review, brief on review, or upon its own initiative. In order to grant a request for oral argument, the Commission requires a showing of how it will assist the Commission in reaching a decision.
- B A motion for reconsideration may not be filed except upon leave of the adjudicatory body that rendered the decision. If leave is granted, the motion must show compelling circumstances, such as the existence of an unanticipated, clear, and material error, which could not have been anticipated, that renders the decision invalid.
- C The Commission's rules do not allow for multiple requests for reconsideration of the same decision.
- D The Commission's rules permit the filing of a combined license application during the pendency of a design certification rulemaking.
- E The Commission's rules of practice provide for an automatic right to appeal a board decision wholly denying a petition to intervene.
- F The Commission will defer to the board's rulings on standing and contention admissibility unless the appeal points to an error of law or abuse of discretion.
- G The Commission has placed strict limits on management and character contentions. When character or integrity issues are raised, they are expected to be directly germane to the challenged licensing action, and of more than historical interest.
- H The Commission will deem waived arguments before the Board that are abandoned on appeal.
- I The Commission will not consider information that was not raised before the Board.
- J There is a difference between contentions that merely allege an omission of information and those that challenge substantively and specifically how particular information has been discussed in a license application.
- K Pursuant to longstanding Commission precedent, a contention that is the subject of what is, or is about to become, the subject of a rulemaking is inadmissible.
- L Attempting to circumvent page-limit rules could be grounds for sanctions. The better practice is for participants to abide by page-limit rules, and if they cannot, to file a motion to enlarge the number of pages permitted.
- CLI-10-10 U.S. DEPARTMENT OF ENERGY (High-Level Waste Repository), Docket No. 63-001-HLW; CONSTRUCTION AUTHORIZATION; March 11, 2010; MEMORANDUM AND ORDER
- A The procedural rules governing this proceeding in 10 C.F.R. Part 2, Subpart J, do not provide for the appeal of a Presiding Officer's ruling on a late-filed intervention petition. No appeals may be taken from any Presiding Officer order or decision, except as specifically permitted by rule. 10 C.F.R. § 2.1015(a).
- CLI-10-11 ENTERGY NUCLEAR GENERATION COMPANY and ENTERGY NUCLEAR OPERATIONS, INC. (Pilgrim Nuclear Power Station), Docket No. 50-293-LR; LICENSE RENEWAL; March 26, 2010; MEMORANDUM AND ORDER
- A The Commission grants review of an Atomic Safety and Licensing Board decision that dismissed a contention on summary disposition. The Commission reverses in part the decision, remanding the contention to the Board for hearing, as limited by the Commission's ruling.
- B Mitigation alternatives or "SAMAs" refer to safety enhancements such as a new hardware item or procedure intended to reduce the risk of severe accidents.
- C Applicable NRC standards governing summary disposition are set forth in 10 C.F.R. § 2.710. Summary disposition is appropriate where relevant documents and affidavits show that there is no genuine issue as to any material fact and that the moving party is entitled to a decision as a matter of law.
- D When a motion for summary disposition is made and supported as described in our regulations, a party opposing the motion may not rest upon mere allegations or denials, but must state specific facts showing that there is a genuine issue of material fact. Only disputes over facts that might affect the outcome of a proceeding would preclude summary disposition.

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- E At the summary disposition stage, the licensing board's or presiding officer's function is not to weigh the evidence and determine the truth of the matter but to determine whether there is a genuine issue for hearing. The evidence of the movant is to be believed, and all justifiable inferences are to be drawn in his favor. If reasonable minds could differ as to the import of the evidence, summary disposition is not appropriate. But if the evidence in favor of the nonmoving party is merely colorable, or not significantly probative, summary disposition may be granted.
- F NRC threshold contention standards require petitioners to review application materials and set forth their contentions with particularity. Where any issue arises over the proper scope of a contention, the Commission has long referred back to the bases set forth in support of the contention. Our contention rules require reasonably specific factual and legal allegations at the outset to assure that matters admitted for hearing have at least some minimal foundation, are material to the proceeding, and provide notice to opposing parties of the issues they will need to defend against.
- G Intervenors may not freely change the focus of an admitted contention at will to add a host of new issues and objections that could have been raised at the outset. Where warranted, we allow for amendment of admitted contentions, but do not allow distinctly new complaints to be added at will as litigation progresses, stretching the scope of admitted contentions beyond their reasonably inferred bounds.
- H There is no NEPA requirement to use the best scientific methodology, and NEPA should be construed in the light of reason if it is not to demand virtually infinite study and resources. Nor is an environmental impact statement intended to be a research document, reflecting the frontiers of scientific methodology, studies, and data.
- I The SAMA analysis is a site-specific mitigation analysis. For a mitigation analysis, NEPA demands no fully developed plan or detailed examination of specific measures which will be employed to mitigate adverse environmental effects.
- J Unless it looks genuinely plausible that inclusion of an additional factor or use of other assumptions or models may change the cost-benefit conclusions for the SAMA candidates evaluated, no purpose would be served to further refine the SAMA analysis, whose goal is only to determine what safety enhancements are cost-effective to implement.
- CLI-10-12 TENNESSEE VALLEY AUTHORITY (Watts Bar Nuclear Plant, Unit 2), Docket No. 50-391-OL; OPERATING LICENSE; March 26, 2010; MEMORANDUM AND ORDER
- A The Commission's rules of practice provide for an automatic right to appeal a board decision wholly denying a petition to intervene.
- B The Commission will defer to the board's rulings on threshold issues absent an error of law or abuse of discretion.
- C In ruling on a nontimely petition, boards are to consider eight factors that will excuse the tardiness of the petition if, on balance, they weigh in favor of the petitioner: (i) good cause, if any, for the failure to file on time; (ii) the nature of the requestor's/petitioner's right under the Atomic Energy Act of 1954, as amended (AEA) to be made a party to the proceeding; (iii) the nature and extent of the requestor's/petitioner's property, financial, or other interest in the proceeding; (iv) the possible effect of any order that may be entered in the proceeding on the requestor's/petitioner's interest; (v) the availability of other means whereby the requestor's/petitioner's interest will be protected; (vi) the extent to which the requestor's/petitioner's interests will be represented by existing parties; (vii) the extent to which the requestor's/petitioner's participation will broaden the issues or delay the proceeding; and (viii) the extent to which the requestor's/petitioner's participation may reasonably be expected to assist in developing a sound record.
- D The first factor — good cause — is accorded the greatest weight.
- E Absent a showing of good cause, a nontimely petition will not be excused unless the petitioner makes a compelling showing on the remaining factors. A petitioner's showing must be highly persuasive; it would be a rare case where the Commission would excuse a nontimely petition absent good cause.
- F Under longstanding Commission precedent, a petitioner must provide more than vague assertions that it will be able to assist in developing the record. When a petitioner addresses this criterion it should set out with as much particularity as possible the precise issues it plans to cover, identify its prospective witnesses, and summarize their proposed testimony.
- G Fundamentally, fairness requires that all participants in NRC adjudicatory proceedings abide by the Commission's procedural rules, especially those who are cognizant of those rules and represented by counsel.

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- CLI-10-13 U.S. DEPARTMENT OF ENERGY (High-Level Waste Repository), Docket No. 63-001-HLW; CONSTRUCTION AUTHORIZATION; April 23, 2010; MEMORANDUM AND ORDER
- CLI-10-14 ENTERGY NUCLEAR GENERATION COMPANY and ENTERGY NUCLEAR OPERATIONS, INC. (Pilgrim Nuclear Power Station), Docket No. 50-293-LR; LICENSE RENEWAL; June 17, 2010; MEMORANDUM AND ORDER
- A The Commission addresses a petition for review of several Atomic Safety and Licensing Board decisions, including LBP-08-22, 68 NRC 590 (2008), LBP-06-23, 64 NRC 257 (2006), and interlocutory decisions, and denies review of these Board decisions. An earlier Commission decision, CLI-10-11, 71 NRC 287 (2010), *reconsideration denied*, CLI-10-15, 71 NRC 479 (2010) addressed the petition's request for review of LBP-07-13, 66 NRC 131 (2007), and granted review of and partially reversed LBP-07-13.
- B The NRC's license renewal safety regulations are set forth in 10 C.F.R. Part 54. Underlying the renewal regulations is the principle that each nuclear power plant has a plant-specific licensing basis that must be maintained during the renewal term in the same manner and to the same extent as during the original licensing term. The current licensing basis is the set of NRC requirements applicable to a specific plant. The current licensing basis does not remain static. The NRC continually reassesses the current licensing basis through the regulatory oversight process, including plant-specific and generic reviews, plant inspections, and enforcement actions.
- C The aging management review for license renewal focuses on structures and components that perform passive functions — with no moving parts or changes in configuration or properties. Further, the license renewal safety review focuses on those systems, structures, and components that are of principal importance to safety. The general scope of the license renewal safety review is outlined in 10 C.F.R. § 54.4.
- D Section 54.4(a)(1)(3) outlines the three general categories of systems, structures, and components (SSCs) falling within the initial focus of the license renewal safety review. The first category (§ 54.4(a)(1)) consists of all safety-related SSCs. These are SSCs relied upon to remain functional during and following design-basis events to ensure the integrity of the reactor coolant pressure boundary, the capability to shut down the reactor and maintain it in a safe shutdown condition, or the capability to prevent or mitigate the consequences of accidents which could result in potential offsite exposures comparable to those referred to in sections 50.34(a)(1), 50.67(b)(2), or 100.11. The second category (§ 54.4(a)(2)) consists of all non-safety-related SSCs whose failure could prevent satisfactory accomplishment of any of the safety functions identified in section 54.4(a)(1). The third category (§ 54.4(a)(3)) consists of all SSCs relied on in safety analyses or plant evaluations to perform a function that demonstrates compliance with the NRC's regulations for fire protection, pressurized thermal shock, anticipated transients without scram, and station blackout.
- E From among the three general categories of SSCs that fall within the initial focus of the license renewal safety review, applicants must identify and list, in an integrated plant assessment (IPA), those structures and components subject to an aging management review. Section 54.21 provides the standards for determining which structures and components require an aging management review.
- F SSCs requiring an aging management review perform an "intended function" as described in section 54.4. These are the functions outlined in the three general categories of SSCs within the initial scope of license renewal. Additionally, SSCs subject to an aging management review perform an intended function in a *passive* fashion, and they are not already subject to replacement based on a qualified life or specified time period.
- G For each structure or component requiring an aging management review, a license renewal applicant must demonstrate that the effects of aging will be adequately managed so that the intended function(s) will be maintained consistent with the CLB for the period of extended operation.
- H The reasonable assurance determination for license renewal need not be reduced to a mechanical verbal formula or set of objective standards but may be given content through case-by-case applications of the Commission's technical judgment in light of all relevant information. The reasonable assurance determination is not quantified as equivalent to a percent confidence level, but is based on sound technical judgment of the particulars of a case and on compliance with our regulations.
- I A license renewal applicant need not address mitigation for issues designated "Category 1." The license renewal rulemaking history makes clear that an issue cannot be identified as "Category 1" if the NRC has not made a generic determination that additional mitigation measures are unlikely to be warranted, given mitigation practices already in place.

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- J Onsite storage of spent fuel during the license renewal term is a “Category 1” issue, and as such explicitly has been found not to warrant any additional site-specific analysis of mitigation measures.
- CLI-10-15 ENTERGY NUCLEAR GENERATION COMPANY and ENTERGY NUCLEAR OPERATIONS, INC. (Pilgrim Nuclear Power Station), Docket No. 50-293-LR; LICENSE RENEWAL; June 17, 2010; MEMORANDUM AND ORDER
- A The Commission denies a motion for reconsideration of its decision in CLI-10-11, 71 NRC 287 (2010).
- B The Commission will grant a motion for reconsideration only upon a showing of compelling circumstances, such as a clear and material error that could not have been reasonably anticipated and that renders a decision invalid.
- C At the summary disposition stage, the quality of evidentiary support is expected to be of a higher level than that at the contention filing stage.
- CLI-10-16 SOUTH TEXAS PROJECT NUCLEAR OPERATING COMPANY (South Texas Project, Units 3 and 4), Docket Nos. 52-012-COL, 52-013-COL; COMBINED LICENSE; June 17, 2010; MEMORANDUM AND ORDER
- A Section 2.311 of our rules of practice permits an appeal as of right from a board’s ruling on an intervention petition in two limited circumstances: (1) upon the denial of a petition to intervene and/or request for hearing, on the question as to whether it should have been granted; or (2) upon the granting of a petition to intervene and/or request for hearing, on the question as to whether it should have been wholly denied.
- B Other requests for review generally are governed by section 2.341, which provides for interlocutory review, at our discretion, only upon a showing that the issue for which interlocutory review is sought: (i) Threatens the party adversely affected by it with immediate and serious irreparable impact which, as a practical matter, could not be alleviated through a petition for review of the presiding officer’s final decision; or (ii) Affects the basic structure of the proceeding in a pervasive or unusual manner.
- C That interlocutory review only will be granted under extraordinary circumstances reflects our disfavor of piecemeal appeals during ongoing licensing board proceedings.
- D Under longstanding Commission precedent, once a petition to intervene and request for hearing has been granted and contentions are admitted for hearing, appeals of Board rulings on new or amended contentions are treated under section 2.341(f)(2), regardless of the subject matter of those contentions.
- E The rejection or admission of a contention, where the Petitioner has been admitted as a party and has other contentions pending, neither constitutes serious and irreparable impact, nor affects the basic structure of the proceeding in a pervasive and unusual manner.
- CLI-10-17 ENTERGY NUCLEAR VERMONT YANKEE, LLC and ENTERGY NUCLEAR OPERATIONS, INC. (Vermont Yankee Nuclear Power Station), Docket No. 50-271-LR; LICENSE RENEWAL; July 8, 2010; MEMORANDUM AND ORDER
- A The licensing board’s interpretation of 10 C.F.R. §§ 54.3, 54.21, 54.29 is challenged.
- B We welcome appellate briefs *amicus curiae* from parties in other Commission adjudications that presented or present an issue similar to the one in the case before us.
- C We see no reason to postpone consideration of pending issues until the resolution of other issues unrelated to this adjudication.
- D On appeal, we review legal issues *de novo*. By contrast, we generally defer to our boards’ findings of fact, unless they are clearly erroneous. When we review our boards’ rulings on contention admissibility, we employ the clear error and abuse of discretion standards of review.
- E We are generally disinclined to upset *fact*-driven Licensing Board determinations.
- F We will not consider cursory, unsupported arguments.
- G A litigant opposing a licensing action is entitled to challenge the sufficiency of any guidance document on which a licensee or applicant relies, but it must do so with substantive support.
- H Entergy modified its Fatigue Monitoring Program to be consistent with the AMP in the GALL Report and thereby satisfy 10 C.F.R. § 54.21(c)(1)(iii). It did so by removing both of the exceptions that the application had previously taken to the generic AMP in the GALL Report — including the exception that omitted any consideration of environmentally assisted fatigue from Entergy’s AMP. These modifications placed the metal fatigue portion of the application within the parameters of 10 C.F.R. § 54.21(c)(1)(iii). Entergy amended its application to include the revised Fatigue Monitoring Program on September 17, 2007. The Board misunderstood Entergy’s modifications and dismissed them as merely “relabeling”

## DIGESTS

### ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION

its demonstration in an effort to avoid its purported obligations under subsections (i) and/or (ii) of 10 C.F.R. § 54.21(c)(1). In so concluding, the Board was not correct in equating the fatigue analyses under subsections (i) and (ii) with the fatigue analyses under subsection (iii). Further, the Board failed to recognize that an applicant may use similar or identical methodology to calculate the fatigue usage factor for the TLAA and for the AMP — regardless of how it seeks to comply with section 54.21(c)(1), whether through a predictive TLAA or by the use of an AMP.

I We also disagree with the Board’s legal determination that CUF<sub>en</sub>s are TLAAAs and that the renewed license therefore may not issue without them. Our regulations in 10 C.F.R. § 54.3 define TLAAAs as being contained in the current licensing basis. Because CUF<sub>en</sub>s are not contained in Vermont Yankee’s current licensing basis, they cannot be TLAAAs and thereby a prerequisite to license renewal. The Staff’s consideration of CUF<sub>en</sub>s in its review of the Vermont Yankee license renewal application does not render the use of CUF<sub>en</sub>s a requirement under our rules.

J The following technical issues are discussed: Metal Fatigue, Aging Management Program (AMP), Time-Limited Aging Analyses (TLAA), Cumulative Use (or Usage) Factor (CUF), Environmentally Adjusted Cumulative Use (or Usage) Factor (CUF<sub>en</sub>), Environmental Adjustment Factor (F<sub>en</sub>), Generic Aging Lessons Learned Report (NUREG-1801), Standard Review Plan for Review of License Renewal Applications for Nuclear Power Plants (NUREG-1800).

CLI-10-18 PA’INA HAWAII, LLC, Docket No. 30-36974-ML (Materials License Application); MATERIALS LICENSE; July 8, 2010; MEMORANDUM AND ORDER

A Under the Commission’s rules, the granting of petitions for review is discretionary, given due weight to the existence of a substantial question with respect to the five considerations listed in 10 C.F.R. § 2.341(b)(4).

B Under the Commission’s adjudicatory scheme, the licensing board’s principal role is carefully to review all of the evidence, including testimony and exhibits, and to resolve any factual disputes.

C The Commission refrains from exercising its authority to make *de novo* findings of fact in situations where a Licensing Board has issued a plausible decision that rests on carefully rendered findings of fact. While the Commission has discretion to review all underlying factual issues *de novo*, it is disinclined to do so where a Board has weighed arguments presented by experts and rendered reasonable, record-based factual findings. The Commission’s standard of “clear error” for overturning a Board’s factual findings is quite high. The Commission defers to a board’s factual findings, correcting only “clearly erroneous” findings — that is, findings not even plausible in light of the record viewed in its entirety — where it has strong reason to believe that a board has overlooked or misunderstood important evidence. The Commission will not lightly reverse its boards’ factual determinations, and will not overturn a licensing board’s findings simply because it might have reached a different result.

D In contrast to findings of fact, for conclusions of law, the Commission’s standard of review is more searching. We review legal questions *de novo*. We will reverse a licensing board’s legal rulings if they are a departure from or contrary to established law.

E The Commission’s boards have the authority to regulate hearing procedure, and decisions on evidentiary questions fall within that authority. A licensing board normally has considerable discretion in making evidentiary rulings. The Commission applies an abuse of discretion standard to its review of decisions on evidentiary questions.

F National Environmental Policy Act § 102(2)(C) requires federal agencies, “to the fullest extent possible,” to include a detailed statement on five listed items “in every recommendation or report on proposals for . . . major Federal actions significantly affecting the quality of the human environment.” The five items are: “(i) the environmental impact of the proposed action, (ii) any adverse environmental effects which cannot be avoided should the proposal be implemented, (iii) alternatives to the proposed action, (iv) the relationship between local short-term uses of man’s environment and the maintenance and enhancement of long-term productivity, and (v) any irreversible and irretrievable commitments of resources which would be involved in the proposed action should it be implemented.”

G The National Environmental Policy Act requires a hard look at environmental effects; general statements about “possible” effects and “some risk” do not constitute a “hard look” absent a justification regarding why more definitive information could not be provided. A rule of reason applies to the assessment of the adequacy of a National Environmental Policy Act analysis. This rule of reason is implicit in the Act’s requirement that an agency consider reasonable alternatives to a proposed action.

## DIGESTS

### ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION

- H The National Environmental Policy Act twice refers to the consideration of “alternatives.” In addition to the “alternatives” language in section 102(2)(C)(iii), section 102(2)(E) of the Act requires federal agencies to “study, develop, and describe appropriate alternatives to recommend courses of action in any proposal which involves unresolved conflicts concerning alternative uses of available resources.” This section 102(E) “alternatives provision” applies both when an agency prepares an environmental impact statement and when an agency prepares an environmental assessment. In either case, the provision requires the agency to give “full and meaningful consideration to all reasonable alternatives.” But the obligation to consider alternatives is a lesser one under an environmental assessment than under an environmental impact statement. When preparing an environmental impact statement, the agency must “[r]igorously explore and objectively evaluate all reasonable alternatives.” In contrast, when preparing an environmental assessment, the agency only must “include a brief discussion of reasonable alternatives.” Even when a proposed action does not require preparation of an environmental impact statement, the consideration of alternatives remains critical to the Act’s goals. In short, whether an agency is preparing an environmental assessment or an environmental impact statement, the alternatives that should be considered will be the same — it is only in the depth of the consideration and in the level of detail provided in the corresponding environmental documents that an environmental assessment and an environmental impact statement will differ.
- I Consistent with the Council on Environmental Quality’s regulations and the definition of “categorical exclusion,” the Commission has by regulation designated certain actions as “categorically excluded” from the requirement to prepare an environmental assessment or an environmental impact statement. Once a categorical exclusion has been established, the Staff need not prepare an environmental assessment or an environmental impact statement, absent the existence of special circumstances.
- J An environmental assessment for a proposed action must identify the action and include (1) a brief discussion of: (i) the need for the proposed action; (ii) alternatives as required by section 102(2)(E) of the National Environmental Policy Act; (iii) the environmental impacts of the proposed action and alternatives as appropriate; and (2) a list of agencies and persons consulted, and identification of sources used.
- K The applicant’s stated purpose defines the correlating range of alternatives that should be considered: while different from the specific proposal, the alternatives that should be considered must still accomplish the underlying purpose of the proposed action. The adequacy of the alternatives analysis is judged on the substance of the alternatives rather than the sheer number of alternatives examined. So long as all reasonable alternatives have been considered and an appropriate explanation is provided as to why an alternative was eliminated, the regulatory requirement is satisfied. The regulation does not impose a numerical floor on alternatives to be considered. The consideration of alternatives is bounded by a notion of feasibility. Alternatives that do not advance the purpose of the project will not be considered reasonable or appropriate.
- L While the Commission does accord “substantial weight” to an applicant’s preferences, this does not equate to complete deference to those preferences. Such deference would, in many cases, preclude the consideration of reasonable alternatives that the National Environmental Policy Act requires. While it is true that the project goal is to be determined by the applicant, not the agency, courts will not allow an agency to define the objectives so narrowly as to preclude a reasonable consideration of alternatives.
- M The Commission does not find that alternative sites always must be analyzed in an environmental assessment. Analysis of alternative sites is appropriate only when such sites are determined to be reasonable alternatives. In this particular instance, it was appropriate for the Board to require the Staff to include a brief analysis — at the level of detail appropriate for an environmental assessment — of the impacts of siting the irradiator at a different location. Consideration of alternative sites is not universally required in the preparation of an environmental assessment.
- N New or amended contentions may be filed only with leave of the presiding officer upon a showing that satisfies the three criteria set out in 10 C.F.R. § 2.309(f)(2).
- O The Atomic Energy Act and the National Environmental Policy Act contemplate *separate* NRC reviews of proposed licensing actions. While the Commission’s safety and environmental reviews may consider overlapping concerns, they are separate and independent, with differing objectives and scope, governed by different statutes with different requirements. Consequently, the fact that the Board dismissed a safety-related transportation contention is not dispositive of the merits of an environmentally based transportation contention.

## DIGESTS

### ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION

- P Once a hearing is granted under Subpart L, the Commission's rules require an informal hearing on the merits, except in the limited circumstances described in 10 C.F.R. § 2.1206. Prior to 2004, the Commission's rules of practice prescribed that hearings held under Subpart L — as this hearing would have been — were to be informal "paper hearings," with oral presentations permitted only upon a determination by the presiding officer that such presentations were necessary to create an adequate record for decision. The Commission's 2004 changes to the rules, however, expressly did away with this format in its entirety, shifting the focus of Subpart L to oral hearings. Although the Board has broad authority to regulate the conduct of the proceeding before it, it is beyond the Board's discretion to abrogate the Commission's oral hearing rule entirely, and proceed as though the prior rules were still in effect.
- CLI-10-19 ENTERGY NUCLEAR OPERATIONS, INC. (Indian Point, Units 2 and 3), Docket Nos. 50-247-LR, 50-286-LR; LICENSE RENEWAL; July 8, 2010; MEMORANDUM AND ORDER
- A The Commission addresses a certified question by the Atomic Safety and Licensing Board on the admissibility of proposed contentions involving the Waste Confidence Rule.
- B Challenges to the Waste Confidence Rule (10 C.F.R. § 51.23) must be made in the context of a rulemaking, not in the context of an adjudicative proceeding.
- C Under longstanding NRC policy, licensing boards should not accept in individual license proceedings contentions which are (or are about to become) the subject of general rulemaking by the Commission.
- CLI-10-20 U.S. ARMY INSTALLATION COMMAND (Schofield Barracks, Oahu, Hawaii, and Pohakuloa Training Area, Island of Hawaii, Hawaii), Docket No. 40-9083; MATERIALS LICENSE; August 12, 2010; MEMORANDUM AND ORDER
- A In a materials licensing case, a petitioner must show more than that he lives or works within a certain distance of the site where materials will be located — he must show a plausible mechanism through which those materials could harm him. *See USEC Inc.* (American Centrifuge Plant), CLI-05-11, 61 NRC 309, 311 (2005).
- B In cases not involving nuclear power reactors, whether a petitioner could be affected by the licensing action must be determined on a case-by-case basis, taking into account the petitioner's distance from the source, the nature of the licensed activity, and the significance of the radioactive source. *American Centrifuge Plant*, CLI-05-11, 61 NRC at 311. *See also Georgia Institute of Technology* (Georgia Tech Research Reactor, Atlanta, Georgia), CLI-95-12, 42 NRC 111, 116 (1995).
- C NRC boards have established the "proximity-plus" test to establish standing in materials cases, where the petitioner must show: (1) that the proposed licensing action involves a "significant source" of radiation, which has (2) an "obvious potential for offsite consequences." *Sequoyah Fuels Corp. and General Atomics* (Gore, Oklahoma Site), CLI-94-12, 40 NRC 64, 75 n.22 (1994). *See also U.S. Army* (Jefferson Proving Ground Site), LBP-00-9, 51 NRC 159, 160-61 (2000) (standing found for organization representing three members living "in close proximity" to decommissioning site, who expressed concern that DU materials could affect a waterway abutting the property of two members).
- D As a rule, *pro se* petitioners are held to less rigid pleading standards, so that parties with a clear — but imperfectly stated — interest in the proceeding are not excluded. *Public Service Electric and Gas Co.* (Salem Nuclear Generating Station, Units 1 and 2), ALAB-136, 6 AEC 487 (1973); *International Uranium (USA) Corp.* (White Mesa Uranium Mill), LBP-01-8, 53 NRC 204, 207-08 (2001); *Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-14, 63 NRC 568, 581 (2006).
- E Unsupported arguments that posited a mechanism for dispersal of radioactive material were insufficient to demonstrate the potential for offsite consequences where the licensee provided evidence that the posited scenario would not occur. Petitioner's argument that high-explosive munitions could fall onto DU, pulverizing and igniting the DU and generating aerosols that might travel through the air, providing an inhalation pathway for offsite exposure was not supported and was contradicted by the Army's statement that it does not employ high-impact explosives in the area where DU is present. Army regulations prohibit firing high-explosive munitions into areas containing DU. Petitioners' claims were "bare conjecture," and insufficient to support standing.
- F The Board did not err in declining to find standing on the basis of unsupported assertions. The Board did not err in refusing to assume that the license applicant will stop following applicable Department of Defense guidance and disregard its representation to the Board that high-explosive munitions will not be used in the DU areas at Pohakuloa or Schofield. The Commission need not assume that the license applicant will act contrary to applicable law, guidance, or the strictures of its license in the future. *Private*

## DIGESTS

### ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION

- Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-01-9, 53 NRC 232, 235 (“in the absence of evidence to the contrary, the NRC does not presume that a licensee will violate agency regulations wherever the opportunity arises”).
- CLI-10-21 SOUTH CAROLINA ELECTRIC & GAS COMPANY and SOUTH CAROLINA PUBLIC SERVICE AUTHORITY (also referred to as SANTEE COOPER) (Virgil C. Summer Nuclear Station, Units 2 and 3), Docket Nos. 52-027-COL, 52-028-COL; COMBINED LICENSE; August 27, 2010; MEMORANDUM AND ORDER
- A In exercising our appellate responsibilities, we defer to a licensing board’s rulings on contention admissibility unless an appeal points to an error of law or abuse of discretion.
- B Our contention admissibility requirements are deliberately strict, and we will reject any contention that does not satisfy them.
- CLI-10-22 ENTERGY NUCLEAR GENERATION COMPANY and ENTERGY NUCLEAR OPERATIONS, INC. (Pilgrim Nuclear Power Station), Docket No. 50-293-LR; LICENSE RENEWAL; August 27, 2010; MEMORANDUM AND ORDER
- A The Commission reviews an intervenor’s motion for disqualification of an Atomic Safety and Licensing Board judge. The Commission agrees with the judge’s determination that the motion did not provide any ground warranting disqualification.
- B Under NRC regulations, if an Atomic Safety and Licensing Board member declines to grant a party’s recusal motion, the motion is referred to the Commission to determine the sufficiency of the grounds alleged.
- CLI-10-23 DAVID GEISEN, Docket No. IA-05-052; ENFORCEMENT; August 27, 2010; MEMORANDUM AND ORDER
- A For purposes of determining whether an actor has deliberately submitted statements to the NRC which he knows are inaccurate or incomplete, “knowledge” of a fact requires not only an awareness of that fact but also an understanding of its significance. The Commission approves the Board majority’s finding that “knowledge” does not necessarily follow simply from previous exposure to individual facts. Instead, to have knowledge, an individual must have a current appreciation of those facts and of what those facts mean in the circumstances presented.
- B In explaining the factors considered in deciding the factual issue whether the target of a Staff enforcement action had acted knowingly, the Board did not create a new legal “test” requiring that the Staff contradict all factors that the Board considered. The Board’s determination of the “knowledge” question was a finding of fact, not of law.
- C To show clear error, the appellant must demonstrate that the Board’s factual findings are “not even plausible in light of the record viewed in its entirety.” *Tennessee Valley Authority* (Watts Bar Nuclear Plant, Unit 1; Sequoyah Nuclear Plant, Units 1 and 2; Browns Ferry Nuclear Plant, Units 1, 2, and 3), CLI-04-24, 60 NRC 160, 189 (2004) (internal quotation marks omitted) (quoting *Kenneth G. Pierce* (Shorewood, Illinois), CLI-95-6, 41 NRC 381, 382 (1995) (in turn quoting *Anderson v. Bessemer City*, 470 U.S. 564, 573-76 (1985))).
- D The Commission will not lightly overturn a Board’s finding of fact, particularly where much of the evidence is subject to varied interpretation.
- E The Board did not commit clear error in finding that an enforcement action target did not “know” certain facts despite Staff’s showing that the target was the recipient list of documents and e-mails that included those facts.
- F The Board did not commit clear error in believing the explanations given by the target of an enforcement action as to why he did not think that information he provided the NRC was false. The enforcement target claimed that he had relied on other people to verify the accuracy of certain information; that he had focused only on his own area of responsibility in verifying the technical accuracy of the correspondence sent to NRC; and that he had focused his attention on responding to the NRC’s request for other information than that found to be false. While none of these circumstances necessarily “proved” that the enforcement target did not know that the information provided was false, the Board could plausibly find the target’s testimony credible.
- G The Board did not hold, as a matter of law, that a person cannot be held responsible for knowingly concurring in materially incomplete and inaccurate representations as long as he can point to someone more directly responsible for the representations. Rather, the Board found, as a matter of fact, that the

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

particular enforcement target did not know the truth because he relied on others to verify statements within their area of responsibility.

H That the majority gave greater weight to the enforcement action target's evidence than to the Staff's evidence is not a basis for overturning the majority's findings of fact. Such weighing of evidence and testimony is inherent in, and at the very heart of, adjudicatory fact-finding — an area where the Commission has traditionally deferred to the licensing boards. *See, e.g., AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-09-7, 69 NRC 235, 259 (2009).

I Regardless of whether the Commission would have made the same findings as the majority in its position, it recognized that the Board's factual analysis and findings were detailed, thorough, internally consistent, and supported by record evidence. *See Watts Bar*, CLI-04-24, 60 NRC at 189 (“We will not overturn a hearing judge's findings simply because we might have reached a different result.”) (quoting *Louisiana Energy Services, L.P.* (Claiborne Enrichment Center), CLI-98-3, 47 NRC 77, 93-94 (1998) (in turn quoting *General Public Utilities Nuclear Corp.* (Three Mile Island Nuclear Station, Unit 1), ALAB-881, 26 NRC 465, 473 (1987))). Further, the Board had the significant advantage of observing the witnesses firsthand and judging their demeanor and credibility. For these reasons, the Commission declined to overturn the Board's findings of fact.

J That the majority assigned less weight to circumstantial evidence showing that the enforcement target knew the falsity of his statements than to the target's direct testimony that he did not know of its falsity did not amount to a legal determination that circumstantial evidence must be disregarded. Had the Board actually made *that* determination, it would have committed legal error for the reasons set forth by the Staff.

K The weight the Board assigns to various evidence falls squarely within the bounds of a factual finding related to weighing evidence to which the Commission defers.

L The Board erred in relying on a report submitted during the sanctions portion of the hearing when it had committed not to rely on that evidence in considering the existence of a violation. But where the appellant failed to show how it was harmed by the error, the error cannot be found to have been prejudicial.

M The Board did not err in refusing to apply collateral estoppel to a prior criminal conviction where the NRC Staff conceded that the standard of knowledge — “deliberate ignorance” — that was applied in the criminal action is broader than the standard of knowledge applied in the Commission enforcement action.

N Before it can apply collateral estoppel, a Board must determine that the issue decided in the prior action is identical to the issue to be decided in the matter before it.

O In determining whether to apply collateral estoppel, a board should not look into the jury trial to determine whether the verdict was “correct.” *Toledo Edison Co.* (Davis-Besse Nuclear Power Station, Units 1, 2, and 3), ALAB-378, 5 NRC 557, 562-63 (1977). *See also Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), LBP-02-20, 56 NRC 169, 182 (2002) (“The correctness of the prior decision is not . . . a public policy factor upon which the application of the doctrine of collateral estoppel depends.”). The Board did not err in declining to examine the evidence presented in the jury trial to try to determine what issue the jury actually decided when that determination is rendered unclear by a special verdict.

CLI-10-24 SOUTH TEXAS PROJECT NUCLEAR OPERATING COMPANY (South Texas Project, Units 3 and 4), Docket Nos. 52-012-COL, 52-013-COL; COMBINED LICENSE; September 29, 2010; MEMORANDUM AND ORDER

A Our rules permit an appeal as of right by the NRC Staff on the question whether a request for access to SUNSI should have been denied in whole or in part. We review the Board's determination *de novo*.

B Once a petition to intervene has been granted, issues involving access to documents for use in the proceeding are governed by our discovery rules. In a Subpart L proceeding, we look to the mandatory disclosure provisions of 10 C.F.R. § 2.336.

C The purpose of the Access Order is to provide an avenue for access to documents through which potential parties already would have been accorded access but for their containing SUNSI or Safeguards Information.

D We have long held that discovery is not permitted before a petition to intervene has been granted.

E We have long held that petitioners or intervenors may request and, where appropriate, obtain — under protective order or other measures — information withheld from the general public for proprietary or security reasons.

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

- CLI-10-25 LUMINANT GENERATION COMPANY, LLC (Comanche Peak Nuclear Power Plant, Units 3 and 4), Docket Nos. 52-034-COL, 52-035-COL; COMBINED LICENSE; September 29, 2010; MEMORANDUM AND ORDER
- A Once a petition to intervene has been granted, issues involving access to documents are governed by our discovery rules. In a Subpart L proceeding, we look to the mandatory disclosure provisions of 10 C.F.R. § 2.336.
- CLI-10-26 TENNESSEE VALLEY AUTHORITY (Bellefonte Nuclear Plant, Units 1 and 2), Docket Nos. 50-438-CP, 50-439-CP; CONSTRUCTION PERMIT; September 29, 2010; MEMORANDUM AND ORDER
- A In the interest of efficient case management and prompt resolution of adjudications, we generally have enforced the 10-day deadline for appeals strictly, excusing it only in unavoidable and extreme circumstances. Unfamiliarity with NRC’s Rules of Practice is not a sufficient excuse for late filings, particularly where the challenged order expressly advised the petitioner of the time within which appellate rights had to be exercised.
- B The fact that a party may have other obligations does not relieve that party of its NRC hearing obligations — specifically its obligation to file pleadings in a timely manner.
- C We disfavor motions for extensions of time that are themselves filed out-of-time, such as the one at issue here. Indeed, we generally expect parties to file motions for extensions of time so that they are received by the NRC well before the time specified expires.
- D Reinstatement of the construction permits did not authorize construction of the reactors. Rather, the effect of the reinstatement was to place the facility in a terminated plant status.
- CLI-10-27 NORTHERN STATES POWER COMPANY (Prairie Island Nuclear Generating Plant, Units 1 and 2), Docket Nos. 50-282-LR, 50-306-LR; LICENSE RENEWAL; September 30, 2010; MEMORANDUM AND ORDER
- A A “Green” inspection finding indicates that the deficiency in licensee performance has a very low risk significance and has little or no impact on safety. By contrast, “White,” “Yellow,” and “Red” inspection findings indicate increasingly serious safety problems. “White” findings denote a “low to moderate” safety significance.
- B The issues here are “significant,” have “potentially broad impact,” and “may well recur in the likely license renewal proceedings for other plants.” Therefore, although we deny the interlocutory appeals, we nonetheless exercise our inherent supervisory authority over adjudications to take *sua sponte* review of the Board Order.
- C License renewal should not include a new, broad-scoped inquiry into compliance that is separate from and parallel to our ongoing compliance oversight activity. We specifically indicated that other broad-based issues akin to safety culture — such as operational history, quality assurance, quality control, management competence, and human factors — were beyond the bounds of a license renewal proceeding. This is because these *conceptual* issues fall outside the bounds of the passive, safety-related *physical* systems, structures, and components that form the scope of our license renewal review.
- D We define safety culture broadly.
- E If the Commission were to permit fundamentally routine inspection findings and regulatory determinations to form the basis for safety culture contentions, this result could lead to a potentially neverending stream of minitrials on operational issues, in which the applicant would be required to demonstrate how each issue was satisfactorily resolved.
- F Our regulatory process continually reassesses whether there is a need for additional oversight or regulations to protect public health and safety. We have taken, and continue to take, measures to include the monitoring of safety culture in its oversight programs and internal management processes.
- G Our license renewal proceedings focus on the potential impacts of an additional 20 years of nuclear power plant operation, not on everyday operational issues — even those that might be age-related. Those issues are effectively addressed and maintained by ongoing agency oversight, review, and enforcement.
- H If a stakeholder believes that immediate action is needed to remedy an ailing safety culture at a licensed facility, then that matter should be brought immediately to the attention of the agency via 10 C.F.R. § 2.206.
- I The Board concluded that the new contention was not based on specific new facts (“any single event or any single piece of information”) but rather on “the history of [Northern States’] ‘deficient performance and dereliction of its obligations to promptly and effectively correct deficient conditions’” — a “history . . .

**DIGESTS**  
**ISSUANCES OF THE NUCLEAR REGULATORY COMMISSION**

outlined for the first time in the . . . SER [Safety Evaluation Report].” The Board stated that it would not expect the petitioner to “piece together” mere “fragments” or “shreds of information” and that, therefore, the petitioner’s delay in filing its contention until the issuance of the SER was justified. We disagree. Based on our review of the record, we see no indication that the SER added a “last piece” of information or in any way addressed the “safety culture” at Prairie Island. Rather, the SER merely compiled and organized certain preexisting information regarding one issue raised by PIIC — the refueling cavity leakage issue — into a single document.

J           The Board’s ruling would effectively allow a petitioner or intervenor to delay filing a contention until a document becomes available that collects, summarizes, and places into context the facts supporting that contention. This interpretation, however, turns on its head the regulatory requirement that new contentions be based on “information . . . not previously available.” Further, such an interpretation is inconsistent with our longstanding policy that a petitioner has an “iron-clad obligation to examine the publicly available documentary material . . . with sufficient care to enable it to uncover any information that could serve as the foundation for a specific contention.”

K           Where the pieces of information underpinning a late-filed contention were publicly available between 2-1/2 and 10 months prior to the contention’s filing, the filing was untimely.

CLI-10-28    ENTERGY NUCLEAR GENERATION COMPANY and ENTERGY NUCLEAR OPERATIONS, INC. (Pilgrim Nuclear Power Station), Docket No. 50-293-LR; LICENSE RENEWAL; November 5, 2010; MEMORANDUM AND ORDER

A           The Board has the authority to regulate the course of the proceeding, and the Commission generally defers to the Board on case management decisions.

CLI-10-29    TENNESSEE VALLEY AUTHORITY (Watts Bar Nuclear Plant, Unit 2), Docket No. 50-391-OL; OPERATING LICENSE; November 30, 2010; MEMORANDUM AND ORDER

A           We previously have held that licensing board decisions denying a petition for waiver are interlocutory and not immediately reviewable. Such decisions generally are not appealable until the board has issued a final decision resolving the case, unless a party seeking review shows that one of the grounds for interlocutory review has been met.

B           Imminent mootness of an issue has been cause for taking interlocutory review in other proceedings. In those proceedings, however, the very issue sought to be reviewed would have become moot by the time the board issued a final decision. In such cases, the issue must be reviewed now or not at all.

C           We assume administrative regularity in the regulatory process, and review of the operating license application takes place independently of that associated with plant construction. There is no reason to assume that completion of construction would in any way force the Commission’s hand in making adjudicatory decisions on operating license issues, including NEPA issues, at the appropriate time. To find otherwise would eviscerate our two-step construction permit/operating license review process.

CLI-10-30    ENTERGY NUCLEAR OPERATIONS, INC. (Indian Point, Units 2 and 3), Docket Nos. 50-247-LR, 50-286-LR; LICENSE RENEWAL; November 30, 2010; MEMORANDUM AND ORDER

A           The Commission denies petitions for interlocutory review of an Atomic Safety and Licensing Board decision that admitted new and amended contentions.

B           Pursuant to 10 C.F.R. § 2.341(f)(2), the Commission may, at its discretion, grant a party’s request for interlocutory review of a Board decision. A petition for interlocutory review will be granted only if the party seeking review demonstrates that the issue for which it seeks review (i) threatens the party with immediate and serious irreparable impact which, as a practical matter, could not be alleviated through a petition for review of the presiding officer’s final decision; or (ii) affects the basic structure of the proceeding in a pervasive or unusual manner.

C           Unreviewed Board decisions lack precedential effect.

D           Parties should not seek interlocutory review by invoking the grounds under which the Commission might exercise its supervisory authority.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- LBP-06-1 HYDRO RESOURCES, INC. (P.O. Box 777, Crownpoint, New Mexico 87313), Docket No. 40-8968-ML (ASLBP No. 95-706-01-ML); MATERIALS LICENSE; January 6, 2006; PARTIAL INITIAL DECISION (Phase II Radiological Air Emissions Challenges to In Situ Leach Uranium Mining License)
- A In this Phase II decision resolving the third category of challenges by multiple intervenors to a license application by Hydro Resources, Inc. (HRI) to perform in situ leach (ISL) uranium mining at three sites in McKinley County, New Mexico, the Board finds that HRI has demonstrated that the Intervenor’s challenges relating to radiological air emissions do not provide a basis for invalidating or amending HRI’s license.
- B Pursuant to the rule of the last antecedent, “qualifying words, phrases and clauses must be applied to the words or phrases immediately preceding them and are not to be construed as extending to and including others more remote.” *Demko v. United States*, 216 F.3d 1049, 1053 (Fed. Cir. 2000) (quoting *Wilshire Westwood Associates v. Atlantic Richfield Corp.*, 881 F.2d 801, 804 (9th Cir. 1989)). However, this rule is not to be applied inflexibly without regard for the intent of the drafters. In the regulatory definition of “background radiation,” because the regulatory words “source, byproduct, [and] special nuclear materials” (10 C.F.R. § 20.1003) “are followed by a clause which is applicable as much to the first and other words as to the last, the natural construction of the language demands that the clause be read as applicable to all.” *Porto Rico Railway, Light & Power Co. v. Mor*, 253 U.S. 345, 348 (1920).
- C Pursuant to the law of the case doctrine — which is a rule of repose designed to promote judicial economy and jurisprudential integrity — the decision of an appellate tribunal should ordinarily be followed in all subsequent phases of that case, provided that the particular question in issue was “actually decided or decided by necessary implication.” *Safety Light Corp.* (Bloomsburg Site Decontamination), CLI-92-9, 35 NRC 156, 159-60 & n.5 (1992).
- D The Commission’s denial of review in a proceeding is not a decision on the merits. It simply indicates that the appealing party “identified no ‘clearly erroneous’ factual finding or important legal error requiring Commission correction.” *Hydro Resources, Inc.* (P.O. Box 15910, Rio Rancho, NM 87174), CLI-00-12, 52 NRC 1, 3 (2000) (citing 10 C.F.R. § 2.786(b)(4)).
- E That a licensing board’s decision is not affirmed by the Commission does not mean that its analysis is perforce wholly without precedential value. *Cf. Sequoyah Fuels Corp.*, CLI-95-2, 41 NRC 179, 190 (1995) (“Licensing Board decisions . . . have no precedential effect beyond the immediate proceeding in which they were issued”). Rather, it means that the precedential value of its analysis is limited to its power to persuade.
- F An intervenor may not attempt to use a license application proceeding to rewrite Commission regulations. *See Baltimore Gas & Electric Co.* (Calvert Cliffs Nuclear Power Plant), 4 AEC 243, 244 (1969); 10 C.F.R. § 2.335. To the extent that an intervenor disagrees with a regulation, its recourse is to petition the Commission for rulemaking to change it. 10 C.F.R. § 2.802.
- G “Cumulative impacts analysis looks to whether the impacts from a proposed project will combine with the existing, residual impacts in the area to result in a significant ‘cumulative’ impact — where, in other words, the new impact is significantly enhanced by already existing environmental effects.” *Hydro Resources, Inc.* (P.O. Box 15910, Rio Rancho, NM 87174), CLI-01-4, 53 NRC 31, 61-62 (2001).
- H As relevant here, for “tailings or wastes” to fall within the definition of byproduct material, the plain statutory and regulatory language requires that such tailings or wastes be “produced” from ore that has been “processed” for its source material content (42 U.S.C. § 2014(e)(2); 10 C.F.R. § 20.1003). *See also* 57 Fed. Reg. 20,525 (May 13, 1992) (“[f]or the tailings and waste . . . to qualify as 11e(2) byproduct material, the ore must be processed primarily for its source-material content”). In other words, byproduct

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

material occurs as a result of a *processing* activity that *extracts* uranium from ore or otherwise renders the uranium ore into a purer state of uranium. See 10 C.F.R. § 40.4 (defining “unrefined and unprocessed ore” as “ore in its natural form prior to any processing, such as grinding, roasting or beneficiating, or refining”); cf. 42 U.S.C. § 7911(8) & 40 C.F.R. § 192.01(m) (Uranium Mill Tailings Radiation Control Act of 1978 and EPA regulation define “tailings” as “the remaining portion of a metal-bearing ore after some or all of such metal, such as uranium, has been extracted”).

I Section 20.1301(a)(1) of 10 C.F.R. requires a licensee to ensure that the total effective dose equivalent (TEDE) “to individual members of the public from the licensed operation” does not exceed 0.1 rem per year “exclusive of the dose contributions from background radiation” and other specified sources (10 C.F.R. § 20.1301(a)(1)). Significantly, the phrase “from the licensed operation” appears to serve as a limitation on what is to be included in the TEDE calculation.

J When a term lacks a statutory or regulatory definition, it should be construed in accord with its “ordinary or natural meaning.” *Smith v. United States*, 508 U.S. 223, 228 (1993).

K The meaning of the term “naturally occurring radioactive material” or NORM, which is not defined in the Atomic Energy Act or Commission regulations, is informed by regulatory and industry usage and practice. NORM is accorded a broad, commonsensical meaning. It consists of materials that contain primordial radioisotopes (e.g., uranium and its progeny) which are present naturally in rocks, soils, water, and minerals, and that are not regulated by the Commission. This broad definition of NORM includes radioactive materials that are undisturbed in nature, as well as radioactive materials that, as a result of human activities, are no longer in their natural state. For example, NORM includes the following industrial wastes that are not regulated by the Commission: uranium mining overburden, phosphate waste, water treatment waste, petroleum production waste, mineral processing waste, and geothermal energy production waste.

L Around 1998, as a result of regulatory and industry practice, the subset of NORM whose radionuclides have become concentrated and/or exposed as a result of human activities became known as “technologically enhanced naturally occurring radioactive materials,” or TENORM. The National Academy of Sciences (NAS) defines TENORM as “any naturally occurring material not subject to regulation under the Atomic Energy Act whose radionuclide concentrations or potential for human exposure have been increased above levels encountered in the natural state by human activities” (National Research Council of the [NAS] and National Academy of Engineering, “Evaluation of Guidelines for Exposures to [TENORM],” at 19 (1999)).

M In the definition of “background radiation” (10 C.F.R. § 20.1003), the phrase “not under the control of the licensee” was added in 1997 when the Commission amended the definition to include fallout from past nuclear accidents such as Chernobyl (62 Fed. Reg. 39,058, 39,087 (July 21, 1997)). The regulatory history of this amendment indicates that the phrase “not under the control of the licensee” was intended only to apply to Chernobyl-like fallout, not to the antecedent phrase “naturally occurring radioactive materials.” See 59 Fed. Reg. 43,200, 43,217 (Aug. 22, 1994).

N “Background radiation” is defined as “naturally occurring radioactive material, including radon (except as a decay product of source or special nuclear material)” (10 C.F.R. § 20.1003) (emphasis added). The radon parenthetical was designed to except only radon that is a decay product of source and special nuclear materials that are regulated by the Commission. This conclusion is supported by regulatory history, which indicates that the Commission intended to include “ambient radon levels” within the definition of “background radiation.” See 56 Fed. Reg. 23,360, 23,365 (May 21, 1991). To interpret the radon parenthetical as applying to radon from *all* source and special nuclear materials would essentially exclude all radon from background radiation, thus negating the Commission’s stated purpose of including radiological emissions from “ambient radon” in background radiation. Cf. *Exxon Nuclear Co.* (Nuclear Fuel Recovery and Recycling Center), ALAB-447, 6 NRC 873, 878 (1977) (“[i]t is an elementary canon of construction that we ‘cannot interpret federal statutes to negate their own stated purposes’”) (quoting *New York State Department of Social Services v. Dublino*, 413 U.S. 405, 419-20 (1973)).

LBP-06-2 DAVID H. HAWES (Reactor Operator License for Vogtle Electric Generating Plant), Docket No. 55-22685-SP (ASLBP No. 05-840-01-SP); SPECIAL PROCEEDING; January 9, 2006; ORDER (Approving Settlement Agreement and Terminating Proceeding)

A Having previously raised the possibility of a settlement that might both promote safe plant operation and make allowance for Petitioner’s military service in Iraq that interrupted his operator license testing, the Licensing Board commends and approves parties’ settlement agreement that achieves those ends.

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- LBP-06-3 ENTERGY NUCLEAR VERMONT YANKEE, LLC, and ENTERGY NUCLEAR OPERATIONS, INC. (Vermont Yankee Nuclear Power Station), Docket No. 50-271-OLA (ASLBP No. 04-832-02-OLA); OPERATING LICENSE AMENDMENT; January 17, 2006; MEMORANDUM AND ORDER (Ruling on Deliberative Process Privilege Claims)
- A With the exception of the factual portions of one document, the Board denies a motion to compel production of fifteen documents by the Department of Public Service of the State of Vermont because the documents qualify for the deliberative process privilege and the State has failed to show an immediate need for the documents that outweighs the privilege.
- B The deliberative process privilege requires that the information be both predecisional and deliberative.
- C The deliberative process privilege is a qualified privilege, meaning a board has the discretion to compel production of a document upon a finding that the need for the evidence outweighs the interests that support the privilege.
- D In ruling on the qualified nature of the deliberative process privilege, the following factors are relevant in balancing the need for the documents against the government's interest in nondisclosure: (i) the relevance of the evidence; (ii) the availability of other evidence; (iii) the seriousness of the litigation and the issues involved; (iv) the role of the government in the litigation; and (v) the possibility of future timidity by government employees who will be forced to recognize that their secrets are violable.
- E Documents that contain the analysis, opinions, and recommendations of NRC Staff members regarding an applicant's response to prior requests for additional information (RAIs) or the formulation of new RAIs are deliberative and thus may qualify for the deliberative process privilege.
- F NRC Staff communications are factual in nature and are not protected by the deliberative process privilege when the communications summarize the procedural aspects of Staff projects or report on the status of Staff work.
- G A showing of relevance alone is not sufficient for a party seeking a deliberative process privilege document to demonstrate that its need for the document outweighs the need to protect the document.
- H NRC Staff communications concerning the appropriate wording and scope of a potential license condition are deliberative and thus may qualify for the deliberative process privilege.
- I NRC Staff communications concerning whether a potential license condition should be imposed are deliberative and thus may qualify for the deliberative process privilege.
- J The fact that deliberative process privilege documents contain important new analyses that are relevant to admitted contentions weighs in favor of their disclosure.
- K In a proceeding that involves assuring the safety of a proposed 20% increase in the power of a nuclear power reactor, the "seriousness of the litigation and the issues involved" factor weighs in favor of disclosing deliberative process documents.
- L When the NRC Staff is a party in a proceeding and not merely an indifferent bystander to private party litigation, the role of the government in the litigation weighs in favor of disclosure.
- M The imminent availability of the NRC Staff's authoritative position on the subject that is discussed in the deliberative process documents constitutes "other evidence" such that the immediate need for the documents does not outweigh the deliberative process privilege.
- LBP-06-4 PA'INA HAWAII, LLC, Docket No. 30-36974-ML (ASLBP No. 06-843-01-ML); MATERIALS LICENSE; January 24, 2006; MEMORANDUM AND ORDER (Ruling on Petitioner's Standing and Environmental Contentions)
- A In this proceeding regarding the application of Pa'ina Hawaii, LLC, to build and operate a commercial pool-type industrial irradiator, the Licensing Board finds that the Concerned Citizens of Honolulu (Petitioner) has established standing to intervene and has proffered at least one admissible contention, and therefore grants the Petitioner's request for a hearing.
- B When assessing whether a petitioner has set forth a sufficient interest to intervene under 10 C.F.R. 2.309, the Commission applies traditional judicial concepts of standing; specifically, a petitioner must demonstrate "a concrete and particularized injury that is fairly traceable to the challenged action and is likely to be redressed by a favorable decision" (i.e., (1) injury, (2) causation, and (3) redressability). *Georgia Institute of Technology* (Georgia Tech Research Reactor, Atlanta, Georgia), CLI-95-12, 42 NRC 111, 115 (1995); *Portland General Electric Co.* (Pebble Springs Nuclear Plant, Units 1 and 2), CLI-76-27, 4 NRC 610, 612 (1976).

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- C A threatened unwanted exposure to radiation, even a minor one, is sufficient to establish an injury. *Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 2), CLI-03-14, 58 NRC 207, 216 (2003).
- D In addition to the traditional requirements for standing, the Commission has recognized that a petitioner may have standing based upon its geographical proximity to a particular facility. *Florida Power & Light Co.* (St. Lucie Nuclear Power Plant, Units 1 and 2), CLI-89-21, 30 NRC 325, 329-30 (1989).
- E In appropriate circumstances, a petitioner's proximity to the facility in question provides for a so-called presumption that "a petitioner has standing to intervene without the need specifically to plead injury, causation, and redressability if the petitioner lives within, or otherwise has frequent contacts with, the zone of possible harm from the nuclear reactor or other source of radioactivity." *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), LBP-01-6, 53 NRC 138, 146 (2001), *aff'd on other grounds*, CLI-01-17, 54 NRC 3 (2001).
- F Demonstrating so-called proximity presumption standing requires a "determination that the proposed action involves a significant source of radioactivity producing an obvious potential for offsite consequences." *Georgia Tech*, CLI-95-12, 42 NRC at 116; *Sequoyah Fuels Corp. and General Atomics* (Gore, Oklahoma Site), CLI-94-12, 40 NRC 64, 75 n.22 (1994).
- G Each contention must: (1) provide a specific statement of the issue of law or fact to be raised or controverted; (2) provide a brief explanation of the basis for the contention; (3) demonstrate that the issue raised in the contention is within the scope of the proceeding; (4) demonstrate that the issue raised in the contention is material to the findings the NRC must make to support the action that is involved in the proceeding; (5) provide a concise statement of the alleged facts or expert opinion that support the petitioner's position and on which the petitioner intends to rely at hearing, including references to specific sources and documents that will be relied upon to support its position on the issue; and (6) provide sufficient information to show that a genuine dispute on a material issue of law or fact exists with the applicant, which consists of either (a) references to specific portions of the application (including the applicant's environmental and safety reports) that are disputed and the reasons supporting the dispute, or (b) identification of each instance where the application purportedly fails to contain information on a relevant matter as required by law and the reasons supporting the allegation. *See* 10 C.F.R. 2.309(f)(1)(i)-(vi).
- H The petitioner is not required to provide an exhaustive discussion in its proffered contention, so long as it meets the Commission's admissibility requirements.
- I The resolution of factual disputes is not the appropriate subject of inquiry at the contention admissibility stage of the proceeding.
- J The regulatory history of the special circumstances exception to the categorical exclusions in 10 C.F.R. 51.22(b) indicates that the location of an irradiator may be a circumstance in which the exclusion might not apply.
- K An agency must affirmatively provide a reasoned explanation of the applicability of a categorical exclusion when special circumstances are alleged. *Alaska Center for the Environment v. U.S. Forest Service*, 189 F.3d 851, 859 (9th Cir. 1999); *Jones v. Gordon*, 792 F.2d 821, 828 (9th Cir. 1986); *Steamboaters v. Federal Energy Regulatory Commission*, 759 F.2d 1382 (9th Cir. 1985).
- L The Commission has found contentions asserting that the risks associated with terrorist attacks require that the agency prepare an Environmental Assessment or an Environmental Impact Statement to be outside the scope of agency NEPA review and inadmissible.
- LBP-06-5 ENTERGY NUCLEAR VERMONT YANKEE, LLC, and ENTERGY NUCLEAR OPERATIONS, INC. (Vermont Yankee Nuclear Power Station), Docket No. 50-271-OLA (ASLBP No. 04-832-02-OLA); OPERATING LICENSE AMENDMENT; January 31, 2006; MEMORANDUM AND ORDER (Denying Motion for Summary Disposition of New England Coalition Contention 3)
- A The Board denies a motion by Entergy Nuclear Vermont Yankee, LLC, and Entergy Nuclear Operations, Inc., for summary disposition of New England Coalition Contention 3 because the motion failed to show that there are no genuine issues of material fact in dispute, as required by 10 C.F.R. §§ 2.1205(c) and 2.710(d)(2).
- B In a Subpart L proceeding, the Board must apply the summary disposition standard set forth in Subpart G. 10 C.F.R. § 2.1205(c). Under the Subpart G standard, summary disposition is proper only "if the filings in the proceeding, depositions, answers to interrogatories, and admissions on file, together with the statements of the parties and the affidavits, if any, show that there is no genuine issue as to any material fact and that the moving party is entitled to a decision as a matter of law." 10 C.F.R. § 2.710(d)(2).

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- C Although there is no right to reply to an answer to a motion for summary disposition, if the answer contains an allegation that is plainly and factually incorrect, the moving party can request the opportunity to respond and to correct the record. *See* 10 C.F.R. § 2.323(c).
- D The fact that the NRC Staff may agree with the moving party's factual or technical positions, either informally or in a formal document such as a Safety Evaluation Report, does not "resolve" the dispute or mean that there is no genuine issue of material fact in dispute.
- E When conflicting expert opinions are involved, summary disposition is rarely appropriate. *See, e.g., Phillips v. Cohen*, 400 F.3d 388, 399 (6th Cir. 2005). At the summary disposition stage, it is not proper for a board "to untangle the expert affidavits and decide 'which experts are more correct.'" *Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), LBP-01-39, 54 NRC 497, 510 (2001) (citation omitted). Factual disputes of this nature are to be resolved at an evidentiary hearing, where the Board has the opportunity to examine witnesses, probe the documents, and *weigh* the evidence.
- F The rule that a presiding officer may not "untangle the expert affidavits and decide 'which experts are more correct'" does not apply if an expert asserts a factual or technical position that is so patently incorrect or absurd (e.g., that the world is flat) that a presiding officer must reject that position as constituting a genuine dispute.
- G Recognizing that our rules require that the opponent of a motion for summary disposition respond to each of the "material facts" listed by the movant, admitting or denying each of them, and must set forth specific facts, by affidavit or otherwise, showing that there are genuine issues of fact, *see* 10 C.F.R. § 2.710(a)-(b), it is an abuse of the adjudicatory process to use a motion for summary disposition as a subterfuge for the filing of interrogatories, requests for admission, or other discovery; as a mechanism for exhausting an impecunious litigant; or for any other extraneous purpose. If a party believes that stipulations or admissions would materially expedite or facilitate the proceeding, the party is encouraged to propose such a course to us directly, and the Board will act accordingly. *See* 10 C.F.R. § 2.319.
- H Compliance with the 10 C.F.R. § 2.323(b) requirement that a movant make a "sincere effort to contact other parties in the proceeding and to resolve the issues raised in the motion" can only be determined from the objective reasonableness of the movant's efforts, as shown by all the facts and circumstances, not by his or her subjective intent.
- I Where a party had 10 months within which to prepare a motion, the last-minute timing of a consultation telephone call, on the last day that the motion could be filed, strongly indicates that there was no sincere effort, as is required by 10 C.F.R. § 2.323(b), to resolve the issues before filing the motion.
- J Even if the party moving for summary disposition thinks that the effort might be futile (i.e., that there would be little or no chance that the other party would agree to abandon its contention), some reasonable effort at consultation is required by 10 C.F.R. § 2.323(b).
- K The following technical issue is discussed: Large Transient Testing.
- LBP-06-6 U.S. ARMY (Jefferson Proving Ground Site), Docket No. 40-8838-MLA (ASLBP No. 00-776-04-MLA); MATERIALS LICENSE AMENDMENT; February 2, 2006; MEMORANDUM AND ORDER (Granting Hearing Request and Deferring Hearing)
- LBP-06-7 AMERGEN ENERGY COMPANY, LLC (Oyster Creek Nuclear Generating Station), Docket No. 50-0219-LR (ASLBP No. 06-844-01-LR); LICENSE RENEWAL; February 27, 2006; MEMORANDUM AND ORDER (Denying New Jersey's Request for Hearing and Petition To Intervene, and Granting NIRS's Request for Hearing and Petition To Intervene)
- A Commission regulations implementing the statutory standing requirement (42 U.S.C. § 2239(a)(1)(A)) establish that a State has standing when a proceeding involves a "facility located within [the State's] boundaries" (10 C.F.R. 2.309(d)(2)(i)). Thus, when a State advises a Licensing Board that a proceeding involves a facility within its borders, the Board "shall not require a further demonstration of standing" (*id.* § 2.309(d)(2)(ii)).
- B For an organization to establish representational standing, it must: (1) show that at least one of its members may be affected by the licensing action and, accordingly, would have standing to sue in his or her own right; (2) identify that member by name and address; and (3) show that the organization is authorized to request a hearing on behalf of that member. *See GPU Nuclear, Inc.* (Oyster Creek Nuclear Generating Station), CLI-00-6, 51 NRC 193, 202 (2000).
- C Ordinarily, for an individual to establish standing, he must show injury in fact that can fairly be traced to the challenged action and that is likely to be redressed by a favorable decision (*Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-99-10, 49 NRC 318, 323 (1999)). However, an

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- individual satisfies these requirements by showing that his residence is within the geographical area that might be affected by an accidental release of fission products. The “rule of thumb” in reactor licensing proceedings is that persons who reside within a 50-mile radius of a reactor plant are presumed to have standing (*Sequoyah Fuels Corp. and General Atomics* (Gore, Oklahoma Site), CLI-94-12, 40 NRC 64, 75 n.22 (1994)).
- D The radioactive “source” posing the danger in a reactor license renewal case is the identical “source” giving rise to the 50-mile proximity presumption rule for reactor construction permit and operating license proceedings. The Commission has endorsed a 50-mile rule in the latter context (*Sequoyah Fuels Corp.*, CLI-94-12, 40 NRC at 75 n.22), and we find that the same 50-mile presumption should apply in reactor license renewal cases.
- E The scope of a license renewal proceeding is cabined by 10 C.F.R. Part 54. 60 Fed. Reg. 22,461 (May 8, 1995). In particular, issues relating to a plant’s “current licensing basis” (10 C.F.R. 54.3(a)) are ordinarily beyond the scope of a license renewal review, because “those issues already [are] monitored, reviewed, and commonly resolved as needed by ongoing regulatory oversight” (*Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), CLI-01-17, 54 NRC 3, 8 (2001)).
- F A petitioner that fails to submit a reply brief is foreclosed from challenging the assertions advanced by the licensee and the NRC Staff in their answers, unless it put such assertions in issue in its petition. *See Blackwell v. Cole Taylor Bank*, 152 F.3d 666, 673 (7th Cir. 1998) (“silence about facts . . . constitute[s] a waiver of the specific factual contentions made by the opposing party in a brief filed earlier”); *Consumers Power Co.* (Midland Plant, Units 1 and 2), ALAB-123, 6 AEC 331, 334-35 (1973) (Licensing Board is authorized to accept assertions of the applicant and Staff that have not been controverted by a party).
- G The scope of the NRC’s public health and safety review in the context of a license renewal proceeding ordinarily is limited to “a review of the plant structures and components that will require an aging management review for the period of extended operation and the plant’s systems, structures, and components that are subject to an evaluation of time-limited aging analyses” (*Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-26, 56 NRC 358, 363-64 (2002) (quoting *Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-01-20, 54 NRC 211, 212 (2001))).
- H The scope of the NRC’s environmental review in the context of a license renewal proceeding is limited by 10 C.F.R. Part 51. The Commission has determined that a number of environmental issues that might otherwise be relevant to license renewal shall be resolved generically for all plants, and such issues — which are classified in 10 C.F.R. Part 51, Subpart A, Appendix B as “Category 1” issues — are normally “beyond the scope of a license renewal hearing” (*Turkey Point*, CLI-01-17, 54 NRC at 15).
- I Issues in Appendix B, designated as “Category 2” issues — issues for which (1) the applicant must make a plant-specific analysis of environmental impacts in its Environmental Report and (2) the NRC Staff must prepare a supplemental Environmental Impact Statement — ordinarily are deemed to be within the scope of license renewal proceedings. *See Turkey Point*, CLI-01-17, 54 NRC at 11-13.
- J Agencies generally are free to exercise their discretion in determining whether to formulate policy through rulemaking or adjudication (*Heckler v. Campbell*, 461 U.S. 458, 467 (1983)). Where the Commission has initiated rulemaking proceedings that apply to the facility in question and that directly implicate a proposed contention, a board ordinarily should refrain from admitting that contention. *See Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 345 (1999) (licensing boards “should not accept in individual license proceedings contentions which are (or are about to become) the subject of general rulemaking by the Commission”) (quoting *Potomac Electric Power Co.* (Douglas Point Nuclear Generating Station, Units 1 and 2), ALAB-218, 8 AEC 79, 85 (1974)).
- K Absent evidence to the contrary, a licensing board will not assume licensee will act in derogation of its formal commitments to the NRC Staff. *See Pacific Gas and Electric Co.* (Diablo Canyon Nuclear Power Plant, Units 1 and 2), CLI-03-2, 57 NRC 19, 29 (2003) (Commission has “long declined to assume that licensees will refuse to meet their obligations”).
- L A contention will be ruled inadmissible where the petitioner has offered “only ‘bare assertions and speculation’” (*Fansteel, Inc.* (Muskogee, Oklahoma Site), CLI-03-13, 58 NRC 195, 203 (2003)).
- M Absent evidence to the contrary, the Commission will not “assume that licensees will contravene our regulations” (*GPU Nuclear, Inc.* (Oyster Creek Nuclear Generating Station), CLI-00-6, 51 NRC 193, 207 (2000)).

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- N A petitioner that fails to develop an argument in its petition is foreclosed from doing so in the first instance in its reply brief. *See Louisiana Energy Services, L.P.* (National Enrichment Facility), CLI-04-25, 60 NRC 223, 225 (2004).
- O Section 2.309(f)(1)(v) of 10 C.F.R. — which requires a “concise statement of the alleged facts or expert opinions” that support its position — does not require the submission of an expert opinion, nor does it require that an expert opinion be submitted in the form of admissible evidence (*Statement of Policy on Conduct of Adjudicatory Proceedings*, CLI-98-12, 48 NRC 18, 22 n.1 (1998)). The contention admissibility rules are *not* designed to erect an onerous evidentiary hurdle, but rather “help[ ] to ensure that full adjudicatory hearings are triggered only by those able to proffer at least some minimal factual and legal foundation in support of their contentions” (*Oconee*, CLI-99-11, 49 NRC at 334).
- P The Commission has stated that at the contention filing stage, “the factual support necessary to show that a genuine dispute exists need not be in formal evidentiary form, nor be as strong as that necessary to withstand a summary disposition motion” (*Gulf States Utilities Co.* (River Ben Station, Unit 1), CLI-94-10, 40 NRC 43, 51 (1994)). Rather, the petitioner need simply make “a minimal showing that the material facts are in dispute, thereby demonstrating that an inquiry in depth is appropriate” (*ibid.*).
- Q Every participant in the adjudicative process has an obligation to fully develop its arguments. “Our adversarial system relies on the advocates to inform the discussion and raise [and develop] the issues” (*Independent Towers of Washington v. Washington*, 350 F.3d 925, 929 (9th Cir. 2003)).
- R Where a petitioner’s contention does not challenge the licensee’s current, ongoing operations or programs conducted under an existing license, but rather focuses on the licensee’s aging management programs for the period of extended operation, asserting that such monitoring activities may not be sufficient to identify and control the effects of aging that will occur during the 20-year renewal period, such contention falls squarely within the scope of a license renewal proceeding.
- S At the contention admissibility stage of a proceeding, a Licensing Board will not adjudicate merits-related issues. *See Mississippi Power and Light Co.* (Grand Gulf Nuclear Station, Units 1 and 2), ALAB-130, 6 AEC 423, 426 (1973) (“in passing upon the question as to whether an intervention petition should be granted, it is not the function of a licensing board to reach the merits of any contention contained therein”). The sole question presented is whether the petitioner has submitted the requisite “minimal factual and legal foundation” (*Oconee*, CLI-99-11, 49 NRC at 334) to support its contention.
- LBP-06-8 LOUISIANA ENERGY SERVICES, L.P. (National Enrichment Facility), Docket No. 70-3103-ML (ASLBP No. 04-826-01-ML); MATERIALS LICENSE; March 3, 2006; SECOND PARTIAL INITIAL DECISION (Environmental Impacts of Disposal of Depleted Uranium)
- A In this 10 C.F.R. Part 70 proceeding regarding the application of Louisiana Energy Services, L.P., for authorization to possess and use source, byproduct, and special nuclear material to enrich natural uranium by the gas centrifuge process at its planned National Enrichment Facility (NEF) to be built near Eunice, New Mexico, the Licensing Board rules in favor of the NRC Staff regarding portions of a National Environmental Policy Act (NEPA)-related environmental contention proffered by Intervenor Nuclear Information and Resource Service and Public Citizen that challenges the adequacy of the Staff’s discussion in the Final Environmental Impact Statement (FEIS) of the environmental impacts of near-surface disposal of depleted uranium associated with the NEF.
- B NEPA, and the corresponding NRC regulations implementing the agency’s responsibilities pursuant to that Act, *see* 42 U.S.C. §§ 4321 *et seq.*, 10 C.F.R. Part 51, require a license applicant to describe and the Staff to consider the potential environmental effects of the proposed agency action (i.e., issuance of a license).
- C The Council on Environmental Quality (CEQ) has implemented regulations providing guidance on agency compliance with NEPA, which may help to direct the Staff’s NEPA review. *See* 40 C.F.R. Part 1500. While the CEQ regulations are not binding on the NRC when the agency has not expressly adopted them, they are entitled to considerable deference. *See Limerick Ecology Action, Inc. v. NRC*, 869 F.2d 719, 725, 743 (3d Cir. 1989).
- D As a general matter, NEPA imposes procedural restraints on agencies, requiring that they take a “hard look” at the environmental impacts of a proposed action and reasonable alternatives to that action. *See Louisiana Energy Services, L.P.* (Claiborne Enrichment Center), CLI-98-3, 47 NRC 77, 87-88 (1998). This “hard look” is subject to a “rule of reason” in that the agency’s environmental review need only account for those impacts that have some likelihood of occurring or are reasonably foreseeable. *See, e.g., Long Island Lighting Co.* (Shoreham Nuclear Power Station), ALAB-156, 6 AEC 831, 836 (1973).

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- E Agencies have considerable discretion in determining the extent to which a particular subject is analyzed, *see Claiborne*, CLI-98-3, 47 NRC at 103, and may decline to examine “remote and speculative” or “inconsequentially small” impacts, *see Vermont Yankee Nuclear Power Corp.* (Vermont Yankee Nuclear Power Station), ALAB-919, 30 NRC 29, 44 (1989) (citing *Limerick Ecology Action*, 869 F.2d at 739). In the words of the Commission, “NEPA does not call for certainty or precision, but an *estimate* of anticipated (not unduly speculative) impacts.” CLI-05-20, 62 NRC at 536 (emphasis in original).
- F When the agency reviews an application filed by a private entity, as opposed to a project initiated by the federal government, it may accord substantial weight to the applicant’s preferences with regard to consideration of alternatives, including choices regarding site selection and project design. *See Hydro Resources, Inc.* (P.O. Box 15910, Rio Rancho, NM 87174), CLI-01-4, 53 NRC 31, 55 (2001) (citing *Citizens Against Burlington v. Busey*, 938 F.2d 190, 197 (D.C. Cir. 1991)); *Claiborne*, CLI-98-3, 47 NRC at 104 (quoting *City of Grapevine v. Department of Transportation*, 17 F.3d 1502, 1506 (D.C. Cir. 1994)).
- G The CEQ regulations state that an agency environmental impact statement (EIS) must address both direct and indirect, or secondary, effects of an action. *See* 40 C.F.R. §§ 1502.16, 1508.8. Direct effects are those caused by, and occurring at the same time and place as, the federal action, while indirect effects are caused by the action at a later time or more distant place, yet still are reasonably foreseeable. *See id.* § 1508.8. An agency is not required to discuss indirect effects it considers remote or speculative. *See Vermont Yankee Nuclear Power Corp. v. Natural Resources Defense Council, Inc.*, 435 U.S. 519, 551 (1978).
- H In conducting its environmental review, an agency has discretion to rely on data, analyses, or reports prepared by persons or entities other than agency staff, including competent and responsible state authorities. *See, e.g., Public Service Co. of Oklahoma* (Black Fox Station, Units 1 and 2), LBP-78-28, 8 NRC 281, 282 (1978). The Staff must, however, independently evaluate and take responsibility for the pertinent information before relying on it in an EIS. *See* 10 C.F.R. § 51.70(b). In other words, the Staff need not replicate the work done by another entity, but rather must independently review and find relevant and scientifically reasonable any outside reports or analyses on which it intends to rely.
- I NEPA and Part 51 require that a “record of decision” accompany any Commission decision on “any action for which a final environmental impact statement has been prepared.” 10 C.F.R. § 51.102(a). Typically under Part 51, the Staff prepares the record of decision on an action, *see id.* § 51.102(b), but when a hearing is held on the proposed action, the Licensing Board’s initial decision on that action constitutes the record of decision, *see id.* § 51.102(c). In addition, section 51.103(c) states that the record of decision may in fact incorporate by reference any material contained in the relevant FEIS. Thus, the FEIS and Board initial decisions (and any subsequent final decision by the Commission) together form the record of decision in a contested proceeding. *See Claiborne*, CLI-98-3, 47 NRC at 89.
- J When a Board decision supplements or differs from the findings of the Staff as set forth in its FEIS, the FEIS is deemed modified by the Board’s decision to that extent. *See, e.g., HRI*, CLI-01-4, 53 NRC at 53; *see also* CLI-05-20, 62 NRC at 537 n.59 (“[a]ny Board ‘impacts’ findings will be added to the NEPA record of decision”).
- K Part 61 of 10 C.F.R. sets forth the NRC’s regulations for the disposal of low-level radioactive waste in a land disposal facility, including certain “performance objectives” and “technical requirements” that must be met before waste can be disposed of at a particular site. *See generally* 10 C.F.R. Part 61, Subparts C & D.
- L Although the Part 61 requirements are directed at the Staff, the Atomic Energy Act of 1954 (AEA), 42 U.S.C. §§ 2011 *et seq.*, permits the NRC to delegate certain regulatory authority to individual states. Specifically, AEA § 274 authorizes the Commission “to enter into agreements with the Governor of any State providing for discontinuance of the regulatory authority of the Commission” with respect to byproduct materials, source materials, and small quantities of special nuclear materials, including the disposal of such materials. *See id.* § 2021(b). Those “Agreement States” have the authority, for the duration of the agreement, “to regulate the materials covered by the agreement for the protection of the public health and safety from radiation hazards.” *Id.* Before it is granted authority to participate in the Agreement State program, a state must pass legislation establishing the authority for that state to conduct a radiation control program, and must further assume and implement that authority through the promulgation of state regulations. *See id.* § 2021(d), (o). At bottom, the state must show its willingness to assume regulatory responsibility for the materials covered by the proposed agreement under a regulatory regime that is equivalent to or more stringent than Part 61. *See id.* § 2021(d)(1), (o)(2).

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- M Section 274 also imposes certain requirements that the Commission must fulfill before it enters into an agreement with any state. Specifically, the Commission is required to find the state radiation control program “compatible” in certain respects with that of the NRC, and must further find that program “adequate to protect the public health and safety with respect to the materials covered by the proposed agreement.” 42 U.S.C. § 2021(d)(2). Among those regulations for which compatibility must be found are the performance objectives and technical requirements set forth in Subparts C and D, respectively, of the Part 61 regulations. *See* Office of State & Tribal Programs (STP), NRC, STP Procedure SA-200, Compatibility Categories and Health and Safety Identification for NRC Regulations and Other Program Elements (Oct. 8, 2004) at 6-7, App. A at 125-26 (ADAMS Accession No. ML042820600).
- N Once the Commission and a state enter into an agreement pursuant to section 274, the NRC retains only oversight authority over the specific activities covered by the agreement, *see* 42 U.S.C. § 2021(j), while the Agreement State assumes all active regulatory authority with regard to those specified activities, *see id.* § 2021(b). In its oversight capacity, the NRC is required to conduct regular reviews of a state’s radiation control program, intended to ensure Agreement State programs remain compatible and provide adequate protection of public health and safety. The NRC further retains the power to terminate or suspend an agreement with any state under certain circumstances if it determines that such action is required to ensure public health and safety. *See id.* § 2021(j); *see also* Statement of Principles and Policy for the Agreement State Program; Policy Statement on Adequacy and Compatibility of Agreement State Programs (62 Fed. Reg. 46,517, 46,520-21 (Sept. 3, 1997)).
- O When an Intervenor’s challenges in an admitted contention are directed at a draft EIS because the FEIS has not yet been issued by the Staff, the contention can be construed as a challenge to the FEIS without the need for further modification. *See, e.g., Claiborne*, CLI-98-3, 47 NRC at 84 (Board appropriately deemed environmental contentions based on applicant’s environmental report as challenges to the FEIS).
- P Part 61 of 10 C.F.R. sets forth the licensing requirements for land disposal of low-level radioactive waste (LLRW). A “land disposal facility” includes any “land, building, and structures, and equipment which are intended to be used for the disposal of radioactive wastes,” but does not include “geologic repository” disposal. 10 C.F.R. § 61.2. Subpart D of Part 61 sets forth the “technical requirements” for LLRW land disposal facilities, and “specif[ies] the minimum characteristics a disposal site must have to be acceptable for use as a near-surface disposal facility.” *Id.* § 61.50(a). Part 61 defines a “near-surface disposal facility” as “a land disposal facility in which radioactive waste is disposed of in or within the upper 30 meters of the earth’s surface.” *Id.* § 61.2. A primary purpose of the Subpart D technical requirements is to ensure that the Subpart C performance objectives for a land disposal facility are met. *Id.* § 61.50(a). The Subpart C “performance objectives,” in turn, must be met regardless of the classification of the waste involved, and are specifically intended to (1) protect the general public from releases of radioactivity, *id.* § 61.41; (2) protect individuals from inadvertent intrusion at any time after active institutional controls over a disposal site are removed, *id.* § 61.42; (3) protect individuals from radiation exposures during operation of a facility, *id.* § 61.43; and (4) ensure the long-term stability of the disposal site after closure, *id.* § 61.44.
- Q The determination about whether near-surface disposal is appropriate for a particular type of radioactive waste turns in large part on how that waste is classified. Section 61.55 of 10 C.F.R. sets forth a classification system for evaluating whether a particular LLRW can be disposed of in a near-surface facility based on the long-lived and/or short-lived radionuclides present in the waste. *See id.* § 61.55(a)(3)-(5), tbls. 1 & 2. Class A, B, and C wastes are generally appropriate for near-surface disposal, *see id.* § 61.55(a)(2)(i)-(iii), while wastes having a greater radioactivity than Class C, i.e., “greater than Class C” waste, are typically not appropriate for near-surface disposal, *see id.* § 61.55(a)(2)(iv). If a particular radioactive waste does not contain any of the radionuclides listed in that section, it is, by default, designated Class A waste. *See id.* § 61.55(a)(6).
- R Part 61 contains flexibility to deal with the occurrence of new waste streams or disposal methods that were not included in the Part 61 rulemaking. Specifically, 10 C.F.R. § 61.58 states: “The Commission may, upon request or on its own initiative, authorize other provisions for the classification and characteristics of waste on a specific basis, if, after evaluation, of the specific characteristics of the waste, disposal site, and method of disposal, it finds reasonable assurance of compliance with the performance objectives in subpart C of this part.”
- S A distinction must be drawn between the particular classification of depleted uranium waste pursuant to 10 C.F.R. § 61.55(a), and the appropriateness of land disposal of that waste according to the Part

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- 61 performance objectives. The appropriateness of near-surface disposal of large quantities of depleted uranium from an enrichment facility depends on whether such disposal would comply with the Part 61 performance objectives, and such compliance, in turn, depends on the specific characteristics of a particular disposal site, or, in the case of a generic analysis, assumptions regarding specific-site characteristics. In other words, some near-surface disposal facilities may not be capable of accepting large quantities of depleted uranium from enrichment operations, and dose pathway analyses should be performed on a site-specific basis to ensure compliance with Part 61, Subpart C.
- T Compliance with regulations of other federal agencies, such as Environmental Protection Agency drinking water contamination limits, are issues beyond a Board's jurisdiction and outside the scope of the proceeding. *See Hydro Resources, Inc.* (2929 Coors Road, Suite 101, Albuquerque, NM 87120), CLI-98-16, 48 NRC 119, 121-22 (1998) (licensing boards do not have jurisdiction over matters properly before other regulatory bodies).
- U The Part 61 regulations establish dose limitations to protect members of the public from releases of radioactivity from land disposal facilities. Specifically, 10 C.F.R. § 61.41 establishes whole body and organ dose limits, requiring that radioactive material released to the environment in ground or surface water, air, soil, plants, or animals "must not result in an annual dose exceeding an equivalent of 25 millirems to the whole body, 75 millirems to the thyroid, and 25 millirems to any other organ of any member of the public." Section 61.42 refers to protection of the "inadvertent intruder," and requires that "[d]esign, operation, and closure of the land disposal facility must ensure protection of any individual inadvertently intruding into the disposal site and occupying the site or contacting the waste at any time after active institutional controls over the disposal site are removed." Taken together, then, the performance objectives for a near-surface disposal facility require that the relevant licensing entity examine whether, at any particular time after active institutional controls are removed, the section 61.41 dose limitations will be met for the inadvertent intruder.
- V Absent particular circumstances that provide a foundation for excluding intruder scenarios in evaluating compliance with the Part 61 regulations, intruder scenarios and intruder dose must be considered by the licensing entity at the time of initial licensing or any subsequent license amendment. Consideration and evaluation of intruder scenarios and related intruder dose would then be part of the "hard look" NEPA requires the Staff to take at the environmental impacts associated with a particular licensing action.
- W The Staff is ultimately responsible for the work undertaken, or not undertaken, by its contractors; therefore, a Staff NEPA analysis is not necessarily insufficient if, in the face of a deficiency on the part of its contractor, a responsible Staff official has "stepped into the breach" and conducted the necessary review and analysis.
- X In evaluating environmental impacts for NEPA purposes, it is appropriate for the Staff to make a determination that, because of the specific circumstances under consideration, certain scenarios, such as Part 61 intruder scenarios, are so unlikely, i.e., so unduly speculative, as to fall outside the scope of the Staff's NEPA review. Such a determination is a proper exercise of NEPA's "rule of reason."
- Y NEPA requires the Staff to take a hard look at all reasonably foreseeable environmental consequences of construction and operation of a proposed facility, including those secondary or indirect consequences of disposal of the waste generated by that facility. These secondary effects cannot, and need not for the purposes of satisfying the agency's NEPA obligation, *see* CLI-05-20, 62 NRC at 536, be examined with particularity when a specific disposal site has not yet been identified.
- Z The following technical issues are discussed: environmental impacts of land disposal of depleted uranium waste; low-level radioactive waste classification.
- LBP-06-9 LOUISIANA ENERGY SERVICES, L.P. (National Enrichment Facility), Docket No. 70-3103-ML (ASLBP No. 04-826-01-ML); MATERIALS LICENSE; March 3, 2006; MEMORANDUM AND ORDER (Ruling on Summary Disposition Cross-Motions Relating to Remand from CLI-05-20)
- A In this 10 C.F.R. Part 70 proceeding regarding the application of Louisiana Energy Services, L.P., for authorization to possess and use source, byproduct, and special nuclear material to enrich natural uranium by the gas centrifuge process at its planned National Enrichment Facility (NEF) to be built near Eunice, New Mexico, the Licensing Board grants an NRC Staff motion for summary disposition and denies a cross-motion by Intervenor Nuclear Information and Resource Service/Public Citizen regarding the adequacy of the Staff's National Environmental Policy Act (NEPA) environmental impact statement

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

(EIS)-related discussion of estimated doses arising from depleted uranium (DU) disposal in a geological repository.

- B The well-established standard governing the grant of summary disposition under 10 C.F.R. § 2.710 has been described as follows: “[S]ummary disposition may be entered with respect to any matter (or all of the matters) in a proceeding if the motion, along with any appropriate supporting material, shows that there is ‘no genuine issue as to any material fact and that the moving party is entitled to a decision as a matter of law.’ The movant bears the initial burden of making the requisite showing that there is no genuine issue as to any material fact, which it attempts to do by means of a required statement of material facts not at issue and any supporting materials (including affidavits, discovery responses, and documents) that accompany its dispositive motion. An opposing party must counter each adequately supported material fact with its own statement of material facts in dispute and supporting materials, or the movant’s facts will be deemed admitted. See *Advanced Medical Systems, Inc.* (One Factory Row, Geneva, Ohio 44041), CLI-93-22, 38 NRC 98, 102-03 (1993).” *Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), LBP-02-20, 56 NRC 169, 180 (2002).
- C Failure to raise any challenge to a Staff EIS correction essentially renders that aspect of an intervenor challenge moot, as the intervenor has failed to raise a litigable challenge to the previously identified error. See *Advanced Medical Systems, Inc.* (One Factory Row, Geneva, Ohio 44041), CLI-94-6, 39 NRC 285, 306-07 (1994) (something more than suspicions or bald assertions are necessary as the basis for any purported material factual disputes), *aff’d sub nom. Advanced Medical Systems, Inc. v. NRC*, 61 F.3d 903 (Table) (6th Cir. 1995) (per curiam).
- D A draft or final EIS is not considered deficient per se simply because its various NEPA findings do not include an explanation that is sufficient on its face to enable independent verification of any scientific results that underlie those findings.
- E The Commission has previously determined that the Staff in preparing an EIS for a uranium enrichment facility could rely upon the analyses in two Department of Energy (DOE) final EISs regarding environmental impacts expected from a DU hexafluoride conversion facility upon the basis that (1) the documents were publicly available; and (2) the Staff’s expert had “assessed the reasonableness of the DOE assumptions, calculations, and conclusions, even though he did not redo its underlying calculations.” CLI-05-28, 62 NRC 721, 730 (2005). In so doing, the Commission recognized that redoing calculations from these DOE EISs “would [be] a duplication of resources not required by law.” *Id.* This reasoning applies with equal force to Staff reliance on a generic deep disposal dose impact analysis in a previous, Staff-prepared final EIS for another proposed uranium enrichment facility that was (1) publicly available; and (2) shown to be subject to independent assessment by Staff experts who prepared the NEF EIS.
- LBP-06-10 NUCLEAR MANAGEMENT COMPANY, LLC (Palisades Nuclear Plant), Docket No. 50-255-LR (ASLBP No. 05-842-03-LR); LICENSE RENEWAL; March 7, 2006; MEMORANDUM AND ORDER (Ruling on Standing, Contentions, and Other Pending Matters)
- A In this license renewal proceeding the Licensing Board rules on various pending matters, finds that Petitioners have established interests sufficient to confer standing, but also finds that they have not submitted an admissible contention as necessary for the granting of a hearing, and therefore terminates the proceeding.
- B A petitioner’s standing, or right to participate in a Commission licensing proceeding, is grounded in section 189a of the Atomic Energy Act (AEA), which requires the NRC to provide a hearing “upon the request of any person whose interest may be affected by the proceeding,” and which has been implemented in Commission regulations as 10 C.F.R. 2.309.
- C Judicial concepts of standing, to which licensing boards are to look in ruling on standing, provide the following guidance in determining whether a petitioner has established the necessary “interest” under 10 C.F.R. 2.309(d)(1): To qualify for standing a petitioner must allege (1) a concrete and particularized injury that is (2) fairly traceable to the challenged action and (3) likely to be redressed by a favorable decision, criteria commonly referred to, respectively, as “injury in fact,” causality, and redressability. The injury may be either actual or threatened, but must lie arguably within the “zone of interests” protected by the statutes governing the proceeding — here, either the Atomic Energy Act (AEA) or the National Environmental Policy Act (NEPA).
- D Individual Petitioners living within 50 miles of a nuclear power plant established standing based on the longstanding “proximity presumption” principle in NRC adjudicatory proceedings.

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- E Public interest group petitioners established “representational” standing to proceed as intervenor parties based upon affected members authorizing the petitioner organizations to represent them in this proceeding.
- F In ruling on admissibility of contentions, the Licensing Board did not consider anything not found in Petitioners’ original contentions, but provided in Petitioners’ Reply to NRC Staff’s and Applicant’s Answers to Petition, except to the extent that it constituted “legitimate amplification” of original contentions or properly late-filed material.
- G All counsel have a continuing duty to update a tribunal “of any development which may conceivably affect the outcome” of litigation, and NRC precedent also requires all parties to NRC proceedings to alert adjudicatory bodies to information relevant to matters being adjudicated.
- H Counsel have both an obligation to assure that representations made in all pleadings “to the best of [their] knowledge, information and belief . . . are true,” and an ethical responsibility *not* to knowingly “make a false statement of fact or law to a tribunal or fail to correct a false statement of material fact or law previously made to the tribunal by the lawyer.”
- I There were no grounds to stay the proceeding to permit Petitioners’ Counsel to depose Staff Counsel; depositions of opposing trial or litigation counsel are permitted only if “no other means exist to obtain the information,” and the “information sought is relevant and non-privileged,” and “crucial to the preparation of the case,” none of which conditions existed in this case.
- J Staff Counsel had a duty to inform the Board of a telephone call from a former expert witness of Petitioners because she knew that this information was “conceivably” relevant to a ruling on a contention. Expert support for a contention raising a technical issue can clearly be relevant to its admissibility (and by extension to the outcome) not only of a ruling on the admission of a contention, but also, through such a ruling, of the proceeding itself, since the failure to proffer an admissible contention will result in denial of a hearing petition. Nor did Counsel’s imparting of the information violate any ethical prohibitions, as the expert in question was not represented by Petitioners’ Counsel, the call was initiated by the expert, and no deception or coercion was in any way involved.
- K There was no requirement that the information provided by Staff Counsel be in the form of a motion, and Petitioners’ Motion To Strike Counsel’s e-mail notification was therefore not granted; the information was placed in the record, all parties were appropriately apprised of it, and Counsel was seeking no action on the part of the Board.
- L To intervene in an NRC proceeding, a petitioner must, in addition to demonstrating standing, submit at least one contention meeting the requirements of 10 C.F.R. 2.309(f)(1). Failure of a contention to meet any of the requirements of section 2.309(f)(1) is grounds for its dismissal.
- M The “strict contention rule serves multiple interests,” including, first, focusing the hearing process on real disputes susceptible of resolution in an adjudication (for example, a petitioner may not demand an adjudicatory hearing to attack generic NRC requirements or regulations, or to express generalized grievances about NRC policies); second, by requiring detailed pleadings, putting other parties in the proceeding on notice of the Petitioners’ specific grievances and thereby giving them a good idea of the claims they will be either supporting or opposing; and, third, helping to ensure that full adjudicatory hearings are triggered only by those able to proffer at least some minimal factual and legal foundation in support of their contentions.
- N Although the February 2004 revision of NRC procedural rules no longer incorporates provisions formerly found in 10 C.F.R. 2.714(a)(3), (b)(1) (2003), which permitted the amendment and supplementation of petitions and filing of contentions after the original filing of petitions, they contain essentially the same substantive admissibility standards for contentions.
- O Sections 2.309(f)(1)(i) and (ii) require that a petitioner must, for each contention, “[p]rovide a specific statement of the issue of law or fact to be raised or controverted,” and “[p]rovide a brief explanation of the basis for the contention.” An “admissible contention must explain, with specificity, particular safety or legal reasons requiring rejection of the contested [application],” and demonstrate “that there has been sufficient foundation assigned for it to warrant further exploration.” The contention rules “bar contentions where petitioners have only ‘what amounts to generalized suspicions, hoping to substantiate them later.’”
- P Petitioners must, under section 2.309(f)(1)(iii), “[d]emonstrate that the issue raised in the contention is within the scope of the proceeding.” A contention must allege facts “sufficient to establish that it falls directly within the scope” of a proceeding. Contentions are necessarily limited to issues that are germane to the application pending before the Board, and are not cognizable unless they are material to matters that

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- fall within the scope of the proceeding for which the licensing board has been delegated jurisdiction as set forth in the Commission's notice of opportunity for hearing.
- Q Under section 2.309(f)(1)(iv), a petitioner must "[d]emonstrate that the issue raised in the contention is material to the findings the NRC must make to support the action that is involved in the proceeding"; a material issue has been defined by the Commission as one in which "resolution of the dispute would make a difference in the outcome of the licensing proceeding."
- R Section 2.309(f)(1)(v), which requires that a petitioner "[p]rovide a concise statement of the alleged facts or expert opinions which support the requestor's/petitioner's position on the issue and on which the petitioner intends to rely at hearing, together with references to the specific sources and documents on which the requestor/petitioner intends to rely to support its position on the issue," does "not call upon the intervenor to make its case at [the contention] stage of the proceeding, but rather to indicate what facts or expert opinions, be it one fact or opinion or many, of which it is aware at that point in time which provide the basis for its contention." The requirement "generally is fulfilled when the sponsor of an otherwise acceptable contention provides a brief recitation of the factors underlying the contention or references to documents and texts that provide such reasons." But contentions will be screened out when Petitioners "have no particular expertise — or expert assistance — and no particularized grievance, but are hoping something will turn up later as a result of NRC Staff work."
- S Section 2.309(f)(1)(v) requires a petitioner to "provide the analyses and expert opinion showing why its bases support its contention," and to "provide documents or other factual information or expert opinion that set forth the necessary technical analysis to show why the proffered bases support its contention."
- T A licensing board "may not make factual inferences on [a] petitioner's behalf." However, a board should also bear in mind the "general admonition that technical perfection is not an essential element of contention pleading." The "[s]ounder practice is to decide issues on their merits, not to avoid them on technicalities."
- U Section 2.309(f)(1)(vi) requires that a petitioner, for each contention, "[p]rovide sufficient information to show that a genuine dispute exists with the applicant/licensee on a material issue of law or fact. This information must include references to specific portions of the application (including the applicant's environmental report and safety report) that the petitioner disputes and the supporting reasons for each dispute, or, if the petitioner believes that the application fails to contain information on a relevant matter as required by law, the identification of each failure and the supporting reasons for the petitioner's belief." Under this requirement, a petitioner must "read the pertinent portions of the license application, including the Safety Analysis Report and the Environmental Report, state the applicant's position and the petitioner's opposing view," and explain why it disagrees with the applicant.
- V Under section 2.309(f)(1)(vi), if a petitioner does not believe the application addresses a relevant issue, the petitioner is to "explain why the application is deficient." A contention that does not directly controvert a position taken by the applicant in the application is subject to dismissal. An allegation that some aspect of a license application is "inadequate" or "unacceptable" does not give rise to a genuine dispute unless it is supported by facts and a reasoned statement of why the application is unacceptable in some material respect.
- W Under section 2.309(f)(1)(vi), a petitioner "does not become entitled to an evidentiary hearing merely on request, or on a bald or conclusory allegation that . . . a dispute exists. The [petitioner] must make a minimal showing that material facts are in dispute, thereby demonstrating that an 'inquiry in depth' is appropriate." However, notwithstanding the burden the contention admissibility rules impose on petitioners to put forth a sufficient factual basis, this "does not shift the ultimate burden of proof from the applicant to the petitioner." Nor do the contention admissibility rules require a petitioner to "prove its case at the contention stage. For factual disputes, a petitioner need not proffer facts in 'formal affidavit or evidentiary form,' sufficient 'to withstand a summary disposition motion.' . . . On the other hand, a petitioner 'must present sufficient information to show a genuine dispute' and reasonably 'indicating that a further inquiry is appropriate.'"
- X The regulatory authority relating to license renewal is found in 10 C.F.R. Parts 51 and 54. Part 54 concerns the "Requirements for Renewal of Operating Licenses for Nuclear Power Plants," and addresses safety-related issues in license renewal proceedings. Part 51, concerning "Environmental Protection Regulations for Domestic Licensing and Related Regulatory Functions," addresses the environmental aspects of license renewal.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- Y The NRC license renewal safety review is focused “upon those potential detrimental effects of aging that are not routinely addressed by ongoing regulatory oversight programs,” which the Commission considers “the most significant overall safety concern posed by extended reactor operation.”
- Z The Commission has framed the focus of license renewal review as being on “plant systems, structures, and components for which current [regulatory] activities and requirements may not be sufficient to manage the effects of aging in the period of extended operation.” An issue can be related to plant aging and still not warrant review at the time of a license renewal application, if an aging-related issue is “adequately dealt with by regulatory processes” on an ongoing basis. For example, if a structure or component is already required to be replaced “at mandated, specified time periods,” it would fall outside the scope of license renewal review.
- AA Issues identified as “Category 1,” or “generic,” issues in Appendix B to Subpart A of Part 51 are not within the scope of a license renewal proceeding. On these issues the Commission found that it could draw “generic conclusions applicable to all existing nuclear power plants, or to a specific subgroup of plants,” based on its conclusion that these issues involve “environmental effects that are essentially similar for all plants,” and that they thus “need not be assessed repeatedly on a site-specific basis, plant-by-plant.” Accordingly, under Part 51, license renewal applicants may in their site-specific ERs refer to and adopt the generic environmental impact findings found in Table B-1, Appendix B for all Category 1 issues.
- BB Issues identified as “Category 2,” or “plant specific,” issues in Appendix B to Subpart A are within the scope of license renewal; the Commission was not able to make generic environmental findings on these issues, and therefore applicants must provide a plant-specific review of all these Category 2 environmental issues. These issues are characterized by the Commission as involving environmental impact severity levels that “might differ significantly from one plant to another,” or impacts for which additional plant-specific mitigation measures should be considered.
- CC As required under 10 C.F.R. 51.95(c), the Commission in 1996 adopted a “Generic Environmental Impact Statement for License Renewal of Nuclear Plants” (GEIS), published as NUREG-1437, which provides data supporting the table of Category 1 and 2 issues in Appendix B. Issuance of the 1996 GEIS was part of an amendment of the requirements of Part 51 undertaken by the Commission to establish environmental review requirements for license renewals “that were both efficient and more effectively focused.”
- DD Section 51.103 defines the requirements for the “record of decision” relating to any license renewal application, including the standard that the Commission, in making such a decision pursuant to Part 54, “shall determine whether or not the adverse environmental impacts of license renewal are so great that preserving the option of license renewal for energy planning decisionmakers would be unreasonable.”
- EE Embrittlement of the reactor pressure vessel is a very serious topic, within the scope of license renewal.
- FF It is reasonable to require enough specificity in the explanation offered in the basis for a contention such that a matter relating to a particular facility is stated in sufficient detail that it clearly states an issue that is susceptible to litigation with regard to that facility. Petitioners failed to achieve this in their contention on embrittlement.
- GG Petitioners provided no expert support for any allegation specific to the plant at issue (even viewing the contention as being “merely inartfully drafted”), referred to no documents or other sources on which they planned to rely at any hearing, and did not provide enough to warrant “further inquiry.” Nor were any sections or specific contents of the application referenced to identify any specific inadequacy, and the asserted “failure to address” embrittlement was not explained with any specificity or tied in any way to the actual application.
- HH The Board recognizes that the new rule’s omission of comparable provisions for amendment of petitions as of right, as permitted under prior rules, might in certain circumstances place some petitioners in a difficult position, particularly those pressed for opportunity and time to research and develop relevant technical and legal issues and arguments, or lacking easy access to experts or counsel competent in NRC practice, to assist them in timely drafting contentions meeting the strict contention admissibility requirements. But no request for extension to address any such concerns was made in this proceeding.
- II Contentions regarding alleged radiological and nonradiological contamination of drinking water were found to be outside the scope of license renewal because they involved no aging-related issues and because “radiation exposures to the public (license renewal term),” as well as the discharge of chlorine or other

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

biocides, sanitary waste and minor chemical spills, and certain metals in wastewater, are identified as a Category 1, or generic, issues under 10 C.F.R. Part 51, Appendix B.

JJ A contention regarding storage of spent fuel was ruled inadmissible because it was outside the relatively narrow scope of a license renewal proceeding as defined by the Commission in its rules and relevant case law.

KK Under Commission authority, a contention raising environmental justice issues was found to be inadmissible because no sufficiently specific disproportionate effects with a “nexus to the physical environment,” falling on low-income and minority communities, were alleged or shown; although some serious issues were raised, these were found to be outside the jurisdiction of the licensing board.

LBP-06-11 AMERGEN ENERGY COMPANY, LLC (Oyster Creek Nuclear Generating Station), Docket No. 50-0219-LR (ASLBP No. 06-844-01-LR); LICENSE RENEWAL; March 22, 2006; MEMORANDUM AND ORDER (Denying NIRS’s Motion for Leave To Add Contentions or Supplement the Basis of the Original Contention)

A After the regulatory time limit has expired for filing a petition to intervene, a petitioner may submit a new or amended contention only with leave of the presiding officer upon a showing that: (1) the information on which the amended or new contention is based was not previously available; (2) the information is materially different than information previously available; and (3) the amended or new contention was submitted in a timely fashion based on the availability of the subsequent information (10 C.F.R. § 2.309(f)(2)).

B Petitioners seeking to admit new or amended contentions under 10 C.F.R. § 2.309(f)(2) must also satisfy the standard admissibility requirements in 10 C.F.R. § 2.309(f)(1).

C If a newly presented contention fails to satisfy 10 C.F.R. § 2.309(f)(2), it will be deemed nontimely and must satisfy 10 C.F.R. § 2.309(c) to be admitted. *Baltimore Gas & Electric Co.* (Calvert Cliffs Nuclear Power Plant, Units 1 and 2), CLI-98-25, 48 NRC 325, 347 (1998).

D Statements made by NRC Staff members during an informal conference call with industry representatives were not declarations of programmatic policy or regulatory conclusions that, for example, might be analogized to conclusions in an Environmental Impact Statement, which could trigger a petitioner’s right to amend or file new contentions under 10 C.F.R. § 2.309(f)(2). Rather, the conference call was analogous to a Staff-issued Request for Additional Information, which ordinarily may not be used to support admission of a new contention, because such a request, standing alone, generally does not give rise to a genuine dispute on material issues. *Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 337 (1999).

E As a general rule, the NRC Staff’s mere interest in an issue, its solicitation of public input on an issue, or its proposed revision to a generic guidance document will not — standing alone and lacking an articulated plant-specific safety concern — suffice as a contention’s cornerstone (*Calvert Cliffs*, CLI-98-25, 48 NRC at 350).

F It has long been established that “the introduction of essentially generic issues, not unique to any given reactor, would be inappropriate in an individual reactor licensing proceeding” absent evidence that the generic issue applied to that particular proceeding (*Long Island Lighting Co.* (Shoreham Nuclear Power Station), ALAB-99, 6 AEC 53, 55 (1973)).

LBP-06-12 PA’INA HAWAII, LLC, Docket No. 30-36974-ML (ASLBP No. 06-843-01-ML); MATERIALS LICENSE; March 24, 2006; MEMORANDUM AND ORDER (Ruling on Petitioner’s Safety Contentions)

A In this proceeding on the application of Pa’ina Hawaii, LLC, to build and operate a commercial pool-type industrial irradiator (i.e., a possession and use materials license), the Licensing Board finds that the Petitioner, Concerned Citizens of Honolulu, has proffered three admissible safety contentions. Previously, in LBP-06-4, 63 NRC 99 (2006), the Board found that the Petitioner had established its standing to intervene and had proffered two admissible environmental contentions and granted the Petitioner’s request for a hearing.

B The Commission’s contention admissibility requirements are rigorous, and “demand a level of discipline and preparedness on the part of petitioners, who must examine the publicly available material and set forth their claims and the support for their claims at the outset.” *Louisiana Energy Services, L.P.* (National Enrichment Facility), CLI-04-25, 60 NRC 223, 224-25 (2004) (emphasis added) (quoting *Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-03-17, 58 NRC 419, 428-29 (2003)). A petitioner may not ignore this burden when submitting its contentions, and then rectify their inadequacies in its reply.

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- C The Commission's regulations and rulings require that the petitioner's reply be "narrowly focused on the legal or logical arguments presented in the applicant/licensee or NRC staff answer." 69 Fed. Reg. 2182, 2203 (Jan. 14, 2004).
- D The pleading requirements of 10 C.F.R. § 2.309(f)(1)(v), calling for a recitation of facts or expert opinion supporting the issue raised, are inapplicable to a contention of omission beyond identifying the regulatively required missing information.
- E The scope of a proceeding generally is defined by the Commission's notice of opportunity for hearing. *See Georgia Institute of Technology* (Georgia Tech Research Reactor, Atlanta, Georgia), CLI-95-12, 42 NRC 111, 118 (1995).
- LBP-06-13 DAVID GEISEN, Docket No. IA-05-052 (ASLBP No. 06-845-01-EA); ENFORCEMENT; May 19, 2006; MEMORANDUM AND ORDER (Denying Government's Request To Delay Proceeding)
- A In this proceeding concerning a Nuclear Regulatory Commission (NRC) Staff immediately effective enforcement order prohibiting the involvement of David Geisen in NRC-licensed activities, the Licensing Board denies a motion by the NRC Staff to hold the proceeding in abeyance indefinitely, pending the parallel criminal prosecution against Mr. Geisen in federal district court.
- B The Government's motion seeking an indefinite enforcement hearing delay must be denied where the Government's theory for seeking the delay of the hearing fails to show that, in actual practice, the prompt conduct of the NRC hearing process would interfere with the Government's prosecution of the criminal charges against the subject of the enforcement order and where the subject of the order has shown that delaying his opportunity to challenge the immediately effective enforcement order would continue the harm of depriving him of his chosen livelihood and its anticipated income.
- C In determining whether there is good cause to delay a proceeding challenging an immediately effective license suspension order, the NRC evaluates the facts of each particular case in the process of weighing the following five factors: (1) the length of the delay, (2) the reason for the delay, (3) the risk that the ruling erroneously deprived the subject of its license (or other right in issue), (4) the subject's assertion of his or her right to a hearing, and (5) the prejudice to the subject.
- D The NRC has stressed that the pendency of a criminal trial does not automatically toll the time for instituting a civil proceeding because it is necessary to look at the facts of a particular proceeding. In doing so, a Licensing Board must separate remedial theories that find particularized support in the circumstances presented from those that do not.
- E In considering the reason for the requested delay of a civil proceeding, it is important to consider which party initiated the civil action and which party is seeking relief from its going forward.
- F The party requesting a delay must provide detailed and specific reasons demonstrating some type of cognizable harm would result absent that relief. Absent a determination that some type of specific harm would result from allowing the proceeding or discovery to continue, delays are routinely denied.
- G The critical issues to be determined when deciding an abeyance motion involve "relative harm," that is focusing on (1) whether, and if so to what extent, the moving party (here, the Government) has shown that not granting a delay of the length being sought will harm it, versus (2) whether, and if so to what extent, granting that same delay will harm the movant's opponent (here, the subject of the enforcement order).
- H Given that the critical issues to be determined when deciding an abeyance motion involve determining where the "relative harm" lies, the other factors (i.e., "assertion of hearing right," and "risk of erroneous deprivation") would typically be given less weight unless, for example, the assertion was dilatory or perfunctory, or — based on some unusual early but abbreviated insight into the merits — the risk can be shown to be either quite high or vanishingly low.
- I Although the passage of time might threaten to cut away at the quality of the evidence, as witnesses pass on, become forgetful, or otherwise become unable to present testimony as lucid as they might have earlier, where the party opposing a motion to stay an enforcement proceeding does not express undue concern that delay will diminish the quality of the evidence, that possibility may be put aside as nonspecific and not credited as prejudicing the subject of the order, notwithstanding the concern that — to protect the probative value of the underlying fact-based evidence — delaying the full discovery and presentation of that evidence in an already long-drawn-out proceeding should be avoided where possible.
- J There is theoretical validity to the Government's arguments that the civil discovery process could lead to the tainting of evidence in a criminal case and that the civil discovery process could lead to the defendant's obtaining access to evidence that would provide him an unfair advantage over the Government.

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

But no matter how serious the concerns underlying those theories, they must be shown by the moving party to have some practical applicability to the particular circumstances of the case in order for it to obtain the delay sought.

- K       Allowing certain civil cases to go forward might create the potential to harm the search for truth in a related criminal case by tainting the evidence otherwise expected to be available therein. For example, allowing prospective Government witnesses to be deposed (or even to be identified) by those in position to intimidate them explicitly or implicitly — through threats of physical violence, of workplace demotion or harassment, or of some other form of physical, financial, or emotional retaliation — might lead to the witness tailoring or limiting his testimony, professing an inability to remember the incidents in question, or disappearing from view entirely.
- L       The natural predeposition unease — i.e., the transitory discomfort, just from having to testify at all, that is always inherent in the discovery or trial process — has nothing to do with the kind of particularized, forceful intimidation involving threats of extra-deposition retaliation that the law is concerned with, threats that could be communicated, subtly or otherwise, as part of the run-up to, or conduct of, the deposition, with the specific intent of causing the subsequent tainting, alteration, or disappearance of substantive evidence.
- M       Civil discovery can lead to perjury in the criminal case, via enabling a defendant to tailor his testimony, and that of his confederates, to jibe with, or to work around, what he learns about the state of the Government's knowledge. But in this case, the Government has already completed years of investigatory work, including numerous interviews of the defendant and of his coworkers. Given the number of their statements already on the record, then regardless of what they might now learn about the Government's case, any opportunity for them — undetected — to adjust their testimony by perjuring themselves is obviously long past.
- N       Saying the Government needs to demonstrate the potential for the tainting of evidence is not the equivalent of insisting that the Government establish that perjury or intimidation would necessarily take place. Rather, what the Government, as movant, must establish is at least that conditions exist in the proceeding that would allow the defendant, were perjury or intimidation on his mind, to proceed into the civil discovery process with some chance of success in that regard.
- O       The serious concern about evidence tampering stems from the possibility that — after learning in a civil proceeding about the nature of the Government's evidence of his possible crime — the defendant would be able to alter evidence in his possession or control to provide a defense to the charges, or to undercut the evidence against him. This concern would be particularly troubling, for example, where a defendant was, and still is, the Chief Executive Officer, the Chief Financial Officer, or the Chief Information Officer (or some other functionary with access to, or control over, company files), at an organization associated with the alleged criminal activity.
- P       The tampering theory is entirely inapplicable where the defendant has not been employed at the relevant organization for several years, and the Government gives no indication as to how the defendant might employ knowledge gained through civil discovery to alter paper documents or electronic files that he has no control over whatsoever and which the Government has long-since obtained through its several-year-long investigation.
- Q       When a defendant is scheduled to receive more discovery, and earlier in the trial, than the Federal Rules of Criminal Procedure contemplate by virtue of the U.S. Attorney's voluntary adoption of an "open file" discovery process, then the Government's own conduct undercuts any complaint that allowing civil discovery to proceed would alter the usual balance as to just how much discovery a defendant can obtain.
- R       Where the Government has investigated for at least 3 years the circumstances surrounding an incident that was meticulously documented, in the files of both the NRC Staff and of the highly regulated nuclear plant operating organization under whose aegis the alleged offenses occurred (and which presumably had to make all its records available to the Government) and, as a result, the Government is in possession of some 19,000 documents related to the activities that underlie the civil and criminal charges, and has already interviewed the alleged perpetrators, as well as their co-employee witnesses, several times (and has not advised that on any of those occasions the targets declined to answer any of the inquiries), and the targets of the investigations are no longer employed in the organization within which their alleged misdeeds occurred, and the Government did not even allege that the targets' information base is anything other than paltry compared to the Government's, the information balance is already skewed heavily in favor of the Government. Thus, allowing the target of criminal and civil proceedings brought against him

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

by the Government to obtain — in the course of challenging expeditiously the immediately effective civil enforcement order — information he would not receive in defending against the criminal indictment, does not alter the information balance to any degree that might properly be called unfair to the Government or that to any degree puts the Government at a disadvantage.

S The happenstance that, in defending themselves against the serious civil charges that another Government agency has chosen to file against them, the targets obtain certain ordinary discovery that will also be helpful in the defense of their criminal case, creates no cognizable harm to the Government beyond its desire to maintain a tactical advantage.

T Courts have occasionally granted the Government's request to delay a civil proceeding when that proceeding has been brought, not by the Government in furtherance of the public interest, but by the accused criminal defendant for the express or transparent purpose of creating a discovery opportunity he would not otherwise have.

U The Commission's long-established policy of deferring to the Department of Justice (DOJ) when it seeks a delay of a parallel enforcement proceeding, and of not lightly second-guessing DOJ's views on whether, and how, premature disclosures might affect its criminal prosecutions, does not remove the need for DOJ to come forward, in public or if necessary in secret, with views of substance that are tailored to the circumstances of the case at hand.

V The right to hold specific private employment and to follow a chosen profession free from unreasonable Governmental interference comes within the liberty and property concepts of the Fifth Amendment.

W The fact of an indictment and the failure to challenge the immediate effectiveness of the order count in favor of the Government's stay request because they reduce the likelihood of erroneous deprivation. Moreover, the weight to be given this factor may be increased by the consideration that the Government saw fit to indict the defendant but not certain other coworkers who were also the subject of enforcement orders.

X Under the erroneous deprivation factor, the fact that a defendant turned down a deferred prosecution offer from the DOJ that would have guaranteed him no prison time if he would admit to the acts alleged, demonstrates that the defendant has some belief in his innocence, or at least in his ability to keep the Government from establishing his guilt before a jury, and in his ability in this forum to redeem his career, and thus entitles him to receive some credit for this factor.

Y The Government's rote incantation of important principles and serious concerns that have applicability and force in other contexts does not mean they bear on the circumstances presented here. Where the Government's sole argument was the unsupported and nonparticularized assertion that the enforcement proceeding should be delayed to protect DOJ's pending criminal prosecution, the matter is controlled by the Commission's admonition that the Staff's mere assertion that it wishes to protect DOJ's pending criminal prosecution does not, without more, justify holding our parallel administrative proceeding in abeyance. Such a "mere assertion" being essentially all that was provided here to counter the serious harm to the subject, the Government's motion therefore had to be denied.

LBP-06-14 ENTERGY NUCLEAR VERMONT YANKEE, LLC, and ENTERGY NUCLEAR OPERATIONS, INC. (Vermont Yankee Nuclear Power Station), Docket No. 50-271-OLA (ASLBP No. 04-832-02-OLA); OPERATING LICENSE AMENDMENT; May 25, 2006; MEMORANDUM AND ORDER (Ruling on Admissibility of Three Additional Contentions)

A Three regulations govern the admissibility of additional contentions after an adjudicatory hearing has commenced. The first, 10 C.F.R. § 2.309(f)(2), deals with the admission of timely contentions based on new information. The second, 10 C.F.R. § 2.309(c)(1), deals with the admission of nontimely contentions. The third, 10 C.F.R. § 2.309(f)(1), establishes six basic criteria that all contentions must meet.

B If new and materially different information becomes available after the commencement of an adjudicatory proceeding and if a new non-NEPA contention is submitted in a timely fashion based on that new information, then such a contention is considered "timely" under 10 C.F.R. § 2.309(f)(2)(iii) and, upon leave of the presiding officer, may be admitted if it also satisfies the general contention admissibility standards contained in 10 C.F.R. § 2.309(f)(1).

C If new and materially different information becomes available after the commencement of an adjudicatory proceeding and if a new non-NEPA contention is submitted in a timely fashion based on that new information, then such a contention is considered "timely" under 10 C.F.R. § 2.309(f)(2)(iii)

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

and, upon leave of the presiding officer, may be admitted, without being subject to the eight additional requirements applicable to “nontimely” contentions under 10 C.F.R. § 2.309(c)(1).

D If a proposed new contention is not timely, it may be admitted if the petitioner shows a favorable balance among the eight factors governing nontimely filing that are found in 10 C.F.R. § 2.309(c)(1). Each of the eight factors needs to be considered only to the extent that it applies to the particular nontimely filing.

E The six basic contention admissibility standards contained in 10 C.F.R. § 2.309(f)(1)(i)-(vi) must be met by all contentions, whether they are filed at the outset of the proceeding, are filed in a timely fashion when material new information arises, or are untimely filings.

F When new and material information is revealed in a piecemeal fashion, the foundation for a new contention may not be reasonably apparent until the later pieces fall into place. In such a case the timeliness of a new contention based thereon depends on a determination about when, as a cumulative matter, the separate pieces of the information “puzzle” were sufficiently in place to make the particular concerns expressed in the contention reasonably apparent.

G While pleadings submitted by a petitioner acting *pro se* are not always expected to meet the same standards as pleadings drafted by lawyers, late filing of documents is not condoned.

LBP-06-15 LOUISIANA ENERGY SERVICES, L.P. (National Enrichment Facility), Docket No. 70-3103-ML (ASLBP No. 04-826-01-ML); MATERIALS LICENSE; May 31, 2006; THIRD PARTIAL INITIAL DECISION (Safety-Related Contentions)

A In this 10 C.F.R. Part 70 proceeding regarding the application of Louisiana Energy Services, L.P. (LES), for authorization to possess and use source, byproduct, and special nuclear material to enrich natural uranium by the gas centrifuge process at its planned National Enrichment Facility (NEF) to be built near Eunice, New Mexico, relative to safety-related challenges to the LES application posed by contentions submitted by Intervenors Nuclear Information and Resource Service and Public Citizen (NIRS/PC), the Licensing Board finds that although LES carried its burden of proof to demonstrate the adequacy of its application regarding the plausibility of its challenged private depleted uranium (DU) dispositioning strategy and certain aspects of the cost estimates associated with the deconversion and disposal of DU tails generated by the NEF, LES’s failure to carry its burden in connection with NIRS/PC contentions contesting LES’s cost estimate for private sector deconversion and near-surface disposal of DU from the NEF requires that for the purpose of fulfilling the NRC’s financial assurance/decommissioning funding plan (DFP) requirements, agency licensing of the NEF should be based on the cost estimates applicable under the plausible strategy associated with the United States Department of Energy (DOE) providing dispositioning services in accordance with section 3113 of the USEC Privatization Act, 42 U.S.C. § 2297h-11.

B The NRC’s regulations require an applicant seeking a license to construct and operate a uranium enrichment facility to submit with its application a proposed decommissioning funding plan. *See* 10 C.F.R. §§ 70.22(a)(9), 70.25(a); *see also id.* §§ 30.35, 40.36 (imposing the same or substantially similar requirements on applicants for a license to possess and use byproduct material and source material, respectively). The purpose of the DFP is to ensure an applicant has (1) considered the decommissioning activities that may be required at the proposed facility over time; (2) presented a credible, site-specific cost estimate for conducting those activities; and (3) provided the NRC with financial assurance to cover those estimated costs should a third party have to take responsibility for facility decommissioning. *See* NUREG-1520, “Standard Review Plan for the Review of a License Application for a Fuel Cycle Facility” (Mar. 2002) at 10-1 [hereinafter SRP].

C Section 70.25(e) of Title 10 of the *Code of Federal Regulations* (C.F.R.) requires that a DFP “contain a cost estimate for decommissioning and a description of the method of assuring funds for decommissioning . . . including means for adjusting cost estimates and associated funding levels periodically over the life of the facility,” i.e., at least triennially. The DFP must also include a certification by the applicant that financial assurance for decommissioning has been provided in an amount equal to the decommissioning cost estimate, and furnish a signed original or appropriate duplicate of the applicant’s financial assurance instrument. *See id.*

D Section 70.25(f) of Title 10 of the C.F.R. discusses the methods by which financial assurance may be provided by a private applicant, namely (1) prepayment into a segregated account, such as a trust or escrow account, prior to the start of facility operations; (2) a surety method, insurance, or other guarantee method; or (3) an external sinking fund, such as a trust or escrow account, into which annual deposits are

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- made, coupled with a surety method or insurance, the value of which decreases by the amount accrued in the sinking fund. *See id.* § 70.25(f)(1)-(3).
- E According to the Commission, the purpose of the triennial adjustments to an applicant's decommissioning cost estimates and associated financial assurance levels is to "help ensure that financial assurance obtained by licensees will not become inadequate as a result of changing disposal prices or other factors," such as inflation or changes in the scope of operations. *See* 68 Fed. Reg. 57,327, 57,332 (Oct. 3, 2003). Therefore, the triennial adjustments required by section 70.25 are intended to account for changes in a licensee's cost estimates regardless of the cause, and to ensure that adequate financial assurance is provided by the licensee at any given time.
- F The initial cost estimates provided in an applicant's DFP must encompass those foreseeable activities associated with decommissioning, including radioactive waste disposal, and must present a reasonably accurate estimate of the direct and indirect costs involved in decommissioning under routine facility conditions. *See* SRP at 10-1; NUREG-1757, "Consolidated NMSS Decommissioning Guidance," vol. 3 (Sept. 2003) at 4-9, A-26 [hereinafter NUREG-1757]. Thus, the availability of the periodic adjustment mechanism should have no bearing on the robustness of the initial decommissioning cost estimate, in that it is not meant to provide a backstop for underestimation, but rather to account for costs unforeseen at the time of licensing.
- G NRC Staff guidance documents generally do not constitute legally binding interpretations of agency regulations. *See Hydro Resources, Inc.* (P.O. Box 15910, Rio Rancho, NM 87174), CLI-04-33, 60NRC 581, 596 (2004). NUREG-1757, "Consolidated NMSS Decommissioning Guidance," is, however, particularly instructive for the purposes of interpreting the agency's financial assurance and decommissioning cost estimate regulations.
- H Pursuant to NUREG-1757, the NRC Staff reviews an applicant's decommissioning cost estimate to ensure it is "based on documented and reasonable assumptions" so as to provide sufficient funds to allow a third party to take responsibility for facility decommissioning if a licensee is unable to do so. *See* NUREG-1757, at 4-9. Section 4.1 sets forth minimum criteria that a cost estimate must meet before the Staff can find it acceptable. Specifically, the cost estimate must: (1) meet all applicable regulatory requirements; (2) be based on documented and reasonable assumptions; (3) use unit cost factors that are reasonable and consistent with NRC cost estimation reference documents; (4) include costs for labor, equipment and supplies, overhead and contractor profit, sampling and laboratory analysis, and other miscellaneous expenses (e.g., license fees); (5) apply a contingency factor of at least 25% to the sum of all estimated costs; (6) take no credit for salvage value from the sale of potential assets or reduced taxes based on payment of decommissioning or site control and maintenance costs; (7) identify adequate means for adjusting the cost estimate and associated funding level over the life of the facility and any storage or surveillance period; (8) reflect decommissioning under normal facility conditions; and (9) include costs for all major decommissioning and site control and maintenance activities, including (a) planning and preparation, (b) decontamination and/or dismantling of facility components, (c) packaging, shipment, and disposal of radioactive wastes, (d) a final radiation survey, (e) restoration of contaminated areas on facility grounds, if necessary, and (f) site stabilization and long-term surveillance, if necessary. *See id.* at 4-10.
- I The Staff also reviews the financial assurance mechanisms specified in an applicant's DFP, specifically to (1) determine whether the proposed mechanisms are acceptable and (2) ensure the certification specifies the correct amount of financial assurance and attests compliance with the appropriate regulatory requirements. *See* NUREG-1757, at 4-6.
- J Certain licensees are also required, at the end of a facility's license period, to submit a decommissioning plan (DP) for Staff approval prior to beginning decommissioning activities. The purpose of the DP is in part to ensure that, as is envisioned in the DFP, the licensee has maintained adequate funding and financial assurance through the term of the license. *See* NUREG-1757, at 4-4. A DP must include (1) an updated, detailed cost estimate for decommissioning; (2) a comparison of that estimate with the amount of funds presently set aside for decommissioning; and (3) a plan for assuring the availability of adequate funds to complete decommissioning activities. *See id.* at 4-5. The DP must also specify at least one financial assurance mechanism, including supporting documentation, that the Staff will again review for adequacy. *See id.* at 4-6.
- K Discussing the concept of a "plausible strategy" for dispositioning DU tails, the Commission has stated that "[w]hile a 'plausible strategy' for private conversion of the tails does not mean a definite or

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- certain strategy, to include completion of all necessary contractual arrangements, it must represent more than mere speculation." See CLI-04-25, 60 NRC 223, 226 (2004).
- L "While the concepts of technical feasibility of a particular strategy and the costs of implementing such a strategy might arguably be linked in the common term 'plausible' . . . the cost of implementation of a particular strategy has no bearing upon whether any particular strategy is technically [feasible]." See Licensing Board Memorandum and Order (Ruling on Late-Filed Contentions) (Nov. 22, 2004) at 13 (unpublished). Accordingly, the sufficiency of a decommissioning cost estimate rests, at least in part, on whether a particular strategy is plausible, that is, a finding that a particular strategy is "plausible" is a necessary precursor to a finding that a cost estimate is "documented and reasonable."
- M The mere fact that a strategy is "plausible" does not establish that sufficiently documented and reasonable cost estimates can be developed for that strategy. Thus, the question of whether an applicant has presented a plausible strategy, although related to disposition costs, is an inquiry distinct from and precedent to the question of the adequacy of an applicant's dispositioning cost estimates.
- N The Commission has determined that transfer of DU from enrichment operations to DOE for deconversion and disposal constitutes a "plausible strategy" for dispositioning. See 69 Fed. Reg. at 5877; CLI-05-5, 61 NRC 22, 34 (2005).
- O The primary purpose of the requirement that an applicant demonstrate a "plausible strategy" for dispositioning DU waste is to provide a foundation upon which to build reasonable cost estimates for various elements related to ultimate decommissioning of the proposed facility. A proposed strategy may well be "plausible," yet the related cost estimates lack a sufficient footing in "documented and reasonable assumptions," see NUREG-1757, at 4-10, so as to afford reasonable assurance there will be sufficient future funds to support decommissioning and so provide an adequate foundation for a DFP. The combination of "documented" and "reasonable" assumptions reflects an overall concept of "reliability," that is, an estimate that is sufficiently trustworthy and dependable to be utilized as a basis for making the requisite financial assurance findings.
- P Section 3113 of the USEC Privatization Act, 42 U.S.C. § 2297h-11, requires DOE to accept for dispositioning DU from a private uranium enrichment facility upon request of the facility operator (or appropriate third party). When acting pursuant to that statutory authority/obligation, DOE can set its costs or cost estimates at whatever level it determines is appropriate. In other words, while section 3113 requires DOE to accept DU for deconversion and disposal at the request of an NRC-licensed uranium enrichment facility operator, it also gives DOE the exclusive authority to determine the amount of reimbursement required for disposition of that DU waste. Neither an intervenor nor an applicant/licensee (nor seemingly the NRC) has the authority to challenge or direct DOE's estimates of the fees it will charge to a uranium enrichment facility that requests DOE to disposition its DU waste. See, e.g., *Philadelphia Electric Co.* (Limerick Generating Station, Units 1 and 2), ALAB-836, 23 NRC 479, 499 (1986) (licensing boards do not undertake review of whether another federal agency complied with its own regulations); *Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1, 2, and 3), LBP-82-117A, 16 NRC 1964, 1991 (1982) (licensing boards should not entertain collateral attacks upon the actions of other federal agencies on a matter over which the Commission has no jurisdiction).
- Q When DOE acts pursuant to section 3113 in setting disposition costs or providing cost estimates, the situation is somewhat analogous to a circumstance in which an applicant and/or the Staff are entitled to rely on statements of third-party market participants. See, e.g., LBP-05-13, 61 NRC 385, 440, 444-45 (2005) (applicant can rely on public statements of market participants regarding plans to close old enrichment facilities or open new ones). In that sense, DOE cost estimates represent an arm's-length, third-party estimate of the cost of doing business, albeit in an instance when the party offering the estimate is statutorily bound to provide that service. Accordingly, cost estimates provided relative to the DOE "plausible strategy" are sufficiently reliable to provide the basis for an initial estimate of the portion of decommissioning funding associated with disposition of DU waste.
- R An applicant may provide cost estimates for each of the elements of its DFP by obtaining estimates of the actual cost of providing a service from experienced third parties. Such an estimate would be sufficiently reliable for establishing the initial estimate of decommissioning funding associated with those elements.
- S Obtaining a cost estimate from an experienced third-party vendor is not the only way for an applicant to demonstrate that its cost estimate is documented and reasonable, although it clearly is one way to reach that end.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- T Whether a particular waste dispositioning strategy is “plausible” relates to, but is not dispositive of, the issue whether a decommissioning cost estimate is sufficiently reliable to be used as a foundation for determining the appropriate size of an applicant/licensee’s decommissioning fund. For a strategy to be “plausible” it must be more than merely technically feasible, but a strategy can be plausible and still not appropriately developed and documented to provide a sound footing on which to rest the public health and safety. In other words, the existence of a “plausible strategy” for dispositioning DU is a necessary condition to a demonstration that an applicant has presented a reliable decommissioning cost estimate (i.e., one that is based on “documented and reasonable assumptions”), but is not, in and of itself, sufficient to satisfy that threshold.
- U A memorandum of understanding between an applicant and another entity with regard to the potential construction and operation of a private DU deconversion facility, demonstrating the anticipation of both those parties that an appropriate facility could be constructed to meet the applicant’s timing and throughput requirements, provides the additional indicia of feasibility necessary to demonstrate that the associated private deconversion strategy is more than “mere speculation” and falls well within the realm of a plausible proposed strategy. This is particularly so when the applicant has identified a specific entity with pertinent, proven technology and experience as the basis for its private deconversion strategy.
- V Although the estimated cost of constructing and operating a deconversion facility may be developed based on prior experience with a similar facility, such estimates must include the entirety of expected costs to the applicant or a third party by, for example, providing a thorough analysis such as would typically be developed and used for any new project.
- W Having a third-party estimate for decommissioning costs is not necessarily mandated by the relevant NRC regulations and guidance; nonetheless, having such a cost estimate adds significantly to the reliability of that estimate, *see, e.g.*, NUREG-1827, “Safety Evaluation Report for the [NEF] in Lea County, New Mexico” (June 2005) at 10-11 to -12.
- X To provide a reliable estimate of the costs of deconverting DU from enrichment operations, an applicant can follow one of two paths: (1) obtain an estimate from a knowledgeable, experienced third party of what that third party would charge to provide deconversion services for the applicant/licensee based on its projected deconversion needs; or (2) obtain a thorough analysis from a qualified, credible source of what it would cost either the applicant/licensee or a third party to build, own, operate, and decommission a deconversion facility at an appropriate site. In the former circumstance, a summary bid or price quote from an experienced third-party vendor would suffice. For the latter scenario, the same detailed cost analysis would be required regardless of whether the actual construction and operation of the deconversion facility was completed by the applicant/licensee or a third party, though the cost figures resulting from such an analysis would undoubtedly differ.
- Y An applicant is not required, as a basis for its initial decommissioning funding cost estimate, to make projections or otherwise speculate about what events may or may not occur in the distant future. The initial decommissioning cost estimate thus is appropriately based on demonstrable *current* market conditions, and any future changes in the market that would impact cost estimates should be accounted for as part of the periodic update process.
- Z An applicant’s withdrawal of an individual as a witness and potential deponent, in the face of the remaining witness’s admission that he has no expertise in the specific subject matter at issue, does not provide a basis for disqualifying or disregarding the information obtained from the withdrawn witness when that witness was identified as the source of the information and, notwithstanding his removal from the applicant’s witness list, seemingly could have been subjected to discovery and compelled to provide testimony before the Board, *see* 10 C.F.R. §§ 2.702(a), 2.706(a). Under these circumstances, there is no compelling basis for discounting the disputed hearsay information as unreliable. *Compare Tennessee Valley Authority* (Hartsville Nuclear Plant, Units 1A, 2A, 1B, and 2B), ALAB-367, 5 NRC 92, 121 (1977) (non-expert’s testimony based on what he was told by anonymous expert stricken as unreliable hearsay).
- AA A cost estimate that lacks a reliable basis is not one that can be endorsed as the basis for a DFP. Although, as the Commission has made apparent, Licensing Boards are not to be involved simply in “formalistic” redrafting in connection with such a plan, *see Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), CLI-96-1, 43 NRC 1, 9 (1996), if an applicant’s cost estimate lacks sufficient support regarding the direct and indirect costs involved, then the availability of the periodic adjustment should not be the basis, in and of itself, for passing the plan forward with the hope that its deficiencies will be rectified at some point in the future.

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- BB To the degree future developments impact upon the cost of otherwise foreseeable items, regardless of the size of the change or revision that is needed, the cost estimates, and the decommissioning funding for which they provide the basis, would be modified as they become apparent through the periodic adjustment process.
- CC The following technical issues are discussed: decommissioning (adequacy of cost estimates); plausible strategy for disposition of depleted uranium; decommissioning (contingency factor); decommissioning (transportation costs).
- LBP-06-16 AMERGEN ENERGY COMPANY, LLC (Oyster Creek Nuclear Generating Station), Docket No. 50-0219-LR (ASLBP No. 06-844-01-LR); LICENSE RENEWAL; June 6, 2006; MEMORANDUM AND ORDER (Contention of Omission Is Moot, and Motions Concerning Mandatory Disclosure Are Moot)
- A Licensee's written commitments that are "docketed and in effect" constitute part of the "current licensing basis," which is the "set of NRC requirements applicable to a specific plant" (10 C.F.R. § 54.3(a)). A licensee must "comply with its licensing basis unless the licensing basis is properly changed or the license is formally excused by the NRC from compliance" (Nuclear Power Plant License Renewal, 56 Fed. Reg. 64,943, 64,951 (Dec. 13, 1991)).
- B There is a difference between contentions that, on the one hand, allege that a license application suffers from an improper omission, and contentions that, on the other hand, raise a specific substantive challenge to how particular information or issues have been discussed in a license application. In the former situation, "[w]here a contention alleges the omission of particular information or an issue from an application, and the information is later supplied by the applicant . . . , the contention is moot" (*Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-28, 56 NRC 373, 383 (2002)).
- C Generally, the plain language of a contention will reveal whether the contention is (1) a claim of omission, (2) a specific substantive challenge to an application, or (3) a combination of both. In some instances, "it may be necessary to examine the language of the bases to determine the contention's scope" (*McGuire/Catawba*, CLI-02-28, 56 NRC at 383 n.45).
- D When a contention of omission has been rendered moot, the intervenor — if it wishes to raise specific challenges regarding the new information — may timely file a new contention that addresses the admissibility factors in 10 C.F.R. § 2.309(f)(1). Otherwise an "original contention alleging simply a failure to address a subject could readily be transformed — without basis or support — into a broad series of disparate new claims. This approach effectively would circumvent NRC contention-pleading standards and defeat the contention rule's purposes" (*McGuire/Catawba*, CLI-02-28, 56 NRC at 383).
- LBP-06-17 LOUISIANA ENERGY SERVICES, L.P. (National Enrichment Facility), Docket No. 70-3103-ML (ASLBP No. 04-826-01-ML); MATERIALS LICENSE; June 23, 2006; FINAL PARTIAL INITIAL DECISION (Mandatory Hearing/Uncontested Issues)
- A In this 10 C.F.R. Part 70 proceeding regarding the application of Louisiana Energy Services, L.P. (LES), for authorization to possess and use source, byproduct, and special nuclear material to enrich natural uranium by the gas centrifuge process at its planned National Enrichment Facility (NEF) to be built near Eunice, New Mexico, the Licensing Board sets forth its findings on certain uncontested safety/technical and environmental matters relative to the LES application, and authorizes the NRC Staff to issue a Part 70 license for the NEF, effective immediately.
- B The source of the mandatory hearing requirement for uranium enrichment facilities is section 193(b)(1) of the Atomic Energy Act (AEA), 42 U.S.C. § 2243(b)(1), which provides, in relevant part, that "[t]he Commission shall conduct a single hearing on the record with regard to the licensing of the construction and operation of a uranium enrichment facility . . ." Sections 70.23a and 70.31(e) of Title 10 of the *Code of Federal Regulations* implement this mandate, declaring that before a uranium enrichment facility can be licensed, a hearing is required to be held on that license application.
- C The matters of fact and law to be considered in a proceeding on an application for a license to construct and operate a uranium enrichment facility are whether the application satisfies the applicable standards in 10 C.F.R. §§ 30.33, 40.32, and 70.23, and whether the requirements of 10 C.F.R. Part 51 have been met. *See* CLI-04-3, 59 NRC 10, 13 (2004).
- D If a proceeding on an application for a 10 C.F.R. Part 70 license is not a contested proceeding, as defined by 10 C.F.R. § 2.4, the licensing board will determine the following, without conducting a de novo evaluation of the application: (1) whether the application and record of the proceeding contain sufficient information and whether the Staff's review of the application has been adequate to support findings to be

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

made by the Director of the Office of Nuclear Materials Safety and Safeguards (NMSS), with respect to the applicable standards in 10 C.F.R. §§ 30.33, 40.32, and 70.23; and (2) whether the review conducted by the Staff pursuant to 10 C.F.R. Part 51 has been adequate. *See* CLI-04-3, 59 NRC at 13; *see also* 10 C.F.R. § 2.104(b)(1)(i)-(iv) and (b)(2)(i).

E        Regardless of whether a proceeding on an application for a 10 C.F.R. Part 70 license is contested or uncontested, the licensing board will, in its initial decision, in accordance with Subpart A of 10 C.F.R. Part 51: (1) determine whether the requirements of sections 102(2)(A), (C), and (E) of the National Environmental Policy Act (NEPA) and Subpart A of Part 51 have been complied with in the proceeding; (2) independently consider the final balance among conflicting factors contained in the record of proceeding with a view to determining the appropriate action to be taken; and (3) determine whether a license should be issued, denied, or conditioned to protect the environment. *See* CLI-04-3, 59 NRC at 13; *see also* 10 C.F.R. § 2.104(b)(2)(ii).

F        If the proceeding on such an application becomes a contested proceeding, the licensing board shall make findings of fact and conclusions of law on admitted contentions. Moreover, with respect to matters relating to the applicable standards of 10 C.F.R. §§ 30.33, 40.32, and 70.23, and the adequacy of the Staff's review pursuant to Part 51, but not covered by admitted contentions, the Board will determine, without conducting a de novo evaluation of the application, whether: (1) the application and record of the proceeding contain sufficient information and whether the Staff's review of the application has been adequate to support findings to be made by the Director of NMSS with respect to the applicable standards in sections 30.33, 40.32, and 70.23; and (2) the review conducted by the Staff pursuant to Part 51 has been adequate. *See* CLI-04-3, 59 NRC at 13; *see also* 10 C.F.R. § 2.104(b)(1)(i)-(iv) and (b)(2)(i).

G        The Commission has provided interpretative guidance for licensing boards conducting mandatory hearings. *See* CLI-05-17, 62 NRC 5 (2005). Addressing the question of whether proceedings should be treated in their entirety as "contested" or "uncontested," as the plain language of agency regulations seemed to imply, the Commission held that "the contested and uncontested designations apply issue-by-issue, and not to proceedings-at-large." *Id.* at 34. The net effect of this ruling is to eliminate the possibility that admission of a single, relatively minor contention would negate the need to conduct a separate mandatory hearing.

H        In accord with 10 C.F.R. § 2.104(b)(2)(i), in a proceeding on an application for a license to construct and operate a uranium enrichment facility, a licensing board is to determine, with respect to safety matters, "whether the application and record of the proceeding contain sufficient information and whether the NRC Staff's review of the application has been adequate to support findings to be made . . . with respect to [10 C.F.R. §§ 30.33, 40.32, and 70.23]," and that these determinations are to be made "without conducting a de novo evaluation of the application." CLI-04-3, 59 NRC at 12. Because a true de novo review would involve *complete* repetition of the Staff's work, this stated limitation does little to clarify the scope of review contemplated by the charge to determine whether the record supports an affirmative Staff finding.

I        The Commission has clearly delineated the respective roles of a licensing board and the Staff, advising that a board's task is "to constitute a check on the understanding of the staff." *See* CLI-05-17, 62 NRC at 40 (internal quotation marks and footnote omitted). The Commission cautioned that "'truly independent review' . . . does not mean that multiple reviews of the same *uncontested* issues — first by the NRC Staff, then by the [Advisory Committee on Reactor Safeguards], and finally by a licensing board — would be necessary to serve this purpose [of constituting a check on the understanding of the Staff]," *id.*, and summarized by noting that "boards should conduct a simple 'sufficiency' review of uncontested issues . . .," *id.* at 39. Nonetheless, to ensure that this guidance was not mistaken as Commission permission for licensing boards to engage in a relatively cursory effort, speaking again to uncontested portions of the proceeding, the Commission defined precisely its view of a licensing board's task, stating "when considering safety and environmental matters not subject to the adversarial process . . . *boards should inquire whether the NRC Staff performed an adequate review and made findings with reasonable support in logic and fact.*" *Id.* (emphasis added). Thus, the scope of a licensing board's review has been clearly defined; i.e., it must identify, investigate, and comprehend the facts underlying, and the logic of, the Staff's central legal, technical, and environmental determinations to develop the basis for the licensing board's ultimate findings regarding the adequacy of the record and the sufficiency of the Staff's review.

J        In further clarifying how a licensing board is to approach its review task, the Commission noted that "as a general matter licensing boards should review contested and uncontested issues differently, giving the NRC Staff considerably more deference on uncontested issues." CLI-05-17, 62 NRC at 36 (emphasis

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

omitted). Moreover, with respect to uncontested matters, even regarding the three “baseline” NEPA issues for which a licensing board is required to make its own independent judgment, “the NRC Staff’s underlying technical and factual findings are not open to board reconsideration unless, after a review of the record, the board finds the NRC Staff review inadequate or its findings insufficient.” *Id.* at 39-40. Finally, the Commission again emphasized, this was “not to say that we expect our licensing boards to follow a cursory, hands-off approach . . . . On the contrary . . . , we anticipate that our boards will carefully probe those findings by asking appropriate questions and by requiring supplemental information when necessary . . . .” *Id.* at 40.

K In sum, the Commission has provided two governing principles for a licensing board’s mandatory hearing review process: (1) relative to the Staff’s cardinal legal, technical, and environmental determinations, a licensing board should inquire whether the Staff performed an adequate review and made findings that have reasonable logical and factual support; and (2) the factual findings underlying the Staff’s legal, technical, and environmental determinations are not subject to licensing board reconsideration unless the board finds the Staff review inadequate or its findings insufficient.

L In examining the principal applicant and Staff review documents in the record relative to its mandatory hearing consideration of uncontested safety matters, the board’s focus should be upon areas in which the Staff indicated that its prescriptive process was incomplete or was not followed, or instances when the board’s review of the safety evaluation report (SER) and other safety-related documents led it to believe further exploration of a particular item was necessary. The board would not, however, undertake any independent review of or attempt to verify technical results presented in the application or in the Staff’s SER. Accordingly, for the purposes of determining whether the Staff had a reasonable basis for its stated conclusions on safety matters, the board would review the record based on the assumption that such a reasonable basis would be present if (1) the applicable standard review plan (SRP) and regulatory guides (along with other pertinent guidance documents) were specifically followed; or (2) the facts underlying a Staff determination were clear and the Staff’s decision logically flowed from those facts and the applicable regulatory guidance.

M In performing its mandatory hearing review of uncontested safety matters, the licensing board sought information on three topics relative to the general conduct of the Staff’s safety review for the uranium enrichment facility application: (1) how the generic SRP for fuel cycle facilities (NUREG-1520) was adapted to the enrichment facility application; (2) what regulatory guides were found applicable and why; and (3) in situations in which a regulatory guide would, in a customary fuel cycle facility application, have been applicable but was not appropriate for the proposed facility, how the Staff addressed (and directed the applicant to address) such matters. More specifically, relative to these inquires the board requested that the Staff provide a written presentation indicating those subsections of the SRP that directly applied to the enrichment facility application as well as a description of how, when a particular subsection of the SRP did not directly apply to the application, the guidance in that subsection was adapted to apply to the application, along with the rationale for that particular adaptation. In addition, the board requested that the Staff identify each regulatory guide used relative to the application, the subsections of the SRP toward which it was applied, and the Staff’s rationale for indicating to the applicant, or for finding, that such a regulatory guide was applicable. Finally, the board asked that the Staff indicate each SRP subsection to which no regulatory guide applied and how the Staff addressed (and directed the applicant to address) those matters. The purpose of this approach was to enable the board to accomplish two critical objectives: (1) to identify those areas of review where the SRP was precisely followed, thereby providing a logical and reasonable basis for the board to conclude, giving due deference to the Staff, that no further scrutiny would be required for that area of review; and (2) to identify those areas of review that warranted additional scrutiny, either because there was a deviation from the SRP or the applicable regulatory guidance, or because no existing regulatory guidance directly applied to the application.

N Pursuant to 10 C.F.R. § 70.25(a)(1), an applicant seeking a license to construct and operate a uranium enrichment facility is required to provide the Staff with a decommissioning funding plan (DFP), which essentially consists of a site-specific estimate of the costs for decommissioning the facility, and a description and certification of the means by which funds for decommissioning will be assured, *see id.* § 70.25(e). The purpose of the financial assurance requirement is to provide reasonable assurance that adequate funds will be available, through appropriate mechanisms, for facility decommissioning should a licensee be unable or unwilling to complete decommissioning. *See* NUREG-1757, “Consolidated NMSS Decommissioning Guidance,” vol. 3 (Sept. 2003), at 4-1 [hereinafter NUREG-1757].

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- O Section 70.25(f) of 10 C.F.R. sets forth a variety of methods by which an applicant may provide financial assurance, including (1) prepayment of funds into a segregated account prior to the start of facility operations; (2) a surety method, insurance, or other guarantee method; and (3) annual deposits into a segregated account coupled with a surety method or insurance, whereby the surety value decreases over time by the amount accrued in the segregated account. *See* 10 C.F.R. § 70.25(f)(1)-(3).
- P Section 70.25(e) of 10 C.F.R. requires an applicant to adjust its cost estimates and associated financial assurance levels at least once every 3 years. The purpose of this periodic adjustment mechanism is to “help ensure that financial assurance obtained by licensees will not become inadequate as a result of changing disposal prices or other factors,” such as inflation or changes in facility operations. *See* 68 Fed. Reg. 57,327, 57,332 (Oct. 3, 2003). This periodic adjustment process is intended to capture changes to a licensee’s estimated decommissioning costs regardless of the cause, and to ensure that adequate financial assurance is provided by the licensee at any given time. It has no bearing on the initial cost estimate and associated financial assurance, but rather establishes a process by which the licensee and the NRC account for costs that are not foreseeable at the time of facility licensing.
- Q NUREG-1757, which provides guidance to the Staff and applicants/licensees regarding, among other things, financial assurance requirements and the related funding mechanisms, describes a surety bond as follows: “A *payment surety bond* (or *surety bond*) is a guarantee by a surety company (or surety) that it will fund decommissioning activities if the principal (i.e., the licensee) fails to do so. In issuing a surety bond, the surety company becomes ‘jointly and severally’ liable for the guaranteed payment, meaning that the surety assumes the licensee’s obligation to fund decommissioning as its own and can be sued jointly with the licensee for the obligation. Consequently, most surety bonds include an indemnification provision that requires the principal to reimburse the surety for costs incurred in satisfaction of the principal’s obligations.” NUREG-1757, at A-88. A surety bond must be funded in an amount greater than or equal to the decommissioning cost estimate set forth in the licensee’s DFP. *See* 10 C.F.R. § 70.25(e).
- R Section 70.25(f) sets forth several additional conditions that must be included in any such surety bond. First, the surety bond must either be open-ended or written for a specified term subject to automatic renewal, and must specify that the full face value will be automatically paid to the NRC prior to expiration if the licensee does not provide an acceptable replacement mechanism within a specified period of time. *See* 10 C.F.R. § 70.25(f)(2)(i). Second, the surety bond must be directly payable to an acceptable standby trust that will be used to fund decommissioning if the licensee defaults on its decommissioning obligation. *See id.* § 70.25(f)(2)(ii); *see also* NUREG-1757, at A-88. Finally, the surety bond must remain in effect until license termination. *See* 10 C.F.R. § 70.25(f)(2)(iii).
- S Subpart H of 10 C.F.R. Part 70 requires an applicant for authorization “to possess greater than a critical mass of special nuclear material, and engage[ ] in . . . uranium enrichment,” to comply with certain performance requirements regarding nuclear criticality safety (NCS). *See* 10 C.F.R. § 70.60. Specifically, 10 C.F.R. § 70.61(a) requires an applicant to evaluate, in its integrated safety analysis (ISA) performed in accordance with 10 C.F.R. § 70.62, its compliance with performance requirements set forth in section 70.61(b) through (d). Section 70.61(b) requires an applicant to limit, through the application of engineered and/or administrative controls, the risk of credible high-consequence events so as to make them “highly unlikely,” or to make their consequences less severe than certain established dose and exposure limits set forth in section 70.61(b)(1)-(4). For its part, section 70.61(c) imposes similar requirements with regard to limitation of the risk posed by each credible intermediate-consequence event so as to make the event “unlikely” or its consequences less severe than dose and exposure limits set forth in section 70.61(c)(1)-(4).
- T In addition, section 70.61(d) requires that the risks of criticality accidents be limited by assuring that all nuclear processes are subcritical under normal and credible abnormal conditions, including the use of an approved margin of subcriticality, and mandates that preventive measures be the primary means of protection against criticality accidents. Moreover, section 70.61(e) requires that each engineered or administrative control/control system necessary to comply with paragraphs (b) through (d) be designated an item relied on for safety (IROFS). Finally, 10 C.F.R. § 70.64(a)(9) mandates that the design of new facilities “provide for criticality control including adherence to the double contingency principle,” i.e., that “process designs should incorporate sufficient factors of safety to require at least two unlikely, independent, and concurrent changes in process conditions before a criticality accident is possible,” *id.* § 70.4. An applicant must provide documentation of its compliance with the section 70.61 performance

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- requirements in its ISA Summary. *See id.* § 70.65(b)(4); *see also* [NEF ISA] Summary, vols. 1 & 2 (Apr. 2005).
- U Two Staff guidance documents, though not legally binding, provide further information regarding the relevant criticality safety regulations. The Staff published an interim Staff guidance (ISG) document, “Nuclear Criticality Safety Performance Requirements and Double Contingency Principle,” to provide additional information about the relationship between the various subsections of 10 C.F.R. § 70.61. *See* ISG-03, [NCS] Performance Requirements and Double Contingency Principle (Feb. 17, 2005). ISG-03 explains that, due to the risk-informed, performance-based nature of section 70.61(b) and (c), in theory a facility operator could have an inadvertent criticality, but still be in compliance with the dose limits set forth in paragraphs (b) and (c). Thus, the guidance explains, the purpose of section 70.61(d) is to ensure that all nuclear processes are designed to remain subcritical under normal and credible abnormal conditions. *See id.* at 2, 4-5.
- V Chapter 3 of the SRP provides additional guidance concerning the content of the ISA Summary and how an applicant can comply with section 70.65(b)(4), which, as noted above, requires an applicant to present information that demonstrates compliance with section 70.61. *See* NUREG-1520, “[SRP] for the Review of a License Application for a Fuel Cycle Facility,” ch. 3 (Mar. 2002). Stated generally, an applicant must identify and assess all credible accident sequences and identify appropriate mitigation measures, commonly referred to as IROFS, to prevent or mitigate the consequences of such accidents. *See id.* at 3-4. In addition, SRP section 5.4.3.4.4 provides guidance with regard to section 70.61(d) compliance, and essentially states that an applicant’s commitment to comply with regulatory requirements, including use of appropriate controls, standards, and subcritical limits, as well as its implementation of a double contingency protection program, should be considered acceptable for the purpose of meeting section 70.61(d) standards. *See id.* at 5-15 to -16.
- W Under the agency’s NEPA regulations, the Staff’s draft and final environmental impact statements are to include a “statement [that] will briefly describe and specify the need for the proposed action.” 10 C.F.R. Part 51, Subpart A, App. A, § 4.
- X Regardless of whether a proceeding is contested or uncontested, in proceedings for which a mandatory hearing is required, a licensing board is required to make the following “baseline” determinations regarding NEPA issues: “(i) Determine whether the requirements of section 102(2)(A), (C), and (E) of [NEPA] and subpart A of part 51 . . . have been complied with in the proceeding; (ii) Independently consider the final balance among conflicting factors contained in the record of the proceeding with a view to determining the appropriate action to be taken; and (iii) Determine whether the construction permit should be issued, denied, or appropriately conditioned to protect environmental values.” *See* 10 C.F.R. § 2.104(b)(3); *see also* CLI-04-3, 59 NRC at 12-13. Regarding the appropriate standard of review to be used by a licensing board when making these “baseline” NEPA determinations, the Commission stated that “licensing boards must reach their own independent determination on uncontested NEPA ‘baseline’ questions — i.e., whether the NEPA process ‘has been complied with,’ what is the appropriate ‘final balance among conflicting factors,’ and whether the ‘construction permit should be issued, denied or appropriately conditioned.’” CLI-05-17, 62 NRC at 45. In reaching these independent determinations, “boards should not second-guess underlying technical or factual findings by the NRC Staff,” and “[t]he only exceptions to this would be if the reviewing board found the Staff review to be incomplete or the Staff findings to be insufficiently explained in the record.” *Id.*
- Y The Commission further directed licensing boards to follow the approach set forth in *Calvert Cliffs’ Coordinating Committee, Inc. v. AEC*, in which the United States Court of Appeals for the District of Columbia Circuit stated: “The Commission’s regulations provide that in an uncontested proceeding the hearing board shall on its own determine whether the application and the record of the proceeding contain sufficient information, and the review of the application by the Commission’s regulatory staff has been adequate, to support affirmative findings on various nonenvironmental factors. NEPA requires at least as much automatic consideration of environmental factors. In uncontested hearings, the board need not necessarily go over the same ground covered in the detailed [environmental impact] statement. But it must at least examine the statement carefully to determine whether the review . . . by the Commission’s regulatory staff has been adequate. And it must independently consider the final balance among conflicting factors that is struck in the staff’s recommendation.” 449 F.2d 1109, 1118 (D.C. Cir. 1971) (footnote and internal quotation marks omitted).
- Z NEPA § 102(2)(A) requires all federal agencies to “utilize a systematic, interdisciplinary approach

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

which will insure the integrated use of the natural and social sciences and the environmental design arts in planning and in decision-making which may have an impact on man's environment." 42 U.S.C. § 4332(2)(A).

- AA Section 102(2)(C) of NEPA requires a federal agency to address in its environmental impact statement: (1) the environmental impact of the proposed action; (2) any unavoidable adverse impacts associated with implementation of the proposed action; (3) alternatives to the proposed action; (4) the relationship between local short-term uses of man's environment and the maintenance and enhancement of long-term productivity; and (5) any irreversible and irretrievable commitment of resources that might result from the proposed action. *See id.* § 4332(2)(C).
- BB NEPA § 102(2)(C) also requires that an agency "consult with and obtain the comments of any Federal agency which has jurisdiction by law or special expertise with respect to any environmental impact involved." *Id.*
- CC Section 102(2)(E) of NEPA requires a federal agency to "study, develop, and describe appropriate alternatives to the recommended courses of action in any proposal which involves unresolved conflicts concerning alternative uses of available resources." *Id.* § 4332(2)(E).
- DD The following technical issues are discussed: financial qualifications (decommissioning); decommissioning (adequacy of cost estimates); decommissioning (financial assurance); decommissioning (funding methods); nuclear criticality safety; materials compatibility; fire safety; consideration of purpose and need; depleted uranium cylinder rupture accident.
- LBP-06-18 ENTERGY NUCLEAR VERMONT YANKEE, LLC, and ENTERGY NUCLEAR OPERATIONS, INC. (Vermont Yankee Nuclear Power Station), Docket No. 50-271-OLA (ASLBP No. 04-832-02-OLA); OPERATING LICENSE AMENDMENT; June 23, 2006; MEMORANDUM AND ORDER (Approving Settlement Agreement, Granting Dismissal of Contentions, and Accepting Withdrawal of Vermont Department of Public Service)
- A In this proceeding concerning an application for a power increase to the operating license of the Vermont Yankee Nuclear Power Station, the Board finds that the submission by the Department of Public Service of the State of Vermont (State) is a settlement agreement that is subject to, and that satisfies, the requirements of 10 C.F.R. § 2.338 and therefore, the Board approves the settlement agreement, dismisses State Contentions 1 and 2, and accepts the State's withdrawal with prejudice. The Board also denies New England Coalition's request that the Board act *sua sponte* and continue the litigation on the State's contentions.
- B A notice of withdrawal combined with an attached memorandum of understanding whereby the Applicant agrees to perform certain actions and testing, in return for which the Intervenor agrees to withdraw, with prejudice, from the litigation, constitutes a *quid pro quo* arrangement which is a settlement agreement within the meaning of 10 C.F.R. § 2.338.
- C The form, content, and board approval provisions of 10 C.F.R. § 2.338 are not limited to settlement agreements achieved via alternative dispute resolution (ADR), but apply to all settlement agreements that purport to be binding on the proceeding and that are submitted to a board after the notice of hearing. The plain language of 10 C.F.R. § 2.338(a), (g), (h), and (i) simply uses the terms "settlement" or "settlement agreement" and makes no reference or suggestion that these provisions and requirements are limited to that small subset of settlements achieved via ADR. Rather the regulatory history supports the view that section 2.338 is a regulation of general applicability, stating that "Section 2.338 is a new provision that consolidates and amplifies the previous rules pertaining to settlement (10 CFR 2.203, 2.759, 2.1241)." Final Rule: "Changes to Adjudicatory Process," 69 Fed. Reg. 2182, 2225 (Jan. 14, 2004). Nothing in these previous regulations limited their application to settlement agreements reached through a third-party neutral.
- D A *quid pro quo* settlement agreement that is submitted to the Board and that would result in the withdrawal, with prejudice, of a party, is an agreement that would be "binding in the proceeding" within the meaning of 10 C.F.R. § 2.338(i).
- E Any settlement agreement that would have a binding effect on the proceeding and that is reached after the notice of hearing must be in the form specified in 10 C.F.R. § 2.338(g), must have the content specified in 10 C.F.R. § 2.338(h), and must be submitted to the presiding officer for his or her approval under 10 C.F.R. § 2.338(i).
- F The opponents of a settlement may not simply object to settlement in order to block it, but must show some substantial basis for disapproving the settlement or the existence of some material issue that requires

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

resolution. The burden is on the opponent of a settlement to come forward and show that the public interest requires the rejection of the settlement and the adjudication of the issues. This is aptly expressed in the current formulation of the rule, which states that the presiding officer “may order the adjudication of the issues [if it is] required in the public interest.” 10 C.F.R. § 2.338(i).

G The Commission has set forth the following factors to be considered when deciding whether a settlement in an enforcement proceeding is in the public interest: (1) whether, in view of the risks and benefits of further litigation, the settlement result appears unreasonable; (2) whether the terms of the settlement appear incapable of effective implementation and enforcement; (3) whether the settlement jeopardizes the public health and safety; and (4) whether the settlement approval process deprives interested parties of meaningful participation. See *Sequoyah Fuels Corp. and General Atomics* (Gore, Oklahoma Site), CLI-97-13, 46 NRC 195, 209-23 (1997). We apply the *Sequoyah Fuels* factors in determining whether the proposed settlement in this licensing proceeding is in the public interest.

H The silence of 10 C.F.R. § 2.338(i) as to the process for determining whether a proposed settlement is in the “public interest” indicates that the Commission intended to leave it to the discretion of the Board to determine how to make this determination.

LBP-06-19 HYDRO RESOURCES, INC. (P.O. Box 777, Crownpoint, New Mexico 87313), Docket No. 40-8968-ML (ASLBP No. 95-706-01-ML); MATERIALS LICENSE; August 21, 2006; FINAL PARTIAL INITIAL DECISION (Phase II Challenges to In Situ Leach Mining Materials License Regarding Adequacy of Environmental Impact Statement)

A The National Environmental Policy Act, 42 U.S.C. §§ 4321-4370f, has two principal objectives. First, it ensures that an agency considers every significant aspect of the environmental impact of a proposed action (*Baltimore Gas & Electric Co. v. Natural Resources Defense Council, Inc.* 462 U.S. 87, 97 (1983)). Second, it ensures that the agency informs the public that it has, in fact, considered environmental concerns in its decisionmaking process (*ibid.*).

B NEPA requires a federal agency, before taking any action “significantly affecting the quality of the human environment,” to prepare a “detailed statement” (i.e., an environmental impact statement) — which must be made available to the public — discussing, *inter alia*, the environmental impact of the proposed action and possible alternatives (42 U.S.C. § 4332(2)(C) (2000)).

C The NRC’s regulations implementing NEPA are contained in 10 C.F.R. Part 51 and provide detailed instructions governing the preparation of a draft environmental impact statement and a final environmental impact statement. The Council on Environmental Quality (CEQ) also has promulgated regulations addressing NEPA compliance (42 U.S.C. § 4342 (2000); 40 C.F.R. Parts 1500-1518). Although the Commission is “not bound by CEQ regulations that it has not expressly adopted, [it] gives those regulations ‘substantial deference’” (*Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-02-25, 56 NRC 340, 348 n.22 (2002)).

D NEPA does “not require agencies to elevate environmental concerns over other appropriate considerations; rather, it require[s] only that the agency take a ‘hard look’ at the environmental consequences before taking a major action” (*Baltimore Gas & Elec. Co. v. NRDC*, 462 U.S. at 97). “If the adverse environmental effects of the proposed action are adequately identified and evaluated, the agency is not constrained by NEPA from deciding that other values outweigh the environmental costs” (*Robertson v. Methow Valley Citizens Council*, 490 U.S. 332, 350 (1989)). Thus, “[NEPA] does not mandate particular results, but simply prescribes the necessary process” (*ibid.*).

E Cumulative impacts analysis has two possible prongs. First, it looks to whether “the proposed action’s impacts will be significantly enhanced by already existing environmental effects from prior actions” (*Hydro Resources, Inc.* (P.O. Box 15910, Rio Rancho, NM 87174), CLI-01-4, 53 NRC 31, 60 (2001)). Pursuant to this approach, a “cumulative impacts review examines ‘the impact on the environment which results from the incremental impact of the action, when added to other past, present, and reasonably foreseeable future actions’” (*ibid.*) (quoting 40 C.F.R. § 1508.7). Second, cumulative impacts analysis may look to whether the proposed action’s impacts will have interregional synergistic effects (*id.* at 57). This approach may be implicated “[w]hen several proposals for . . . actions that will have a cumulative or synergistic environmental impact upon a region are pending concurrently before an agency” (*ibid.*) (quoting *Kleppe v. Sierra Club*, 427 U.S. 390, 410 (1976)).

F Arguments that an intervenor fails — in derogation of 10 C.F.R. § 2.1233(c) — adequately to develop are treated as waived. See *Hydro Resources, Inc.* (P.O. Box 777, Crownpoint, New Mexico 87313), LBP-05-17, 62 NRC 77, 98 n.14 (2005); accord, e.g., *Williams v. Eastside Lumberyard and Supply Co.*,

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- 190 F. Supp. 2d 1104, 1114 (S.D. Ill. 2001); *Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant), ALAB-843, 24 NRC 200, 204 (1986).
- G Intervenor may not blithely incorporate by reference arguments that are ill-defined or undeveloped. It is not the duty of an adjudicative body to “dig through the reams of paper which [litigants] have deposited” to construct and develop their arguments (*HRI*, LBP-05-17, 62 NRC at 99 n.14).
- H The “adjudicatory record and Board decision (and, of course, any Commission appellate decisions) become, in effect, part of the [Final Environmental Impact Statement]” (*HRI*, CLI-01-4, 53 NRC at 53 (quoting *Louisiana Energy Services, L.P.* (Claiborne Enrichment Center), CLI-98-3, 47 NRC 77, 89 (1998))).
- I Although the NRC Staff inadvertently omitted information regarding background radiation from the Final Environmental Impact Statement (FEIS), since the information was made available to the public in the Draft Environmental Impact Statement and was taken into account by the Staff in performing its NEPA analysis in the FEIS, the Intervenor was not prejudiced nor was the correctness of the Staff’s analysis undermined.
- J Pursuant to environmental justice principles, each agency should “identify and address, as appropriate, any ‘disproportionately high and adverse human health or environmental effects of its programs, policies, and activities on minority populations and low-income populations’” (*HRI*, CLI-01-4, 53 NRC at 64).
- K That the Intervenor would have preferred that the Final Environmental Impact Statement (FEIS) contain additional details on any particular issue is not, standing alone, probative of the FEIS’s adequacy. “One can always flyspeck an FEIS to come up with more specifics and more areas of discussion that conceivably could have been included” (*HRI*, CLI-01-4, 53 NRC at 71). The salient question is whether the FEIS took the required “hard look” at the relevant environmental consequences (*see ibid.*).
- L The Final Environmental Impact Statement is required to include a description of the “underlying purpose and need” of a proposed project (40 C.F.R. § 1502.13). The benefits described by the project’s purpose and need are among the factors that are weighed against the project’s costs in striking the cost-benefit balance required by NEPA. *See Public Service Co. of Oklahoma* (Black Fox Station, Units 1 and 2), ALAB-573, 10 NRC 775, 804 (1979).
- M Subject to limited exceptions, “legal determinations made on appeal in a case are controlling precedent, becoming the ‘law of the case,’ for all later decisions in the same case” (*Hydro Resources, Inc.* (P.O. Box 777, Crownpoint, New Mexico 87313), CLI-06-11, 63 NRC 483, 488 (2006)).
- N The statement of purpose and need is independent of any specific project area. Therefore, a prior decision of the Commission adjudicating an intervenor’s challenge to the statement of purpose and need applies with equal force to all areas of a proposed project.
- O The proper inquiry for determining the sufficiency of the purpose and need statement is whether the Final Environmental Impact Statement, read as a whole, includes a correct and adequate description of the purpose and need of the “proposed action” (10 C.F.R. Part 51, Subpart A, App. A, § 4; *see HRI*, CLI-01-4, 53 NRC at 47).
- P The Final Environmental Impact Statement must contain a discussion of alternatives, which is considered to be “the heart of the environmental impact statement” (10 C.F.R. Part 51, Subpart A, App. A, § 5). This discussion shall identify “reasonable alternatives” and present the “environmental impacts of the proposal and the alternatives in comparative form” (*ibid.*). It also shall “include a final recommendation on the action to be taken” (*ibid.*).
- Q “When the purpose [of a proposed action] is to accomplish one thing, it makes no sense to consider the alternative ways by which another thing might be achieved” (*City of Angoon v. Hodel*, 803 F.2d 1016, 1021 (9th Cir. 1986), *cert. denied*, 484 U.S. 870 (1987)).
- R Because blending down highly enriched uranium for reactor fuel would not promote the primary purpose of HRI’s project — maintaining the viability of a dwindling domestic uranium industry — it is outside the scope of reasonable alternatives that must be considered under NEPA. *See Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-29, 62 NRC 801, 808 (2005) (NEPA imposes no obligation to “examine [alternatives] that would do nothing to satisfy this particular project’s goals”).
- S When an agency is asked to approve a private applicant’s proposed project, the agency may — taking into account the applicant’s economic goals — accord appropriate deference to the applicant’s proposed siting and design plans (*HRI*, CLI-01-4, 53 NRC at 55-56).
- T The adequacy of the no-action alternative discussion in a Final Environmental Impact Statement is governed by a rule of reason (*Claiborne*, CLI-98-3, 47 NRC at 97). The discussion “need not be

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

exhaustive or inordinately detailed” (*ibid.* (quoting *Farmland Preservation Ass’n v. Goldschmidt*, 611 F.2d 233, 239 (8th Cir. 1979))). “It is most simply viewed as maintaining the status quo” (*HRI*, CLI-01-4, 53 NRC at 54).

U Although the Intervenor would prefer the no-action alternative, “NEPA imposes no obligation to select the most environmentally benign alternative” (*HRI*, CLI-01-4, 53 NRC at 55 (citing *Robertson v. Methow Valley Citizens Council*, 490 U.S. at 350)).

V The environmental impact statement must provide a cost-benefit analysis among alternatives that, *inter alia*, “considers and weighs the environmental effects of the proposed action [and the] alternatives available for reducing or avoiding adverse environmental effects” (10 C.F.R. § 51.71(d)).

W When preparing an environmental impact statement, in addition to considering the adverse environmental impacts of a proposed action (42 U.S.C. § 4332(C)(ii)), the NRC Staff must consider measures to mitigate such impacts by examining “alternatives available for reducing or avoiding adverse environmental effects” (10 C.F.R. § 51.71(d)). “Mitigation must be discussed in sufficient detail to ensure that environmental consequences have been fairly evaluated” (*Neighbors of Cuddy Mountain v. United States Forest Service*, 137 F.3d 1372, 1380 (9th Cir. 1998)).

X The NRC Staff shall supplement an environmental impact statement (EIS) if: (1) “[t]here are substantial changes in the proposed action that are relevant to environmental concerns;” or (2) “[t]here are significant new circumstances or information relevant to environmental concerns and bearing on the proposed action or its impacts.” 10 C.F.R. §§ 51.72(a), 51.92(a). “A Supplemental [EIS] is not necessary ‘every time new information comes to light after the EIS is finalized.’ . . . The new information must present ‘a seriously different picture of the environmental impact of the proposed project from what was previously envisioned.’” (*Hydro Resources, Inc.* (2929 Coors Road, Suite 101, Albuquerque, NM 87120), CLI-99-22, 50 NRC 3, 14 (1999) (quoting *Marsh v. Oregon Natural Resources Council*, 490 U.S. 360, 373 (1989), and *Sierra Club v. Froehelke*, 816 F.2d 205, 210 (5th Cir. 1987))).

Y Performance-based licensing “is fully consistent with . . . sound NEPA practice” (*HRI*, CLI-99-22, 50 NRC at 17), and “does not run counter to any agency mandate contained in the Atomic Energy Act or any established Commission regulation” (*id.* at 16). “It is simply an additional means through which the NRC can decrease the administrative burden of regulation while ensuring the continued protection of public health and safety” (*id.* at 16-17).

Z It is well established that “the [Final Environmental Impact Statement (FEIS)], in response to comments received, may supplement, refine, or otherwise adapt the project alternatives” (*HRI*, CLI-01-4, 53 NRC at 53). The Staff’s addition of mitigation measures to an FEIS is, thus, not only permissible, it is properly viewed as the Staff’s conscientious performance of its NEPA responsibilities. *See ibid.* (“[t]he FEIS . . . might typically add ‘mitigation measures’ to an alternative”).

AA Although federal permits and exemptions must be mentioned in the FEIS (10 C.F.R. §§ 51.90 and 51.71(c)), the absence of such mention does not perforce render the FEIS invalid.

LBP-06-20 ENTERGY NUCLEAR VERMONT YANKEE, LLC, and ENTERGY NUCLEAR OPERATIONS, INC. (Vermont Yankee Nuclear Power Station), Docket No. 50-271-LR (ASLBP No. 06-849-03-LR); LICENSE RENEWAL; September 22, 2006; MEMORANDUM AND ORDER (Ruling on Standing, Contentions, Hearing Procedures, State Statutory Claim, and Contention Adoption)

A In construing 10 C.F.R. § 51.53(c)(3)(i) and (iv), the Commission has stated: “even where the GEIS has found that a particular impact applies generically (Category 1), the applicant must still provide additional analysis in its Environmental Report if new and significant information may bear on the applicability of the Category 1 finding at its particular plant.” *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), CLI-01-17, 54 NRC 3, 11 (2001) (emphasis added). Likewise, “the applicant must provide additional analysis of even a Category 1 issue if new and significant information has surfaced.” *Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-14, 55 NRC 278, 290 (2002).

B When preparing the Supplemental EIS, the Staff must consider any significant new information related to Category 1 issues. *See* 10 C.F.R. §§ 51.92(a)(2), 51.95(c)(3); Final Rule: “Environmental Review for Renewal of Nuclear Power Plant Operating Licenses,” 61 Fed. Reg. 28,467, 28,470 (June 5, 1996).

C The Commission has stated that the Staff’s final Supplemental EIS must take account of public comments concerning new and significant information on Category 1 findings. *See Turkey Point*, CLI-01-17, 54 NRC at 12; *McGuire/Catawba*, CLI-02-14, 55 NRC at 290-91.

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- D Even assuming that the petitioner's information regarding the dangers of high-density racking of spent fuel constitutes known "new and significant information," the Commission's decision in *Turkey Point*, CLI-01-17, 54 NRC 3, compels the Board to conclude that the failure of an applicant to include such new and significant information concerning a Category 1 issue in its environmental report, in violation of 10 C.F.R. § 51.53(c)(3)(iv), does not give rise to an admissible contention.
- E Even assuming that petitioner's information regarding the risks of terrorism related to the high-density racking of spent fuel in pools is "new and significant information" concerning a Category 1 matter and the failure of the applicant to include the information violates 10 C.F.R. § 51.53(c)(3)(iv), the same result obtains — the contention is not adjudicable under *Turkey Point*. If the petitioner wants to raise its concerns on this issue, it should pursue one of the three paths specified by the Commission. See *Turkey Point*, CLI-01-17, 54 NRC at 12.
- F The State of Vermont's citation to specific and potentially inconsistent portions of Entergy's documents, together with the declaration of its unchallenged expert, the State's official nuclear engineer, that "the concrete surface behind the steel shell will closely match the drywell ambient temperature" provide us with alleged "facts or expert opinion," which are "sufficient" to meet the requirements of 10 C.F.R. § 2.309(f)(1)(v) and (vi). The fact that Mr. Sherman's opinion is simple, straightforward, and fact-based does not mean that it is bald or conclusory.
- G At the contention admission stage, which is a lesser threshold than a merits determination or even a summary disposition ruling, the Board's purpose in applying 10 C.F.R. § 2.309(f)(1) is only to "ensure that the adjudicatory process is used to address real, concrete, specific issues that are appropriate for litigation." Final Rule: "Changes to the Adjudicatory Process," 69 Fed. Reg. 2182, 2202 (Jan. 14, 2004). The State of Vermont's Contention 1 meets this criterion, and its factual allegations and attached expert opinion suffice under 10 C.F.R. § 2.309(f)(1)(v) and (vi).
- H The State of Vermont's contention, presenting what it characterizes as "new and significant information" related to the timeline for the opening of a federal high-level waste geologic repository such as Yucca Mountain, is inadmissible because, although 10 C.F.R. § 51.53(c)(3)(iv) requires an applicant to include any new and significant information concerning Category 1 issues that it is aware of, the failure of an applicant to do so is simply not litigable, absent a waiver under 10 C.F.R. § 2.335. We need not, and do not, decide whether the information proffered by the State of Vermont is indeed "new and significant," or whether Entergy was, or should have been, aware of it.
- I Issues related to the environmental impact of onsite spent fuel storage after the license renewal term are covered by NRC's Waste Confidence Rule, 10 C.F.R. § 51.23(a) which specifies that the "Commission believes there is reasonable assurance that at least one mined geologic repository will be available within the first quarter of the twenty-first century, and sufficient repository capacity will be available within 30 years beyond the licensed life for operation of any reactor to dispose of the commercial high-level waste and spent fuel originating in such reactor and generated up to that time." Such issues are outside the scope of a license renewal proceeding because under 10 C.F.R. § 2.335(a) contentions may not challenge a regulation. See *Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 344-45 (1999).
- J The State of Vermont contention that the applicant has failed to identify non-safety-related systems, structures, and components in the security area whose failure could prevent satisfactory accomplishment of the functions of safety-related systems, structures, and components under 10 C.F.R. § 54.4(a)(2) is not admissible because, under controlling Commission rulings, security-related issues are not within the scope of a license renewal proceeding under 10 C.F.R. § 2.309(f)(1)(iii). See *Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-26, 56 NRC 358, 364 (2002), and *Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 1 and 2), CLI-04-36, 60 NRC 631, 638 (2004).
- K A petitioner has no right or need to request a "reservation of rights" to file additional contentions later. To the extent that the draft or final SEIS contains data or conclusions that differ significantly from the data or conclusions in the applicant's environmental report or in the GEIS, a petitioner is entitled to use 10 C.F.R. § 2.309(f)(2) as the grounds to file a new or amended contention. However, should the petitioner later file an environmental contention that is *not* based on new information, the contention can only be admitted upon a favorable balancing of the factors found in 10 C.F.R. § 2.309(c).
- L NRC will consider the fact that an applicant is subject to, and compliant with, other environmental laws and permits, such as a RCRA permit, Clean Air Act permit, or NPDES permit, but this does not

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- obviate the NEPA mandate that, prior to any major federal action significantly affecting the environment, NRC must perform an environmental impact statement assessing these subjects under 10 C.F.R. § 51.71(d).
- M We reject the assertion that section 511(c) of the Federal Water Pollution Control Act bars a contention alleging that the applicant or NRC failed to adequately assess water quality impacts of a proposed license amendment. While section 511(c) bars NRC from imposing or second-guessing effluent limitations or water quality certification requirements imposed by EPA or an authorized state, it does not bar NRC from addressing water quality matters in its assessment of the environmental impact of the license renewal. To the contrary, NEPA requires the NRC to do so.
- N The contention, which raises the question as to whether an NPDES permit that will expire before the proposed 20-year NRC license renewal would even take effect satisfies the requirements of 10 C.F.R. § 51.53(c)(3)(ii)(B), raises an admissible and material issue of law and fact.
- O The contention, which raises the question as to whether requirements of 10 C.F.R. § 51.53(c)(3)(ii)(B) supplement the more general requirements of 10 C.F.R. §§ 51.45(c) and 51.53(c), or instead displace and supplant the latter requirements, raises an admissible and material issue of interpretation and construction of the regulations.
- P The contention, which alleges that the applicant's plan to manage metal fatigue is too vague and is really only a "plan to develop a plan," raises an admissible and material issue as to whether the applicant has met the 10 C.F.R. § 54.21(c)(1)(iii) and (a)(3) requirement to "demonstrate that the effects of aging . . . will be adequately managed."
- Q The contention alleging that the applicant's proposed monitoring techniques are not adequate because they are based on computer models that were not benchmarked, which is supported by a sworn statement by an unchallenged expert who described his professional reasoning, satisfies the requirement that the petitioner provide sufficient evidence to show that there is a genuine dispute concerning a material issue, as required by 10 C.F.R. § 2.309(f)(1)(vi) and is not "bald or conclusory."
- R A reply may respond to any legal, logical, or factual arguments presented in an answer. While a petitioner who fails to satisfy the requirements of 10 C.F.R. § 2.309(f)(1) in its initial contention submission may not use its reply to rectify those inadequacies or to raise new arguments, a petitioner may use the reply to flesh out contentions that have already met the pleading requirements.
- S At the contention admissibility stage, the petitioner is not required to prove its contention or to provide all the evidence for its contention that may be required later in the proceeding. Rather, a petitioner is only required to provide sufficient information that "the Applicants are sufficiently put on notice so that they will know at least generally what they will have to defend against or oppose, and that there has been sufficient foundation assigned to warrant further exploration of [the] contention." *Kansas City Gas & Electric Co.* (Wolf Creek Generating Station, Unit 1), LBP-84-1, 19 NRC 29, 34 (1984).
- T The portions of the reply that respond to legal, logical, and factual arguments raised in the answers, such as Entergy's allegation that the treatment and resolution of the flow-accelerated corrosion issue during NRC's separate review of the extended power uprate application, are appropriate and the motion to strike them is denied.
- U Emergency planning concerns are not within the scope of a license renewal proceeding and therefore any such contention is not admissible under 10 C.F.R. § 2.309(f)(1)(iii). See, e.g., *Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-05-24, 62 NRC 551, 560-61 (2005).
- V The selection of appropriate hearing procedures under 10 C.F.R. § 2.310 is a contention-by-contention matter, dependent on the nature of the specific issues involved in the contention. Thus, for example, a single adjudicatory proceeding may include some contentions litigated under Subpart L and others litigated under Subpart G or N.
- W Section 274(l) of the AEA does not give a state an absolute right of cross-examination, but states only that "the Commission . . . shall afford *reasonable opportunity* for State representatives to . . . interrogate witnesses." 42 U.S.C. § 2021(l) (emphasis added).
- X The Commission's statement in *Citizens Awareness Network, Inc. v. United States*, 391 F.3d 338 (1st Cir. 2004), that a petitioner's right to cross-examination (in Subpart L proceedings) whenever it "is necessary to ensure the development of an adequate record for decision," 10 C.F.R. § 2.1204(b)(3), is equivalent to a party's right to cross-examination under 5 U.S.C. § 556(d), leads the Board to conclude that Subpart L proceedings satisfy the AEA requirement that State representatives be given a "reasonable opportunity . . . to . . . interrogate witnesses." 42 U.S.C. § 2021(l).

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- Y Subpart L is not the automatic default procedure for adjudicatory hearings. If the provisions of 10 C.F.R. § 2.310(c)-(j) do not mandate the use of a specific procedure, then 10 C.F.R. § 2.310(b) specifies that the Board “may” use the Subpart L procedures. In this circumstance the Board, in its sound discretion, must determine the type of hearing procedures most appropriate for the specific contentions before it.
- Z We reject the assertion that section 247(l) of the AEA gives a state a right to offer evidence and interrogate witnesses, even if no hearing is otherwise being held and no party has submitted an admissible contention.
- AA It is sufficient for our purposes to hold that if a notice of adoption of a contention is filed under 10 C.F.R. § 2.309(f)(3) within a reasonable time (such as 20 days) after the contention has been filed and admitted, then it is deemed timely and is not subject to the nontimely factors specified in 10 C.F.R. § 2.309(c). Accordingly, we find that the DPS and NEC adoption notices were timely and the adoptions are granted.
- BB We have serious reservations about requiring the adopting party to demonstrate an independent ability to litigate a contention. No such requirement is imposed under new 10 C.F.R. § 2.309(f)(3). No such requirement is imposed on the original petitioner under 10 C.F.R. § 2.309(f)(1). Further, it is not clear how a Board could determine, in advance, whether an adopter has the “independent ability to litigate a contention” without impermissibly inquiring into the party’s finances and membership list. Any such requirement may not comport with section 189a of the AEA.
- CC As provided in 10 C.F.R. § 2.315(c), any interested state, local governmental body, and affected, federally recognized Indian Tribe that has not been admitted as a party under 10 C.F.R. § 2.309 will be given a reasonable opportunity to participate in any hearing conducted in this proceeding. The only timing requirement for giving notice of such participation states that a “representative shall identify those contentions on which it will participate in advance of any hearing held.”
- LBP-06-21 DALE L. MILLER, Docket No. IA-05-053 (ASLBP No. 06-846-02-EA); ENFORCEMENT; September 29, 2006; ORDER (Approving Proposed Settlement and Dismissing Proceeding)
- A In this challenge to an NRC Staff immediately effective enforcement order prohibiting a former Davis-Besse employee from working in NRC-licensed activities for 5 years, the Licensing Board finds a proposed settlement to be in the public interest, so that no adjudication is required.
- B In approving a proposed settlement between the NRC Staff and the subject of a very stringent enforcement order, the Board found no reason — where Staff had taken aggressive enforcement action in related respects — to look behind the Staff’s newly emerged judgment that lesser measures as to this individual are now seen as adequate for compliance and enforcement purposes.
- LBP-06-22 AMERGEN ENERGY COMPANY, LLC (Oyster Creek Nuclear Generating Station), Docket No. 50-0219-LR (ASLBP No. 06-844-01-LR); LICENSE RENEWAL; October 10, 2006; MEMORANDUM AND ORDER (Granting Petition To File a New Contention)
- A Petitioners who seek to introduce a new or amended contention based on allegedly new information that was previously unavailable must show that: (1) the information upon which the amended or new contention is based was not previously available; (2) the information upon which the amended or new contention is based is materially different than information previously available; and (3) the amended or new contention has been submitted in a timely fashion based on the availability of the subsequent information (10 C.F.R. § 2.309(f)(2)).
- B A petitioner’s failure to satisfy 10 C.F.R. § 2.309(f)(2) will mandate the rejection of a late-filed contention as nontimely, unless the petitioner demonstrates that the eight-factor balancing test in 10 C.F.R. § 2.309(c) militates in favor of considering the admissibility of the nontimely contention.
- C A petitioner who without reason fails to argue that a nontimely contention satisfies the eight-factor balancing test in 10 C.F.R. § 2.309(c) may be deemed as having waived that argument.
- LBP-06-23 ENTERGY NUCLEAR GENERATION COMPANY and ENTERGY NUCLEAR OPERATIONS, INC. (Pilgrim Nuclear Power Station), Docket No. 50-293-LR (ASLBP No. 06-848-02-LR); LICENSE RENEWAL; October 16, 2006; MEMORANDUM AND ORDER (Ruling on Standing and Contentions of Petitioners Massachusetts Attorney General and Pilgrim Watch)
- A In this license renewal proceeding the Licensing Board rules that the public interest organization, Pilgrim Watch, and the Massachusetts Attorney General, both of which have petitioned to intervene, have standing to participate in the proceeding; that Pilgrim Watch has submitted two admissible contentions and is therefore admitted as a party; but that the Attorney General has failed to submit an admissible contention and is therefore not admitted as a party to the proceeding.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- B** A petitioner's standing, or right to participate in a Commission licensing proceeding, is grounded in section 189a of the Atomic Energy Act (AEA), which requires the NRC to provide a hearing "upon the request of any person whose interest may be affected by the proceeding," and which has been implemented in Commission regulations at 10 C.F.R. § 2.309.
- C** Judicial concepts of standing, to which licensing boards are to look in ruling on standing, provide the following guidance in determining whether a petitioner has established the necessary "interest" under 10 C.F.R. § 2.714(d)(1): To qualify for standing a petitioner must allege (1) a concrete and particularized injury that is (2) fairly traceable to the challenged action and (3) likely to be redressed by a favorable decision, criteria commonly referred to, respectively, as "injury in fact," causality, and redressability. The injury may be either actual or threatened, but must lie arguably within the "zone of interests" protected by the statutes governing the proceeding — here, either the AEA or the National Environmental Policy Act (NEPA).
- D** Individual petitioners living within 50 miles of a nuclear power plant may establish standing based on a longstanding "proximity presumption" principle in NRC adjudicatory proceedings, under which the elements of standing will be presumed to be satisfied if an individual lives within the zone of possible harm from a significant source of radioactivity, in the geographical area that might be affected by an accidental release of fission products, which has been defined in proceedings involving nuclear power plants as being within a 50-mile radius of such a plant.
- E** An organization that wishes to establish standing to intervene may do so by demonstrating either organizational standing or representational standing. In order to establish organizational standing it must show that the interests of the organization will be harmed by the proceeding. To establish representational standing it must (1) demonstrate that the interests of at least one of its members may be affected by the licensing action and would have standing to sue in his or her own right, (2) identify that member by name and address, and (3) show that the organization is authorized to request a hearing on behalf of that member. Public interest group Petitioner Pilgrim Watch is found to have established representational standing under these criteria.
- F** Under 10 C.F.R. § 2.309(d)(2) a State that wishes to be a party in a proceeding for a facility located within its boundaries need not address the standing requirements, and the Massachusetts Attorney General is therefore found to have standing to participate as the representative of the State of Massachusetts.
- G** To intervene in an NRC proceeding, a petitioner must, in addition to demonstrating standing, submit at least one contention meeting the requirements of 10 C.F.R. § 2.309(f)(1). Failure of a contention to meet any of the requirements of section 2.309(f)(1) is grounds for its dismissal.
- H** The "strict contention rule serves multiple interests," including, first, focusing the hearing process on real disputes susceptible of resolution in an adjudication (for example, a petitioner may not demand an adjudicatory hearing to attack generic NRC requirements or regulations, or to express generalized grievances about NRC policies); second, by requiring detailed pleadings, putting other parties in the proceeding on notice of the petitioner's specific grievances and thereby giving them a good idea of the claims they will be either supporting or opposing; and, third, helping to ensure that full adjudicatory hearings are triggered only by those able to proffer at least some minimal factual and legal foundation in support of their contentions.
- I** Although the February 2004 revision of the NRC procedural rules no longer incorporates provisions formerly found in 10 C.F.R. § 2.714(a)(3), (b)(1), which permitted the amendment and supplementation of petitions and filing of contentions after the original filing of petitions, they contain essentially the same substantive admissibility standards for contentions, which are now found in 10 C.F.R. § 2.309(f), and which are discussed in an Appendix to the Memorandum and Order that also addresses various case law interpreting the requirements in question.
- J** The regulatory authority relating to license renewal is found in 10 C.F.R. Parts 51 and 54. Part 54 concerns the "Requirements for Renewal of Operating Licenses for Nuclear Power Plants," and addresses safety-related issues in license renewal proceedings. Part 51, concerning "Environmental Protection Regulations for Domestic Licensing and Related Regulatory Functions," addresses the environmental aspects of license renewal.
- K** As described by the Commission in the license renewal adjudicatory proceeding of *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), CLI-01-17, 54 NRC 3 (2001), the NRC license renewal safety review is focused "upon those potential detrimental effects of aging that are not routinely addressed by ongoing regulatory oversight programs," which the Commission considers

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

“the most significant overall safety concern posed by extended reactor operation,” and on “plant systems, structures, and components for which current [regulatory] activities and requirements may not be sufficient to manage the effects of aging in the period of extended operation.” An issue can be related to plant aging and still not warrant review at the time of a license renewal application, if an aging-related issue is “adequately dealt with by regulatory processes” on an ongoing basis. For example, if a structure or component is already required to be replaced “at mandated, specified time periods,” it would fall outside the scope of license renewal review.

- L The regulatory provisions relating to the environmental aspects of license renewal arise out of the requirement that the National Environmental Policy Act (NEPA), 42 U.S.C. § 4332(C), places on federal agencies to “include in every recommendation or report on . . . major Federal actions significantly affecting the quality of the human environment, a detailed statement by the responsible official on . . . the environmental impact of the proposed action . . . .” As noted by the Supreme Court in *Robertson v. Methow Valley Citizens Council*, 490 U.S. 332, 349 (1989), the “statutory requirement that a federal agency contemplating a major action prepare such an environmental impact statement [EIS] serves NEPA’s ‘action-forcing’ purpose in two important respects. . . . It ensures that the agency, in reaching its decision, will have available, and will carefully consider, detailed information concerning significant environmental impacts; it also guarantees that the relevant information will be made available to the larger audience that may also play a role in both the decisionmaking process and the implementation of that decision.”
- M Although the requirements of NEPA are directed to federal agencies and thus the primary duties of NEPA fall on the NRC Staff in NRC proceedings, the initial requirement to analyze the environmental impacts of an action, including license renewal, is directed to applicants, and 10 C.F.R. § 51.53(c) requires a license renewal applicant to submit with its application an environmental report (ER), which “must contain a description of the proposed action, including the applicant’s plans to modify the facility or its administrative control procedures as described in accordance with § 54.21,” and “describe in detail the modifications directly affecting the environment or affecting plant effluents that affect the environment.”
- N Environmental issues identified as “Category 1,” or “generic,” issues in Appendix B to Subpart A of Part 51 are not within the scope of a license renewal proceeding. On these issues the Commission found that it could draw generic conclusions that are applicable to nuclear power plants generally. Thus these issues need not be repeatedly assessed on a plant-by-plant basis, and license renewal applicants may in their ERs refer to and adopt the generic environmental impact findings found in Table B-1, Appendix B, for all Category 1 issues, with the following exception: as required by 10 C.F.R. § 51.53(c)(3)(iv), ERs must also contain “any new and significant information regarding the environmental impacts of license renewal of which the applicant is aware,” even if this concerns a Category 1 issue.
- O The Commission was not able to make generic environmental findings on issues identified as “Category 2,” or “plant specific,” issues in Appendix B to Subpart A, and thus these issues are within the scope of license renewal, and applicants must provide a plant-specific review of them. These issues are characterized by the Commission as involving environmental impact severity levels that could differ significantly from plant to plant, or impacts for which additional plant-specific mitigation measures should be considered.
- P As required under 10 C.F.R. § 51.95(c), the Commission in 1996 adopted a “Generic Environmental Impact Statement for License Renewal of Nuclear Plants” (GEIS), published as NUREG-1437, which provides data supporting the table of Category 1 and 2 issues in Appendix B. Issuance of the 1996 GEIS was part of an amendment of the requirements of Part 51 undertaken by the Commission to establish environmental review requirements for license renewals “that were both efficient and more effectively focused.”
- Q Section 51.103 of 10 C.F.R. defines the requirements for the “record of decision” relating to any license renewal application, including the standard that the Commission, in making such a decision pursuant to Part 54, “shall determine whether or not the adverse environmental impacts of license renewal are so great that preserving the option of license renewal for energy planning decisionmakers would be unreasonable.”
- R Contentions that the Applicant’s ER fails to satisfy NEPA because it does not address the environmental impacts of severe spent fuel pool accidents, and fails to address severe accident mitigation alternatives (SAMAs) that would reduce the potential for spent fuel pool water loss and fires, are found inadmissible, on two grounds, neither of which is addressed by relevant rules, but both of which are mandated by relevant Commission precedent in the *Turkey Point* license renewal proceeding. First, the

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

Commission interpreted the term, "severe accidents," to encompass only reactor accidents and not spent fuel pool accidents, which fall within the analysis of the generic Category 1 issue of onsite storage of spent fuel. Second, the Commission has stated, notwithstanding the responsibility of an applicant in its ER (and the NRC Staff in the supplemental EIS that it must prepare) to address "new and significant information" relating even to Category 1 issues, that an alleged failure to address such "new and significant information" does not give rise to an admissible contention, absent a waiver of the rule in 10 C.F.R. § 51.53(c)(3)(i) that Category 1 issues need not be addressed in a license renewal, and no waiver was requested, because the matters at issue were not considered to involve "special circumstances with respect to the subject matter of the particular proceeding," as required by 10 C.F.R. § 2.335(b).

S A contention, that Applicant's aging management program is inadequate with regard to aging management of buried pipes and tanks that contain radioactively contaminated water because it does not provide for monitoring wells that would detect leakage, is admitted, based on its being within the scope of license renewal, and sufficiently supported as required under the contention admissibility standards of 10 C.F.R. § 2.309(f)(1). In litigation of this contention, scientific articles and reports, as well as the existence of leaks at other facilities and the response to those leaks, may, along with whatever other evidence and expert testimony is provided, be relevant evidence on the factual issues of whether Applicant's aging management program for underground pipes and tanks is satisfactory or deficient, and whether as a result the sort of monitoring wells that Petitioner seeks should be included in this program.

T A contention, that Applicant's aging management program fails to adequately assure the continued integrity of the drywell liner for the requested license extension, is denied, because it fails to meet the requirement of 10 C.F.R. § 2.309(f)(vi) that sufficient information be shown to demonstrate that a genuine dispute exists with the Applicant on a material issue of law or fact. Applicant provided a detailed application amendment on how it addressed the matter, and Petitioner failed to state with any specificity or provide information showing how the actions and proposed actions of the Applicant do not comply with the Interim Staff Guidance that Petitioner relied on in support of its contention. A licensing board is not permitted to draw any inferences on behalf of a petitioner, and in the absence of any more specific statement than has been provided, showing how the specific actions of Applicant fall short, or some nexus with problems at other plants, the contention is found to be lacking in its failure to show any genuine dispute on a material issue of fact relating to the matters at issue.

U A contention, that Applicant's severe accident mitigation alternatives (SAMA) analysis for the plant is deficient regarding input data on evacuation times, economic consequences, and meteorological patterns, resulting in incorrect conclusions about the costs versus benefits of possible mitigation alternatives such that further analysis is called for, is admitted. SAMAs are within the scope of license renewal as a Category 2 issue; Petitioner is found to have raised questions about input data that are material in these three areas because they concern significant health and safety issues that affect the outcome of the proceeding; and Petitioner is found to have adequately supported its contention under the contention admissibility standards of 10 C.F.R. § 2.309(f)(1).

V That some of the information provided by Petitioner on evacuation-related issues is apparently in conflict with some of the data taken by Applicant from the plant's emergency plan is found not to preclude its being considered, because, while emergency planning has been found in the *Turkey Point* proceeding to be "one of the *safety issues* that need not be re-examined within the context of license renewal," what is challenged in this contention is whether particular bits of information taken from such a plan are sufficiently accurate for use in computing the health and safety consequences of an accident, as an *environmental issue*. Because this challenge is focused upon the accuracy of certain assumptions and input data used in the SAMA computations and how they affect the validity of the SAMA analysis under NEPA, it is found to be appropriate in the three areas admitted.

W A contention, that new and significant information about cancer rates in communities around the plant shows that another 20 years of operations may result in greater offsite radiological impacts on human health than was previously known, is denied, because it attempts to challenge both generic findings made in the GEIS, and NRC dose limit rules, without a waiver. Petitioner conceded that it was not suggesting that radiological releases from the plant are greater than currently allowed by the NRC regulations, and thus its contention regarding radiological releases must necessarily be construed as a challenge to the current NRC dose limit regulations found in 10 C.F.R. Part 20, and without a waiver under 10 C.F.R. § 2.335, no request for which was submitted, such a challenge is impermissible in an adjudication proceeding.

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- LBP-06-24 DOMINION NUCLEAR NORTH ANNA, LLC (Early Site Permit for North Anna ESP Site), Docket No. 52-008-ESP (ASLBP No. 04-822-02-ESP); EARLY SITE PERMIT; October 24, 2006; MEMORANDUM AND ORDER (Granting Summary Disposition and Terminating Contested Proceeding)
- A Given the Applicant's amendment to its environmental report whereby it changed its cooling method for the proposed reactor from a once-through cooling water system that discharges heated water into the receiving water body to a no-discharge cooling system that uses a combination of wet and dry cooling towers, there remains no genuine dispute that there will be essentially no discharge of heated water, and therefore the Applicant is entitled to summary disposition as a matter of law.
- B The grant of the motion for summary disposition on the Intervenor's sole remaining contention terminates the contested portion of this proceeding for an Early Site Permit under Part 52. As an ESP permit is a type of construction permit, a mandatory hearing is required by Atomic Energy Act § 189a and thus the case will continue as an uncontested proceeding.
- LBP-06-25 DAVID GEISEN, Docket No. IA-05-052 (ASLBP No. 06-845-01-EA); ENFORCEMENT; October 31, 2006; MEMORANDUM AND ORDER (Ruling on Motion To Compel Production)
- A The NRC barred David Geisen, a former employee of the Davis-Besse Nuclear Power Station, from engaging in NRC-licensed activities for 5 years, effective immediately. After Mr. Geisen requested a hearing before the Licensing Board to contest the validity of that enforcement order, the NRC Staff gave him a copy of the Office of Investigations (OI) 2003 Report regarding the incident at issue, but redacted parts of the report, claiming "deliberative process" and law enforcement "personal privacy" privileges. On Mr. Geisen's motion to compel the Staff to produce the full, unredacted version, the Board (1) upholds the Staff's claim with respect to the deliberative process privilege but (2) rejects it as to the personal privacy privilege (because a protective order can fully preserve the modest privacy interests implicated).
- B Parties in NRC adjudications are generally entitled to obtain, through discovery and other pretrial activities, "the fullest possible knowledge of the issues and facts before trial." *Hickman v. Taylor*, 329 U.S. 495, 501 (1947). *See also* 10 C.F.R. § 2.705(b)(1).
- C Qualified privilege materials may be excluded from discovery, depending on the particular circumstances presented. The greater the interest protected by the privilege, the more compelling the need and the other circumstances must be to overcome it.
- D An assertion that material can be withheld must expressly state the specific privilege being claimed. A privilege which is not claimed is waived.
- E When materials are withheld from discovery, "sufficient information for assessing the claim of privilege or protected status of the documents" must be provided to the requesting party. 10 C.F.R. § 2.336(b)(5). Failure to do so in the future might well lead to consideration of rejection of the claimed privilege.
- F The general purpose of the deliberative process privilege is to protect frank agency deliberations from public scrutiny and thus to "prevent injury to the quality of agency decisions." *National Labor Relations Board v. Sears, Roebuck & Co.*, 421 U.S. 132, 151 (1975).
- G Purely factual material is not generally protected by the deliberative process privilege, but exceptions exist. These include (1) factual materials too intertwined with deliberative discussions and (2) summaries of factual materials compiled to assist in agency decisionmaking.
- H In order to earn recognition for the deliberative process privilege, a sufficiently high-ranking person must sign the affidavit asserting the privilege.
- I The affidavit asserting the deliberative process privilege should provide the basis for the withholding and a statement of specific harm, applicable to the circumstances of the case, that would result from disclosure.
- J The NRC's regulatory scheme for balancing privacy interests (arising in a law enforcement context) against the need for party discovery combines elements of both FOIA and the Federal Rules of Civil Procedure. Privacy interests are defined using FOIA's language but their weight is tempered by the capability in the discovery process of making limited disclosure to a litigant under a protective order instead of public disclosure. The privacy interest that would remain threatened after surrounding it with a protective order is weighed against the other party's need for disclosure.
- K The subject of the enforcement action has a property interest in his employment-related license sufficient to invoke the procedural protections of the Due Process Clause, the vindication of which invokes a public interest. *See Barry v. Barchi*, 443 U.S. 55, 64 (1979).

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- L There is an important public interest in the proper resolution of all aspects of what occurred at a nuclear facility when serious safety and communication issues are involved.
- M Although an initial position of protecting privacy may be founded on mere theoretical constructs, when a fact-based challenge is made, concrete or specific analysis is needed to effectively counter the challenge and to establish the privacy interests involved.
- N Where a protective order precludes public disclosure, the strength of the privacy interest diminishes because any threatened harm in releasing the information can be virtually eliminated.
- O With a confidential protection order in place, weighing the privacy invasion from public disclosure against a party's need for the materials is no longer appropriate. Instead, there is an assumption that disclosure only to the other parties will only minimally, if at all, harm that interest.
- P Both federal courts and NRC Boards will normally assume that protective orders will not be breached; to counter that assumption, the withholding party must show evidence of the likelihood of a breach.
- Q The universal understanding of relevance, applicable to the NRC Staff and others, includes matters that "appear[ ] reasonably calculated to lead to the discovery of admissible evidence." 10 C.F.R. § 2.705(b)(1). *See also* Fed. R. Civ. P. 26(b)(1).
- R The chilling effect upon frank government discussions can be just as great when the release is limited only to those involved in particular litigation as when the documents are released publicly.
- S Deliberative process protects several strong interests, including an agency's interest in preserving the integrity of its consultative functions and the public's interest in good government. These protected interests are so strong that federal courts and NRC adjudicators are generally unwilling to compel discovery of deliberative materials unless there is a particular and compelling reason for the privilege to be suspended.
- T The law generally recognizes a personal privacy interest not to have allegations of unlawful activity publicly disseminated after they have been shown to be insubstantial. But a privacy interest does not exist as a generalized theory; instead, it depends on such specific factors as the impact of the information's disclosure upon particular individuals and in particular circumstances.
- U When the investigation is open and notorious, the interview transcripts are not confidential, and the public has constructive knowledge that those interviewed had a sufficient relationship to the root problem to warrant being interviewed, the right of personal privacy being asserted is weak compared to the privacy rights in other "unsubstantiated allegation" circumstances.
- V The privacy interests for which protection is sought can be amply preserved by a protective order that limits the disclosures to those involved in this litigation and thus having a need to know.
- W Where the privilege and the need may be equally weak, but the privilege can be protected by other means, we return to the norms of full and open discovery, so that relevancy, not need, becomes the determinative standard.
- X The subject of an enforcement order may benefit from more knowledge and perspective about others' roles in an incident because it might help him put his actions in a transactional context that would lessen or eliminate his responsibility for any missteps.
- Y Although the subject of an NRC enforcement proceeding may attempt to take advantage of his discovery rights in the civil proceeding to obtain information also useful in his criminal proceeding, that is no reason to deny him that discovery because he asserted his Fifth Amendment right not to respond to discovery requests directed to him, even if other procedural consequences might flow from that action.
- LBP-06-26 STEVEN P. MOFFITT, Docket No. IA-05-054 (ASLBP No. 06-847-03-EA); ENFORCEMENT; December 13, 2006; ORDER (Approving Proposed Settlement and Dismissing Proceeding)
- A In this challenge to an NRC Staff immediately effective enforcement order prohibiting a former Davis-Besse employee from working in NRC-licensed activities for 5 years, the Licensing Board finds a proposed settlement to be in the public interest, so that no adjudication is required.
- B In order for a licensing board to review a settlement agreement for compliance with agency regulations, including 10 C.F.R. §§ 2.203 and 2.338, and to evaluate whether the agreement is plainly in the public interest, the wording of the agreement must be clear enough for the board to ascertain unambiguously what its terms signify.
- C The apparent inconsistency created by an unexplained lapse of several years between the Staff's completion of a thorough investigation and its initiation of an immediately effective enforcement order may jeopardize both public confidence in government decisionmaking and public protection from asserted safety threats, and may require an explanation if the immediate effectiveness of the order were to be challenged.

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- LBP-06-27 U.S. ARMY (Jefferson Proving Ground Site), Docket No. 40-8838-MLA (ASLBP No. 00-776-04-MLA); MATERIALS LICENSE AMENDMENT; December 20, 2006; MEMORANDUM AND ORDER (Determining Scope of Evidentiary Hearing)
- A Neither the Rules of Practice nor Commission precedent mandates the consideration at the threshold of every basis assigned for every contention advanced by the hearing requestor.
- B The Commission has made it clear that “[t]he adequacy of the applicant’s license application, not the NRC staff’s safety evaluation, is the safety issue in any licensing proceeding, and under longstanding decisions of the agency, contentions on the adequacy of the [content of the Safety Evaluation Report] are not cognizable in a proceeding.” 69 Fed. Reg. 2182, 2202 (Jan. 14, 2004).
- C The National Environmental Policy Act requires the preparation of an Environmental Impact Statement (EIS) for all “major Federal actions significantly affecting the quality of the human environment.” 42 U.S.C. § 4332(2)(C) (2000). Council on Environmental Quality regulations state that, in determining whether to prepare an EIS, the Federal agency shall prepare an Environmental Assessment, which will “briefly provide sufficient evidence and analysis for determining whether to prepare an [EIS] or a finding of no significant impact.” 40 C.F.R. § 1508.9(a)(1).
- D It might well be that, in order for a petitioner to raise an admissible contention with respect to a Staff finding of no significant impact, it need not demonstrate that there will in fact be a significant environmental impact as a consequence of the proposed action; however, it must “allege[] facts which, if true, show that the proposed project *may* significantly degrade some human environmental factor.” *Steamboaters v. FERC*, 759 F.2d 1382, 1392 (9th Cir. 1985).
- LBP-06-28 EXELON GENERATION COMPANY, LLC (Early Site Permit for Clinton ESP Site), Docket No. 52-007-ESP (ASLBP No. 04-821-01-ESP); EARLY SITE PERMIT; December 28, 2006; INITIAL DECISION (Uncontested Issues)
- A In this proceeding regarding the application of Exelon Generation Company, LLC (Exelon) for an Early Site Permit, under 10 C.F.R. Part 52, for its site in DeWitt County, Illinois, the Licensing Board sets forth its findings on certain uncontested safety and environmental matters relative to the Exelon application and authorizes the Director of Nuclear Reactor Regulation to issue Exelon an early site permit for the Clinton ESP site.
- B As provided in 10 C.F.R. § 52.39, an ESP allows a future applicant for a construction permit (“CP”), an operating license (“OL”), or a combined license (“CL” or “COL”), to seek early NRC review and approval of some siting and environmental issues, and therefore, to “bank” a site for up to 20 years in anticipation of its future reference in an application for a CP or COL. *See* 10 C.F.R. § 52.27.
- C Section 52.17 of 10 C.F.R. sets forth the required content of an ESP application. Section 52.17 also allows an ESP applicant to make a number of choices regarding the scope, and therefore the content, of its ESP application. One such choice relates to the development of an emergency plan (“EP”). Section 52.17(b)(2) states that an ESP applicant may propose for review and approval by the NRC (i) major features of its emergency plan, or (ii) a complete and integrated emergency plan.
- D An applicant may also, according to 10 C.F.R. § 52.17, choose to submit “a plan for redress of the site,” which if accepted as part of an approved ESP would allow an applicant to perform certain preconstruction activities (as defined by 10 C.F.R. § 50.10(e)(1)) at the site, without additional authorization.
- E The genesis of the mandatory hearing requirement is section 189a(1)(A) of the Atomic Energy Act of 1954 (AEA), which provides, in relevant part, that “[t]he Commission shall hold a hearing after thirty days’ notice and publication once in the Federal Register, on each application . . . for a construction permit for a [production or utilization] facility.” 42 U.S.C. § 2239(a). In the context of an Early Site Permit, Commission regulations implement the mandatory hearing requirement of section 189a through 10 C.F.R. § 52.21, which provides, in relevant part, that the Board shall “determine whether, taking into consideration the site criteria contained in 10 CFR part 100, a reactor, or reactors, having characteristics that fall within the parameters for the site[, and which meets the terms and conditions proposed by the Staff in the SER,] can be constructed and operated without undue risk to the health and safety of the public.” Additionally, 10 C.F.R. § 2.104(b) sets forth the Commission’s procedural regulations specifying the issues to be addressed in uncontested proceedings.
- F For *uncontested* license applications, section 52.21 and the notice requirements of section 2.104(b)(2) (and the Notice of Hearing itself) outline the Board’s obligation to “determine”: “(i) Without conducting a de novo evaluation of the application, whether the application and the record of the proceeding contain sufficient information, and the review of the application by the Commission’s staff has been adequate to

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- support affirmative findings on (b)(1)(i) through (iii) specified in [10 C.F.R. § 2.104] and a negative finding on (b)(1)(iv) specified in [10 C.F.R. § 2.104] proposed to be made and the issuance of the construction permit proposed by the Director of Nuclear Reactor Regulation or Director of Nuclear Material Safety and Safeguards, as appropriate, and (ii) If the application is for a construction permit for a nuclear power reactor, a testing facility, a fuel processing plant, a uranium enrichment facility, or other facility whose construction or operation has been determined by the Commission to have a significant impact on the environment, whether the review conducted by the Commission pursuant to the National Environmental Policy Act (NEPA) has been adequate.” 10 C.F.R. § 2.104(b)(2).
- G Section 51.105(a)(1)(3) and the notice requirements of section 2.104(b)(3) (and the Notice of Hearing itself) outline the three NEPA-related matters the Board is required to address: “(i) Determine whether the requirements of section 102(2) (A), (C), and (E) of [NEPA] and subpart A of part 51 of this chapter have been complied with in the proceeding; (ii) Independently consider the final balance among conflicting factors contained in the record of the proceeding with a view to determining the appropriate action to be taken; and (iii) Determine whether the construction permit should be issued, denied, or appropriately conditioned to protect environmental values.” See 10 C.F.R. § 2.104(b)(3).
- H Our regulations require the licensing board to perform two types of inquiries with respect to safety matters: *first*, “whether the application and the record of the proceeding contain sufficient information, . . . to support a negative finding on Safety Issue 1 (whether the issuance of an ESP will be inimical to the common defense and security or to the health and safety of the public), and an affirmative finding on Safety Issue 2 (whether, taking into consideration the site criteria contained in 10 CFR Part 100, a reactor, or reactors, having characteristics that fall within the parameters for the site, can be constructed and operated without undue risk to the health and safety of the public),” and *second*, “whether . . . the review of the application by the Commission’s staff has been adequate to support” those same findings. 68 Fed. Reg. 69,426, 69,427 (Dec. 12, 2003); see also CLI-05-17, 62 NRC 5, 39 (2005); 10 C.F.R. § 2.104(b).
- I The Commission (a) advised that a board’s task is “to constitute a check on the understanding of the staff,” (b) cautioned that “‘truly independent review’ . . . does not mean that multiple reviews of the same *uncontested* issues — first by the NRC Staff, then by the ACRS, and finally by a licensing board — would be necessary to serve this purpose [of constituting a check on the understanding of the Staff],” and (c) summarized that “boards should conduct a simple ‘sufficiency’ review of uncontested issues.” CLI-05-17, 62 NRC at 39-40.
- J Further clarifying how we are to approach this task, the Commission noted that with respect to uncontested proceedings — even as to the three “baseline” NEPA issues on which a Board is required under our regulations to make its own independent judgment — “the NRC Staff’s underlying technical and factual findings are not open to board reconsideration unless, after a review of the record, the board finds the NRC Staff review inadequate or its findings insufficient.” CLI-05-17, 62 NRC at 39-40. The Commission reminded the Boards that, although we are to ensure that the Staff made findings with reasonable support in logic and in fact, “[t]his is not to say that we expect our licensing boards to follow a cursory, hands-off approach . . . . On the contrary, . . . we anticipate that our boards will carefully probe those findings by asking appropriate questions and by requiring supplemental information when necessary . . . .” *Id.* at 40.
- K We have interpreted our charge to be to determine whether the record enables us to conclude that the Staff had a reasonable basis for its conclusions, assuming that such a reasonable basis would be present where the Standard Review Plan (SRP) and applicable Regulatory Guides (or other guidance documents) were specifically followed, and where the facts underlying its determinations were clear and its decision logically flowed from those facts and the applicable regulatory guidance. Where the SRP had not been followed, no specific Regulatory Guide was applicable, a Regulatory Guide required adaptation, or the Staff’s logic was incomplete or unclear, the Board sought a thorough explanation of the Staff’s rationale for the process it ultimately adopted along with its conclusions, and examined that process and those conclusions to ensure they were well founded in fact and logic.
- L By identifying areas of the Staff’s Standard Review Plan that were precisely, prescriptively followed, because following that prescriptive process would be reasonable and logical for both the Staff and the Applicant, and by giving reasonable deference to Staff determinations (as the Commission has advised, see CLI-05-17, 62 NRC at 34, 36) when that process was indeed followed, this Board was able, in the absence of obvious gaps in the logic of the Staff as set out in the record, to conclude for those areas that no further scrutiny would be required. In contrast, identification of those areas where there was (1) a deviation

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

from an SRP or from the methodologies set out in an ordinarily prescribed regulatory guidance document, or (2) no applicable regulatory guidance document, required that we more closely scrutinize the factual underpinnings of the Staff's and the Applicant's documentation and their conclusions.

M The Commission directed, in this regard, that "licensing boards must reach their own independent determination on uncontested NEPA 'baseline' questions — i.e., whether the NEPA process 'has been complied with,' what is the appropriate 'final balance among conflicting factors,' and whether the 'construction permit should be issued, denied or appropriately conditioned.'" CLI-05-17, 62 NRC at 45. In reaching these independent determinations, however, "boards should not second-guess underlying technical or factual findings by the NRC Staff," and "[t]he only exceptions to this would be if the reviewing board found the Staff review to be incomplete or the Staff findings to be insufficiently explained in the record." *Id.*

N Section 102(2)(A) of NEPA requires all federal agencies to "utilize a systematic, interdisciplinary approach which will insure the integrated use of the natural and social sciences and the environmental design arts in planning and in decisionmaking which may have an impact on man's environment." 42 U.S.C. § 4332(2)(A).

O Section 102(2)(C) of NEPA requires a federal agency to address in its environmental impact statement: (1) the environmental impact of the proposed action; (2) any adverse environmental effects which cannot be avoided should the proposal be implemented; (3) alternatives to the proposed action; (4) the relationship between local short-term uses of man's environment and the maintenance and enhancement of long-term productivity; and (5) any irreversible and irretrievable commitments of resources which would be involved in the proposed action should it be implemented. 42 U.S.C. § 4332(2)(C).

P NEPA section 102(2)(C) also requires that an agency "consult with and obtain the comments of any Federal agency which has jurisdiction by law or special expertise with respect to any environmental impact involved." 42 U.S.C. § 4332(2)(C).

Q Section 102(2)(E) of NEPA requires a federal agency to "study, develop, and describe appropriate alternatives to the recommended courses of action in any proposal which involves unresolved conflicts concerning alternative uses of available resources." 42 U.S.C. § 4332(2)(E). At the ESP stage, NRC regulations expressly excuse an applicant from examination, in its environmental report, of the benefits of the proposed project, e.g., the need for power, or analysis regarding energy alternatives, and provide that the relevant regulations "may not be construed to require that . . . the draft or final environmental impact statement include an assessment of the benefits of the proposed action." 10 C.F.R. § 52.21.

LBP-07-1 SYSTEM ENERGY RESOURCES, INC. (Early Site Permit for Grand Gulf ESP Site), Docket No. 52-009-ESP (ASLBP No. 04-823-03-ESP); EARLY SITE PERMIT; January 26, 2007; INITIAL DECISION (Authorizing the Issuance of the Grand Gulf Early Site Permit)

A Under section 189a of the Atomic Energy Act (AEA), the Commission "shall hold a hearing . . . on each application under Section 103 or 104b for a construction permit for a facility." 42 U.S.C. § 2239(a)(1)(A) (2000). NRC regulations define Early Site Permits as "partial construction permits" and, as such, they are subject to the hearing requirements that are mandated under section 189a of the AEA and "to all procedural requirements in 10 C.F.R. Part 2 which are applicable to construction permits." 10 C.F.R. § 52.21.

B When a proceeding involving an application for a construction permit is uncontested the Board will not conduct a "de novo review"; rather it "conduct[s] a simple 'sufficiency' review of [the] uncontested issues." *Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-17, 62 NRC 5, 39 (2005). The Board will "inquire whether the NRC Staff performed an adequate review and made findings with reasonable support in logic and fact." *Id.*

C The Board "must narrow its inquiry to those topics or sections in [NRC] Staff documents that it deems most important and should concentrate on portions of the documents that do not on their face adequately explain the logic, underlying facts, and applicable regulations and guidance." *Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-06-20, 64 NRC 15, 21-22 (2006).

D With respect to matters involving safety — i.e., issues pursuant to the Atomic Energy Act — the Board will determine whether the application and the record of the proceeding contain sufficient information and the review of the application by the NRC Staff has been adequate to assure that: (1) the issuance of an ESP will not be inimical to the common defense and security or to the health and safety of the public (Safety Issue 1); and (2) taking into consideration the site criteria contained in 10 C.F.R. Part 100, a reactor, or reactors, having characteristics that fall within the parameters for the site, can be

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

constructed and operated without undue risk to the health and safety of the public (Safety Issue 2). 69 Fed. Reg. 2636 (Jan. 16, 2004).

E With respect to matters involving the environment — i.e., issues arising from the National Environmental Policy Act (NEPA) — the Board will: (1) determine whether the requirements of section 102(2)(A), (C), and (E) of NEPA and Subpart A of 10 C.F.R. Part 51 have been complied with in the proceeding; (2) independently consider the final balance among conflicting factors contained in the record of the proceeding with a view to determining the appropriate action to be taken; (3) determine, after considering reasonable alternatives, whether the ESP should be issued, denied, or appropriately conditioned to protect environmental values; (4) determine whether the record of these proceedings contains sufficient information to conclude that the NEPA review conducted by the NRC Staff has been adequate. 69 Fed. Reg. 2636 (Jan. 16, 2004).

F For purposes of the Environmental Impact Statement, the potential construction and operation of the Early Site Permit plant or plants is the proposed action that must be the focus of the Board’s review under the National Environmental Policy Act (42 U.S.C. § 4332(2)(C)).

G The NRC Staff is required to prepare an Environmental Impact Statement (EIS) during its review of an Early Site Permit (ESP) application (10 C.F.R. § 52.18) in accordance with 10 C.F.R. Part 51. The EIS must focus on the environmental effects of construction and operation of reactors that have the characteristics of the postulated site parameters, and must include an evaluation of alternatives to determine whether there are any obviously superior options to the proposed action. The Staff’s EIS analysis for the ESP need not, however, include an assessment of the benefits (e.g., need for power). *See* 10 C.F.R. §§ 52.17, 52.18.

H Even where an Early Site Permit does not authorize any construction activity, the NRC Staff is required by Council on Environmental Quality regulations to consider actions that are related to other actions that could lead to a significant impact on the environment. *See* 40 C.F.R. § 1508.27(b)(7); *see also* 10 C.F.R. § 51.10.

I The Board — in reaching its determinations on the “baseline” National Environmental Policy Act issues — will not second-guess the underlying technical or factual findings of the NRC Staff. When, however, the reviewing Board finds that the Staff’s review is incomplete or that the Staff findings lack sufficient explanation, it will make its own determination of technical and factual findings.

J Under section 102(2)(A) of the National Environmental Policy Act, agencies are required to use a “systematic, interdisciplinary approach which will insure the integrated use of the natural and social sciences and the environmental design arts in planning and in decisionmaking which may have an impact on man’s environment.” 42 U.S.C. § 4332(2)(A).

K Under section 102(2)(C) of the National Environmental Policy Act, agencies are required to include a detailed statement on: (1) “the environmental impact of the proposed action”; (2) “any [unavoidable] adverse environmental effects”; (3) “alternatives to the proposed action”; (4) “the relationship between local short-term uses of man’s environment and the maintenance and enhancement of long-term productivity”; and (5) “irreversible and irretrievable commitments of resources which would be involved in the proposed action should it be implemented.” 42 U.S.C. § 4332(2)(C)(i)-(v).

L Under section 102(2)(E) of the National Environmental Policy Act, agencies are required to “study, develop, and describe appropriate alternatives to recommended courses of action in any proposal which involves unresolved conflicts concerning alternative uses of available resources.” 42 U.S.C. § 4332(E).

M In an uncontested proceeding for an Early Site Permit (ESP), the Board will independently consider the final balance among the conflicting factors, which include: (1) relative magnitude of the environmental impacts of the proposed action (i.e., construction and operation of one or more ESP base load nuclear plants at the proposed site) as compared to other energy, plant design, and site alternatives; (2) unavoidable adverse environmental impacts during construction and operation of the plant or plants and the mitigative actions proposed to minimize their effects; (3) potential cumulative impacts in the context of past, present, and future actions at the proposed site; (4) magnitude of the irreversible and irretrievable commitment of resources; and (5) relationship between short-term uses and long-term productivity of the human environment.

LBP-07-2 ENTERGY NUCLEAR VERMONT YANKEE, LLC, and ENTERGY NUCLEAR OPERATIONS INC. (Vermont Yankee Nuclear Power Station), Docket No. 50-271-OLA (ASLBP No. 04-832-02-OLA); OPERATING LICENSE AMENDMENT; February 26, 2007; INITIAL DECISION (Ruling on NEC Contention 3)

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- A Criterion XI of Appendix B to 10 C.F.R. Part 50 and 10 C.F.R. § 50.54(a)(1) require that each nuclear power plant implement a quality assurance program that includes “all testing required to demonstrate that the structures, systems and components will perform satisfactorily in service” and, pursuant to these requirements, the Staff normally requires that an applicant perform two large transient tests (a main steam isolation valve test and a generator load rejection test) before an extended power uprate can be granted. See NUREG-0800, “Standard Review Plan for the Review of Safety Analysis Reports for Nuclear Power Plants,” Draft Revision 0 (Dec. 2002), § 14.2. In this case, the Intervenor challenged the Staff’s decision to exempt the Applicant from large transient testing. After hearing all of the evidence, the Board is persuaded that these large transient tests are not required to demonstrate that the structures, systems, and components of the Vermont Yankee Nuclear Power Station will perform satisfactorily in uprated service. Thus, the contention is denied.
- LBP-07-3 SOUTHERN NUCLEAR OPERATING COMPANY (Early Site Permit for Vogtle ESP Site), Docket No. 52-011-ESP (ASLBP No. 07-850-01-ESP-BD01); EARLY SITE PERMIT; March 12, 2007; MEMORANDUM AND ORDER (Ruling on Standing and Contentions)
- A In this 10 C.F.R. Part 52 proceeding regarding the application of Southern Nuclear Operating Company (SNC) for an early site permit (ESP) for an additional two reactors at the Vogtle Electric Generating Plant site, ruling on a petition filed jointly by five public interest organizations seeking to intervene to contest the SNC ESP request, the Licensing Board concludes that, having established the requisite standing and proffering two admissible environmental contentions, each of the Petitioners is admitted as a party to the proceeding.
- B In determining whether an individual or organization should be granted party status in a proceeding based on standing “as of right,” the agency has applied contemporaneous judicial standing concepts that require a participant to establish (1) it has suffered or will suffer a distinct and palpable injury that constitutes injury-in-fact within the zones of interests arguably protected by the governing statutes (e.g., the Atomic Energy Act of 1954 (AEA), the National Environmental Policy Act of 1969 (NEPA)); (2) the injury is fairly traceable to the challenged action; and (3) the injury is likely to be redressed by a favorable decision. See *Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), CLI-96-1, 43 NRC 1, 6 (1996).
- C In cases involving the possible construction or operation of a nuclear power reactor, proximity to the proposed facility has been considered sufficient to establish the requisite standing elements. See *Florida Power & Light Co.* (St. Lucie Nuclear Power Plant, Units 1 and 2), CLI-89-21, 30 NRC 325, 329 (1989).
- D When an entity seeks to intervene on behalf of its members, that entity must show it has an individual member who can fulfill all the necessary standing elements and who has authorized the organization to represent his or her interests. See *Vermont Yankee Nuclear Power Corp.* (Vermont Yankee Nuclear Power Station), CLI-00-20, 52 NRC 151, 163 (2000).
- E In assessing a petition to determine whether these elements are met, which a presiding officer must do even though there are no objections to a petitioner’s standing, the Commission has indicated that a presiding officer is to “construe the petition in favor of the petitioner.” *Georgia Institute of Technology* (Georgia Tech Research Reactor, Atlanta, Georgia), CLI-95-12, 42 NRC 111, 115 (1995).
- F Section 2.309(f) of the Commission’s rules of practice specifies the requirements that must be met if a contention is to be deemed admissible. Specifically, a contention must provide (1) a specific statement of the legal or factual issue sought to be raised; (2) a brief explanation of its basis; (3) a concise statement of the alleged facts or expert opinions, including references to specific sources and documents, that support the petitioner’s position and upon which the petitioner intends to rely at hearing; and (4) sufficient information demonstrating that a genuine dispute exists in regard to a material issue of law or fact, including references to specific portions of the application that the petitioner disputes, or in the case when the application is alleged to be deficient, the identification of such deficiencies and supporting reasons for this belief. See 10 C.F.R. § 2.309(f)(1)(i), (ii), (v), and (vi). In addition, the petitioner must demonstrate that the issue raised in the contention is both “within the scope of the proceeding” and “material to the findings the NRC must make to support the action that is involved in the proceeding.” *Id.* § 2.309(f)(1)(iii)-(iv). Failure to comply with any of these requirements is grounds for dismissing a contention. See *Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-99-10, 49 NRC 318, 325 (1999); see also *Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1, 2, and 3), CLI-91-12, 34 NRC 149, 155-56 (1991).
- G An adjudication is not the proper forum for challenging applicable statutory requirements or the basic structure of the agency’s regulatory process. *Philadelphia Electric Co.* (Peach Bottom Atomic Power

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

Station, Units 2 and 3), ALAB-216, 8 AEC 13, 20, *aff'd in part on other grounds*, CLI-74-32, 8 AEC 217 (1974). Similarly, a contention that attacks a Commission rule, or which seeks to litigate a matter that is, or clearly is about to become, the subject of a rulemaking, is inadmissible. *See* 10 C.F.R. § 2.335; *Potomac Electric Power Co.* (Douglas Point Nuclear Generating Station, Units 1 and 2), ALAB-218, 8 AEC 79, 85, 89 (1974). This includes contentions that advocate stricter requirements than agency rules impose or that otherwise seek to litigate a generic determination established by a Commission rulemaking. *See Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), LBP-01-6, 53 NRC 138, 159 (2001); *Pacific Gas and Electric Co.* (Diablo Canyon Nuclear Power Plant, Units 1 and 2), LBP-93-1, 37 NRC 5, 29-30 (1993); *Public Service Co. of New Hampshire* (Seabrook Station, Units 1 and 2), LBP-82-106, 16 NRC 1649, 1656 (1982); *see also Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), CLI-96-7, 43 NRC 235, 251 (1996); *Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1, 2, and 3), LBP-91-19, 33 NRC 397, 410, *aff'd in part and rev'd in part on other grounds*, CLI-91-12, 34 NRC 149 (1991). By the same token, a contention that simply states the petitioner's views about what regulatory policy should be does not present a litigable issue. *See Peach Bottom*, ALAB-216, 8 AEC at 20-21 & n.33.

H All proffered contentions must be within the scope of the proceeding as defined by the Commission in its initial hearing notice and order referring the proceeding to the Licensing Board. *See* 10 C.F.R. § 2.309(f)(1)(iii); *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), CLI-00-23, 52 NRC 327, 329 (2000); *Duke Power Co.* (Catawba Nuclear Station, Units 1 and 2), ALAB-825, 22 NRC 785, 790-91 (1985). As a consequence, any contention that falls outside the specified scope of the proceeding must be rejected. *See Portland General Electric Co.* (Trojan Nuclear Plant), ALAB-534, 9 NRC 287, 289 n.6 (1979).

I It is the petitioner's obligation to present factual information and/or expert opinion necessary to support its contention. *See* 10 C.F.R. § 2.309(f)(1)(v); *Georgia Institute of Technology* (Georgia Tech Research Reactor, Atlanta, Georgia), LBP-95-6, 41 NRC 281, 305, *vacated in part and remanded on other grounds*, CLI-95-10, 42 NRC 1, and *aff'd in part*, CLI-95-12, 42 NRC 111 (1995). While a Board may appropriately view a petitioner's supporting information in a light favorable to the petitioner, failure to provide such information regarding a proffered contention requires that the contention be rejected. *See Palo Verde*, CLI-91-12, 34 NRC at 155. In this connection, neither mere speculation nor bare or conclusory assertions, even by an expert, alleging that a matter should be considered will suffice to allow the admission of a proffered contention. *See Fansteel, Inc.* (Muskogee, Oklahoma Site), CLI-03-13, 58 NRC 195, 203 (2003). If a petitioner neglects to provide the requisite support for its contentions, it is not within the Board's power to make assumptions of fact that favor the petitioner, nor may the Board supply information that is lacking. *See Palo Verde*, CLI-91-12, 34 NRC at 155; *Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), LBP-01-35, 54 NRC 403, 422 (2001); *Georgia Tech Research Reactor*, LBP-95-6, 41 NRC at 305.

J Providing any material or document as a basis for a contention, without setting forth an explanation of its significance, is inadequate to support the admission of the contention. *See Fansteel*, CLI-03-13, 58 NRC at 205. Along these lines, any supporting material provided by a petitioner, including those portions of the material that are not relied upon, is subject to licensing board scrutiny. *See Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), LBP-96-2, 43 NRC 61, 90 (1996), *rev'd in part on other grounds*, CLI-96-7, 43 NRC 235 (1996). Thus, the material provided in support of a contention will be carefully examined by a licensing board to confirm that it does indeed supply an adequate basis for the contention as asserted by the petitioner. *See Vermont Yankee Nuclear Power Corp.* (Vermont Yankee Nuclear Power Station), ALAB-919, 30 NRC 29, 48 (1989), *vacated in part on other grounds and remanded*, CLI-90-4, 31 NRC 333 (1990).

K Simply attaching material or documents as a basis for a contention, without setting forth an explanation of that information's significance, is inadequate to support the admission of the contention. *See Fansteel*, CLI-03-13, 58 NRC at 204-05. Along these lines, any supporting material provided by a petitioner, including those portions of the material that are not relied upon, is subject to Board scrutiny. *See Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), LBP-96-2, 43 NRC 61, 90 (1996), *rev'd in part on other grounds*, CLI-96-7, 43 NRC 235 (1996). Thus, the material provided in support of a contention will be carefully examined by the Board to confirm that on its face it does supply an adequate basis for the contention. *See Vermont Yankee Nuclear Power*

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- Corp.* (Vermont Yankee Nuclear Power Station), ALAB-919, 30 NRC 29, 48 (1989), *vacated in part on other grounds and remanded*, CLI-90-4, 31 NRC 333 (1990).
- L To be admissible, the regulations require that all contentions assert an issue of law or fact that is material to the outcome of a licensing proceeding, meaning that the subject matter of the contention must impact the grant or denial of a pending license application. See 10 C.F.R. § 2.309(f)(1)(iv). This requirement of materiality often dictates that any contention alleging deficiencies or errors in an application also indicate some significant link between the claimed deficiency and either the health and safety of the public or the environment. See *Yankee Nuclear*, LBP-96-2, 43 NRC at 75-76; see also *Pacific Gas and Electric Co.* (Diablo Canyon Power Plant Independent Spent Fuel Storage Installation), LBP-02-23, 56 NRC 413, 439-41 (2002), *petition for review denied*, CLI-03-12, 58 NRC 185, 191 (2003).
- M All properly formulated contentions must focus on the license application in question, challenging either specific portions of or alleged omissions from the application (including the Safety Analysis Report and the Environmental Report) so as to establish that a genuine dispute exists with the applicant on a material issue of law or fact. See 10 C.F.R. § 2.309(f)(1)(vi). Any contention that fails directly to controvert the application or that mistakenly asserts the application does not address a relevant issue can be dismissed. See *Sacramento Municipal Utility District* (Rancho Seco Nuclear Generating Station), LBP-93-23, 38 NRC 200, 247-48 (1993), *review declined*, CLI-94-2, 39 NRC 91 (1994); *Texas Utilities Electric Co.* (Comanche Peak Steam Electric Station, Unit 2), LBP-92-37, 36 NRC 370, 384 (1992).
- N Although licensing boards generally are to litigate “contentions” rather than “bases,” it has been recognized that “[t]he reach of a contention necessarily hinges upon its terms coupled with its stated bases.” *Public Service Co. of New Hampshire* (Seabrook Station, Units 1 and 2), ALAB-899, 28 NRC 93, 97 (1988), *aff’d sub nom. Massachusetts v. NRC*, 924 F.2d 311 (D.C. Cir.), *cert. denied*, 502 U.S. 899 (1991); see also *Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-28, 56 NRC 373, 379 (2002).
- O A National Environmental Policy Act (NEPA) analysis relating to aquatic impacts must, as a practical matter, have a baseline from which to operate. See *American Rivers v. Federal Energy Regulatory Commission*, 201 F.3d 1186, 1195 n.15 (9th Cir. 2000). It is equally apparent, however, that nothing in the agency’s 10 C.F.R. Part 51 NEPA regulations, see 10 C.F.R. § 51.45(b) (environmental report (ER) must contain “description of the environment affected”), or the Staff’s ER preparation guidance regarding providing a description of the local environment, see Office of Standards Development, U.S. Nuclear Regulatory Commission [(NRC)], Preparation of [ERs] for Nuclear Power Stations, Regulatory Guide 4.2, at 2-3 to -4 (rev. 2, July 1976) (ADAMS Accession No. ML003739519), indicates exactly how, as a general matter, such a baseline is to be established.
- P The appropriate scope of the baseline for a project is a functional concept: an applicant must provide enough information and in sufficient detail to allow for an evaluation of important impacts. See Office of Nuclear Reactor Regulation, [NRC], “Standard Review Plans for Environmental Reviews for Nuclear Power Plants,” NUREG-1555, at 4.3.2-1 to -2 (Oct. 1999); Office of Nuclear Regulatory Research, [NRC], General Site Suitability Criteria for Nuclear Power Stations, Regulatory Guide 4.7, at 4.7-14 to -15 (rev 2, Apr. 1998) (ADAMS Accession No. ML003739894).
- Q No-action alternative discussions can be brief and can incorporate by reference other sections of an ER discussing the project’s adverse consequences. See *Hydro Resources, Inc.* (P.O. Box 15910, Rio Rancho, NM 87174), CLI-01-4, 53 NRC 31, 54 (2001) (“[f]or the ‘no action’ alternative, there need not be much discussion”); *Louisiana Energy Services, L.P.* (Claiborne Enrichment Center), CLI-98-3, 47 NRC 77, 98 (1998) (“[w]e do not find the [final environmental impact statement’s (FEIS)] incorporation by reference approach unreasonable as such”).
- R Established case law teaches that, except for its overall NEPA balancing, the NRC can limit its analysis of aquatic impacts to those determined by the Environmental Protection Agency (EPA), see *New England Coalition on Nuclear Pollution v. NRC*, 582 F.2d 87, 98 (1st Cir. 1978), when EPA has analyzed an alternative technology extensively and made conclusions as to its suitability.
- S The NRC has made a commitment as part of its NEPA review process to strive to reach the environmental justice goals described in Executive Order 12898. See 69 Fed. Reg. 52,040, 52,041-42 (Aug. 24, 2004) (final Commission environmental justice policy statement). As the Commission previously has noted in reviewing environmental justice claims, “[a]dverse impacts that fall heavily on minority and impoverished citizens call for particularly close scrutiny.” *Claiborne Enrichment Center*, CLI-98-3, 47 NRC at 106. There are, however, two requirements necessary to implicate this close environmental justice

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

scrutiny. First, support must be presented regarding the alleged existence of adverse impacts or harm on the physical or human environment. Second, a supported case must be made that these purported adverse impacts could disproportionately affect poor or minority communities in the vicinity of the facility at issue. See 69 Fed. Reg. at 52,047.

- T The NRC requires that environmental justice contentions be based on the specific characteristics of a particular minority community. See *Claiborne Enrichment Center*, CLI-98-3, 47 NRC at 100.
- U It being well established that the Board cannot be expected to sift through reams of data to determine whether a contention is admissible, see *Georgia Tech Research Reactor*, LBP-95-6, 41 NRC at 305; *International Uranium (USA) Corp.* (Receipt of Material from Tonawanda, New York), LBP-98-21, 48 NRC 137, 142 n.7 (1998); *Tennessee Valley Authority* (Browns Ferry Nuclear Plant, Units 1 and 2), LBP-76-10, 3 NRC 209, 216 (1976), a nonselective citation is not consistent with the obligation to provide analyses and expert opinion supporting a contention.
- V NRC has expressed a commitment to considering cumulative impacts in its environmental justice analysis, making nearby nuclear facility-related harm an appropriate issue to consider cumulatively with any impacts from proposed reactors. See 69 Fed. Reg. at 52,042-43.
- W In accord with the environmental justice executive order, the NRC has obligated itself to address only the disproportionate distribution of “high and adverse” effects in its NEPA analysis. See *Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-02-20, 56 NRC 147, 154 (2002).
- X While one of the central purposes of NEPA is information gathering and disclosure, information immaterial to the proceeding does not necessarily need to be included. See *Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-29, 62 NRC 801, 811 (2005) (“There may, of course, be mistakes in the [draft environmental impact statement (DEIS)], but in an NRC adjudication, it is intervenors’ burden to show their significance and materiality. Our boards do not sit to ‘flyspeck’ environmental documents or to add details or nuances.”); see also *Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-02-25, 56 NRC 340, 349 (2002) (“NEPA does not call for examination of every conceivable aspect of federally licensed projects” (internal quotes omitted)).
- Y A challenge to an agency rule is not permitted in an agency adjudication. See 10 C.F.R. § 2.335(a); see also *Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-07-3, 65 NRC 13, 20 (2007) (contention seeking ER analysis of long-term effects of high-density pool spent fuel storage inappropriately challenges rule-based generic environmental findings for reactor life extension proceedings). The agency’s procedural rules do, however, offer an opportunity to request a waiver or exception to the application of a rule in a particular adjudicatory proceeding. See 10 C.F.R. § 2.335(b); see also *Vermont Yankee*, CLI-07-3, 65 NRC at 20.
- Z The Commission has the authority to enter case-specific procedural orders to facilitate the efficient resolution of issues before a licensing board. See *Long Island Lighting Co.* (Shoreham Nuclear Power Station, Unit 1), CLI-88-9, 28 NRC 567, 569 (1988) (noting “the Commission’s inherent supervisory authority over the conduct of adjudicatory proceedings”); see also, e.g., *Louisiana Energy Services, L.P.* (National Enrichment Facility), CLI-04-3, 59 NRC 10, 16-21 (2004) (establishing general schedule for proceeding).
- AA Any Licensing Board merits litigation-based findings have the effect of amending or supplementing the FEIS. See *Louisiana Energy Services, L.P.* (National Enrichment Facility), CLI-06-15, 63 NRC 687, 707 n.91 (2006).
- BB If admitted contentions are resolved before the FEIS is issued so as to conclude the contested portion of a proceeding, an intervenor (or anyone else) could timely seek to litigate contentions regarding FEIS data or conclusions that differ significantly from the ER or the DEIS. See 10 C.F.R. § 2.309(c), (f)(2).
- LBP-07-4 PPL SUSQUEHANNA LLC (Susquehanna Steam Electric Station, Units 1 and 2), Docket Nos. 50-387-LR, 50-388-LR (ASLBP No. 07-851-01-LR-BD01); LICENSE RENEWAL; March 22, 2007; MEMORANDUM AND ORDER (Ruling on Standing and Contentions of Petitioner Eric Joseph Epstein)
- A In this license renewal proceeding the Licensing Board finds that Petitioner has standing to intervene but has not submitted an admissible contention, and that the proceeding must therefore be terminated.
- B A petitioner’s standing, or right to participate in a Commission licensing proceeding, is derived from section 189a of the Atomic Energy Act (AEA), which requires the NRC to provide a hearing “upon the request of any person whose interest may be affected by the proceeding,” and which has been implemented in Commission regulations as 10 C.F.R. § 2.309.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- C Judicial concepts of standing, to which licensing boards are to look in ruling on standing, provide the following guidance in determining whether a petitioner has established the necessary “interest” under 10 C.F.R. § 2.309(d)(1): To qualify for standing a petitioner must allege (1) a concrete and particularized injury that is (2) fairly traceable to the challenged action and (3) likely to be redressed by a favorable decision, criteria commonly referred to, respectively, as “injury in fact,” causality, and redressability. The injury may be either actual or threatened, but must lie arguably within the “zone of interests” protected by the statutes governing the proceeding — here, either the Atomic Energy Act (AEA) or the National Environmental Policy Act (NEPA).
- D Individual petitioners living within 50 miles of a nuclear power plant may establish standing based on a longstanding “proximity presumption” principle in NRC adjudicatory proceedings, under which the elements of standing will be presumed to be satisfied if an individual lives within the zone of possible harm from a significant source of radioactivity, in the geographical area that might be affected by an accidental release of fission products; this has been defined in proceedings involving nuclear power plants as being within a 50-mile radius of such a plant. Petitioner is found to have established individual standing because, although he resides 6 miles outside the 50-mile zone, his work regularly takes him within the area and will likely continue to do so in view of his residence so close to the area.
- E An organization that wishes to establish standing to intervene may do so by demonstrating either organizational or representational standing. To establish organizational standing it must be shown that the interests of the organization will be harmed by the proceeding. To establish representational standing, (1) it must be demonstrated that the interests of at least one member who has standing to sue in his or her own right may be affected by the licensing action; (2) that member must be identified by name and address; and (3) it must be shown that the organization is authorized to request a hearing on behalf of that member. Petitioner is found not to have established standing on behalf of public interest group TMI Alert because (1) general policy interests alone are insufficient to establish organizational standing, and (2) although the group asserted to have members living within 50 miles of the plant, none were identified by name and address, and no showing was made that any such individuals authorized the organization or Petitioner to act on their behalf.
- F Petitioner’s motion to compel Applicant to take certain actions prior to license renewal application is denied on its merits; had Petitioner consulted with the other parties prior to filing his motion, as required under 10 C.F.R. § 2.323(b), this step would have corrected his oversight of the true situation regarding subjects of motion.
- G In ruling on Applicant’s motion to strike portions of Petitioner’s reply to Applicant’s and NRC Staff’s answers to the petition, the Licensing Board would not “strike from the record” any portions of the Petitioner’s reply, because any part of a record, whether or not appropriately considered in making any rulings, may become relevant in an appeal. The Board would not, however, in making contention admissibility rulings, consider any new issues or claims raised in the reply, unless they would constitute timely filings under 10 C.F.R. § 2.309(c), (f)(2); the Board would consider only “legitimate amplification” of the original contention that focused on the legal, logical, and factual arguments presented in the answers of the Applicant and Staff.
- H To intervene in an NRC proceeding, a petitioner must, in addition to demonstrating standing, submit at least one contention meeting the requirements of 10 C.F.R. § 2.309(f)(1). Failure of a contention to meet any of the requirements of section 2.309(f)(1) is grounds for its dismissal.
- I The “strict contention rule serves multiple interests,” including (1) focusing the hearing process on real disputes susceptible of resolution in an adjudication (for example, a petitioner may not demand an adjudicatory hearing to attack generic NRC requirements or regulations, or to express generalized grievances about NRC policies); (2) by requiring detailed pleadings, putting other parties in the proceeding on notice of the petitioners’ specific grievances and thereby giving them a good idea of the claims they will be either supporting or opposing; and (3) helping to ensure that full adjudicatory hearings are triggered only by those able to proffer at least some minimal factual and legal foundation in support of their contentions.
- J Although the February 2004 revision of the NRC procedural rules no longer incorporates all of the prior provisions, including some of those formerly found in 10 C.F.R. § 2.714(a)(3), (b)(1), which in the past permitted the amendment and supplementation of petitions and filing of contentions after the original filing of petitions, the new rules contain essentially the same substantive admissibility standards for contentions.

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- K Under 10 C.F.R. § 2.309(f)(1)(vi), requiring the provision of sufficient information to show a genuine dispute with the applicant on a material issue of law or fact, a petitioner must read pertinent portions of the license application, including the safety analysis report and the environmental report (ER); state the applicant's position and the petitioner's opposing view; and explain why petitioner disagrees with the applicant. If a petitioner does not believe these materials address a relevant issue, petitioner must explain why the application is deficient. A contention must directly controvert a position taken by the applicant in the application, and an allegation that some aspect of a license application is "inadequate" or "unacceptable" does not give rise to a genuine dispute unless it is supported by facts and a reasoned statement of why the application is unacceptable in some material respect.
- L Under 10 C.F.R. § 2.309(f)(1)(iv), a petitioner must demonstrate that the issue raised in the contention is material to the findings the NRC must make to support the action that is involved in the proceeding; the standards defining the findings the NRC must make to support a license renewal are set forth in 10 C.F.R. § 54.29.
- M Under 10 C.F.R. § 2.309(f)(1)(iii), a contention must allege facts sufficient to establish that it falls directly within the scope of a proceeding. The scope of a license renewal proceeding is addressed, with regard to safety-related issues, in 10 C.F.R. Part 54, and, with regard to environmental issues, in 10 C.F.R. Part 51.
- N A contention that challenges any Commission rule or applicable statutory requirement is outside the scope of the proceeding. A petitioner may, however, within the adjudicatory context submit a request for waiver of a rule under 10 C.F.R. § 2.335, and outside the adjudicatory context file a petition for rulemaking under 10 C.F.R. § 2.802 or a request that the NRC Staff take enforcement action under 10 C.F.R. § 2.206.
- O As addressed in 10 C.F.R. Part 54 and described by the Commission in *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), CLI-01-17, 54 NRC 3 (2001), the NRC license renewal safety review is focused "upon those potential detrimental effects of aging that are not routinely addressed by ongoing regulatory oversight programs" (*id.* at 7), which the Commission considers "the most significant overall safety concern posed by extended reactor operation" (*id.*), and on "plant systems, structures, and components for which current [regulatory] activities and requirements may not be sufficient to manage the effects of aging in the period of extended operation" (*id.* at 10). An issue can be related to plant aging and still not warrant review at the time of a license renewal application, if an aging-related issue is "adequately dealt with by regulatory processes" on an ongoing basis. For example, if a structure or component is already required to be replaced "at mandated, specified time periods," it would fall outside the scope of license renewal review.
- P The regulatory provisions of 10 C.F.R. Part 51, relating to the environmental aspects of license renewal, arise out of the requirement that the National Environmental Policy Act (NEPA), 42 U.S.C. § 4332(C), places on federal agencies to "include in every recommendation or report on . . . major federal actions significantly affecting the quality of the human environment, a detailed statement by the responsible official on . . . the environmental impact of the proposed action . . ." As noted in *Robertson v. Methow Valley Citizens Council*, 490 U.S. 332, 349 (1989), the "statutory requirement that a federal agency contemplating a major action prepare such an environmental impact statement [EIS] serves NEPA's 'action-forcing' purpose in two important respects. . . . It ensures that the agency, in reaching its decision, will have available, and will carefully consider, detailed information concerning significant environmental impacts; it also guarantees that the relevant information will be made available to the larger audience that may also play a role in both the decisionmaking process and the implementation of that decision."
- Q Although the requirements of NEPA are directed to federal agencies and thus the primary duties of NEPA fall on the NRC Staff in NRC proceedings, the initial requirement to analyze the environmental impacts of an action, including license renewal, is directed to applicants, and 10 C.F.R. § 51.53(c) requires a license renewal applicant to submit with its application an environmental report (ER), which "must contain a description of the proposed action, including the applicant's plans to modify the facility or its administrative control procedures as described in accordance with § 54.21," and "describe in detail the modifications directly affecting the environment or affecting plant effluents that affect the environment."
- R Environmental issues identified as "category 1," or "generic," issues in 10 C.F.R. Part 51, Subpart A, Appendix B, are not within the scope of a license renewal proceeding. On these issues the Commission found that it could draw generic conclusions that are applicable to nuclear power plants generally. Thus these issues need not be repeatedly assessed on a plant-by-plant basis, and license renewal applicants may in their ERs refer to and adopt the generic environmental impact findings found in Table B-1, Appendix

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- B, for all Category 1 issues, with the following exception: As required by 10 C.F.R. § 51.53(c)(3)(iv), ERs must also contain “any new and significant information regarding the environmental impacts of license renewal of which the applicant is aware,” even if this concerns a Category 1 issue; but this is not a proper subject for a contention absent a waiver of the rule in 10 C.F.R. § 51.53(c)(3)(i) that Category 1 issues need not be addressed in a license renewal.
- S The Commission was not able to make generic environmental findings on issues identified as “Category 2,” or “plant specific,” issues in 10 C.F.R. Part 51, Subpart A, Appendix B, and thus these issues are within the scope of license renewal, and applicants must provide a plant-specific review of them. These issues are characterized by the Commission as involving environmental impact severity levels that could differ significantly from plant to plant, or impacts for which additional plant-specific mitigation measures should be considered.
- T As required under 10 C.F.R. § 51.95(c), the Commission in 1996 adopted a “Generic Environmental Impact Statement for License Renewal of Nuclear Plants” (GEIS), published as NUREG-1437, which provides data supporting the table of Category 1 and 2 issues in Appendix B. Issuance of the 1996 GEIS was part of an amendment of the requirements of Part 51 undertaken by the Commission to establish environmental review requirements for license renewals “that were both efficient and more effectively focused.”
- U Section 51.103 of 10 C.F.R. defines the requirements for the “record of decision” relating to any license renewal application, including the standard that the Commission, in making such a decision pursuant to Part 54, “shall determine whether or not the adverse environmental impacts of license renewal are so great that preserving the option of license renewal for energy planning decisionmakers would be unreasonable.”
- V A contention that Applicant failed to provide requisite data necessary to show it could maintain and service financial obligations inherited from the prior owner of a plant is denied, because Petitioner did not demonstrate that it met the scope, materiality, and genuine dispute requirements of 10 C.F.R. § 2.309(f)(1)(iii), (iv), and (vi), and the contention did not take into account financial assurances Applicant was required to provide as part of an earlier license transfer proceeding.
- W A contention that Applicant failed to address various water use and indigenous aquatic issues is denied, because it was unsupported by any discussion of the sections of the ER addressing consumptive use of water, and because it did not show any specific or genuine dispute with these or any other section of the Application. Moreover, the plant in question is not the type of plant for which any Category 2 “aquatic ecology” items apply.
- X The mere posing of questions does not provide sufficient support to demonstrate a genuine dispute under 10 C.F.R. § 2.309(f)(1)(vi).
- Y A contention that Applicant’s demographic profile was flawed and incomplete and failed to consider the aging population and workforce and impacts on social services, emergency planning, and other matters, is denied, because it did not address any issues involving the aging of any relevant plant systems, structures, or components, or any aging-management issues, nor did it fall within any Category 2 environmental issue, or controvert or challenge in any way the portion of the ER that addressed asserted Category 2 offsite land use issues.
- Z A contention alleging flawed tax analysis is denied because it is not within the scope of license renewal.
- AA A contention asserting violation of various emergency planning issues is denied because it is not within the scope of license renewal. Although some input data for severe accident mitigation alternatives analysis relating to emergency evacuation issues may be challenged in a license renewal proceeding, in this case Petitioner did not provide sufficient information on any such issues to show a genuine dispute with the Applicant.
- BB Judges are ethically required to base their rulings solely on the facts and law applicable in any given case, and thus, while licensing boards may reasonably accommodate *pro se* petitioners who are not technically perfect in their pleading, such parties must still meet the basic requirements of the contention admissibility rules, and if these are not met boards may not “fill in” any missing support but rather are legally required to deny such contentions. A board’s responsibility to make contention admissibility rulings based on existing law and on what is provided by a petitioner in support of a contention is not suspended when a petitioner may have failed to comply with all relevant requirements as a result of not having a lawyer and not being skilled in the law himself, in part also because of requirements that a petitioner show

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

“at least some minimal factual and legal foundation” for a hearing focused on “real disputes susceptible of resolution in an adjudication.”

LBP-07-5 SHIELDALLOY METALLURGICAL CORPORATION (Amendment Request for Decommissioning of the Newfield, New Jersey Facility), Docket No. 40-7102-MLA (ASLBP No. 07-852-01-MLA-BD01); MATERIALS LICENSE AMENDMENT; March 28, 2007; MEMORANDUM AND ORDER (Ruling on Hearing Requests)

A A hearing requestor must demonstrate the existence of the requisite standing to raise questions regarding the acceptability of the particular proposal at hand. To that end, the Rules require that the requestor set forth, *inter alia*, his or her interest in the proceeding, as well as the possible effect that any order or decision entered therein might have upon that interest. 10 C.F.R. § 2.309(d)(1).

B The Commission has long applied the test that is employed in the federal courts in resolving standing issues — i.e., the requestor must allege “a concrete and particularized injury that is fairly traceable to the challenged action and is likely to be redressed by a favorable decision.” *Cleveland Electric Illuminating Co.* (Perry Nuclear Power Plant, Unit 1), CLI-93-21, 38 NRC 87, 92 (1993) (citing *Lujan v. Defenders of Wildlife*, 504 U.S. 555, 561 (1992)).

C In the case of governmental entities, status as a party is not a condition precedent to participation in NRC adjudicatory proceedings. By virtue of 10 C.F.R. § 2.315(c), an interested state or political subdivision thereof that has not become a party to the proceeding must be accorded a reasonable opportunity to participate, through a single representative, in the hearing of one or more of the admitted contentions.

D Although it is clearly established in the Commission’s regulations and case law that a state or local governmental body has standing to intervene in a proceeding for a facility that is located within its boundaries, the same does not hold true for individual legislators wishing to participate as a party on behalf of unnamed constituents. Rather, licensing boards have consistently ruled that one does not acquire standing as a consequence of being a member of a legislative tribunal. See *Babcock & Wilcox* (Apollo, Pennsylvania Fuel Fabrication Facility), LBP-92-35, 36 NRC 355, 358 n.9 (1992); *Combustion Engineering, Inc.* (Hematite Fuel Fabrication Facility), LBP-89-23, 30 NRC 140, 145 (1989); *General Electric Co.* (GE Test Reactor, Vallecitos Nuclear Center), LBP-79-28, 10 NRC 578, 582-83 (1979).

E As the Commission has stressed on numerous occasions, “the contention rule is strict by design” (*Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-01-24, 54 NRC 349, 358 (2001); *Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP site), CLI-05-29, 62 NRC 801, 808 (2005)), and does “not permit the filing of a vague, unparticularized contention, unsupported by affidavit, expert, or documentary support.” *North Atlantic Energy Service Corp.* (Seabrook Station, Unit 1), CLI-99-6, 49 NRC 201, 219 (1999) (citation and internal quotation marks omitted).

F While it is true that, at the time contentions are filed, a petitioner is not required to have developed the entire factual record on which it intends to rely at a hearing, even in the case of a *pro se* litigant some level of factual or expert support must be furnished.

LBP-07-6 USEC INC. (American Centrifuge Plant), Docket No. 70-7004-ML (ASLBP No. 05-838-01-ML); MATERIALS LICENSE; April 13, 2007; INITIAL DECISION (Authorizing the Issuance of the American Centrifuge Plant License)

A Section 193(b)(1) of the Atomic Energy Act of 1954, as amended, requires that for license applications for uranium enrichment facilities, “the [Nuclear Regulatory] Commission shall conduct a single adjudicatory hearing on the record with regard to the licensing of the construction and operation of a uranium enrichment facility.” 42 U.S.C. § 2243(b) (2000). Sections 70.23a and 70.31(e) of 10 C.F.R. implement this mandate.

B When a proceeding involving an application for a construction permit is uncontested the Board will not conduct a “*de novo* review,” rather it “conduct[s] a simple ‘sufficiency’ review of [the] uncontested issues.” *Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-17, 62 NRC 5, 39 (2005). The Board will “inquire whether the NRC Staff performed an adequate review and made findings with reasonable support in logic and fact.” *Id.*

C The Board “must narrow its inquiry to those topics or sections in [NRC] Staff documents that it deems most important and should concentrate on portions of the documents that do not on their face adequately explain the logic, underlying facts, and applicable regulations and guidance.” *Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-06-20, 64 NRC 15, 21-22 (2006).

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- D With respect to matters involving safety — i.e., issues pursuant to the Atomic Energy Act — Boards must determine whether the application and the record of the proceeding contain sufficient information and the review of the application by the NRC Staff has been adequate to support findings pursuant to 10 C.F.R. §§ 30.33, 40.32, and 70.23. 69 Fed. Reg. 61,411 (Oct. 18, 2004).
- E With respect to matters involving the environment — i.e., issues arising from the National Environmental Policy Act (NEPA) — Boards must: (1) determine whether the review conducted by the NRC Staff pursuant to 10 C.F.R. Part 51 has been adequate; (2) determine whether the requirements of section 102(2)(A), (C), and (E) of NEPA and Subpart A of 10 C.F.R. Part 51 have been complied with in the proceeding; (3) independently consider the final balance among conflicting factors contained in the record of the proceeding with a view to determining the appropriate action to be taken; and (4) determine whether a license should be issued, denied, or appropriately conditioned to protect the environment. 69 Fed. Reg. 61,411-12 (Oct. 18, 2004).
- F Nuclear Regulatory Commission Issuances (NUREG) and Regulatory Guides (RG) serve as guidance and do not prescribe requirements. They are not substitutes for regulations and are not binding authority. *See Curators of the University of Missouri* (TRUMP-S Project), CLI-95-1, 41 NRC 71, 98 (1995); *Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant), ALAB-852, 24 NRC 532, 544-45 (1986). A Board's review focuses on compliance with the regulations, not compliance with a particular NUREG or RG.
- G In accordance with 10 C.F.R. §§ 40.14 and 70.17, an exemption can be granted if it is authorized by law and will not endanger life or property or the common defense and security, and is otherwise in the public interest.
- H It may be inferred that an exemption is implicitly "authorized by law" if all of the conditions for granting the exemption are met (i.e., will not endanger life or property or the common defense and security, and is otherwise in the public interest) and no other provision prohibits, or otherwise restricts, its application. To do otherwise would render these two exemption provisions meaningless, which violates elementary rules of construction that the language of a regulation should not be read to destroy itself (*Citizens Bank of Maryland v. Strumpf*, 516 U.S. 16, 20 (1995)) and a provision should not be read in a way that is inconsistent with its purpose. *Eli Lilly & Co. v. Medtronic, Inc.*, 496 U.S. 661, 668-69 (1990); *Gwaltney of Smithfield, Ltd. v. Chesapeake Bay Foundation, Inc.*, 484 U.S. 49, 59 (1987).
- I The NRC has traditionally read the language "authorized by law" to be the functional equivalent of "not prohibited by law." *See Long Island Lighting Co.* (Shoreham Nuclear Power Station, Unit 1), DD-90-8, 32 NRC 469, 488 (1990); *Cleveland Electric Illuminating Co.* (Perry Nuclear Power Plant, Units 1 and 2), ALAB-841, 24 NRC 64, 99 (1986); *United States Department of Energy* (Clinch River Breeder Reactor Plant), CLI-82-83, 16 NRC 412, 422-25 (1982); *Washington Public Power Supply System* (WPPSS Nuclear Project Nos. 3 and 5), CLI-77-11, 5 NRC 719, 722 (1977).
- J Pursuant to 10 C.F.R. Part 51, the NRC Staff's Environmental Impact Statement (EIS) must discuss the potential environmental impacts of the proposed American Centrifuge Plant, including an evaluation of alternatives to determine whether there are any obviously superior options to the proposed action. In addition, the EIS analysis must compare the environmental costs of the facility to the Staff's assessment of the benefits derived from the additional domestic supply of enriched uranium and the presence of upgraded enrichment technology in the United States.
- K For purposes of the Environmental Impact Statement, the potential construction, operation, and decommissioning of the American Centrifuge Plant is the proposed action that must be the focus of the Board's review under the National Environmental Policy Act (42 U.S.C. § 4332(2)(C)).
- L Under section 102(2)(A) of the National Environmental Policy Act, agencies are required to use a "systematic, interdisciplinary, approach which will insure the integrated use of the natural and social sciences and the environmental design arts in planning and in decisionmaking which may have an impact on man's environment." 42 U.S.C. § 4332(2)(A).
- M Under section 102(2)(C) of the National Environmental Policy Act, agencies are required to include a detailed statement on: (1) "the environmental impact of the proposed action"; (2) "any [unavoidable] adverse environmental effects"; (3) "alternatives to the proposed action"; (4) "the relationship between local short-term uses of man's environment and the maintenance and enhancement of long-term productivity"; and (5) "irreversible and ir retrievable commitments of resources which would be involved in the proposed action should it be implemented." 42 U.S.C. § 4332(2)(C)(i)-(v).

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- N Under section 102(2)(E) of the National Environmental Policy Act, agencies are required to “study, develop, and describe appropriate alternatives to recommended courses of action in any proposal which involves unresolved conflicts concerning alternative uses of available resources.” 42 U.S.C. § 4332(2)(E).
- O In performing its National Environmental Policy Act review, the Board will independently consider the final balance among the conflicting factors, which include: (1) the relative magnitude of the environmental impacts of the American Centrifuge Plant (ACP) as compared to other site locations, enrichment technologies, and depleted uranium conversion and disposal alternatives; (2) unavoidable adverse environmental impacts during construction and operation of the ACP and the mitigative actions proposed to minimize their effects; (3) potential cumulative impacts in the context of past, present, and future actions for both local (place-based) and national activities; (4) the magnitude of the irreversible and irretrievable commitments of resources; and (5) the relationship between short-term uses and long-term productivity of the human environment.

- LBP-07-8 SHIELDALLOY METALLURGICAL CORPORATION (License Amendment Request for Decommissioning of the Newfield, New Jersey Facility), Docket No. 40-7102-MLA (ASLBP No. 07-852-01-MLA-BD01); MATERIALS LICENSE AMENDMENT; June 18, 2007; MEMORANDUM AND ORDER (Addressing Filings of the Parties Directed by Commission in CLI-07-20)
- LBP-07-9 DOMINION NUCLEAR NORTH ANNA, LLC (Early Site Permit for North Anna ESP Site), Docket No. 52-008-ESP (ASLBP No. 04-822-02-ESP); EARLY SITE PERMIT; June 29, 2007; INITIAL DECISION
- A The role of the Board in complying with the mandate of the Atomic Energy Act § 189 is to independently evaluate the record and the adequacy of the Staff’s review and then to decide six fundamental issues that are specified by the law and regulations.
- B For three issues (two under AEA and one under the NEPA) the Board must review the *sufficiency of the record* and the *sufficiency of the NRC Staff’s review*, and decide if they are *adequate to support the Staff’s proposed findings*. See 10 C.F.R. § 2.104(b)(2). For these issues, the Board’s role is analogous to that of an appellate court applying the “substantial evidence” test. *Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-17, 62 NRC 5, 39 (2005) (*Clinton I*).
- C For the “NEPA Baseline Issues,” the Board has a “special responsibility” and the scope of the Board’s review is significantly different. *Clinton I*, 62 NRC at 30. For these issues the Board is not merely reviewing the sufficiency of the record and the adequacy of the Staff’s review and findings, but instead “must reach [its] own independent determination of uncontested NEPA ‘baseline’ questions.” *Id.* at 45.
- D For all six fundamental issues the Board is to make its decisions without conducting a “*de novo*” review. This means that “the NRC Staff’s underlying *technical and factual findings* are not open to board reconsideration unless, after a review of the record, the board finds the NRC Staff review inadequate or its findings insufficient.” *Clinton I*, 62 NRC at 39-40 (emphasis added). The “no *de novo* review” approach, however, does not change the Board’s responsibility to independently interpret and apply the *law* and to decide the six ultimate issues in an uncontested ESP case such as this.
- E While generally accepting the technical and factual findings of the Staff, the Board must independently decide (a) whether NEPA §§ 102(2)(A), (C), and (E) have been complied with, (b) the final balance among conflicting factors, and (c) whether the ESP should be issued, denied, or appropriately conditioned.
- F The first of the six fundamental decisions that a board must make in a mandatory hearing is whether the application and the record of the proceeding contain sufficient information, and the review of the application by the NRC Staff has been adequate, to support a negative finding on the question of whether the issuance of the ESP will be inimical to the common defense and security or to the health and safety of the public. *Clinton I*, 62 NRC at 33 n.32. A decision on this issue, referred to as “AEA Safety Issue 1,” is mandated by section 103d of the AEA and 10 C.F.R. § 50.40(c).
- G The second of the six fundamental decisions that a board must make in a mandatory hearing is whether the application and the record of the proceeding contain sufficient information, and the review of the application by the NRC Staff has been adequate, to support a positive finding that, taking into consideration the site criteria contained in 10 C.F.R. Part 100, a reactor or reactors having the characteristics

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

that fall within the parameters of the site, can be constructed without undue risk to the health and safety of the public. *Clinton I*, 62 NRC at 33 n.32. A decision on this issue, referred to as "AEA Safety Issue 2," is mandated by 10 C.F.R. § 52.21.

H The third of the six fundamental decisions that a board must make in a mandatory hearing is whether the review conducted by the Commission pursuant to NEPA, has been adequate. *Clinton I*, 62 NRC at 33 n.34. A decision on this issue, referred to as the "Overriding NEPA Issue," is required by *Calvert Cliffs' Coordinating Committee, Inc. v. AEC*, 449 F.2d 1109 (D.C. Cir. 1971) and 10 C.F.R. § 51.105(a)(4).

I The fourth of the six fundamental decisions that a board must make in a mandatory hearing is whether the requirements of section 102(2)(A), (C), and (E) of NEPA and the regulations in 10 C.F.R. Part 51 have been met. A decision on this issue, referred to as the "NEPA Baseline Issue 1," is required by *Calvert Cliffs' Coordinating Committee, Inc. v. AEC*, 449 F.2d 1109 (D.C. Cir. 1971) and 10 C.F.R. § 51.105(a)(1).

J The fifth of the six fundamental decisions that a board must make in a mandatory hearing is to independently consider the final balance among conflicting factors contained in the record of the proceeding with a view to determining the appropriate action to be taken. A decision on this issue, referred to as the "NEPA Baseline Issue 2," is required by *Calvert Cliffs*, 449 F.2d 1109 and 10 C.F.R. § 51.105(a)(2).

K The sixth of the six fundamental decisions that a board must make in a mandatory hearing is to determine whether the construction permit should be issued, denied, or appropriately conditioned to protect environmental values. A decision on this issue, referred to as the "NEPA Baseline Issue 3," is required by *Calvert Cliffs*, 449 F.2d 1109 and 10 C.F.R. § 51.105(a)(3).

L The fact that an ESP holder cannot commence construction of the proposed nuclear reactors without obtaining an additional license from the NRC does not mean that an ESP is not an important permit. Once the ESP is issued, the proposed site for the nuclear reactors is "banked" or approved and the regulations applicable to the site are frozen as of the date that the ESP is issued. Once the ESP is issued, "the Commission may not impose new requirements . . . on . . . the site," 10 C.F.R. § 52.39(a)(1), unless they are "necessary . . . to assure adequate protection of the public health and safety or the common defense and security." *Id.*

M Although unresolved issues exist and may be addressed if and when Dominion actually applies to construct Unit 3 and/or 4, the Board concludes that the application and the record contain information that is sufficient, and the review by the NRC Staff has been adequate, to support a finding that the issuance of the ESP would not be inimical to the common defense and security or to the health and safety of the public, subject to the permit conditions, COL Action Items, site characteristics and bounding parameters contained in Appendix A to the FSER, and the conditions specified in the Draft Permit.

N After studying the site criteria that the issue specifically refers to, i.e., 10 C.F.R. Part 100, which establishes numerous factors to consider when evaluating a proposed site, the Board concludes, with reference to AEA Safety Issue 2, that Dominion's application and the record of this proceeding contain sufficient information, and the review of the application by the NRC Staff has been adequate, to support a positive finding.

O NEPA § 102(2)(A) requires that the NRC use a "systematic, interdisciplinary approach which will insure the integrated use of the natural and social sciences and the environmental design arts in planning and in decisionmaking which may have an impact on man's environment." The Board has no difficulty in concluding that NEPA § 102(2)(A) has been satisfied.

P The majority of this Board concludes that the FEIS satisfies the requirements of NEPA § 102(2)(C). NEPA § 102(2)(C) requires that, for every major Federal action significantly affecting the quality of the human environment, the NRC must issue a detailed statement by the responsible official on (i) the environmental impact of the proposed action, (ii) any unavoidable adverse environmental effects, (iii) alternatives to the proposed action, (iv) the relationship between local short-term uses of man's environment and the maintenance and enhancement of long-term productivity, and (v) any irreversible and irretrievable commitments of resources which would be involved in the proposed action should it be implemented. NEPA § 102(2)(C)(i)-(v), 42 U.S.C. § 4332(2)(C)(i)-(v).

Q While the FEIS did not address one possible environmental impact, i.e., groundwater contamination (and resulting lake impacts) from proposed Units 3 and 4, proposed Permit Condition 4 requires measures to preclude such impacts and, in any event, it is clear that the issue of groundwater impacts must be addressed at the COL stage. In addition, although we have raised the question as to whether the Staff's investigation and discussion of the impacts on minority and low-income populations satisfies the Commission's policy

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- on environmental justice, we believe, on balance, that the FEIS discussion on this matter did not violate NEPA § 102(2)(i).
- R The FEIS provides a sufficient statement of “any adverse environmental impacts which cannot be avoided.” 42 U.S.C. § 4332(2)(C)(ii). The issuance of the ESP alone would not authorize construction of Units 3 and 4, but would instead only authorize site preparation and preliminary preparatory work under a 10 C.F.R. § 50.10(e) limited work authorization. If a COL or CP is never issued or ultimately denied, Dominion would be required to redress even such limited site preparation activities and restore the site. 10 C.F.R. § 50.17(c).
- S While requiring that “all reasonable alternatives will be identified” and considered by the agency, *see* 10 C.F.R. Part 51, App. A, § 5; 40 C.F.R. § 1502.14, federal courts and the NRC use a “rule of reason” in identifying alternatives and do not require that unreasonable alternatives be examined.
- T A project’s goals will determine which alternatives are considered reasonable. *City of New York v. U.S. Department of Transportation*, 715 F.2d 732, 742 (2d Cir. 1983). The agency’s alternatives analysis should be based around the applicant’s goals, including the applicant’s economic goals. *City of Grapevine v. U.S. Department of Transportation*, 17 F.3d 1502, 1506 (D.C. Cir.), *cert. denied*, 513 U.S. 1043 (1994).
- U Based on the record in this proceeding, the majority of the Board concludes that the NRC Staff’s alternative sites description and analysis satisfies NEPA § 102(2)(C)(iii), providing a “detailed statement” of “the alternatives to the proposed action.” 42 U.S.C. § 4332(2)(C)(iii). Having excluded unreasonable alternatives not in keeping with Dominion’s economic goals, the ER and the EIS presented an adequate survey of the reasonable or feasible alternatives, as required. *See Westlands Water District v. U.S. Department of Interior*, 376 F.3d 853, 868 (9th Cir. 2004).
- V It was not reasonable or necessary to consider, as a system design alternative to the application for an ESP for Units 3 and 4, the imposition of water conservation measures on preexisting Units 1 and 2.
- W We agree with the Staff that discussion of the “relationship between local short-term uses of man’s environment and the maintenance and enhancement of long-term productivity,” NEPA § 102(2)(C)(iv), should be performed if and when the ESP holder applies for a construction permit or combined operating license.
- X Because the granting of the ESP would not, in itself, authorize any activity that would have any such irreversible or irretrievable commitments, NEPA § 102(2)(C)’s required description of “any irreversible and irretrievable commitments of resources which would be involved in the proposed action should it be implemented” has been met.
- Y NEPA Baseline Issue 2 requires the Board to “independently consider [and decide] the final balance among conflicting factors contained in the record of the proceeding with a view to determining the appropriate action to be taken.” 10 C.F.R. § 51.105(a)(2). While we cannot do a NEPA *cost-benefit* analysis, or final *balance* among conflicting factors at this time, this Board has considered, probed, and independently balanced such factors as are covered within the limited ambit of the ESP FEIS, and determines that the appropriate action to be taken is to issue the proposed ESP with the proposed permit conditions contained in Staff Exhibit 17.
- Z NEPA Baseline Issue 3 requires the Board to “determine . . . whether the construction permit . . . should be issued, denied, or appropriately conditioned to protect environmental values. We believe that our answer to NEPA Baseline Issues 1 and 2 suffices here and that the ESP should be issued, with the conditions that we have specified.
- AA Within the limitations of the ESP environmental analysis, e.g., no assessment of benefits or cost-benefit analysis, and recognizing that there are various unresolved issues under 10 C.F.R. § 52.39 that must be addressed if and when a COL or CP is sought, we conclude that the NEPA review by the NRC Staff was adequate.
- BB The paucity of Environmental Justice analysis, investigation, and information in the FEIS raises doubts as to whether the Staff has complied with the NRC EJ Policy that requires that the Staff provide an EJ analysis “in greater detail” when the low-income or minority population thresholds are met. Under these circumstances, and given that the Commission will necessarily review any initial ESP decision such as this one, the Board suggests that the Commission consider addressing the somewhat novel question as to what it expects the Staff to do when, under the NRC EJ Policy, an EJ analysis “in greater detail” is required.
- CC When an applicant is proposing to locate additional reactors on a site where a different licensee already operates two nuclear reactors that already exist, it is important to understand how the various

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

regulatory limits apply to each reactor, licensee, and site, and how these limits are allocated as between the existing and new reactors and licenses.

DD Regulatory gaps arise from the multiplicity of reactor designs included within Dominion's PPE. It is unclear how we should assess whether the applicant's gas-cooled reactor designs (i.e., the Pebble Bed Modular Reactor design and the Gas Turbine-Modular Helium Reactor design) satisfy AEA safety standards, when the main safety standards issued by NRC deal only with a fundamentally different design — light-water-cooled reactors.

EE NRC regulations are unclear as to how the 25-mrem limit in 40 C.F.R. § 190.10 and 10 C.F.R. § 20.1301(e) is to be allocated between an existing licensee on a site (VEPCO/ODEC) and an applicant considering the construction of additional nuclear reactors on the same site (Dominion). It is also unclear what rational principle and legal standard the NRC Staff will use in allocating legal liability if the 25-mrem standard is exceeded. As a matter of regulatory clarity for the licensees and the public, it might be prudent for NRC to articulate this rational principle and/or allocate the 25-mrem limit of 10 C.F.R. § 190.10 in a permit condition at the outset.

FF While an ESP applicant is not required to provide "detailed design" information concerning each of the types of reactor designs covered by the application and may provide a "plant parameter envelope" instead, problems may arise when the ESP application does not include significant PPE values. It is unclear how this would meet the requirement that an ESP applicant provide "adequate information" or NRC's bar on "partial ESPs." It is also unclear how many holes or "unresolved issues" there can be in a PPE before it runs afoul of the Commission's policy and when the Staff should decline to issue an ESP and advise the applicant to instead consider an Early Partial Decision on Site Suitability pursuant to 10 C.F.R. Part 2, Subpart F.

LBP-07-10 PPL SUSQUEHANNA LLC (Susquehanna Steam Electric Station, Units 1 and 2), Docket Nos. 50-387-OLA, 50-388-OLA (ASLBP No. 07-854-01-OLA-BD01); OPERATING LICENSE AMENDMENT; July 27, 2007; MEMORANDUM AND ORDER (Ruling on Standing and Contentions)

A In this 10 C.F.R. Part 50 operating license amendment proceeding regarding the application of PPL Susquehanna LLC (PPL) to increase the current maximum authorized power level for each of the two units at its Susquehanna Steam Electric Station through an extended power uprate (EPU), ruling on a hearing petition filed by Eric Joseph Epstein seeking to intervene to contest the PPL EPU request, the Licensing Board concludes that although this *pro se* petitioner made a showing that is minimally sufficient to establish his standing as of right, he failed to proffer an admissible contention.

B In determining whether an individual or organization should be granted party status in a proceeding based on standing "as of right," the agency has applied contemporaneous judicial standing concepts that require a participant to establish (1) it has suffered or will suffer a distinct and palpable injury that constitutes injury-in-fact within the zones of interests arguably protected by the governing statutes (e.g., the Atomic Energy Act of 1954 (AEA), the National Environmental Policy Act of 1969 (NEPA)); (2) the injury is fairly traceable to the challenged action; and (3) the injury is likely to be redressed by a favorable decision. *See Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), CLI-96-1, 43 NRC 1, 6 (1996).

C In cases involving the possible construction or operation of a nuclear power reactor, the Commission has created a presumption that residing or regularly conducting activities within a 50-mile proximity of the proposed facility is considered sufficient to establish the requisite injury, causation, and redressability elements. *See Florida Power & Light Co.* (St. Lucie Nuclear Power Plant, Units 1 and 2), CLI-89-21, 30 NRC 325, 329 (1989). In other cases, such as operating license amendment cases, a petitioner must (1) assert an injury-in-fact associated with the challenged license amendment, not simply a general objection to the facility; and (2) in the absence of a showing that the proposed action obviously entails an increased potential for offsite consequences, base its standing upon more than residence or activities within a particular proximity of the plant by making a showing of a plausible chain of events that would result in offsite radiological consequences posing a distinct new harm or threat to the participant. *See Commonwealth Edison Co.* (Zion Nuclear Power Station, Units 1 and 2), CLI-99-4, 49 NRC 185, 188, 191-92 (1999). Moreover, even in those nonreactor construction permit/operating license cases involving an increased potential for offsite consequences in which proximity can be the primary basis for establishing standing, the distance at which a petitioner can be presumed to be affected must take into account the nature of the proposed action and the significance of the radioactive source. *See Georgia Institute of Technology* (Georgia Tech Research Reactor, Atlanta, Georgia), CLI-95-12, 42 NRC 111, 116 (1995); *see also Consumers Energy Co.* (Big Rock Point Independent Spent Fuel Storage Installation), CLI-07-21, 65

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- NRC 519, 522-23 (2007) (difference in potential risk between independent spent fuel storage installation (ISFSI) and operating reactor justifies treating ISFSI and license transfer cases differently in terms of potential proximity presumption).
- D In assessing a hearing petition to determine whether the standing elements are met, which a presiding officer must do even if there are no objections to a petitioner's standing, *see Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), LBP-04-27, 60 NRC 530, 542 n.3 (2004) (even if undisputed, jurisdictional nature of standing requires independent examination by presiding officer), the Commission has indicated that we are to "construe the petition in favor of the petitioner." *Georgia Tech Research Reactor*, CLI-95-12, 42 NRC at 115.
- E A petitioner bears the burden of establishing its standing to intervene in a proceeding. *See Babcock & Wilcox Co.* (Apollo, Pennsylvania Fuel Fabrication Facility), LBP-93-4, 37 NRC 72, 81, *appeal dismissed*, CLI-93-9, 37 NRC 190 (1993).
- F The benefits of the proximity presumption are not limited to those who reside within the area in which the presumption applies, but can be extended to those who conduct everyday activities or visit within that area. *See Big Rock Point*, CLI-07-21, 65 NRC at 523-24; *see also Zion*, CLI-99-4, 49 NRC at 191; *Gulf States Utilities Co.* (River Bend Station, Units 1 and 2), ALAB-183, 7 AEC 222, 226 (1974). Nonetheless, as is sometimes the case regarding the degree to which someone "resides" in the requisite area, *see Georgia Power Co.* (Vogtle Electric Generating Plant, Units 1 and 2), CLI-93-16, 38 NRC 25, 35 (1993) (regular but intermittent residence 1 week a month in house 35 miles from facility sufficient for standing purposes), there may be issues about the extent to which those activities and contacts are sufficient to invoke the presumption.
- G The relevant concern in determining if the proximity presumption applies in a particular case to afford standing as of right is whether the record reflects information that adequately demonstrates (1) the obvious potential for offsite consequences such that a proximity presumption would be applicable in the proceeding; (2) the scope of the area within which the presumption would apply; and (3) whether the petitioner has shown it has sufficient contacts within that area to establish the applicability of the presumption.
- H Showing that estimated dose consequences associated with operation under EPU conditions can be expected to increase by the 20% power level change establishes that the proposed EPU creates an obvious potential for offsite consequences. *See Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-04-28, 60 NRC 548, 553-54 (2004) (EPU amendment involves increase in reactor core radioactivity with obvious potential for offsite consequences); *see also Tennessee Valley Authority* (Sequoyah Nuclear Plant, Units 1 and 2; Watts Bar Nuclear Plant, Unit 1), LBP-02-14, 56 NRC 15, 25 (2002) (obvious offsite consequences from technical specification change that would add tens of millions of curies of radioactive gas to already significant core inventory).
- I Given that an EPU is directly associated with continuing reactor operation, the potential geographic scope of the consequences of EPU operation can be considered to be similar to that which supported the creation of a 50-mile presumption for construction permit and operating license proceedings. *See Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), LBP-98-33, 48 NRC 381, 385 n.1 (1998) (50-mile presumption should apply to life extension cases because reactor operation over additional period subject to same equipment failure and personnel errors), *aff'd*, CLI-99-11, 49 NRC 328 (1999); *see also Big Rock Point*, CLI-07-21, 65 NRC at 522-23 (in determining application of potential proximity presumption, potential risk difference between a reactor and an independent spent fuel storage installation (ISFSI) justifies treating the ISFSI differently).
- J There is agency case law indicating that a petitioner's showing establishing standing in one proceeding need not be repeated to establish standing in another proceeding regarding that same facility. *See U.S. Army* (Jefferson Proving Ground Site), LBP-04-1, 59 NRC 27, 29 (2004); *Georgia Institute of Technology* (Georgia Tech Research Reactor, Atlanta, Georgia), LBP-95-23, 42 NRC 215, 217 (1995). Nonetheless, given that a Board in one proceeding is not constrained to follow the rulings of another Board (absent explicit affirmation by the Commission), *see Cleveland Electric Illuminating Co.* (Perry Nuclear Power Plant, Unit 1), LBP-92-4, 35 NRC 114, 125-26 (1992), *rev'd on other grounds*, CLI-93-21, 38 NRC 87 (1993), the better practice for a petitioner is to submit a fully developed showing regarding standing in each proceeding in which it seeks to intervene, regardless of whether it has previously been found to have standing relative to the facility that is the locus of the proceedings.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- K A Licensing Board's ruling regarding a petitioner's standing does not constitute dicta simply because the Board also concluded that the petitioner had failed to proffer an admissible contention. Because a petitioner's failure to establish its standing is a jurisdictional flaw that likewise is fatal to its attempt to gain party status, any discussion of its failure to proffer an admissible contention would be every bit as deserving of a "dicta" label. To suggest that a Board's decision on one of these admission elements necessarily renders any discussion of the other superfluous fails to acknowledge that, as a practical matter, a decision addressing only one of these two items creates the potential for significant delay if that single determination is later overturned on appeal.
- L A finding regarding whether a petitioner has established proximity presumption-based standing must be based on the factual circumstances presented by the information before the Licensing Board regarding the petitioner's activities, which, as the Commission has noted in the past, may include consideration of the proximity (i.e., is the activity within the presumption zone), timing, and duration of those activities. See *Big Rock Point*, CLI-07-21, 65 NRC at 523-24; *Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-99-10, 49 NRC 318, 324 (1999).
- M The process of sifting and weighing the participants' factual proffers often calls upon a Licensing Board to make difficult choices, so that a petitioner who fails to provide specific information regarding the geographic proximity or the timing and duration of its visits only complicates matters for itself. See *Private Fuel Storage*, CLI-99-10, 49 NRC at 325.
- N In accord with 10 C.F.R. § 2.337(f), a Licensing Board can take official notice of the locations and the distances to the various locations specified by a petitioner as denominated on Mapquest (<http://www.mapquest.com>) and an American Automobile Association road map.
- O Somewhat greater latitude generally is afforded *pro se* petitioners in drafting their intervention petitions. See *Public Service Electric and Gas Co.* (Salem Nuclear Generating Station, Units 1 and 2), ALAB-136, 6 AEC 487, 489 (1973).
- P Standing depends on the petitioner's present circumstances (or the extent to which activities in the recent past reflect a likely pattern of future conduct).
- Q In seeking to establish standing to intervene in a licensing adjudication based on regular activities within a proximity zone (including business, recreational, or personal activities), a petitioner, whether *pro se* or otherwise, is best served by accurately delineating in as much detail as practicable the particulars associated with the proximity, timing, and duration of those activities.
- R Discretionary standing will not lie in the absence of a finding that one intervening participant has standing as of right. See 10 C.F.R. § 2.309(e) (discretionary standing only appropriate when one petitioner has been shown to have standing as of right and an admissible contention so that a hearing will be conducted).
- S Section 2.309(f) of the Commission's rules of practice specifies the requirements that must be met if a contention is to be deemed admissible. Specifically, a contention must provide (1) a specific statement of the legal or factual issue sought to be raised; (2) a brief explanation of its basis; (3) a concise statement of the alleged facts or expert opinions, including references to specific sources and documents, that support the petitioner's position and upon which the petitioner intends to rely at hearing; and (4) sufficient information demonstrating that a genuine dispute exists with regard to a material issue of law or fact, including references to specific portions of the application that the petitioner disputes, or in the case when the application is alleged to be deficient, the identification of such deficiencies and supporting reasons for this belief. See 10 C.F.R. § 2.309(f)(1)(i), (ii), (v), and (vi). In addition, the petitioner must demonstrate that the issue raised in the contention is both "within the scope of the proceeding" and "material to the findings the NRC must make to support the action that is involved in the proceeding." *Id.* § 2.309(f)(1)(iii), (iv). Failure to comply with any of these requirements is grounds for dismissing a contention. See *Private Fuel Storage*, CLI-99-10, 49 NRC at 325; see also *Arizona Public Service Co.* (Palo Verde Nuclear Station, Units 1, 2, and 3), CLI-91-12, 34 NRC 149, 155-56 (1991).
- T An adjudication is not the proper forum for challenging applicable statutory requirements or the basic structure of the agency's regulatory process. *Philadelphia Electric Co.* (Peach Bottom Atomic Power Station, Units 2 and 3), ALAB-216, 8 AEC 13, 20, *aff'd in part on other grounds*, CLI-74-32, 8 AEC 217 (1974). Similarly, a contention that attacks a Commission rule, or which seeks to litigate a matter that is, or clearly is about to become, the subject of a rulemaking, is inadmissible. See 10 C.F.R. § 2.335; *Potomac Electric Power Co.* (Douglas Point Nuclear Generating Station, Units 1 and 2), ALAB-218, 8 AEC 79, 85, 89 (1974). This includes contentions that advocate stricter requirements than agency rules impose or that

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- otherwise seek to litigate a generic determination established by a Commission rulemaking. *See Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), LBP-01-6, 53 NRC 138, 159, *aff'd*, CLI-01-17, 54 NRC 3 (2001); *Pacific Gas and Electric Co.* (Diablo Canyon Nuclear Power Plant, Units 1 and 2), LBP-93-1, 37 NRC 5, 29-30 (1993); *Public Service Co. of New Hampshire* (Seabrook Station, Units 1 and 2), LBP-82-106, 16 NRC 1649, 1656 (1982); *see also Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), CLI-96-7, 43 NRC 235, 251 (1996); *Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1, 2, and 3), LBP-91-19, 33 NRC 397, 410, *aff'd in part and rev'd in part on other grounds*, CLI-91-12, 34 NRC 149 (1991). By the same token, a contention that simply states the petitioner's views about what regulatory policy should be does not present a litigable issue. *See Peach Bottom*, ALAB-216, 8 AEC at 20-21 & n.33.
- U All proffered contentions must be within the scope of the proceeding as defined by the Commission in its initial hearing notice and order referring the proceeding to the Licensing Board. *See* 10 C.F.R. § 2.309(f)(1)(iii); *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), CLI-00-23, 52 NRC 327, 329 (2000); *Duke Power Co.* (Catawba Nuclear Station, Units 1 and 2), ALAB-825, 22 NRC 785, 790-91 (1985). As a consequence, any contention that falls outside the specified scope of the proceeding must be rejected. *See Portland General Electric Co.* (Trojan Nuclear Plant), ALAB-534, 9 NRC 287, 289 n.6 (1979).
- V It is the petitioner's obligation to present factual information and/or expert opinion necessary to support its contention. *See* 10 C.F.R. § 2.309(f)(1)(v); *Georgia Institute of Technology* (Georgia Tech Research Reactor, Atlanta, Georgia), LBP-95-6, 41 NRC 281, 305, *vacated in part and remanded on other grounds*, CLI-95-10, 42 NRC 1, and *aff'd in part*, CLI-95-12, 42 NRC 111 (1995). While a Licensing Board may appropriately view a petitioner's supporting information in a light favorable to the petitioner, failure to provide such information regarding a proffered contention requires the contention be rejected. *See Palo Verde*, CLI-91-12, 34 NRC at 155. In this connection, neither mere speculation nor bare or conclusory assertions alleging that a matter should be considered will suffice to allow the admission of a proffered contention. *See Fansteel, Inc.* (Muskogee, Oklahoma Site), CLI-03-13, 58 NRC 195, 203 (2003). If a petitioner neglects to provide the requisite support for its contentions, it is not within the Board's power to make assumptions of fact that favor the petitioner, nor may the Board supply information that is lacking. *See Palo Verde*, CLI-91-12, 34 NRC at 155; *Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), LBP-01-35, 54 NRC 403, 422 (2001), *rev'd in part on other grounds*, CLI-02-24, 56 NRC 335 (2002); *Georgia Tech Research Reactor*, LBP-95-6, 41 NRC at 305.
- W Simply attaching material or documents as a basis for a contention, without setting forth an explanation of that information's significance, is inadequate to support the admission of the contention. *See Fansteel*, CLI-03-13, 58 NRC at 204-05. Along these lines, any supporting material provided by a petitioner, including those portions of the material that are not relied upon, is subject to Licensing Board scrutiny. *See Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), LBP-96-2, 43 NRC 61, 90, *rev'd in part on other grounds*, CLI-96-7, 43 NRC 235 (1996). Thus, the material provided in support of a contention will be carefully examined by the Board to confirm that on its face it does supply an adequate basis for the contention. *See Vermont Yankee Nuclear Power Corp.* (Vermont Yankee Nuclear Power Station), ALAB-919, 30 NRC 29, 48 (1989), *vacated in part on other grounds and remanded*, CLI-90-4, 31 NRC 333 (1990).
- X To be admissible, the regulations require that all contentions assert an issue of law or fact that is material to the outcome of a licensing proceeding, meaning that the subject matter of the contention must impact the grant or denial of a pending license application. *See* 10 C.F.R. § 2.309(f)(1)(iv). This requirement of materiality often dictates that any contention alleging deficiencies or errors in an application also indicate some significant link between the claimed deficiency and either the health and safety of the public or the environment. *See Yankee Nuclear*, LBP-96-2, 43 NRC at 75-76; *see also Pacific Gas and Electric Co.* (Diablo Canyon Power Plant Independent Spent Fuel Storage Installation), LBP-02-23, 56 NRC 413, 439-41 (2002), *petition for review denied*, CLI-03-12, 58 NRC 185, 191 (2003).
- Y All properly formulated contentions must focus on the license application in question, challenging either specific portions of or alleged omissions from the application (including the Safety Analysis Report and the Environmental Report) so as to establish that a genuine dispute exists with the applicant on a material issue of law or fact. *See* 10 C.F.R. § 2.309(f)(1)(vi). Any contention that fails directly to controvert the application or that mistakenly asserts the application does not address a relevant issue can be dismissed. *See Sacramento Municipal Utility District* (Rancho Seco Nuclear Generating Station), LBP-93-23, 38

NRC 200, 247-48 (1993), *review declined*, CLI-94-2, 39 NRC 91 (1994); *Texas Utilities Electric Co.* (Comanche Peak Steam Electric Station, Unit 2), LBP-92-37, 36 NRC 370, 384 (1992), *appeals dismissed as moot*, CLI-93-10, 37 NRC 192 (1993).

Z As the Commission has made apparent in other contexts, *see Hydro Resources, Inc.* (2929 Coors Road, Suite 101, Albuquerque, NM 87120), CLI-98-16, 48 NRC 119, 121-22 (1998), absent some need for resolution to meet the agency's statutory responsibilities, the agency's adjudicatory process is not a forum for litigating matters that are primarily the responsibility of other federal or state/local regulatory agencies.

AA Assertions regarding purported water fouling incidents by members of the applicant's corporate family who are not NRC licensees fall far short of what is required to establish circumstances that would create a genuine material dispute regarding the potential for such activities by the Applicant, which is an NRC licensee, during the course of facility operation. *See* 10 C.F.R. § 2.309(f)(1)(v); *see also GPU Nuclear, Inc.* (Oyster Creek Nuclear Generating Station), CLI-00-6, 51 NRC 193, 207 (2000) (absent evidence to the contrary, it is assumed NRC licensees will not contravene agency regulations).

BB As the agency's rules state, "[n]o petition or other request for review on the staff's significant hazards consideration determination will be entertained by the Commission. The staff's determination is final, subject only to the Commission's discretion on its own initiative, to review the determination." 10 C.F.R. § 50.58(b)(6); *see also Duke Energy Corp.* (Catawba Nuclear Station, Units 1 and 2), CLI-05-14, 61 NRC 359, 361 n.2 (2005).

CC A reply pleading is an improper place to attempt to introduce a new argument to establish a contention's admissibility. *See Louisiana Energy Services, L.P.* (National Enrichment Facility), CLI-04-25, 60 NRC 223, 225, *reconsideration denied*, CLI-04-35, 60 NRC 619, 623-24 (2004).

DD The following technical issue is discussed: power uprates.

LBP-07-11 CAROLINA POWER & LIGHT COMPANY (Shearon Harris Nuclear Power Plant, Unit 1), Docket No. 50-400-LR (ASLBP No. 07-855-02-LR-BD01); LICENSE RENEWAL; August 3, 2007; MEMORANDUM AND ORDER (Ruling on Standing and Contentions of Petitioners North Carolina Waste Awareness and Reduction Network and Nuclear Information and Resource Service)

A In this license renewal proceeding the Licensing Board finds that Petitioners have standing to intervene but have not submitted a contention that is admissible in the current circumstances, and that the proceeding must therefore be terminated at this time.

B A petitioner's standing, or right to participate in a Commission licensing proceeding, is derived from section 189a of the Atomic Energy Act (AEA), which requires the NRC to provide a hearing "upon the request of any person whose interest may be affected by the proceeding," and which has been implemented in Commission regulations as 10 C.F.R. § 2.309(d)(1).

C Judicial concepts of standing, to which licensing boards are to look in ruling on standing, provide the following guidance in determining whether a petitioner has established the necessary "interest" under 10 C.F.R. § 2.309(d)(1): To qualify for standing a petitioner must allege (1) a concrete and particularized injury that is (2) fairly traceable to the challenged action and (3) likely to be redressed by a favorable decision, criteria commonly referred to, respectively, as "injury in fact," causality, and redressability. The injury may be either actual or threatened, but must lie arguably within the "zone of interests" protected by the statutes governing the proceeding — here, either the Atomic Energy Act (AEA) or the National Environmental Policy Act (NEPA).

D Individual petitioners living within 50 miles of a nuclear power plant may establish standing based on a longstanding "proximity presumption" principle in NRC adjudicatory proceedings, under which the elements of standing will be presumed to be satisfied if an individual lives within the zone of possible harm from a significant source of radioactivity, in the geographical area that might be affected by an accidental release of fission products; this has been defined in proceedings involving nuclear power plants as being within a 50-mile radius of such a plant.

E An organization that wishes to establish standing to intervene may do so by demonstrating either organizational or representational standing. To establish organizational standing it must be shown that the interests of the organization will be harmed by the proceeding. To establish representational standing, (1) it must be demonstrated that the interests of at least one member who has standing to sue in his or her own right may be affected by the licensing action; (2) that member must be identified by name and address; and (3) it must be shown that the organization is authorized to request a hearing on behalf of that member. Petitioner organizations that provided affidavits of seven members who lived within 50 miles of plant were

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

found to have established standing on behalf of such public interest groups; even though affidavits did not explicitly authorize organizations to represent them, this was implicit in their providing the affidavits, and in any event this matter was cured after objection was raised.

- F To intervene in an NRC proceeding, a petitioner must, in addition to demonstrating standing, submit at least one contention meeting the requirements of 10 C.F.R. § 2.309(f)(1). Failure of a contention to meet any of the requirements of section 2.309(f)(1) is grounds for its dismissal.
- G The “strict contention rule serves multiple interests,” including (1) focusing the hearing process on real disputes susceptible of resolution in an adjudication (for example, a petitioner may not demand an adjudicatory hearing to attack generic NRC requirements or regulations, or to express generalized grievances about NRC policies); (2) by requiring detailed pleadings, putting other parties in the proceeding on notice of the Petitioners’ specific grievances and thereby giving them a good idea of the claims they will be either supporting or opposing; and (3) helping to ensure that full adjudicatory hearings are triggered only by those able to proffer at least some minimal factual and legal foundation in support of their contentions.
- H Although the February 2004 revision of the NRC procedural rules no longer incorporates all of the prior provisions, including some of those formerly found in 10 C.F.R. § 2.714(a)(3), (b)(1), which in the past permitted the amendment and supplementation of petitions and filing of contentions after the original filing of petitions, the new rules contain essentially the same substantive admissibility standards for contentions.
- I Under 10 C.F.R. § 2.309(f)(1)(iii), a contention must allege facts sufficient to establish that it falls directly within the scope of a proceeding. The scope of a license renewal proceeding is addressed, with regard to safety-related issues, in 10 C.F.R. Part 54, and, with regard to environmental issues, in 10 C.F.R. Part 51.
- J A contention that challenges any Commission rule or applicable statutory requirement is outside the scope of the proceeding. A petitioner may, however, within the adjudicatory context submit a request for waiver of a rule under 10 C.F.R. § 2.335, and outside the adjudicatory context file a petition for rulemaking under 10 C.F.R. § 2.802 or a request that the NRC Staff take enforcement action under 10 C.F.R. § 2.206.
- K Under 10 C.F.R. § 2.309(f)(1)(iv), a petitioner must demonstrate that the issue raised in the contention is material to the findings the NRC must make to support the action that is involved in the proceeding; the standards defining the findings the NRC must make to support a license renewal are set forth in 10 C.F.R. § 54.29.
- L Under 10 C.F.R. § 2.309(f)(1)(vi), requiring the provision of sufficient information to show a genuine dispute with the applicant on a material issue of law or fact, a petitioner must read pertinent portions of the license application, including the safety analysis report and the environmental report (ER); state the applicant’s position and the petitioner’s opposing view; and explain why petitioner disagrees with the applicant. If a petitioner does not believe these materials address a relevant issue, petitioner must explain why the application is deficient. A contention must directly controvert a position taken by the applicant in the application, and an allegation that some aspect of a license application is “inadequate” or “unacceptable” does not give rise to a genuine dispute unless it is supported by facts and a reasoned statement of why the application is unacceptable in some material respect.
- M As addressed in 10 C.F.R. Part 54 and described by the Commission in *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), CLI-01-17, 54 NRC 3 (2001), the NRC license renewal safety review is focused “upon those potential detrimental effects of aging that are not routinely addressed by ongoing regulatory oversight programs,” which the Commission considers “the most significant overall safety concern posed by extended reactor operation,” and on “plant systems, structures, and components for which current [regulatory] activities and requirements may not be sufficient to manage the effects of aging in the period of extended operation.” An issue can be related to plant aging and still not warrant review at the time of a license renewal application, if an aging-related issue is “adequately dealt with by regulatory processes” on an ongoing basis. For example, if a structure or component is already required to be replaced “at mandated, specified time periods,” it would fall outside the scope of license renewal review.
- N The regulatory provisions of 10 C.F.R. Part 51, relating to the environmental aspects of license renewal, arise out of the requirement that the National Environmental Policy Act (NEPA), 42 U.S.C. § 4332(2)(C), places on federal agencies to “include in every recommendation or report on . . . major federal actions significantly affecting the quality of the human environment, a detailed statement by the responsible official on . . . the environmental impact of the proposed action . . . .” As noted in *Robertson*

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

*v. Methow Valley Citizens Council*, 490 U.S. 332, 349 (1989), the “statutory requirement that a federal agency contemplating a major action prepare such an environmental impact statement [EIS] serves NEPA’s ‘action-forcing’ purpose in two important respects. . . . It ensures that the agency, in reaching its decision, will have available, and will carefully consider, detailed information concerning significant environmental impacts; it also guarantees that the relevant information will be made available to the larger audience that may also play a role in both the decisionmaking process and the implementation of that decision.”

O Although the requirements of NEPA are directed to federal agencies and thus the primary duties of NEPA fall on the NRC Staff in NRC proceedings, the initial requirement to analyze the environmental impacts of an action, including license renewal, is directed to applicants, and 10 C.F.R. § 51.53(c) requires a license renewal applicant to submit with its application an environmental report (ER), which “must contain a description of the proposed action, including the applicant’s plans to modify the facility or its administrative control procedures as described in accordance with § 54.21,” and “describe in detail the modifications directly affecting the environment or affecting plant effluents that affect the environment.”

P Environmental issues identified as “category 1,” or “generic,” issues in 10 C.F.R. Part 51, Subpart A, Appendix B, are not within the scope of a license renewal proceeding. On these issues the Commission found that it could draw generic conclusions that are applicable to nuclear power plants generally. Thus these issues need not be repeatedly assessed on a plant-by-plant basis, and license renewal applicants may in their ERs refer to and adopt the generic environmental impact findings found in Table B-1, Appendix B, for all category 1 issues, with the following exception: As required by 10 C.F.R. § 51.53(c)(3)(iv), ERs must also contain “any new and significant information regarding the environmental impacts of license renewal of which the applicant is aware,” even if this concerns a category 1 issue; but this is not a proper subject for a contention absent a waiver of the rule in 10 C.F.R. § 51.53(c)(3)(i) that category 1 issues need not be addressed in a license renewal.

Q The Commission was not able to make generic environmental findings on issues identified as “category 2,” or “plant specific,” issues in 10 C.F.R. Part 51, Subpart A, Appendix B, and thus these issues are within the scope of license renewal, and applicants must provide a plant-specific review of them. These issues are characterized by the Commission as involving environmental impact severity levels that could differ significantly from plant to plant, or impacts for which additional plant-specific mitigation measures should be considered.

R As required under 10 C.F.R. § 51.95(c), the Commission in 1996 adopted a “Generic Environmental Impact Statement for License Renewal of Nuclear Plants” (GEIS), published as NUREG-1437, which provides data supporting the table of category 1 and 2 issues in Appendix B. Issuance of the 1996 GEIS was part of an amendment of the requirements of Part 51 undertaken by the Commission to establish environmental review requirements for license renewals “that were both efficient and more effectively focused.”

S Section 51.103 defines the requirements for the “record of decision” relating to any license renewal application, including the standard that the Commission, in making such a decision pursuant to Part 54, “shall determine whether or not the adverse environmental impacts of license renewal are so great that preserving the option of license renewal for energy planning decisionmakers would be unreasonable.”

T A contention that the license should not be renewed for an additional 20 years until the plant comes into compliance with fire safety requirements, although it raises a significant issue, is found not to be admissible at this time, based on binding Commission case law precedent, that issues already the focus of ongoing regulatory processes do not come within the NRC’s safety review of a license renewal application, and based on the circumstance that licensee was required by NRC Staff to file a license amendment application indicating how it intended to come into compliance with relevant fire safety requirements by May 2008, prior to scheduled final action on the license renewal application, which would seem to allow for such processes to provide “reasonable assurance that the activities authorized by the renewed license will continue to be conducted in accordance with the current licensing basis,” as required under 10 C.F.R. § 54.29(a) — provided Staff addresses whether the new proposed fire protection program effectively addresses all relevant aging issues. Though the contention is denied at this time, petitioners might file a new petition in a license amendment proceeding and/or at a later point in this license renewal proceeding, provided relevant requirements of 10 C.F.R. § 2.309(c), (f)(1), and/or (f)(2) are met.

U Contentions that the license renewal application fails to satisfy NEPA, because it does not address environmental impacts of attack by deliberate and malicious crash of aircraft into the plant, must be

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

denied based on binding Commission case law precedent that NEPA imposes no duty on NRC to consider intentional malevolent acts in a license renewal proceeding.

- V A contention that the plant's evacuation plan does not adequately protect the health and safety of public and plant workers must be denied based on binding Commission case law precedent that emergency planning is not within the scope of license renewal as a safety issue, and because, as an environmental issue, petitioners did not challenge specific input data to the severe accident mitigation alternatives (SAMA) analysis, which might have brought the contention within the scope of license renewal.

LBP-07-12 ENTERGY NUCLEAR GENERATION COMPANY and ENTERGY NUCLEAR OPERATIONS, INC. (Pilgrim Nuclear Power Station), Docket No. 50-293-LR (ASLBP No. 06-848-02-LR); LICENSE RENEWAL; October 17, 2007; MEMORANDUM AND ORDER (Ruling on Entergy's Motion for Summary Disposition of Pilgrim Watch Contention 1, Regarding Adequacy of Aging Management Program for Buried Pipes and Tanks and Potential Need for Monitoring Wells To Supplement Program)

- A In this license renewal proceeding the Licensing Board denies the Applicant's motion for summary disposition of a contention involving whether leak detection through monitoring wells is necessary as part of the plant's aging management program to ensure that relevant components perform their intended safety functions during the license renewal period, but limits issues for litigation.

- B Section 2.1205(a) of 10 C.F.R. permits a party in a Subpart L proceeding to submit a motion for summary disposition; under section 2.1205(c), resolution of such a motion is governed by the standards for summary disposition set forth in Subpart G of 10 C.F.R. Part 2, which provides in section 2.710(d)(2) that a moving party shall be granted summary disposition "if the filings in the proceeding, . . . together with the statements of the parties and the affidavits, if any, show that there is no genuine issue as to any material fact and that the moving party is entitled to a decision as a matter of law."

- C Because motions for summary disposition are analogous to motions for summary judgment under Rule 56 of the Federal Rules of Civil Procedure, they are generally evaluated according to the same standards used by Federal District Courts in ruling on motions for summary judgment. *Advanced Medical Systems, Inc.* (One Factory Row, Geneva, Ohio 44041), CLI-93-22, 38 NRC 98, 102 (1993).

- D The moving party for summary disposition in an NRC proceeding "bears the burden of showing the absence of a genuine issue as to any material fact," and a licensing board ruling on a motion "must view the record in the light most favorable to the party opposing such a motion" and deny the motion if the moving party fails to meet its burden, even in the face of an inadequate response. *Advanced Med. Sys.*, CLI-93-22, 38 NRC at 102.

- E Facts are "material" if they will "affect the outcome of [a proceeding] under the governing law." *Anderson v. Liberty Lobby, Inc.*, 477 U.S. 242, 248 (1986).

- F If the filings demonstrate the existence of a genuine material fact, the evidence submitted in support of a motion fails to show the nonmoving party's position is a sham or fails to foreclose the possibility of a factual dispute, or there is an issue as to the credibility of the moving party's evidentiary material, a moving party will be found to have failed to meet its burden. *Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-5, 63 NRC 116, 122 (2006); 10A Charles Alan Wright et al., *Federal Practice & Procedure* § 2727 (3d ed. 1998).

- G If the proponent of the motion meets its burden, an opponent must "set forth specific facts showing that there is a genuine issue," and may not rely on "mere allegations or denials." The opposing party does not have to show that it would prevail on the issues, but must "demonstrate that there is a genuine factual issue to be tried." Any fact not controverted will be deemed admitted. *Advanced Med. Sys.*, CLI-93-22, 38 NRC at 102-03.

- H If a movant satisfies its initial burden and supports its motion by affidavit, "the opposing party must either proffer rebutting evidence or submit an affidavit explaining why it is impractical to do so," and "[i]f the presiding officer determines from affidavits filed by the opposing party that the opposing party cannot present by affidavit the facts essential to justify its opposition, the presiding officer may order a continuance to permit such affidavits to be obtained, or may take other appropriate action." *Advanced Med. Sys.*, CLI-93-22, 38 NRC at 103; 10 C.F.R. § 2.710(c).

- I Even if the basic facts are uncontroverted, summary disposition is "inappropriate when the evidence is susceptible of different interpretations or inferences." *Hunt v. Cromartie*, 526 U.S. 541, 553 (1999).

- J Summary disposition is not "a tool for trying to convince a Licensing Board to decide, on written submissions, genuine issues of material fact that warrant resolution at a hearing." *Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), LBP-01-39, 54 NRC 497, 509 (2001).

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- K It is inappropriate at the summary disposition stage for a Board to attempt “to untangle the expert affidavits and decide ‘which experts are more correct.’” *Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), LBP-05-4, 61 NRC 71, 80 (2005).
- L While “‘wholly conclusory statements for which no supporting evidence is offered’ need not be taken as true for summary judgment purposes,” a court “may not make credibility determinations or weigh the evidence” at the summary judgment stage. *Banks v. District of Columbia*, 377 F. Supp. 2d 85, 89 (D.D.C. 2005).
- M Summary disposition may be a useful device to eliminate the need for the time and cost of a hearing if the truth on a contested issue is clear and there is no genuine issue on any material fact, *Poller v. Columbia Broadcasting System, Inc.*, 368 U.S. 464, 467 (1962); but “if there is doubt as to whether the parties should be required to proceed further, [a motion for summary disposition] should be denied.” *Savannah River*, LBP-05-4, 61 NRC at 79.
- N Licensing board finds there are “genuine issues of material fact” that have been controverted by Intervenor and denies motion for summary disposition, but limits issues remaining to be litigated. In hearing on contention asserting that leak detection through monitoring wells is necessary as part of plant’s aging management program to ensure that relevant components perform their intended safety functions during the license renewal period, not in dispute and not to be litigated are (a) issues relating to any health effects of leaking radioactive liquid, and (b) any leakage from the spent fuel pool. Also, (c) leakage events at other plants are not directly relevant; while these events may provide relevant information regarding the potential usefulness of monitoring wells in detecting leaks, what is relevant is the uniqueness of the Pilgrim plant and what may be required with regard to it.
- LBP-07-13 ENTERGY NUCLEAR GENERATION COMPANY and ENTERGY NUCLEAR OPERATIONS, INC. (Pilgrim Nuclear Power Station), Docket No. 50-293-LR (ASLBP No. 06-848-02-LR); LICENSE RENEWAL; October 30, 2007; MEMORANDUM AND ORDER (Ruling on Motion To Dismiss Petitioners’ Contention 3 Regarding Severe Accident Mitigation Alternatives)
- A In this license renewal proceeding the Licensing Board grants the Applicant’s motion for summary disposition of a contention involving the Applicant’s handling of its Severe Accident Mitigation Alternatives (SAMA) analysis concerning (1) evacuation times, (2) economic consequences, and (3) meteorological patterns.
- B The determinative factor in a summary disposition motion is whether there is any genuine issue of *material* fact remaining in dispute — and that determination is made through examination of the filings in respect of the motion. The determination as to materiality in any given instance is controlled by the governing law for the particular issue involved. “As to materiality, the substantive law will identify which facts are material. Only disputes over facts that might affect the outcome of the suit under the governing law will properly preclude the entry of summary judgment. Factual disputes that are irrelevant or unnecessary will not be counted.” *Anderson v. Liberty Lobby, Inc.*, 477 U.S. 242, 248 (1986) (citing generally 10A C. Wright, A. Miller, & M. Kane, *Federal Practice & Procedure* § 2727, at 93-95 (1983)).
- C For this Agency the inquiry becomes whether or not there is at issue any fact which can materially influence the determination the NRC (resting upon the technical evaluation by the Staff) must make. We believe, therefore, that the regulations of the NRC (which are the governing law for this case and what *Anderson* requires guide us) clearly teach that a fact cannot be “material” to *our* ruling here unless its consideration could materially affect the decision of the NRC vis-a-vis implementation of any particular SAMA.
- D NRC regulations require specificity and support for the positions parties take in their filings. *See, e.g.*, 10 C.F.R. § 2.710(b) (requiring that affidavits “set forth facts which would be admissible in evidence,” and that opponents may not rest their arguments on “mere allegations or denials”); *compare* 10 C.F.R. § 2.309(f) (establishing the minimum required support for original contention admissibility). In our view, the conditions set out in 10 C.F.R. § 2.309(f) serve as minimum specificity standards for “specific facts showing there is a genuine issue of fact” (as described in 10 C.F.R. § 2.710(b)).
- E Of course, a party is not required to prove its case in making or opposing a motion for summary disposition. But if the support a party offers to demonstrate that a genuine dispute exists as to a material fact indicates that, after expanding that support to its logical limits, it cannot support a finding of fact material to the determination the Agency must make, that party’s position cannot prevail. The rendering of a determination regarding any motion for summary disposition thus requires a thorough examination of the potential materiality of the support offered by the Parties for their positions.

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- F “There is no issue for trial unless there is sufficient evidence favoring the nonmoving party for a jury to return a verdict for that party. . . . If th[at] evidence . . . is not significantly probative, summary judgement may be granted.” *Anderson*, 477 U.S. at 249. Furthermore, “the judge must ask himself . . . whether a fair minded jury could return a verdict for the [nonmovant] on the evidence presented[.]” *id.* at 252, and “if there is no evidence upon which a reasonable mind might fairly conclude [for the nonmovant], the motion must be granted.” *Id.* at 253. Finally, “we agree . . . that the trial judge must direct a verdict (*i.e.* grant summary disposition) if, under the governing law, there can be but one reasonable conclusion as to the verdict.” *Id.* at 250. Formerly, it was held that where there was a “*scintilla* of evidence in support of a [nonmovant’s] case, the judge was bound to leave it to the jury, but recent decisions . . . have established a more reasonable rule that . . . there is a preliminary question for the judge . . . whether there is any [evidence] upon which a jury could properly proceed to find a verdict for the [nonmovant].” *Id.*
- G A licensing board cannot make a determination of whether there is a genuine issue of material fact without carefully examining the evidence presented in the parties’ affidavits. “For example, there is no genuine issue if the evidence presented in the opposing affidavits is of insufficient caliber or quantity to allow a rational finder of fact to find [for the nonmovant].” *Anderson*, 477 U.S. at 254.
- H NRC Regulations require, at the operating license renewal stage, that “[i]f the staff has not previously considered severe accident mitigation alternatives for the applicant’s plant in an environmental impact statement or related supplement or in an environmental assessment, a consideration of alternatives to mitigate severe accidents must be provided.” 10 C.F.R. § 51.53(c)(3)(ii)(L).
- I The SAMA analysis is an obligation of the Staff in fulfillment of its National Environmental Policy Act (NEPA) obligations, and, therefore it is set out in the environmental portions of NRC regulations, and, because it is part of an environmental effects analysis, the requirement is that the Staff accurately characterize and “consider” these alternatives. That Part 51 is a part of this Agency’s efforts to satisfy its NEPA obligations is made crystal clear by 10 C.F.R. § 51.2, as well as the fact that the required finding is set out in Table B-1 of Appendix B to Subpart A of Part 51, entitled “Summary of Findings on NEPA Issues for License Renewal of Nuclear Power Plants.”
- J The requirement for SAMA analysis is made more explicit in Table B-1 of Appendix B to Subpart A of Part 51 in the section entitled “Postulated Accidents,” wherein NRC regulations require an analysis of “[t]he probability weighted consequences of atmospheric releases, fallout onto open bodies of water, releases to ground water, and societal and economic impacts from severe accidents . . .,” and consideration of “alternatives to mitigate” these sorts of accidents; thus our regulations require the use of probabilistic (as opposed to deterministic) methodology.
- K The underlying SAMA analyses require modeling of extremely complex time- and physical condition-dependent phenomena, which all those familiar with the field know are generally not amenable to accurate modeling. Therefore, this Agency has wisely determined that these effects and potential benefits of mitigation be examined using “probability weighted consequences.”
- L It is necessary for the Staff to take a uniform approach to its review of such analyses by license applicants and for performance of its own analyses, and it would be imprudent for the Staff to do otherwise without sound technical justification. Where these analyses are customarily prepared using the MACCS2 code, and where this code has been widely used and accepted as an appropriate tool in a large number of similar instances, the Staff is fully justified in finding, after due consideration of the manner in which the code has been used, that analysis using this code is an acceptable method for performance of SAMA analysis.
- M The manner in which this Agency meets its obligation to “consider” these alternatives is to perform a cost-benefit analysis, comparing the estimated equivalent dollar amount of computed reduction in the risk of a severe accident associated with implementation of a particular mitigation alternative with the estimated potential cost of implementation of that alternative.
- N In addressing the Motion and the opposition thereto, we must examine the substance of the information provided by the parties, for, at its heart, such a motion rests upon whether or not there is evidence upon which a trier of fact might reasonably find for the nonmoving party.
- O For a fact to be “material” in the present context, we have taken our guidance from the procedures for contention admissibility, which provide that the issue proffered by a petitioner must be “material to the findings the NRC must make to support the action that is involved in the proceeding.” 10 C.F.R. § 2.309(f)(1)(iv).

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

P We find foundation for our threshold criteria regarding the level of support required for summary disposition in those same contention admissibility provisions — requiring a proponent of a position to provide facts or expert support for its position. *See, e.g.*, 10 C.F.R. § 2.309(f)(1)(v).

Q For the express purposes of summary disposition, mere allegations are insufficient — and we take that to include allegations which are in the nature of speculation or bare conclusory statements by an expert. *See, e.g.*, 10 C.F.R. § 2.710(b).

R Where it is shown that even with no evacuation a SAMA is still not cost-effective it clearly demonstrates that any errors in assumptions regarding the evacuation time or pattern cannot reasonably be expected to rise to a level necessary to cause implementation of any SAMA to become cost-effective. Thus it is clear that a trier of fact could not reasonably find that the result of this Agency's determination regarding whether or not any (not implemented) SAMA is cost-effective could be affected by errors in assumptions regarding evacuation.

S We note that for a fact to be material with regard to the SAMA analysis, it must be a fact which can reasonably be expected to impact the Staff's conclusion that any particular mitigation alternative may (or may not) be cost-effective.

LBP-07-14 SHAW AREVA MOX SERVICES (Mixed Oxide Fuel Fabrication Facility), Docket No. 70-3098-MLA (ASLBP No. 07-856-02-MLA-BD01); MATERIALS LICENSE AMENDMENT; October 31, 2007; MEMORANDUM AND ORDER (Ruling on Standing and Contentions)

A In this proceeding regarding the application of Shaw AREVA MOX Services (MOX Services) for a license to possess and use byproduct, source, and special nuclear material at the planned Mixed Oxide Fuel Fabrication Facility (MFFF, or the MOX facility) that it is building for the U.S. Department of Energy (DOE) on the federal government's Savannah River Site (SRS), the Licensing Board — ruling on a hearing petition filed by Blue Ridge Environmental Defense League (BREDL), Nuclear Watch South (NWS), and the Nuclear Information and Resource Service (NIRS) (collectively "Petitioners") seeking to intervene to contest the MOX Services Application — concludes that the Petitioners have standing to intervene and have proffered two admissible contentions.

B The Board declines to impose a requirement that Petitioners perform an independent technical analysis at the standing phase of a proceeding, especially in a case where the chain of plausible causation that could lead to offsite doses is abundantly clear.

C Where the NRC's standard review plan for a facility requires applicants to include measures to prevent nuclear criticality, an applicant's assertion that petitioners have not demonstrated that the facility involves "a significant source of radioactivity with an obvious potential for offsite consequences" does not stand up.

D Given the information known about the nature of the facility and the available radioactive and chemical materials at risk, and the resulting potential for offsite consequences in the event of inadvertent release, criticality accident, or chemical explosion, there is no need for *pro se* petitioners to plead these matters more specifically.

E For purposes of determining whether there is potential for offsite consequences at specific sites, licensing boards have authority to infer obvious intermediate steps in a chain of causation that could lead to offsite doses. The standard in these matters is that offsite consequences need only be plausible, not that they be probable or likely, and thus standing can be based on plausible but unlikely scenarios.

F Petitioners are not required to demonstrate their asserted injury with "certainty," nor to "provide extensive technical studies" in support of their standing argument. Resolving standing questions is an entirely different matter than adjudicating the ultimate merits of a contention. At the standing stage, petitioners should not be burdened with conducting extensive technical studies.

G A petitioner awarded standing in one proceeding need not restate all of its case to establish standing in another proceeding related to the same facility. Where the standing in the prior proceeding is, however, based on an issue that is outside the scope of the new proceeding it cannot serve as the basis for standing in the new proceeding.

H In evaluating the specificity of petitioners' standing arguments, a licensing board must take into account the information provided by the applicant and the NRC Staff in the EIS. If the two federal agencies themselves, with the resources at their disposal, do not see fit to calculate projected doses at several different distances from the facility and to differentiate areas that might receive radiation doses from those that will not, it is hardly reasonable, or fair, to expect petitioners to do better.

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- I Because of the nature of a two-step structure where environmental issues are dealt with in a separate proceeding, environmental contentions are beyond the scope of the current proceeding unless they meet requirements beyond the ordinary contention admissibility tests of 10 C.F.R. § 2.309(f)(1). In that circumstance, petitioners' pleadings must contain more systematic support for contention admissibility than a passing reference to new information and to 10 C.F.R. § 51.92.
- J The fact that a given guidance document upon which an applicant relied was withdrawn does not suffice to support a contention. The applicant's analysis itself must be challenged, and the fact that it does or does not match the requirements of a specific guidance document — or matches the guidance of a withdrawn document — is only one factor to consider in evaluating the challenge.
- K When a Notice of Hearing, intended to provide an opportunity to challenge aspects of a facility's construction or subsequent operation, is issued before construction is commenced, it is to be fully expected that additional petitions to intervene, or statements of contentions, will need to be filed as construction unfolds and (hypothetically) reveals attendant shortcomings.
- L Instead of establishing a sorting system containing only two bins — "premature" and "nontimely" — into which a prospective intervenor's proffered contentions must be placed, a licensing board, in determining whether the proffered contentions are appropriate, must apply prematurity norms in a manner that fits the circumstances; and must consider whether to condition rejection of such contentions so as to preserve the opportunity for them to be re-presented later, if their concerns come to fruition, without having to overcome higher pleading hurdles.
- M The fundamental purpose served by a Notice of Hearing, one which is so obvious it might be overlooked, is to provide facility opponents a fair opportunity to be heard.
- N If any safety contentions filed before construction begins would be considered premature and/or speculative, NRC hearing opportunities could soon come to be viewed as chimerical — a result that would seem to be the opposite of what Commissioners past and present have said is their goal. For in an "early notice" situation it would never be possible for a petitioner to have a contention admitted if potentially legitimate safety concerns about actual construction practices, or upcoming operational procedures, were automatically rejected, without recourse, because they were filed before construction had either commenced at all or proceeded any distance. It would be paradoxical to let that situation label the challenge, rather than the notice, as premature, thus ending the process and eliminating ready later opportunities to raise construction-practice matters freely.
- O A license to possess and to use special nuclear materials at this facility is the functional equivalent of an operating license for more standard facilities, such as nuclear power plants. Traditionally, operating license applications for such facilities were neither docketed nor noticed for hearing until substantial progress had been made under the previously awarded construction permit, as a crucial issue at the operating license stage was whether the facility had indeed been constructed in accordance with the permit.
- P A classic "contention of omission" occurs when petitioners allege that certain necessary safety-related steps or analyses have not been taken. Responding that the actions will be taken later does not defeat the contention for prematurity — the uncertain or speculative nature of the situation cuts against an applicant, not against a petitioner. Facility proponents may later bring forward, as they routinely do, a solution that allegedly cures the deficiency; they then move to dismiss the contention, triggering in turn a period during which petitioners can amend the original contention to challenge the solution's substance.
- Q There is an apparent inconsistency between two portions of the Commission's rules establishing a framework for considering contentions filed after the initial petition was due. Any new contentions filed by petitioners — whose original petition was timely and who have demonstrated their standing — that are attributable to the applicant's construction activity or change of plans or design, should be governed by the basic provisions of 10 C.F.R. § 2.309(f)(2) rather than by the more restrictive elements of 10 C.F.R. § 2.309(c) applicable to "nontimely filings." When new contentions are based on breaking developments or information, they are to be treated as "new or amended," not as "nontimely."
- R After the initial filing, permission of the licensing board must be sought to file new or amended safety contentions. Such permission is to be given only if (i) the contention is based on information which "was not previously available"; (ii) that information is "materially different than information previously available"; and (iii) the contention was submitted "*in a timely fashion*" in terms of "the availability of the subsequent information." 10 C.F.R. § 2.309(f)(2)(i)-(iii).
- S A party may be sanctioned, including losing the opportunity to participate in a proceeding, when it absents itself from a scheduled session without first requesting that it be excused. The Board emphasizes

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

that parties are obligated (unless excused) to attend scheduled sessions as well as to communicate readily and cooperatively with each other when the conduct of adjudicatory business requires it.

LBP-07-15 ENTERGY NUCLEAR VERMONT YANKEE, LLC, and ENTERGY NUCLEAR OPERATIONS, INC. (Vermont Yankee Nuclear Power Station), Docket No. 50-271-LR (ASLBP No. 06-849-03-LR); LICENSE RENEWAL; November 7, 2007; MEMORANDUM AND ORDER (Ruling on NEC Motions To File and Admit New Contention)

A The proposed new contention, challenging the adequacy of the applicant's recently issued metal fatigue calculations, meets the three-factor test of 10 C.F.R. § 2.309(f)(2)(i)-(iii) because it was filed in a timely manner soon after this new and materially different information became available. It also meets the six-factor test of 10 C.F.R. § 2.309(f)(1). It is therefore admissible.

B The first step in assessing the admissibility of a new contention in an ongoing proceeding is to determine if it is timely under 10 C.F.R. § 2.309(f)(2)(iii). Timely new (non-NEPA) contentions are subject to a three-factor test under 10 C.F.R. § 2.309(f)(2). Nontimely new contentions are subject to a more stringent standard — the eight-factor balancing test specified in 10 C.F.R. § 2.309(c).

C A new non-NEPA contention is admissible under 10 C.F.R. § 2.309(f)(2)(i)-(iii) if it is based on information that was not previously available, if the new information is materially different from previously available information, and if the contention is submitted in a timely manner once the new information becomes available. In this case, the applicant's release of a revised metal fatigue analysis constitutes new and materially different information.

D NRC regulations do not provide a specific deadline for determining whether a new contention is timely for purposes of 10 C.F.R. § 2.309(f)(2)(iii). A specific rule may be established by a licensing board in the initial scheduling order for a case. Many boards have established a 30-day rule in this way.

E The six-factor contention admissibility test in 10 C.F.R. § 2.309(f)(1) applies regardless of whether a contention is submitted at the beginning of a proceeding, as a timely new contention under 10 C.F.R. § 2.309(f)(2), or as a nontimely new contention under 10 C.F.R. § 2.309(c).

F In a license renewal proceeding, safety contentions must focus on topics related to the detrimental effects of aging and related time-limited issues mentioned in 10 C.F.R. Part 54. Metal fatigue is an example of age-related degradation that properly falls within the scope of a license renewal proceeding.

G Under 10 C.F.R. § 2.310(a), upon admission of a new contention, the Board must identify the specific hearing procedures to be used. The Board makes this determination on a contention-by-contention basis, selecting the hearing procedure most appropriate for each contention.

H Absent any mandatory hearing procedure under 10 C.F.R. § 2.310(b)-(h), the Board must exercise its discretion under 10 C.F.R. § 2.310(a) and select the hearing procedure most appropriate for a newly admitted contention. There is no mandatory or automatic "default" to Subpart L.

LBP-07-16 NUCLEAR FUEL SERVICES, INC. (Special Nuclear Facility), Docket No. 70-143-CO (ASLBP No. 07-857-01-CO-BD01) (Confirmatory Order); ENFORCEMENT; December 13, 2007; MEMORANDUM AND ORDER (Denying Requests for Hearing)

A By Commission design, the scope of an enforcement proceeding is narrow and is expressly restricted by the *Federal Register* Notice of Opportunity for Hearing which initiates the proceeding. In past enforcement proceedings, the Commission has limited the scope of the proceeding to whether an enforcement order should be sustained. As provided in longstanding Commission policy, this means that a petitioner must show that he, she, or it would be adversely affected by the enforcement order as it exists, not that they are harmed by the failure of the Commission to impose a hypothetical order the petitioner asserts would be an improvement. *Alaska Department of Transportation and Public Facilities*, CLI-04-26, 60 NRC 399, 404-06 (2004).

B "Boards are not to consider whether [enforcement] orders need strengthening." *Alaska Dep't of Transp. & Pub. Facilities*, CLI-04-26, 60 NRC at 406. To the extent a request for hearing seeks to enhance the enforcement measures already outlined in an enforcement order, this is outside the scope of the proceeding, and accordingly, the request for hearing must be denied.

C To establish standing, a petitioner must show an injury in fact that is fairly traceable to the challenged action, and that is likely to be redressed by a favorable decision. *Maine Yankee Atomic Power Co.* (Maine Yankee Atomic Power Station), CLI-04-5, 59 NRC 52, 57 n.16 (2004) (citing *Sequoyah Fuels Corp. and General Atomics* (Gore, Oklahoma Site), CLI-94-12, 40 NRC 64, 71-72 (1994)). This three-part inquiry is conducted by reviewing the alleged injury stemming from the regulatory action at issue, not that asserted to arise generally from the operation of the facility or the actions of the licensee involved in the proceeding.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

*See Pacific Gas and Electric Co.* (Diablo Canyon Nuclear Power Plant, Units 1 and 2), LBP-92-27, 36 NRC 196, 198 (1992).

D To establish standing, a petitioner must show an injury in fact that is fairly traceable to the challenged action, and that is likely to be redressed by a favorable decision. *Maine Yankee*, CLI-04-5, 59 NRC at 57 n.16 (citing *Sequoyah Fuels Corp. & General Atomics*, CLI-94-12, 40 NRC at 71-72). Because a petitioner must show an injury, the issue of standing is directly related to the issue of the scope of the proceeding. If there is no injury, i.e., no adverse effect, the petitioner's request for hearing is not within the scope of the proceeding. *Alaska Dep't of Transp. & Pub. Facilities*, CLI-04-26, 60 NRC at 405-06. Consequently, the petitioner also has not established standing. *Id.* For these reasons, the hearing request must be denied. *Id.*

E To establish standing, a petitioner must show an injury in fact that is fairly traceable to the challenged action, and that is likely to be redressed by a favorable decision. *Maine Yankee*, CLI-04-5, 59 NRC at 57 n.16 (citing *Sequoyah Fuels Corp. & General Atomics*, CLI-94-12, 40 NRC at 71-72). If a petitioner "requests a remedy that is beyond the scope of the [proceeding], then the hearing request must be denied" because the request is incapable of being redressed by a favorable decision. This is because the Board does not have the authority to review the request. *Alaska Dep't of Transp. & Pub. Facilities*, CLI-04-26, 60 NRC at 405.

F Although a proximity presumption has been invoked when resolving issues of standing for cases involving reactor licensing, in a case involving an enforcement order, the standing requirement is based on an alleged adverse effect stemming from the promulgation of the order. Therefore, something in addition to the distance of the petitioner from the facility is necessary to establish standing — a link between the order and the alleged harm to the petitioner. *Sequoyah Fuels Corp. & General Atomics*, CLI-94-12, 40 NRC at 75 n.22; *Alaska Dep't of Transp. & Pub. Facilities*, CLI-04-26, 60 NRC at 406.

G The admissibility of contentions is set out in 10 C.F.R. § 2.309(f)(1). An admissible contention must (1) provide a specific statement of the legal or factual issue sought to be raised; (2) "provide a brief explanation of the basis for the contention"; (3) demonstrate that the issue raised is within the scope of the proceeding; (4) "[d]emonstrate that the issue raised . . . is material to the findings the NRC must make to support the action that is involved in the proceeding"; (5) provide a concise statement of the alleged facts or expert opinions, including references to specific sources and documents, that support the petitioner's position and upon which the petitioner intends to rely at the hearing; and (6) provide sufficient information to show that a genuine dispute exists with regard to a material issue of law or fact, including references to specific portions of the application that the petitioner disputes, or in the case when the application is alleged to be deficient, the identification of such deficiencies and supporting reasons for this belief. 10 C.F.R. § 2.309(f)(1)(i)-(vi). Failure to comply with any of these requirements is grounds for the dismissal of the contention. 69 Fed. Reg. 2182, 2202 (Jan. 14, 2004).

H If a petitioner fails to show that his or her contention is within the scope of the proceeding, it must be denied for failure to meet the requirements of 10 C.F.R. § 2.309(f)(1)(iii).

I The Commission has instructed that the scope of a reply filed pursuant to 10 C.F.R. § 2.309(h)(2) "should be narrowly focused on the legal or logical arguments presented in the applicant/licensee or NRC staff answer." 69 Fed. Reg. at 2203. Replies that are not so limited, that raise additional arguments not raised in a petitioner's hearing request or addressed by the applicant/licensee or the NRC Staff in their respective answers, are not properly before the Board.

J A hearing request that is filed after the period designated in the Notice of Opportunity for Hearing published in the *Federal Register*, which was not filed pursuant to an extension of time granted under 10 C.F.R. § 2.307(a), and which does not address the factors that the Board is required to balance in its determination on the admissibility of a nontimely filing, must be denied. *See* 10 C.F.R. § 2.309(c).

LBP-07-17 AMERGEN ENERGY COMPANY, LLC (Oyster Creek Nuclear Generating Station), Docket No. 50-0219-LR (ASLBP No. 06-844-01-LR); LICENSE RENEWAL; December 18, 2007; INITIAL DECISION (Rejecting Citizens' Challenge to AmerGen's Application To Renew Its Operating License for the Oyster Creek Nuclear Generating Station)

A In conducting Subpart L hearings under 10 C.F.R. Part 2, Board members pose questions to the parties' witnesses in those areas that, in the Board's judgment, require additional clarification and development (10 C.F.R. § 2.1207(b)(6)). Boards are assisted in this endeavor by proposed written questions that the parties provide prior to, and during the course of, the hearing (10 C.F.R. § 2.1207(a)(3); 10 C.F.R. § 2.1207(b)(6)). Proposed questions that are proffered to the Board for this purpose "must be kept by the [Board] in confidence until they are either propounded by the [Board], or until issuance of the initial decision on the

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- issue being litigated” (10 C.F.R. § 2.1207(a)(3)(iii)). After the Board issues its initial decision, the Board must provide these questions “to the Commission’s Secretary for inclusion in the official record of the proceeding” (*ibid.*).
- B The scope of license renewal proceedings is limited. Such proceedings are “not intended to ‘duplicate the Commission’s ongoing review of operating reactors’” (*Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), CLI-01-17, 54 NRC 3, 7 (2001) (quoting Final Rule: “Nuclear Power Plant License Renewal,” 56 Fed. Reg. 64,943, 64,946 (Dec. 13, 1991)). Rather, they focus on the “potential detrimental effects of aging that are not routinely addressed by ongoing regulatory oversight programs” (*ibid.*).
- C Intervenor may not challenge a licensee’s current licensing basis. The Commission has determined that such issues: (1) are not germane to aging management concerns; (2) previously have been the subject of thorough review and analysis; and, accordingly (3) need not be revisited in a license renewal proceeding. See *Turkey Point*, CLI-01-17, 54 NRC at 8-9. Additionally, arguments challenging the derivation of criteria encompassed in the current licensing basis are effectively an attack on the adequacy of the current licensing basis and must be rejected as beyond the scope of the proceeding.
- D A challenge to a licensee’s current compliance with its current licensing basis is outside the scope of a license renewal proceeding, because the Commission’s ongoing regulatory process — which includes inspection and enforcement activities — seeks to ensure a licensee’s current compliance with the current licensing basis. See 10 C.F.R. § 54.30; 60 Fed. Reg. 22,461, 22,473 (May 8, 1995). Challenges to a licensee’s current compliance with its current licensing basis or other operational requirements may be raised via a 10 C.F.R. § 2.206 petition.
- E Applicants for license renewal must “demonstrate how their [aging management] programs will be effective in managing the effects of aging during the proposed period of extended operation” (*Turkey Point*, CLI-01-17, 54 NRC at 8) (citing 10 C.F.R. § 54.21(a)). The Applicant must demonstrate, by a preponderance of the evidence, that its aging management program provides “reasonable assurance” that activities authorized by the renewed license will be conducted in a manner consistent with the current licensing basis, and that the effects of aging will be detected and corrected (*Commonwealth Edison Co.* (Zion Station, Units 1 and 2), ALAB-616, 12 NRC 419, 421 (1980); *Turkey Point*, CLI-01-17, 54 NRC at 8; 60 Fed. Reg. at 22,469).
- F The “reasonable assurance” standard is not susceptible to formalistic quantification or mechanistic application. Rather, whether the reasonable assurance standard is satisfied is based on sound technical judgment applied on a case-by-case basis. See *Union of Concerned Scientists v. NRC*, 880 F.2d 552, 558 (D.C. Cir. 1989); see also *North Anna Environmental Coalition v. NRC*, 533 F.2d 655, 667 (D.C. Cir. 1973).
- G A touchstone for determining whether the reasonable assurance standard is satisfied is compliance with Commission regulations. See *Maine Yankee Atomic Power Co.* (Maine Yankee Atomic Power Station), ALAB-161, 6 AEC 1003, 1009 (1973). Additionally, in the context of license renewal proceedings, whether the reasonable assurance standard is satisfied is directly linked to an assessment of the adequacy of the aging management program — i.e., whether an applicant can show that it is able to timely identify and correct degraded conditions. See *Turkey Point*, CLI-01-17, 54 NRC at 8; 60 Fed. Reg. at 22,469.
- H A licensee’s written commitments that are “docketed and in effect” constitute part of the “current licensing basis,” which is the “set of NRC requirements applicable to a specific plant” (10 C.F.R. § 54.3(a)).
- I A licensee’s discretionary use of testing and assessment criteria that are more conservative than those in the current licensing basis does not transform the former criteria into part of the current licensing basis. A contrary conclusion would be at odds with the regulatory definition of “current licensing basis.” See 10 C.F.R. § 54.3.
- J Pursuant to Commission case law, requests for extension of time to file a petition for review are to be determined by the relevant appellate body, and accordingly, must be directed to that body. See *Consolidated Edison Co. of New York* (Indian Point, Unit 3), ALAB-281, 2 NRC 6, 7 n.2 (1975).
- LBP-08-1 U.S. DEPARTMENT OF ENERGY (High-Level Waste Repository), Docket No. PAPO-00 (ASLBP No. 04-829-01-PAPO); PRE-LICENSE APPLICATION MATTERS; January 4, 2008; MEMORANDUM (Setting Forth Full Reasoning for Denying Nevada’s Motion To Strike)
- A In the pre-license application phase of the High-Level Waste Proceeding, the Pre-License Application Presiding Officer (PAPO) Board earlier denied the State of Nevada’s motion to strike the Department of

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

Energy's certification that it had made all its documentary material available on the Licensing Support Network (LSN) and the Board now sets forth its full reasoning for denying the motion.

B The duty to produce "all documentary material . . . generated by, or at the direction of, or acquired by, a potential party" pursuant to 10 C.F.R. § 2.1003(a)(1) applies to extant documentary material and does not require that the potential party delay its initial certification until all documentary material that it intends to rely on is finished and complete.

C The language, structure, and history of Subpart J regulations demonstrate that the duty to produce documentary material pursuant to 10 C.F.R. § 2.1003(a)(1) applies to extant documentary material. The regulations speak predominately in the past tense and refer to documents currently in existence.

D The duty to supplement the initial document production with "material created after the time of . . . initial certification" imposed by 10 C.F.R. § 2.1003(e), demonstrates that the initial certification is limited to extant documentary material because this regulation would be superfluous if all documentary material needed to be finished and produced at the time of the initial certification.

E Answers to a motion to strike are limited to legal or factual issues raised by the motion, and new issues should be raised in a separate motion.

LBP-08-2 SOUTHERN NUCLEAR OPERATING COMPANY (Early Site Permit for Vogtle ESP Site), Docket No. 52-011-ESP (ASLBP No. 07-850-01-ESP-BD01); EARLY SITE PERMIT; January 15, 2008; MEMORANDUM AND ORDER (Ruling on Dispositive Motion and Associated Motions To Strike Regarding Environmental Contention 1.2)

A In this 10 C.F.R. Part 52 proceeding regarding the application of Southern Nuclear Operating Company (SNC) for an early site permit (ESP) for an additional two reactors at the Vogtle Electric Generating Plant site, ruling on an SNC motion seeking summary disposition regarding environmental contention (EC) 1.2, Environmental Report (ER) Fails To Identify and Consider Cooling System Impacts on Aquatic Resources, the Licensing Board (1) grants the motion as to that portion of the contention challenging the SNC ER as omitting a discussion of the amount of facility chemical discharges, finding that this assertion was subject to dismissal as moot in light of the discussion in the NRC Staff's draft environmental impact statement (DEIS); and (2) denies the motion as to those portions of the contention challenging the adequacy of the ER/DEIS discussions of baseline aquatic data, impingement and entrainment impacts, and thermal discharges, concluding that SNC has failed to demonstrate there are no material factual disputes concerning genuine issues with regard to those portions of the contention.

B For proceedings that are being conducted pursuant to the "informal" hearing procedures of 10 C.F.R. Part 2, Subpart L, summary disposition motions are to be resolved in accord with the standards for dispositive motions for "formal" hearings, as set forth in Part 2, Subpart G. *See* 10 C.F.R. § 2.1205(c). Summary disposition may be entered with respect to any matter (or all matters) in a proceeding if the motion, along with any appropriate supporting materials (including affidavits, discovery responses, and documents), shows that there is "no genuine issue as to any material fact and that the moving party is entitled to a decision as a matter of law." *See* 10 C.F.R. §§ 2.710(d)(2), 2.1205(c).

C The party proffering the summary disposition motion bears the burden of making the requisite showing by providing "a separate, short, and concise statement of the material facts as to which the moving party contends that there is no genuine issue to be heard." 10 C.F.R. § 2.710(a). A party opposing the motion must counter any adequately supported material facts provided by the movant with its own "separate, short, and concise statement of the material facts as to which it is contended there exists a genuine issue to be heard," with the recognition that, to the degree the responsive statement fails to contravene the material facts proffered by the movant, the movant's facts "will be considered to be admitted." *Id.*

D Commission precedent recognizes that for contentions (or portions of contentions) challenging an application as having omitted a required item (or items), post-contention admission events, such as issuance of a Staff DEIS, can render the contention subject to dismissal as moot, *see Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-28, 56 NRC 373, 383 (2002).

E When filed with an intervention petition, an environmental contention and its associated bases quite properly address an applicant's ER, rather than the then still-being-developed Staff DEIS, *see* 10 C.F.R. § 2.309(f)(2) (contentions must be based on documents/information available when hearing petition to be filed).

F A Board may consider environmental contentions contesting an applicant's ER as challenges to the agency's subsequent DEIS so long as the DEIS analysis or discussion at issue is essentially *in para*

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

*materia* with the ER analysis or discussion that is the focus of the contention. If it is not, an intervenor attempting to litigate an issue based on expressed concerns about the DEIS may need to amend the admitted contention or, if the information in the DEIS is sufficiently different from that in the ER that supported the contention's admission, submit a new contention. *See* 10 C.F.R. § 2.309(f)(2); *see also McGuire/Catawba*, CLI-02-28, 56 NRC at 383.

G In the context of a summary disposition motion, the question about the need to amend or file a new contention becomes relevant when there is a dispute about whether an admitted issue statement (or a relevant portion of such an issue statement) is a contention of omission — i.e., a contention challenging a portion of the application, because it fails in toto to address a required subject matter — or a contention of inadequacy — i.e., one that asserts the pertinent portion of the application contains a discussion or analysis of a relevant subject that is inadequate in some material respect. *See Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), LBP-01-23, 54 NRC 163, 171-72 (2001) (dividing all contentions into “a challenge to the application’s adequacy based on the validity of the information that is in the application; a challenge to the application’s adequacy based on its alleged omission of relevant information; or some combination of these two challenges”); *see also AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), LBP-06-16, 63 NRC 737, 742 & n.7 (2006).

H If intervenors have not sought to amend an environmental contention as admitted, to the degree the contention is one of omission, it is subject to dismissal in connection with those aspects for which it is appropriately established the Staff DEIS provides any purported missing analysis or discussion.

I The argument that information provided in support of an intervenor’s response to a summary disposition motion should not be considered because the information is outside the scope of the intervenor’s admitted contention, if true, can be a meritorious assertion.

J A motion to strike is an inappropriate vehicle to address whether arguments in a summary disposition answer raise matters outside the scope of a contention, as the Board can consider and resolve the issue without such a motion and without “striking” anything. Instead, the issue should have been raised in a reply pleading, for which permission to file should have been sought from the Board before the replies were due. *See* Licensing Board Memorandum and Order (Initial Prehearing Order) (Dec. 18, 2006) at 5 (unpublished); *see also Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), LBP-05-4, 61 NRC 71, 78 (2005) (request to file reply to summary disposition answer granted).

K While the current procedural rule governing summary disposition in formal agency adjudications under Part 2, Subpart G (as did its pre-2004 predecessor) clearly discourages the filing of replies to summary disposition responses, *see* 10 C.F.R. § 2.710(a) (2007) (following response by opposing party, no further supporting statements or responses will be entertained); *id.* § 2.749(a) (2003) (same); *but see id.* § 2.1205(b) (2007) (making no mention of replies relative to summary disposition in Part 2, Subpart L proceedings), given the ability of responding parties to interpose additional “factual” information by way of affidavits and other submissions, as well as the potential that exists under such a motion for a merits disposition of a contention (or portion of a contention), a properly supported request to reply to a summary disposition response would seem to be a reasonable candidate for a favorable Board discretionary decision permitting the filing. *Compare* 10 C.F.R. § 2.309(h)(2) (petitioner given opportunity to file reply to applicant/staff answers to hearing requests); *id.* § 2.323(c) (permission to file reply to response to motion may be granted in compelling circumstances, such as when moving party could not reasonably anticipate response arguments).

L While a movant’s discussion of a matter in its summary disposition motion does aid the Board in understanding whether the issue is within the scope of the contention, at least to the degree it suggests the parties had notice of the matter, such a discussion does not necessarily establish that the matter is within the scope of a contention given that the movant’s discussion may also be outside the scope of the contention. Nonetheless, if a movant discusses a matter in its statement of undisputed facts, it would not be untoward for the Board to view with skepticism any later argument by that movant that a response regarding that issue is outside the scope of the contention, particularly given the onus that is placed upon an opposing party to respond to such a statement. *See* 10 C.F.R. § 2.710(a) (“All material facts set forth in the statement required to be served by the moving party will be considered to be admitted unless controverted by the statement required to be served by the opposing party”).

M Summary disposition is not the vehicle for untangling expert disputes so long as the experts are competent and the information they provide is adequately stated and explained. *See MOX*, LBP-05-4, 61 NRC at 80-81.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- N In the face of a Staff DEIS or final environmental impact statement that includes additional probative information the Staff believes is relevant to the subject matter of an admitted contention initially footed in an applicant's ER, an intervenor would be wise to amend its contention (or submit a new contention) to reflect any relevant changes or additions, thereby avoiding any question about whether this additional information falls outside the scope of the admitted contention so as to preclude it from consideration as support for the contention. *See* 10 C.F.R. § 2.309(f)(2).
- O In accord with 10 C.F.R. § 2.309(f)(1), the support for a contention, as reflected in its stated bases and any accompanying affidavits or documentary information, should be set forth with reasonable specificity so as "to put the other parties on notice as to what issues they will have to defend against or oppose." *Public Service Co. of New Hampshire* (Seabrook Station, Units 1 and 2), ALAB-899, 28 NRC 93, 97 (1988).
- LBP-08-3 SOUTHERN NUCLEAR OPERATING COMPANY (Early Site Permit for Vogtle ESP Site), Docket No. 52-011-ESP (ASLBP No. 07-850-01-ESP-BD01); EARLY SITE PERMIT; January 15, 2008; MEMORANDUM AND ORDER (Ruling on Dispositive Motion and Associated Motions To Strike and To Supplement the Record Regarding Environmental Contention 1.3)
- A In this 10 C.F.R. Part 52 proceeding regarding the application of Southern Nuclear Operating Company (SNC) for an early site permit (ESP) for an additional two reactors at the Vogtle Electric Generating Plant site, ruling on an SNC motion seeking summary disposition regarding environmental contention (EC) 1.3, Environmental Report (ER) Dry Cooling System Alternatives Discussion Fails To Address Aquatic Species Impacts, the Licensing Board denies the motion, concluding that SNC failed to demonstrate there are no material factual disputes concerning genuine issues regarding the matter of the adequacy of the analysis of the appropriateness of a dry cooling system given the presence of extremely sensitive biological resources that is the focus of the contention.
- B For proceedings that are being conducted pursuant to the "informal" hearing procedures of 10 C.F.R. Part 2, Subpart L, summary disposition motions are to be resolved in accord with the standards for dispositive motions for "formal" hearings, as set forth in Part 2, Subpart G. *See* 10 C.F.R. § 2.1205(c). Summary disposition may be entered with respect to any matter (or all matters) in a proceeding if the motion, along with any appropriate supporting materials (including affidavits, discovery responses, and documents), shows that there is "no genuine issue as to any material fact and that the moving party is entitled to a decision as a matter of law." *See* 10 C.F.R. §§ 2.710(d)(2), 2.1205(c).
- C The party proffering the summary disposition motion bears the burden of making the requisite showing by providing "a separate, short, and concise statement of the material facts as to which the moving party contends that there is no genuine issue to be heard." 10 C.F.R. § 2.710(a). A party opposing the motion must counter any adequately supported material facts provided by the movant with its own "separate, short, and concise statement of the material facts as to which it is contended there exists a genuine issue to be heard," with the recognition that, to the degree the responsive statement fails to contravene the material facts proffered by the movant, the movant's facts "will be considered to be admitted." *Id.*
- D Commission precedent recognizes that for contentions (or portions of contentions) challenging an application as having omitted a required item (or items), post-contention admission events, such as issuance of a Staff draft environmental impact statement (DEIS), can render the contention subject to dismissal as moot, *see Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-28, 56 NRC 373, 383 (2002).
- E When filed with an intervention petition, an environmental contention and its associated bases quite properly address an applicant's ER, rather than the then still-being-developed Staff DEIS, *see* 10 C.F.R. § 2.309(f)(2) (contentions must be based on documents/information available when hearing petition to be filed).
- F A Board may consider environmental contentions contesting an applicant's ER as challenges to the agency's subsequent DEIS so long as the DEIS analysis or discussion at issue is essentially *in para materia* with the ER analysis or discussion that is the focus of the contention. If it is not, an intervenor attempting to litigate an issue based on expressed concerns about the DEIS may need to amend the admitted contention or, if the information in the DEIS is sufficiently different from that in the ER that supported the contention's admission, submit a new contention. *See* 10 C.F.R. § 2.309(f)(2); *see also McGuire/Catawba*, CLI-02-28, 56 NRC at 383.
- G In the context of a summary disposition motion, the question about the need to amend or file a new contention becomes relevant when there is a dispute about whether an admitted issue statement (or a

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

relevant portion of such an issue statement) is a contention of omission — i.e., a contention challenging a portion of the application, because it fails in toto to address a required subject matter — or a contention of inadequacy — i.e., one that asserts the pertinent portion of the application contains a discussion or analysis of a relevant subject that is inadequate in some material respect. *See Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), LBP-01-23, 54 NRC 163, 171-72 (2001) (dividing all contentions into “a challenge to the application’s adequacy based on the validity of the information that is in the application; a challenge to the application’s adequacy based on its alleged omission of relevant information; or some combination of these two challenges”); *see also AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), LBP-06-16, 63 NRC 737, 742 & n.7 (2006).

H If intervenors have not sought to amend an environmental contention as admitted, to the degree the contention is one of omission, it is subject to dismissal in connection with those aspects for which it is appropriately established the Staff DEIS provides any purported missing analysis or discussion.

I The argument that information provided in support of an intervenor’s response to a summary disposition motion should not be considered because the information is outside the scope of the intervenor’s admitted contention, if true, can be a meritorious assertion.

J A motion to strike is an inappropriate vehicle to address whether arguments in a summary disposition answer raise matters outside the scope of a contention, as the Board can consider and resolve the issue without such a motion and without “striking” anything. Instead, the issue should have been raised in a reply pleading, for which permission to file should have been sought from the Board before the replies were due. *See* Licensing Board Memorandum and Order (Initial Prehearing Order) (Dec. 18, 2006) at 5 (unpublished); *see also Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), LBP-05-4, 61 NRC 71, 78 (2005) (request to file reply to summary disposition answer granted).

K While the current procedural rule governing summary disposition in formal agency adjudications under Part 2, Subpart G (as did its pre-2004 predecessor) clearly discourages the filing of replies to summary disposition responses, *see* 10 C.F.R. § 2.710(a) (2007) (following response by opposing party, no further supporting statements or responses will be entertained); *id.* § 2.749(a) (2003) (same); *but see id.* § 2.1205(b) (2007) (making no mention of replies relative to summary disposition in Part 2, Subpart L proceedings), given the ability of responding parties to interpose additional “factual” information by way of affidavits and other submissions, as well as the potential that exists under such a motion for a merits disposition of a contention (or portion of a contention), a properly supported request to reply to a summary disposition response would seem to be a reasonable candidate for a favorable Board discretionary decision permitting the filing. *Compare* 10 C.F.R. § 2.309(h)(2) (petitioner given opportunity to file reply to applicant/staff answers to hearing requests); *id.* § 2.323(c) (permission to file reply to response to motion may be granted in compelling circumstances, such as when moving party could not reasonably anticipate response arguments).

L While a movant’s discussion of a matter in its summary disposition motion does aid the Board in understanding whether the issue is within the scope of the contention, at least to the degree it suggests the parties had notice of the matter, such a discussion does not necessarily establish that the matter is within the scope of a contention given that the movant’s discussion may also be outside the scope of the contention. Nonetheless, if a movant discusses a matter in its statement of undisputed facts, it would not be untoward for the Board to view with skepticism any later argument by that movant that a response regarding that issue is outside the scope of the contention, particularly given the onus that is placed upon an opposing party to respond to such a statement. *See* 10 C.F.R. § 2.710(a) (“All material facts set forth in the statement required to be served by the moving party will be considered to be admitted unless controverted by the statement required to be served by the opposing party”).

M Summary disposition is not the vehicle for untangling expert disputes so long as the experts are competent and the information they provide is adequately stated and explained. *See MOX*, LBP-05-4, 61 NRC at 80-81.

LBP-08-4 U.S. ARMY (Jefferson Proving Ground Site), Docket No. 40-8838-MLA (ASLBP No. 00-776-04-MLA); MATERIALS LICENSE AMENDMENT; February 28, 2008; INITIAL DECISION

LBP-08-5 U.S. DEPARTMENT OF ENERGY (High-Level Waste Repository), Docket No. PAPO-00 (ASLBP No. 04-829-01-PAPO); PRE-LICENSE APPLICATION MATTERS; April 23, 2008; MEMORANDUM AND ORDER (Denying the Department of Energy’s Motion To Strike)

A In the pre-license application phase of the High-Level Waste Proceeding, the Pre-License Application Presiding Officer (PAPO) Board denies the Department of Energy’s motion to strike the State of Nevada’s

**DIGESTS**

certification that it has made all its documentary material available on the Licensing Support Network (LSN).

- B Pursuant to 10 C.F.R. § 2.325, the burden of proof rests on the movant.
- C In the case of any motion resting on assertions of fact, it is reasonable to expect that the movant will buttress it with some concrete evidence, often if not usually supplied in the form of an affidavit or declaration by a person with asserted knowledge of the fact or facts upon which the motion is based.
- LBP-08-6 CROW BUTTE RESOURCES, INC. (North Trend Expansion Project), Docket No. 40-8943 (ASLBP No. 07-859-03-MLA-BD01); MATERIALS LICENSE AMENDMENT; April 29, 2008 (Corrected May 21, 2008); MEMORANDUM AND ORDER (Ruling on Standing and Contentions of Petitioners Owe Aku, Bring Back the Way; Western Nebraska Resources Council; Slim Buttes Agricultural Development Corporation; Debra L. White Plume; and Thomas Kanatakeniate Cook)
- A In this license amendment proceeding the licensing board finds that three petitioners have standing to intervene and have submitted three admissible contentions, and set further oral argument on one additional contention and whether to grant 10 C.F.R. Part 2, Subpart G, hearing.
- B Licensing board finds it appropriate to consider the timeliness of materials proffered by petitioners in support of standing and certain contentions under 10 C.F.R. § 2.309(c) and (f)(2), and found that one document, a recent e-mail from an expert, was not timely, given that petitioners provided no indication of when they contacted the expert, and his e-mail primarily referenced articles published years earlier; nor did the e-mail constitute “legitimate amplification” of originally filed contentions, given that it was less “focused on the legal or logical arguments presented in the applicant/licensee or NRC staff answer,” than it was “new [expert] support” for contentions.
- C Licensing board finds that one document, consisting primarily of new information in the form of fairly extensive original analysis of essentially the same information contained in the application, and available in NRC ADAMS system 51 days prior to its submission but received by petitioners only 1 day before its submission, was timely under 10 C.F.R. § 2.309(c) and (f)(2).
- D Motion of Oglala Sioux Tribe To File Brief Amicus Curiae granted, because Tribe entitled to a “reasonable opportunity to participate” in this proceeding under 10 C.F.R. § 2.315(c).
- E A petitioner’s standing, or right to participate in a proceeding, concerns whether a party has “sufficient stake” in a matter, as contrasted with whether there is a real dispute.
- F A petitioner bears the burden of demonstrating standing, but in ruling on standing a licensing board is to “construe the petition in favor of the petitioner.”
- G The starting point in determining the standing of a petitioner in an NRC proceeding is section 189a of the Atomic Energy Act (AEA), which requires the NRC to provide a hearing “upon the request of any person whose interest may be affected by the proceeding,” and which has been implemented in Commission regulations in 10 C.F.R. § 2.309(d)(1).
- H Judicial concepts of standing, to which licensing boards are to look in ruling on standing, provide the following guidance in determining whether a petitioner has established the necessary “interest” under 10 C.F.R. § 2.309(d)(1): To qualify for standing a petitioner must allege (1) a concrete and particularized injury that is (2) fairly traceable to the challenged action and (3) likely to be redressed by a favorable decision. The injury may be either actual or threatened, but must lie arguably within the “zone of interests” protected by the statutes governing the proceeding — here, either the Atomic Energy Act (AEA) or the National Environmental Policy Act (NEPA).
- I An organization that wishes to establish standing to intervene may do so by demonstrating either organizational or representational standing. To establish organizational standing it must “demonstrate a palpable injury in fact to its organization interests” within the zone of interests of the AEA or NEPA; to establish representational standing, it must (1) demonstrate that the interests of at least one member who has standing to sue in his or her own right may be affected by the licensing action, (2) identify that member by name and address; and (3) show that the organization is authorized to request a hearing on behalf of that member.
- J A presumption of standing based on geographical proximity may be applied in nuclear materials licensing cases only when the activity at issue involves a “significant source of radioactivity producing an obvious potential for off-site consequences,” which is determined on a case-by-case basis, depending on how close to the source a petitioner lives or works, and “taking into account the nature of the proposed action and the significance of the radioactive source.” When there is “no obvious potential for harm,” it is the petitioner’s burden to show “specific and plausible means” by which an action may harm the petitioner.

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- K In “in situ leach,” or “ISL,” mining cases the geographical areas that may be affected by mining operations are largely dependent on the size and other characteristics of underground aquifers, including the hydrogeological conditions that determine how easily and how fast water moves within and among aquifers and interacts with surface water.
- L Although the pleading requirements of 10 C.F.R. § 2.309 are “strict by design,” a licensing board may permit potential intervenors to cure defects in petitions in order to obviate dismissal of an intervention petition because of inarticulate draftsmanship or procedural or pleading defects, and *pro se* petitioners are not held to the same standards of pleading as those represented by counsel.
- M In ruling on standing, a licensing board is not to assess the merits of a case, but rather to consider whether assertions of harm are plausible, and in this case board found it was plausible to conclude that contaminated water might mix with water ultimately used by at least some of the Petitioners, given past undisputed excursions and spills from Applicant’s mining operations, and lack of complete knowledge about the hydrogeology of the proposed new area of operation, supported by exhibit from state environmental office raising questions about Applicant’s information.
- N Organizational petitioner found to have shown representational standing based on member who had and used well drawing from same aquifer Applicant proposed to mine, 1-1/2 miles from proposed site boundary.
- O Organizational petitioner found to have shown representational standing based on member who drank from well that drew from aquifer that might mix with aquifer to be mined, in the area of the proposed site, 8 miles from its boundary, supported by exhibit from state environmental office; notwithstanding Applicant’s arguments about how fast water was said to flow in mined aquifer, there were indications that water in aquifer from which well drew flowed at a faster rate.
- P Individual petitioner who fished in river downstream from proposed mining operations, into which mining site would drain, found to have shown standing, given history of spill into river and case law supporting arguments that contamination can be carried significant distances in rivers.
- Q Organizational petitioner that alluded to a number of promising avenues for demonstrating standing, but failed to follow any to a concrete, particular, and specific conclusion that would plausibly establish its standing, denied standing to intervene.
- R Individual petitioner who alleged that his well drew from an aquifer that might mix with the mined aquifer or another nearby aquifer, and lived 20 miles from proposed mining site, found not to have plausibly shown, with sufficient specificity, concreteness, or particularity, how he might be injured as a result of proposed operation, and therefore denied standing; but ruling not meant to suggest that any particular distance would or would not confer standing in any case, as all such rulings are dependent on a variety of factors.
- S To intervene in an NRC proceeding, a petitioner must, in addition to demonstrating standing, submit at least one contention meeting the requirements of 10 C.F.R. § 2.309(f)(1). Failure of a contention to meet any of the requirements of section 2.309(f)(1) is grounds for its dismissal.
- T Although the February 2004 revision of the NRC procedural rules no longer incorporates all of the prior provisions, including some of those formerly found in 10 C.F.R. § 2.714(a)(3), (b)(1), which in the past permitted the amendment and supplementation of petitions and filing of contentions after the original filing of petitions, the new rules contain essentially the same substantive admissibility standards for contentions.
- U The “strict contention rule serves multiple interests,” including (1) focusing the hearing process on real disputes susceptible of resolution in an adjudication (for example, a petitioner may not demand an adjudicatory hearing to attack generic NRC requirements or regulations, or to express generalized grievances about NRC policies); (2) putting other parties in the proceeding on notice of the Petitioners’ specific grievances, by requiring detailed pleadings that give other parties a good idea of the claims they will be either supporting or opposing; and (3) helping to ensure that full adjudicatory hearings are triggered only by those able to proffer at least some minimal factual and legal foundation in support of their contentions.
- V It is not essential that there be “technical perfection” in contention pleading,” and contentions should be decided on their merits rather than on technicalities, but the contention admissibility rules still bar contentions based only on “generalized suspicions.”
- W A petitioner must read the application, state the position of the applicant as stated therein, and state and explain the petitioner’s opposing view. A contention must directly controvert a position taken by the

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- applicant in the application. A petitioner must explain any alleged deficiencies and support its contentions with documents, expert support, or at least a fact-based argument.
- X A petitioner is not required to prove its case at the contention admissibility stage of a proceeding, or to state factual allegations in affidavits or formal evidentiary form sufficient to withstand a summary disposition motion, but must do more than make conclusory allegations; a petitioner must show that material facts are in dispute and demonstrate that an in-depth inquiry is appropriate.
- Y A petitioner must provide a sufficient basis to support a contention, which requires not an exhaustive list of bases but enough alleged factual or legal bases to support the contention.
- Z The “brief explanation of the basis” that is required by section 2.309(f)(1)(ii) helps define the scope of a contention, but it is the contention itself, not “bases,” whose admissibility must be determined.
- AA In ruling on contentions originally filed by Petitioners acting *pro se* but who later retained counsel, it is not appropriate to hold the petition itself to the same standards of pleading as would be expected of a lawyer, particularly because under the new procedural rules in 10 C.F.R. Part 2 it is no longer permissible for counsel to file an amended petition.
- BB Expert support is not required for admission of a contention; a fact-based argument may be sufficient on its own.
- CC With regard to contentions involving alleged violations of the National Environmental Policy Act (NEPA), although the requirements of NEPA are directed to federal agencies and thus the primary duties of NEPA fall on the NRC Staff in the NRC proceedings, the initial requirement to analyze the environmental impacts of an action, including a materials licensing amendment, is directed to applicants under relevant NRC rules.
- DD The contention admissibility stage of a proceeding is not the time to go to merits determinations on matters raised in contentions.
- EE The provision in 10 C.F.R. § 2.335(a) that no NRC rule is subject to attack in any adjudicatory proceeding prohibits the admission of any contention or part thereof challenging any dose limits specified in NRC rules.
- FF The provision in 10 C.F.R. § 2.335(a) that no NRC rule is subject to attack in any adjudicatory proceeding does not prohibit the filing of a contention challenging, in a license amendment proceeding, a position of an applicant that is based on a condition in its current license, because a license condition is not the same as an NRC rule.
- GG The licensing board finds that Petitioners have demonstrated that further inquiry in depth is appropriate with regard to two contentions alleging that proposed mining operations could have negative environmental and health and safety impacts, by contaminating groundwater resources that mix with water resources used by Petitioners, and admits contentions in somewhat limited form and reframed to consolidate admissible environmental issues falling logically under NEPA into one admitted contention, and to consolidate admissible public health and safety issues falling under the Atomic Energy Act (AEA) into a second admitted contention. While this results in a somewhat artificial separation of issues, given the interrelatedness of the two sets of issues that are both centered primarily in the underground geology of the area surrounding the proposed expansion area and how groundwater may move among underground aquifers and interact with surface water and thereby potentially affect both the environment and public health and safety through the same underlying mechanisms, the NRC’s authority and responsibility to regulate the matters in dispute in this proceeding arise out of two sets of standards, found in NEPA and the AEA, and thus, for the sake of analytical clarity under these dual sets of standards — particularly given the absence of any rules specifically setting standards in ISL cases — the licensing board finds that proceeding in the manner described makes for the most effective organization of the admissible issues under the circumstances.
- HH Issues of drought and climate change are not outside the scope of the proceeding because these fall under the provisions of 10 C.F.R. § 51.45(b)(1), (b)(4), requiring that an environmental report include a description of the environment affected and discuss impacts of the proposed action on the environment, in proportion to their significance, and the relationship between local short-term uses of man’s environment and the maintenance and enhancement of long-term productivity.
- II Licensing board admits contention asserting that prehistoric Indian camp should be inspected by Tribal elders and leaders, finding that in it Petitioners demonstrated a dispute over the material factual/legal issue of whether the consultation process conducted by the Applicant, a precursor to the consultation to be conducted by the NRC as the responsible federal agency, complies with relevant requirements of

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

law; contentions are to be based on documents available at the time the petition is filed, including the environmental report, and Petitioners based their contention on this.

- JJ Licensing board denies contention concerned with terrorism, based on failure of Petitioners to distinguish situation at issue from relevant and binding Commission case law that such contentions are outside the scope of NRC adjudicatory proceedings in jurisdictions where no federal court of appeals has ruled to the contrary.
- KK Licensing board defers ruling on contention concerning alleged foreign ownership of Applicant until parties have briefed issue.
- LBP-08-7 PACIFIC GAS AND ELECTRIC COMPANY (Diablo Canyon Power Plant Independent Spent Fuel Storage Installation), Docket No. 72-26-ISFSI (ASLBP No. 08-860-01-ISFSI-BD01); INDEPENDENT SPENT FUEL STORAGE INSTALLATION; May 14, 2008; ORDER (Granting NRC Staff's Unopposed Motion for Summary Disposition of San Luis Obispo Mothers for Peace's Contention 1(b))
- A In the Diablo Canyon proceeding, the Presiding Officer grants the NRC Staff's uncontested motion for summary disposition of Contention 1(b), which alleged that the Staff failed to provide a complete list of source documents underlying its Environmental Assessment, and also failed to identify appropriate Freedom of Information Act exemptions for its withholding decisions.
- B Summary disposition motions are addressed in 10 C.F.R. § 2.710, which states that summary disposition shall be granted if the "filings in the proceeding . . . together with the statements of the parties and the affidavits . . . show that there is no genuine issue as to any material fact and that the moving party is entitled to a decision as a matter of law" (10 C.F.R. § 2.710(d)(2)).
- C The moving party bears the initial burden of informing the tribunal of the basis for its motion and identifying those portions of the record that demonstrate the absence of a genuine issue of material fact (*Celotex Corp. v. Catrett*, 477 U.S. 317, 323 (1986)).
- D The nonmoving party cannot rest on the mere allegations or denials of a pleading, but must "go beyond the pleadings and by [the party's] own affidavits, or by the depositions, answers to interrogatories, and admissions on file, designate specific facts showing that there is a genuine issue for trial" (*Celotex Corp. v. Catrett*, 477 U.S. 317, 324 (1986)).
- E The tribunal must examine the evidence in the light most favorable to the nonmoving party (*Anderson v. Liberty Lobby, Inc.*, 477 U.S. 242, 255 (1986)).
- F The moving party "has the burden to show that he is entitled to judgment under established principles; and if he does not discharge that burden then he is not entitled to judgment. No defense to an insufficient showing is required" (*Cleveland Electric Illuminating Co.* (Perry Nuclear Power Plant, Units 1 and 2), ALAB-443, 6 NRC 741, 754 (1977); *accord Adickes v. S.H. Kress & Co.*, 398 U.S. 144, 160 (1970)).
- G Challenges in FOIA cases routinely are resolved on the basis of summary judgment pleadings. *See, e.g., Wickwire Gavin, P.C. v. U.S. Postal Service*, 356 F.3d 588 (4th Cir. 2004); *Cooper Cameron Corp. v. U.S. Department of Labor*, 280 F.3d 539 (5th Cir. 2002); *Minier v. Central Intelligence Agency*, 88 F.3d 796 (9th Cir. 1996); *Lewis v. Internal Revenue Service*, 823 F.2d 375 (9th Cir. 1987).
- H Where the agency has submitted detailed public affidavits that permit resolution of FOIA issues, *in camera* review of redacted information or sealed documents is not necessary. *See Lion Raisins Inc. v. U.S. Department of Agriculture*, 354 F.3d 1072, 1083 (9th Cir. 2004) (*in camera* review ought to occur only in the "exceptional case" after the "government has submitted as detailed public affidavits . . . as possible") (quoting *Doyle v. Federal Bureau of Investigation*, 722 F.2d 554, 556 (9th Cir. 1983)).
- I Regarding the public disclosure requirements of an agency's NEPA analysis, Congress has established that the Environmental Impact Statement "shall be made available . . . to the public as provided by [FOIA]" (42 U.S.C. § 4332(2)(C)).
- J An agency need not disclose information if it falls within one of the nine exemptions in FOIA (5 U.S.C. § 552(b)). An agency may "withhold public disclosure of any NEPA documents, in whole or in part, under the authority of an FOIA exemption" (*Weinberger v. Catholic Action of Hawaii/Peace Education Project*, 454 U.S. 139, 143 (1981)).
- K Ordinarily, when access to documents is disputed in FOIA litigation, the "government must submit detailed public affidavits identifying the documents withheld, the FOIA exemptions claimed, and a particularized explanation of why each document falls within the claimed exemption" (*Lion Raisins Inc. v. U.S. Dep't of Agric.*, 354 F.3d at 1082). This can be usually accomplished by the agency's preparation of a *Vaughn* Index and explanatory affidavits that are sufficiently detailed to support a tribunal's plenary

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- assessment of the validity of a claimed exemption. See *Lion Raisins Inc.*, 354 F.3d at 1082-83; *Vaughn v. Rosen*, 484 F.2d 820 (D.C. Cir. 1973), *cert. denied*, 415 U.S. 977 (1974).
- L In evaluating the validity of a claimed FOIA exemption, the experience and expertise of an affiant, coupled with a detailed and specific affidavit, lends special weight to the affiant's statements and conclusions. See *Lion Raisins Inc.*, 354 F.3d at 1080.
- M FOIA Exemption 2 authorizes an agency to withhold "matters that are . . . related solely to the internal personnel rules and practices of an agency" (5 U.S.C. § 552(b)(2)). Relevant case law supports the conclusion that NRC records are protected from disclosure under Exemption 2 to the extent they contain internal analytic guidance, operating rules, or practices, the disclosure of which would aid terrorists or saboteurs seeking to circumvent security measures designed to protect nuclear materials. *E.g.*, *Dirksen v. U.S. Department of Health and Human Services*, 803 F.2d 1456 (9th Cir. 1986); *Ginsburg, Feldman, & Bress v. Federal Energy Administration*, 591 F.2d 717 (D.C. Cir.), *aff'd en banc and per curiam*, 591 F.2d 752 (D.C. Cir. 1978), *cert. denied*, 441 U.S. 906 (1979).
- N Under NRC Regulations, an Environmental Assessment must include a Reference Document List that "(identifies the) sources used" (10 C.F.R. § 51.30(a)(2)). This List should include ("[a]ll references (i.e., sources used) used in the preparation of the EA . . . including those cited in the text of the EA and those that were not specifically cited but served as useful guidance during document development" (NUREG-1748, "Environmental Review Guidance for Licensing Actions Associated with NMSS Programs" § 3.4.12 (Aug. 2003)).
- LBP-08-8 SHIELDALLOY METALLURGICAL CORPORATION (Amendment Request for Decommissioning of the Newfield, New Jersey Facility), Docket No. 40-7102-MLA (ASLBP No. 07-852-01-MLA-BD01); MATERIALS LICENSE AMENDMENT; June 2, 2008; MEMORANDUM (Bringing Matter of Concern to Commission's Attention)
- LBP-08-9 DOMINION NUCLEAR CONNECTICUT, INC. (Millstone Nuclear Power Station, Unit 3), Docket No. 50-423-OLA (ASLBP No. 08-862-01-OLA-BD01); OPERATING LICENSE AMENDMENT; June 4, 2008; MEMORANDUM AND ORDER (Ruling on Petition To Intervene and Request for Hearing)
- A In addition to the traditional requirements for standing, the Commission has recognized that a petitioner may have standing based upon its geographical proximity to a particular facility. *Florida Power & Light Co.* (St. Lucie Nuclear Power Plant, Units 1 and 2), CLI-89-21, 30 NRC 325, 329 (1989). In appropriate circumstances, a petitioner's proximity to the facility in question provides for a so-called presumption that "a petitioner has standing to intervene without the need to specifically plead injury, causation, and redressability if the petitioner lives within, or otherwise has frequent contacts with, the zone of possible harm from the nuclear reactor or other source of radioactivity." *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), LBP-01-6, 53 NRC 138, 146 (2001), *aff'd on other grounds*, CLI-01-17, 54 NRC 3 (2001). However, in an uprate proceeding, demonstrating standing in this manner additionally requires a "determination that the proposed action involves a significant source of radioactivity producing an obvious potential for offsite consequences." *Georgia Institute of Technology* (Georgia Tech Research Reactor, Atlanta, Georgia), CLI-95-12, 42 NRC 111, 116 (1995); *see also PPL Susquehanna LLC* (Susquehanna Steam Electric Station, Units 1 and 2), LBP-07-10, 66 NRC 1, 18 (2007); *Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-04-28, 60 NRC 548, 553-54 (2004).
- B An organization seeking to intervene in a representational capacity must demonstrate that the licensing action will affect at least one of its members, must identify that member by name and address, and must show that it is authorized by that member to request a hearing on his or her behalf. *Vermont Yankee Nuclear Power Corp.* (Vermont Yankee Nuclear Power Station), CLI-00-20, 52 NRC 151, 163 (2000).
- C An applicant for a change in the operating conditions of its nuclear power plant (in this case, a power uprate) is required to comply with all relevant NRC regulations. The standard to be met is whether the application meets the requirements for a License Amendment. The relevant NRC regulations for a power uprate, be it a SPU or an EPU, are set forth in 10 C.F.R. §§ 50.90 to 50.92. See 10 C.F.R. §§ 50.90 to 50.92.
- D The failure of an applicant to address any guidance topics or deviation from the guidance provided does not rise to the level of failure to comply with NRC regulations.
- E A contention must specifically challenge the license application to be admissible. 10 C.F.R. § 2.309(f)(1)(vi). This can either be in the form of an asserted omission from the application of required information or an asserted error in a specific analysis or other technical matter set out in the application. *Id.* The former form of challenge must be supported by specific reasons why the alleged omissions are

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

relevant and material, and the latter form of challenge must be supported by reasons why the analysis is deficient. *Id.*

F To the extent a contention calls for requirements in excess of those imposed by Commission regulations, it must be rejected as a collateral attack on the regulations. *See Northeast Nuclear Energy Co.* (Millstone Nuclear Power Station, Units 2 and 3), LBP-01-10, 53 NRC 273, 286-87 (2001); *Public Service Co. of New Hampshire* (Seabrook Station, Units 1 and 2), LBP-82-106, 16 NRC 1649, 1656 (1982).

G In determining whether an amendment to a license will be issued, the Commission is “guided by the considerations which govern the issuance of initial licenses.” 10 C.F.R. § 50.92(a), i.e., the same regulatory criteria that govern the initial license issuance govern each amendment. Therefore, as amendments are approved, they become part of the licensing baseline, all evaluated against the same standards. The current application for an amendment to the license to permit a power uprate must be evaluated against the current baseline (i.e., as against the status quo). Thus the structural operating margins are evaluated considering the plant’s current design limits (which are based upon the cumulative effect of the original license and all of the amendments previously approved). Challenges to the current operating license are outside the scope of matters challengeable in a power uprate application, and therefore fail to meet the requirements of 10 C.F.R. § 2.309(f)(1)(iii).

H Whether Millstone Unit 3 has a valid NPDES permit is outside the scope of this uprate proceeding. *See Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), LBP-04-15, 60 NRC 81, 92-93 (2004); *Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-07-16, 65 NRC 371, 377 (2007).

I Challenges to how the Staff performs its reviews are outside the scope of this proceeding. *See Tennessee Valley Authority* (Sequoyah Nuclear Plant, Units 1 and 2; Watts Bar Nuclear Plant, Unit 1), LBP-02-14, 56 NRC 15, 37 (2002) (“It is a well-established principle of NRC adjudication that ‘contentions must rest on the *license application*, not on NRC Staff reviews’ . . . . As the Commission stated when it amended the contentions rule, ‘a contention will not be admitted if the allegation is that the NRC Staff has not performed an adequate analysis’ because ‘the sole focus of the hearing is on whether the application satisfies NRC regulatory requirements, rather than adequacy of the NRC Staff performance’”) (internal citations omitted) (emphasis in original).

LBP-08-10 U.S. DEPARTMENT OF ENERGY (High-Level Waste Repository), Docket No. PAPO-001 (ASLBP No. 08-861-01-PAPO-BD01); PRE-LICENSE APPLICATION MATTERS; June 20, 2008; MEMORANDUM AND ORDER (Case Management Order Concerning Petitions To Intervene, Contentions, Responses and Replies, Standing Arguments, and Referencing or Attaching Supporting Materials)

A The Advisory Pre-License Application Presiding Officer Board sets forth binding case management requirements and makes certain related recommendations pertaining to petitions to intervene, contentions, responses and replies, standing arguments, and referencing or attaching supporting materials, in any adjudication regarding the Department of Energy’s application for authorization to construct a high-level waste repository at Yucca Mountain, Nevada.

LBP-08-11 SHAW AREVA MOX SERVICES (Mixed Oxide Fuel Fabrication Facility), Docket No. 70-3098-MLA (ASLBP No. 07-856-02-MLA-BD01); MATERIALS LICENSE AMENDMENT; June 27, 2008; MEMORANDUM AND ORDER (Ruling on Contentions and All Other Pending Matters)

A In this proceeding regarding the application of Shaw AREVA MOX Services (MOX Services) for a license to possess and use byproduct, source, and special nuclear material at the planned Mixed Oxide Fuel Fabrication Facility (MFFF, or the MOX facility) that it is building for the U.S. Department of Energy (DOE) on the federal government’s Savannah River Site (SRS), the Licensing Board — ruling on a hearing petition filed by Blue Ridge Environmental Defense League (BREDL), Nuclear Watch South (NWS), and the Nuclear Information and Resource Service (NIRS) (collectively “Petitioners”) seeking to intervene to contest the MOX Services Application — concludes that the Petitioners have proffered one admissible contention, that one previously admitted contention should be dismissed after reconsideration, and that a new contention should be dismissed, with its denial conditioned upon the other parties notifying the Petitioners when action on that subject is next contemplated.

B The Chairman issued a concurring opinion to point out possible ways in which the Commission might avoid disruptions or errors attributable to safety-culture or due-process shortcomings. The first is that the Commission has stressed the need for safety culture to drive the performance of the NRC Staff in its regulation and oversight of the industry. In the Chairman’s judgment, this proceeding has exposed matters that might indicate that that culture is being undermined. Secondly, the Chairman suggests that the

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- Commission needs to issue directives or policies that would enable adjudications to proceed differently when circumstances call for it, so as to assure that the agency's hearing process is "meaningful."
- C While the Licensing Board is concerned about the need to make — and the legitimacy of making — significant decisions intrinsic to the operating license proceeding when construction of the facility has scarcely begun, this concern alone is not sufficient to permit admission of an environmental contention in the face of the Commission's specific direction that environmental issues would be resolved at an earlier phase.
- D A contention based solely on information relating to possible design or capacity changes that have not yet been presented to the agency (e.g., as an amendment to the Application) must fail because "a possible future action must at least constitute a 'proposal' pending before the agency to be ripe for adjudication." *Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-14, 55 NRC 278, 295 (2002).
- E Unlike contentions that deal with the capability of the facility as designed to accommodate interruptions in waste transfer that could significantly influence the facility's environmental impact and safe operation, a contention revolving around the possibility of future design changes to the facility is speculative and would for that reason be inadmissible even absent restrictions on environmental contentions in general.
- F When the Safety Evaluation Report (SER) was not explicitly mentioned in the original version of the contention, but was the subject of supporting information that the Petitioners did cite explicitly, it is appropriate to include a reference to it in a Board-revised contention. In any event, whether or not the referenced SER *citation* appears in the revised contention, the relevant SER *material* will deserve attention in any adjudication that may eventually take place on the contention.
- G What is far more consequential are the implications of the argument that an SER prepared at one stage lacks force at the next stage. If that is the position being asserted, then much of the underpinning of, and reliance placed upon, the Staff's regulatory review would be vitiated. Such a position must be rejected.
- H The admission of a "grand contention of omission" based on failure to meet the requirements of 10 C.F.R. § 70.23(a)(8) regarding facility completion could be justified in order to preserve, untrammelled, a Petitioners' litigation options where a notice of hearing on an operating license for a facility is published at the nascent stages of a 6-year construction process. Nonetheless, a better approach is to dismiss the contention on the condition that the Applicant and the NRC Staff provide specified notices of the pendency of the "completion" finding. This will provide the Petitioners with reasonable notice of an opportunity to formulate — in an effective and efficient manner — any challenges they may then have regarding the substance of that finding, and to present such a substantive contention without the need for extraordinary allotments of additional time (beyond the norm) to do so.
- I It has been customary in other proceedings for licensing boards, after intervention has been allowed, to establish a specific time period after the occurrence of a triggering event during which new contentions will, if filed within that time, be deemed to have been filed "in a timely fashion based on the availability of the subsequent information" within the meaning of 10 C.F.R. § 2.309(f)(2)(iii). Many times, boards have selected 30 days as that specific presumptive time period. The Board finds that a longer period is justified here. The task facing citizen-intervenors who are monitoring the publication of documents on the progress of facility planning and construction in an effort to file timely new contentions is enormous. Given the disparity in resources, the Applicant's choice to file well in advance of the start of construction should not be allowed to place upon the Petitioners the burden of having to face, continuously for the entirety of a 6-year construction period, a rolling 30-day deadline for monitoring, reviewing, analyzing, and critiquing documents. That period is too short in these circumstances.
- J Given the length of time that this proceeding will consume, there is no room for the Applicant to argue that its interests, or the public interest, would be harmed by extending the Petitioners' time. An extension of a rolling 30-day deadline to a rolling 60-day one confers the benefit of doubling the Petitioners' time to prepare any one contention while adding a total of only 30 days — during a 6-year construction period — to the *overall* time Petitioners will have to file contentions. This would seem a worthwhile investment in making the opportunity for a hearing a meaningful one.
- LBP-08-12 AMERGEN ENERGY COMPANY, LLC (Oyster Creek Nuclear Generating Station), Docket No. 50-0219-LR (ASLBP No. 06-844-01-LR); LICENSE RENEWAL; July 24, 2008; MEMORANDUM AND ORDER (Denying Citizens' Motion to Reopen the Record and to Add a New Contention)

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- A Reopening the record is an “‘extraordinary action’” (51 Fed. Reg. 19,535, 19,538 (May 30, 1986)). The standards for reopening are strict and demanding. Otherwise, “‘there would be little hope’ of completing administrative proceedings if each newly arising allegation required an agency to reopen its hearings” (*Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-05-12, 61 NRC 345, 350 n.18 (2005) (quoting *Vermont Yankee Nuclear Power Corp. v. Natural Resources Defense Council, Inc.*, 435 U.S. 519, 555 (1978))). Proponents of motions seeking to reopen the record therefore bear a “heavy burden” (*Pacific Gas and Electric Co.* (Diablo Canyon Nuclear Power Plant, Units 1 and 2), ALAB-756, 18 NRC 1340, 1344 (1983) (quoting *Kansas Gas & Electric Co.* (Wolf Creek Generating Station, Unit 1), ALAB-462, 7 NRC 320, 338 (1978))).
- B Movants must satisfy a multifactor test (10 C.F.R. §§ 2.326(a) and 2.326(d)) that is governed by prescribed evidentiary requirements (*id.* § 2.326(b)).
- C Additionally, where a motion to reopen the record seeks to admit a new contention that has not previously been in controversy among the parties, section 2.326(d) requires the movant to show that a balancing of the factors of 2.309(c)(1) (to the extent they are relevant to the particular filing) weighs in favor of reopening.
- D Section 2.326(b) demands particularized support for motions that seek to reopen the record. *See Private Fuel Storage, L.L.C.*, CLI-05-12, 61 NRC at 350 (“a party seeking to reopen a closed record to raise a new matter faces an elevated burden to lay a proper foundation for its claim”). Such motions must be accompanied by “affidavits that set forth the factual and/or technical bases for the movant’s claim that the criteria [in section 2.326(a)] have been satisfied” (10 C.F.R. § 2.326(b)). Moreover, section 2.326(b) requires that “[e]vidence contained in affidavits must meet the [regulatory] admissibility standards” (*ibid.*) — that is, it must be “relevant, material, and reliable” (*id.* § 2.337(a)).
- E In evaluating a motion to reopen the record, a licensing board properly evaluates the evidentiary material submitted by the parties. *See Private Fuel Storage, L.L.C.*, CLI-05-12, 61 NRC at 350 (a licensing board properly considers the movant’s “new allegations and [the nonmovant’s] contrary evidence in determining whether there was a real issue at stake warranting a reopened hearing”); *Public Service Co. of New Hampshire* (Seabrook Station, Units 1 and 2), CLI-90-10, 32 NRC 218, 222 (1990) (Commission weighed the competing evidence in concluding that a “motion to reopen [did] not present a question of safety significance”).
- F When considering a motion to reopen the record, a licensing board need not formally reopen the record in order to assess the relative worth of the parties’ competing evidence. *See Vermont Yankee Nuclear Power Corp.* (Vermont Yankee Nuclear Station), ALAB-138, 6 AEC 520, 523 (1973) (In denying a motion to reopen the record, the tribunal will necessarily have supplemented the record with, for example, the “affidavits, letters or other materials accompanying the motion and the responses thereto. The ‘hearing record,’ however, has not been reopened”).
- G It is well established that discovery is not permitted for the purpose of developing a motion to reopen the record or to assist a petitioner in the framing of contentions. *See Baltimore Gas & Electric Co.* (Calvert Cliffs Nuclear Power Plant, Units 1 and 2), CLI-98-25, 48 NRC 325, 351 (1998); *Metropolitan Edison Co.* (Three Mile Island Nuclear Station, Unit 1), CLI-85-7, 21 NRC 1104, 1106 (1985); *see also Public Service Co. of New Hampshire* (Seabrook Station, Units 1 and 2), ALAB-915, 29 NRC 427, 432-33 (1989).
- H Neither law nor logic supports an assertion that a licensing board is foreclosed from considering docketed licensing material that has been submitted to the board and that, on its face, appears to be relevant to the disposition of a pending motion.
- I “There is a difference between contentions that, on the one hand, allege that a license application suffers from an improper omission, and contentions that, on the other hand, raise a specific substantive challenge to how particular information or issues have been discussed in a license application” (*AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), LBP-06-16, 63 NRC 737, 742 (2006)). As with all contentions of omission, if the applicant supplies the missing information — or, as relevant here, if the applicant performs the omitted analysis — the contention is moot (*Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-28, 56 NRC 373, 383 (2002)).
- J To satisfy the requirement in section 2.326(a)(2), the affidavit must provide sufficient information to support a *prima facie* showing that (1) a deficiency exists in the license renewal application, and (2) the deficiency presents a significant safety issue.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- K When a newly proffered contention (and its underlying evidence) is unrelated to the contention adjudicated by the licensing board, rather than showing that the newly proffered evidence would likely have materially altered the board's disposition of the contention, the movant must show that the evidence supporting their contention would likely have materially affected the outcome of the license renewal proceeding. That is, they must show a likelihood that its contention would be resolved in its favor such that the license renewal application would be denied or conditioned. *See Private Fuel Storage, LLC*, CLI-05-12, 61 NRC at 350 (to reopen a closed record to introduce a new issue, the movant has the burden of "showing that the new information will 'likely' trigger a 'different result'").
- L A decision by the NRC Staff to revise the Final Safety Evaluation Report to account for an applicant's confirmatory analysis would not, standing alone, be a materially different result that justifies reopening the record, because it would neither change the outcome of the renewal proceeding nor impose a different licensing condition on an applicant.
- M Although the term "likely" in section 2.326(a)(3) is not defined, we construe it — consistent with its commonly understood meaning — to be synonymous with "probable" or "more likely than not." *See Webster's Third New International Dictionary of the English Language Unabridged* 1310 (1976); *cf.* 51 Fed. Reg. at 19,536-37 (in selecting a "likelihood" standard, the Commission indicated that a "would have been reached" standard is too strict, and a "might have been reached" standard is too lax).
- N It is not surprising that a movant who has failed to provide an adequate foundation to support the existence of a significant safety issue also is unable to "demonstrate that a materially different result . . . would have been likely had [their] newly proffered evidence been considered initially" (10 C.F.R. § 2.326(a)(3)). *See Seabrook*, CLI-90-10, 32 NRC at 223 ("Because this matter as presented is devoid of safety significance, we see no likelihood whatsoever — let alone a demonstration — that a materially different result would . . . have been likely had the newly proffered evidence been considered initially").
- O Failure by a movant to address all the reopening requirements in a motion to reopen "is reason enough to deny [the motion]." *See AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-08-13, 67 NRC 396, 399 (2008). *See also Seabrook*, ALAB-915, 29 NRC at 432 ("the Commission expects its adjudicatory boards to enforce [reopening requirements] rigorously — i.e., to reject out-of-hand reopening motions that do not meet those requirements within their four corners").
- LBP-08-13 ENTERGY NUCLEAR OPERATIONS, INC. (Indian Point, Units 2 and 3), Docket Nos. 50-247-LR, 50-286-LR (ASLBP No. 07-858-03-LR-BD01); LICENSE RENEWAL; July 31, 2008; MEMORANDUM AND ORDER (Ruling on Petitions to Intervene and Requests for Hearing)
- A In this proceeding regarding the License Renewal Application ("LRA") of Entergy Nuclear Operations, Inc. ("Entergy" or "Applicant"), to renew the operating license for the Indian Point Energy Center ("IPEC" or "Indian Point"), for 20 years beyond the current expiration date of September 9, 2013, for Unit 2 ("IP2") and December 12, 2015, for Unit 3 ("IP3"), the Licensing Board — ruling on petitions to intervene filed by seven different petitioners — concludes that three petitioners have demonstrated standing and proffered at least one admissible contention and are admitted as parties to the proceeding; that three petitioners that were not admitted as parties have the option to participate in the proceeding as interested governmental entities; and that one petitioner failed to proffer an admissible contention and has been dismissed from the proceeding.
- B A petitioner must provide basic information supporting its claim to standing in order to satisfy the requirements of 10 C.F.R. § 2.309(d)(1)(ii)-(iv). This information must include (1) the nature of the petitioner's right to be made a party to the proceeding; (2) the nature and extent of the petitioner's property, financial, or other interest in the proceeding; and (3) the possible effect of any decision or order that may be issued in the proceeding on the petitioner's interest. In addition, the NRC generally follows judicial concepts of standing, which require that a petitioner "(1) allege a concrete and particularized injury that is (2) fairly traceable to the challenged action and (3) likely to be redressed by a favorable decision," commonly referred to as "injury in fact," causality, and redressability."
- C In order for organizations to demonstrate standing to intervene, they must allege that the challenged action will cause a cognizable injury to the organization's interests or to the interests of its members.
- D When seeking to intervene as the representative for its members, an organization must identify a member by name and address, show how that member would be affected by the licensing action, and demonstrate that the member has authorized the organization to request a hearing on his or her behalf.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- E The NRC applies a proximity presumption, whereby a petitioner is presumed to have standing to intervene without the need specifically to plead injury, causation, and redressability if the petitioner lives within 50 miles of the nuclear power reactor.
- F A State or local governmental entity that wishes to be a party in a proceeding that involves a facility located within its boundaries is automatically deemed to have standing.
- G An admissible contention must (1) provide a specific statement of the legal or factual issue sought to be raised; (2) provide a brief explanation of the basis for the contention; (3) demonstrate that the issue raised is within the scope of the proceeding; (4) demonstrate that the issue raised is material to the findings the NRC must make to support the action that is involved in the proceeding; (5) provide a concise statement of the alleged facts or expert opinions, including references to specific sources and documents, that support the petitioner's position and upon which the petitioner intends to rely at hearing; and (6) provide sufficient information to show that a genuine dispute exists with regard to a material issue of law or fact, including references to specific portions of the application that the petitioner disputes, or in the case when the application is alleged to be deficient, the identification of such deficiencies and supporting reasons for this belief.
- H With limited exceptions not applicable in this case, no rule or regulation of the Commission is subject to attack in any adjudicatory proceeding.
- I In order for a petitioner to adopt the contention of another petitioner, it must first demonstrate that it has standing and submit its own admissible contention. The Board will not allow a petitioner who has not submitted an admissible contention to adopt the contentions of other petitioners.
- J Part 51 of 10 C.F.R. divides environmental issues for license renewal into generic and site-specific components. The issues that have been dealt with generically are identified as Category 1 issues. Other issues that require site-specific analysis, are identified as Category 2 issues. Category 1 issues are not subject to challenge in a relicensing proceeding because they involve environmental effects that are essentially similar for all plants and need not be assessed repeatedly on a site-specific basis.
- K Absent a waiver pursuant to 10 C.F.R. § 2.335, Category 1 issues cannot be addressed in a license renewal proceeding.
- L Category 2 issues, on the other hand, are not "essentially similar" for all plants because they must be reviewed on a site-specific basis; accordingly, challenges relating to these issues are properly part of a license renewal proceeding.
- M Certain safety issues that were reviewed for the initial license have been closely monitored by NRC inspection during the license term and need not be reviewed again in the context of a license renewal application.
- N The Updated Final Safety Analysis Report ("UFSAR") is part of the Current Licensing Basis ("CLB") and must be updated annually. Contentions pertaining to issues dealing with the current operating license, including the UFSAR, are not within the scope of license renewal review.
- O The General Design Criteria are not applicable to nuclear power plants with construction permits issued prior to May 21, 1971.
- P Aging management programs ("AMP") for systems, structures, and components ("SSC") identified by 10 C.F.R. § 54.4 are within the scope of license renewal proceedings. For those SSCs subject to aging management review that are not CLB issues, discussion of proposed inspection and monitoring details will come before this Board only as they are needed to demonstrate that the Applicant's AMP does or does not achieve the desired goal of providing assurance that the intended function of relevant SSCs discussed herein will be maintained for the license renewal period.
- Q Pursuant to section 54.21(a)(3), each application must contain an Integrated Plant Assessment ("IPA") for which specified components will, *inter alia*, demonstrate that the effects of aging will be adequately managed so that the intended function(s) will be maintained consistent with the CLB for the period of extended operation. A commitment to develop a program does not *demonstrate* that the effects of aging will be adequately managed.
- R NEPA does not require an applicant to look at every conceivable alternative, but rather requires only consideration of feasible, nonspeculative, reasonable alternatives. The reasonable alternatives for license renewal proceedings are limited to discrete electric generation sources that are feasible technically and available commercially. Section 8.2 of the Generic Environmental Impact Statement ("GEIS") addresses the need to consider energy conservation for the "no-action" alternative.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- S The reasonable alternatives to be considered in the Environmental Report for license renewal proceedings are limited to discrete electric generation sources that are feasible technically and available commercially. There is no requirement for an applicant to analyze in detail options that are not discrete, feasible sources of base-load energy.
- T Neither the NRC nor the applicant has the mission or authority to implement a general societal interest in energy efficiency. An applicant's decision to exclude renewable energy options from its alternatives analysis is reasonable because these sources are not always available and, with the current technology, cannot meet the goals of the LRA.
- U Whether a SAMA must be analyzed in an ER hinges on whether it could potentially be cost-beneficial. Therefore, a petitioner must, at a minimum, address the approximate relative cost and benefit of the SAMA because without any notion of cost, it is difficult to assess whether a SAMA may be cost-beneficial and thus warrant serious consideration.
- V While the seismic SAMA methodology is outlined in the ER, a petitioner may assume that, because it cannot check all analysis details, the analysis is incomplete or incorrect. This is mere speculation and such speculation is insufficient to support the admissibility of this contention.
- W A petitioner is not required to redo SAMA analyses in order to raise a material issue. Where a petitioner alleges that the SAMA was done, but that the analysis was significantly flawed due to the use of inaccurate factual assumptions, it may be used to support a contention.
- X Pursuant to 10 C.F.R. Part 51, Subpart A, Appendix B, Table B-1 ("Table B-1"), the impact on offsite land use during the license renewal term cannot be assessed generically and, accordingly, it is a Category 2 environmental issue that is within the scope of this proceeding. In conducting its analysis of the impact of the license renewal on land use, an applicant should consider the impact on real estate values that would be caused by license renewal or nonrenewal.
- Y The adequacy of the UFSAR and compliance with the CLB are outside the scope of license renewal proceedings. The proper vehicle to challenge the adequacy of the UFSAR would be a section 2.206 petition, not a challenge to the license renewal.
- Z Any challenge, explicit or implicit, to a decision by the NRC Staff to grant an exemption from a 1-hour barrier to a 24/30-minute barrier is a direct challenge to the CLB and unrelated to the effects of plant aging and the LRA. Accordingly, it is beyond the scope of a license renewal proceeding.
- AA Part 54 does not require a comprehensive preapplication baseline inspection. If a petitioner believes the current NRC regulations are inadequate, the venue for raising such a concern is a section 2.802 petition to institute a rulemaking action.
- BB It is the burden of an applicant to show that the concrete in the containment structures will maintain its integrity during the extended period of operations, and, if this cannot be done, to develop an AMP that ensures that any indication of degradation is detected and remediated.
- CC Whether an AMP is necessary to manage the cumulative effects of embrittlement of the reactor pressure vessels and associated internals is within the scope of this proceeding.
- DD In evaluating metal fatigue, a component's cumulative usage factor ("CUF") is the fundamental parameter used to determine whether it will likely develop cracks during the license renewal period and, as a result, be subject to an AMP in accordance with 10 C.F.R. § 54.21(c)(1)(iii). As the threshold parameter of the time-limited aging analysis ("TLAA") for metal fatigue, an applicant must complete the analysis of the CUFs for the license renewal period and include the results in the LRA. An applicant's commitment to repair or replace the affected locations before exceeding a CUF of 1.0 does not meet the "demonstration" requirement of the regulations. While the implementation of the AMP can anticipate future actions as implied by this statement, the actual plan must be sufficient to demonstrate the specific aging management actions that will take place in the future, and not just that the AMP will be developed in the future.
- EE The Commission ruled that NEPA imposes no legal duty on the NRC to consider intentional malevolent acts . . . on a case-by-case basis in conjunction with commercial power reactor license renewal applications.
- FF Contentions relating to the conclusions that the NRC Staff reaches in its NEPA analysis with regard to the environmental impacts from these radiological releases to groundwater must await future publication of its SEIS.
- GG There is no need for a review of emergency planning issues in the context of license renewal.
- HH Section 51.53(c)(3)(ii)(B) requires an applicant to provide in its ER a site-specific analysis of entrainment, impingement, and heat shock/thermal discharge impacts from its once-through cooling

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

systems. An applicant may meet its obligations by doing one of following: (1) provide a copy of current CWA § 316(b) determination; (2) provide a section 316(a) variance or equivalent State permit and supporting documentation; or (3) assess the impact of proposed action on fish and shellfish resources resulting from heat shock, impingement, and entrainment.

- II Spent fuel pool fires are Category 1 environmental issues and, therefore, are addressed generically in the GEIS for license renewals. A petition for rulemaking that addresses issues related to spent fuel pool fires would be a more appropriate venue to seek relief for resolving generic concerns about spent fuel fires than a site-specific contention in an adjudication.
- JJ Presentation of an alternative analysis is, without more, insufficient to support a contention alleging that the original analysis failed to meet applicable requirements.
- KK An applicant is required to address new and significant information for either Category 1 or Category 2 issues in its ER for an LRA.
- LL NEPA, which mandates a hard look at the environmental impact of proposed federal actions, is the only legal grounds for an admissible contention relating to Environmental Justice (“EJ”) matters. Under NEPA, the purpose of an EJ review is to insure that the Commission considers and publicly discloses environmental factors peculiar to minority or low-income populations that may cause them to suffer harm disproportionate to that suffered by the general population. The goals of NEPA are to inform federal agencies and the public about the environmental effects of proposed projects.
- MM An applicant in its ER need only consider the range of alternatives that are capable of achieving the goal of the proposed action. The reasonable alternatives for license renewal proceedings are limited to discrete electric generation sources that are technically feasible and commercially available. Energy conservation, including the demand-side options, are not discrete electric generation sources. NEPA’s “rule of reason” does not demand an analysis of energy efficiency, because, *inter alia*, conservation measures are beyond the ability of an applicant to implement, and are therefore outside the scope required by a NEPA review of reasonable alternatives.
- NN General allegations covering the overall adequacy of SSCs, with no mention of potential errors or deficiencies in an applicant’s LRA do not support the admissibility of a contention.
- OO An ER prepared for a license renewal pursuant to 10 C.F.R. § 51.53(c) need not discuss the economic or technical benefits and costs of the proposed action or alternatives except as they are either essential for determining whether an alternative should be included or relevant to mitigation.
- LBP-08-14 FLORIDA POWER & LIGHT COMPANY (St. Lucie Nuclear Power Plant, Units 1 and 2), Docket Nos. 50-335-CO, 50-389-CO (ASLBP No. 08-866-01-CO-BD01); ENFORCEMENT; August 15, 2008; MEMORANDUM AND ORDER (Denying Request for Hearing)
- A In this proceeding regarding a request for hearing filed by Saporito Energy Consultants, by and through its president, Thomas Saporito (Petitioner or SEC), seeking to challenge a Confirmatory Order issued by the Nuclear Regulatory Commission Staff (Staff) to Florida Power & Light Company (FPL or Licensee), the Licensing Board concludes that Petitioner has failed to demonstrate that it has standing and has failed to proffer an admissible contention. Accordingly, the Board denies the request for hearing.
- B A petitioner’s right to participate in a licensing proceeding stems from section 189a of the Atomic Energy Act. That section provides for a hearing upon the request of any person whose interest may be affected by the proceeding. The Commission’s regulations implementing that section of the Atomic Energy Act (“AEA”) require a licensing board, in ruling on a request for a hearing, to determine whether the petitioner has an interest potentially affected by the proceeding by considering (1) the nature of the petitioner’s right under the AEA to be made a party to the proceeding; (2) the nature and extent of the petitioner’s property, financial, or other interest in the proceeding; and (3) the possible effect of any decision or order that may be issued in the proceeding on the petitioner’s interest.
- C When assessing whether a petitioner has set forth a sufficient interest to intervene under 10 C.F.R. § 2.309, licensing boards apply judicial concepts of standing. Judicial concepts of standing require the petitioner to show that (1) he or she has personally suffered, or will personally suffer in the future, a distinct and palpable harm that constitutes an injury in fact; (2) the injury fairly can be traced to the challenged action; and (3) the injury is likely to be redressed by a favorable decision.
- D If the petitioner requests a remedy that is beyond the scope of the hearing, then the hearing request must be denied because redressability is an element of standing. Accordingly, it is unlikely that petitioners will often obtain hearings on confirmatory enforcement orders. In the context of an enforcement proceeding, Commission precedent teaches that the scope of the proceeding is directly related to the issue

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

of standing, in that an individual or organization requesting a hearing must show that the petitioner would be adversely affected by the enforcement order as it exists, rather than being adversely affected by the existing order as it might be compared to a hypothetical order that the petitioner asserts would be an improvement.

E The Commission's regulations, 10 C.F.R. § 2.309(f)(1), set out the requirements that must be met if a contention is to be admitted in a NRC licensing or enforcement adjudication. An admissible contention must (1) provide a specific statement of the legal or factual issue sought to be raised; (2) provide a brief explanation of the basis for the contention; (3) demonstrate that the issue raised is within the scope of the proceeding; (4) demonstrate that the issue raised is material to the findings the NRC must make to support the action involved in the proceeding; (5) provide a concise statement of the alleged facts or expert opinions, including references to specific sources and documents, that support the petitioner's position and upon which the petitioner intends to rely at the hearing; and (6) provide sufficient information to show that a genuine dispute exists with regard to a material issue of law or fact, including references to specific portions of the application that the petitioner disputes, or in the case when the application is alleged to be deficient, the identification of such deficiencies and supporting reasons for this belief.

F In addition to the contention admissibility standards in section 2.309(f), section 2.335(a) prohibits petitioners from challenging NRC regulations.

G The purpose of the contention rule is to focus litigation on concrete issues and should result in a clearer and more focused record for decision. The Commission has stated that it should not have to expend resources to support the hearing process unless there is an issue that is appropriate for, and susceptible to, resolution in an NRC hearing. The Commission has emphasized that the rules on contention admissibility are "strict by design." Failure to comply with any of these requirements is grounds for the dismissal of a contention.

H The issue of standing in an enforcement proceeding and whether a request for hearing raises allegations that are within the scope of the proceeding are closely related. A petitioner requesting a hearing must show that the request is within the scope of the proceeding by demonstrating that the petitioner will be adversely affected by the existing terms of the enforcement order. Any purported adverse effects caused by the Confirmatory Order's failure to include revised or additional provisions sought by a petitioner shall be deemed irrelevant for this purpose. If the petitioner fails to show the adverse effects of the Confirmatory Order, the hearing request will be denied.

I Although licensing boards have used a proximity presumption when resolving issues of standing for cases involving reactor licensing, in a case involving an enforcement order the standing requirement is based on the Confirmatory Order itself, and the petitioner must show that he will be adversely affected by the terms of the Confirmatory Order.

J Therefore, something more than proximity to the facility (i.e., a link between the Confirmatory Order and the alleged harm to the individual) is necessary to establish standing.

K The Commission has consistently and unequivocally ruled that petitioners may not seek to enhance the measures outlined in an enforcement order. Additionally, the Commission has held that claims by a nonlicensee to the effect that the root causes or facts underpinning a Confirmatory Order are inaccurate, are not valid claims in a proceeding concerning a Confirmatory Order.

L Challenges to the NRC's authority to engage in administrative dispute resolution (ADR) is beyond the scope of enforcement order proceedings. Supreme Court precedent establishes that agencies have wide latitude in administering their enforcement program. Indeed, the Administrative Dispute Resolution Act of 1996 requires each federal agency to promote the use of ADR.

LBP-08-15 VIRGINIA ELECTRIC AND POWER COMPANY d/b/a DOMINION VIRGINIA POWER and OLD DOMINION ELECTRIC COOPERATIVE (North Anna Power Station, Unit 3), Docket No. 52-017-COL (ASLBP No. 08-863-01-COL); COMBINED LICENSE; August 15, 2008; MEMORANDUM AND ORDER (Ruling on Petitioner's Standing and Contentions and NCUC's Request to Participate as a Nonparty Interested State)

A State agencies may participate as nonparty interested States. 10 C.F.R. § 2.315(c).

B Matters resolved in a proceeding on an ESP application are considered resolved in a subsequent COL proceeding when the COL application references the ESP, subject to certain exceptions. 10 C.F.R. § 52.39(a)(2).

C A safety contention arising from a matter resolved in an ESP proceeding is within the scope of a COL proceeding that references the ESP only if it concerns whether the site characteristics and design

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- parameters specified in the ESP have been met (10 C.F.R. § 52.39(c)(1)(i)), whether a term or condition in the ESP has been met (§ 52.39(c)(1)(ii)), whether a variance from the ESP requested by the COL applicant is unwarranted or should be modified (§ 52.39(c)(1)(iii)), or whether emergency planning matters resolved in the ESP should be revisited (§ 52.38(c)(1)(iv)).
- D The Commission’s decision to use the term “resolved” in 10 C.F.R. § 52.39(a) implies that it intended to grant preclusive effect only when the appropriate agency official makes a determination concerning the issue in dispute. The fact that an issue was mentioned in agency documents is insufficient to show that it was resolved.
- E An environmental contention may be admitted during a COL proceeding if it concerns a significant environmental issue that was not resolved in the ESP proceeding, or if it involves the impacts of construction and operation of the facility and significant new information has been identified. 10 C.F.R. § 52.39(c)(1)(v).
- F A matter need not be actually litigated in order to be “resolved” in an ESP proceeding. If the matter was decided by the Staff in the ESP proceeding, concerns an issue the Staff was required to resolve at that stage, and could have been litigated in the ESP proceeding, the matter is deemed “resolved” by the ESP proceeding even if the issue was not actually litigated.
- G In general, the rule of collateral estoppel bars parties from relitigating issues actually and necessarily decided in prior litigation between the same parties. The Appeals Board decided in 1974 that the doctrine of collateral estoppel should be applied in appropriate circumstances in NRC proceedings.
- H The NRC must have provided adequate notice to potential litigants, through the *Federal Register* notice that provides the public with the opportunity for a hearing, of the issues that were within the scope of the ESP proceeding, and thus might properly be raised in a request for a hearing in that ESP proceeding. Given that the *Federal Register* notice defines the scope of the issues that may properly be raised in a request for a hearing, it also defines the scope of the issues that could reasonably be deemed resolved during an ESP proceeding.
- I Before a participant may be precluded from litigating an issue because it failed to raise the issue in an earlier proceeding, it must have had reasonable notice that such an opportunity existed.
- J A contention of omission claims, in the words of 10 C.F.R. § 2.309(f)(1)(vi), that “the application fails to contain information on a relevant matter as required by law . . . and the supporting reasons for the petitioner’s belief.” For such a contention, a petitioner may satisfy the requirement to provide a specific statement of the legal or factual issue sought to be raised by providing an adequate description of the information it contends should have been included in the application. 10 C.F.R. § 2.309(f)(1)(i).
- K For a contention of omission, the petitioner may satisfy the requirement of 10 C.F.R. § 2.309(f)(1)(ii) to provide a brief explanation of the basis of the contention by adequately explaining the basis of its belief that the application omits information necessary to satisfy the governing NRC regulations.
- L If a contention challenges the legal sufficiency of the application that is the subject of the Notice of Hearing and Opportunity to Petition for Leave to Intervene, the contention is within the scope of the proceeding. 10 C.F.R. § 2.309(f)(1)(iii).
- M Applicant’s plan for storage of low-level radioactive waste was material to the findings the NRC must make to support the action that is involved in the proceeding, because the applicant had requested a license under 10 C.F.R. Part 30 that would authorize it to possess and store the low-level radioactive waste that is the subject of the proposed contention. 10 C.F.R. § 2.309(f)(1)(iv).
- N Applicant’s plan for storage of low-level radioactive waste at its facility was material to compliance with the National Environmental Policy Act (NEPA) and the NRC’s regulations implementing NEPA, because the environmental report prepared for a Combined Operating License application must address, among other things, the environmental costs of “management of low-level wastes and high-level wastes related to uranium fuel cycle activities.” 10 C.F.R. § 51.51(a).
- O Petitioner failed to establish the materiality of its contention related to management of low-level radioactive waste by referring to 10 C.F.R. Part 61. The applicant was not seeking a license under Part 61, and it was speculative whether such a license would ever be necessary.
- P For a contention of omission, the petitioner’s burden under 10 C.F.R. § 2.309(f)(1)(v) is to show the facts necessary to establish that the application omits information that should have been included. The facts relied on need not show that the applicant’s facility cannot be safely operated, but rather that the application is incomplete under the governing regulations. If the applicant cures the omission, the

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

contention will become moot. Then, the intervenor must timely file a new or amended contention if it intends to challenge the sufficiency of the new information supplied by the applicant.

Q Under 10 C.F.R. § 2.309(f)(1)(vi), when an application is alleged to be deficient, the petitioner must identify the deficiencies and provide supporting reasons for its position that such information is required. Any contention that meets these requirements necessarily presents a genuine dispute with the applicant on a material issue, as required by section 2.309(f)(1)(vi).

R Petitioners that are not represented by counsel will be held to less rigid standards for pleading, although a totally deficient petition will not be admitted.

S Contention that asked the Licensing Board to determine whether the applicant would be able to obtain permits from and comply with regulatory requirements imposed by other agencies was in substance a request that the Board examine matters outside the NRC's jurisdiction, and therefore the contention was outside the scope of the proceeding.

T Because the NRC's regulations mandate balancing the economic and other benefits of a proposed new reactor against its environmental and other costs, a contention that worldwide uranium supplies will be inadequate to permit the anticipated power production benefits during the license term was potentially material to the licensing proceeding under 10 C.F.R. Part 52. Nevertheless, the Board declined to admit the contention because the Petitioner failed to provide expert opinion, documents, or other sources to support its allegation that worldwide uranium supplies would be inadequate.

LBP-08-16 TENNESSEE VALLEY AUTHORITY (Bellefonte Nuclear Power Plant, Units 3 and 4), Docket Nos. 52-014-COL, 52-015-COL (ASLBP No. 08-864-02-COL-BD01); COMBINED LICENSE; September 12, 2008; MEMORANDUM AND ORDER (Ruling on Standing, Hearing Petition Timeliness, and Contention Admissibility)

A In this 10 C.F.R. Part 52 proceeding regarding the application of the Tennessee Valley Authority (TVA) for a combined operating license (COL) to construct and operate two new reactors at the existing Bellefonte nuclear facility site, ruling on a petition filed jointly by three public interest organizations seeking to intervene to contest the TVA COL application, the Licensing Board concludes that, having established the requisite standing and proffering four admissible contentions, two of the petitioners, Blue Ridge Environmental Defense League (BREDL) and the Southern Alliance for Clean Energy (SACE), are admitted as parties to the proceeding. The third petitioner, the Bellefonte Efficiency and Sustainability Team (BEST), having failed to make the requisite standing showing, is not admitted as a party to the proceeding.

B In determining whether an individual or organization should be granted party status in a proceeding based on standing "as of right," the agency has applied contemporaneous judicial standing concepts that require a participant to establish (1) it has suffered or will suffer a distinct and palpable injury that constitutes injury-in-fact within the zones of interests arguably protected by the governing statutes (e.g., the Atomic Energy Act (AEA), the National Environmental Policy Act of 1969 (NEPA), 42 U.S.C. § 4321, et seq.); (2) the injury is fairly traceable to the challenged action; and (3) the injury is likely to be redressed by a favorable decision. See *Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), CLI-96-1, 43 NRC 1, 6 (1996).

C In cases involving the possible construction or operation of a nuclear power reactor, proximity to the proposed facility has been considered sufficient to establish the requisite standing elements. See *Florida Power & Light Co.* (St. Lucie Nuclear Power Plant, Units 1 and 2), CLI-89-21, 30 NRC 325, 329 (1989).

D When an entity seeks to intervene on behalf of its members, that entity must show it has an individual member who can fulfill all the necessary standing elements and who has authorized the organization to represent his or her interests. See *Vermont Yankee Nuclear Power Corp.* (Vermont Yankee Nuclear Power Station), CLI-00-20, 52 NRC 151, 163 (2000).

E In assessing a petition to determine whether these elements are met, which a presiding officer must do even though there are no objections to a petitioner's standing, the Commission has indicated that we are to "construe the petition in favor of the petitioner." *Georgia Institute of Technology* (Georgia Tech Research Reactor, Atlanta, Georgia), CLI-95-12, 42 NRC 111, 115 (1995).

F Because none of the affidavits submitted in support of a hearing request indicate an organization seeking to intervene represents the interests of the submitter, the organization has failed to establish it has standing. See *Virginia Electric and Power Co.* (North Anna Power Station, Unit 3), LBP-08-15, 68 NRC 294, 304 (2008).

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- G Under 10 C.F.R. § 2.306(c)(2), to be considered timely, a document must be submitted to the E-Filing system for docketing and service “[b]y 11:59 p.m. Eastern Time.” The agency’s regulations further state that a filing will be considered complete “[b]y electronic transmission when the filer performs the last act that it must perform to transmit a document, in its entirety, electronically.” 10 C.F.R. § 2.302(d)(1).
- H “Hitting the button” to submit, if the last act for a particular pleading, is all the regulations require to be done by 11:59 p.m. on the due date. Thus, the time an E-Filing submission is received by the system server is not necessarily controlling relative to the timeliness of the filing.
- I Given the general rule of interpretation that the specific controls over the general, *see* 10 C.F.R. § 2.3(a) (in any conflict between a general rule in Part 2, Subpart C, and a special rule in Part 2, the special rule governs), the language of the Commission’s case-specific notice establishing “11:59 p.m. Eastern Standard Time” as the filing time for hearing petitions controls over the agency’s rule of general applicability for all cases that refers only to “11:59 p.m. Eastern Time.”
- J Considerations not unlike those associated with the concept of *contra proferentem* that applies in construing written instruments, *see* Black’s Law Dictionary 328 (7th ed. 1999) (ambiguous provision is construed most strongly against the person who selected the language), lead to the conclusion that any ambiguity relative to the filing date for hearing requests arising from the language of the agency’s hearing opportunity notice should be construed in favor of a participant (particularly a pro se participant) who was seeking to comply with the notice.
- K Those who wish to make a timely adjudicatory filing via the agency’s E-Filing system should leave themselves enough preparation time to ensure they can “hit the button” to submit their filing, in its entirety, well before the eleventh hour (and fifty-ninth minute).
- L Section 2.309(f) of the Commission’s rules of practice specifies the requirements that must be met if a contention is to be deemed admissible. Specifically, a contention must provide (1) a specific statement of the legal or factual issue sought to be raised; (2) a brief explanation of its basis; (3) a concise statement of the alleged facts or expert opinions, including references to specific sources and documents, that support the petitioner’s position and upon which the petitioner intends to rely at hearing; and (4) sufficient information demonstrating that a genuine dispute exists in regard to a material issue of law or fact, including references to specific portions of the application that the petitioner disputes, or in the case when the application is alleged to be deficient, the identification of such deficiencies and supporting reasons for this belief. *See* 10 C.F.R. § 2.309(f)(1)(i), (ii), (v), and (vi). In addition, the petitioner must demonstrate that the issue raised in the contention is both “within the scope of the proceeding” and “material to the findings the NRC must make to support the action that is involved in the proceeding.” *Id.* § 2.309(f)(1)(iii), (iv). Failure to comply with any of these requirements is grounds for dismissing a contention. *See Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-99-10, 49 NRC 318, 325 (1999); *see also Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1, 2, and 3), CLI-91-12, 34 NRC 149, 155-56 (1991).
- M A contention that attacks a Commission rule, or which seeks to litigate a matter that is, or clearly is about to become, the subject of a rulemaking, is inadmissible. *See* 10 C.F.R. § 2.335; *Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 345 (1999) (citing *Potomac Electric Power Co.* (Douglas Point Nuclear Generating Station, Units 1 and 2), ALAB-218, 8 AEC 79, 85, 89 (1974)). This includes contentions that advocate stricter requirements than agency rules impose or that otherwise seek to litigate a generic determination established by a Commission rulemaking. *See Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), LBP-01-6, 53 NRC 138, 159 (2001); *Pacific Gas and Electric Co.* (Diablo Canyon Nuclear Power Plant, Units 1 and 2), LBP-93-1, 37 NRC 5, 29-30 (1993); *Public Service Co. of New Hampshire* (Seabrook Station, Units 1 and 2), LBP-82-106, 16 NRC 1649, 1656 (1982); *see also Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), CLI-96-7, 43 NRC 235, 251 (1996); *Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1, 2, and 3), LBP-91-19, 33 NRC 397, 410, *aff’d in part and rev’d in part on other grounds*, CLI-91-12, 34 NRC 149 (1991). Similarly, an adjudication is not the proper forum for challenging applicable statutory requirements or the basic structure of the agency’s regulatory process. *See Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-07-16, 65 NRC 371, 383 (2007) (citing 10 C.F.R. § 2.335(a)); *see also Philadelphia Electric Co.* (Peach Bottom Atomic Power Station, Units 2 and 3), ALAB-216, 8 AEC 13, 20, *aff’d in part on other grounds*, CLI-74-32, 8 AEC 217 (1974). By the same token, a contention that simply states the petitioner’s views about what regulatory policy should be does not present a litigable issue. *See PPL Susquehanna LLC* (Susquehanna Steam

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- Electric Station, Units 1 and 2), CLI-07-25, 66 NRC 101, 106 (2007) (citing *Peach Bottom*, ALAB-216, 8 AEC at 20-21 & n.33).
- N All proffered contentions must be within the scope of the proceeding as defined by the Commission in its initial hearing notice and order referring the proceeding to the Licensing Board. See 10 C.F.R. § 2.309(f)(1)(iii); *Tennessee Valley Authority* (Watts Bar Nuclear Plant, Unit 1; Sequoyah Nuclear Plant, Units 1 and 2; Browns Ferry Nuclear Plant, Units 1, 2, and 3), CLI-04-24, 60 NRC 160, 204 (2004) (citing *General Public Utilities Nuclear Corp.* (Three Mile Island Nuclear Station, Unit 1), ALAB-881, 26 NRC 465, 476 (1987) (footnotes omitted)); see also *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), CLI-00-23, 52 NRC 327, 329 (2000); *Duke Power Co.* (Catawba Nuclear Station, Units 1 and 2), ALAB-825, 22 NRC 785, 790-91 (1985). As a consequence, any contention that falls outside the specified scope of the proceeding must be rejected. See *Portland General Electric Co.* (Trojan Nuclear Plant), ALAB-534, 9 NRC 287, 289 n.6 (1979).
- O It is the petitioner's obligation to present factual information and/or expert opinion necessary to support its contention. See 10 C.F.R. § 2.309(f)(1)(v); *Georgia Institute of Technology* (Georgia Tech Research Reactor, Atlanta, Georgia), LBP-95-6, 41 NRC 281, 305, *vacated in part and remanded on other grounds*, CLI-95-10, 42 NRC 1, and *aff'd in part*, CLI-95-12, 42 NRC 111 (1995). While a Board may appropriately view a petitioner's supporting information in a light favorable to the petitioner, failure to provide such information regarding a proffered contention requires the contention be rejected. See *Palo Verde*, CLI-91-12, 34 NRC at 155. In this connection, neither mere speculation nor bare or conclusory assertions, even by an expert, alleging that a matter should be considered will suffice to allow the admission of a proffered contention. See *Fansteel, Inc.* (Muskogee, Oklahoma Site), CLI-03-13, 58 NRC 195, 203 (2003). If a petitioner neglects to provide the requisite support for its contentions, it is not within the Board's power to make assumptions of fact that favor the petitioner, nor may the Board supply information that is lacking. See *Palo Verde*, CLI-91-12, 34 NRC at 155; *Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), LBP-01-35, 54 NRC 403, 422 (2001); *Georgia Tech Research Reactor*, LBP-95-6, 41 NRC at 305.
- P Simply attaching material or documents as a basis for a contention, without setting forth an explanation of that information's significance, is inadequate to support the admission of the contention. See *Fansteel*, CLI-03-13, 58 NRC at 204-05. Along these lines, any supporting material provided by a petitioner, including those portions of the material that are not relied upon, is subject to Board scrutiny. See *Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), LBP-96-2, 43 NRC 61, 90, *rev'd in part on other grounds*, CLI-96-7, 43 NRC 235 (1996). Thus, the material provided in support of a contention will be carefully examined by the Board to confirm that on its face it does supply an adequate basis for the contention. See *Vermont Yankee Nuclear Power Corp.* (Vermont Yankee Nuclear Power Station), ALAB-919, 30 NRC 29, 48 (1989), *vacated in part on other grounds and remanded*, CLI-90-4, 31 NRC 333 (1990).
- Q To be admissible, the regulations require that all contentions assert an issue of law or fact that is material to the outcome of a licensing proceeding, meaning that the subject matter of the contention must impact the grant or denial of a pending license application. See 10 C.F.R. § 2.309(f)(1)(iv). This requirement of materiality often dictates that any contention alleging deficiencies or errors in an application also indicate some significant link between the claimed deficiency and either the health and safety of the public or the environment. See *Yankee Nuclear*, LBP-96-2, 43 NRC at 75-76; see also *Pacific Gas and Electric Co.* (Diablo Canyon Power Plant Independent Spent Fuel Storage Installation), LBP-02-23, 56 NRC 413, 439-41 (2002), *petition for review denied*, CLI-03-12, 58 NRC 185, 191 (2003).
- R All properly formulated contentions must focus on the license application in question, challenging either specific portions of or alleged omissions from the application (including the applicant's safety analysis report and the environmental report) so as to establish that a genuine dispute exists with the applicant on a material issue of law or fact. See 10 C.F.R. § 2.309(f)(1)(vi). Any contention that fails directly to controvert the application or that mistakenly asserts the application does not address a relevant issue can be dismissed. See *Sacramento Municipal Utility District* (Rancho Seco Nuclear Generating Station), LBP-93-23, 38 NRC 200, 247-48 (1993), *review declined*, CLI-94-2, 39 NRC 91 (1994); *Texas Utilities Electric Co.* (Comanche Peak Steam Electric Station, Unit 2), LBP-92-37, 36 NRC 370, 384 (1992).
- S Although licensing boards generally are to litigate a "contention" rather than the "basis" that provides the issue statement's foundational support, it has been recognized that the reach of a contention necessarily

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- hinges upon its terms coupled with its stated basis. *See Public Service Co. of New Hampshire* (Seabrook Station, Units 1 and 2), ALAB-899, 28 NRC 93, 97 (1988), *aff'd sub nom. Massachusetts v. NRC*, 924 F.2d 311 (D.C. Cir.), *cert. denied*, 502 U.S. 899 (1991); *see also Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-28, 56 NRC 373, 379 (2002).
- T If there are problems with meeting a filing date, participants should seek an extension of time or, if the time for filing has passed, submit a motion for leave to file out of time.
- U The failure to specify the language of a contention and distinguish it from the discussion that might otherwise be considered the basis for the issue statement might be grounds for dismissing the contention. *See* 10 C.F.R. § 2.309(f)(1)(i), (ii) (providing for separate statement of contention and basis).
- V In the absence of a 10 C.F.R. § 2.335 waiver petition, any challenge brought to aspects of a referenced certified design is outside the scope of a combined operating license proceeding. *See* 10 C.F.R. § 52.63(a)(5).
- W Even in the face of the Commission's longstanding admonition that a presiding officer should provide latitude to a pro se participant, *see Shieldalloy Metallurgical Corp.* (Cambridge, Ohio Facility), CLI-99-12, 49 NRC 347, 354 (1999); *Public Service Electric and Gas Co.* (Salem Nuclear Generating Station, Units 1 and 2), ALAB-136, 6 AEC 487, 489 (1973), a pro se petitioner's decision to provide an expert affidavit, available when it filed its hearing petition, at the time it submitted its reply is one that runs afoul of the Commission's explicit and repeated directive that reply pleadings cannot be used to introduce additional supporting information relative to a contention (as opposed to addressing the arguments raised in response to the petition), *see Louisiana Energy Services, L.P.* (National Enrichment Facility), CLI-04-25, 60 NRC 223, 225, *reconsideration denied*, CLI-04-35, 60 NRC 619 (2004).
- X The Licensing Board in the Vogtle early site permit (ESP) proceeding recently observed: "[I]n support of their argument the ER is deficient because of its lack of site-specific studies, Joint Petitioners have not demonstrated with any references — nor are we aware of any — that suggest site-specific studies are generally required. Rather, the appropriate scope of the baseline for a project is a functional concept: an applicant must provide enough information and in sufficient detail to allow for an evaluation of important impacts." *Southern Nuclear Operating Co.* (Early Site Permit for Vogtle ESP Site), LBP-07-3, 65 NRC 237, 257 (2007) (citations omitted).
- Y That is not to say that questions about the adequacy of an applicant's ER discussion regarding the impacts associated with the construction and operation of reactor cooling system intake and discharge structures cannot be based on the adequacy of the applicant's assessment of the state of existing aquatic resources. As the Board in the *Vogtle ESP* proceeding also noted, asserted deficiencies in the ER intake/discharge impact discussion as it is associated with the baseline discussion of aquatic resources, if properly supported, can be admitted for further litigation. *See id.* at 258-59.
- Z It is the petitioner's responsibility to provide factual or expert support for its contention, which includes the specific sources or documents on which it relies to support its position. A litany of "facts" and "figures" on various items without citing any specific document, expert opinion, or other source that will support their figures or claims severely undercuts the probative value to which these "factual" assertions might otherwise be entitled, essentially reducing them to the type of "bare assertions and speculation" that the Commission indicated in *GPU Nuclear, Inc.* (Oyster Creek Nuclear Generating Station), CLI-00-6, 51 NRC 193, 208 (2000), will not support the admission of their contention. *See* 10 C.F.R. § 2.309(f)(1)(v).
- AA In the context of seeking the admission of a NEPA or environmental-based contention, the underlying purpose of NEPA as an information-gathering and disclosure mechanism does require a somewhat different view of the concept of "materiality" under section 2.309(f)(1)(iv) than might be applied, strictly speaking, to a contention seeking to establish an AEA health and safety issue. Just because a contention is NEPA-related does not, however, eliminate materiality as an admissibility factor. Thus, an assertion that some analysis, calculation, or survey must be included in an ER or environmental statement is not necessarily sufficient, in and of itself, to require consideration of whether that additional information gathering and disclosure mechanism should be included, particularly in the absence of any expert or other support suggesting that such inquiry or examination is necessary to provide a reasonably accurate perspective regarding the relevant circumstances. Even in the context of NEPA, "saying it, does not make it so" for the purpose of establishing the materiality of a perceived information or analytical omission or deficiency.
- BB While a presiding officer must take seriously the responsibility, as recognized by the Commission, to afford a reasonable measure of latitude to a pro se intervenor in terms of the mechanics of contention

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

pleading and citation, this does not equate to the principle that all pro se intervenors must be afforded the same measure of latitude without regard to their experience in dealing with the agency's adjudicatory process and procedural rules. When an organization has appeared several times previously, it is not untoward for the presiding officer to expect that there will be a heightened awareness of the agency's pleading rules.

CC The agency's longstanding approach to electric power demand forecasting has emphasized historical, conservative planning to ensure electricity generating capacity will be available to meet reasonably expected needs. *See Duke Power Co.* (Catawba Nuclear Station, Units 1 and 2), ALAB-355, 4 NRC 397, 410 (1976); *see also Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant, Units 1, 2, 3, and 4), CLI-79-5, 9 NRC 607, 609-10 (1979).

DD Notwithstanding TVA's status as a federal entity, it is within NRC's regulatory authority to review TVA's COL application, including its compliance with the agency's NEPA requirements. *See Tennessee Valley Authority* (Phipps Bend Nuclear Plant, Units 1 and 2), ALAB-506, 8 NRC 533, 545-47 (1978). Moreover, it is apparent that the issue of the need for power is a part of the agency's COL NEPA review process. *See* 10 C.F.R. § 51.45(c) (ER submitted for agency review must contain analysis of economic, technical, and other benefits), *id.* § 51.50(c) (ER for COL application must include information required by section 51.45(c)). Further, as the Staff's standard review plan for environmental matters makes clear, under the agency's NEPA process the ER is reviewed to "ensur[e] that the analysis of the need for power and alternatives is reasonable and meets high quality standards." NUREG-1555, "Standard Review Plans for Environmental Reviews for Nuclear Power Plants," at 8.4-1 (Oct. 1999).

LBP-08-17 DUKE ENERGY CAROLINAS, LLC (William States Lee III Nuclear Station, Units 1 and 2), Docket Nos. 52-018-COL, 52-019-COL (ASLBP No. 08-865-03-COL-BD01); COMBINED LICENSE; September 22, 2008; MEMORANDUM AND ORDER (Ruling on Petition for Intervention and Request for Hearing)

A The Licensing Board finds that Petitioner Blue Ridge Environmental Defense League has standing to intervene, but because it has not submitted an admissible contention, the Board denies Petitioner's hearing request. The Board, however, refers its ruling on Contention Two to the Commission, consistent with the licensing board's treatment of an identical contention in *Tennessee Valley Authority* (Bellefonte Nuclear Power Plant, Units 3 and 4), LBP-08-16, 68 NRC 361 (2008).

B In addition to the traditional requirements for standing, the Commission recognizes that a petitioner may have standing based upon its geographic proximity to a particular facility. *Florida Power & Light Co.* (St. Lucie Nuclear Power Plant, Units 1 and 2), CLI-89-21, 30 NRC 325, 329 (1989). In appropriate circumstances, a petitioner's proximity to the pertinent facility triggers a presumption that it "has standing to intervene without the need to specifically plead injury, causation, and redressability if the petitioner lives within, or otherwise has frequent contacts with, the zone of possible harm." *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), LBP-01-6, 53 NRC 138, 146, *aff'd on other grounds*, CLI-01-17, 54 NRC 3 (2001). In reactor license proceedings, that zone is generally deemed to constitute the areas within a 50-mile radius of the site. *Id.* at 149.

C An organization that wants to intervene in a representational capacity must (1) demonstrate that the licensing action will affect at least one of its members; (2) identify that member by name and address; and (3) show that it is authorized by that member to request a hearing on his or her behalf. *Vermont Yankee Nuclear Power Corp.* (Vermont Yankee Nuclear Power Station), CLI-00-20, 52 NRC 151, 163 (2000). Additionally, the member must qualify for standing in his or her own right, the interests that the organization seeks to protect must be germane to its own purpose, and neither petitioner's contentions nor the requested relief must require an individual member to participate in the proceeding. *Consumers Energy Co.* (Palisades Nuclear Plant), CLI-07-18, 65 NRC 399, 409 (2007).

D In determining whether a petitioner has established standing, the Commission has directed us to "construe the petition in favor of the petitioner." *Georgia Institute of Technology* (Georgia Tech Research Reactor, Atlanta, Georgia), CLI-95-12, 42 NRC 111, 115 (1995).

E Absent a waiver, "no rule or regulation of the Commission . . . is subject to attack . . . in any adjudicatory proceeding." 10 C.F.R. § 2.335(a).

F A waiver of a Commission regulation "can be granted only in unusual and compelling circumstances." *Public Service Co. of New Hampshire* (Seabrook Station, Units 1 and 2), ALAB-895, 28 NRC 7, 16, *aff'd*, CLI-88-10, 28 NRC 573, 597 (1988), *reconsideration denied*, CLI-89-3, 29 NRC 234 (1989) (internal

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

quotation marks omitted). “The sole ground for petition of waiver or exception is that special circumstances with respect to the subject matter of the particular proceeding are such that the application of the rule or regulation . . . would not serve the purposes for which the rule or regulation was adopted.” 10 C.F.R. § 2.335(b). The Commission requires that any request for such waiver or exception be accompanied by an affidavit that identifies “with particularity the special circumstances alleged to justify the waiver or exception requested.” *Id.*

G The NRC has made a generic determination that regulated electric utilities are financially qualified to operate nuclear power plants. By regulation, the Commission has exempted such utilities from NRC review of their financial qualifications to cover operational costs. *See* 10 C.F.R. § 50.33(f); Final Rule: “Elimination of Review of Financial Qualifications of Electric Utilities in Operating License Review and Hearings for Nuclear Power Plants,” 49 Fed. Reg. 35,747, 35,747-49 (Sept. 12, 1984). Therefore, a contention that suggests this information should be provided in the application submitted by a regulated electric utility represents an impermissible challenge to Commission regulations.

H The NRC regulations implementing the AEA do not require an applicant to address or demonstrate whether the issuance of a COL will improve the general welfare, increase the standard of living, or strengthen free competition in private enterprise. Nor is the NRC required to make such a finding prior to granting a COL. Therefore, contrary to 10 C.F.R. § 2.309(f)(1)(iii) and (iv), these matters are outside the scope of this proceeding and are not material to the findings that the NRC must make to support issuance of a license.

I By complying with the six contention requirements in 10 C.F.R. § 2.309(f)(1)(i)-(vi), a petitioner must demonstrate: (1) that a contention raises an issue that is appropriate for a licensing board hearing; and (2) that such a hearing would not likely be a waste of time and resources.

J Licensing boards admit contentions, not bases: “[I]t is the admissibility of the contention, not the basis, that must be determined.” *Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-04-28, 60 NRC 548, 557 (2004). Nor should boards try to rewrite a petitioner’s contention, transforming it into numerous additional contentions that the petitioner has not clearly set forth. “A contention’s proponent, not the licensing board, is responsible for formulating the contention.” *Statement of Policy on Conduct of Adjudicatory Proceedings*, CLI-98-12, 48 NRC 18, 22 (1998).

K Licensing boards can and should review materials that purportedly support a petition to intervene or request for hearing to determine whether, at least on their face, they actually support the facts alleged. *See Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), LBP-04-18, 60 NRC 253, 265 (2004).

L The Commission has instructed licensing boards not to initiate evidentiary hearings unless the petitioner has specified how an application is deficient. A contention is not admissible where “the Petitioner’s assertion that the application[ ] [is] deficient is simply based upon a failure to read or perform any meaningful analysis of the application[ ].” *Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), LBP-04-15, 60 NRC 81, 95 (2004).

M An NRC licensing proceeding is not “an occasion for far-reaching speculation about unimplemented and uncertain plans” of applicants or licensees. *Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-14, 55 NRC 278, 293 (2002).

N The proper purpose of a reply is to discuss alleged deficiencies in a petition, not to try to fix them. *See Nuclear Management Co., LLC* (Palisades Nuclear Plant), CLI-06-17, 63 NRC 727, 732 (2006).

O Referencing a reactor design for which a design certification application has been docketed but not yet granted is expressly authorized by the Commission’s regulations. *See* 10 C.F.R. § 52.55(c). An applicant that avails itself of this procedure does so “at its own risk.” *Id.* Should an applicant revise its application as a result of the NRC’s review process, a petitioner may submit contentions at that time. Moreover, a petitioner may raise concerns by filing comments on the proposed rule when it is issued. Similarly, if a petitioner had submitted an otherwise admissible contention challenging specific aspects of a design, the licensing board would refer that contention to the NRC Staff for consideration in the design certification rulemaking, and hold the contention in abeyance. *See* Conduct of New Reactor Licensing Proceedings; Final Policy Statement, 73 Fed. Reg. 20,963, 20,972 (Apr. 17, 2008).

P In its Waste Confidence Rule, the Commission has made a determination, on a generic basis, that spent fuel generated by “any reactor” can be safely managed and that sufficient repository capacity will be available. 10 C.F.R. § 51.23(a). When the Commission promulgated a revised Waste Confidence Rule in 1990, it expressly stated that its conclusions should apply to “the spent fuel discharged from any new

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

generation of reactor designs.” Review and Final Revision of Waste Confidence Decision, 55 Fed. Reg. 38,474, 38,504 (Sept. 18, 1990). The Commission reaffirmed its 1990 findings in a 1999 status report, in which it concluded that “no significant and unexpected events have occurred . . . that would cast doubt on the Commission’s Waste Confidence findings or warrant a detailed reevaluation at this time.” Status Report on the Review of the Waste Confidence Decision, 64 Fed. Reg. 68,005, 68,007 (Dec. 6, 1999). More recently, in 2007, the Commission amended the Waste Confidence Rule to clarify that the rule encompasses COL applications. See Final Rule: “Licenses, Certifications, and Approvals for Nuclear Power Plants,” 72 Fed. Reg. 49,352, 49,429 (Aug. 28, 2007) (“The NRC is revising §§ 51.23(b) and (c) to indicate that the provisions of these paragraphs also apply to combined licenses”).

LBP-08-18 FLORIDA POWER & LIGHT COMPANY (Turkey Point Nuclear Generating Plant, Units 3 and 4), Docket Nos. 50-250, 50-251 (ASLBP No. 08-869-03-OLA-BD01); OPERATING LICENSE AMENDMENT; October 14, 2008; MEMORANDUM AND ORDER (Denying Request for Hearing)

A In license amendment cases such as that in this proceeding, “a petitioner cannot base his or her standing simply upon a residence or visits near the plant, unless the proposed action quite ‘obvious[ly]’ entails an increased potential for offsite consequences.” *Commonwealth Edison Co.* (Zion Nuclear Power Station, Units 1 and 2), CLI-99-4, 49 NRC 185, 191 (1999).

B Pursuant to 10 C.F.R. § 50.58(b)(6), a “petition or other request for review of or hearing on the staff’s significant hazards consideration determination” will not be entertained by the Commission. 10 C.F.R. § 50.58(b)(6). For significant hazards consideration determinations, “[t]he staff’s determination is final, subject only to the Commission’s discretion, on its own initiative, to review the determination.” *Id.* See also *Long Island Lighting Co.* (Shoreham Nuclear Power Station, Unit 1), LBP-91-7, 33 NRC 179, 183 (1991).

C A reply cannot be used to substantively supplement or amend a contention. *Nuclear Management Co., LLC* (Palisades Nuclear Plant), CLI-06-17, 63 NRC 727, 732 (2006).

D The Commission and licensing boards have imposed sanctions against a party seeking to file a written request for hearing only when that party “has not followed established Commission procedures” despite prior agency warnings. *Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-06-4, 63 NRC 32, 38 (2006). See also *Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), CLI-07-28, 66 NRC 275, 275 (2007). A meritless petition warrants denial, not sanctions.

LBP-08-19 FPL ENERGY POINT BEACH, LLC (Point Beach Nuclear Plant, Unit 1), Docket No. 50-266-LA (ASLBP No. 08-870-01-LA-BD01); LICENSE AMENDMENT; October 14, 2008; MEMORANDUM AND ORDER (Denying Request for Hearing)

A SEC’s proffered contentions challenge the proposed license amendments as failing to meet the various parts of the 10 C.F.R. § 50.92(c) standard for significant hazards consideration determinations. Because 10 C.F.R. § 50.58(b)(6) provides that “[n]o petition or other request for review of or hearing on the staff’s significant hazards consideration determination will be entertained by the Commission,” the Petitioner’s contentions are not appropriate for review by the Licensing Board.

B The Commission and the licensing board have imposed sanctions against a party seeking to file a written request for hearing only when that party “has not followed established Commission procedures.” A meritless petition warrants denial, not sanctions.

LBP-08-20 FPL ENERGY SEABROOK, LLC (Seabrook Station, Unit 1), Docket No. 50-443-LA (ASLBP No. 08-872-02-LA-BD01); LICENSE AMENDMENT; October 14, 2008; MEMORANDUM AND ORDER (Denying Request for Hearing)

A [T]he contentions are not appropriate for review by this Licensing Board under 10 C.F.R. § 50.58(b)(6), which provides that “[n]o petition or other request for review of or hearing on the staff’s significant hazards consideration determination will be entertained by the Commission. The staff’s determination is final, subject only to the Commission’s discretion, on its own initiative, to review the determination.” SEC’s impermissible attempt to challenge the Staff’s significant hazards consideration determination in derogation of section 50.58(b)(6) provides an independent basis for rejecting the hearing request.

B The Commission and the licensing board have imposed sanctions against a party seeking to file a written request for hearing only when that party “has not followed established Commission procedures.” A meritless petition warrants denial, not sanctions.

**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- LBP-08-21    PROGRESS ENERGY CAROLINAS, INC. (Shearon Harris Nuclear Power Plant, Units 2 and 3), Docket Nos. 52-022-COL, 52-023-COL (ASLBP No. 08-868-04-COL-BD01); COMBINED LICENSE; October 30, 2008; MEMORANDUM AND ORDER (Ruling on Standing and Contention Admissibility)
- A            This 10 C.F.R. Part 52 proceeding concerns the application of Progress Energy Carolinas, Inc. (Progress Energy) for a combined operating license (COL) to construct and operate two new units employing the Westinghouse Electric Corporation AP1000 advanced pressurized water power reactor certified design on its existing Shearon Harris site, located in Wake County, North Carolina. Ruling on a petition filed by the North Carolina Waste Awareness and Reduction Network (NC WARN) seeking to intervene to contest the Progress COL application, the Licensing Board concludes that, having established the requisite standing and proffering one admissible contention, the Petitioner NC WARN is admitted as a party to the proceeding. Additionally, the South Carolina Office of Regulatory Staff (SC ORS) and the North Carolina Utilities Commission (NCUC) requests to participate in the proceeding as interested governmental entities pursuant to 10 C.F.R. § 2.315 are granted.
- B            In assessing a petition to determine whether the requirements for standing are met, which we must do even though there are no objections to Petitioner's standing in this case, the Commission has indicated that we are to "construe the petition in favor of the petitioner." *Georgia Institute of Technology* (Georgia Tech Research Reactor, Atlanta, Georgia), CLI-95-12, 42 NRC 111, 115 (1995).
- C            Section 2.315(c) of 10 C.F.R. directs that an interested governmental entity that has not been admitted as a party under section 2.309 be provided "a reasonable opportunity to participate in a hearing."
- D            Contention admissibility is governed by 10 C.F.R. § 2.309(f)(1), which specifies a set of strict requirements which must be satisfied for a contention to be admissible. *See* 10 C.F.R. § 2.309(f)(1)(i), (ii), (v), and (vi). The petitioner must also demonstrate that the issue raised in the contention is both "within the scope of the proceeding" and "material to the findings the NRC must make to support the action that is involved in the proceeding." *Id.* § 2.309(f)(1)(iii), (iv).
- E            In CLI-08-15, the Commission directed Petitioner and, indirectly, this Board that if Petitioner identified specific omissions in the COLA, those omissions should be addressed in a contention to this Board which, in turn, "should refer such a contention to the Staff for consideration in the design certification rulemaking, and hold that contention in abeyance, if it is otherwise admissible." Memorandum and Order, CLI-08-15, 68 NRC 1, 4 (citing to the Final Policy Statement on the Conduct of New Reactor Licensing Proceedings, 73 Fed. Reg. 20,972 (Apr. 17, 2008)).
- F            The mere reference to general materials on a website is insufficient to provide support for a contention. "Petitioners are expected 'to clearly identify the matters on which they intend to rely with reference to a specific point.'" *Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), LBP-04-15, 60 NRC 81, 89 & n.26 (2004). "[A] petitioner may not simply incorporate massive documents by reference as the basis for a statement of his contentions." *Public Service Co. of New Hampshire* (Seabrook Station, Units 1 and 2), CLI-89-3, 29 NRC 234, 240-41 (1989).
- G            The Commission has made clear its view that NEPA does not require the analysis of potential terrorist attacks on a proposed nuclear facility. In this case, which concerns a facility outside the jurisdiction of the Ninth Circuit, that view is binding upon this Board.
- H            NEPA does not require revisitation by the NRC of matters related to high-density spent fuel pool (SFP) coolant loss (or other SFP events). The NRC has determined that the "security and mitigation measures the NRC has imposed upon its licensees since September 11, 2001, and national anti-terrorist measures to prevent, for example, aircraft hijackings, coupled with the robust nature of SFP's, make the probability of a successful terrorist attack, though numerically indeterminable, very low," i.e., it is precisely the type of remote and speculative event that an agency need not address. *See* Denial of Petitions for Rulemaking, 73 Fed. Reg. 46,204, 46,207 (Aug. 8, 2008).
- I            Commission precedent establishes that NEPA requires an applicant to present a cost-benefit analysis (and therefore provide cost estimates) for nuclear power plants and facilities only where the applicant's alternatives analysis indicates that there is an environmentally preferable alternative. *See Consumers Power Co.* (Midland Plant, Units 1 and 2), ALAB-458, 7 NRC 155 (1978).
- J            NRC regulations do not require the Applicant to include cost data in the ER. *See* 10 C.F.R. § 51.45. Although the regulations encourage the Applicant to provide cost information in the ER, we find that this is not mandatory. The Commission did not intend, and our regulations do not require, that costs be considered in the ER. Therefore, the question of whether or not the cost estimates used in the ER are inaccurate does not rise to the level of a failure to comply with NRC regulations. Where Applicant did not

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

find any environmentally preferable alternative in its ER analysis, it was under no obligation to provide cost estimates or a comparison of costs, as NEPA only requires a cost-benefit analysis where there exists an environmentally preferable alternative.

- K The Commission contemplates that its Waste Confidence Decision covers new reactors; for example, in the revised Waste Confidence Rule of 1990, the Commission stated that the rule should apply to “the spent fuel discharged from any new generation of reactor designs.” *See* Review and Final Revision of Waste Confidence Decision, 55 Fed. Reg. 38,474, 38,504 (Sept. 18, 1990).
- L A contention that seeks to litigate a matter that is, or clearly is about to become, the subject of a rulemaking, is inadmissible. *See* 10 C.F.R. § 2.335.
- LBP-08-22 ENTERGY NUCLEAR GENERATION COMPANY and ENTERGY NUCLEAR OPERATIONS, INC. (Pilgrim Nuclear Power Station), Docket No. 50-293-LR (ASLBP No. 06-848-02-LR); LICENSE RENEWAL; October 30, 2008; INITIAL DECISION
- A This 10 C.F.R. Part 54 proceeding concerns the application of Entergy Nuclear Generation Company and Entergy Nuclear Operations, Inc. (Entergy) for renewal of the operating license for its Pilgrim Nuclear Power Station (the “Pilgrim plant”), located in Plymouth, Massachusetts. Ruling on the merits of Contention 1 as filed by Intervenor Pilgrim Watch concerning Entergy’s aging management program, or “AMP,” for certain underground pipes, the Licensing Board concludes that, based on the entire evidentiary record and the parties’ arguments in this proceeding, Pilgrim Watch’s Contention 1 is resolved in favor of Entergy, and that this proceeding is terminated.
- B In conducting Subpart L hearings under 10 C.F.R. Part 2, Board members pose a question to the parties’ witnesses in those areas that, in the Board’s judgment, require additional clarification and development. 10 C.F.R. § 2.1207(b)(6). Boards in part accomplish this through proposed written questions that the parties provide prior to, and during the course of, the hearing. 10 C.F.R. § 2.1207(a)(3); 10 C.F.R. § 2.1207(b)(6).
- C In developing 10 C.F.R. Part 54, the Commission focused the NRC license renewal safety review “upon those potential detrimental effects of aging that are not routinely addressed by ongoing regulatory oversight programs.” In so doing, the Commission expressed the view that these are the matters it considered “the most significant overall safety concern posed by extended reactor operation.” *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), CLI-01-17, 54 NRC 3, 7 (2001).
- D The regulatory authority relating to the renewal of nuclear power plant operating licenses is found in 10 C.F.R. Parts 51 and 54, the latter of which concerns the “Requirements for Renewal of Operating Licenses for Nuclear Power Plants,” and enumerates issues to be addressed in license renewal proceedings. Accordingly, the scope of license renewal proceedings is quite limited under Commission rules and case law.
- E Applicants must “demonstrate that all ‘important systems, structures, and components’ will continue to perform their intended function in the period of extended operation”; and “identify any additional actions, i.e., maintenance, replacement of parts, etc., that will need to be taken to manage adequately the detrimental effects of aging.” *Turkey Point*, CLI-01-17, 54 NRC at 8 (quoting 60 Fed. Reg. at 22,462). The Commission has recognized that these “[a]dverse aging effects generally are gradual and thus can be detected by programs that ensure sufficient inspections and testing.” *Id.* (citing 60 Fed. Reg. at 22,475). Accordingly, license renewal proceedings are limited to a “review of the plant structures and components that will require an aging management review for the period of extended operation and the plant’s systems, structures, and components that are subject to an evaluation of time-limited aging analyses.” *Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-01-20, 54 NRC 211, 212 (2001) (citing 10 C.F.R. §§ 54.21(a) & (c), 54.4; 60 Fed. Reg. 22,461).
- F The Commission may issue the renewed license, under the provisions of 10 C.F.R. § 54.29 if it finds that, with respect to the structures and components identified under section 54.21(a)(1), there is reasonable assurance of ongoing conformity to the current licensing basis or “CLB.” Those systems, structures, and components (SSCs) are delineated in 10 C.F.R. § 54.4 and include not only those SSCs that perform safety-related functions as defined in section 54.4(a)(1), but also those non-safety-related SSCs (defined in section 54.4(a)(2)) whose failure could prevent accomplishment of the section 54.4(a)(1) tasks and those SSCs relied on in safety analyses or plant evaluations to perform a function that demonstrates compliance with the Commission’s regulations for fire protection, environmental qualification, pressurized thermal shock, anticipated transients without scram, and station blackout, as defined in section 54.4(a)(3).

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- G Section 54.4(b) of 10 C.F.R. advises that even if a particular “system” falls within the scope of Part 54, not all structures and components comprising that system will necessarily be subject to Part 54 aging management requirements — only those that perform section 54.4(a) functions will be subject to the requirements in question. Therefore, the issue before the Board was whether the existing aging management plans, or “AMPs,” for the nuclear power plant provide appropriate assurance that the buried pipes and tanks will not develop leaks so great as to cause those pipes and tanks to be unable to perform their intended safety functions.
- H NRC regulations require that a license renewal application “[f]or those [systems, structures, and components (SSCs) within the scope], demonstrate that the effects of aging will be adequately managed so that the intended function(s) [i.e., the direct and indirect safety-related functions enumerated in 10 C.F.R. § 54.4] will be managed consistent with the current licensing basis for the period of extended operation.” 10 C.F.R. § 54.21(a)(3). Challenges to the current licensing basis itself are, however, not within the scope of a license renewal proceeding. *See, e.g.*, 10 C.F.R. § 54.30(b). Thus, the subject matter of a license renewal proceeding is of very narrow scope.
- I Matters relating to an applicant’s ongoing operational and maintenance programs are not within the scope of a license renewal proceeding. Accordingly, monitoring, and the installation of monitoring wells, is a matter for ongoing operation and maintenance, and not within the scope of matters properly considered in a license renewal.
- LBP-08-23 VIRGINIA ELECTRIC AND POWER COMPANY d/b/a DOMINION VIRGINIA POWER and OLD DOMINION ELECTRIC COOPERATIVE (North Anna Power Station, Unit 3), Docket No. 52-017-COL (ASLBP No. 08-863-01-COL); COMBINED LICENSE; November 7, 2008; ORDER (Denying the Motion of the Blue Ridge Environmental Defense League to Reconsider the Board’s Order of August 15, 2008)
- A Although licensing boards frequently hold oral arguments on contention admissibility, a board may instead elect to dispense with oral argument. *See* 10 C.F.R. § 2.331.
- B When a board decides to allow oral argument on contention admissibility, neither NRC regulations nor agency policy mandates that the arguments be conducted in person near the site. The argument may be held in a public place in the vicinity of the facility in question or in the ASLBP Hearing Room at NRC Headquarters in Rockville, Maryland. Another option is to hold a prehearing teleconference.
- C In ASLBP proceedings, collateral estoppel may bar a party from relitigating the admissibility of a contention when an earlier board refused to admit the same contention in an earlier proceeding involving the same facility. The party against which collateral estoppel is applied must have had a full and fair opportunity to litigate its position, but it need not necessarily have had discovery or an evidentiary hearing.
- LBP-08-24 CROW BUTTE RESOURCES, INC. (In Situ Leach Facility, Crawford, Nebraska), Docket No. 40-8943 (ASLBP No. 08-867-02-MLA-BD01); LICENSE RENEWAL; November 21, 2008; MEMORANDUM AND ORDER (Ruling on Hearing Requests)
- A A Board in one proceeding is not constrained to follow the rulings of another Board absent explicit affirmation by the Commission.
- B The Commission has held that proximity alone is not sufficient to establish standing for a petitioner’s proximity to a source materials activity. In cases involving ISL uranium mining and other source materials licensing, a petitioner must independently establish the requisite elements of standing, i.e., injury in fact, causation, and redressibility.
- C Standing can be accorded where a petitioner uses a substantial quantity of water personally or for livestock from a source that is reasonably contiguous to either the injection or processing sites, because such a showing demonstrates an “injury in fact.” Stated otherwise, to the extent contaminants can plausibly migrate to the aquifer from which a petitioner obtains his or her water, a petitioner would have a claim of a cognizable injury and could be accorded standing.
- D Petitioners are not required to demonstrate their asserted injury with “certainty,” nor to “provide extensive technical studies” in support of their standing argument. These determinations are reserved for adjudicating the ultimate merits of a contention.
- E The Board is bound by the holding in *United States v. Sioux Nation of Indians*, 448 U.S. 371 (1980) and is required to reject treaty-based claims of ownership. As a consequence, any claims to ownership of the land upon which a mining site sits cannot support standing.
- F The preservation of cultural traditions is a protected interest under federal law. If this interest is endangered or harmed, it qualifies as an injury for the purposes of establishing standing.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- G To establish an injury in fact, a party merely has to show some threatened concrete interest personal to the party that the National Historic Preservation Act was designed to protect. Without consultation with a Tribe, culturally significant resources will go unidentified and unprotected. As a result, development or use of the land might cause damage to these cultural resources, thereby injuring the protected interests of the Tribe.
- H Federal law not only recognizes that Native American tribes have a protected interest in cultural resources found on their aboriginal land, but as well has imposed on federal agencies a consultation requirement under the National Historic Preservation Act to ensure the protection of tribal interests in cultural resources. A Tribe's threatened injury is therefore within the zone of interests protected by the National Historic Preservation Act, and is beyond cavil that the failure of consultation provides a definite and concrete threat of injury to the interests of a Tribe.
- I The NRC has the authority to regulate the release of nonradiological contaminants, and therefore, a challenge to the analysis (or lack thereof) of nonradiological contaminants in the License Renewal Application is within the scope of the proceeding. 42 U.S.C. § 2114(a)(1) (2008).
- J The commitment of one party to fulfill its statutory duties in the application process is not enough to demonstrate that the issue would be properly addressed. Such assurances are no substitute for enabling a Tribe to prosecute its contention. The Board must afford a Tribe a way to ensure its interests are protected; if all claims were denied because an adverse party promises to fulfill its duties, the hearing process would be subverted.
- K In determining ripeness, the Board assesses both the fitness of the issue for judicial decision and the hardship to the parties of withholding court consideration.
- L The regulations that implement the National Historic Preservation Act require federal agencies themselves to consult with a tribe if that tribe ascribes cultural or religious significance to properties not on tribal lands. The regulations clearly require that each federal agency consult with the Indian tribe(s) whose interests are at stake as a result of agency action — such as the issuance, renewal, or amendment of a license — that may affect a tribe's cultural resources. 36 C.F.R. § 800 *et seq.*; 16 U.S.C. § 470(f).
- M The Applicant is not qualified to make representations regarding cultural resources found on the mining site. Because Tribal Historical Preservation Officers were not consulted by the NRC, the Petitioner raised a legitimate challenge to the Applicant's finding in the License Renewal Application that no significant impact to cultural resources will occur as a result of mining activities.
- N A license renewal proceeding is an appropriate occasion for appraising the entire past performance of the licensee. Such appraisals are relevant in a license renewal proceeding because NRC must assure the public that the facility's current management encourages a safety-conscious attitude and must provide reasonable assurance that the facility can be safely operated.
- O Unlike federal court practice, the Commission does not accept mere notice pleading in support of an admissible contention.
- P The Commission has made clear that a Board is not to permit incorporation by reference where the effect would be to circumvent NRC-prescribed specificity requirements.
- Q Part 40 of 10 C.F.R. does not require ISL uranium mining facilities to maintain backup power. If such a facility were to experience a power failure, uranium recovery operations would simply cease.
- R The contention admissibility requirements are strict by design to ensure that hearings cover only genuine and pertinent issues of concern and that the issues are framed and supported concisely enough at the outset to ensure that the proceedings are effective and focused on real, concrete issues.
- S The trust responsibility imposes a fiduciary duty on NRC, as a federal agency, to the Tribe and its members.
- T An individual member of a Native American tribe may assert his or her rights on behalf of the tribe.
- U Applicant's failure to disclose ownership by a foreign corporation in its License Renewal Application constitutes a contention of omission. 10 C.F.R. § 40.9.
- V Concerns related to an Applicant's foreign ownership are potentially material to the safety and environmental requirements of 10 C.F.R. Part 40. Moreover, a license renewal proceeding is an appropriate time to review the adequacy of a licensee's corporate organization and the integrity of its management.
- W Because the regulations clearly require the NRC Staff to take into consideration whether or not renewing an Applicant's license would be inimical to the common defense and security or the public health and safety, this issue is material. In fact, the Commission has held that the phrase "inimical to the common

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

defense and security” refers to, among other things, the absence of foreign control over the applicant. 10 C.F.R. § 40.32(d).

X The lease and proposed issues related to Nebraska laws on alien ownership of property are outside the scope of these proceedings and outside the jurisdiction of the NRC.

Y Absent explicit Commission authority, there appears to be no provision in 10 C.F.R. § 2.700 for source materials licensing cases to be contested under Subpart G. If section 2.310(d) allows the Board to choose a Subpart G hearing process, the Board would only be permitted to do so if issues of motive or intent of the party or eyewitness material to the resolution of the contested matter are in dispute.

LBP-08-25 ENTERGY NUCLEAR VERMONT YANKEE, LLC, and ENTERGY NUCLEAR OPERATIONS, INC. (Vermont Yankee Nuclear Power Station), Docket No. 50-271-LR (ASLBP No. 06-849-03-LR); LICENSE RENEWAL; November 24, 2008; PARTIAL INITIAL DECISION (Ruling on Contentions 2A, 2B, 3, and 4)

A In this Partial Initial Decision concerning an application submitted by Entergy Nuclear Vermont Yankee, LLC, and Entergy Nuclear Operations, Inc. (collectively, Entergy) to renew the operating license for the Vermont Yankee Nuclear Power Station (VYNPS) in Windham County, Vermont, the Board concluded that Entergy’s metal fatigue analyses of the core spray and reactor recirculation outlet nozzles did not comply with the time-limited aging analysis (TLAA) requirements of 10 C.F.R. § 54.21(c)(1) and did not provide the reasonable assurance of safety required by 10 C.F.R. § 54.29. Accordingly, the Board ruled that the license renewal is not authorized and cannot be granted unless and until 45 days after Entergy satisfactorily completes these TLAA metal fatigue calculations *and* serves them on the NRC Staff and the other parties herein. Until that time, the proceeding on Contentions 2A and 2B will remain open and Contention 2 will be held in abeyance. In addition, the Board concluded that the subjects of the other two remaining contentions, the aging management programs (AMPs) for the VYNPS steam dryer and for flow accelerated corrosion (FAC), comply with the relevant requirements and provide the reasonable assurance of safety required by the regulations. However, to clarify ambiguity in the License Renewal Application (LRA), the Board’s decision with respect to Contention 3 is that the license should include a condition requiring Entergy to continue to monitor and inspect the steam dryer during the period of extended operation (PEO) at the intervals specified in GE-SIL-644 Revision 2.

B An application to renew the operating license of a commercial nuclear power plant may be granted only if the Commission finds that the continued operation of the facility “will be in accord with the common defense and security and will provide adequate protection to the health and safety of the public” as specified in 42 U.S.C. § 2232(a).

C When the license renewal regulations were issued, the Commission acknowledged, at 56 Fed. Reg. 64,943, 64,946 (Dec. 13, 1991), that the NRC’s “ongoing processes” for regulating a nuclear power plant during its initial 40-year operating life “have not . . . addressed safety questions which, by their nature, become important principally during the period of extended operation beyond the initial 40-year license term.” Thus, the Commission concluded that analysis and management of “age-related degradation . . . must be elevated [*sic*] before a renewed license is issued. . . [and] will be critical to safety during the term of the renewed license.”

D License renewal is not limited to age-related degradation, however, because “there may be other safety issues that may arise in connection with renewal that . . . are not relevant to safety during the initial operating license term . . . but, because of their plant-specific nature, must be addressed in renewals case by case.” 56 Fed. Reg. at 64,946.

E The licensing basis for a nuclear power plant during the renewal term consists of the current licensing basis (CLB) together with new commitments to monitor, manage, and correct age-related degradation unique to license renewal. 56 Fed. Reg. at 64,946.

F The term “current licensing basis” or CLB, as defined in 10 C.F.R. § 54.3, is a “term of art comprehending the various Commission requirements applicable to a specific plant that are in effect at the time of the license renewal application.” *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plants, Units 3 and 4), CLI-01-17, 54 NRC 3, 9 (2001). The CLB “represents an ‘evolving set of requirements and commitments for a specific plant that are modified as necessary over the life of a plant to ensure continuation of an adequate level of safety.’” 60 Fed. Reg. 22,461, 22473 (May 8, 1995).

G The NRC Staff’s review of the “safety” related aspects of each license renewal application focuses on two main issues — the adequacy of the applicant’s aging management programs (AMPs) and an evaluation of the applicant’s time-limited aging analyses (TLAAs). The scope of each license renewal proceeding

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- “encompasses a review of the plant structures and components that will require an aging management review for the period of extended operation and the plant’s systems, structures, and components that are subject to an evaluation of time-limited aging analyses.” See *Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-01-20, 54 NRC 211, 212 (2001).
- H Adequate aging management programs (AMPs) are both a required element of the license renewal application (LRA) and a central finding that NRC must make before it can issue a license renewal. Under 10 C.F.R. § 54.21(a)(3), “[e]ach application must . . . demonstrate that the effects of aging will be adequately managed so that the intended function(s) will be maintained consistent with the CLB for the period of extended operation.”
- I Adequate time-limited aging analyses are a required component of the license renewal application and a necessary prerequisite to license renewal. Under 10 C.F.R. § 54.21(c)(1), each application must “demonstrate” that: the time-limited aging analyses (TLAAs) (i) “remain valid for the period of extended operation”; (ii) have been projected to the end of the period of extended operation”; or that (iii) the “effects of aging on the intended function(s) will be adequately managed for the period of extended operation.”
- J Both aging management programs (AMPs) and time-limited aging analyses (TLAAs) are subject to the requirement of 10 C.F.R. § 54.29 that the Commission may not grant a license renewal unless it finds that “[a]ctions . . . have been or will be taken with respect to [the AMP or TLAA] such that there is reasonable assurance that the activities authorized by the renewed license will continue to be conducted in accordance with the [current licensing basis (CLB)] and that any changes made to the plant’s CLB in order to comply with this paragraph are in accord with the Act and the Commission’s regulations.”
- K The phrase “reasonable assurance” specified in 10 C.F.R. § 54.29 is not defined, but requires, at a minimum, that an applicant demonstrate compliance with all of NRC’s safety regulations. “[T]he *sine qua non* of adequate protection to public health and safety is compliance with all applicable safety rules and regulations.” *Maine Yankee Atomic Power Co.* (Maine Yankee Atomic Power Station), ALAB-161, 6 AEC 1003, 1009 (1973).
- L Under 10 C.F.R. § 2.325, the applicant has the burden of proving that it has met the reasonable assurance standard of 10 C.F.R. § 54.29.
- M A finding of “reasonable assurance that there will be adequate protection to the health and safety of the public” is based on judgment, not on the application of a mechanical verbal formula, a set of objective standards, or specific confidence interval.
- N While compliance with NRC regulations is legally mandatory, compliance with NRC guidance documents is neither necessary nor necessarily sufficient to satisfy the legal requirements that each application must meet under the Atomic Energy Act (AEA) and Part 54. Compliance or noncompliance with such guidance, even if proven, is simply evidence and does not relieve the Board of the duty to determine whether an applicant has satisfied the relevant legal and regulatory requirements.
- O The current licensing basis (CLB) for the plant during the license renewal term incorporates the CLB for the current license, including all licensee commitments, plus any “new commitments to monitor, manage, and correct age-related degradation unique to license renewal.” 56 Fed. Reg. at 64,946.
- P Under 10 C.F.R. § 54.21(c), each license renewal application must contain three things: (1) an evaluation of time-limited aging analyses (TLAAs), (2) a list of TLAAs, and (3) a demonstration relating to TLAAs. But, since one cannot evaluate a TLAA unless it exists, the regulation seems to imply a fourth requirement, i.e., that the application include the TLAA.
- Q Section 54.21(c)(1)(i) requires that the application demonstrate that the time-limited aging analyses (TLAAs) “remain valid” for the period of extended operation (PEO). There is no definition of what this means. Technical accuracy of the TLAA is necessary, but not sufficient, because it is clear that a technically accurate TLAA that shows that the component *will fail* during the period of extended operation does not satisfy 10 C.F.R. § 54.21(c)(1)(i).
- R Section 54.21(c)(1)(ii) requires that the application demonstrate that the time-limited aging analysis (TLAA) has “been projected to the end of the period of extended operation,” but a technically accurate projection of the TLAA that predicts that the component *will fail* due to aging during the 20-year PEO will not suffice.
- S The “demonstrations” mandated by 10 C.F.R. § 54.21(c)(1)(i) and (ii) require that the time-limited aging analyses both (1) be performed in a technically accurate manner, *and* (2) produce a prediction that the component will *not fail* due to aging during the period of extended operation.

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- T Section 54.21(c)(1)(iii) allows the applicant to pursue a license renewal even if the time-limited aging analyses (TLAAs) predict that the component will fail during the period of extended operation (PEO). In such a situation, a license renewal can still be granted if the applicant demonstrates that the effects of aging will be adequately managed during the PEO, i.e., the applicant demonstrates that it has an AMP and that it is adequate. Under this regulation, the applicant can use an AMP either when (1) the TLAAs predict that the component in question will fail due to aging during the PEO or (2) the applicant foregoes the TLAAs and assumes that aging is a problem.
- U Section 54.21(c)(1)(i)-(iii) requires that the applicant make its demonstration in the application, which is necessarily *before* the license may be granted. The applicant has a choice: either perform an analysis-of-record that demonstrates that aging is not a problem, or accept that aging is a problem and demonstrate that it will be adequately managed, i.e., time-limited aging analysis (TLAA) or aging management program (AMP). The demonstration is a *condition precedent* to issuance of a license renewal. Section 54.21(c)(1) does not allow the applicant to postpone the demonstration and say: renew our license now, and we will do our predictive TLAA (analysis-of-record) later to determine whether an AMP is needed.
- V The feedwater, reactor recirculation, and core spray outlet nozzles on a boiling water reactor such as VYNPS are “components which are part of the reactor coolant pressure boundary that must meet the requirements of Class I components in Section III of the ASME Boiler and Pressure Vessel Code” under 10 C.F.R. § 50.55a.
- W As Class I components, the feedwater, reactor recirculation, and core spray outlet nozzles on a boiling water reactor such as VYNPS must be designed, fabricated, erected, and tested to the “highest quality standards practical” as specified in Part 50, Appendix A, General Design Criterion 30.
- X Even if we assume that the applicant’s metal fatigue analysis complies with NUREG/CR-5704 and NUREG/CR-6583, it is not dispositive of the Board’s determination as to whether the application complies with the regulations. If the Board found that the use of a more accurate approach was needed in order to provide reasonable assurance that metal fatigue will be adequately managed during the PEO, then the Board would be authorized, and duty bound, to impose such a requirement.
- Y The Board finds that the NRC Staff’s guidance document NUREG/CR-6909, which prescribes guidance on the calculation of metal fatigue on reactor components in a light water reactor environment, is built upon a larger and more recent database than NUREG/CR-5704 and -6583.
- Z Although NUREG/CR-6909, which prescribes guidance on the calculation of metal fatigue on reactor components in a light water reactor environment, is built upon a larger and more recent database than NUREG/CR-5704 and -6583, the Board finds that Entergy’s use of the latter NUREGs was sufficient to provide the reasonable assurance required by 10 C.F.R. § 54.29. In this instance, although NUREG/CR-6909 is more accurate in certain respects, the use of NUREG/CR-5704 and -6583 produced more conservative results.
- AA Entergy’s environmentally adjusted cumulative usage factor (CUFen) analyses for metal fatigue used a conservative number of transients in the calculations. Rather than using a simple linear projection as to the number of transients expected during the period of extended operation, Entergy’s projections are based on design basis events, actual experience at the VYNPS, industry experience, and increased severity levels that might be associated with the recent extended power uprate. Thus, with regard to the number of transients, Entergy’s time-limited aging analysis calculations are adequate to provide the degree of assurance required by 10 C.F.R. § 54.29(a).
- BB Entergy’s environmentally adjusted cumulative usage factor metal fatigue analyses for the core spray and reactor recirculation outlet nozzles used a simplified Green’s function methodology, and are thus inconsistent with the ASME Code, could underestimate the nature and extent of metal fatigue, cannot serve as the analysis-of-record, and do not satisfy the requirements of 10 C.F.R. §§ 54.21(c)(1) or 54.29(a).
- CC The performance of corrected environmentally adjusted cumulative usage factor metal fatigue analyses for the core spray and reactor recirculation outlet nozzles without use of a simplified Green’s function methodology, involves a considerable amount of technical and scientific judgment and is not a minor or ministerial task.
- DD If an applicant’s metal fatigue analyses on Class I components do not comply with the ASME Code and do not provide reasonable assurance as required by 10 C.F.R. §§ 54.21(c)(1) and 54.29(a), then a license renewal cannot be issued before the necessary “analysis-of-record” TLAA is performed and these

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- analyses cannot be postponed until after the license is issued. They are a condition precedent, not a condition subsequent, to license issuance.
- EE Allowing an applicant to postpone the performance of an “analysis-of-record” time-limited aging analysis (TLAA) until after the license renewal is issued, is inconsistent with the language, structure, and intent of the Part 54 regulations and inconsistent with NRC precedent.
- FF Allowing an applicant to postpone the performance of an “analysis-of-record” time-limited aging analysis (TLAA) until after the license renewal is issued would violate the intervenor’s right under section 189(a) of the Atomic Energy Act to have a hearing on an issue material to the licensing decision and would impermissibly remove a significant safety issue from the opportunity to be reviewed in the adjudicatory hearing process.
- GG An accurate calculation as to whether components such as the core spray and reactor recirculation outlet nozzles are likely to fail due to metal fatigue during the period of extended operation is a critical part of the license renewal proceeding. Given the fact that the cumulative usage factor (CUF) used in the ASME Code fails to account for the substantial effects of the actual environment in a light water reactor (e.g., water, high temperature, high pressure, transients, nonsmooth metal surfaces) and the fact that these effects can cause a substantial acceleration of metal fatigue, the Board concludes that CUF *must* be adjusted to account for such environmental factors (e.g., “Fen” factors). An LRA analysis of metal fatigue that ignored the known and substantial effects of the LWR environment (the Fen) would be insufficient, both as a technical matter and as a legal matter under 10 C.F.R. § 54.21(c)(1)(i), (ii) or § 54.29(a).
- HH Compliance cannot be achieved by repackaging and postponing a time-limited aging analysis (TLAA) analysis-of-record and calling it an aging management program (AMP). First, such an interpretation would collapse 10 C.F.R. § 54.21(c)(1)(ii) into subsection (iii), subsuming the former into the latter. An applicant cannot demonstrate compliance *now* by *promising* to demonstrate compliance *later*. Any other interpretation would render 10 C.F.R. § 54.21(c)(1)(ii) superfluous, thus violating a cardinal rule of statutory and regulatory interpretation.
- II The structure and intent of 10 C.F.R. § 54.21(c)(1) require that the demonstration be in the application, i.e., *prior* to the issuance of the license renewal. An applicant must *either* demonstrate that aging will not be a problem (by submitting a TLAA) *or* demonstrate that aging will be properly managed (by submitting an AMP). One or the other must be *demonstrated* before the license can be granted. Promising to demonstrate, after the application is issued, that aging will not be a problem, does not suffice.
- JJ There is a distinction between *predictive* time-limited aging analyses (TLAAs) that are performed as the “analysis-of-record,” and TLAAs that may be done after the license is issued in order to monitor or track compliance and safety (*tracking* TLAAs). Nothing prevents a licensee from doing tracking TLAAs after the license renewal is granted. If, however, a TLAA is to serve as the “analysis-of-record” that (1) predicts that aging will NOT be a problem during the period of extended operation (PEO) and (2) establishes that an aging management program (AMP) is not required, *then* it is a condition precedent to the grant of the license. The predictive analysis-of-record that serves to excuse the licensee from the need to have any further AMP cannot be postponed until after the license is issued.
- KK The demonstration required by 10 C.F.R. § 54.21(c)(1)(i)-(iii) and the reasonable assurance criterion of 10 C.F.R. § 54.29(a), are conditions precedent to the issuance of a license renewal. The performance of satisfactory confirmatory CUFens on the core spray and reactor recirculation outlet nozzles are not merely ministerial and cannot be consigned to some post-hearing interaction between the NRC Staff and an applicant where there is no opportunity for the public to challenge the sufficiency of the methods and judgments that went into the calculation and/or to request a hearing.
- LL Although the steam dryer is not a safety-related system, the cracking of a dryer could cause a release of loose parts that could have an adverse impact on safety-related equipment by becoming lodged in places that might impede the function of other reactor components that do perform safety-related functions. Thus, the steam dryer is a “nonsafety-related system[ ], structure[ ], and component[ ] whose failure could prevent” safety-related systems, structures, and components from performing their safety-related functions, as specified in 10 C.F.R. § 54.4(a)(2) and it is within the scope of aging management review in a license renewal proceeding.
- MM Pursuant to 10 C.F.R. § 54.21(a)(3), (c)(1)(iii), an applicant must demonstrate that its AMP for the steam dryer is adequate to manage the effects of aging so that the functionality of the safety-related systems, structures, and components will be maintained during the period of extended operation (PEO). In addition, pursuant to 10 C.F.R. § 54.29(a), a Licensing Board must find there is “reasonable assurance

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- that the activities authorized by the renewed license will continue to be conducted in accordance with the [current licensing basis (CLB)].” Accordingly, an applicant is required to establish that it has an aging management program (AMP) for the steam dryer that provides “reasonable assurance” that it will not fail in such a way as to prevent the functioning of the safety-related systems, structures, and components during the PEO.
- NN Sections 54.21(a)(3) and 54.21(c)(1)(iii) require an AMP for the steam dryer to “demonstrate that the effects of aging will be adequately managed so that the intended function(s) will be maintained consistent with the [current licensing basis (CLB)] during the period of extended operation.” Meanwhile, section 54.29(a) does not permit the NRC to issue a renewed license until the applicant provides reasonable assurance that failure of the steam dryer will not interfere with the continued operation of safety-related components and that the activities that the renewed license authorizes will continue to be conducted in accordance with the CLB. It is the burden of the applicant to show that the aging management program for the steam dryer meets these criteria, and it must do so by a preponderance of the evidence.
- OO Entergy’s steam dryer aging management program (AMP) has two branches, the first calling for the continuation of Entergy’s existing program, and the second specifying that a new AMP, the “BWRVIP-139,” will apply if and when various contingencies occur, including (a) [Electric Power Research Institute (EPRI)] is finished revising it, (b) the NRC Staff approves it, and (c) Entergy decides to accept it or to take “exceptions” to it. BWRVIP-139 is an EPRI proprietary document that is not available to the public, has not been provided to the intervenors, and is not in evidence. Based solely on the first branch of Entergy’s steam dryer AMP, the Board concludes that it is adequate. Our decision is not based on this second branch, the content of which is unknown. In the event that, in the future, Entergy attempts to switch its steam dryer AMP to the BWRVIP-139 option, nothing precludes a challenge to the second branch at that time.
- PP Our conclusion that Entergy’s steam dryer aging management program satisfies the regulatory requirements is subject to the requirement that the license include a condition requiring Entergy to continue to perform and implement continuous parameter monitoring, moisture content monitoring, and visual inspections at the intervals specified in GE-SIL-644 Revision 2 for the full term of the period of extended operations, unless the license is duly amended.
- QQ Sections 54.21(a)(3), 54.21(c)(1)(iii), and 54.29(a) provide the applicable legal standards for the approval of an aging management program (AMP) for plant piping due to flow accelerated corrosion (FAC). Pursuant to 10 C.F.R. § 54.21(a)(3), (c)(1)(iii), the applicant must establish an AMP that is adequate to provide reasonable assurance that the intended function of the piping subject to FAC will be maintained in accordance with the current licensing basis for the period of extended operation.
- RR An aging management program which consists solely of the bald statements that it is (1) “comparable to the program described in NUREG-1801,” (2) “consistent with the program described in NUREG-1801,” and (3) “based on [Electric Power Research Institute (EPRI)] Report NSAC-202L-R2 recommendations,” does not satisfy the requirement that an applicant “demonstrate” that it will adequately manage aging, as required by 10 C.F.R. § 54.21(a)(3) and (c)(1)(iii). NUREG-1801 and the EPRI Report are not themselves aging management programs, and the terms “comparable,” “consistent,” and “based on” leave huge ambiguity and discretion to the applicant. A declaration of compliance is not a demonstration of compliance.
- SS As required by 10 C.F.R. § 2.337(f), and in accordance with Rule 201(e) of the Federal Rules of Evidence, where a Board’s decision rests in part on facts officially noticed, any party wishing to controvert the facts officially noticed may do so by filing a motion for reconsideration or an appeal from this Partial Initial Decision.
- TT While some special weight should be given to some NRC guidance documents, the same does not apply to industry guidance documents. Further, any suggestion that NRC guidance is on par with NRC regulations (which are legally binding) is incorrect.
- UU The term “demonstrate” as used in 10 C.F.R. § 54.21 is a strong, definitive verb that logically requires an applicant to provide a reasonably thorough description of its aging management program and to show conclusively how this program will ensure that the effects of aging will be managed for its specific plant. For an applicant to just illustrate how its proposed program will, or promises to, follow the same generic recommendations provided to all plants does not clear the bar required by the regulations. To claim otherwise would imply that the AMP has already been generically developed for all plants and would render 10 C.F.R. § 54.21 unnecessary.

**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- LBP-08-26 NORTHERN STATES POWER COMPANY (formerly NUCLEAR MANAGEMENT COMPANY, LLC) (Prairie Island Nuclear Generating Plant, Units 1 and 2), Docket Nos. 50-282-LR, 50-306-LR (ASLBP No. 08-871-01-LR); LICENSE RENEWAL; December 5, 2008; MEMORANDUM AND ORDER (Ruling on Petition to Intervene, Request for Hearing, and Motion to Strike)
- A General Counsel for an Indian Tribe is not required to submit a declaration stating the basis of his or her authority to represent the Tribe. As long as Counsel is an attorney in good standing and a member of the bar, a Notice of Appearance is sufficient in itself for him or her to represent the Tribe in a proceeding. *See* 10 C.F.R. § 2.314(b).
- B A reply is not an opportunity for a petitioner to bolster its original contentions with new supporting facts and arguments. Rather, it is a chance to amplify issues presented in the initial petition as well as the applicant's and NRC Staff's answers. *See Louisiana Energy Services, L.P.* (National Enrichment Facility), CLI-04-25, 60 NRC 223, 224-25, *reconsideration denied*, CLI-04-35, 60 NRC 619 (2004).
- C Under Commission regulations, a license renewal applicant must "assess whether any historic or archaeological properties will be affected by the proposed project." 10 C.F.R. § 51.53(c)(3)(ii)(K). The regulations also shed light on the required extent of this assessment: "The environmental report should contain sufficient data to aid the Commission in its development of an independent analysis." 10 C.F.R. § 51.45(c).
- D A license renewal applicant has no obligation to discuss in its ER the impacts of a potential expansion of the Independent Spent Fuel Storage Installation (ISFSI). Expansion of the ISFSI is a separate project, subject to a separate proceeding governed by the regulations in 10 C.F.R. Part 72.
- E Offsite radiological impacts are a Category 1 issue, and the Commission has determined such impacts to be "small" for all nuclear power plants seeking a renewed license. *See* 10 C.F.R. Part 51, App. B, Table B-1. If a petitioner wishes to challenge this generic determination in a license renewal proceeding, it must seek and receive a waiver under 10 C.F.R. § 2.335(b).
- F While true that, under NEPA, the Commission is ultimately responsible for analyzing environmental justice issues, nonetheless, 10 C.F.R. § 51.45(c) requires license renewal applicants to assist the Commission with that evaluation.
- G NRC regulations require a petitioner to raise contentions related to NEPA as challenges to the applicant's environmental report, which acts as a surrogate for the EIS during the early stages of a relicensing proceeding.
- H If a component falls within the scope of 10 C.F.R. § 54.4 and meets the requirements of 10 C.F.R. § 54.21 such that aging of the component is a relicensing issue, an applicant may address this issue in one of two ways. An analysis may be performed showing that the aging mechanism will not cause failure of the component. If the analysis fails, then the application must include a specific aging program to manage the effects of aging on that component. If, however, the analysis succeeds, then no aging management program is required.
- I The ten elements of an effective aging management program (AMP) must be addressed only when an applicant's AMP differs from the relevant AMP identified in the GALL Report. *See AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-08-23, 68 NRC 461, 468 (2008).
- J Where the application provides a commitment that, should inspection requirements be changed, the applicant will implement those new inspection requirements, it is the responsibility of NRC Staff and the applicant to ensure that this commitment is fulfilled. The Board lacks the authority — much less the ability — to require an applicant clairvoyantly to predict the future inspection requirements and to describe their future implementation in the application.
- K Although an applicant's use of an AMP identified in the GALL Report constitutes reasonable assurance that it will manage the targeted aging effect during the renewal period, the application still must contain sufficient information to independently confirm consistency with the GALL Report.
- LBP-08-27 CROW BUTTE RESOURCES, INC. (In Situ Leach Facility, Crawford, Nebraska), Docket No. 40-8943 (ASLBP No. 08-867-02-MLA-BD01); LICENSE RENEWAL; December 10, 2008; ORDER (Ruling on Motion to Admit New Contention)
- A This 10 C.F.R. Part 40 proceeding concerns the application of Crow Butte Resources, Inc. (Crow Butte), for renewal of its Source Materials License No. SUA-1534 to allow continued operation of its in-situ leach (ISL) uranium mine in Crawford, Nebraska. The Licensing Board ruled that a newly filed contention regarding public health and safety concerns related to arsenic in Consolidated Petitioners' drinking water was both timely and admissible.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- B The basic rule governing contentions (10 C.F.R. § 2.309(f)) indicates that contentions “must be based on documents or other information available at the time the petition is to be filed . . .” 10 C.F.R. § 2.309(f)(2). To that end, new or amended contentions can be filed with leave of the Board if (i) the information upon which the amended or new contention is based was not previously available; (ii) the information upon which the amended or new contention is based is materially different from information previously available; and (iii) the amended or new contention has been submitted in a timely fashion based on the availability of the subsequent information. *See id.* § 2.309(f)(2)(i)-(iii).
- C Nontimely contentions may be accepted under section 2.309(c)(1) only upon a showing of “good cause” for failure to file in a timely manner and a weighing of a number of factors. 10 C.F.R. § 2.309(c)(1)(ii)-(viii). Previous boards have concluded that, when new contentions are based on “breaking developments of information, they are to be treated as ‘new or amended,’ not as ‘nontimely.’” *Shaw AREVA MOX Services (Mixed Oxide Fuel Fabrication Facility)*, LBP-07-14, 66 NRC 169, 210 n.95 (2007).
- D The contention need not meet the stricter requirements required of untimely contentions under section 2.309(c)(i)-(viii) because it is based on information heretofore unknown to Petitioners. Though the concern was referenced in Petitioners’ initial pleading, they filed their initial pleading 1 month before the scientific study in issue was available to the public. The information in the scientific study is therefore both new to Petitioners and is materially different from information previously available to them. Therefore, “[t]he amended or new contention has been submitted in a timely fashion based on the availability of the subsequent information.” 10 C.F.R. § 2.309(f)(2)(iii).
- LBP-09-1 CROW BUTTE RESOURCES, INC. (North Trend Expansion Project), Docket No. 40-8943 (ASLBP No. 07-859-03-MLA-BD01); MATERIALS LICENSE AMENDMENT; January 27, 2009; MEMORANDUM AND ORDER (Ruling on Foreign Ownership and Arsenic Contentions and Other Pending Matters)
- A In this materials license amendment proceeding the licensing board admits a contention relating to foreign ownership, finds that a separate showing of standing for each contention is not required, denies a motion for sanctions, allows litigation of newly submitted allegations regarding arsenic contamination and health effects under an already-admitted contention, permits participation of tribal treaty council, and recommends that the Commission order that the hearing be conducted under the provisions of 10 C.F.R. Part 2, Subpart G.
- B Petitioners are not required to show standing for each contention separately; once a party demonstrates that it has standing to intervene on its own accord, that party may then raise any contention that, if proved, will afford the party relief from the injury it relies upon for standing, and there is no requirement for any “nexus” between the injury and the contention. Case law to the effect that a plaintiff in federal court must demonstrate standing separately for each “form of relief sought” and for each separate “claim” does not translate into a requirement that a petitioner must show standing for each contention submitted in an NRC proceeding; contentions are comparable to neither “forms of relief” nor Article III “claims,” but are instead comparable to various “grounds” that may be asserted in opposition to a proposed agency action at issue, approving an application for a license, license amendment, or other authorization. In sum, a showing of standing need be made only once with regard to any one proposed agency action.
- C Contention alleging foreign ownership of applicant, failure to disclose, and various ramifications of such ownership, is found to be admissible. In addition to meeting the requirements of 10 C.F.R. § 2.309(f)(1)(i), (ii), and (v), the contention is “within the scope of the proceeding” and “material to the findings the NRC must make to support the action” at issue, and supported by “sufficient information to show that a genuine dispute exists with the applicant/licensee on a material issue of law or fact,” as required by 10 C.F.R. § 2.309(f)(1)(iii), (iv), and (vi). Section 40.32, which concerns the requirements for issuance of a materials license, includes as a requirement that “issuance of the license will not be inimical to the common defense and security or to the health and safety of the public”; the phrase “common defense and security” has been interpreted in NRC case law as referring to “the absence of foreign control over the applicant”; and Intervenor urge that Applicant’s foreign ownership is “key” to the determination whether the Applicant’s current and proposed operations are within “the best interests of the US general public.” Applicant acknowledges that its ultimate owner is a Canadian company, on the significance and consequences of which the parties are in dispute; under 10 C.F.R. § 40.2, relevant provisions of Part 40 “apply to all persons in the United States” and not to those outside the United States, even those in Canada, which brings into question whether the “applicant’s proposed . . . procedures are adequate to protect health

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

and minimize danger to life or property” under 10 C.F.R. § 40.32(c); and it would be inappropriate to deny the admission of Contention E based on arguments that issues raised are appropriate for consideration only later, in any export license proceedings.

D Given the Commission’s calls for licensing boards to sanction parties that violate NRC rules, which do not have the purpose of relieving intervenors of their adjudicatory expenses but would merely have an incidental effect as part of an overall effort to ensure the expeditious management of the licensing process, in appropriate situations licensing boards might be said to have the authority to impose monetary sanctions on any party to any other party without violating the prohibition of section 502 of the Energy and Water Development Appropriations Act of 1993, which provides that NRC appropriations shall not “be used to pay the expenses of, or otherwise compensate, parties intervening in regulatory or adjudicatory proceedings.” In this instance, however, the motion for monetary sanctions is denied, because the requisite showing of “willful, prejudicial, and bad-faith behavior” is not shown.

E A new contention based on a new study that supports the hypothesis that low levels of exposure to inorganic arsenic in drinking water may play a role in diabetes prevalence, connected with additional newly discovered information about a high incidence of pancreatic cancer in areas near the proposed new site, and already existing information about a link between diabetes and pancreatic cancer, and about allegations concerning arsenic in water returned to relevant aquifers during the course of the mining process, is subsumed within a previously admitted contention regarding alleged contamination of water and resulting harm to public health and safety, and may thus be litigated as part of that contention, and not as a new contention.

F The Black Hills/Oglala Delegation of the Sioux Nation Treaty Council is permitted to participate in this proceeding, subject to appropriate coordination and consolidation of the presentations of the council with those of the Oglala Sioux Tribe and the intervenors.

G Section 2.700 of 10 C.F.R. provides that Subpart G hearing procedures apply only to certain enumerated types of proceedings, not including proceedings such as this materials license case but including “any other proceeding as ordered by the Commission.” The licensing board therefore does not grant Intervenor’s request to conduct this proceeding under the provisions of Subpart G, but does recommend to the Commission that it order that the proceeding be conducted as a Subpart G proceeding, based on considerations including alleged failures to disclose certain information; the nature of the issues in this case, which are of a sort that would benefit from having live witnesses subject to cross-examination and available to question for clarification during oral testimony; ongoing disputes between the parties and allegations relating to motive, analogous to that at issue under 10 C.F.R. §§ 2.310(d) and 2.700; more effective sharing of information and management by the board under the discovery provisions of Subpart G; and the greater transparency associated with a Subpart G hearing, which is particularly appropriate given community and tribal interest in the proceeding.

LBP-09-2 SOUTH CAROLINA ELECTRIC & GAS COMPANY and SOUTH CAROLINA PUBLIC SERVICE AUTHORITY (also referred to as SANTEE COOPER) (Virgil C. Summer Nuclear Station, Units 2 and 3), Docket Nos. 52-027-COL, 52-028-COL (ASLBP No. 09-875-03-COL-BD01); COMBINED LICENSE; February 18, 2009; ORDER (Ruling on Standing and Contention Admissibility)

A Petitioner here impermissibly challenges NRC’s regulations, which explicitly provide that “[a]ll nuclear safety issues,” 10 C.F.R. Part 52, App. D, § VI.B.1, and “[a]ll environmental issues concerning severe accident mitigation design alternatives associated with . . . the NRC’s EA [(environmental assessment)] for the AP1000 design and Appendix 1B of the generic [Design Control Document (DCD)]” are considered resolved by the Commission. 10 C.F.R. Part 52, App. D, § VI.B.7.

B The revision process is contemplated by NRC regulations, *see, e.g.*, 10 C.F.R. § 52.55(c); *Progress Energy Carolinas, Inc.* (Shearon Harris Nuclear Power Plant, Units 2 and 3), CLI-08-15, 68 NRC 1, 3-4 (2008), and is currently being carried out through the design certification rulemaking. The appropriate path for any petitioner’s challenges to proposed design revisions is through participation in those rulemaking proceedings, not through a combined license (COL) proceeding. *See* Conduct of New Reactor Licensing Proceedings; Final Policy Statement, 73 Fed. Reg. 20,963 (Apr. 17, 2008); *Shearon Harris*, CLI-08-15, 68 NRC at 4.

C Along the way, and certainly once a final design is certified, each Combined License Application (COLA) applicant will have to determine whether it will adopt *in toto* the certified design, or whether it will take exemptions thereto and/or departures therefrom. *See, e.g.*, 10 C.F.R. § 52.63(b)(1), (2); 10 C.F.R. Part 52, App. D, §§ IV, VIII. An applicant will also have to demonstrate that the site-specific parameters

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- are bounded by the parameters developed for the certified design. *See, e.g.*, 10 C.F.R. Part 52, App. D, §§ I.I.C, V.I.B.7.
- D The process for taking exemptions and departures from the certified design is set forth in 10 C.F.R. Part 52, App. D, § VIII, and we note that there are provisions in both subsections A.4 and B.4 thereof that describe the process for hearings and litigation on any such departures and exemptions. *See* 10 C.F.R. §§ 52.63(b)(1), 52.98(f), 50.12(a). *See also* 73 Fed. Reg. 20,963; *Shearon Harris*, CLI-08-15, 68 NRC at 4.
- E At the appropriate point in the overall COLA/DCD process, an interested party will have the opportunity to petition for intervention to raise matters that are material to the decision the NRC must make regarding the licenseability of the proposed nuclear units.
- F A contention that attacks a Commission rule, or which seeks to litigate a matter that is, or clearly is about to become, the subject of a rulemaking, is inadmissible. *See Potomac Electric Power Co.* (Douglas Point Nuclear Generating Station, Units 1 and 2), ALAB-218, 8 AEC 79, 85, 89 (1974); *see also Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 2), CLI-03-14, 58 NRC 207, 218 (2003).
- G An applicant for a COL is expressly authorized by NRC's regulations to incorporate by reference a certified design. *See, e.g.*, 10 C.F.R. §§ 52.55(c), 52.73(a), 52.79(d)(1).
- H Challenges to the certified design (or the certification thereof) are outside the scope of this adjudicatory proceeding and should be resolved in the design certification rulemaking. *Shearon Harris*, CLI-08-15, 68 NRC at 4.
- I The National Environmental Policy Act (NEPA) is not an appropriate vehicle for exploring questions about the potential for a terrorist attack upon a proposed nuclear facility. *See, e.g., System Energy Resources, Inc.* (Early Site Permit for Grand Gulf ESP Site), CLI-07-10, 65 NRC 144 (2007); *Nuclear Management Co., LLC* (Palisades Nuclear Plant), CLI-07-9, 65 NRC 139, 141-42 (2007); *AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-07-8, 65 NRC 124, 128-34 (2007).
- J Although the United States Court of Appeals for the Ninth Circuit has held that the NRC must address certain matters to satisfy its NEPA obligations, *see San Luis Obispo Mothers for Peace v. NRC*, 449 F.3d 1016 (9th Cir. 2006), *cert. denied*, 549 U.S. 1166 (2007), the Commission has stated that it does not consider itself bound by that holding outside the Ninth Circuit, *see Oyster Creek*, CLI-07-8, 65 NRC at 128-29, and this Board is bound by that position.
- K The need for design features to guard against Design Basis Threats is outside the scope of this proceeding because it is the subject of an ongoing rulemaking. *See Consideration of Aircraft Impacts for New Nuclear Power Reactor Designs*, 72 Fed. Reg. 56,287 (Oct. 3, 2007).
- L Events that could cause radioactive releases (including aircraft impact events) are included within the set of Design Basis Events required to be analyzed and designed against only if the probability of such events is above  $10^{-6}$  per year. *Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-01-22, 54 NRC 255, 260 (2001).
- M The Commission stated that "[q]uibbling over the details of an economic analysis . . . [amounts to] . . . standing NEPA on its head by asking that the license be rejected not due to environmental costs, but because the economic benefits are not as great as estimated." *Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-04-22, 60 NRC 125, 145 (2004) (internal quotation marks omitted).
- N In 10 C.F.R. § 51.45(b)(3), the NRC's regulations adopt NEPA's requirement that an agency consider alternatives that are "appropriate alternatives to recommended courses of action." 42 U.S.C. § 4332(2)(E). A reviewing agency determines whether an alternative is "appropriate" by looking at the objectives (i.e., purpose and need) of a project sponsor. *See Citizens Against Burlington, Inc. v. Busey*, 938 F.2d 190, 195 (D.C. Cir. 1991). So long as the applicant has "not set forth an unreasonably narrow objective of its project," *see Nuclear Energy Institute; Denial of Petition for Rulemaking*, 68 Fed. Reg. 55,905, 55,910 (Sept. 29, 2003), the NRC adheres to the principle that "when the purpose is to accomplish one thing, it makes no sense to consider alternative ways by which another thing might be accomplished." *Citizens Against Burlington*, 938 F.2d at 195 (citing *City of Angoon*, 803 F.2d 1016, 1021 (9th Cir. 1986)).
- O Costs for a project are relevant for the determination only if an environmentally preferable option is identified. *Consumers Power Co.* (Midland Plant, Units 1 and 2), ALAB-458, 7 NRC 155, 163 (1978).
- P The accuracy of project cost estimates only becomes relevant if an environmentally preferable alternative has been identified. *Progress Energy Carolinas, Inc.* (Shearon Harris Nuclear Power Plant, Units 2 and 3), LBP-08-21, 68 NRC 554, 576 (2008).

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- Q            “[T]he NRC is not in the business of regulating the market strategies of licensees . . . and leave[s] to licensees the ongoing business decisions that relate to costs and profit.” *Louisiana Energy Services, L.P.* (National Enrichment Facility), CLI-05-28, 62 NRC 721, 726 (2005) (internal citation omitted).
- R            NEPA charges a federal agency with weighing the environmental effects and impacts of the proposed project and its alternatives against each other and balancing those effects against the benefits of each such project. The Commission is consummately clear that its obligations under NEPA focus on “the adjective ‘environmental,’” and “NEPA does not require the agency to assess every impact or effect . . . , but only the impact or effect on the environment.” *Louisiana Energy Services, L.P.* (Claiborne Enrichment Center), CLI-98-3, 47 NRC 77, 88 (1998) (citing *Metropolitan Edison Co. v. People Against Nuclear Energy*, 460 U.S. 766, 772 (1983)).
- LBP-09-3    SOUTHERN NUCLEAR OPERATING COMPANY (Vogtle Electric Generating Plant, Units 3 and 4), Docket Nos. 52-025-COL, 52-026-COL (ASLBP No. 09-873-01-COL-BD01); COMBINED LICENSE; March 5, 2009; MEMORANDUM AND ORDER (Ruling on Standing and Contention Admissibility)
- A            In this 10 C.F.R. Part 52 proceeding regarding the application of Southern Nuclear Operating Company (SNC) for a combined license (COL) to construct and operate two new nuclear reactors at its existing Vogtle Electric Generating Plant (VEGP) site, ruling on a petition filed jointly by five public interest organizations seeking to intervene to contest the SNC COL application, the Licensing Board concludes that, having established the requisite standing and proffered one admissible contention, the Joint Petitioners are admitted as parties to the proceeding.
- B            In determining whether an individual or organization should be granted party status in a proceeding based on standing “as of right,” the agency has applied contemporaneous judicial standing concepts that require a participant to establish (1) it has suffered or will suffer a distinct and palpable injury that constitutes injury-in-fact within the zones of interests arguably protected by the governing statutes (e.g., the AEA, the National Environmental Policy Act of 1969 (NEPA), 42 U.S.C. § 4321, *et seq.*); (2) the injury is fairly traceable to the challenged action; and (3) the injury is likely to be redressed by a favorable decision. *See Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), CLI-96-1, 43 NRC 1, 6 (1996).
- C            In cases involving the possible construction or operation of a nuclear power reactor, proximity to the proposed facility has been considered sufficient to establish the requisite standing elements. *See Florida Power & Light Co.* (St. Lucie Nuclear Power Plant, Units 1 and 2), CLI-89-21, 30 NRC 325, 329 (1989).
- D            When an entity seeks to intervene on behalf of its members, that entity must show it has an individual member who can fulfill all the necessary standing elements and who has authorized the organization to represent his or her interests. *See Vermont Yankee Nuclear Power Corp.* (Vermont Yankee Nuclear Power Station), CLI-00-20, 52 NRC 151, 163 (2000).
- E            In assessing a petition to determine whether these elements are met, which a licensing board must do even though there are no objections to a petitioner’s standing, the Commission has indicated that we are to “construe the petition in favor of the petitioner.” *Georgia Institute of Technology* (Georgia Tech Research Reactor, Atlanta, Georgia), CLI-95-12, 42 NRC 111, 115 (1995).
- F            Section 2.309(f) of the Commission’s rules of practice specifies the requirements that must be met if a contention is to be deemed admissible. Specifically, a contention must provide (1) a specific statement of the legal or factual issue sought to be raised; (2) a brief explanation of the basis of the contention; (3) a concise statement of the alleged facts or expert opinions, including references to specific sources and documents, that support the petitioner’s position and upon which the petitioner intends to rely at hearing; and (4) sufficient information demonstrating that a genuine dispute exists in regard to a material issue of law or fact, including references to specific portions of the application that the petitioner disputes, or in the case when the application is alleged to be deficient, the identification of such deficiencies and supporting reasons for this belief. *See* 10 C.F.R. § 2.309(f)(1)(i), (ii), (v), and (vi). In addition, the petitioner must demonstrate that the issue raised in the contention is both “within the scope of the proceeding” and “material to the findings the NRC must make to support the action that is involved in the proceeding.” *Id.* § 2.309(f)(1)(iii)-(iv). Failure to comply with any of these requirements is grounds for dismissing a contention. *See Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-99-10, 49 NRC 318, 325 (1999); *see also Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1, 2, and 3), CLI-91-12, 34 NRC 149, 155-56 (1991).
- G            An adjudication is not the proper forum for challenging applicable statutory requirements or the basic structure of the agency’s regulatory process. *See Philadelphia Electric Co.* (Peach Bottom Atomic Power

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

Station, Units 2 and 3), ALAB-216, 8 AEC 13, 20, *aff'd in part on other grounds*, CLI-74-32, 8 AEC 217 (1974). Similarly, a contention that attacks a Commission rule, or which seeks to litigate a matter that is, or clearly is about to become, the subject of a rulemaking, is inadmissible. *See* 10 C.F.R. § 2.335; *Potomac Electric Power Co.* (Douglas Point Nuclear Generating Station, Units 1 and 2), ALAB-218, 8 AEC 79, 85, 89 (1974). This includes contentions that advocate stricter requirements than agency rules impose or that otherwise seek to litigate a generic determination established by a Commission rulemaking. *See Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), LBP-01-6, 53 NRC 138, 159 (2001); *Pacific Gas and Electric Co.* (Diablo Canyon Nuclear Power Plant, Units 1 and 2), LBP-93-1, 37 NRC 5, 29-30 (1993); *Public Service Co. of New Hampshire* (Seabrook Station, Units 1 and 2), LBP-82-106, 16 NRC 1649, 1656 (1982); *see also Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), CLI-96-7, 43 NRC 235, 251 (1996); *Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1, 2, and 3), LBP-91-19, 33 NRC 397, 410, *aff'd in part and rev'd in part on other grounds*, CLI-91-12, 34 NRC 149 (1991). By the same token, a contention that simply states the petitioner's views about what regulatory policy should be does not present a litigable issue. *See Peach Bottom*, ALAB-216, 8 AEC at 20-21 & n.33.

H All proffered contentions must be within the scope of the proceeding as defined by the Commission in its initial hearing notice and order referring the proceeding to the Licensing Board. *See* 10 C.F.R. § 2.309(f)(1)(iii); *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), CLI-00-23, 52 NRC 327, 329 (2000); *Duke Power Co.* (Catawba Nuclear Station, Units 1 and 2), ALAB-825, 22 NRC 785, 790-91 (1985). As a consequence, any contention that falls outside the specified scope of the proceeding must be rejected. *See Portland General Electric Co.* (Trojan Nuclear Plant), ALAB-534, 9 NRC 287, 289 n.6 (1979).

I It is the petitioner's obligation to present factual information and/or expert opinion necessary to support its contention. *See* 10 C.F.R. § 2.309(f)(1)(v); *Georgia Institute of Technology* (Georgia Tech Research Reactor, Atlanta, Georgia), LBP-95-6, 41 NRC 281, 305, *vacated in part and remanded on other grounds*, CLI-95-10, 42 NRC 1, and *aff'd in part*, CLI-95-12, 42 NRC 111 (1995). While a Board may appropriately view a petitioner's supporting information in a light favorable to the petitioner, failure to provide such information regarding a proffered contention requires that the contention be rejected. *See Palo Verde*, CLI-91-12, 34 NRC at 155. In this connection, neither mere speculation nor bare or conclusory assertions, even by an expert, alleging that a matter should be considered will suffice to allow the admission of a proffered contention. *See Fansteel, Inc.* (Muskogee, Oklahoma Site), CLI-03-13, 58 NRC 195, 203 (2003). If a petitioner neglects to provide the requisite support for its contentions, it is not within the Board's power to make assumptions of fact that favor the petitioner, nor may the Board supply information that is lacking. *See Palo Verde*, CLI-91-12, 34 NRC at 155; *Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), LBP-01-35, 54 NRC 403, 422 (2001); *Georgia Tech Research Reactor*, LBP-95-6, 41 NRC at 305.

J Simply attaching material or documents as a basis for a contention, without setting forth an explanation of that information's significance, is inadequate to support the admission of the contention. *See Fansteel*, CLI-03-13, 58 NRC at 204-05. Along these lines, any supporting material provided by a petitioner, including those portions of the material that are not relied upon, is subject to Board scrutiny. *See Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), LBP-96-2, 43 NRC 61, 90 (1996), *rev'd in part on other grounds*, CLI-96-7, 43 NRC 235 (1996). Thus, the material provided in support of a contention will be carefully examined by the Board to confirm that on its face it does supply adequate support for the contention. *See Vermont Yankee Nuclear Power Corp.* (Vermont Yankee Nuclear Power Station), ALAB-919, 30 NRC 29, 48 (1989), *vacated in part on other grounds and remanded*, CLI-90-4, 31 NRC 333 (1990).

K To be admissible, the regulations require that all contentions assert an issue of law or fact that is material to the outcome of a licensing proceeding, meaning that the subject matter of the contention must impact the grant or denial of a pending license application. *See* 10 C.F.R. § 2.309(f)(1)(iv). This requirement of materiality often dictates that any contention alleging deficiencies or errors in an application also indicate some significant link between the claimed deficiency and either the health and safety of the public or the environment. *See Yankee Nuclear*, LBP-96-2, 43 NRC at 75-76; *see also Pacific Gas and Electric Co.* (Diablo Canyon Power Plant Independent Spent Fuel Storage Installation), LBP-02-23, 56 NRC 413, 439-41 (2002), *petition for review denied*, CLI-03-12, 58 NRC 185, 191 (2003).

L All properly formulated contentions must focus on the license application in question, challenging

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

either specific portions of or alleged omissions from the application (including the Safety Analysis Report and the Environmental Report) so as to establish that a genuine dispute exists with the applicant on a material issue of law or fact. *See* 10 C.F.R. § 2.309(f)(1)(vi). Any contention that fails directly to controvert the application or that mistakenly asserts the application does not address a relevant issue can be dismissed. *See Sacramento Municipal Utility District* (Rancho Seco Nuclear Generating Station), LBP-93-23, 38 NRC 200, 247-48 (1993), *review declined*, CLI-94-2, 39 NRC 91 (1994); *Texas Utilities Electric Co.* (Comanche Peak Steam Electric Station, Unit 2), LBP-92-37, 36 NRC 370, 384 (1992).

M The current situation in which a Part 52 COLA referencing a certified standard design (CSD) that, while previously approved, faces potential modification in the form of pending design certification document (DCD) revisions that both have and have not been incorporated into the COLA is no doubt one the Commission hoped reactor designers and COL applicants would avoid so as to maximize the longstanding “reliability” and “finality” hallmarks of the Part 52 CSD, early site permit (ESP), and COL processes. At the same time, this is a happenstance the Commission has recognized may occur, and could result in a properly framed contention being admitted and held in abeyance pending resolution of the design certification rulemaking (DCR). *See Progress Energy Carolinas, Inc.* (Shearon Harris Nuclear Power Plant, Units 2 and 3), CLI-08-15, 68 NRC 1, 3-4 & nn.5, 8 (2008); *see also Detroit Edison Co.* (Enrico Fermi Atomic Power Plant, Unit 3), CLI-09-4, 69 NRC 80, 84-85 (2009).

N Absent a future exemption request, an applicant cannot obtain a COL for its proposed facility until the DCR process for a COLA-referenced revision to the COLA-referenced DCD is completed by incorporating the revision into the CSD.

O A concern about the travails of the post-initial intervention contention admission process does not provide the basis for an open-ended, placeholder contention. Rather than asserting, based on documentary material or expert analysis, that some particular facet of a proposed DCD change has a safety impact relative to some specific aspect of either the existing CSD or the proposed unit, the focus of a submitted contention was a generalized concern that because the design issues reflected in the proposed DCD revision will remain unresolved pending the completion of the DCR to incorporate the change, the COLA is somehow fatally incomplete. But given that a pending DCD revision clearly can be referenced in a COLA, *see* 10 C.F.R. § 52.55(c), the failure to frame a specific, sufficiently supported, material issue regarding a safety concern arising from the interaction of the proposed DCD amendment with the existing CSD and/or a facility-specific provision of the COLA leaves the contention as no more than an inadmissible challenge to the Part 52 regulatory framework.

P If a contention is a contention of omission, a petitioner need only “identify[] the regulatively required missing information” and provide enough facts to show that the application is incomplete. *Virginia Electric and Power Co.* (North Anna Power Station, Unit 3), LBP-08-15, 68 NRC 294, 317 (2008) (quoting *Pa’ina Hawaii, LLC*, LBP-06-12, 63 NRC 403, 414 (2006)).

Q While section 52.79(a)(3) does not explicitly speak to long-term storage of low-level radioactive waste (LLRW) or any specific amount of waste storage, if offsite disposal for LLRW remains unavailable, it is not apparent how a COL applicant could address compliance with 10 C.F.R. Part 20 limits in accordance with section 52.79(a)(3) without addressing what it intends to do with the LLRW (which certainly qualifies as radioactive material) expected to be produced in the operation of a proposed reactor unit. Thus, because an applicant’s compliance with 10 C.F.R. § 52.79 is a material part of what the agency must assess in a COL proceeding, the question of how the applicant intends to handle LLRW in the absence of an offsite disposal facility is material to the findings the agency must make.

LBP-09-4 CALVERT CLIFFS 3 NUCLEAR PROJECT, LLC, and UNISTAR NUCLEAR OPERATING SERVICES, LLC (Calvert Cliffs Nuclear Power Plant, Unit 3), Docket No. 52-016-COL (ASLBP No. 09-874-02-COL-BD01); COMBINED LICENSE; March 24, 2009; MEMORANDUM AND ORDER (Ruling on Joint Petitioners’ Standing and Contentions)

A There is no conflict between judicial concepts of standing and the NRC’s 50-mile presumption of standing. The presumption does not permit persons with no actual or imminent claim of injury to obtain a hearing. On the contrary, the “common thread” in the decisions applying the 50-mile presumption is a recognition of the potential effects at significant distances from the facility of the accidental release of fissionable materials. The increased risk of living within 50 miles of the plant constitutes injury-in-fact, is traceable to the challenged action (the NRC’s licensing of a new nuclear reactor), and is likely to be redressed by a favorable decision that either denies a license or mandates compliance with legal requirements that protect the interests of the petitioners.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- B Licensing boards are bound by Commission and appeal board precedent and therefore are not at liberty to reject the 50-mile presumption.
- C The rationale for the 50-mile presumption does not depend upon the probability that a proposed reactor is likely to generate an accidental release of radioactive materials, but rather the fact that, if such an accident were to occur, it could realistically impact the geographic area within which the petitioners reside.
- D Although the Commission has encouraged licensing boards to apply contemporaneous concepts of standing, the ultimate test is not whether the NRC's test for standing conforms to that applied by federal courts, but whether the NRC's test represents a reasonable construction of section 189a of the Atomic Energy Act. As long as the petitioners reside within an area that could realistically be impacted if an accidental release occurs, it is reasonable and consistent with section 189a to find that they have standing to challenge Applicant's safety claims and its environmental analysis under NEPA.
- E The Petition was submitted through the EIE system and the failure of all the representatives to sign the Petition was evidently due to a misunderstanding of the EIE system and the requirements of 10 C.F.R. § 2.304(d). Given the complexities of the EIE system, the fact that it is new, and that it was not intended to frustrate the ability of the public to participate in NRC proceedings, Petitioners will not be denied the opportunity to participate in this proceeding due to an error that can easily be corrected and that has caused no prejudice to any other participant.
- F The NRC has not established an ownership interest threshold or plateau above which a foreign entity is presumed to have control or domination over the applicant. Instead, the decision of whether or not to grant a license to a corporation hinges on whether the applicant is being *controlled or dominated* by the foreign entity.
- G The AEA restriction on foreign ownership focuses on safeguarding access to nuclear materials, a security issue, and not on other licensing matters.
- H A domestic corporation in which a foreign entity has an ownership interest is considered "controlled or dominated" if their will is subjugated to the will of the foreign entity on primary safety matters or access policies that may be inimical to the national defense and security of the United States. However, a license will not be prohibited if the foreign entity's influence is on other licensing activities not of primary concern to the NRC, or if the corporation follows NRC-implemented conditions to isolate safety matters from foreign control.
- I NRC case law and precedent do not prohibit considering the percentage of foreign ownership as one element in NRC's overall analysis and finding of whether or not the foreign entity is a threat to the national defense and security of the United States.
- J It is beyond the authority of a licensing board to require applicant to choose a certain method of decommissioning funding. Moreover, there is no provision that requires an applicant or licensee to choose one form of decommissioning assurance over another. Licensees and applicants can demonstrate financial assurance by "one or more" of the funding mechanisms. An applicant is permitted to choose a single method or a combination of methods to demonstrate financial assurance.
- K The contention states that Applicant cannot demonstrate that the decommissioning funding strategy is financially possible. Such demonstration is required at some point in the licensing process. However, both regulations and guidance documents fail to state when such proof is required.
- L It would be inconsistent with NEPA's rule of reason to require that the cumulative impacts analysis individually analyze the effects of remote facilities absent a demonstration that such additional effort would lead to a different conclusion.
- M NEPA analyses are subject to a "rule of reason," but to apply a rule of reason it is necessary to have a criterion upon which reasonableness may be determined. If the accident sought to be considered is sufficiently unlikely, such that it can be characterized fairly as remote and speculative, then consideration under NEPA is not required as a matter of law. The Commission has found that events having a less than a one in one million probability of occurring are not "credible events." Taken together, these individual statements lead to the conclusion that  $10^{-6}$  is a reasonable threshold for considering events under NEPA.
- N The Commission has announced proposals to revise its Waste Confidence Rule and its Waste Confidence Decision, and that it is accepting public comment on both proposals. Petitioners and others who believe the Waste Confidence Rule needs revision must use those proceedings to express their concerns.

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- O Contentions concerning an Applicant's plan for disposal of Greater-Than-C radioactive waste cannot be admitted because the disposal of that type of waste is the responsibility of the federal government.
- P A licensing board may not admit a contention that directly or indirectly challenges Table S-3 of 10 C.F.R. § 51.51.
- Q The Board may admit an application-specific contention concerning the environmental consequences of the need for extended onsite storage of Low Level Radioactive Waste, assuming that contention satisfies the requirements of 10 C.F.R. § 2.309(f)(1).
- R The Application assumes that offsite disposal facilities will be available to receive the full range of radioactive waste generated at the nuclear power plant. The Application does not explain how Applicant intends to manage Low Level Radioactive Waste in the absence of an offsite disposal facility. The omitted information is material to the ER's compliance with 10 C.F.R. § 51.45(b) and (e), and to the agency's compliance with NEPA.
- S NEPA requires that an EIS disclose measures that will mitigate potential adverse environmental impacts.
- T The Commission has made clear that petitioners must raise NEPA contentions in response to the ER, rather than await the agency's draft environmental impact statement.
- LBP-09-5 SOUTH TEXAS PROJECT NUCLEAR OPERATING COMPANY, NRG SOUTH TEXAS 3, LLC, NRG SOUTH TEXAS 4, LLC, and the CITY PUBLIC SERVICE BOARD acting for the CITY OF SAN ANTONIO, TEXAS (South Texas Project, Units 3 and 4), Docket Nos. 52-012-COL, 52-013-COL (ASLBP No. 09-883-06-COL-BD01); COMBINED LICENSE; April 20, 2009; MEMORANDUM AND ORDER (Affirming Denial of Access to SUNSI)
- A In adjudicating Petitioners' appeal from the NRC Staff's denial of Petitioners' request for access to SUNSI, we consider whether the NRC Staff correctly applied the criteria established by the Commission and prescribed by order of the Secretary of the Commission — namely, (1) whether the SUNSI request demonstrates a reasonable basis to believe that a potential party is likely to establish standing to intervene; and (2) whether the SUNSI request demonstrates the proposed recipient has a "need" for the SUNSI.
- B If a SUNSI request is denied, the NRC Staff shall briefly state the reasons for the denial. The requester then may challenge the NRC Staff's adverse determination with respect to access to SUNSI by filing a challenge with the presiding officer, and the NRC Staff may file a reply to the requester's challenge. Thus, when the appeal appears before us, we are asked to adjudicate a dispute arising from the NRC Staff's adverse determinations regarding likelihood of standing and need.
- C Our standard of review in an appeal from an NRC Staff denial of a SUNSI request is *de novo*.
- D To satisfy the likelihood of establishing standing criterion, Petitioner organizations were required to provide sufficient information to allow the NRC Staff to conclude that the requirements for "representational standing" or "organizational standing" could likely be satisfied.
- E SUNSI requests need not be accompanied by affidavits or include lengthy, detailed justifications addressing the likelihood of standing criterion. Rather, such requests need simply include the name and address of the potential party and a description of the potential party's particularized interest that could be harmed by the proposed licensing action sufficient to demonstrate a reasonable basis to conclude he or she could likely establish standing.
- F Although the SUNSI-access procedures do not impose a high threshold for demonstrating need, they must be applied consistent with the principle that it is important to prevent unnecessary disclosure of sensitive information.
- G Had Petitioners offered a reason for needing such information material to the findings a Licensing Board must make and otherwise explained why publicly available versions of the application would not be sufficient to provide the basis and specificity for a proffered contention, they would have satisfied the need criterion.
- H We stress that the requirement to discuss the basis for a proffered contention is not to be equated with the discussion that would be necessary to support an admissible contention. Rather, the discussion need only show why the publicly available information in the application is not sufficient to support the basis and specificity of a proffered contention.
- I We recognize that a petitioner's lack of access to SUNSI may, on occasion, hinder it to some degree in its ability to demonstrate why publicly available versions of the application would not be sufficient to provide the basis and specificity for a proffered contention. Any such hindrance, however, does not absolve a petitioner from at least endeavoring to address this criterion. A contrary conclusion would

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

improperly convert the current SUNSI disclosure process from one that is based on a petitioner's ability to show "legitimate need" into one where a petitioner's broad, nonspecific, and speculative assertion of "need" would mandate the wholesale release of SUNSI.

- J The procedure for seeking access to SUNSI does not provide a method for general access to SUNSI or topical access to SUNSI. It provides access to only the information necessary to meaningfully participate in an adjudicatory proceeding, and, further, only grants access to the information that is necessary to provide the basis and specificity of a proffered contention.
- LBP-09-6 U.S. DEPARTMENT OF ENERGY (High-Level Waste Repository), Docket No. 63-001-HLW; CONSTRUCTION AUTHORIZATION; May 11, 2009; MEMORANDUM AND ORDER (Identifying Participants and Admitted Contentions)
- A In this proceeding on the Application by the Department of Energy seeking authorization to construct a geologic repository for high-level nuclear waste (HLW) at Yucca Mountain, in Nye County, Nevada, the Construction Authorization Boards conclude that, having established the requisite standing and proffering admissible contentions, eight petitioners, State of Nevada, Nuclear Energy Institute, Nye County, Churchill, Esmeralda, Lander, and Mineral Counties, State of California, Clark County, Inyo County, and White Pine County, are admitted as parties to the proceeding. Two of the petitioners, the Joint Timbisha Shoshone Tribal Group and the Native Community Action Council, are denied party status until they can demonstrate compliance with the Licensing Support Network (LSN) requirements. The petition of Caliente Hot Springs Resort is denied, having failed to make the requisite standing showing.
- B To intervene as a party in the HLW proceeding, a petitioner must: (1) establish that it has standing; (2) be able to demonstrate substantial and timely LSN compliance; and (3) proffer at least one admissible contention.
- C In the HLW proceeding, the Commission conferred standing as of right on certain parties. Pursuant to 10 C.F.R. § 2.309(d)(2)(iii), intervention is permitted by the state and local governmental body (county, municipality, or other subdivision) in which the geologic repository operations area (GROA) is located, and by any affected federally recognized Indian Tribe (AIT), as defined in 10 C.F.R. Part 63, if the contention admission requirements in 10 C.F.R. § 2.309(f) are satisfied with respect to at least one contention. Additionally, in the Notice of Hearing, the Commission clarified that any "affected unit of local government" (AULG), as defined in section 2 of the Nuclear Waste Policy Act of 1982, as amended (NWPA), need not address standing, but rather shall be considered a party provided that it files at least one admissible contention in accordance with 10 C.F.R. § 2.309(f).
- D Where a petitioner is not conferred automatic standing, the petition to intervene must provide information supporting the petitioner's claim to standing, including: (1) the nature of the petitioner's right under the governing statutes to be made a party; (2) the nature of the petitioner's interest in the proceeding; and (3) the possible effect of any decision or order on the petitioner's interest. In determining whether an individual or organization should be granted party status "as of right," the Nuclear Regulatory Commission (NRC) applies judicial standing concepts that require a participant to establish: (1) it has suffered or will suffer a distinct and palpable harm that constitutes injury-in-fact within the zone of interests arguably protected by the governing statutes (e.g., the Atomic Energy Act of 1954 (AEA), the National Environmental Policy Act of 1969 (NEPA)); (2) the injury is fairly traceable to the challenged action; and (3) the injury is likely to be redressed by a favorable decision.
- E An organization seeking to intervene in a representational capacity must: (1) demonstrate that the licensing action will affect at least one of its members; (2) identify that member by name and address; and (3) show that it is authorized by that member to request a hearing on his or her behalf. Additionally, the member must qualify for standing in his or her own right, and the interests that the organization seeks to protect must be germane to its own purpose. Neither the petitioner's contentions nor the requested relief, however, must require the participation of an individual member in the proceeding.
- F In the HLW proceeding, a state can meet the requirements for standing as a matter of right, based on the threat posed by transportation of radioactive waste through that state.
- G When an organization takes formal corporate action to initiate litigation not only germane but integral to its purpose, that action can constitute the requisite, if implicit, proof of authorization.
- H Section 2.1009(b) requires a certification to the Pre-License Application Presiding Officer (PAPO) Board that the party or potential party has complied with the implementation procedures of section 2.1009(a)(2) and that "to the best of his or her knowledge, the documentary material specified in § 2.1003 has been identified and made electronically available."

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- I In the event a petitioner is found not to be in substantial and timely compliance with the LSN requirements, section 2.1012(b)(2) allows that petitioner to request party status upon a subsequent showing of compliance, although any grant of a request is “conditioned on accepting the status of the proceeding at the time of admission.”
- J An admissible contention must: (1) provide a specific statement of the legal or factual issue sought to be raised; (2) provide a brief explanation of the basis for the contention; (3) demonstrate that the issue raised is within the scope of the proceeding; (4) demonstrate that the issue raised is material to the findings the NRC must make to support the action that is involved in the proceeding; (5) provide a concise statement of the alleged facts or expert opinions that support the petitioner’s position and on which the petitioner intends to rely at the hearing, including references to the specific sources and documents on which the petitioner intends to rely; and (6) provide sufficient information to show that a genuine dispute exists on a material issue of law or fact, including references to specific portions of the application that the petitioner disputes or, if the application is alleged to be deficient, the identification of such deficiencies and the supporting reasons for this allegation.
- K An admissible contention cannot challenge an existing Commission regulation. Absent a waiver, no rule or regulation of the Commission is subject to attack in any adjudicatory proceeding. This rule bars contentions that: (1) advocate more or less stringent requirements than the NRC rules impose; (2) otherwise seek to litigate a generic determination that the Commission has established by rulemaking; or (3) raise a matter that is or is about to become the subject of rulemaking.
- L In substantially revising its contention admissibility requirements in 1989, the Commission sought to preclude a contention from being admitted where an intervenor has no facts to support its positions, but rather hopes to use discovery or cross-examination as a “fishing expedition.” The Commission therefore amended its rules to require that contentions have at least some minimal factual and legal foundation in support. As the Commission has emphasized, the contention requirements were never intended to be turned into a fortress to deny intervention.
- M In addition to the usual contention admissibility requirements set forth in section 2.309(f)(1), factual NEPA contentions in the HLW proceeding must be supported by one or more competent affidavits and such affidavits must present significant and substantial information that, if true, would render the DOE environmental statements inadequate.
- N The NWPA has limited, but not eliminated, the scope of the NRC’s NEPA responsibilities. The Commission has addressed those limitations by imposing special pleading requirements for all NEPA contentions. If those requirements are satisfied, Boards cannot dismiss otherwise admissible contentions at this stage of the proceeding.
- O The NRC is obligated under NEPA to analyze and to disclose all environmental effects of the proposed repository, not just the effects of those portions of the repository over which the NRC has direct regulatory control. Contentions that address such environmental effects, including transportation-related effects, may not be dismissed at the contention admissibility stage if they satisfy the Commission’s special pleading requirements for HLW NEPA contentions.
- P A petitioner does not fail to satisfy 10 C.F.R. § 2.309(f)(1)(v) and (vi) by providing expert affidavits that adopt assertions made in the body of the contention.
- Q An expert’s opinion need not always be accompanied by a specific reference to supporting sources and documents. Section 2.309(f)(1)(v) requires “references to the specific sources and documents on which the requestor/petitioner intends to rely to support its position.” It says nothing about references upon which an expert might rely in offering expert opinion. Nor can it reasonably be interpreted to require a petitioner to produce, at the contention admissibility stage, its exhibit list for a hearing.
- R The standards embodied in section 2.309(f)(1) have been in existence, for the most part, since 1989. If, in subsequently promulgating Subpart J containing the LSN provisions, the Commission had wanted to raise the standard for the admissibility of contentions because of the LSN, it could have done so explicitly, as it did in 10 C.F.R. § 51.109(a)(2) with respect to the admissibility of contentions raising NEPA issues. On the contrary, when promulgating Subpart J, the Commission expressly provided that section 2.309 was to remain unchanged.
- S The suggestion that “reasonable expectation,” 10 C.F.R. § 63.31(a)(2), connotes less exacting obligations than does “reasonable assurance,” 10 C.F.R. § 63.31(a)(1), invokes a distinction without a difference. The NRC has repeatedly indicated that “reasonable expectation” and “reasonable assurance” mean virtually the same thing.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- T Under 10 C.F.R. § 2.309(f)(1)(i), a contention may raise an issue of law or fact. A purely legal issue contention need not allege “facts” under section 2.309(f)(1)(v).
- U The requirement that a NEPA contention be accompanied by one or more affidavits, pursuant to 10 C.F.R. § 51.109(a)(2), ought not apply to a legal issue contention under NEPA, as that section requires only affidavits “which set forth factual and/or technical bases for the claim.” There is no requirement that legal arguments be presented by affidavit.
- V The term “person” is defined under section 11(s) of the AEA to include not only private entities, but also “any . . . Government agency other than the Commission,” and a “person,” as the term is used throughout the AEA, is required to be licensed in order to conduct nuclear activities. Thus, in terms of the Commission’s treatment of private entities and government actors under the AEA, there is no difference.
- W The NWPA explicitly provides that it does not diminish any part of the Commission’s authority to review license applications and issue licenses under the AEA.
- X Although the Commission has not promulgated a rule or regulation requiring an applicant to include information in its application regarding its character pursuant to AEA § 182(a), NRC case law makes clear that an applicant’s character is appropriate for consideration in a licensing proceeding.
- LBP-09-7 SOUTHERN NUCLEAR OPERATING COMPANY (Early Site Permit for Vogtle ESP Site), Docket No. 52-011-ESP (ASLBP No. 07-850-01-ESP-BD01); EARLY SITE PERMIT; June 22, 2009; FIRST PARTIAL INITIAL DECISION (Contested Proceeding)
- A In this 10 C.F.R. Part 52 proceeding regarding the application of Southern Nuclear Operating Company (SNC) for an early site permit (ESP) for an additional two reactors at the existing Vogtle Electric Generating Plant (VEGP) site, in a Partial Initial Decision ruling on the merits of three admitted environmental contentions (ECs) regarding cooling system impacts on aquatic resources, use of a dry cooling system as an alternative to wet cooling, and impacts associated with dredging the Savannah River federal navigation channel to bring reactor components to the VEGP site, the Licensing Board concludes that, having carried their respective burdens of proof, a ruling on the merits of each contention should be entered in favor of the NRC Staff and SNC, thereby terminating the contested portion of this ESP proceeding before the Board.
- B The Council on Environmental Quality (CEQ) has implemented regulations that provide guidance on agency compliance with the National Environmental Policy Act (NEPA), *see* 40 C.F.R. Part 1500, that, while not binding on the NRC when the agency has not expressly adopted them, are entitled to considerable deference. *See Limerick Ecology Action, Inc. v. NRC*, 869 F.2d 719, 725, 743 (3d Cir. 1989).
- C NEPA requires federal agencies to take a “hard look” at the environmental impacts of a proposed action, as well as reasonable alternatives to that action. *See Louisiana Energy Services, L.P.* (Claiborne Enrichment Center), CLI-98-3, 47 NRC 77, 87-88 (1998). This “hard look” is, however, subject to a “rule of reason” in that consideration of environmental impacts need not address every impact that could possibly result, but rather only those that are reasonably foreseeable or have some likelihood of occurring. *See, e.g., Long Island Lighting Co.* (Shoreham Nuclear Power Station), ALAB-156, 6 AEC 831, 836 (1973).
- D Agencies are given broad discretion in determining how thoroughly to analyze a particular subject, *see Claiborne*, CLI-98-3, 47 NRC at 103, and may decline to examine issues the agency in good faith considers “remote and speculative” or “inconsequentially small,” *Vermont Yankee Nuclear Power Corp.* (Vermont Yankee Nuclear Power Station), ALAB-919, 30 NRC 29, 44 (1989) (citing *Limerick Ecology Action, Inc.*, 869 F.2d at 739). To that end, when reviewing a license application filed by a private applicant, as opposed to a federally sponsored project, an agency may give substantial weight to the stated preferences of the applicant with regard to issues such as site selection and facility design. *See Claiborne*, CLI-98-3, 47 NRC at 104; *Hydro Resources, Inc.* (P.O. Box 15910, Rio Rancho, NM 87174), CLI-01-4, 53 NRC 31, 55 (2001).
- E CEQ regulations state that an environmental impact statement (EIS) must address both direct and indirect effects of an action. *See* 40 C.F.R. §§ 1502.16, 1508.8. Direct effects are those caused by the federal action, and occurring at the same time and place as that action, while indirect effects are those caused by the action at a later time or more distant place, yet are still reasonably foreseeable. *See id.* § 1508.8. But if effects are remote or speculative, the EIS need not discuss them. *See Vermont Yankee Nuclear Power Corp. v. Natural Resources Defense Council, Inc.* 435 U.S. 519, 551 (1978).
- F In the context of an NRC adjudicatory proceeding, even if an EIS prepared by the Staff is found to be inadequate in certain respects, the Board’s findings, as well as the adjudicatory record, “become, in

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

effect, part of the [final environmental impact statement (FEIS)].” *Hydro Resources*, CLI-01-4, 53 NRC at 53. Thus, the Board’s ultimate NEPA judgments can be made on the basis of the entire adjudicatory record in addition to the Staff’s FEIS. See *Louisiana Energy Services, L.P.* (National Enrichment Facility), LBP-05-13, 61 NRC 385, 404 (2005), *aff’d*, CLI-06-22, 64 NRC 37 (2006), *petition for review denied sub nom.*, *Nuclear Information and Resources Service v. NRC*, 509 F.3d 562 (D.C. Cir. 2007).

G Under the NRC’s Part 51 regulations, an applicant for an ESP must submit with its application an ER. See 10 C.F.R. § 51.50(b). The ER must “contain a description of the proposed action, a statement of its purposes, [and] a description of the environment affected,” *id.* § 51.45(b), and it must discuss: “(1) The impact[s] of the proposed action on the environment . . . in proportion to their significance; (2) Any adverse environmental effects which cannot be avoided should the proposal be implemented; (3) Alternatives to the proposed action . . . ; (4) The relationship between local short-term uses of man’s environment and the maintenance and enhancement of long-term productivity; and (5) Any irreversible and irretrievable commitments of resources which would be involved in the proposed action should it be implemented.” *Id.* § 51.45(b)(1)-(5).

H NEPA requires an agency to provide a detailed statement of reasonable alternatives to a proposed action. 42 U.S.C. § 4332(2)(C)(iii); see also *Claiborne*, CLI-98-3, 47 NRC at 104. The alternatives discussion, however, need not include “every possible alternative, but every reasonable alternative.” *Long Island Lighting Co.* (Shoreham Nuclear Power Station, Unit 1), CLI-91-2, 33 NRC 61, 71 (1999) (second emphasis in original). Reasonable alternatives do not include alternatives that are “impractical[.] . . . that present unique problems; or that cause extraordinary costs.” *Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), LBP-03-30, 58 NRC 454, 479 (2003) (citing *Airport Neighbors Alliance v. United States*, 90 F.3d 426, 432 (10th Cir. 1996); *Communities, Inc. v. Busey*, 956 F.2d 619, 627 (6th Cir. 1992)). Alternatives that need not be considered include those that are technologically unproven. See *Kelley v. Selin*, 42 F.3d 1501, 1521 (6th Cir. 1995); *Natural Resources Defense Council, Inc. v. Morton*, 458 F.2d 827, 837 (D.C. Cir. 1972) (approving exclusion from alternatives discussion of alternative energy sources that “will be dependent on [future] environmental safeguards and [technological] developments”); *Busey*, 956 F.2d at 627 (upholding rejection of alternatives that “presented severe engineering requirements” or were “imprudent for reasons including their high cost, safety hazards, [and] operational difficulties”).

I The agency’s NEPA regulations require that the NRC Staff prepare an environmental impact statement in connection with the issuance of an ESP. See 10 C.F.R. § 51.20(b)(1).

J The Staff must first prepare a draft environmental impact statement (DEIS), see *id.* § 51.70, which addresses, among other topics, “the matters specified in [section] 51.45.” *Id.* § 51.71(a).

K Though the DEIS may rely in part on the ER, agency regulations require the Staff to “independently evaluate and be responsible for the reliability of all information used in the [DEIS].” *Id.* § 51.70(b).

L The Staff’s DEIS is distributed for public comment and, based on the comments received, a review of information provided by the applicant, and supplemental independent information and analysis, the Staff prepares and issues an FEIS. See *id.* §§ 51.73, 51.91.

M When the Staff makes its conclusions in the DEIS and FEIS regarding the environmental impacts of a proposed action or alternative actions, the Staff uses as guidance a standard scheme to categorize or quantify the impacts. See, e.g., 10 C.F.R. Part 51, App. B, Table B-1 n.3. This standard was created using the approach outlined in section 1508.27 of the CEQ regulations, which requires agencies to consider both the context and intensity of impacts. See 40 C.F.R. § 1508.27. The NRC has established three levels of impacts — SMALL, MODERATE, and LARGE — that are defined as follows:

SMALL — Environmental effects are not detectable or are so minor that they will neither destabilize nor noticeably alter any important attribute of the resource.

MODERATE — Environmental effects are sufficient to alter noticeably, but not to destabilize, important attributes of the resource.

LARGE — Environmental effects are clearly noticeable and are sufficient to destabilize important attributes of the resource.

N An agency may rely on an EIS prepared by another federal agency if such reliance will aid in the presentation of issues, eliminate repetition, or reduce the length of an EIS. See 10 C.F.R. Part 51, Appendix A, § 1(b). This principle may extend to conclusions by other agencies set forth in other contexts in which

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

they have analyzed an issue extensively. *See New England Coalition on Nuclear Pollution v. NRC*, 582 F.2d 87, 98 (1st Cir. 1978) (NRC can accept as conclusive Environmental Protection Agency adjudicatory findings concerning thermal discharge aquatic impacts). Thus, the Staff is able to adopt the underlying scientific data and inferences from the other agency's analysis without independent review, so long as it exercises independent judgment with respect to conclusions about the environmental impacts of the current proposed agency action. *See id.*; *Philadelphia Electric Co.* (Limerick Generating Station, Units 1 and 2), LBP-82-43A, 15 NRC 1423, 1467-68 (1982).

O In the context of licensing board adjudication of NEPA-related contentions, intervenors are required to file contentions in the first instance based on the applicant's ER. *See* 10 C.F.R. § 2.309(f)(2). Where, however, the Staff has prepared a DEIS or FEIS by the time the contentions come before a licensing board on the merits, such contentions are appropriately treated as challenges to the EIS. *See Claiborne*, CLI-98-3, 47 NRC at 84.

P Although, as the proponent of the agency action at issue, an applicant generally has the burden of proof in a licensing proceeding, *see* 10 C.F.R. § 2.325, when NEPA contentions are involved, the burden shifts to the Staff, because the NRC, not an applicant, has the burden of complying with NEPA. *See, e.g., Duke Power Co.* (Catawba Nuclear Station, Units 1 and 2), CLI-83-19, 17 NRC 1041, 1049 (1983). Nonetheless, because "the Staff, as a practical matter, relies heavily upon the Applicant's ER in preparing the EIS, should the Applicant become a proponent of a particular challenged position set forth in the EIS, the Applicant, as such a proponent, also has the burden on that matter." *Louisiana Energy Services, L.P.* (Claiborne Enrichment Center), LBP-96-25, 44 NRC 331, 339 (1996) (citing *Public Service Co. of New Hampshire* (Seabrook Station, Units 1 and 2), ALAB-471, 7 NRC 477, 489 n.8 (1978)), *rev'd on other grounds*, CLI-97-15, 46 NRC 294 (1997).

Q Given the direction in 10 C.F.R. Part 2, Subpart L, to file proposed findings, *see* 10 C.F.R. § 2.1209 (each party "shall" file written post-hearing proposed findings of fact and conclusions of law on the contentions addressed in an oral hearing), a party's failure to raise a matter in its findings submissions (notwithstanding any discussion in its section 2.1207 initial or responsive written statements of position) seemingly waives these items as grounds for its challenge to the FEIS, *see Statement of Policy on Conduct of Licensing Proceedings*, CLI-81-8, 13 NRC 452, 457 (1981).

R Section 51.45(b)(3) of Title 10 of the *Code of Federal Regulations* remains the applicable standard for alternatives analyses in the FEIS in that section 51.90 instructs the Staff to prepare the FEIS "in accordance with the [DEIS-related] requirements in §§ 51.70(b) and 51.71," and section 51.71, in turn, instructs the Staff to address in the DEIS matters an applicant is instructed to address in the ER under section 51.45. *See* 10 C.F.R. §§ 51.90, 51.71(a). Thus, the Board must decide whether the FEIS alternatives discussion is "sufficiently complete to aid the Commission in developing and exploring, pursuant to section 102(2)(E) of NEPA, 'appropriate alternatives to recommended courses of action in any proposal which involves unresolved conflicts concerning alternative uses of available resources.'" *Id.* § 51.45(b)(3).

S Under NEPA, once "the adverse environmental effects of the proposed action are adequately identified and evaluated, the agency is not constrained by NEPA from deciding that other values outweigh the environmental costs." *Robertson v. Methow Valley Citizens Council*, 490 U.S. 332, 351 (1989).

T In implementing NEPA, the NRC uses the definitions provided in CEQ regulations. 10 C.F.R. § 51.14(b).

U The CEQ regulations state that an agency EIS must consider direct, indirect, and cumulative impacts of an action. *See* 40 C.F.R. § 1508.25. Direct impacts are those caused by the federal action, and occurring at the same time and place as that action, while indirect impacts are caused by the action at a later time or more distant place, yet are still reasonably foreseeable. *See id.* § 1508.8. Cumulative impacts are defined as: "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions. Cumulative impacts can result from individually minor but collectively significant actions taking place over a period of time." *Id.* § 1508.7.

V For impacts that are reasonably foreseeable, but for which the agency lacks complete information in its analysis, the agency must indicate that such information is lacking. *See* 40 C.F.R. § 1502.22. Significantly, the unavailability of information does not "halt all government action." *Sierra Club v. Sigler*, 695 F.2d 957, 970 (5th Cir. 1983). "This is particularly true when information may become available at a later time and can still be used to influence the agency's decision." *Id.*

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- W Under section 1508.25 of the CEQ regulations, which defines the term “connected action,” the types of impacts that are to be considered are outlined separately from the types of actions that are to be considered. *See* 40 C.F.R. § 1508.25. This indicates that each type of action and each type of impact has its own independent significance in the sense that a conclusion that something is a “connected action” does not necessarily inform the type of impacts analysis that is performed, whether direct, indirect, or cumulative. *See id.* § 1508.25 (“To determine the scope of environmental impact statements, agencies shall consider 3 types of actions, 3 types of alternatives, and 3 types of impacts”).
- X Under NEPA, the Staff is required to include an analysis of only those impacts that are reasonably foreseeable or have some likelihood of occurring. *See, e.g., Shoreham*, ALAB-156, 6 AEC at 836.
- Y NEPA’s hard look requirement is subject to a rule of reason, and extensive studies of every conceivable impact need not be addressed. *See Shoreham*, ALAB-156, 6 AEC at 836.
- Z The following technical issues are discussed: Cooling Water Intake System; Impingement; Entrainment; Hydraulic Zone of Influence; Cooling Water Discharge; Thermal Plume Analysis; Effects of Thermal Discharge; Cooling Systems (Wet vs. Dry); Dredging of River Channel.
- LBP-09-8 PROGRESS ENERGY CAROLINAS, INC. (Shearon Harris Nuclear Power Plant, Units 2 and 3), Docket Nos. 52-022-COL, 52-023-COL (ASLBP No. 08-868-04-COL-BD01); COMBINED LICENSE; June 30, 2009; MEMORANDUM AND ORDER (Ruling on Admissibility of Contention TC-1 in Response to the Commission’s Remand in CLI-09-8)
- LBP-09-9 ENTERGY NUCLEAR VERMONT YANKEE, LLC, and ENTERGY NUCLEAR OPERATIONS, INC. (Vermont Yankee Nuclear Power Station), Docket No. 50-271-LR (ASLBP No. 06-849-03-LR); LICENSE RENEWAL; July 8, 2009; FULL INITIAL DECISION (Denying NEC’s Motion to File a New Contention)
- A In this Full Initial Decision concerning an application submitted by Entergy Nuclear Vermont Yankee, LLC, and Entergy Nuclear Operations, Inc. (collectively, Entergy) to renew the operating license for the Vermont Yankee Nuclear Power Station (VYNPS) in Windham County, Vermont, the Board denied New England Coalition Inc.’s (NEC) motion to file a new contention concerning Entergy’s recent metal fatigue time-limited aging analyses, pursuant to 10 C.F.R. § 54.21(c)(1)(ii), for the core spray (CS) and reactor recirculation outlet (RO) nozzles. The Board found that NEC’s motion satisfied neither the requirements specified in the Board’s partial initial decision (LBP-08-25, 68 NRC 763, 831-32 (2008)) nor the new contention pleading requirements of 10 C.F.R. § 2.309(f)(2)(i)-(iii).
- B The Board’s partial initial decision, LBP-08-25, stated that Entergy’s new metal fatigue cumulative usage factor environmentally adjusted (CUFen) analyses (1) must be done in accordance with the approach previously used in CUFen analyses for the feedwater nozzle, (2) must not use scientific or technical judgments significantly different from the prior CUFen analyses, and (3) must demonstrate values of less than unity. The Board ruled that new contentions could only be filed if the new CUFen analyses failed to conform to these requirements and ruled that any new contention could not rehash or renew technical challenges that had already been raised and resolved in this proceeding. The proposed new contention raises old arguments, such as the adequacy of consideration of the dissolved oxygen factor in the CUFen analysis and the use of inappropriate heat transfer equations, which were previously litigated and resolved, and thus is not admissible.
- C NEC’s proposed new contention also fails to meet the new contention requirements of 10 C.F.R. § 2.309(f)(2)(i)-(iii). NEC’s new contention focuses on technical assumptions made in the recent CUFen analyses. However, these same technical assumptions were made in the 2007 and 2008 CUFen analyses for the same nozzles. Thus, the new contention is based on information that cannot be considered “not previously available” or “materially different than information previously available,” and therefore the proposed new contention does not meet the requirements of 10 C.F.R. § 2.309(f)(2)(i) or (ii).
- LBP-09-10 PROGRESS ENERGY FLORIDA, INC. (Levy County Nuclear Power Plant, Units 1 and 2), Docket Nos. 52-029-COL, 52-030-COL (ASLBP No. 09-879-04-COL-BD01); COMBINED LICENSE; July 8, 2009; MEMORANDUM AND ORDER (Rulings on Standing, Contention Admissibility, Motion to File New Contention, and Selection of Hearing Procedure)
- A In this combined license application proceeding under 10 C.F.R. Part 52, Subpart C, the Petitioners have shown standing and have proffered twelve contentions. Nine of the contentions do not satisfy the admissibility criteria of 10 C.F.R. § 2.309(f)(1). Portions of three of the contentions satisfy these criteria. Therefore the Board grants the Petition to Intervene and admits portions of these three contentions.

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- B Contention 1, which asserts that the Part 52 combined license application is incomplete because it incorporates by reference a standard design certification and a pending application for a revision to that certified design, failed to identify any specific omissions in these components of the application and thus is inadmissible for failure to comply with 10 C.F.R. § 2.309(f)(1)(vi).
- C An applicant is legally entitled to reference a pending application for a design certification, but it does so “at its own risk,” i.e., subject to otherwise admissible contentions. 10 C.F.R. § 52.55(c).
- D The fact that the combined license application is subject to, or even expected to, change does not make it legally deficient. The NRC follows a “dynamic licensing process.” *Curators of the University of Missouri* (TRUMP-S Project), CLI-95-8, 41 NRC 386, 395 (1995).
- E A contention must focus on the combined license application as it exists when the contention is filed and must point out an omission or deficiency with regard to the application as of that moment in time. 10 C.F.R. §§ 2.309(f)(1)(vi), 2.309(f)(2).
- F The necessary corollary to NRC’s dynamic licensing process is that, if the combined license application is amended or material new information subsequently becomes available, petitioners must be given a fair opportunity to file new or amended contentions challenging these changes. 10 C.F.R. § 2.309(f)(2).
- G The fact that the NRC Staff issues a request for additional information (RAI) does not, per se, demonstrate that the combined license application is incomplete or ensure the admission of a new contention. The contention must still meet the criteria of 10 C.F.R. §§ 2.309(f)(1)(i)-(vi) and 2.309(f)(2) or (c).
- H The fact that the NRC Staff issues a request for additional information (RAI) does not immunize the COLA from challenge or bar the admission of a new contention on the same subject, provided the contention satisfies the criteria of 10 C.F.R. §§ 2.309(f)(1)(i)-(vi) and 2.309(f)(2) or (c).
- I To demonstrate financial qualification, an applicant for a combined license must show that it possesses funds or has “reasonable assurance of obtaining funds necessary to cover estimated” construction and fuel cycle costs. 10 C.F.R. § 50.33(f)(1).
- J A combined license is, in part, an operating license. Thus, 10 C.F.R. § 50.33(f), which states that an electric utility need not include operating and maintenance costs in its demonstration of financial qualification in an application for an operating license, also applies to an application for a combined license.
- K The purpose of the financial qualification requirements of 10 C.F.R. § 50.33(f) is to ensure the protection of public health and safety and the common defense and security, not to evaluate the financial wisdom of the proposed project. *Louisiana Energy Services, L.P.* (Claiborne Enrichment Center), CLI-97-15, 46 NRC 294, 303 (1997) (citing Financial Qualifications, 33 Fed. Reg. 9704 (July 4, 1968)).
- L The National Environmental Policy Act (NEPA) requires the consideration of all significant environmental impacts and all reasonable alternatives and is governed by the rule of reason. Thus, the decision as to whether an alleged environmental impact or alternative is significant or reasonable is the *merits* of a NEPA contention and should not be adjudicated at the contention admissibility stage under the guise of “materiality” or “scope.”
- M Avoidance of the NEPA merits does not require the admission of every allegation that an environmental impact must be considered or an alternative analyzed. If a NEPA contention alleges that impacts or alternatives that are patently outside the realm of reason must be considered, then the contention should be denied for failure to demonstrate that the issue raised is within the legitimate scope of NEPA as required by 10 C.F.R. § 2.309(f)(1)(iii).
- N NEPA applies only to NRC and not to the applicant. Thus, the primary criterion of the adequacy of the applicant’s Environmental Report is found in 10 C.F.R. Part 51, not NEPA.
- O While our construction of the provisions of 10 C.F.R. Part 51 mandating the contents of the applicant’s Environmental Report may be informed by consideration of general NEPA principles, we must look to the wording of the Part 51 regulations to determine if an ER is satisfactory or deficient.
- P The applicant’s Environmental Report is not the same as the NRC’s Environmental Impact Statement. While 10 C.F.R. § 51.45(b)(3) specifies that the ER impact analysis must include “sufficient data to aid” the Commission, and 10 C.F.R. § 51.45(c) specifies that the alternatives analysis must be “sufficiently complete to aid the Commission” in preparing the EIS, the regulations do not repeat the NEPA mandate that the ER be a “detailed statement” and do not mandate that the ER must be equivalent to the EIS.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- Q Section 2.309(f)(2) of 10 C.F.R. specifically recognizes that a challenge to the applicant's Environmental Report is different from a challenge to the NRC's Environmental Impact Statement or Environmental Assessment. Because the ER is the only environmental document available when NRC issues its notice of opportunity to request a hearing, all initial contentions necessarily focus on the adequacy of the applicant's ER under Part 51. But 10 C.F.R. § 2.309(f)(2) specifies that the public will have a new opportunity to file environmental contentions when the NRC Staff issues the EIS or EA. Such new contentions focus on the adequacy of the NRC Staff's EIS or EA under NEPA.
- R Although Contention 4 has multiple subparts, it presents a single major theme and was intended to be viewed as a whole. The criteria of 10 C.F.R. § 2.309(f)(1)(i)-(vi) apply to Contention 4 as a whole, with each subpart providing specific illustrations, examples or bases supporting the alleged omissions or deficiencies in the Environmental Report. While the Board will deny certain portions of Contention 4 as outside of the scope or too attenuated, applying all six criteria of 10 C.F.R. § 2.309(f)(1) to each subpart of the contention would inappropriately atomize it.
- S The requirement of Part 51 that the Environmental Report cover all significant environmental impacts associated with a project includes *offsite* impacts and is not limited to onsite environmental impacts. For example, Table S-3 to 10 C.F.R. § 51.51 covers numerous offsite environmental impacts associated with the licensing of nuclear power plants.
- T The fact that the Environmental Report is silent about the location of the offsite mining activities necessitated by the proposed project does not render a contention concerning such offsite environmental impacts inadmissible. If the environmental impact of such mining activities is potentially significant, then the failure of the ER to disclose the location of the offsite mine does not immunize it from being the subject of a legitimate contention.
- U Nothing in the NRC case law or regulations requires, at the contention admissibility stage, that a contention be supported by an expert opinion, substantive affidavits, or evidence. The regulations require that a petitioner provide a concise statement of the "alleged facts or expert opinion" that support the petitioner's position. 10 C.F.R. § 2.309(f)(1)(v). This disjunctive statement — alleged facts *or* expert opinion — makes clear that there is no requirement to have an expert or to provide an expert opinion. And it simply requires *alleged* facts, not proven facts or evidence.
- V The second half of 10 C.F.R. § 2.309(f)(1)(v) does not require that, to be admissible, a contention must be accompanied by facts, experts, affidavits, or evidence. It merely specifies that the contention include "references" to specific sources and documents, if any, that the petitioner "intends to rely on" to support its position.
- W The provision of 10 C.F.R. § 2.309(f)(vi) that requires the petition to include "sufficient information to show that a genuine dispute exists with the applicant/licensee on a material issue of fact" does not require the submission of expert affidavits or evidence in order for a contention to be admissible.
- X The requirement of 10 C.F.R. § 2.309(f)(1)(ii) that the petition include a "brief explanation of the basis" for the contention requires an explanation of the rationale or theory of the contention. It does not require the submission of evidence, expert opinions, or substantive affidavits. To the extent there are any requirements to provide "alleged facts or expert opinion," or "sufficient information," they are found in 10 C.F.R. § 2.309(f)(1)(v) and (vi).
- Y Environmental Reports and Environmental Impact Statements must include an assessment of all environmental impacts, even though they are regulated by another federal or state agency. This is supported by NRC regulations (10 C.F.R. § 51.71(d) n.3 and Part 51, Appendix A, § 5), the CEQ regulations (10 C.F.R. § 1502.14(c)), and the case law (*Natural Resources Defense Council, Inc. v. Morton*, 458 F.2d 827, 834-36 (D.C. Cir. 1972)).
- Z Environmental Reports and Environmental Impact Statements must include an assessment of all environmental impacts and alternatives, even though NRC has no jurisdiction to regulate such impacts or jurisdiction to impose such alternatives. This is supported by NRC regulations (10 C.F.R. § 51.71(d) n.3 and Part 51, Appendix A, § 5), the CEQ regulations (10 C.F.R. § 1502.14(c)), and the case law (*NRDC v. Morton*, 458 F.2d at 834-36).
- AA While Petitioners need to explain how or why they disagree with statements in the application or Environmental Report, there is no presumption, at the contention admissibility stage or otherwise, that statements and assessments in the application or ER are correct or accurate. To the contrary, the applicant, as the proponent of the license, bears the burden of proof. 10 C.F.R. § 2.325.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- BB NRC guidelines and regulatory guides are not legally binding on the Staff, the Board, or the Commission.
- CC While Part 51 requires that the Environmental Report consider all significant environmental impacts, it does not authorize NRC to regulate or enforce compliance with all other environmental laws and regulations. Part 51 and NEPA focus on assessment, not regulation.
- DD The fact that Contention 4 alleges that the Environmental Report “failed to address” a certain topic does not mean that it can only be a “contention of omission” and thus that any mention of the topic in the ER mandates the denial of the contention. Here, the contention acknowledges that the ER covered certain aspects of the topic, but goes on to allege that the ER failed to cover certain other aspects of the topic or covered them inadequately. In context, it is clear that Contention 4 is not just a “contention of omission” but is also a “contention of inadequacy” because it alleges that the ER is insufficient because it fails to discuss all aspects of the topic adequately.
- EE The portions of Contention 4 that concern the environmental impacts of offsite mining are rejected, not because the impacts occur offsite, but because the petitioner has failed to support these allegations with information indicating that such impacts (including indirect or cumulative) are even plausibly significant.
- FF The portions of Contention 4 that concern onsite and offsite impacts of active and passive dewatering associated with the proposed project satisfy the admissibility criteria of 10 C.F.R. § 2.309(f)(1)(i)-(vi).
- GG The portion of Contention 4 that alleges that the Environmental Report failed to address the alleged greenhouse gas and global climate disruption impacts resulting from “prematurely killing trees” is not admissible because the Petitioners have failed to support the proposition that the number of trees involved could, even arguably, be potentially significant or reasonably affect global warming. This is too remote and attenuated.
- HH The portions of Contention 4 that allege that, as a consequence of the failure to adequately address the environmental impacts described earlier in the contention, the Environmental Report also failed to adequately address the zone of environmental impact, impact on listed species, and appropriate mitigation are a fair and logical corollary and, to the extent the earlier portions of Contention 4 were admitted, these consequential portions of the contention are also admitted.
- II The applicant’s Environmental Report and the NRC’s Environmental Impact Statement are required to cover all significant environmental impacts of the proposed project, even if the regulation of such impacts falls outside of the NRC’s jurisdiction and lies with another agency. Thus, the fact the disposal of dredged or fill material in wetlands is regulated by USEPA and the U.S. Army Corps of Engineers does not render this portion of Contention 4 inadmissible.
- JJ The portions of Contention 4 that allege that the Environmental Report fails to address the “Guidelines for Specification of Disposal Sites for Dredged or Fill Material” stated in 40 C.F.R. Part 230 are not admissible because Petitioners fail to allege or explain how these guidelines relate to any alleged deficiency in the ER.
- KK NRC regulations require that nuclear reactors be designed to withstand certain postulated events or accidents, called “design basis accidents” or “DBAs.” By definition, a DBA results in negligible offsite consequences because the reactor is designed to handle such an event.
- LL NRC defines the term “severe accident” as a reactor accident more severe than a design basis accident where substantial damage is done to the reactor core, whether or not there are serious offsite consequences. Policy Statement on Severe Reactor Accidents Regarding Future Designs and Existing Plants, 50 Fed. Reg. 32,138 (Aug. 8, 1985).
- MM NRC safety regulations require that the combined license application address the mitigation and potential consequences of a “severe accident,” i.e., an accident that is beyond a “design basis accident.” 10 C.F.R. §§ 50.33(g), 50.34, 52.79(a)(1)(a)(vi).
- NN NEPA § 102(2)(C) requires that the NRC consider measures to mitigate the environmental impacts of the project and 10 C.F.R. § 51.45(c) requires that the Environmental Report analyze the “alternatives available for reducing or avoiding adverse environmental effects.”
- OO NRC requires that applicants examine and evaluate the consequences of severe accidents in both the AEA (safety) and NEPA (environmental) context. SAMA analyses must be site specific and given careful consideration in order to comply with NEPA and the AEA. *See Limerick Ecology Action, Inc. v. NRC*, 869 F.2d 719, 741 (3d Cir. 1989).
- PP A severe accident mitigation design analysis (SAMDA) is a subpart or element of a severe accident mitigation analysis (SAMA) that focuses on severe accident mitigation dealing with reactor design and

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- hardware issues. Licenses, Certifications and Approvals for Nuclear Power Plants, 72 Fed. Reg. 49,352, 49,426 (Aug. 28, 2007).
- QQ The existence of another independent nuclear power plant within the 10-mile-radius emergency planning zone (EPZ) (*see* 10 C.F.R. § 50.33(g)) of a proposed new nuclear power plant is a significant factor for purposes of emergency planning for the new reactor.
- RR The Board rejects the argument that the Waste Confidence Rule only applies to existing reactors and does not cover new or proposed reactors. The regulation specifically refers to “any reactor.” 10 C.F.R. § 51.23(a). When it was originally promulgated, the Commission explained that 10 C.F.R. § 51.23 was intended to cover “the storage of spent fuel in *new or existing* facilities.” Requirements for Licensee Actions Regarding the Disposition of Spent Nuclear Fuel upon Expiration of Reactor Operating Licenses, 49 Fed. Reg. 34,688, 34,689 (1984) (emphasis added). And, the regulation specifically refers to reactors to be covered by “combined licenses,” 10 C.F.R. § 51.23(b), none of which exist yet.
- SS Despite the Ninth Circuit’s holding in *San Luis Obispo Mothers for Peace v. NRC*, 449 F.3d 1016 (9th Cir. 2005), the Commission declined to require the agency (outside of the Ninth Circuit) to consider terrorist threats as part of the NEPA review process. *AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-07-8, 65 NRC 124, 126 (2007). The Third Circuit recently affirmed the Commission’s *Oyster Creek* decision in *New Jersey Department of Environmental Protection v. NRC*, 561 F.3d 132 (3d Cir. 2009).
- TT Part 61 of 10 C.F.R. only applies to the “land disposal of radioactive waste . . . *received from other persons*,” 10 C.F.R. § 61.1(a) (emphasis added), and is therefore inapplicable to the issue of Applicant’s management of low-level waste (LLW) generated and managed at the same site, i.e., Levy Units 1 and 2.
- UU In *Bellefonte*, the Commission stated, “we do not rule out that, in a future COL proceeding, a petitioner could proffer an application-specific contention suitable for litigation on the subject of onsite storage of low-level radioactive waste.” *Tennessee Valley Authority* (Bellefonte Nuclear Power Plant, Units 3 and 4), CLI-09-3, 69 NRC 68, 77 n.42 (2009). The Commission further concluded that “[t]he questions of the safety and environmental impacts of onsite low-level waste *storage* are, in our view, largely site- and design-specific, and appropriately decided in an individual licensing proceeding, provided that litigants proffer properly framed and supported contentions.” *Id.* at 76-77. Thus, based on *Bellefonte*, it is clear that there are elements of C7 and C8 that are specific to the PEF COLA, dealing with the environmental and safety consequences of the potential need for extended storage of LLW on the Levy site, and that satisfy the requirements of 10 C.F.R. § 2.309(f)(1).
- VV The duty to consider alternatives originates with two provisions of NEPA: (1) 42 U.S.C. § 4322(2)(C)(iii), which requires that an agency’s environmental impact statement (EIS) include “a detailed statement [of the] alternatives to the proposed action,” and (2) 42 U.S.C. § 4322(2)(E), which requires that an agency “study, develop and describe appropriate alternatives to recommended courses of action in any proposal which involves unresolved conflicts concerning alternative uses of available resources.”
- WW The goals of the project sponsor are given substantial weight in determining whether an alternative is reasonable. *City of New York v. U.S. Department of Transportation*, 715 F.2d 732, 742 (2d Cir. 1983). In this regard, “[a]n agency cannot redefine the [applicant’s] goals,” *Citizens Against Burlington, Inc. v. Busey*, 938 F.2d 190, 199 (D.C. Cir.), *cert. denied*, 501 U.S. 994 (1991), and the EIS alternatives analysis should be based around the applicant’s goals, including its economic goals. *Hydro Resources, Inc.* (P.O. Box 15910, Rio Rancho, NM 87174), CLI-01-4, 53 NRC 31, 55 (2001) (internal citations omitted).
- XX The NRC regulations state that “[a]n otherwise reasonable alternative will not be excluded from discussion solely on the ground that it is not within the jurisdiction of the NRC.” 10 C.F.R. Part 51, Subpart A, App. A, § 5.
- YY NEPA does not allow the applicant to define its goals so narrowly as to unreasonably circumscribe the range of alternatives that must be considered under 42 U.S.C. § 4322(2)(C)(iii) and (E).
- ZZ Furthermore, “NEPA requires an agency to ‘exercise a degree of skepticism in dealing with the self-serving statements from the prime beneficiary of the project’ and to look at the general goal of the project, rather than only those alternatives by which a particular applicant can reach its own specific goals.” *Environmental Law and Policy Center v. NRC*, 470 F.3d 676, 683 (7th Cir. 2006). An applicant “may not define the objectives of its action in terms so unreasonably narrow that only one alternative . . . would accomplish the [applicant’s] goals” because this would make the agency’s EIS alternatives analysis a “foreordained formality.” *Citizens Against Burlington, Inc. v. Busey*, 938 F.2d 190, 199 (D.C. Cir. 1991).

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- AAA While NRC does not consider CEQ pronouncements to be binding, they are entitled to substantial deference. *See Limerick*, 869 F.2d at 741.
- BBB The first step in assessing the admissibility of a new contention is to determine if it is timely under 10 C.F.R. § 2.309(f)(2)(iii) or nontimely under 10 C.F.R. § 2.309(c). If timely, then its admissibility is evaluated under the three-factor test of 10 C.F.R. § 2.309(f)(2)(i)-(iii). If nontimely, then its admissibility is evaluated under the eight-factor balancing test of 10 C.F.R. § 2.309(c)(i)-(viii).
- CCC By definition, contentions admitted under 10 C.F.R. § 2.309(f)(2)(i)-(iii) are timely because they are founded on material new information that was not available at the time when the petition was initially due. Contentions that meet the three criteria of this regulation are in no sense late, dilatory, or untimely.
- DDD The fact that a party integrates, consolidates, restates, or collects previously available information into a new document does not convert it into information that “was not previously available” within the meaning of 10 C.F.R. § 2.309(f)(2)(i).
- EEE A party cannot satisfy the “not previously available” standard of 10 C.F.R. § 2.309(f)(2)(i) by showing that, as a subjective matter, he or she only recently became aware of, or realized the significance of, public information that was previously available to all. The “not previously available” standard is an objective standard, not a subjective one.
- FFF In cases where information becomes available piecemeal over time, and the foundation for a new contention does not become reasonably apparent until the last piece of information becomes available and falls into place, the test of 10 C.F.R. § 2.309(f)(2)(i) may be met. In such “mosaic” cases, the admissibility decision turns on a determination about when, as a cumulative matter, the separate pieces of the information puzzle were sufficiently in place to make the particular concerns reasonably apparent. *Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), LBP-96-15, 44 NRC 8, 26 (1996). This is an objective standard.
- GGG The fact that NRC issues a proposed rulemaking and requests comments does not, in itself, constitute information “not previously available” that entitles a party to file a new contention under 10 C.F.R. § 2.309(f)(i).
- HHH The substantive standard for allowing parties to conduct cross-examination is the same under 10 C.F.R. Part 2, Subparts G and L. It is the standard set by 5 U.S.C. § 556(d) of the Administrative Procedure Act, whereby a party is “entitled to conduct such cross-examination as may be required for a full and true disclosure of the facts.” *See Citizens Awareness Network, Inc. v. NRC*, 391 F.3d 338, 351 (1st Cir. 2004).
- III The procedure for allowing parties to conduct cross-examination differs under 10 C.F.R. Part 2, Subparts G and L. Cross-examination occurs virtually automatically in Subpart G hearings, subject to normal judicial management and the requirement to file a cross-examination plan. *See* 10 C.F.R. §§ 2.319 and 2.711(c). In contrast, under Subpart L, a party seeking to conduct cross-examination must file a written motion and obtain leave from the Board. 10 C.F.R. § 2.1204(b).
- JJJ Under 10 C.F.R. §§ 2.309(g) and 2.310, the Board determines which hearing procedure will be used (Subpart G or L) on a contention-by-contention basis.
- KKK Section 2.310(b)-(k) of 10 C.F.R. specifies circumstances where a particular hearing procedure is required. If no particular procedure is required, then, under 10 C.F.R. § 2.310(a) the Board *may* conduct the proceeding for that contention under Subpart L. But, even then, the Board must exercise its discretion and select the hearing procedure most appropriate for the newly admitted contentions.
- LLL The selection of hearing procedures for contentions at the outset of a proceeding is not immutable, because, *inter alia*, the availability of Subpart G procedures under 10 C.F.R. § 2.310(d) depends critically on the credibility of eyewitnesses, and the identity of such witnesses may not be known until after the contentions are admitted.
- LBP-09-11 ANDREW J. SIEMASZKO, Docket No. IA-05-021-EA (ASLBP No. 05-839-02-EA); ENFORCEMENT; July 16, 2009; ORDER (Approving Proposed Settlement Agreement and Dismissing Proceeding)
- A The Licensing Board approved a settlement agreement between Andrew Siemaszko and the Nuclear Regulatory Commission. Under the Settlement Agreement, Mr. Siemaszko’s 5-year debarment would be effective from the date of the April 21, 2005 Order, which prohibited his involvement in NRC-licensed activities for a period of 5 years, and would terminate on April 21, 2010. All other terms of the Order would remain in effect.
- B A licensing board must be satisfied that the terms of a proposed Settlement Agreement reflect a fair and reasonable resolution of the matter at hand and is in keeping with the objectives of the NRC’s Enforcement Policy and satisfies the requirements of 10 C.F.R. § 2.338(g) and (h).

**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- LBP-09-12 HIMAT SONI, DHIRAJ SONI, and EASTERN TESTING AND INSPECTION, INC., Docket Nos. IA-08-023, IA-08-022 (EA-08-174) (ASLBP Nos. 09-882-02-EA-BD01, 09-881-01-EA-BD01); ENFORCEMENT; July 16, 2009; ORDER (Accepting Proposed Settlement and Dismissing Proceeding)
- A In this enforcement proceeding the licensing board approves the parties' settlement agreement pursuant to 10 C.F.R. § 2.338(i), finding that its terms reflect a fair and reasonable settlement of the matters at issue, that it satisfies the requirements of 10 C.F.R. § 2.338(g) and (h), and that the public interest requires no further adjudication.
- LBP-09-13 COGEMA MINING, INC. (Irigaray and Christensen Ranch Facilities), Docket No. 40-08502-MLR (ASLBP No. 09-887-01-MLR-BD01); MATERIALS LICENSE RENEWAL; July 23, 2009; MEMORANDUM AND ORDER (Ruling on Petition for Review and Request for Hearing)
- A A petitioner's participation in an NRC licensing proceeding requires that it demonstrate that it has standing as specified in 10 C.F.R. § 2.309(a) and (d).
- B The Commission states that it customarily follows judicial concepts of standing. These require that the party show three elements: injury-in-fact, causation, and redressability.
- C The Supreme Court has defined "injury-in-fact" as an invasion of a legally protected interest which is concrete and particularized and actual or imminent rather than conjectural or hypothetical. An injury-in-fact must go beyond generalized grievances to affect a petitioner "in a personal and individual way." *Lujan v. Defenders of Wildlife*, 504 U.S. 555, 560 n.1 (1992).
- D To establish causation, a petitioner must show that there is a causal connection between the injury-in-fact and the conduct complained of. The injury has to be fairly traceable to the challenged action of the defendant. In NRC source materials licensing cases, the petitioner has the burden to show a plausible chain of causation between the challenged licensing activities and the alleged injury. *See USEC Inc.* (American Centrifuge Plant), CLI-05-11, 61 NRC 309, 311-12 (2005). This does not require that the injury flow directly from the challenged action, but only that the chain of causation is plausible. *Sequoyah Fuels Corp. and General Atomics* (Gore, Oklahoma Site), CLI-94-12, 40 NRC 64, 75 (1994).
- E Redressability requires a petitioner to show that its alleged injury-in-fact could be cured or alleviated by some action of the tribunal.
- F An organization must satisfy one of two additional criteria in order to establish standing. It must demonstrate either organizational standing or representational standing.
- G To establish organizational standing under 10 C.F.R. § 2.309(d)(1), an organization must demonstrate that the action at issue will cause an injury-in-fact to the organization's interest. The Supreme Court has stated that an injury-in-fact necessary to establish organizational standing must be more than a "mere interest in a problem," and must go beyond asserting an injury to a generalized interest — i.e., an interest in protecting the environment, an interest in preserving national parks — and instead establish that the organization itself is suffering, or will suffer, from a specific, concrete harm caused by the challenged action. In addition, an organization, like an individual, must satisfy the causation and redressability requirements.
- H Alternatively, an organization can demonstrate representational standing by (1) showing that the interests of at least one of its members will be harmed, (2) showing that the member would have standing in his or her own right, (3) identifying that member by name and address, and (4) demonstrating that the organization is authorized to request a hearing on behalf of that member.
- I The Oglala Delegation of the Great Sioux Nation Treaty Council has failed to establish that it is a "Federally-recognized Indian Tribe" within the meaning of 10 C.F.R. §§ 2.309(d)(2)(i) or 2.315(c). These regulations were promulgated to comply with Executive Order 13,084 which defines a "Federally-recognized Indian Tribe" as one that is included on the Bureau of Indian Affairs' list of federally recognized Indian Tribes published in the *Federal Register*.
- J Under 10 C.F.R. §§ 2.309(d)(2)(i) or 2.315(c), a group whose name is included on the Bureau of Indian Affairs list is a "Federally-recognized Indian Tribe," and any organization, tribe, or otherwise, whose name does not appear on the list, is not a "Federally-recognized Indian Tribe."
- K The Bureau of Indian Affairs' list of federally recognized Indian Tribes does not include the names of the "Oglala Lakota" or the "Oglala Delegation of the Great Sioux Nation Treaty Council." Therefore, these groups do not constitute federally recognized Indian Tribes within the meaning of 10 C.F.R. §§ 2.309(d)(2)(i) or 2.315(c).
- L The Oglala Delegation of the Great Sioux Nation Treaty Council has failed to establish that it is a "local governmental body" within the meaning of 10 C.F.R. §§ 2.309(d)(2)(i). Even assuming that

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

the Delegation has some governmental functions, not all entities with governmental ties are entitled to participate in licensing proceedings as local governmental bodies. *Consumers Energy Co.* (Palisades Nuclear Plant), CLI-07-18, 65 NRC 399, 412 n.37 (2007). An entity wishing to participate as a local governmental body must demonstrate that it goes beyond an advisory role and exercises “executive or legislative responsibilities.” *Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), CLI-98-21, 48 NRC 185, 203 (1998).

M The fact that the great-grandfather of one of the members of the Oglala Delegation of the Great Sioux Nation Treaty Council signed several treaties with the United States more than 100 years ago does not establish that the Delegation is a current and official successor to the delegation that signed such treaties, or that the Delegation is a local governmental entity that currently exercises executive or legislative authority over the Oglala Lakota.

N The Oglala Delegation of the Great Sioux Nation Treaty Council has failed to establish that the proposed in-situ leach mining activities on the Irigaray and Christensen ranches are “within [the Delegation’s] boundaries” within the meaning of 10 C.F.R. § 2.309(d)(2)(i). Although the Irigaray and Christensen mines are located on lands that were once reserved to the Oglala Lakota under the Fort Laramie Treaty of 1868, the Supreme Court has ruled that the 1868 treaty was abrogated by the Fort Laramie Treaty of 1877, and that these lands no longer belong to the Oglala Lakota. *United States v. Sioux Nation of Indians*, 448 U.S. 371 (1980).

O The Oglala Delegation of the Great Sioux Nation Treaty Council has failed to establish that it has organizational standing pursuant to 10 C.F.R. § 2.309(d)(1) because it has failed to establish that it has a legal right, under the National Historic Preservation Act, to be consulted with regard to cultural artifacts found on the Cogema sites. Under 36 C.F.R. § 800.16(m), only Indian Tribes that appear on the Department of the Interior’s list of federally recognized Indian Tribes have consultation rights under the NHPA. The Delegation is not on this list. As such, any claims of injury as a result of Cogema’s or NRC Staff’s failure to consult with the Delegation are not cognizable in this proceeding.

P The Delegation has failed to establish that it has organizational standing pursuant to 10 C.F.R. § 2.309(d)(1) because even assuming, *arguendo*, that (a) the Cogema mines release contaminants, and (b) there are health problems on the Pine Ridge Indian Reservation, the Delegation provides no plausible chain of causation or connection between the two. The Delegation fails to address how the contamination might migrate 150 miles from the Cogema mines to the Pine Ridge Reservation.

Q The Trust Responsibility requires federal agencies to take actions or refrain from taking actions “in fulfillment of [Congress’s] duty to protect the Indians.” *United States v. Navajo Nation*, 537 U.S. 488 (2003). In the case before us, however, the Board has been presented with no plausible chain of causation whereby the Delegation or its members might be adversely affected by the Cogema mining operation. Without some plausible connection between the Indian people and the mine, we fail to see how the Trust Responsibility is triggered.

R The Oglala Delegation of the Great Sioux Nation Treaty Council has failed to establish that it has representational standing pursuant to 10 C.F.R. § 2.309(d)(1) because it has not shown a concrete and particularized injury-in-fact to Chief Oliver Red Cloud (the only individual named in the Delegation’s petition) that is plausibly connected to the Cogema mining operations. Absent a showing of standing for Chief Red Cloud in his own right, the Board cannot grant the Delegation representational standing on his behalf.

S The Powder River Basin Resource Council has failed to establish organizational standing under 10 C.F.R. § 2.309(d)(1). In order to establish organizational standing, a petitioner must allege “more than an injury to a cognizable interest.” *Sierra Club v. Morton*, 405 U.S. 727, 734-35 (1972). The Council listed its interests — clean air, clean water, etc. — but did not demonstrate how these interests would be adversely affected by mining operations. The Council merely lists interests that we find are too generalized to qualify as injuries-in-fact under *Sierra Club v. Morton*.

T The Powder River Basin Resource Council has failed to establish representational standing under 10 C.F.R. § 2.309(d)(1) because it failed to identify a member who has standing in his or her own right and who authorizes the Council to represent him or her in this proceeding.

LBP-09-14 DAVID B. KUHL, II (Denial of Senior Reactor Operator License), Docket No. 55-62335-SP (ASLBP No. 09-891-01-SP-BD01); REACTOR OPERATOR LICENSE; July 28, 2009; MEMORANDUM AND ORDER (Regarding Request for Hearing)

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- A The Licensing Board concludes that because Mr. Kuhl no longer works for the facility for which he seeks a senior reactor operator license, there is no possible remedy for his claim. Therefore the Board dismisses Mr. Kuhl's claim as moot.
- B Any senior reactor operator (SRO) license is "limited to the facility for which it is issued." 10 C.F.R. § 55.53(b).
- C Any SRO license automatically expires "upon termination of employment with the facility licensee." 10 C.F.R. § 55.55(a).
- D The Commission has recognized that, despite not being constitutionally limited by the case or controversy requirement of Article III, common sense counsels against proceeding with an adjudication where no effective relief can be granted. *See, e.g., Texas Utilities Electric Co.* (Comanche Peak Steam Electric Station, Unit 2), CLI-93-10, 37 NRC 192, 204 (1993) (dismissing appeal as moot where "[n]o effective relief can be granted the Petitioners even if they were to prevail on their claim"). In similar circumstances, where an applicant had proposed that an SRO license be both issued and cancelled retroactively, the Commission declined to engage in such "an empty exercise." *Alfred J. Morabito* (Senior Operator License for Beaver Valley Power Station, Unit 1), CLI-88-4, 28 NRC 5, 6 (1988).
- LBP-09-15 CALVERT CLIFFS 3 NUCLEAR PROJECT, LLC, and UNISTAR NUCLEAR OPERATING SERVICES, LLC (Calvert Cliffs Nuclear Power Plant, Unit 3), Docket No. 52-016-COL (ASLBP No. 09-874-02-COL-BD01); COMBINED LICENSE; July 30, 2009; MEMORANDUM AND ORDER (Granting Motion for Summary Disposition of Contention 2)
- A We conclude that the financial test for a parent company guarantee is a material issue because the Staff must decide whether the test is satisfied in order to grant the COL.
- B The mootness doctrine derives from the Constitution's limitation of federal courts' jurisdiction to "cases" or "controversies." The Commission has explained that, although it "is not strictly bound by the doctrine, the agency's adjudicatory tribunals have generally adhered to the principle." *Advanced Medical Systems, Inc.* (One Factory Row, Geneva, Ohio 44041), CLI-93-8, 37 NRC 181, 185 (1993) (citing *Northern States Power Co.* (Prairie Island Nuclear Generating Plant, Units 1 and 2), ALAB-455, 7 NRC 41, 54 (1978)).
- C The Commission has further stated that a contention alleging that a license application omits material information becomes moot when the applicant cures the omission. *Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-28, 56 NRC 373, 383 (2002).
- D In general, when a claim becomes moot in federal court, the court loses jurisdiction to decide the merits of that claim. But, as noted in a leading treatise on federal court practice and procedure, a decision on the merits "may be appropriate if the same basic dispute is likely to recur in the future, unless it seems sufficient to await the event or better to defer to another court." 13A Charles Alan Wright et al., *Federal Practice and Procedure* § 3533.2 (2nd ed. 1984) (footnote omitted); *see also In re Campbell*, 628 F.2d 1260, 1262 (9th Cir. 1980); *Kodiak Oil Field Haulers, Inc. v. Teamsters Union Local No. 959*, 611 F.2d 1286, 1290 (9th Cir. 1980).
- E We are not invariably required to avoid consideration of a legal issue in circumstances where a federal court would do so. When a federal court dismisses a claim as moot and avoids any further consideration of the merits of that claim, it does so because the claim no longer satisfies the case or controversy requirement of Article III, a requirement rooted in the separation of powers. Although the Commission commonly looks to Article III concepts for guidance, we are not required to automatically follow them in all respects because NRC proceedings are not subject to Article III. *See Envirocare of Utah v. NRC*, 194 F.3d 72, 75 (D.C. Cir. 1999); *Quivira Mining Co.* (Ambrosia Lake Facility, Grants, New Mexico), CLI-98-11, 48 NRC 1, 6 n.2 (1998); *International Uranium (USA) Corp.* (Receipt of Material from Tonawanda, New York), CLI-98-23, 48 NRC 259, 264 (1998).
- F A finding of mootness does not necessarily preclude all consideration of the merits in NRC proceedings, even if it would have that effect in federal court, and that we may consider the merits to the extent doing so will promote the fair and expeditious resolution of the case before us and there are no significant countervailing concerns.
- G A finding that a license applicant has cured an omission does not preclude litigation concerning the adequacy of the information the applicant has supplied.
- H NRC regulations permit the filing of new or amended contentions based on new information, and the filing of late contentions if sufficient justification is provided. 10 C.F.R. § 2.309(f)(2) and (c).

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- I We find sufficient basis in both the text and structure of the regulations and the administrative history to show that a COLA must provide reasonable assurance of adequate decommissioning funding, that this assurance must identify the method or methods of funding the applicant plans to use, and that the assurance must provide the information required by 10 C.F.R. § 50.75(e)(1)(iii)(B) if the applicant plans to use a parent company guarantee.
- J For COLs, the final signed documents providing the financial assurance are not due until 30 days after the notice issued pursuant to 10 C.F.R. § 52.103(a).
- K The requirement that the decommissioning report specify not only the amount of financial assurance but the method of providing such assurance follows from the language and structure of 10 C.F.R. § 50.75(b). That section both requires that power reactor applicants submit a decommissioning report and, in section 50.75(b)(1)-(4), specifies information that the report must include. We must construe the four numbered paragraphs of section 50.75(b) in light of their placement in the regulatory scheme. *Bailey v. United States*, 516 U.S. 137, 145 (1995).
- L The most natural way to read a provision that sets forth a general obligation (in this instance, the obligation to submit the decommissioning report) followed by a set of specific requirements is that the specific requirements provide the details necessary to fulfilling the general obligation. That is how we read section 50.75(b) in its entirety. See *Textron Lycoming Reciprocating Engine Division, Avco Corp. v. United Automobile, Aerospace, Agricultural Implement Workers of America, International Union*, 523 U.S. 653, 657 (1998) (“[I]t is a ‘fundamental principle of statutory construction . . . that the meaning of a word cannot be determined in isolation, but must be drawn from the context in which it is used.’” (quoting *Deal v. United States*, 508 U.S. 129, 132 (1993))).
- M Under the plain meaning of the regulations, the requirement that the designated amount of financial assurance be “covered by” an acceptable method arises concurrently with the requirement that the applicant submit a decommissioning report to the NRC. It cannot plausibly be construed as remaining inchoate for years after the report is submitted, and only springing into life after the license is issued and the licensee is ready to load fuel.
- N Since the requirement of section 50.75(b)(3) applies to the amount of financial assurance specified in the decommissioning report, we think it readily apparent that the report must explain how that requirement will be fulfilled.
- O Section 50.75(b)(3) requires that the decommissioning amount be covered by a method acceptable to the NRC. Section 50.75(b)(3) appears within a section of the regulations that lists the requirements for the decommissioning report. That context means that the report must explain how the requirement of section 50.75(b)(3) will be satisfied. The report must do so for the NRC Staff to determine whether the amount of financial assurance stated in the decommissioning report is in fact covered by a method acceptable to the NRC, as section 50.75(b)(3) states that it must be.
- P The decommissioning report must identify the method of providing financial assurance if the report is to “indicat[e] how reasonable assurance will be provided that funds will be available to decommission the facility,” as required by 10 C.F.R. § 50.33(k)(1).
- Q The fact that the Commission included language deferring the obligation that would otherwise apply to COL applicants in section 50.75(b)(4), but included no equivalent provision in section 50.75(b)(3), confirms that the Commission did not intend to defer the requirement of section 50.75(b)(3) until after the license is issued. We interpret the failure to include such a deferral in section 50.75(b)(3) as deliberate, not inadvertent. Accordingly, the requirement imposed upon COL applicants by section 50.75(b)(3), which on its face applies concurrently with the duty to submit a decommissioning report, may not be deferred until after the COL is issued.
- R The report itself must explain “how reasonable assurance will be provided.” 10 C.F.R. § 50.33(k)(1). This means that the COL applicant must identify the method of decommissioning funding assurance it proposes to use and show that the method complies with any applicable financial test. If the applicant merely stated the method of funding but failed to show that an applicable financial test is satisfied, it would fail to demonstrate that the amount of financial assurance is “covered by” one or more of the funding methods identified in section 50.75(e) as acceptable to the NRC. 10 C.F.R. § 50.75(b)(3). A parent company guarantee, standing alone, is not a funding method identified in section 50.75(e) as acceptable to the NRC. A parent company guarantee is only an acceptable method of providing financial assurance “if the guarantee and test are as contained in appendix A to 10 CFR part 30.” 10 C.F.R. § 50.75(e)(1)(iii)(B).

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

Compliance with section 50.75(b)(3) therefore requires that the applicant demonstrate compliance with any applicable financial test.

S The holder of a COL must begin filing biannual reports on the status of decommissioning funding once the Commission has made a finding that all acceptance criteria in the license have been met. 10 C.F.R. § 50.75(f)(1) (citing 10 C.F.R. § 52.103(g)). The reports must include the information specified in section 50.75(f)(1), including “any modification occurring to a licensee’s current method of providing financial assurance since the last submitted report.” *Id.*

T We recognize that the Commission provided flexibility to licensees to change their method of decommissioning funding during the many years that will elapse before decommissioning actually takes place. But this in no way alters the requirement that the amount of financial assurance certified in the decommissioning report must be covered by a method acceptable to the NRC. If the licensee changes its method of decommissioning funding assurance, the new method will also have to pass any applicable financial test.

U The Commission allows COL applicants to delay submission of the financial instrument until after licensing, reasoning that “requiring the combined license applicant to comply with the current requirement in § 50.75(b)(4) . . . would place a more stringent requirement on the combined license applicant, inasmuch as that applicant would be required to fund decommissioning assurance at an earlier date as compared with the operating license applicant.” Licenses, Certifications, and Approvals for Nuclear Power Plants, 72 Fed. Reg. 49,352, 49,406-7, 49,502-3 (Aug. 28, 2007).

V The Commission did not change the requirement of section 50.75(b)(3) that decommissioning funding must be covered by one of several methods as set forth in section 50.75(e); nor did it modify section 50.75(e)(1)(iii)(B), which precludes an applicant from relying on a parent company guarantee unless the parent meets the financial test in Appendix C to 10 C.F.R. Part 30. Thus, the Commission did not excuse a COL applicant from identifying in its license application the funding mechanism it has chosen, or from showing that it is eligible to rely on that decommissioning funding mechanism.

W These requirements do not force applicants to actually fund decommissioning assurance, but only to explain how it will be funded and to show that the funding mechanism can satisfy any applicable financial test.

X The applicant’s compliance with these requirements is a material factor in the COL proceeding and, as such, may properly be challenged in an adjudicatory hearing.

Y Contention 2 is moot because the Applicant has shown that it provided the information required by Appendix A to Part 30, and because the Intervenor has not set forth facts sufficient to create a genuine dispute on that issue as required to survive a motion for summary disposition.

LBP-09-16 DETROIT EDISON COMPANY (Fermi Nuclear Power Plant, Unit 3), Docket No. 52-033-COL (ASLBP No. 09-880-05-COL-BD01); COMBINED LICENSE; July 31, 2009; MEMORANDUM AND ORDER (Ruling on Hearing Requests)

A This 10 C.F.R. Part 52 proceeding concerns the application of Detroit Edison Company (DTE) to construct and to operate a new boiling water reactor on its existing Fermi nuclear facility site near Newport City in Monroe County, Michigan. The proposed reactor is designated Unit 3 and would employ the GE-Hitachi Economic Simplified Boiling Water Reactor (ESBWR) design. The Licensing Board ruled that all the Petitioners met the necessary prerequisites for the Board to grant a hearing request by establishing standing to intervene in the proceeding and advancing, in part, four admissible contentions.

B NRC’s proximity presumption does not disregard contemporaneous judicial concepts of standing, as suggested by the Applicant, but rather the Commission applied its expertise to determine that persons living within a 50-mile radius of a nuclear reactor “face a realistic threat of harm if a release of radioactive material were to occur from the facility.” *Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), LBP-09-4, 69 NRC 170, 183 (2009). It is for this reason that the Commission has chosen not to require independent showings of injury, causation, and redressibility. *Florida Power & Light Co.* (St. Lucie Nuclear Power Plant, Units 1 and 2), CLI-89-21, 30 NRC 325, 329 (1989); *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), LBP-01-6, 53 NRC 138, 150 (2001). The nontrivial increased risk constitutes injury-in-fact, is traceable to the challenged action (the NRC’s licensing of a new nuclear reactor), and is likely to be redressed by a favorable decision that either denies a license or mandates compliance with legal requirements that protect the interests of the petitioners. *Lujan v. Defenders of Wildlife*, 504 U.S. 555, 560-61 (1992).

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- C In *Yankee Rowe* the Commission ruled that “once a party demonstrates that it has standing to intervene on its own accord, that party may then raise any contention that, if proved, will afford the party relief from the injury it relies upon for standing.” *Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), CLI-96-1, 43 NRC 1, 6 (1996). The Commission recently confirmed that, rather than requiring a “nexus” between the claimed injury and the contention, “*Yankee Rowe* requires a nexus between the injury and the relief.” *Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), CLI-09-9, 69 NRC 331, 340 (2009). When the denial of a license would alleviate a petitioner’s asserted potential injury, the Commission held that any admissible contention with such a result can be prosecuted by a petitioner, regardless of whether that contention is directly related to that petitioner’s articulated injury. *Crow Butte Res., Inc.*, CLI-09-9, 69 NRC at 340.
- D Petitioners state that they are concerned that the construction and operation of Fermi Unit 3 might adversely affect their health and safety and the environment in which they live. The safety-related contentions the Petitioners raise, if successful, will afford relief from the asserted injuries by requiring denial or modification of the license.
- E Because NEPA is a procedural statute, the Petitioners need not show that favorable rulings on their NEPA contentions will require denial of the license, but rather that favorable rulings will require that procedures intended for protection of their members’ concrete interests will be observed. *Lujan v. Defenders of Wildlife*, 504 U.S. at 573 n.7. Favorable rulings on the Petitioners’ NEPA contentions would ensure that procedures are observed that require adequate analysis of potential impacts to their members’ health and safety and to the environment where the members reside. Thus, all of the Petitioners’ contentions, if proved, will afford relief from the injuries relied upon for standing.
- F The Petition refers to safety and security issues only in the context of discussing the environmental effects that must be evaluated under NEPA. The Petition fails to identify any NRC safety regulations requiring that the COLA be supplemented with additional information concerning LLRW management. Only in their reply brief did the Petitioners claim that Contention 3 includes a separate safety contention and provide citations to NRC safety regulations that they claim require the Applicant to provide updated information concerning LLRW management. But “a reply cannot expand the scope of the arguments set forth in the original hearing request.” *Crow Butte Resources, Inc.* (North Trend Expansion Project), CLI-09-12, 69 NRC 535, 568 (2009).
- G The portion of a contention disputing the cost estimate for decommissioning is an indirect challenge to 10 C.F.R. § 50.75(c). The Applicant developed the cost estimate using the formula required by the regulation, which includes, among other things, an escalation factor for waste burial. The Petitioners do not claim that the Applicant used the formula incorrectly. Rather, they appear to argue that the cost estimate should be increased above the estimate developed pursuant to the regulation because of the alleged need to permanently store or dispose of LLRW onsite during decommissioning. When a Commission regulation permits the use of a particular analysis, a contention asserting that a different analysis or technique should be utilized is inadmissible because it indirectly attacks the Commission’s regulations. *Metropolitan Edison Co.* (Three Mile Island Nuclear Station, Unit 1), LBP-83-76, 18 NRC 1266, 1273 (1983).
- H A licensing board may not admit a contention that directly or indirectly challenges Table S-3 of 10 C.F.R. § 51.51. *Tennessee Valley Authority* (Bellefonte Nuclear Power Plant, Units 3 and 4), CLI-09-3, 69 NRC 68, 75 (2009). Table S-3 assumes that solid, low-level waste from reactors will be disposed of through shallow land burial, and concludes that this kind of disposal will not result in the release of any “significant effluent to the environment.” *Bellefonte*, CLI-09-3, 69 NRC at 75 n.30. We may not admit a contention that directly or indirectly challenges that assumption or conclusion. Thus, the Applicant must rely upon Table S-3 to evaluate the environmental consequences of the permanent disposal of LLRW from Fermi Unit 3, as it did, and we may not require it to reexamine issues resolved by Table S-3.
- I A petitioner could proffer an application-specific contention suitable for litigation on the subject of onsite storage of low-level radioactive waste. *Bellefonte*, CLI-09-3, 69 NRC at 77 n.42. The questions of the safety and environmental impacts of onsite low-level waste storage are largely site- and design-specific, and appropriately decided in an individual licensing proceeding, provided that litigants proffer properly framed and supported contentions. *Bellefonte*, CLI-09-3, 69 NRC at 76-77.
- J A Licensing Board may, without creating a conflict with Table S-3, admit an application-specific contention concerning the environmental and public health consequences of the need for extended onsite storage of LLRW, assuming that contention satisfies the requirements of 10 C.F.R. § 2.309(f)(1).

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- K Boards may reformulate contentions to “eliminate extraneous issues or to consolidate issues for a more efficient proceeding.” *North Trend*, CLI-09-12, 69 NRC at 552.
- L NEPA requires that an EIS provide a detailed statement concerning among other things, “the environmental impact of the proposed action,” “any adverse environmental effects which cannot be avoided should the proposal be implemented,” and “any irreversible and irretrievable commitments of resources which would be involved in the proposed action should it be implemented.” 42 U.S.C. § 4332(C)(i), (ii), (v). The NRC regulations governing preparation of the ER require that it discuss the same subjects. 10 C.F.R. § 51.45(b)(1), (2), (5). In addition, the NRC regulations provide that the information submitted in the ER pursuant to these requirements “should not be confined to information supporting the proposed action but should also include adverse information.” *Id.* § 51.45(e). In substance, Contention 3 alleges that the discussion of LLRW management in the ER does not reflect current conditions but rather those that existed when Michigan reactors could ship LLRW to an offsite disposal facility, and therefore the ER fails to accurately describe the proposed action and its impact on the environment. Contention 3 thus alleges omissions from the analysis required by NEPA and 10 C.F.R. § 51.45(b) and (e). Accordingly, it is material to the ER’s compliance with the NRC’s Part 51 regulations and to the Agency’s compliance with NEPA.
- M Even if the text of Part 51 does not conclusively resolve a question concerning the content of the ER, we may resort to case law and regulations construing the NEPA requirements for the EIS that correspond to the requirements section 51.45(b) imposes upon the ER.
- N Section 51.45(b)(2) requires that the ER discuss “[a]ny adverse environmental effects which cannot be avoided should the proposal be implemented,” the same subject that NEPA § 102(2)(C)(ii) requires be covered in the EIS. Because the NRC regulation repeats verbatim the NEPA language that the Supreme Court construed to require “a detailed discussion of possible mitigation measures,” and because the analysis in the ER is the foundation upon which the Agency’s EIS will be prepared, the ER should also discuss the measures the Applicant intends to use to mitigate adverse environmental consequences. If it did not, it would not provide the Staff with the information it needs to prepare the EIS in compliance with NEPA.
- O NEPA case law and CEQ regulations concerning NEPA § 102(2)(C)(i)-(v) provide useful guidance in interpreting the corresponding provisions in 10 C.F.R. § 51.45(b)(1)-(5). 40 C.F.R. §§ 1500-1517. “[A] regulation must be interpreted so as to harmonize with and further [ ] not to conflict with the objective of the statute it implements. [Courts] must construe [regulations] in light of the statute[s] they implement [ ], keeping in mind that where there is an interpretation of an ambiguous regulation which is reasonable and consistent with the statute, that interpretation is to be preferred.” *Western Fuels-Utah, Inc.*, 900 F.2d 318, 320 (D.C. Cir. 1990).
- P Given that the ER provides the foundation upon which the EIS is built, the environmental considerations the applicant must address in the ER pursuant to section 51.45(b)(1)-(5) should be construed consistently with the environmental issues the Staff must address in the EIS pursuant to NEPA § 102(2)(C)(i)-(v). The Commission has made it clear that issues arising under NEPA, not just those arising under Part 51, are a material basis for challenging the ER.
- Q For a contention of omission, the petitioner’s burden is to show the facts necessary to establish that the application omits information that should have been included.
- R For purposes of a NEPA contention, the crucial question is not merely whether the Applicant has a plan for managing its Class B and C wastes but whether that plan, and any onsite environmental impacts it may produce, is disclosed in the ER. NEPA § 102(2)(C) requires a “detailed statement” from the agency of the environmental consequences of the planned federal action. Similarly, section 51.45(b) directs that the ER “discuss” the environmental consequences that will be the subject of the agency’s detailed statement.
- S Under section 2.309(f)(1)(vi), when an application is alleged to be deficient, the petitioner must identify the deficiencies and provide supporting reasons for its position that such information is required.
- T Contention 5 properly asserts a contention of omission with regard to onsite measurements of distribution coefficients, retardation factors, and porosity from the COLA. The Petitioners provide a regulatory citation to 10 C.F.R. § 100.20(c)(3), which states that “[f]actors important to hydrological radionuclide transport (such as soil, sediment, and rock characteristics, adsorption and retention coefficients, ground water velocity, and distances to the nearest surface body of water) must be obtained from on-site measurements.” 10 C.F.R. § 100.20(c)(3). The Petitioners contend that the Applicant itself acknowledges in its response to the RAI that the COLA does not present site-specific measurements of adsorption and retention coefficients. Thus, this is a properly pleaded contention of omission and we admit it as such.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- U The Petitioners identify an exceedance of regulatory limits in the Applicant's radionuclide transport in groundwater as documented in the FSAR. The Applicant stated in its FSAR that its proposed mitigating design features preclude an accidental release of liquid effluents, and thus an accidental release to ground and surface water was not assessed in the FSAR. Even though the Applicant asserts that this issue is not material because of forthcoming data and analysis, a Licensing Board must analyze issues based on information currently at hand. Thus, the Petitioners have correctly demonstrated a dispute with the Applicant on a material issue of law. *See* 10 C.F.R. § 2.309(f)(1)(vi).
- V A bare assertion without the requisite support for those claims is inadequate to support the admission of a contention. *Fansteel, Inc.* (Muskogee, Oklahoma Site), CLI-03-13, 58 NRC 195, 203 (2003).
- W Issues associated with the Applicant's compliance, or lack thereof, with NRC facility decommissioning regulations are outside of the scope of this proceeding. This issue addresses a concern that is purely speculative at this juncture, and will more appropriately be addressed at the license termination stage. Thus, the claims related to the decommissioning of the facility are not currently ripe for review and outside the scope of this proceeding. 10 C.F.R. § 2.309(f)(1)(iii).
- X We deny the Petitioners' request for an opportunity to modify this contention. The rules for filing of new or amended contentions based on previously unavailable information, as well as untimely contentions, 10 C.F.R. § 2.309(f)(2)(c), allow procedural opportunities for the Petitioners to raise these concerns at a time more appropriate for addressing them.
- Y The fact that an environmental impact is regulated by another federal agency or by a state does not justify the exclusion of the analysis in the Applicant's ER or the NRC's EIS. *See* 10 C.F.R. § 51.71(d) n.3 and Part 51, Appendix A, § 5. *See also* 40 C.F.R. § 1502.14(c); *Natural Resources Defense Council, Inc. v. Morton*, 458 F.2d 827, 834-36 (D.C. Cir. 1972). Thus, we are not persuaded by the Staff's argument that the impact to water quality from effluent discharge at the proposed Fermi Unit 3 is outside the scope of this proceeding simply because FWPCA prohibits federal agencies other than EPA from imposing their own effluent limits. While NEPA requires the consideration of information regarding other regulatory requirements and permits, the fact that the applicant is subject to and complying with them "does not obviate the NEPA mandate that the federal agency perform an EIS covering these topics." *Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-20, 64 NRC 131, 179 (2006). We thus hold that the impacts raised by the Petitioners speak precisely to the mandates of NEPA, and thus these issues are material to findings the NRC must make prior to issuance of the COL for Fermi Unit 3.
- Z A presentation of excerpts from the COLA without further explanation does not provide sufficient support for a contention. *See USEC Inc.* (American Centrifuge Plant), LBP-05-28, 62 NRC 585, 597 (2005), *aff'd*, CLI-06-10, 63 NRC 451, 472 (2006).
- AA Neither NEPA nor Part 51 requires applicants to eliminate adverse environmental impacts. Courts have consistently interpreted NEPA as a procedural statute that requires disclosure and analysis of environmental impacts, not one that imposes substantive obligations for the protection of natural resources. *Robertson v. Methow Valley Citizens Council*, 490 U.S. 332, 350 (1989). Thus, to the extent Contention 8 asks that we require the Applicant to adopt additional mitigation measures for the protection of the eastern fox snake, it exceeds our authority under NEPA and Part 51.
- BB NRC regulations require that procedures be established to provide for early notification and clear instructions to the populace within the plume exposure pathway EPZ. *See* 10 C.F.R. § 50.47(b)(5). In accordance with the regulations, the plume exposure pathway EPZ shall generally consist of an area covering a radius of "about 10 miles." *See* 10 C.F.R. § 50.47(c)(2). As pled, the Petitioners provide no basis for the assertion that the EPZ should be increased to a 50-mile radius. 10 C.F.R. § 2.309(f)(1)(ii). In addition, the Petitioners provide no alleged facts or expert opinion to support their assertion that the EPZ should be increased. 10 C.F.R. § 2.309(f)(1)(v).
- CC Under the NRC's Part 51 regulations, the ER must "contain a description of the proposed action, a statement of its purposes, [and] a description of the environment affected," 10 C.F.R. § 51.45(b), and it must also discuss "[a]lternatives to the proposed action. . . ." *Id.* § 51.45(b)(3). The requirement to discuss alternatives in the ER parallels NEPA's requirement that an EIS provide a detailed statement of reasonable alternatives to a proposed action. 42 U.S.C. § 4332(2)(C)(iii). The alternatives discussion in the ER or EIS, however, need not include "every possible alternative, but every reasonable alternative." *Long Island Lighting Co.* (Shoreham Nuclear Power Station, Unit 1), CLI-91-2, 33 NRC 61, 71 (1991) (emphasis added). Reasonable alternatives do not include alternatives that are "impractical[:]. . . that present unique problems; or that cause extraordinary costs." *Private Fuel Storage, L.L.C.* (Independent

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

Spent Fuel Storage Installation), LBP-03-30, 58 NRC 454, 479 (2003). Thus, an alternative need not be considered in detail if it is technologically unproven, unsafe, too costly, or otherwise impracticable. See *Kelley v. Selin*, 42 F.3d 1501, 1521 (6th Cir. 1995).

DD If the Applicant disqualified an environmentally preferable alternative on the ground that it was too costly compared to the cost of the proposed new reactor, then the reasonableness of the Applicant's cost estimate for the new reactor could be a material issue under NEPA.

EE The NRC's NEPA regulations mandate balancing the economic and other benefits of the proposed new reactor against the environmental and other costs that the project might incur. The need for power is therefore a material issue under NEPA when the Applicant claims, as it does here, that the benefit of the project is satisfying the need for power. 68 Fed. Reg. 55,905, 55,905 (Sept. 29, 2003). This implies that the NRC must analyze the need for additional power when it relies upon such a benefit in performing the balancing of benefits and costs required by 10 C.F.R. § 51.107(a)(3). The issue of the need for power may therefore fall within the scope of the findings the NRC must make under NEPA when reviewing an application for a new reactor, and a petitioner may obtain a hearing on the issue if it satisfies the other requirements of section 2.309(f)(1).

LBP-09-17 LUMINANT GENERATION COMPANY, LLC (Comanche Peak Nuclear Power Plant, Units 3 and 4), Docket Nos. 52-034-COL, 52-035-COL (ASLBP No. 09-886-09-COL-BD01); COMBINED LICENSE; August 6, 2009; MEMORANDUM AND ORDER (Ruling on Standing and Contentions of Petitioners, and Other Pending Matters)

A Section 189a of the Atomic Energy Act (AEA) provides the basis for the standing of a petitioner in an NRC proceeding, requiring the NRC to provide a hearing "upon the request of any person whose interest may be affected by the proceeding."

B The Commission has implemented the requirements of section 189a in its regulations in 10 C.F.R. § 2.309(d)(1), which provides in relevant part that a licensing board shall consider three factors when deciding whether to grant standing to a petitioner: the nature of the petitioner's right under the AEA to be made a party to the proceeding; the nature and extent of the petitioner's property, financial, or other interest in the proceeding; and the possible effect of any order that may be entered in the proceeding on the petitioner's interest.

C For an organization to establish standing, it must show either immediate or threatened injury to its organizational interests or to the interests of identified members.

D Under Commission case law, there are some circumstances in which petitioners may be presumed to have standing based on their geographical proximity to a facility or source of radioactivity. In nuclear power reactor licensing proceedings, a "rule of thumb" has been developed whereby persons who reside or frequent the area within a 50-mile radius of the reactor are presumed to have standing to participate in a proceeding involving that reactor.

E Strict contention admissibility standards, adopted in 1989 and rendered more stringent in 2004 amendments, exist to ensure that hearings cover only genuine and pertinent issues of concern and focus on real, concrete issues. Although technical perfection is not an essential element of contention pleading, the rules bar contentions where petitioners have only what amount to generalized suspicions, hoping to substantiate them later.

F The requirements of 10 C.F.R. § 2.309(f)(1)(i) and (ii) — that a "specific statement of the issue of law or fact to be raised or controverted" and a "brief explanation of the basis for the contention" be provided — are fairly straightforward, and the issue that generally arises under the first of these is whether a contention is stated with sufficient specificity.

G Subsection (iii) of section 2.309(f)(1) requires that a petitioner must "[d]emonstrate that the issue raised in the contention is within the scope of the proceeding," which may be defined by statute, rule, or the Commission notice or order referring the proceeding to the Atomic Safety and Licensing Board Panel. In addition, under 10 C.F.R. § 2.335(a), no NRC rule may be attacked in an adjudicatory proceeding; the appropriate procedure to raise such a challenge is to file a petition for rulemaking pursuant to 10 C.F.R. § 2.802.

H The materiality requirements of 10 C.F.R. § 2.309(f)(1)(iv) and (vi) mandate that petitioners show that any issue raised in a contention has significance regarding the "findings the NRC must make to support the action that is involved in the proceeding." In other words, does the issue make any difference to, or have any impact on, the grant or denial of an application at issue in a given proceeding?

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- I Disputes often arise among parties as to the nature and extent, or amount, of information that must be provided to support a contention in order for it to be admitted. Section 2.309(f)(1)(v) concerns the nature of the information that is required, and section 2.309(f)(1)(vi) concerns the sufficiency — i.e., the extent or amount — of supportive information offered.
- J Taken literally, 10 C.F.R. § 2.309(f)(1)(v) might be read to require a petitioner to provide a statement that is both “concise” and also covers the full universe of “the alleged facts or expert opinions” and additional information and material that supports a contention. The Commission has, however, interpreted 10 C.F.R. § 2.309(f)(1)(v), quite reasonably and simply, to require a petitioner to support its contentions with documents, expert opinion, or at least a fact-based argument. On the other hand, as was observed even before the 1989 procedural rule amendments, a protestant does not become entitled to an evidentiary hearing merely on request, or on a bald or conclusory allegation that a dispute exists. The protestant must make a minimal showing that material facts are in dispute, thereby demonstrating that an inquiry in depth is appropriate. In other words, as the Commission has more recently observed, a petitioner must present sufficient information to show a genuine dispute and reasonably indicating that a further inquiry is appropriate.
- K More than mere notice pleading is required, and a petitioner’s contention will be ruled inadmissible if the petitioner has offered no tangible information, no experts, no substantive affidavits, but instead only bare assertions and speculation. Petitioners need not, however, proffer facts in formal affidavit or evidentiary form, sufficient to withstand a summary disposition motion. A board may appropriately view petitioners’ support for a contention in a light favorable to petitioners, but it is the petitioners’ burden to establish the admissibility of a contention.
- L Simply attaching material or documents in support of a contention, without explaining their significance, is inadequate to support the admission of a contention, and any supporting material that is provided by a petitioner, including those portions of the material that are not relied upon, is subject to board scrutiny. In making a ruling on contention admissibility a board is not, however, to look to the merits of the contention, and a petitioner is not required to prove its case at the contention stage.
- M Section 2.309(f)(1)(vi) has been interpreted to require a petitioner to read the pertinent portions of the license application, including the Safety Analysis Report [SAR] and the Environmental Report [ER], state the applicant’s position and the petitioner’s opposing view, and explain why petitioner disagrees with the applicant. Petitioners in a contention must explain why the application is deficient, through reference to specific portions of the application, and must directly controvert a position taken by the applicant in the application. Enough material must be provided to show an actual and genuine dispute on a material issue. If a contention neither raises a genuine, material dispute with any specific part of an application nor identifies any omission from the application along with the reasons petitioners believe the material should be included, it must be denied.
- N If a petitioner, through reference to the application itself, as well as through expert opinion, a document or documents, a fact-based argument, or some combination of all three, provides support for an otherwise admissible contention, sufficient to show a genuine dispute on a material issue of fact or law and reasonably indicating that further inquiry is appropriate, it should be admitted. Particularly if no expert opinion or supporting relevant documents are submitted, any fact-based argument that is provided must be reasonably specific, coherent, and logical, sufficient to show such a dispute and indicate the appropriateness of further inquiry.
- O Contentions amounting to challenges to the Waste Confidence Rule in 10 C.F.R. § 51.23(a) are denied, because the history of the rule indicates it was intended to cover new reactors as well as existing ones, and in any event the Commission is currently involved in a rulemaking to amend the rule, and it has long been agency policy that Licensing Boards should not accept in individual license proceedings contentions which are (or are about to become) the subject of general rulemaking by the Commission.
- P Contentions that amount to challenges to NRC decommissioning rules are found not to be admissible.
- Q The Commission has ruled terrorism-related issues to be outside the scope of NRC adjudications.
- R With regard to management of high-level waste, 10 C.F.R. § 51.51(b), Table S-3, when read together with the “background documents” referenced in Note 1 to the Table, indicates small or no radiological release into the environment. Thus, contentions challenging the ER’s finding of “SMALL” impact, and effectively challenging Table S-3, must be denied in accordance with 10 C.F.R. § 2.335(a); and contentions that fail to address the ER’s supplementation of Table S-3 fail to dispute provisions in the application as required under 10 C.F.R. § 2.309(f)(1)(vi).

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- S A contention challenging the absence in the ER of consideration of impacts from a severe radiological accident at one unit on other collocated units, supported by fact-based argument demonstrating a genuine dispute on a material issue and identifying supporting reasons for petitioners' belief, is admitted. In considering the question of the level of credibility of impacts asserted to require consideration in the ER, the Licensing Board consulted NUREG-1555, the NRC's Standard Review Plans for Environmental Reviews for Nuclear Power Plants; although a guidance document, with no binding effect, it is entitled to special weight so as to make it appropriate to consider in evaluating contentions, and it provides insight into the information the NRC considers necessary for a complete ER.
- T A contention challenging ER's omission of consideration of alternatives — consisting of combinations of renewable energy sources such as wind and solar power, with technological advances in storage methods and supplemental use of natural gas, to create baseload power — is admitted. Although portions of the original contention, including those concerning alternatives that do not address baseload power generation, are not admissible under Commission precedent, relevant NEPA court precedent mandates admission of the contention, supported by fact-based argument provided in the report attached to the petition, which concerns combinations of renewable sources with storage and other methods to create baseload power. Under this case law, applicant may not define its goals so narrowly as to unreasonably circumscribe the range of alternatives that must be considered.
- LBP-09-18 PPL BELL BEND, LLC (Bell Bend Nuclear Power Plant), Docket No. 52-039-COL (ASLBP No. 09-890-10-COL-BD01); COMBINED LICENSE; August 10, 2009; MEMORANDUM AND ORDER (Ruling on Petitions to Intervene and Requests for Hearing)
- A This case arises from an application by PPL Bell Bend, LLC (PPL) for a combined license (COL) to construct and operate one U.S. Evolutionary Power Reactor (U.S. EPR) which it proposes to locate adjacent to the PPL Susquehanna Steam Electric Station (SSES or Susquehanna) in Luzerne County, Pennsylvania. Petitions to intervene and requests for hearing were timely filed by Gene Stilp and Taxpayers and Ratepayers United (Stilp/TRU) and Eric Joseph Epstein (Mr. Epstein). The Board found that (1) Stilp/TRU have standing to participate but have not proffered any admissible contentions, and (2) Mr. Epstein does not have standing and has not proffered any admissible contentions. Based on these rulings, the Board did not admit either Stilp/TRU or Mr. Epstein as parties and terminated this proceeding.
- B Any person or organization that seeks to intervene as a party in an adjudicatory proceeding addressing a proposed licensing action must: (1) establish that it has standing; and (2) proffer at least one admissible contention.
- C Under NRC regulations, a petitioner must provide certain basic information to demonstrate that it has standing to intervene in the licensing process. This information includes: (1) the nature of the petitioner's right under the governing statutes to be made a party; (2) the nature of the petitioner's interest in the proceeding; and (3) the possible effect of any decision or order on the petitioner's interest. In determining whether an individual or organization should be granted party status "as of right," the NRC applies judicial standing concepts that require a participant to establish: (1) it has suffered or will suffer a distinct and palpable harm that constitutes injury-in-fact within the zone of interests arguably protected by the governing statutes (*e.g.*, the Atomic Energy Act of 1954 (AEA) and the National Environmental Policy Act of 1969 (NEPA)); (2) the injury is fairly traceable to the challenged action; and (3) the injury is likely to be redressed by a favorable decision.
- D The Commission recognizes that a petitioner may have standing based upon its geographic proximity to the proposed facility. In certain circumstances, a petitioner's proximity to the facility triggers a presumption that it has standing to intervene without the need to specifically plead injury, causation, and redressability if the petitioner lives within, or otherwise has frequent contacts with, the zone of possible harm. In reactor licensing proceedings, that zone is generally deemed to constitute the area within a 50-mile radius of the site.
- E When an organization wants to intervene in a representational capacity it must: (1) demonstrate that the licensing action will affect at least one of its members; (2) identify that member by name and address; and (3) show that it is authorized by that member to request a hearing on his or her behalf. Additionally, the member must qualify for standing in his or her own right, the interests that the organization seeks to protect must be germane to its own purpose, and neither the petitioner's contentions nor the requested relief must require an individual member to participate in the proceeding. In determining whether a petitioner has established standing, the Commission has directed us to construe the petition in favor of the petitioner.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- F Licensing boards have been lenient in permitting *pro se* petitioners the opportunity to cure procedural defects in petitions to intervene regarding standing. The benefit of the doubt should be given to the potential intervenor in order to prevent the dismissal of a petition due to inarticulate draftsmanship or procedural or pleading defects. Petitioners are usually permitted to amend petitions containing curable defects and *pro se* petitioners are held to a less rigorous standard.
- G Because agencies are not constrained by Article III of the Constitution; nor are they governed by judicially created standing doctrines restricting access to federal courts. The criteria for establishing administrative standing may permissibly be less demanding than the criteria for judicial standing.
- H The proximity presumption is neither outdated nor overly simplified and obsolete.
- I Every petitioner bears the burden of demonstrating standing in order to participate in hearings before a licensing board. When a petitioner lives more than 50 miles from the proposed site, he must explain the extent of his day-to-day activities within the vicinity of the plant site in order to demonstrate he has standing in this proceeding.
- J However, a petitioner has an affirmative duty to demonstrate that it has standing in each proceeding in which it seeks to participate because a petitioner's status can change over time and the bases for its standing in an earlier proceeding may no longer apply.
- K It is the burden of the petitioner to clearly state the distance from his home to the proposed facility, the extent, frequency, and duration which the petitioner's business and community service work take him to the vicinity, etc., in a petition to intervene. Merely because a petitioner might have had standing in an earlier proceeding does not automatically grant standing in subsequent proceedings. Absent a showing of specific information regarding the geographic proximity, the timing and the duration of a petitioner's visits, the Board is unable to conclude that a petitioner has standing to intervene.
- L In order to participate as a party in this proceeding, a petitioner for intervention must not only establish standing, but must also proffer at least one admissible contention that meets the requirements of 10 C.F.R. § 2.309(f)(1). An admissible contention must: (1) provide a specific statement of the legal or factual issue sought to be raised; (2) provide a brief explanation of the basis for the contention; (3) demonstrate that the issue raised is within the scope of the proceeding; (4) demonstrate that the issue raised is material to the findings the NRC must make to support the action that is involved in the proceeding; (5) provide a concise statement of the alleged facts or expert opinions, including references to specific sources and documents, that support the petitioner's position and upon which the petitioner intends to rely at the hearing; and (6) provide sufficient information to show that a genuine dispute exists with regard to a material issue of law or fact, including references to specific portions of the application that the petitioner disputes, or if the application is alleged to be deficient, the identification of such deficiencies and the supporting reasons for this allegation.
- M A contention that attacks applicable statutory requirements, challenges the basic structure of the NRC's regulatory process, or merely expresses generalized policy grievances is not appropriate for a licensing board hearing. A contention that attacks a Commission rule, or seeks to litigate a matter that is, or clearly is about to become, the subject of a rulemaking, is inadmissible.
- N A petitioner must provide some minimal basis indicating the potential validity of the contention. The Commission's rules bar contentions where petitioners have only what amounts to generalized suspicions, hoping to substantiate them later. Although a petitioner does not have to prove its contention at the admissibility stage, mere notice pleading is insufficient. If a petitioner fails to provide the requisite support for its contentions, the Board may not make assumptions of fact that favor the petitioner or supply information that is lacking. Simply attaching materials or documents, without explaining their significance, is also insufficient. Moreover, any contention that fails to controvert the application directly, or that mistakenly asserts the application fails to address an issue that the application does address, is defective. A petitioner cannot demonstrate the existence of a genuine issue of material fact by simply restating information provided in the application and asserting that further analysis is required.
- O The Commission in its Waste Confidence Rule has determined that there is reasonable assurance that a geologic repository will be available by 2025 and that sufficient repository capacity will be available within 30 years beyond the licensed life to dispose of high-level waste and spent fuel generated by any reactor up to that time. The Commission has also determined that spent fuel generated in any reactor can be stored safely and without significant environmental impacts for at least 30 years in an onsite spent fuel pool or an onsite or offsite independent spent fuel storage installation.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- P The Waste Confidence Rule is applicable to all new reactor proceedings, and contentions challenging the rule or seeking its reconsideration are inadmissible.
- Q In order to challenge a regulation, a petitioner must submit a supporting affidavit setting forth “with particularity” the special circumstances that justify the waiver or exception requested.
- R The Commission recently ruled that for a contention to be held in abeyance, it must otherwise be admissible. A decision may be referred to the Commission if it raises significant and novel legal or policy issues, and resolution of the issues would materially advance the orderly disposition of the proceeding.
- S The Commission has made its position clear that — outside the Ninth Circuit — NEPA does not require the NRC to consider the environmental consequences of hypothetical terrorist attacks on NRC-licensed facilities. Furthermore, the Third Circuit upheld the Commission’s determination that NEPA does not demand any terrorism inquiry. Licensing boards lack the authority to reconsider these legal rulings and must apply the Commission’s directive that outside the Ninth Circuit, NEPA does not require the evaluation of the impact of terrorist attacks by aircraft or other means.
- T NRC regulations in Part 52 allow a COLA to reference a certified design that has been docketed but not yet approved. Until the design is certified and the rulemaking proceeding concluded, the design continues to change, creating potentially new safety and environmental concerns. Petitioners can challenge any generic issues as part of the design certification rulemaking process and will have an opportunity to file new contentions related to material new information regarding site-specific plant design issues.
- U The regulations require that at the time the combined license application is submitted, it must identify the method of decommissioning funding assurance that the applicant proposes to use and to show that the method complies with any applicable financial test. Thus a parent company guarantee is only acceptable if it and the financial test are as contained in Appendix A to 10 C.F.R. Part 30.
- V The regulations are clear that a COL applicant does not need to provide the NRC, at the time the application is submitted, with its final signed documents assuring the decommissioning funding, and that the holder of a COL must do so 30 days after notice is published regarding the fuel load. The role of a licensing board is to decide whether an applicant has supplied the requisite information to the NRC, and whether the petitioners have identified any defect in that information.
- W The regulations do not dictate which financial assurance method an applicant must use. Instead, an applicant can choose “one or more” of the funding methods provided in 10 C.F.R. § 50.75(e). It is beyond the authority of this Board to say which method an applicant must use to fulfill the decommissioning funding assurance requirement. The Board can only decide whether or not the current funding proposal fulfills NRC requirements. Thus, a petitioner’s assertion that an applicant must submit prepayment is inadmissible.
- X The AEA states that a license may not be issued “to an alien or any corporation or other entity if the Commission knows or has reason to believe it is owned, controlled, or dominated by an alien, a foreign corporation, or a foreign government.” The Commission makes clear that a foreign entity must be able to control or dominate an applicant in order for it to be considered a foreign owner. When the entity in question is simply a contractor working for an applicant that has no ownership, control, or domination over the applicant, they cannot be considered foreign owners.
- Y NEPA is the only legal grounds for an admissible contention relating to environmental justice issues. To qualify as an environmental justice contention, a petitioner must show that the affected local population qualifies as a minority or low-income population. Second, an admissible environmental justice contention must allege with the requisite documentary basis and support as required by 10 C.F.R. Part 2, that the proposed action will have significant adverse impacts on the physical or human environment that were not considered because the impacts to the community were not adequately evaluated. Accordingly, to be admissible, an environmental justice contention must show there are significant, adverse, environmental impacts that will result from the licensing of the reactor that will disproportionately affect minority and low-income populations.
- LBP-09-19 SOUTHERN NUCLEAR OPERATING COMPANY (Early Site Permit for Vogtle ESP Site), Docket No. 52-011-ESP (ASLBP No. 07-850-01-ESP-BD01); EARLY SITE PERMIT; August 17, 2009; SECOND AND FINAL PARTIAL INITIAL DECISION (Mandatory/Uncontested Proceeding)
- A In this 10 C.F.R. Part 52 proceeding regarding the application of Southern Nuclear Operating Company (SNC) for an early site permit (ESP), and an associated limited work authorization (LWA), for two additional reactors at the existing Vogtle Electric Generating Plant (VEGP) site, in a second and final partial initial decision regarding the mandatory or uncontested portion of the proceeding, based on

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- its review of the pending SNC ESP application and its LWA supplement, as well as the NRC Staff's final environmental impact statement (FEIS) and final safety evaluation report (FSER) regarding these SNC licensing requests, the Board concludes that Staff issuance of the ESP and the LWA for the Vogtle ESP site should be authorized, effective immediately.
- B Under the Commission's 10 C.F.R. Part 52 regulations, an applicant who may apply for a construction permit under Part 50, or a combined license (COL) under Part 52, may apply for an ESP. *See* 10 C.F.R. § 52.15(a). If granted, an ESP, which is defined as "a partial construction permit," evidences Commission approval of a site for one or more nuclear power facilities. *Id.* § 52.1(a).
- C An ESP applicant may also request that an LWA under 10 C.F.R. § 50.10 be issued in conjunction with the ESP. *See id.* § 52.17(c).
- D The Atomic Energy Act (AEA) of 1954, as amended, provides that "[t]he Commission shall hold a hearing . . . on each application under section 2133 or 2134(b) of this title for a construction permit for a facility." 42 U.S.C. § 2239(a)(1)(A). ESP applications, as partial construction permit applications, *see* 10 C.F.R. § 52.1(a), are subject to the AEA hearing requirement, as well as "all procedural requirements in 10 CFR part 2," *id.* § 52.21; *see also System Energy Resources, Inc.* (Early Site Permit for Grand Gulf ESP Site), LBP-07-1, 65 NRC 27, 35, *permit issuance authorized*, CLI-07-14, 65 NRC 216 (2007).
- E When reviewing an ESP application in an uncontested proceeding, licensing boards are instructed to "conduct a simple 'sufficiency' review" rather than a de novo review on both AEA and National Environmental Policy Act (NEPA) of 1969 issues. *Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-17, 62 NRC 5, 39 (2005). Thus, boards "should decide simply whether the safety and environmental record is 'sufficient' to support license issuance. In other words, the boards should inquire whether the NRC Staff performed an adequate review and made findings with reasonable support in logic and fact." *Id.* With respect to certain NEPA findings, boards are instructed to make independent environmental judgments, though they "need not rethink or redo every aspect of the NRC Staff's environmental findings or undertake their own fact-finding activities." *Id.* at 44; *see also Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), LBP-07-9, 65 NRC 539, 559-60, *permit issuance authorized*, CLI-07-27, 66 NRC 215 (2007). The board's role is to "carefully probe [Staff] findings by asking appropriate questions and by requiring supplemental information when necessary," but "the NRC Staff's underlying technical and factual findings are not open to board reconsideration unless, after a review of the record, the board finds the NRC Staff review inadequate or its findings insufficient." *Clinton ESP*, CLI-05-17, 62 NRC at 39-40.
- F In a mandatory hearing, a licensing board "must narrow its inquiry to those topics or sections in Staff documents that it deems most important and should concentrate on portions of the documents that do not on their face adequately explain the logic, underlying facts, and applicable regulations and guidance." *Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-06-20, 64 NRC 15, 21-22 (2006).
- G Pursuant to the AEA and agency regulations in effect at the time the notice of hearing for this proceeding was published, the board was required to make two safety findings — answering the first in the negative and the second in the affirmative — before an ESP could be issued: "(1) Whether the issuance of an ESP will be inimical to the common defense and security or to the health and safety of the public (Safety Issue 1); and (2) whether, taking into consideration the criteria contained in 10 CFR part 100, a reactor, or reactors, having characteristics that fall within the parameters for the site, can be constructed and operated without undue risk to the health and safety of the public (Safety Issue 2)." Notice of Hearing and Opportunity to Petition for Leave to Intervene on an [ESP] for the Vogtle ESP Site, 71 Fed. Reg. 60,195, 60,195 (Oct. 12, 2006) [hereinafter ESP Hearing Notice]. Subsequent to the publication of the notice of hearing in this proceeding, the 10 C.F.R. Part 52 regulations were revised to, among other things, clarify what is required in the findings associated with the issuance of an ESP. *See Licenses, Certifications, and Approvals for Nuclear Power Plants*, 72 Fed. Reg. 49,352, 49,524 (Aug. 28, 2007). Under a new section 52.24, an ESP may issue if the Commission, or, presumably, the Licensing Board, as the Commission's delegate, finds, among other things, that: "(1) [The ESP application] meets the applicable standards and requirements of the [AEA] and the Commission's regulations; (2) Notifications, if any, to other agencies or bodies have been duly made; (3) There is reasonable assurance that the site is in conformity with the provisions of the Act, and the Commission's regulations; (4) The applicant is technically qualified to engage in any activities authorized; (5) The proposed inspections, tests, analyses and acceptance criteria, including any on emergency planning, are necessary and sufficient, within the scope of the early site permit,

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- to provide reasonable assurance that the facility has been constructed and will be operated in conformity with the license, the provisions of the Act, and the Commission's regulations; [and] (6) Issuance of the permit will not be inimical to the common defense and security or to the health and safety of the public." 10 C.F.R. § 52.24(a)(1)-(6). In addition, section 52.24 states that if the Commission decides to authorize issuance of the ESP, the issued ESP "must specify the site characteristics, design parameters, and terms and conditions of the [ESP] the Commission deems appropriate." *Id.* § 52.24(b).
- H Because the substantive findings that must be made under the pre-2007 regime overlap to a significant degree those required under the current regulations, and the Applicant has both revised its application to reflect the new rule and provided information in this proceeding to address both sets of provisions, the Board will address the findings outlined in each.
- I In authorizing issuance of an ESP, to fulfill its NEPA obligations the Board must: "(1) Determine whether the requirements of Sections 102(2)(A), (C), and (E) of NEPA and the [10 C.F.R. Part 51, Subpart A] regulations have been met; (2) Independently consider the final balance among conflicting factors contained in the record of the proceeding with a view to determining the appropriate action to be taken; (3) Determine, after . . . considering reasonable alternatives, whether the [ESP] should be issued, denied, or appropriately conditioned to protect environmental values; [and] (4) Determine, in an uncontested proceeding, whether the NEPA review conducted by the NRC Staff has been adequate." *Id.* § 51.105(a)(1)-(4); *see also* ESP Hearing Notice, 71 Fed. Reg. at 60,195. These findings are consistent with the requirement under 10 C.F.R. § 52.24(a) that, prior to issuance of an ESP, "[t]he findings required by subpart A of 10 CFR Part 51 have been made." 10 C.F.R. § 52.24(a)(8).
- J With regard to the first three of these findings, i.e., the "baseline" NEPA issues, the Board must reach its own independent determination, but should do so without "second-guess[ing] underlying technical or factual findings by the NRC Staff." *Clinton ESP*, CLI-05-17, 62 NRC at 45.
- K An ESP applicant may request that an LWA be issued in conjunction with the ESP. *See* 10 C.F.R. § 52.17(c). Before the LWA can issue, the Staff must issue an FEIS in connection with the LWA, and the Board must perform essentially the same NEPA analysis described above for the ESP, with respect to the LWA activities, although, instead of making a finding on NEPA Baseline Issue 3, the Board is to "[d]etermine whether the redress plan will adequately redress the activities performed under the [LWA]" should the activities be terminated by either the holder of the LWA or by Commission denial of any corresponding ESP or COL. *See id.* §§ 50.10(e)(1)(ii), 51.105(c); *see also* Supplementary Notice of Hearing and Opportunity to Petition for Leave to Intervene on an [ESP] for the VOGTLE ESP Site, 72 Fed. Reg. 64,686, 64,686 (Nov. 16, 2007) [hereinafter LWA Hearing Notice]. Finally, the Board must find that (1) "the applicable standards and requirements of the Act, and the Commission's regulations applicable to the activities to be conducted under the [LWA] have been met"; (2) "[t]he applicant is technically qualified to engage in the activities authorized"; (3) "[i]ssuance of the [LWA] will provide reasonable assurance of adequate protection to public health and safety and will not be inimical to the common defense and security"; and (4) "there are no unresolved safety issues relating to the activities to be conducted under the [LWA] that would constitute good cause for withholding the authorization." 10 C.F.R. § 50.10(e)(1)(iii)-(iv); *see* LWA Hearing Notice, 72 Fed. Reg. at 64,686.
- L Although section 50.10(e)(1)(iii) and the LWA hearing notice give the responsibility in the first instance for making three of these findings to the Director, Office of New Reactors (NRO), *see* 10 C.F.R. § 50.10(e)(1)(iii); LWA Hearing Notice, 72 Fed. Reg. at 64,686, in light of the fact that the LWA hearing notice attributes to the Board the authority to make the three additional ESP safety findings found in section 52.24(a)(1), (4), (6) in the context of the LWA, *see* LWA Hearing Notice, 72 Fed. Reg. at 64,686, which, in turn, are essentially the same as the three findings in section 50.10(e)(iii), the Board likewise will make these findings in accord with 10 C.F.R. § 50.10(e)(iii) and the LWA hearing notice.
- M In an instance when an ESP is issued with an associated LWA, the Board must find relative to the LWA that "[a]ny significant adverse environmental impact resulting from activities requested under § 52.17(c) can be redressed." 10 C.F.R. § 52.24(a)(7). In addition, if LWA activities are approved by the NRC in conjunction with an ESP, the ESP as issued "shall specify those 10 CFR 50.10 [authorized] activities." 10 C.F.R. § 52.24(c).
- N Licensing board initial decisions in earlier ESP proceedings have not been effective until they were reviewed by the Commission. *See, e.g., North Anna ESP*, LBP-07-9, 65 NRC at 629. Subsequently, however, the 10 C.F.R. Part 2 regulations were revised to provide for immediate effectiveness of initial decisions in certain proceedings. *See* 72 Fed. Reg. at 49,416, 49,475-76. Accordingly, under the current

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- rules, “[a]n initial decision directing the issuance or amendment of a limited work authorization under 10 CFR 50.10 [or] an early site permit under subpart A of part 52 of this chapter . . . is immediately effective upon issuance unless the presiding officer finds that good cause has been shown by a party why the initial decision should not become immediately effective.” 10 C.F.R. § 2.340(f).
- O The agency’s NEPA regulations require that the Staff prepare an environmental impact statement (EIS) in connection with the issuance of an ESP. *See* 10 C.F.R. § 51.20(b)(1). The Staff must first prepare a draft EIS (DEIS), *see id.* §§ 51.70, 51.75(b), that includes, among other things, “an evaluation of the environmental effects of construction and operation of a reactor, or reactors, which have design characteristics that fall within the site characteristics and design parameters for the [ESP] application, but only to the extent addressed in the [ESP] environmental report [(ER)] or otherwise necessary to determine whether there is any obviously superior alternative to the site proposed.” *Id.* § 51.75(b). Though the DEIS may rely in part on the applicant’s ER, the regulations require the Staff to “independently evaluate and be responsible for the reliability of all information used in the [DEIS].” *Id.* § 51.70(b). The DEIS is then distributed for public comment and, based on the comments received, a review of information provided by the applicant, and supplemental independent information and analysis, the Staff prepares and issues an FEIS. *See id.* §§ 51.73, 51.91.
- P Additionally, in implementing NEPA, the NRC uses certain of the definitions provided in Council on Environmental Quality regulations. *See id.* § 51.14(b). Among those is section 1508.25, which states that an agency EIS must consider direct, indirect, and cumulative impacts of an action. *See* 40 C.F.R. § 1508.25. Direct impacts are those caused by the federal action, and occurring at the same time and place as that action, while indirect impacts are caused by the action at a later time or more distant place, yet are still reasonably foreseeable. *See id.* § 1508.8. In addition, cumulative impacts are defined as “the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions. Cumulative impacts can result from individually minor but collectively significant actions taking place over a period of time.” *Id.* § 1508.7.
- Q The NEPA-driven environmental review is more outward looking and involves a one-time impacts evaluation emphasizing a “reasonableness” approach. In contrast, the AEA-driven safety review, which is both more inward looking and ongoing, takes a “conservative” approach.
- R Potential radiological impacts of the proposed units have both environmental and safety aspects. On the safety side, 10 C.F.R. § 52.17 specifies that an ESP application must contain “[a] description and safety assessment of the site” that includes “an analysis and evaluation of the major structures, systems, and components of the facility that bear significantly on the acceptability of the site under the radiological consequence evaluation factors identified in paragraphs (a)(1)(ix)(A) and (a)(1)(ix)(B) of this section.” 10 C.F.R. § 52.17(a)(1)(ix). That section requires that “[t]he applicant . . . perform an evaluation and analysis of the postulated fission product release . . . to evaluate the offsite radiological consequences.” *Id.* Under 10 C.F.R. § 52.17, individuals located at the boundary of the exclusion area cannot be exposed to more than 25 rem total effective dose equivalent (TEDE) in any 2-hour period, and any individual located at the outer boundary of the low population zone cannot be exposed to more than 25 rem TEDE during the entire period of any radioactive release. *See id.* § 52.17(a)(1)(ix)(A)-(B).
- S Additionally, 10 C.F.R. § 52.18 directs the Staff to review ESP applications “according to the applicable standards set out in 10 CFR part 50 and its appendices and 10 CFR part 100.” *Id.* § 52.18. Section 50.34a, in turn, directs an applicant to describe “equipment to be installed to maintain control over radioactive materials in gaseous and liquid effluents produced during normal reactor operations, including expected operational occurrences,” and, for applications filed after January 2, 1971, directs the applicant to identify design objectives and means to maintain levels of radioactive effluents “as low as is reasonably achievable [(ALARA)].” *Id.* § 50.34a(a). Part 50, Appendix I, sets forth numerical guidelines for meeting the ALARA standard. *See id.* Part 50, App. I. Further, Part 100 instructs the Staff to consider physical characteristics of the site, specifically noting that “[f]actors important to hydrological radionuclide transport . . . must be obtained from on-site measurements.” *Id.* § 100.20(c)(3). Finally, Part 20 sets out numerical limits for radiation exposure, including occupational dose limits and radiation dose limits for members of the public. *See id.* §§ 20.1201 to .1302.
- T On the environmental side, the Environmental Protection Agency (EPA) has established radiation exposure standards under 40 C.F.R. Part 190, the applicability of which the Commission has acknowledged in Part 20 of the agency’s regulations. *See id.* § 20.1003 (defining “generally applicable environmental

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- radiation standards” as the “standards issued by the [EPA]”; *id.* § 20.1301(e) (providing that “licensee[s] subject to the provisions of EPA’s generally applicable environmental radiation standards in 40 CFR part 190 shall comply with those standards”). Additionally, the Staff evaluates individual and population exposure under the 10 C.F.R. Part 20 and the ALARA standards discussed above in connection with safety.
- U Among other things, pursuant to section 52.17(a)(1) the site safety analysis report (SSAR) submitted with an ESP application must contain “[t]he seismic, meteorological, hydrologic, and geologic characteristics of the proposed site” and “[a] description and safety assessment of the site on which a facility is to be located.” *Id.* § 52.17(a)(1)(vi), (ix). In addition, section 100.20 states that the Commission, “in determining the acceptability of a site for a stationary power reactor,” will consider the “[p]hysical characteristics of the site, including seismology, meteorology, geology, and hydrology.” *Id.* § 100.20(c).
- V NEPA § 102(2)(C)(iii) requires that an EIS address alternatives to the proposed action. *See* 42 U.S.C. § 4332(2)(C)(iii). NRC’s regulations implementing this NEPA provision require an applicant for an ESP to file an environmental report (ER), *see* 10 C.F.R. § 51.50(b), addressing the following factors: “(1) . . . impact of proposed action on the environment; (2) . . . [unavoidable] adverse environmental impacts; (3) [a]lternatives to the proposed action; (4) [t]he relationship between local short-term uses of man’s environment and the maintenance and enhancement of long-term productivity; and (5) . . . irreversible and irretrievable commitments of resources.” *Id.* § 51.45(b)(1)-(5). If the proposed siting of a plant slated for an ESP involves unresolved conflicts concerning alternative uses of available resources, then this discussion must be sufficiently complete to allow the Staff to develop and to explore appropriate alternatives to the ESP pursuant to NEPA § 102(2)(E). *See id.* § 51.45(b)(3). The ER must also include “an evaluation of alternative sites to determine whether there is any obviously superior alternative to the site proposed.” *Id.* § 51.50(b)(1).
- W Additionally, 10 C.F.R. § 51.45(b)(3) and 10 C.F.R. Part 51, App. A, § 1(a)(5), call for a presentation of alternatives in an applicant’s ER and in an NRC EIS, respectively, in comparative form. All reasonable alternatives are to be identified. *See Long Island Lighting Co.* (Shoreham Nuclear Power Station, Unit 1), CLI-91-2, 33 NRC 61, 71 (1991). The Staff must prepare an EIS during review of an ESP application, *see* 10 C.F.R. § 52.18, and this EIS “must include an evaluation of alternative sites to determine whether there is any obviously superior alternative to the site proposed.” *Id.* § 51.75(b). The EIS must be prepared in accordance with 10 C.F.R. § 51.71, which, *inter alia*, considers and weighs the environmental impacts of alternatives to the proposed action and alternatives available for reducing or avoiding adverse environmental effects. *See id.* § 51.71(d). In addition, with regard to alternative sites, the Commission has recently emphasized that the Staff must evaluate “‘both the process (i.e., methodology) used by the applicant and the reasonableness of the product (e.g., potential sites) identified by that process.’” *North Anna ESP*, CLI-07-27, 66 NRC at 223-24 (quoting ESRP at 9.3-8); *see also id.* at 228-32 (finding FEIS discussion of alternative sites insufficient but independently reviewing record on greenfield, competitors’ brownfield, noncompetitors’ brownfield, and applicant’s other nuclear sites to conclude that the Staff’s underlying alternative site review was adequate).
- X Section 50.10 of Title 10 of the *Code of Federal Regulations* provides the terms for requesting and issuing an LWA, which authorize an applicant to perform certain site-preparation activities that would otherwise only be permitted following the issuance of a 10 C.F.R. Part 50 construction permit or a 10 C.F.R. Part 52 COL. *See* 10 C.F.R. § 50.10(d)-(g). Section 52.17(c) allows an ESP applicant to request that a section 50.10 LWA be issued in conjunction with an ESP. Section 50.10(a)(1) identifies LWA construction activities, while section 50.10(a)(2) identifies activities that can be performed without an LWA (i.e., as “preconstruction” activities that do not require NRC approval). An LWA allows for the performance of these LWA construction activities prior to issuance of a COL, *see id.* § 50.10(d)(1) (LWA authorizes activities “for which either a construction permit or [COL] is otherwise required”), but the LWA application must include a plan for site redress that provides for restoration if the project is cancelled, the LWA is revoked, or a construction permit or COL is denied. *See id.* § 50.10(d)(3)(iii). The site redress plan (SReP) also remains in effect for an ESP applicant even if the ESP with which the LWA is issued is not referenced in a construction permit or COL application during the period that the ESP remains valid. *See id.* § 52.25.
- Y Under section 50.10(a)(1), activities constituting construction, and thus requiring an LWA, are the driving of piles; subsurface preparation; placement of backfill, concrete, or permanent retaining walls within an excavation; installation of foundations; or in-place assembly, erection, fabrication, or testing that are for safety-related structures, systems, or components (SSCs). Also included are construction activities

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- associated with onsite emergency facilities necessary to comply with section 50.47 and 10 C.F.R. Part 50, App. E. *See id.* § 50.10(a)(1).
- Z Under section 50.10(a)(2), “construction” is defined as not including site exploration; preparation of the site for construction, including site clearing, grading, and installation of environmental mitigation measures; erection of fences and other access control measures; excavation; erection of support buildings for use in connection with construction; building of service facilities, such as paved roads, parking lots, railroad spurs, exterior lighting systems, potable water systems and sewerage treatment facilities, and transmission lines; and procurement or offsite fabrication of facility components. *See id.* § 50.10(a)(2).
- AA The SSAR filed with the ESP application must include information that “identif[ies] physical characteristics of the proposed site, such as egress limitations from the area surrounding the site, that could pose a significant impediment to the development of emergency plans.” *Id.* § 52.17(b)(1). If the applicant determines that there are physical characteristics “that could pose a significant impediment to the development of emergency plans, the application must identify measures that would, when implemented, mitigate or eliminate the significant impediment.” *Id.*
- BB In addition, an ESP applicant has the option of either proposing a complete and integrated emergency plan or proposing major features of the emergency plan “for review and approval by NRC, in consultation with the Department of Homeland Security (DHS).” *Id.* § 52.17(b)(2)(i), (ii). The regulations provide that either option should be proposed in accordance with the “pertinent” or “applicable” standards in 10 C.F.R. § 50.47 and the requirements of Appendix E to 10 C.F.R. Part 50. *Id.* Section 50.47(b) contains sixteen planning standards related to the emergency preparedness function, and Appendix E to 10 C.F.R. Part 50, establishes minimum requirements for emergency plans. *See id.* § 50.47(b); *id.* Part 50, App. E. Among other requirements in Part 50 Appendix E, section IV outlines the content of emergency plans, while section V specifies provisions for submitting emergency implementing procedures to the NRC for review, and section VI sets forth provisions for the Emergency Response Data System (ERDS). *See id.* Part 50, App. E, §§ IV-VI.
- CC If an applicant chooses to submit a complete and integrated emergency plan with its ESP application, complete and integrated emergency plans “must include the proposed inspections, tests, and analyses that the holder of a combined license referencing the [ESP] shall perform, and the acceptance criteria that are necessary and sufficient” to support a finding of “reasonable assurance that, if the inspections, tests, and analyses are performed and the acceptance criteria met, the facility has been constructed and will be operated in conformity with the emergency plans, the provisions of the Act, and the Commission’s rules and regulations.” *Id.* § 52.17(b)(3). The inspections, tests, analyses, and acceptance criteria (ITAAC) associated with emergency planning reflect those aspects of the emergency plan that cannot be described or completed until the plant is further along in the licensing and construction process. They are essentially placeholders that reflect requirements that could not be addressed under Part 52 prior to physical construction of the plant.
- DD If an applicant submits a complete and integrated emergency plan in conjunction with an ESP application, the Staff must find “that the emergency plans provide reasonable assurance that adequate protective measures can and will be taken in the event of a radiological emergency.” 10 C.F.R. § 50.47(a)(1)(iii). The Staff’s review focuses primarily on the applicant-prepared onsite provisions of the plans, which include the evacuation time estimate provided by the applicant, and the ITAAC. *See id.* § 50.47(b), (d). The offsite provisions, which generally are the responsibility of state and local governments, are reviewed by the Federal Emergency Management Agency (FEMA). *See id.* § 50.47(b), (d). FEMA performs its evaluation independently of the NRC, also using NUREG-0654/FEMA-REP-1, and provides its review findings to the NRC. The Staff must take into account FEMA’s findings, as section 50.47(a)(2) provides: “[t]he NRC will base its finding on a review of the [FEMA] findings and determinations as to whether State and local emergency plans are adequate and whether there is reasonable assurance that they can be implemented, and on the NRC assessment as to whether the applicant’s onsite emergency plans are adequate and whether there is reasonable assurance that they can be implemented.” *Id.* § 50.47(a)(2). Moreover, FEMA’s finding “constitute[s] a rebuttable presumption on questions of adequacy and implementation capability” in NRC licensing proceedings. *Id.* Ultimately, the reasonable assurance finding for complete and integrated plans includes the successful completion of ITAAC and resolution of any permit conditions.
- EE Under 10 C.F.R. § 52.17(a)(1)(vi), an applicant’s SSAR must include “[t]he seismic . . . and geologic characteristics of the proposed site with appropriate consideration of the most severe of the natural

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- phenomena that have been historically reported for the site and surrounding area and with sufficient margin for the limited accuracy, quantity, and period of time in which the historical data have been accumulated.” In providing this information, applicants must conform to the requirements of 10 C.F.R. § 100.23, which stipulates that the information provides “the principal geologic and seismic considerations that guide the Commission in its evaluation of the suitability of a proposed site and adequacy of the design bases established in consideration of the geologic and seismic characteristics of the proposed site, such that, there is a reasonable assurance that a nuclear power plant can be constructed and operated at the proposed site without undue risk to the health and safety of the public.” Among other things, this provision, in conjunction with Appendix A to 10 C.F.R. Part 100, sets forth in detail the geologic, seismic, and engineering characteristics as well as the siting factors and criteria that govern an applicant’s seismic suitability showing.
- FF Severe accident mitigation alternatives (SAMAs), encompass potential plant modifications, sometimes referred to as severe accident mitigation design alternatives (SAMDA), as well as plant procedural changes or training program changes that can reduce the risks of severe accidents.
- GG Severe accidents are defined as accidents “in which substantial damage is done to the reactor core whether or not there are serious offsite consequences.” Policy Statement on Severe Reactor Accidents Regarding Future Designs and Existing Plants, 50 Fed. Reg. 32,138, 32,138 (Aug. 8, 1985). NRC safety and environmental regulations require consideration of the consequences of severe accidents. Section 52.17 of Title 10 of the *Code of Federal Regulations* requires an ESP applicant to submit a safety assessment that includes an analysis of a fission product release from an accident, “using the expected demonstrable containment leak rate and any fission product cleanup systems intended to mitigate the consequences of the accidents.” 10 C.F.R. § 52.17(a)(1)(ix). The fission product releases in question are associated with accidents that have “generally been assumed to result in substantial meltdown of the core with subsequent release into the containment of appreciable quantities of fission products.” *Id.* § 52.17(a)(1)(ix) n.1. Thus, implicitly, some discussion of SAMAs is required under the safety regulations.
- HH On the environmental side, NEPA § 102(2)(C) “implicitly requires agencies to consider measures to mitigate [environmental] impacts.” [NEI]; Denial of Petition for Rulemaking, 66 Fed. Reg. 10,834, 10,836 (Feb. 20, 2001); *see also Progress Energy Florida, Inc.* (Levy County Nuclear Power Plant, Units 1 and 2), LBP-09-10, 70 NRC 51, 107-08 (2009). NRC regulations also require an applicant’s ER to include an analysis of “alternatives available for reducing or avoiding adverse environmental effects.” 10 C.F.R. § 51.45(c). NRC’s policy statement on Nuclear Power Plant Accident Considerations Under the National Environmental Policy Act of 1969, 45 Fed. Reg. 40,101 (Jun. 13, 1980), specifically provides for consideration of measures to prevent or to mitigate the consequences of severe accidents in the ER and EIS of certain categories of nuclear plants. *See id.* at 40,103. The agency’s 1985 severe accident policy statement, 50 Fed. Reg. at 32,138, provides for consideration of severe accidents for new plant designs.
- II In evaluating ESP applications, where detailed design information is not available, the Commission may defer resolution of SAMA issues until the 10 C.F.R. Part 50 construction permit (CP) or 10 C.F.R. Part 52 COL stage. *See North Anna ESP*, CLI-07-27, 66 NRC at 237 & n.126. If an application has selected a certified design for its proposed units, because NRC regulations require design certification applicants to address SAMDA, *see, e.g.*, 10 C.F.R. §§ 51.30(d), 51.55(a), enough information may be available through the design certification document (DCD), to conduct a limited SAMDA analysis for the application.
- JJ Although the ESP process is designed, among other things, to permit an applicant to resolve various safety, environmental, and emergency planning issues associated with the particular site at issue prior to the submission of a COL application, items for which sufficient information is lacking at the ESP stage of the licensing process may be subject to deferral for consideration at the COL stage of the process. *See Grand Gulf ESP*, LBP-07-1, 65 NRC at 90.
- KK The concept of attaching permit conditions to an ESP arises from 10 C.F.R. § 52.24(b), which states: “The [ESP] must specify the . . . terms and conditions of the [ESP] the Commission deems appropriate. Before issuance of either a construction permit or combined license referencing an [ESP], the Commission shall find that any relevant terms and conditions of the [ESP] have been met. Any terms or conditions of the [ESP] that could not be met by the time of issuance of the construction permit or combined license, must be set forth as terms or conditions of the construction permit or combined license.” 10 C.F.R. § 52.24(b). Thus, any permit conditions imposed that are not met before a COL referencing the ESP is issued will attach to the COL.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- LL An ESP is an approval for a nuclear plant site, *see id.* § 52.1, and specifies design parameters for the site, *see id.* § 52.24(b). The ER for an ESP application may evaluate the environmental impacts of a reactor or reactors falling “within the site characteristics and design parameters for the [ESP] application.” *Id.* § 51.50(b)(2). At the COL stage, an applicant may reference both an ESP and a standard design certification in its application. *See id.* § 52.73(a). If the application references an ESP, the applicant must demonstrate that the chosen design (e.g., the certified design) falls within the parameters specified in the ESP or, on the safety side, request a variance. *See id.* §§ 51.50(c)(1)(i), 52.79(b)(1)-(2).
- MM Additionally, an LWA applicant must submit, as part of the safety analysis report for the LWA, design information related to activities within the scope of the requested LWA. *See id.* § 50.10(d)(3)(i).
- NN To grant an ESP, the Commission must find that “[t]he proposed [ITAAC], including any on emergency planning, are necessary and sufficient, within the scope of the [ESP], to provide reasonable assurance that the facility has been constructed and will be operated in conformity with the license, the provisions of the Act, and the Commission’s regulations.” *Id.* § 52.24(a)(5). An applicant has the option of submitting a complete and integrated emergency plan under section 52.17(b)(2)(ii), but if the applicant chooses to do so, it must include in the ESP application the proposed inspections, tests, and analyses that will be performed, and the acceptance criteria that are “necessary and sufficient” for the Commission’s required findings for issuance of the ESP. *See id.* § 52.17(b)(3). In addition, the Commission will review any proposed ITAAC relative to a request for an LWA submitted with an ESP application. *See also id.* § 50.10(d)(3).
- OO At the COL stage, a COL application likewise must include, among other things, the “proposed inspections, tests and analyses, including those applicable to emergency planning,” to be performed and “the acceptance criteria that are necessary and sufficient” to support the Commission’s finding that a COL can be granted. *See id.* § 52.80(a). If a COL application “references an early site permit with ITAAC or a standard design certification or both, the application may include a notification that a required inspection, test, or analysis in the ITAAC has been successfully completed and that the corresponding acceptance criterion has been met.” *Id.* § 52.80(a)(3). If the applicant makes this notification, which is essentially a request for a Commission finding on the completion of ITAAC needed for issuance of a COL, the Commission is required to identify these ITAAC in the notice of hearing published in the *Federal Register* for the COL proceeding. *See id.* §§ 52.80(a)(3), 52.85.
- PP If the Commission finds that these ESP or design certification ITAAC have been met, “[t]his finding will finally resolve that those acceptance criteria have been met, those acceptance criteria will be deemed to be excluded from the combined license, and findings under § 52.103(g) [(i.e., findings required before operation of the facility)] with respect to those acceptance criteria are unnecessary.” *Id.* § 52.97(a)(2). Upon issuance of a COL, the Commission also must identify any ITAAC that have not yet been met. *See id.* § 52.97(b). Thereafter, but no later than “1 year after issuance of the [COL] or at the start of construction as defined in 10 CFR 50.10(a), whichever is later” the COL licensee must submit “its schedule for completing the inspections, tests, or analyses in the ITAAC.” *Id.* § 52.99(a). The licensee must provide schedule updates as outlined in section 52.99(a), with appropriate notifications of completed ITAAC as required by section 52.99(c) and with the NRC reviewing the licensee’s ITAAC submissions to “ensure that the prescribed inspections, tests, and analyses in the ITAAC are performed.” *Id.* § 52.99(e). Prior to operation under a COL, a notice of intended operation will be published in the *Federal Register* “[n]ot less than 180 days before the date scheduled for initial loading of fuel.” *Id.* § 52.103(a). An opportunity for hearing will be provided in this notice regarding certain matters, one of which is ITAAC that have not been found to have been met under section 52.97(a)(2) prior to issuance of the COL. *See id.* § 52.103(a), (b). To this end, “[a]t appropriate intervals” during the time between issuance of a COL and “the last date for submission of requests for hearing under § 52.103(a), the NRC shall publish notices in the *Federal Register* of the NRC staff’s determination of the successful completion of inspections, tests, and analyses.” *Id.* § 52.99(e)(1). Additionally, the NRC is required to make publicly available any notifications from the COL licensee indicating that the licensee believes certain ITAAC have been met as well as any notifications that any uncompleted ITAAC will be met prior to operation. *See id.* § 52.99(e)(2).
- QQ The following technical issues are discussed: Accident Dose Estimates; Alternative Site Consideration; Alternative Sources of Energy; Alternatives (and Consideration of); Capability of Fault(s); Cooling Systems; Cooling Water Supply; Earthquake Motions; Emergency Operations Facilities; Emergency Plan(s); Groundwater Diversion (Cumulative Impacts); Groundwater Impacts (Safety-Related Structures, Saltwater Intrusion, Tritium); Inspections, Tests, Analyses, and Acceptance Criteria; Limited Work Au-

LBP-09-20 DETROIT EDISON COMPANY (Fermi Power Plant Independent Spent Fuel Storage Installation), Docket No. 72-71-EA (ASLBP No. 09-888-03-EA-BD01); LICENSE MODIFICATION; August 21, 2009; MEMORANDUM AND ORDER (Ruling on Standing and Contention Admissibility)

A For an order issued under 10 C.F.R. § 2.202, the time for filing a hearing request runs from the date of the order, not the date of publication of the order in the *Federal Register*.

B Publication of notice of the opportunity to request a hearing in the *Federal Register* will generally be sufficient to provide constructive notice to aggrieved persons, even if they lack actual notice.

C A provision of the Federal Register Act, 44 U.S.C. § 1508, requires that agency notices provide at least 15 days before the opportunity for a hearing is forfeited unless a shorter period is reasonable. This implies that, if the period between publication of the *Federal Register* notice and the date fixed for termination of the opportunity to be heard is less than the minimum number of days required, then the notice is legally ineffective to provide constructive notice of the right to be heard.

D A hearing request is timely when the petitioner lacks both actual and constructive notice of its opportunity to request a hearing as of the deadline specified by the agency, and the petitioner files the hearing request promptly upon receipt of actual notice.

E Petitioners have shown good cause for their late filing where, due to the lack of constructive or actual notice before the filing deadline, they could not have filed within the time specified in the notice of opportunity for hearing, and they filed as soon as possible thereafter.

F A petitioner must always request a remedy that falls within the scope of the proceeding, as articulated in the notice of hearing. In *Bellotti v. NRC*, 725 F.2d 1380, 1381 (D.C. Cir. 1983), the court affirmed that the Commission holds the authority to define the scope of a proceeding, as opposed to a petitioner. Thus, where the notice of hearing limits the scope to whether this Order should be sustained, a petitioner's sole remedy is rescission of the order. A petitioner cannot obtain a hearing by simply suggesting that the order should be strengthened in some way. Rather, a petitioner must show that he would be better off in the absence of any order at all.

G In nonreactor cases, the Commission decides on a case-by-case basis whether the proximity presumption should apply, taking into account any obvious potential for offsite radiological consequences, as well as the nature of the proposed action and the significance of the radioactive source. We decline to adopt a proximity presumption where petitioners have not shown how the action at issue — a Commission order modifying an ISFSI license — creates any potential for offsite consequences.

LBP-09-21 SOUTH TEXAS PROJECT NUCLEAR OPERATING COMPANY (South Texas Project, Units 3 and 4), Docket Nos. 52-012-COL, 52-013-COL (ASLBP No. 09-885-08-COL-BD01); COMBINED LICENSE; August 27, 2009; MEMORANDUM AND ORDER (Ruling on Standing and Admissibility of Certain Contentions)

A This 10 C.F.R. Part 52 proceeding concerns the application of South Texas Project Nuclear Operating Co. (STP or the Applicant) to the Nuclear Regulatory Commission (NRC) for two combined operating licenses (COL) that would authorize STP to construct and to operate two new units employing the Advanced Boiling Water Reactor (ABWR) certified design on its South Texas site, located in Matagorda County, Texas. Ruling on a petition filed jointly by the three organizations — the Sustainable Energy and Economic Development Coalition (SEED), the South Texas Association for Responsible Energy, and Public Citizen (Petitioners) — seeking to intervene and to contest the STP Application, the Licensing Board concludes that, having established the requisite standing and proffering one admissible contention, Petitioners are admitted as parties to the proceeding. Additionally, the Licensing Board refrained from ruling on nine contentions and indicated it would issue a decision on the admissibility of those nine at a later date.

B A petitioner's participation in a licensing proceeding hinges on a demonstration of the requisite standing. The agency has established requirements for standing derived from section 189a of the Atomic

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- Energy Act of 1954 (AEA), which instructs the NRC to provide a hearing “upon the request of any person whose interest may be affected by the proceeding.”
- C The Commission’s implementing regulation, 10 C.F.R. § 2.309(a) and (d), directs a licensing board, in ruling on a request for a hearing, to consider (1) the nature of the petitioner’s right under the AEA or the National Environmental Policy Act (NEPA) to be made a party to the proceeding; (2) the nature and extent of the petitioner’s property, financial, or other interest in the proceeding; and (3) the possible effect of any decision or order that may be issued in the proceeding on the petitioner’s interest.
- D In cases involving the possible construction or operation of a nuclear power reactor, physical proximity to the proposed facility has been considered sufficient to establish the requisite standing elements. *See Florida Power & Light Co.* (St. Lucie Nuclear Power Plant, Units 1 and 2), CLI-89-21, 30 NRC 325, 329 (1989) (proximity presumption generally applies where a petitioner has physical proximity to a nuclear power plant within 50 miles).
- E For an organization to establish standing, it must show either organizational or representational standing.
- F Organizational standing requires the party to “demonstrate a palpable injury in fact to its organizational interests that is within the zone of interests protected by the AEA or NEPA.” *Hydro Resources, Inc.* (2929 Coors Road, Suite 101, Albuquerque, NM 87120), LBP-98-9, 47 NRC 261, 271 (1998), *rev’d on other grounds*, CLI-98-16, 48 NRC 119 (1998); *see also Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), ALAB-952, 33 NRC 521, 528-30 (1991).
- G Representational standing requires the organization (1) to demonstrate that the interest of at least one of its members will be harmed, (2) to identify that member by name and address, and (3) to show that the organization is authorized to request a hearing on behalf of that member. *See GPU Nuclear, Inc.* (Oyster Creek Nuclear Generating Station), CLI-00-6, 51 NRC 193, 202 (2000). The organization must show that the member has individual standing in order to assert representational standing on his or her behalf, and “the interests that the representative organization seeks to protect must be germane to its own purpose.” *Consumers Energy Co.* (Palisades Nuclear Plant), CLI-07-18, 65 NRC 399, 409 (2007).
- H The Commission has indicated that in evaluating a petitioner’s standing, we are to construe the petition in favor of the petitioner. *See Georgia Institute of Technology* (Georgia Tech Research Reactor, Atlanta, Georgia), CLI-95-12, 42 NRC 111, 115 (1995).
- I Once establishing standing to intervene in the licensing process, petitioners will then be free to assert any contention, which, if proved, will afford them the relief they seek.
- J Admissible contentions are governed by 10 C.F.R. § 2.309(f)(1). Another Board recently summarized well the six criteria of 10 C.F.R. § 2.309(f)(1) that govern the admissibility of contentions as follows: (i) Specificity: Provide a specific statement of the issue of law or fact to be raised or controverted; (ii) Brief Explanation: Provide a brief explanation of the basis for the contention; (iii) Within Scope: Demonstrate that the issue raised in the contention is within the scope of the proceeding; (iv) Materiality: Demonstrate that the issue raised in the contention is material to the findings the NRC must make to support the action that is involved in the proceeding; (v) Concise Statement of Alleged Facts or Expert Opinion: Provide a concise statement of the alleged facts or expert opinions which support the requestor’s/petitioner’s position on the issue and on which the petitioner intends to rely at hearing, together with references to the specific sources and documents on which the requestor/petitioner intends to rely to support its position on the issue; and (vi) Genuine Dispute: Provide sufficient information to show that a genuine dispute exists with the applicant/licensee on a material issue of law or fact. This information must include references to specific portions of the application (including the applicant’s environmental report and safety report) that the petitioner disputes and the supporting reasons for each dispute, or, if the petitioner believes that the application fails to contain information on a relevant matter as required by law, the identification of each failure and the supporting reasons for the petitioner’s belief. *Progress Energy Florida, Inc.* (Levy County Nuclear Power Plant, Units 1 and 2), LBP-09-10, 70 NRC 51, 71-72 (2009).
- K Failure to comply with any of the 10 C.F.R. § 2.309(f)(1) requirements is grounds for dismissing a contention. *See Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-99-10, 49 NRC 318, 325 (1999); *Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1, 2, and 3), CLI-91-12, 34 NRC 143, 155-56 (1991).
- L The assertion that the Applicant might need to obtain a Part 72 license is irrelevant at this time, as a grant of the COL could be accompanied by grant of a Part 72 general license if the Applicant complies with certain conditions. *See* 10 C.F.R. § 72.210; *see also* 10 C.F.R. § 72.212(a)(2). The

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- Commission has determined that “the environmental impacts related to storage of spent fuel under part 72 have been generically evaluated under two previous rulemakings and the Commission’s waste confidence proceedings. Thus, these potential environmental impacts need not be reassessed.” *Storage of Spent Fuel in NRC-Approved Storage Casks at Power Reactor Sites*, 55 Fed. Reg. 29,181, 29,188 (1990).
- M In the context of NEPA, the NRC is obligated to study matters that may be far afield of its primary mission, including the environmental impacts related to the permits and licenses issued by other governmental agencies. 10 C.F.R. § 51.71(d) & n.3 and Part 51, Appendix A, § 5; *see also Natural Resources Defense Council, Inc. v. Morton*, 458 F.2d 827, 834-36 (D.C. Cir. 1972).
- N Whenever a contention of omission encompasses issues that are addressed completely in materials the Applicant subsequently files, the contention is rendered moot. *Duke Energy Corp. (McGuire Nuclear Station, Units 1 and 2, Catawba Nuclear Station, Units 1 and 2), CLI-02-28*, 56 NRC 373, 383 (2002).
- O Under 10 C.F.R. § 2.335(a), a licensing board may not admit any contention that challenges a Commission rule or regulation, unless a waiver is requested under 10 C.F.R. § 2.335(b).
- P The Commission is currently assessing the applicability of the Waste Confidence Rule to “all reactors” — both current and anticipated. *See* Waste Confidence Decision Update, 73 Fed. Reg. 59,551 (Oct. 9, 2008). As the Commission has stated “[i]t has long been agency policy that Licensing Boards ‘should not accept in individual license proceedings contentions which are (or are about to become) the subject of general rulemaking by the Commission.’” *Duke Energy Corp. (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11*, 49 NRC 328, 345 (1999).
- Q Mere statements of government officials are insufficient to overturn 10 C.F.R. § 51.23.
- R As the Commission has emphasized, the contention requirements were never intended to be turned into a “fortress to deny intervention.” *Oconee, CLI-99-11*, 49 NRC at 335 (citing *Philadelphia Electric Co. (Peach Bottom Atomic Power Station, Units 2 and 3), ALAB-216*, 8 AEC 13, 21 (1974)). The NRC’s pleading rules require merely that a petitioner provide a simple nexus between the contention and the referenced factual or legal support. *See* 10 C.F.R. § 2.309(f)(1)(v). They require nothing more.
- S In addition to the Commission’s determination that there will be a national geologic repository available for the storage of high-level waste, 10 C.F.R. § 51.51, Table S-3 is definitive with respect to radioactivity releases from such a geologic repository.
- T Expert statements must contain sufficient support to demonstrate a genuine dispute on a material issue of fact or law in order to support admission of a contention. *See* 10 C.F.R. § 2.309(f)(1)(v), (vi).
- U The Commission has generically dealt with land use commitment and the environmental effects of the uranium fuel cycle by creating numerical values in Table S-3, and absent a waiver, petitioners cannot challenge the Commission’s determination.
- V Although NUREG-1555 is only a guidance document, this Board considers this guidance to provide sufficient indication to support contention admissibility where the subject discussions may be required in the ER.
- W To demonstrate that this contention is within the scope of this proceeding requires some minimal showing that the alternative is reasonable and feasible in the electrical area that the nuclear units are to serve. As explained in *Dominion Nuclear North Anna, LLC (Early Site Permit for North Anna ESP Site), LBP-07-9*, 65 NRC 539, 607 (2007): Federal courts now review the range of alternatives in an EIS under the “rule of reason.” *Westlands Water District v. U.S. Department of Interior*, 376 F.3d 853, 868 (9th Cir. 2004); *City of Bridgeton v. Federal Aviation Administration*, 212 F.3d 448, 458 (8th Cir. 2000). Under this rule, “the EIS need not consider an infinite range of alternatives, only reasonable or feasible ones.” *Westlands Water Dist.*, 376 F.3d at 868.
- X The subject decommissioning rules are designed “(1) to minimize the administrative effort of licensees and the Commission and (2) to provid[e] reasonable assurance that funds will be available to carry out decommissioning in a manner which protects public health and safety.” *Consolidated Edison Co. of New York (Indian Point, Units 1 and 2), CLI-01-19*, 54 NRC 109, 143 (2001) (citing Final Rule: “General Requirements for Decommissioning Nuclear Facilities,” 53 Fed. Reg. 24,018, 24,030 (June 27, 1988) (internal quotations omitted)). In furtherance of this objective, the Commission revised its decommissioning rules in 2007 to address the unique status of COLs — as the prior rules were too stringent upon applicants for both a construction and operating license, where they had yet to even break ground on the subject reactor. *See* Licenses, Certifications, and Approvals for Nuclear Power Plants, 72 Fed. Reg. 49,352, 49,406 (Aug. 28, 2007). The Commission specifically revised section 50.75(b)(4) as it applies to COLs under Part 52 because the requirements in place (decommissioning report and certification

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

of financial assurance at the application phase) were too stringent. *See* 72 Fed. Reg. at 49,406. Under the revised rule, the COL applicant must submit a decommissioning report containing a certification that the funding assurance will be provided no later than 30 days after the NRC publishes notice in the *Federal Register* of its scheduled date for initial fuel loading. *See* 10 C.F.R. § 52.103(a); *see also* 10 C.F.R. § 50.75(b)(1); 72 Fed. Reg. at 49,406.

Y As NRC guidance, *see* NUREG-1577, “Standard Review Plan on Power Reactor Licensee Financial Qualifications and Decommissioning Funding Assurance,” at 6 (Rev. 1) (Feb. 1999), and rules, 10 C.F.R. § 50.75(e)(1)(ii), suggest, an applicant or licensee is not obligated to choose prepayment, sinking fund, or some other funding assurance method to cover for the total estimated decommissioning cost.

Z As another Licensing Board explained: This Board does not decide energy policy, nor do we adjudicate the business wisdom of a proposed investment. Instead, at this stage, we are simply looking for some indication that Petitioners have identified and articulated some concrete allegation as to how or why the ER fails to satisfy some legal requirement (*e.g.*, Part 51), and some understanding as to what will actually be litigated at the evidentiary hearing. *Levy*, LBP-09-10, 70 NRC at 135.

LBP-09-22 PROGRESS ENERGY FLORIDA, INC. (Levy County Nuclear Power Plant, Units 1 and 2), Docket Nos. 52-029-COL, 52-030-COL (ASLBP No. 09-879-04-COL-BD01); COMBINED LICENSE; August 27, 2009; INITIAL SCHEDULING ORDER

LBP-09-23 AMERENUE (Callaway Plant, Unit 2), Docket No. 52-037-COL (ASLBP No. 09-884-07-COL-BD01); COMBINED LICENSE; August 28, 2009; MEMORANDUM AND ORDER (Approving Settlement Agreement and Terminating Contested Adjudicatory Proceeding)

A In this 10 C.F.R. Part 52 proceeding regarding the application of AmerenUE (AUE) for a combined license (COL) to authorize the construction and operation of an additional reactor at the existing Callaway Plant site, in ruling on a joint motion for approval of a settlement agreement filed by AUE, the NRC Staff, and the various Petitioners who seek to intervene to challenge the AUE COL application, finding the agreement is consistent with the content and form provisions of 10 C.F.R. § 2.338(g)-(h) and is in the public interest in accord with section 2.338(i), the Licensing Board grants the participants’ motion, approves the settlement agreement, and terminates the contested adjudicatory hearing in the proceeding.

B As is reflected in 10 C.F.R. § 2.107(a), when an applicant decides it no longer wishes to have the agency evaluate its application, the usual approach is for the applicant to request that the agency permit it to withdraw its licensing request. Such a termination would, of course, end all agency consideration of the matter, including any Staff technical review and any adjudicatory proceeding, either as to contested matters raised by any intervenors or any uncontested/mandatory hearing that might be required.

C In an instance in which a hearing notice has been issued, the withdrawal would be subject to “such terms as the presiding officer may prescribe.” 10 C.F.R. § 2.107(a).

D Whatever authority a licensing board might have to order the renoticing of a licensing proceeding pending before it, *see Rochester Gas & Electric Corp.* (R.E. Ginna Nuclear Plant, Unit 1), LBP-83-73, 18 NRC 1231, 1233 (1983), in an instance in which an adjudicatory proceeding has been terminated before a licensing board pursuant to a settlement agreement, the board loses its jurisdiction over, and thus its authority to act with respect to, that licensing action. *See Eastern Testing & Inspection, Inc.*, LBP-96-11, 43 NRC 279, 282 n.1 (1996).

E When a licensing board will have no remaining role in a COL proceeding once the contested hearing is terminated because the board is not empowered to conduct the mandatory hearing, if the previously terminated contested hearing is subsequently renoticed, a new licensing board would need to be established to preside over the renoticed litigation.

F The section 2.341(a)(2) sua sponte review process that applies to a licensing board determination approving a settlement agreement, *see* 10 C.F.R. § 2.338(i), affords the Commission the opportunity to correct any participant or Board misapprehensions regarding the items contemplated in the settlement agreement.

G A settlement agreement provision whereby the applicant agrees not to contest the standing of specified petitioners in any renoticed licensing proceeding would not bind a future licensing board to make any particular determination regarding whether any of those petitioners has established its standing, either as of right or as a matter of discretion in accord with 10 C.F.R. § 2.309(d)-(e). *See* 10 C.F.R. § 2.309(a), (d)(3) (in ruling on hearing request/intervention petition, licensing board will determine whether petitioner has interest affected by the proceeding); *id.* § 2.309(e) (in ruling on discretionary intervention request, licensing board will consider and balance enumerated factors weighing in favor of and against allowing

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

intervention); *see also Southern Nuclear Operating Co.* (Vogtle Electric Generating Plant, Units 3 and 4), LBP-09-3, 69 NRC 139, 149 (in assessing intervention petition, licensing board must determine whether standing elements are met even though there are no objections to petitioner's standing), *appeals denied*, CLI-09-16, 70 NRC 33 (2009).

H The form for a settlement in a contested proceeding conducted under 10 C.F.R. Part 2 is set forth in section 2.338(g), which states that it "must be in the form of a proposed settlement agreement, a consent order, and a motion for its entry that includes the reasons why it should be accepted." Also, the settlement must be signed by the consenting parties or their authorized representatives.

I Even though, as a potential 10 C.F.R. § 2.315(c) interested governmental entity rather than a potential party to the proceeding, a governmental entity would not have a formal role in the proceeding absent the admission of parties and contentions, such an entity nonetheless should be kept appropriately apprised of the other participants' settlement efforts. *See* Licensing Board Memorandum and Order (Postponing Initial Prehearing Conference and Setting Schedule for Submission of Settlement Agreement) (July 16, 2009) at 4 n.3 (citing *Pa'ina Hawaii, LLC*, CLI-06-18, 64 NRC 1, 7 (2006)) (unpublished).

J As to the content of a settlement agreement in a contested proceeding, what the agreement "must" contain is governed by 10 C.F.R. § 2.338(h), which specifies four items. An agreement that fulfills each of the elements in paragraph (h) must have provisions that include (1) an admission of all jurisdictional facts; (2) an express waiver of further procedural steps before the presiding officer, of any right to challenge the validity of any order entered into in accord with the agreement, and of all rights to seek judicial review or otherwise contest the validity of this consent order; (3) a statement that this consent order has the same force and effect as an order made after a full hearing; and (4) a statement that matters identified in the agreement, required to be adjudicated, have been resolved by the agreement and consent order.

K In accord with 10 C.F.R. § 2.338(i), when a notice of hearing has been issued by the Commission in a COL proceeding, the licensing board assigned to preside over the adjudication of any hearing petitions has jurisdiction to approve a settlement agreement relating to that contested hearing.

L In accord with 10 C.F.R. § 2.338(i), a settlement agreement must be approved as appropriate so as to be binding in the proceeding.

M A licensing board decision dismissing the contested adjudication relating to a COL application has no impact on the subsequent need to conduct a mandatory hearing relating to the application. Under current Commission policy, the Commission would preside over that uncontested adjudicatory proceeding. *See Southern Nuclear Operating Co.* (Early Site Permit for Vogtle ESP Site), CLI-07-24, 66 NRC 38, 38 & n.2 (2007).

LBP-09-24 DAVID GEISEN, Docket No. IA-05-052 (ASLBP No. 06-845-01-EA); ENFORCEMENT; August 28, 2009; INITIAL DECISION

A In this Initial Decision concerning the validity of an Enforcement Order brought by the NRC Staff against David Geisen, a former employee of the Davis-Besse Nuclear Power Station located in northwestern Ohio and operated by FirstEnergy Nuclear Operating Company ("FENOC" or "Licensee"), a majority of the Board concluded that the Staff failed to show by a preponderance of the evidence that Mr. Geisen engaged in the deliberate misrepresentation with which he was charged. Accordingly, the Board set aside the charges in the Enforcement Order as unsupported by the evidence. As a consequence, also set aside were the immediately effective sanctions the Enforcement Order imposed against Mr. Geisen, including the 5-year ban on his employment in the nuclear industry.

B A Licensing Board reviews a Staff Enforcement Order *de novo* and determines on the basis of the hearing record whether the charges are sustained and the sanction imposed is warranted. *Atlantic Research Corp.* (Alexandria, Virginia), ALAB-594, 11 NRC 841, 849 (1980); *Radiation Technology, Inc.* (Lake Denmark Road, Rockaway, New Jersey 07866), ALAB-567, 10 NRC 533, 536 (1979).

C The NRC Staff's role at a hearing in an enforcement proceeding is "akin to that of a prosecutor," and it has the burden to prove its allegations "by a preponderance of the reliable, probative, and substantial evidence." *Radiation Tech., Inc.*, ALAB-567, 10 NRC at 536-37; Revisions to Procedures to Issue Orders; Deliberate Misconduct by Unlicensed Persons, 56 Fed. Reg. 40,644, 40,673 (Aug. 15, 1991).

D To prevail, the Staff was called upon to demonstrate by a preponderance of the evidence that Mr. Geisen had actual knowledge of the information associated with his actions and that he deliberately acted contrary to that knowledge. 10 C.F.R. § 50.5(a)(2).

E Section 50.5(a)(2) states that an employee of a licensee may not "[d]eliberately submit to the NRC . . . information that [he] knows to be incomplete or inaccurate in some respect material to the NRC."

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

Deliberate misconduct within the meaning of that regulation refers to “an intentional act or omission” that the person “knows” would cause a licensee to be in violation of any rule. *See* 10 C.F.R. § 50.5(c)(1). In this regard, the Staff’s practice is to charge a person with deliberate misconduct only when that person is knowledgeable about information associated with his actions and willfully and deliberately acts in contradiction to that knowledge. Thus, careless disregard in the execution of one’s duties does not amount to deliberate misconduct or a violation of 10 C.F.R. § 50.5(a)(2). Therefore, as the Staff interprets the regulation, the element of “actual knowledge” must be present to sustain a charge of deliberate misconduct under the NRC’s regulations.

F An inquiry into an individual’s “actual knowledge is entirely factual, requiring examination of the record.” *Ziegler v. Connecticut General Life Insurance Co.*, 916 F.2d 548, 553 (9th Cir. 1990). Where, as is common in proceedings of this nature, the record may be devoid of direct evidence to establish knowledge (e.g., a defendant’s admission, or documents drafted by the defendant that include representations entirely inconsistent with what he had written elsewhere), the Staff may have to build its case upon circumstantial evidence alone. The issue then becomes the quality of circumstantial evidence sufficient to give rise to a finding that the person charged actually knew the information.

G Establishing a party’s actual knowledge requires showing more than that a party had a suspicion “that something was awry.” *Brock v. Nellis*, 809 F.2d 753, 755 (11th Cir. 1987). Thus, constructive knowledge (that is, knowledge of facts sufficient to prompt an inquiry which would have uncovered the misrepresentations) is not actual knowledge. *Gluck v. Unisys Corp.*, 960 F.2d 1168, 1176 (3d Cir. 1992); *see also Radiology Center, S.C. v. Stifel, Nicolaus & Co.*, 919 F.2d 1216, 1222-23 (7th Cir. 1990) (district court erred in using constructive knowledge because the law required actual knowledge).

H The evidence at the hearing confirmed the commonsense view that not every document, whether paper or electronic, processed by an individual gets the same level of attention. But the degree of attention paid to a document initially can later be a strong determinant of the extent to which a person can later recall the contents of, and therefore can be said to have “knowledge” of, that particular document.

I An individual’s later recall of the contents of any document will turn on several factors, including (1) the effort, or lack thereof, that the worker put into its creation or application; (2) the need, or lack thereof, for the worker to have responded to the document in the course of employment; and (3) the significance, or lack thereof, of the information in the document to those tasks assigned to the worker that are viewed as having higher priority or greater significance than others.

J If a person can be charged — as always, in *retrospect* — with knowledge of a *particular* sentence in a document he once saw, then — looked at *prospectively* (i.e., at the time the document first came to his attention) — he is subject to being later held accountable for *every* sentence in that document, and, for that matter, for every word in all the documents that ever came before him. For at the time he first examines a document, he has no inkling of what will later be viewed as a crucial fact that he will be held to have “known.” The overly simplistic view that “he saw it, so he knew it” is an analytical conundrum that cannot be the rule.

K Collateral estoppel is a form of issue preclusion that prevents “the relitigation of issues of law or fact which have been finally adjudicated by a tribunal of competent jurisdiction in a proceeding involving the same parties or their privies.” *Toledo Edison Co.* (Davis-Besse Nuclear Power Station, Units 1, 2, and 3), ALAB-378, 5 NRC 557, 561 (1977). As a general matter, collateral estoppel may be applied in administrative adjudicatory proceedings. *Id.* at 562-63.

L In order to apply collateral estoppel and to preclude the relitigation of an issue, four factors must be present: (1) the issue sought to be precluded must be the same as that involved in the prior action; (2) that issue must have been actually litigated; (3) it must have been determined by a valid and final judgment; and (4) the determination must have been essential to the prior judgment. *Houston Lighting and Power Co.* (South Texas Project, Units 1 and 2), LBP-79-27, 10 NRC 563, 566 (1979), *aff’d*, ALAB-575, 11 NRC 14 (1980).

M In applying collateral estoppel principles, the question is not whether the subsequent tribunal believes that the prior tribunal correctly decided the issue at hand; rather, if all factors of the doctrine are met, collateral estoppel comes into play. *Davis-Besse*, ALAB-378, 5 NRC at 563-64 & n.7; *Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), LBP-02-20, 56 NRC 169, 173 (2002).

N Even where all of the factors are met, the application of collateral estoppel by the subsequent tribunal is to some degree a discretionary matter. *Parklane Hosiery Co. v. Shore*, 439 U.S. 322, 331 (1979).

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

Thus, Boards have some leeway to consider the existence of other considerations that could outweigh the jurisprudential reasons for applying the doctrine.

- O Examples of such considerations that can lead a Board to exercise its discretion not to apply collateral estoppel, as found in this proceeding, are: (1) the pendency of an appeal of the criminal court judgment upon which estoppel would be based; (2) the questions over the equivalence of the “knowledge” standard that governed the jury and the standard applicable in this administrative proceeding; and (3) the possibility that the jury verdict was internally inconsistent.
- P Ordinarily, the pendency of an appeal need not preclude reliance upon the decision being appealed to estop relitigation of the same matter in another forum. *Southern Pacific Communication Co. v. American Telephone & Telegraph Co.*, 740 F.2d 1011, 1018 (D.C. Cir. 1984). Under that generally useful view, the potentially duplicative and unnecessary litigation in the second forum does not take place while the appeal is pending, but if the appeal later proves successful — thus invalidating the original judgment upon which collateral estoppel had been based — then the litigation in the second forum is allowed to proceed. *Davis-Besse*, ALAB-378, 5 NRC at 563. There might be many circumstances in which such an efficient approach would be entirely workable, and acceptable to both parties, if the estoppel ruling covered the whole case and neither party was hurt by the ensuing trial delay. But that is not the only way to proceed, and where delay is already a problematic factor, it may clearly not be the way to proceed.
- Q “[C]are should be taken in dealing with judgments that are final, but still subject to direct review,” so as to avoid “the risks of denying relief on the basis of a judgment that is subsequently overturned.” *Martin v. Malhoyt*, 830 F.2d 237, 264 (D.C. Cir. 1987). To avoid those risks, a court may want to avoid the question by staying the case pending the appeal. *See* 18A Charles A. Wright et al., *Federal Practice and Procedure: Jurisdiction* 2d § 4433 (1981).
- R Where the impact of delay is a concern, the desirability of avoiding any further delay in reaching a final merits determination can be a key discretionary factor counseling nonreliance upon the collateral estoppel principle (even if that doctrine otherwise appeared applicable).
- S The complexity of the issues and facts underlying both the Staff’s Enforcement Order and the jury verdict in the criminal case raises at least a question as to whether the issues essential to the prior judgment are the same as those before us. Where a serious question exists as to whether the law regarding “knowledge” applied in a parallel criminal case was the same as the law governing a Board proceeding, the existence of that question may cause a Board to invoke its discretion not to preclude full litigation of the pending charges.
- T The “deliberate ignorance” theory is not embraced within the “deliberate misconduct” standard that governs NRC proceedings.
- U A Licensing Board is in no position, and has no authority, to express a direct opinion on the legitimacy of a jury verdict from a criminal trial; determining whether a conviction can stand is a matter for the appellate court with jurisdiction over the appeal. But even if possible deficiencies in the verdict are not of sufficient weight to warrant a reversal in the appellate court, the existence of such questions may nonetheless appear sufficiently colorable or weighty to provide a discretionary reason not to apply collateral estoppel principles to preclude litigation of the similar matter pending before a Board.
- V Given the extensive concern federal courts have exhibited over the legitimacy of the “deliberate ignorance” jury instruction, its use in a parallel criminal case — when it is not embraced by NRC regulations — makes the two proceedings sufficiently different that the ruling in the one cannot be binding in the other. And, even if application of collateral estoppel were permissible in these circumstances, it would not be required, and a Board may exercise its discretion not to apply it: to win on direct appeal, a litigant might need to show that the expanded instruction actually tainted the jury verdict, while he need raise before a Board only a legitimate concern that it did so.
- W With the jury in the parallel criminal case not having been asked to render a special verdict, the general verdict provides the Board insufficient guidance from which to determine whether the jury conviction was premised on actual knowledge or on deliberate ignorance.
- X The fact that the original judgment is subject to alternative interpretations provides reason for a Board to exercise its discretion not to apply collateral estoppel. For the Board to conduct a realistic and rational examination of the record in the criminal case to determine whether a reasonable jury could have grounded its verdict on any basis other than that asserted by the Staff as having been the controlling issue would require the Board to perform a thorough examination of the evidence underlying the Government’s case in the criminal trial. But performing such a duplicative examination is precisely what application of

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- collateral estoppel is intended to prevent. If a Board must reexamine the issue one way or another, it makes more sense to do it on the evidence presented to us than on the evidence presented elsewhere.
- Y The Staff brings the charges that frame our review of enforcement orders. Boards should not be in the position of upholding Staff enforcement orders on legal theories that (1) the Staff did not and does not embrace and (2) in any event do not fit the circumstances of the case before them.
- Z The nuclear regulatory system depends upon the agency being able to depend upon applicants and licensees, and their employees, not to submit information that they know to be false. For the decisions of the agency's dedicated regulators to be effective in protecting the public health and safety, there is no room for the submission of falsified information.
- AA The appropriateness of a 5-year ban may not depend upon a Board's upholding all of the several charges and then imposing a multiyear ban on a sort of "one year for each violation" approach. To the contrary, a single charge, if serious enough, could itself justify a 5-year ban.
- BB One of the key factors in establishing the length of a potential ban is whether the subject has taken responsibility for his actions and expressed the appropriate remorse. Just because an individual does not admit to his guilt does not necessarily mean that this factor should be weighed against him in setting the length of the employment ban. Neither should the continuing refusal to admit his guilt exacerbate the weight of this factor. Instead, if an individual engages in searching self-examination and in retrospect confirms an earlier wish that he had done far more to uncover the problems with the submissions to the NRC and to address the entire matter much more aggressively, those factors should be given weight. An agonizing admission of what the subject of an Enforcement Order "should have done" does not prove the deliberate misconduct charges against him; but what it does do is at least eliminate the negative aspects that might be assigned to "taking responsibility" and "expressing regret" factors — and to some degree turn them into positive attributes that count in his favor.
- CC Anyone who would willfully provide falsified information on a reactor safety matter should bear in mind that a 5-year ban may well be the result, both in light of its consistency with other enforcement measures taken through the years, and for its deterrent effect, advising other nuclear industry workers of the standards by which their own future conduct will be judged.
- DD There is a need to ensure that those who by their conduct have shown they cannot be trusted to operate a nuclear power plant are removed from a position in which they can harm the public health and safety. There will be instances in which such steps must be taken immediately. But this type of immediately effective deprivation of the legally acknowledged right to pursue one's livelihood should not be imposed without the Staff having substantial reason to do so and explaining its reasons in advance and in some detail.
- EE The agency's procedural regulations provide two measures that might be seen as alleviating the risk that an immediately effective order will be set aside after it has already had its adverse impact. The first is the chance to challenge the immediate effectiveness; the second is the promise of an expedited hearing. 10 C.F.R. § 2.202(c)(1) and (c)(2)(i).
- LBP-09-25 SOUTH TEXAS PROJECT NUCLEAR OPERATING COMPANY (South Texas Project, Units 3 and 4), Docket Nos. 52-012-COL, 52-013-COL (ASLBP No. 09-885-08-COL-BD01); COMBINED LICENSE; September 29, 2009; MEMORANDUM AND ORDER (Ruling on Admissibility of Contentions 8-16)
- A This 10 C.F.R. Part 52 proceeding concerns the application of South Texas Project Nuclear Operating Co. (STP or the Applicant) which has applied to the Nuclear Regulatory Commission (NRC) for two combined operating licenses (COL) under 10 C.F.R. Part 52 that would authorize STP to construct and to operate two new units employing the Advanced Boiling Water Reactor (ABWR) certified design on its South Texas site, located in Matagorda County, Texas. Having previously ruled on a petition filed jointly by Petitioners, in LBP-09-21, and having found standing on behalf of Petitioners and one admissible contention, the Licensing Board now rules on the remaining contentions. Of the remaining nine contentions, the Licensing Board finds that four are admissible.
- B The NRC's pleading rules require merely that a petitioner provide a simple nexus between the contention and the referenced factual or legal support. *See* 10 C.F.R. § 2.309(f)(1)(v). They require nothing more.
- C A fully adequate ER is a prerequisite to issuance of a COL. *See* 10 C.F.R. § 51.45(b) ("The environmental report shall . . . discuss the following considerations: (1) The impact of the proposed action on the environment. Impacts shall be discussed in proportion to their significance").

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- D Section 1371(c)(2) of 33 U.S.C. provides that “[n]othing in the National Environmental Policy Act of 1969 (83 Stat. 852) shall be deemed to . . . authorize any Federal agency . . . to review any effluent limitation or other requirement established pursuant to [the Clean Water Act] . . . ; or . . . authorize any such agency to impose any effluent limitation other than” those set by the Environmental Protection Agency or a state agency that has been delegated such authority — which here means the TCEQ. This is a clear federal prohibition on the NRC regulating effluent discharges subject to TPDES permit limits or mandating that TCEQ adopt discharge limitations different than those TCEQ deems appropriate.
- E Even if this contention concerned subject matter regulated by another governmental agency, such as TCEQ, the issue before us is whether the ER must analyze the environmental impacts of unregulated seepage from the MCR into adjacent groundwater. Section 51.71(d) n.3 and Part 51, Appendix A, § 5, of 10 C.F.R. mandate that the NRC Staff address such matters in its EIS, *see also Natural Resources Defense Council, Inc. v. Morton*, 458 F.2d 827, 834-36 (D.C. Cir. 1972); *Progress Energy Florida, Inc.* (Levy County Nuclear Power Plant, Units 1 and 2), 70 NRC 51, 86 (2009), and concomitantly, that Applicant address such potentially adverse environmental effects in its ER, *cf.* 10 C.F.R. §§ 51.45(b)(2), 51.41, and 51.45(b)(3).
- F The law has been clear for some time that “the scope of an adjudicatory hearing is specified by the Notice of Hearing.” *PPL Bell Bend, LLC* (Bell Bend Nuclear Power Plant), LBP-09-18, 70 NRC 385, 431 (2009) (citing *Public Service Co. of Indiana* (Marble Hill Nuclear Generating Station, Units 1 and 2), ALAB-316, 3 NRC 167, 170-71 (1976)). *See also Florida Power & Light Co.* (St. Lucie Nuclear Power Plant, Unit 1), LBP 88-10A, 27 NRC 452, 463 (1988) (citing *Commonwealth Edison Co.* (Zion Station, Units 1 and 2), ALAB-616, 12 NRC 419, 426 (1980) (“the scope of the contention is bounded by the scope of the notice of hearing”)). Here, the Notice of Hearing establishes that the permissible scope of the hearing is confined solely to the application. *See* [STP], Notice of Order, Hearing, and Opportunity to Petition for Leave to Intervene, 74 Fed. Reg. 7934 (Feb. 20, 2009). *See also U.S. Department of Energy* (High-Level Waste Repository), CLI-09-14, 69 NRC 580, 590 (2009).
- G Section 1371(c)(2) of 33 U.S.C. of the Clean Water Act expressly prohibits an agency such as the NRC from using NEPA to impose additional effluent limitations on Applicant’s wastewater discharges to surface waters. Section 1371(c)(2) does not affect the permissible reach of the NRC’s NEPA obligations with respect to discharges to groundwater. Section 1371(c)(2) provides that nothing in NEPA shall be deemed to “authorize any such agency to impose, as a condition precedent to the issuance of any license or permit, any effluent limitation other than any such limitation established pursuant to this chapter.” The reach of “this chapter” of the Clean Water Act is confined to navigable waters, which do not even encompass all surface waters. *Solid Waste Agency of Northern Cook County v. United States Army Corps of Engineers*, 531 U.S. 159 (2001). Certainly, the Clean Water Act does not authorize regulation of discharges to groundwater. *Exxon Corp. v. Train*, 554 F.2d 1310 (5th Cir. 1977). This is the case even if such groundwater is adjacent to navigable water. *See San Francisco Baykeeper v. Cargill Salt Division*, 481 F.3d 700, 709 (9th Cir. 2009).
- H The word “material” appears in two separate places in the NRC pleading requirements. One requires a petitioner to demonstrate that the issue raised is material to the findings the NRC must make to support the action that is involved in the proceeding. The second requires a petitioner to provide sufficient information to show that a genuine dispute exists on a material issue of law or fact. This second requirement is not a second hurdle of materiality a petitioner must meet, but rather reiterates that a petitioner must demonstrate that its dispute is “material” under the first requirement. Thus, a contention is admissible if it raises a genuine dispute that is material to the findings the NRC must make to support the action involved. 10 C.F.R. § 2.309(f)(1)(iv).
- I Litigation over the term “genuine” is not easy to find, but a dispute that is not genuine would be one that would be contrived, and hence not justiciable. “[A] justiciable controversy must involve adverse parties representing a true clash of interests. The questions raised must be ‘presented in an adversary context and in a form historically viewed as capable of resolution through the judicial process.’” *Hydro Resources, Inc.* (P.O. Box 777, Crownpoint, New Mexico 87313), LBP-05-17, 62 NRC 77, 91 (2005) (quoting *Flast v. Cohen*, 392 U.S. 83, 95 (1968)).
- J NEPA does not command one outcome over another; it merely requires that the proposed action and alternatives to such proposed action be examined. *See Robertson v. Methow Valley Citizens Council*, 490 U.S. 332, 350 (1989) (“NEPA itself does not mandate particular results, but simply prescribes the necessary process”). It is important to keep in mind that “10 C.F.R. § 2.309(f)(2) recognizes that, when

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

NRC issues the EIS, petitioners have the opportunity to file a second wave of environmental contentions. Such new contentions focus on the adequacy of the NRC Staff's EIS (or EA) under NEPA." *Levy County*, LBP-09-10, 69 NRC at 88.

LBP-09-26 TENNESSEE VALLEY AUTHORITY (Watts Bar Nuclear Plant, Unit 2), Docket No. 50-391-OL (ASLBP No. 09-893-01-OL-BD01); OPERATING LICENSE; November 19, 2009; MEMORANDUM AND ORDER (Granting Petition to Intervene)

A In this proceeding arising from the license application of the Tennessee Valley Authority (TVA or Applicant) to operate a second nuclear power reactor at the Watts Bar Nuclear Plant (WBN Unit 2), the Licensing Board — ruling on a petition to intervene jointly filed by five organizations — concludes that one petitioner which has received an extension of time within which to file a petition to intervene demonstrated standing, filed a timely petition to intervene, and proffered admissible contentions, and was admitted as a party to the proceeding; and that the other four petitioners did not file timely petitions and did not demonstrate that their late intervention should be permitted.

B Pursuant to 10 C.F.R. § 2.309(d)(ii)-(iv), a petitioner seeking to establish standing to intervene in an NRC proceeding must provide information in the petition including (1) the nature of the petitioner's right to be made a party to the proceeding; (2) the nature and extent of the petitioner's property, financial, or other interest in the proceeding; and (3) the possible effect of any decision or order that might be issued in the proceeding on the petitioner's interest.

C To demonstrate standing, an organization seeking to intervene in a proceeding must allege that the challenged action will cause a cognizable injury to the organization's interests or to the interests of one or more of its members.

D If an organization seeks to intervene as a representative of its members, it must identify at least one member by name and address, show that member would have standing in his or her own right, and demonstrate that the member has authorized the organization to intervene on his or her behalf.

E In the context of an operating license proceeding the NRC applies a proximity presumption, under which a petitioner who lives within 50 miles of a nuclear power reactor is presumed to have standing without the need specifically to plead injury, causation, and redressability.

F Pursuant to the 10 C.F.R. Part 2 regulations, a licensing board may consider contentions submitted after the initial 60-day filing deadline under two sets of circumstances. Section 2.309(f)(2) allows contentions to be filed after the initial 60-day deadline if the petitioner shows that: "(i) The information upon which the amended or new contention is based was not previously available; (ii) The information upon which the amended or new contention is based is materially different than information previously available; and (iii) The amended or new contention has been submitted in a timely fashion based on the availability of the subsequent information." Otherwise, pursuant to 10 C.F.R. § 2.309(c), petitions and contentions filed after the initial 60-day deadline are admissible only upon a balancing of the following factors: "(i) Good cause, if any, for the failure to file on time; (ii) The nature of the requestor's/petitioner's right under the Act to be made a party to the proceeding; (iii) The nature and extent of the requestor's/petitioner's property, financial or other interest in the proceeding; (iv) The possible effect of any order that may be entered in the proceeding on the requestor's/petitioner's interest; (v) The availability of other means whereby the requestor's/petitioner's interest will be protected; (vi) The extent to which the requestor's/petitioner's interests will be represented by existing parties; (vii) The extent to which the requestor's/petitioner's participation will broaden the issues or delay the proceeding; and (viii) The extent to which the requestor's/petitioner's participation may reasonably be expected to assist in developing a sound record."

G Of the 10 C.F.R. § 2.309(c)(1) factors, good cause for the failure to file on time is the most important. Absent good cause, a petitioner's demonstration on the other factors must be "compelling."

H Where petitioners failed to file on time or seek an extension because they had not yet decided whether to seek to intervene, such indecision does not constitute good cause.

I For a contention to be admissible, under 10 C.F.R. § 2.309(f)(1), it must (i) provide a specific statement of the legal or factual issue sought to be raised; (ii) provide a brief explanation of the basis for the contention; (iii) demonstrate that the issue raised is within the scope of the proceeding; (iv) demonstrate that the issue raised is material to the findings the NRC must make to support the action that is involved in the proceeding; (v) provide a concise statement of the alleged facts or expert opinions, including references to specific sources and documents that support the petitioner's position and upon which the petitioner intends to rely at hearing; and (vi) provide sufficient information to show that a genuine dispute exists

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

with regard to a material issue of law or fact, including references to specific portions of the application that the petitioner disputes or, where the application is alleged to be deficient, the identification of such deficiencies and supporting reasons for this belief.

- J A petitioner must provide some sort of minimal basis indicating the potential validity of the contention.
- K Because the reach of a contention necessarily hinges upon its terms and its stated bases, the brief explanation helps define the scope of the contention.
- L The scope of a proceeding is defined in the Commission's initial hearing notice and order referring the proceeding to the Licensing Board. Contentions that fall outside the scope of the proceeding must be rejected.
- M In order to be admissible, a contention must assert an issue of law or fact that is material to the findings the NRC must make to support the action that is involved in the proceeding. In other words, the petitioner must show that the subject matter of the contention could impact the grant or denial of the license application at issue in the proceeding.
- N "Materiality" requires a showing that the alleged error or omission is of possible significance to the result of the proceeding, i.e., that some significant link exists between the claimed deficiency and either the health and safety of the public, or the environment.
- O It is the petitioner's obligation to present the factual and expert support for its contention. Failure to do so requires that the contention be rejected. Mere notice pleading is insufficient. A petitioner's issue will be ruled inadmissible if the petitioner has offered no tangible information, no experts, no substantive affidavits, but instead only bare assertions and speculation. Likewise, providing any material or document as the foundation for a contention, without setting forth an explanation of its significance, is inadequate to support the admission of a contention.
- P If a petitioner neglects to provide the requisite support for its contentions, the Board should not make assumptions of fact that favor the petitioner or supply information that is lacking.
- Q Any supporting material provided by a petitioner, including those portions of the material that are not relied upon, is subject to Board scrutiny.
- R Determining whether the contention is adequately supported by a concise allegation of the facts or expert opinion is not a hearing on the merits. The petitioner does not have to prove its contention at the admissibility stage. The contention admissibility threshold is also less than is required at the summary disposition stage. Nevertheless, while a Board may appropriately view petitioners' support for its contention in a light that is favorable to the petitioner, a petitioner must provide some support for his or her contention, in the form of either facts or expert testimony.
- S A contention must show that a genuine dispute exists on a material issue of law or fact with regard to the license application in question, challenge and identify either specific portions of, or alleged omissions from, the application, and provide the supporting reasons for each dispute. Any contention that fails to directly controvert the application, or that mistakenly asserts that the application does not address a relevant issue, may be dismissed.
- T With limited exceptions no rule or regulation of the Commission is subject to attack in any adjudicatory proceeding. Thus, a contention that attacks applicable statutory requirements or represents a challenge to the basic structure of the Commission's regulatory process must be rejected. Similarly, the NRC's adjudicatory process is not the proper venue for the evaluation of a petitioner's own view regarding the direction that regulatory policy should take.
- U The requirements of NEPA and, by extension, the NRC's regulations implementing NEPA (10 C.F.R. Part 51) are subject to a rule of reason, and only reasonably foreseeable environmental impacts must be addressed.
- V Section 51.53(b) of 10 C.F.R. establishes the requirements for an applicant's submission of environmental information at the operating license stage. Pursuant to this regulation, the applicant must submit a document denominated as the "Supplement to Applicant's Environmental Report — Operating License Stage." In this document "the applicant shall discuss the same matters described in §§ 51.45, 51.51, and 51.52 [which would have been initially discussed in the ER at the construction permit stage], but only to the extent that they differ from those discussed or reflect new information . . ." The clear intent of this provision is to avoid duplication and to highlight new information. However, this regulation specifies limitations on this general requirement. It goes on to state that: "No discussion of need for power, or of alternative energy sources . . . is required in this report [the Supplement to Applicant's Environmental

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- Report — Operating License Stage].” Since an OL applicant is thus not obligated to include any discussion of the need for power or of alternative energy sources in its application for an operating license, a challenge to the adequacy of the applicant’s discussion of these issues is not within the scope of the proceeding.
- W In order for the Board to allow a petitioner to amend a contention, the petitioner must demonstrate that the information upon which the amended contention is based was not previously available, is materially different from information previously available, and that the amended contention has been submitted in a timely fashion.
- X The standard for whether information is new is whether the information was available to the public, not whether the petitioner has recently become aware of its availability.
- Y At the contention admissibility stage of the proceedings, the Board admits “contentions,” not “bases.”
- LBP-09-27 VIRGINIA ELECTRIC AND POWER COMPANY d/b/a DOMINION VIRGINIA POWER and OLD DOMINION ELECTRIC COOPERATIVE (North Anna Power Station, Unit 3), Docket No. 52-017-COL (ASLBP No. 08-863-01-COL); COMBINED LICENSE; November 25, 2009; MEMORANDUM AND ORDER (Admitting Contention 10 in Part)
- A In this Combined License Proceeding, Intervenor filed a new contention challenging the Applicant’s new plan for the onsite storage of low-level radioactive waste. The Licensing Board ruled that the new contention was timely and admitted it in part.
- B Several Licensing Boards have recognized a dichotomy between “new” contentions filed under section 2.309(f)(2) and “nontimely” contentions filed under 10 C.F.R. § 2.309(c), based on both the regulatory text and the apparent absurdity of requiring intervenors with contentions rooted in new material information (“new” contentions) to make the same showing as intervenors who have simply delayed filing their contentions until after expiration of the regulatory deadline (“nontimely” contentions). Simply put, “[i]f a contention satisfies the timeliness requirement of 10 C.F.R. § 2.309(f)(2)(iii), then, by definition, it is *not* subject to 10 C.F.R. § 2.309(c) which specifically applies to ‘nontimely filings.’” *Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-14, 63 NRC 568, 573 n.14 (2006) (emphasis in original).
- C The adequacy of a COL applicant’s plan for the storage and management of LLRW is a material issue in a COL proceeding.
- D Part 61 does not apply to onsite facilities where a licensee plans on storing its own low-level radioactive waste prior to eventual disposal offsite; it only governs land disposal facilities receiving waste from others.
- E Thirty days is a reasonable limit for fulfilling the timing requirement of 10 C.F.R. § 2.309(f)(2)(iii) because of “the significant effort involved in (a) identifying new information, (b) assembling the required expertise, and then (c) drafting a contention that satisfies 10 C.F.R. § 2.309(f)(1).” *Vermont Yankee*, LBP-06-14, 63 NRC at 574.
- F To satisfy 10 C.F.R. § 2.309(f)(1)(iv)’s materiality requirements for contentions of omission, there must be some significant link between the claimed deficiency and the agency’s ultimate determination whether the license applicant will adequately protect the health and safety of the public and the environment.
- G The proponent of a contention is not required to prove its case on the merits at the contention admissibility stage.
- H Section 2.309(f)(1)(vi) of 10 C.F.R. requires that the proponent of a contention identify the specific parts of the COLA it disputes and show that resolution of those disputes is material to the licensing decision.
- I An admissible contention may not be based solely on a general allegation that an applicant’s Safety Analysis Report contains an unsubstantiated claim of conservatism. Such allegations, “without specific ties to NRC regulatory requirements or to safety in general . . . do not provide adequate support demonstrating the existence of a genuine dispute of fact or law with respect to the . . . application.” *U.S. Department of Energy* (High-Level Waste Repository), CLI-09-14, 69 NRC 580, 588 (2009).
- J If an applicant has underestimated radioactive waste volumes, this raises the question whether the applicant will “control[ ] and limit[ ] radioactive effluents and radiation exposures within the limits set forth in [10 C.F.R. Part 20].” 10 C.F.R. § 52.79(a)(3).
- K The Commission has recently held that 10 C.F.R. § 52.79(a)(3) “sets no quantity or time restrictions relative to onsite storage of . . . [low level radioactive] waste” in an applicant’s Final Safety Analysis Report. *Southern Nuclear Operating Co.* (Vogtle Electric Generating Plant, Units 3 and 4), CLI-09-16, 69

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- NRC 33, 36 (2009). Rather, the information required in this part of the application is largely dependent on the individual applicant's plans. *Id.* at 37.
- LBP-09-28 WESTINGHOUSE ELECTRIC COMPANY, LLC (Hematite Decommissioning Project), Docket No. 70-36-MLA (ASLBP No. 10-894-01-MLA-BD01); MATERIALS LICENSE AMENDMENT; December 3, 2009; MEMORANDUM AND ORDER (Ruling on Request for Hearing)
- A In this proceeding regarding the application by Westinghouse Electric Company for authorization to dispose of low-activity radioactive waste at the U.S. Ecology Inc. site near Grand View, Idaho, the Licensing Board rules that Citizens for a Clean Idaho, Inc. (CCI) did not demonstrate standing to participate as a party. Therefore, the Board denies CCI's request for hearing.
- B Anyone who wishes to request a hearing concerning a proposed licensing action must (1) establish standing and (2) proffer at least one admissible contention.
- C Pursuant to 10 C.F.R. § 2.309(d), a request for hearing must state: (1) the name, address, and telephone number of the requestor; (2) the nature of the requestor's right under the governing statutes to be made a party to the proceeding; (3) the nature and extent of the requestor's property, financial, or other interest in the proceeding; and (4) the possible effect of any decision or order that may be issued in the proceeding on the requestor's interest.
- D The Commission applies judicial concepts of standing, requiring anyone who requests a hearing to show that (1) it has suffered or will suffer a distinct and palpable harm that constitutes injury-in-fact within the zone of interests arguably protected by the governing statutes; (2) the injury is fairly traceable to the challenged action; and (3) the injury is likely to be redressed by a favorable decision.
- E The requisite injury for standing may be either actual or threatened, but must nonetheless be concrete and particularized, not conjectural, or hypothetical.
- F Although the Commission recognizes a 50-mile proximity presumption to establish standing in nuclear power reactor construction and operating license proceedings, in other cases, licensing boards must address standing on a case-by-case basis, taking into account the nature of the proposed action and the significance of the radioactive source.
- G Organizations may demonstrate standing in either an organizational or representational capacity.
- H For organizational standing, an organization must, in its own right, satisfy the same requirements of injury, causation, and redressability as an individual.
- I For representational standing, an organization must (1) demonstrate that the licensing action in issue will affect at least one of its members; (2) identify that member by name and address; (3) show that it is authorized by that member to request a hearing on his or her behalf; (4) demonstrate that the member would qualify for standing in his or her own right; (5) show that the interests the organization seeks to protect are germane to its own purpose; and (6) show that neither the proffered contentions nor the requested relief would require an individual member to participate in the proceeding.
- J To state a sufficiently concrete and particularized injury-in-fact, a potential party must not merely repeat the language of 10 C.F.R. § 2.309(d), but rather must explain how the action in issue would adversely affect its interests. Absent an obvious potential for harm, it is a requestor's burden to show how harm will or may occur.
- LBP-09-29 U.S. DEPARTMENT OF ENERGY (High-Level Waste Repository), Docket No. 63-001-HLW (ASLBP No. 09-892-HLW-CAB04); CONSTRUCTION AUTHORIZATION; December 9, 2009; MEMORANDUM AND ORDER (Addressing Contentions Filed After Initial Petitions)
- A A legal issue contention need not satisfy all the contention admissibility criteria of 10 C.F.R. § 2.309(f)(1).
- B A legal issue contention is not required to provide "facts or expert opinions," as called for in section 2.309(f)(1)(v).
- LBP-09-30 PROGRESS ENERGY FLORIDA, INC. (Levy County Nuclear Power Plant, Units 1 and 2), Docket Nos. 52-029-COL, 52-030-COL (ASLBP No. 09-879-04-COL-BD01); COMBINED LICENSE; December 29, 2009; ORDER (Denying Motion to Compel Disclosure of Bases for Expert Opinion)
- A The Board denies Progress Energy Florida's Motion to compel disclosure of bases for expert opinions filed by Joint Intervenors.
- B 10 C.F.R. § 2.336(a)(1) requires only the disclosure of the written "analysis or other authority," if any, that is extant and reasonably available to the party when the mandatory disclosure is made.
- C 10 C.F.R. § 2.336(a)(1) creates no substantive criteria for the quality of the expert "analysis or other authority" that must be disclosed.

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- D 10 C.F.R. § 2.336(a) simply governs the mandatory exchange of certain discovery information and documents and imposes no *evidentiary* hurdle or “burden of going forward” with the *evidence* that must be met in the mandatory disclosure.
- E The phrase “claims and contentions” as used in 10 C.F.R. § 2.336(a)(1) includes any assertion, statement, or argument, positive or negative, in support of an intervenor’s or applicant’s position, that is advanced by any party. It is not limited to the formal “contentions” that meet the criteria of 10 C.F.R. § 2.309(f)(1).
- LBP-10-1 SOUTHERN NUCLEAR OPERATING COMPANY (Vogtle Electric Generating Plant, Units 3 and 4), Docket Nos. 52-025-COL, 52-026-COL (ASLBP No. 09-873-01-COL-BD01); COMBINED LICENSE; January 8, 2010; MEMORANDUM AND ORDER (Ruling on Petition to Intervene)
- A In this 10 C.F.R. Part 52 proceeding regarding the application of Southern Nuclear Operating Company (SNC) for a combined license (COL) to construct and operate two new nuclear reactors at its existing Vogtle Electric Generating Plant (VEGP) site, ruling on a petition filed jointly by five individuals seeking to intervene to contest the SNC COL application, the Licensing Board concludes that although one of the five petitioners has established the requisite standing, because they have failed to proffer one admissible contention, their hearing request must be denied.
- B In determining whether an individual or organization is an “interested person” under section 189a of the Atomic Energy Act (AEA) of 1954, 42 U.S.C. § 2239(a)(1)(A), that has standing “as of right” such that it can be granted party status in a proceeding in accord with 10 C.F.R. § 2.309(d), the Commission applies contemporaneous judicial standing concepts that require a participant to establish that (1) it has suffered or will suffer a distinct and palpable injury that constitutes injury-in-fact within the zones of interests arguably protected by the governing statutes (e.g., the AEA, 42 U.S.C. § 2011 et seq., the National Environmental Policy Act of 1969 (NEPA), 42 U.S.C. § 4321 et seq.); (2) the injury is fairly traceable to the challenged action; and (3) the injury is likely to be redressed by a favorable decision. *See Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), CLI-96-1, 43 NRC 1, 6 (1996).
- C In proceedings involving the possible construction or operation of a nuclear power reactor, proximity to the proposed facility has been considered sufficient to establish standing. *See PPL Bell Bend, LLC* (Bell Bend Nuclear Power Plant), CLI-10-7, 71 NRC 133, 138 (2010); *Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), CLI-09-20, 70 NRC 911, 915-16 (2009).
- D The proximity presumption applies when petitioners live within 50 miles of the proposed facility or when they have “frequent contacts” with the area affected by the proposed facility. *Calvert Cliffs, CLI-09-20, 70 NRC at 915-16; see Bell Bend, CLI-10-7, 71 NRC at 138.*
- E To establish the requisite proximity, a petitioner must clearly indicate where he lives and/or what contact he has with the site. *See Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), LBP-91-2, 33 NRC 42, 47 (1991) (no standing when petitioner alleged proximity but failed to state his physical address or elaborate on the extent of his activities in the area).
- F To establish standing based on “frequent contacts,” the petitioner must show that it “‘frequently engages in *substantial* business and related activities in the vicinity of the facility,’ engages in ‘normal, *everyday* activities’ in the vicinity, has ‘*regular*’ and ‘*frequent*’ contacts’ in an area near a licensed facility, or otherwise has visits of a ‘length’ and ‘nature’ showing ‘an ongoing connection and presence,’” but standing is not presumed “where contact has been limited to ‘*mere occasional trips* to areas located close to reactors.’” *Consumers Energy Co.* (Big Rock Point Independent Spent Fuel Storage Installation), CLI-07-21, 65 NRC 519, 523-24 (2007) (footnotes omitted); *see also PPL Bell Bend, LLC* (Bell Bend Nuclear Power Plant), LBP-09-18, 70 NRC 385, 402 (2009) (no proximity-based standing when petitioner failed to supply “more specific information regarding the frequency, nature, and length of his contacts” within the proximity zone), *aff’d*, CLI-10-7, 71 NRC at 139; *Tennessee Valley Authority* (Sequoyah Nuclear Plant, Units 1 and 2; Watts Bar Nuclear Plant, Unit 1), LBP-02-14, 56 NRC 15, 26 (2002) (no proximity-based standing when petitioner “demonstrate[d] only occasional contact with the zone of harm”).
- G Ultimately, it is the petitioner’s responsibility to “provide enough detail to allow the Board to distinguish a casual interest from a substantial one.” *Bell Bend, CLI-10-7, 71 NRC at 139.*
- H Regardless of whether there is a challenge to a petitioner’s standing, given the jurisdictional nature of standing under the AEA, a licensing board has an independent obligation to make a standing determination. *Cf. Summers v. Earth Island Institute*, 129 S. Ct. 1142, 1152 (2009) (court must make independent assessment of Article III standing claims).

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- I Petitioner's claim to have fished "regularly," does not necessarily convey the same meaning as the term "frequently" that is referenced in Commission standing cases. One who performs an act "regularly" does so "in a regular, orderly, . . . or methodical way," *Webster's Third New International Dictionary* 1913 (Philip B. Gove ed. in chief, 1976) (unabridged) (definition of "regularly"), while one who does something "frequently" does so "at frequent or short intervals," "frequent" being defined as "often or habitually," *id.* at 909 (definitions of "frequently" and "frequent"). Thus, an individual who fishes once a year, every year, might be considered to do so "regularly," but not necessarily "frequently."
- J Petitioners bear the burden of providing sufficient relevant, specific information, whether by good-faith estimate or otherwise, to establish the basis for their standing claims. *See Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-99-10, 49 NRC 318, 325 (1999) (intervenors who fail to provide specific information regarding proximity or frequency of contacts only complicate matters for themselves); *see also Bell Bend*, CLI-10-7, 71 NRC at 139 ("a petitioner's lack of specificity concerning the nature, extent, and duration of his contacts with the area surrounding the proposed site is a sufficient basis to reject a claim of standing"); *id.* at 140 (affirming licensing board finding that petitioner's claim that he "routinely pierces" 50-mile radius around reactor site is too vague to support standing).
- K While the nature of the activities undertaken within the affected area undoubtedly impacts the amount of detail that must be provided to establish whether the activity is sufficiently "frequent," *see Northern States Power Co.* (Pathfinder Atomic Plant), LBP-90-3, 31 NRC 40, 45 (1990) ("regular" commute that takes petitioner past plant entrance once or twice a week sufficient to establish standing), in describing a discretionary recreational activity such as fishing, providing more, rather than less, detail would generally be prudent.
- L The distinction between "frequently" and "regularly" might seem overly formalistic/legalistic, but it highlights the importance of making a more detailed factual showing (rather than relying on conclusory adjectives and adverbs) in situations in which a standing claim rests upon the nature of a petitioner's activities purportedly near to, or bearing some connection with, the reactor facility at issue. Without question, a large number of individuals who do not reside within a 50-mile radius of a reactor site may undertake a variety of activities (e.g., going to work or school, shopping, attending meetings or religious services, visiting friends and relatives) within that distance from the reactor site. The degree to which those activities are sufficient to afford standing in a reactor licensing proceeding, as a question that "will require the Board to weigh the information provided," *Bell Bend*, CLI-10-7, 71 NRC at 139, undoubtedly is a matter that benefits from more, rather than less, factual information.
- M A Licensing Board has responsibility to construe a hearing petition in a light most favorable to the petitioner. *See Georgia Institute of Technology* (Georgia Tech Research Reactor, Atlanta, Georgia), CLI-95-12, 42 NRC 111, 115 (1995).
- N Even if a party seeking standing has some intent to return to an area, when such intentions are not supported by "concrete plans" or a "specification of when" future visits would take place, they do not support a finding of injury in the standing context. *Summers*, 129 S. Ct. at 1151 (quoting *Lujan v. Defenders of Wildlife*, 504 U.S. 555, 564 (1992)).
- O NRC's regulations provide for the possibility of discretionary intervention in circumstances when one petitioner has standing as of right and has proffered at least one admissible contention, but other petitioners have not demonstrated their standing. *See* 10 C.F.R. § 2.309(e). If a petitioner did not request discretionary intervention in the event the petitioner is found to lack standing as of right, a licensing board need not consider affording such intervention status.
- P Under section 2.309(c), whether a "nontimely" petition and its associated contentions should be considered is based upon a balancing of eight factors: "(i) Good cause, if any, for the failure to file on time; (ii) The nature of the requestor's/petitioner's right under the Act to be made a party to the proceeding; (iii) The nature and extent of the requestor's/petitioner's property, financial or other interest in the proceeding; (iv) The possible effect of any order that may be entered in the proceeding on the requestor's/petitioner's interest; (v) The availability of other means whereby the requestor's/petitioner's interest will be protected; (vi) The extent to which the requestor's/petitioner's interests will be represented by existing parties; (vii) The extent to which the requestor's/petitioner's participation will broaden the issues or delay the proceeding; and (viii) The extent to which the requestor's/petitioner's participation may reasonably be expected to assist in developing a sound record."
- Q Of the section 2.309(c) factors, the first factor regarding good cause for the failure to file timely is the most important element in that, absent a demonstration of good cause under this factor, a compelling

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

showing must be made on the other factors if a nontimely petition is to be granted or a nontimely contention is to be admitted. *See Commonwealth Edison Co.* (Braidwood Nuclear Power Station, Units 1 and 2), CLI-86-8, 23 NRC 241, 244 (1986). Moreover, among the remaining four nonstanding elements in this balance (i.e., factors (v) through (viii)), factors five and six generally are given less weight than factors seven and eight. *See id.* at 244-45.

R Also potentially relevant to the admissibility of a hearing petition filed after the initial filing deadline is 10 C.F.R. § 2.309(f)(2), which provides: “The petitioner may amend those contentions or file new contentions [on issues arising under NEPA] if there are data or conclusions in the NRC draft or final environmental impact statement [(EIS)], environmental assessment [(EA)], or any supplements relating thereto, that differ significantly from the data or conclusions in the applicant’s documents. Otherwise, contentions may be amended or new contentions filed after the initial filing only with leave of the presiding officer upon a showing that — (i) The information upon which the amended or new contention is based was not previously available; (ii) The information upon which the amended or new contention is based is materially different than information previously available; and (iii) The amended or new contention has been submitted in a timely fashion based on the availability of the subsequent information.”

S The initial, good cause factor under section 2.309(c)(1) favors a petitioner when, in accord with a previous licensing board directive, the petitioner has filed its petition within 30 days of what it has asserted is the trigger date for the new filing — that is, within 30 days of the availability of the document the petitioner contends contains new and significant information so as to form the basis for its contention.

T If a petitioner is found to have standing, standing-related factors two through four of section 2.309(c)(1) favor the petitioner.

U Although a petitioner also could participate in another federal agency’s comment process relating to a proposed environmental assessment that is the focus of a new contention and thus does have some alternative means for protecting its interests, for the purpose of factor five of section 2.309(c)(1) that process is not analogous to participation in an NRC adjudicatory proceeding and therefore does not weigh heavily against the petitioner’s intervention in the NRC proceeding.

V With respect to factor six of section 2.309(c)(1), the presence of another admitted party to the proceeding, particularly when that party previously raised the issue that is the subject of the new contention, weighs against a petitioner.

W Regarding factor seven of section 2.309(c)(1), although admitting the new contention would broaden the issues in dispute, in the early stage of the proceeding, this does not weigh heavily against a petitioner.

X Relative to section 2.309(c)(1) factor eight, when a petitioner has filed an expert declaration with its petition, indicating that it can assist, through expert opinion, in the development of a sound record, this is a factor that weighs in favor of admission.

Y When the Staff’s draft or final EIS regarding the COL application has not been issued so as to provide the petitioner with a basis for framing its contention, the licensing board must look to the three other factors specified in section 2.309(f)(2) in assessing the admissibility of a new NEPA-related issue statement.

Z Under the first section 2.309(f)(2) element, when the particular draft EA prepared by another federal agency that is the focus of a new contention was not issued until recently, it was not available previously.

AA Although the licensing board did not consider a draft EA prepared by another federal agency that is the focus of the new contention document to be “material” in the context of its assessment of the substantive admissibility of the issue statement, relative to the second factor under section 2.309(f)(2), the licensing board concludes that the potential difference in temporal coverage — as compared to a previous EA by that federal agency regarding the same subject matter — makes that federal agency’s later draft EA “materially different” from other information previously available.

BB Materiality in the context of section 2.309(f)(2) differs from materiality in the context of section 2.309(f)(1). Whereas the former relates to the magnitude of the difference between previously available information and currently available information, the latter relates to the impact of the information on the proceeding at hand.

CC Given an earlier licensing board directive that any new or amended contention should be submitted within 30 days of the occurrence or circumstance under which the contention arises, a petitioner’s hearing submission focusing on another agency’s draft EA that is filed within 30 days of issuance of the EA would be considered timely based on the public availability of the document.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- DD A contention based on another agency's draft EA that does not apply to the time period in which proposed reactor units would be operational is not material to the findings the licensing board must make in the proceeding. *See* 10 C.F.R. § 2.309(f)(1)(iv).
- LBP-10-2 SOUTH TEXAS PROJECT NUCLEAR OPERATING COMPANY (South Texas Project, Units 3 and 4), Docket Nos. 52-012-COL, 52-013-COL (ASLBP No. 09-885-08-COL-BD01); COMBINED LICENSE; January 29, 2010; ORDER (Rulings on the Admissibility of New Contentions and on Intervenors' Challenge to Staff Denial of Documentary Access)
- A In this 10 C.F.R. Part 52 proceeding regarding the application of South Texas Project Nuclear Operating Company ("STP") for a combined license ("COL") to construct and operate two new nuclear units, using the Advanced Boiling Water Reactor certified design, at its site in Matagorda County, Texas, ruling on motions by Intervenors seeking (1) to admit seven new contentions into the contested portion of this proceeding that challenge the adequacy of STP's May 26, 2009 Mitigative Strategies Report; and (2) to obtain access to a Draft Interim Staff Guidance document that the NRC Staff had designated as containing Sensitive Unclassified Non-Safeguards Information ("SUNSI"), the Licensing Board (1) directs the NRC Staff to provide Intervenors with a copy of all non-SUNSI portions of the guidance document; (2) directs the NRC Staff to reevaluate Intervenors' request for access to the guidance document, using the standard for access to SUNSI in a licensing board proceeding articulated herein, and file a memorandum explaining its reevaluation; and (3) denies the motion to admit seven new contentions.
- B A participant in administrative litigation — having an even greater interest in obtaining access to SUNSI than does the general public — is entitled to obtain documents under standards no more restrictive than would be accorded the general public under FOIA.
- C FOIA provides, with nine enumerated exceptions, that each agency make copies of all records available to the public. 5 U.S.C. § 552(a)-(b). NRC regulations implement and repeat this FOIA obligation. *See* 10 C.F.R. §§ 9.15, 2.390. In addition, NRC regulations provide, with certain very limited exceptions, that "all hearings will be public," 10 C.F.R. § 2.328, and that the public is entitled to copies of the transcripts of all hearings, 10 C.F.R. § 2.327(c).
- D If it seeks to withhold a document from a party or the public, or to bar a party or member of the public from attending any adjudicatory proceeding before a Licensing Board, NRC Staff bears the burden of proving that the document or situation meets one of FOIA's specifically enumerated exceptions. *See* 10 C.F.R. §§ 2.325 and 2.390 (proponent of protective order shoulders burden of proof).
- E Even if a document contains information that is exempt from disclosure, FOIA mandates that "[a]ny reasonably segregable portion of the record shall be provided to any person requesting such record after deletion of the portions which are exempt." 5 U.S.C. § 552(b)(9).
- F For decades, the Commission has restricted public access to classified information and SGI. *See* 10 C.F.R. §§ 95.34, 73.21; 38 Fed. Reg. 35,430 (Dec. 28, 1973). These restrictions on the dissemination and handling of such materials have a clear statutory and regulatory foundation. *See* 10 C.F.R. § 9.19. Safeguards Information ("SGI") is an example of a FOIA exemption. Under FOIA, and the NRC regulations implementing FOIA, the duty to make all documents available does not apply to records "specifically exempted from disclosure by statute." 5 U.S.C. § 552(b)(3); 10 C.F.R. § 2.390(a)(3). SGI qualifies for this exemption because the Atomic Energy Act specifically exempts it from disclosure. 42 U.S.C. § 2167. The NRC has promulgated regulations implementing the FOIA exemption for SGI. *See* 10 C.F.R. § 73.21. Likewise, FOIA exempts classified information from disclosure, 5 U.S.C. § 552(b)(1), and NRC regulations implement this exemption. 10 C.F.R. § 2.390(a)(1); 10 C.F.R. Part 2, Subpart I; 10 C.F.R. Part 95.
- G The term "sensitive unclassified non-safeguards information" or SUNSI is apparently used only twice in the NRC regulations. First, the regulations authorize the Secretary of the Commission to establish procedures for obtaining access to SUNSI prior to granting intervention in a licensing proceeding. 10 C.F.R. § 2.307(c). Second, the regulations authorize interlocutory appeal to the Commission of certain rulings relating to SUNSI. 10 C.F.R. §§ 2.311(a)(3), 2.311(d)(2). But these regulations never define the term.
- H Although 10 C.F.R. § 2.390(d) never uses the term SUNSI, this regulation seems to fit NRC Staff's claim that SUNSI is "security-related," and it is our best lodestar as to the meaning of this term. Under this regulation, in order for a document to qualify as exempt from FOIA disclosure as "SUNSI" the document must: (1) qualify as commercial or financial information under 10 C.F.R. § 9.17(a)(4) (commonly referred to as "FOIA Exemption 4"); (2) constitute "correspondence and reports to or from NRC"; (3) contain

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

information or records concerning a licensee's or applicant's (i) physical protection of special nuclear material, (ii) classified matter protection, or (iii) material control and accounting program relating to special nuclear material; (4) not constitute Safeguards Information; and (5) not constitute classified information (National Security Information or Restricted Data).

I In conjunction with a licensing board's reevaluation of the NRC Staff's refusal to provide intervenors with access to a SUNSI document, a board may direct the Staff to segregate those paragraphs of the document that contain SUNSI from those that do not contain SUNSI. NRC regulations require that documents containing classified information or SGI be evaluated paragraph by paragraph, that those paragraphs containing classified information or SGI be redacted, and that the remaining paragraphs (not containing such sensitive material) be available for disclosure to the public. *See* 10 C.F.R. 95.37(f); NRC Safeguards Information Security Program Handbook 12.7 Part II (June 25, 2008) at 8-9.

J The implications of excessively broad claims of SUNSI in a licensing proceeding impact not just an intervenors' access to documents, but, as importantly, the public's access to the adjudicatory process.

K The public is normally to be afforded full access to all NRC proceedings involving the issuance of a license, and the extraordinary step of closure (e.g., to ensure that SUNSI is not disclosed to the public) should not be instituted unless a party can establish that closure is the only reasonable alternative available. Before a licensing board will close future proceedings, the party (or parties) seeking closure must demonstrate that the need to close the hearing outweighs the strong presumption that all licensing board proceedings will be open to the public.

L Anglo-American jurisprudence has long ensured that judicial proceedings will be open to the public. *Pennekamp v. Florida*, 328 U.S. 331, 361 (1946) (Frankfurter, J., concurring) ("Of course trials must be public and the public have a deep interest in trials"); *Craig v. Harney*, 331 U.S. 367, 374 (1947) ("A trial is a public event. What transpires in the court room is public property."); *see also In re Oliver*, 333 U.S. 257, 278 (1948); *Sheppard v. Maxwell*, 384 U.S. 333, 349 (1966) ("The principle that justice cannot survive behind walls of silence has long been reflected in the 'Anglo-American distrust for secret trials'" (citation omitted)). In a 1980 decision, *Richmond Newspapers v. Virginia*, 448 U.S. 555 (1980), the U.S. Supreme Court enunciated a constitutional basis for public access to courts, grounded in the First Amendment: "Free speech carries with it some freedom to listen." *Id.* at 576. The First Amendment requires public access not only to criminal proceedings, *id.*, but as well both to civil trials, *see, e.g., Gitto Global Corp. v. Worcester Telegram & Gazette Corp.*, 422 F.3d 1 (1st Cir. 2005), and to trial-type administrative proceedings, *see, e.g., Detroit Free Press v. Ashcroft*, 303 F.3d 681, 702 (6th Cir. 2002), such as a combined licensing proceeding.

M Public access to judicial proceedings is not absolute. Instead, *Richmond Newspapers* only creates a "presumption of openness." 448 U.S. at 573. To determine whether a tribunal should block public access to a judicial proceeding, *Richmond Newspapers* established a two-part "experience and logic" test. *See, e.g., North Jersey Media Group, Inc. v. Ashcroft*, 308 F.3d 198, 209-20 (3d Cir. 2002); *Detroit Free Press*, 303 F.3d at 703.

N Withholding from public access an entire document — just because it may contain some SUNSI information — is not only a misuse of the SUNSI designator, but fails the logic test of *Richmond Newspapers* by excluding the public from access to information that is not security-related.

O A wholesale closure of a licensing proceeding, effectively shutting out the public, cannot be justified under the *Richmond Newspapers* test as long as there is material, not properly designated as SUNSI, to which the public should have access. Under *Richmond Newspapers*, it is essential that such proceedings be accessible to the public and that they be closed only where specific information — legitimately designated as SUNSI — must be discussed.

LBP-10-3 IDAHO STATE UNIVERSITY, Docket No. 70-1374-MLR (ASLBP No. 10-897-01-MLR-BD01) (Special Nuclear Materials License No. SNM-1373); MATERIALS LICENSE; February 24, 2010; MEMORANDUM AND ORDER (Granting Motion to Withdraw Hearing Request and Intervention Petition and Terminating Proceeding)

LBP-10-4 U.S. ARMY INSTALLATION COMMAND (Schofield Barracks, Oahu, Hawaii, and Pohakuloa Training Area, Island of Hawaii, Hawaii), Docket No. 40-9083 (ASLBP No. 10-895-01-ML-BD01); MATERIALS LICENSE; February 24, 2010; MEMORANDUM AND ORDER (Denying Requests for Hearing)

A Because Petitioners were not represented by counsel, this Board — consistent with longstanding precedent (*see, e.g., Public Service Electric and Gas Co.* (Salem Nuclear Generating Station, Units 1 and

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- 2), ALAB-136, 6 AEC 487, 489 (1973) — held them to less rigid pleading standards than we would ordinarily apply to litigants who are represented by counsel.
- B Although we acknowledge that complying with Commission regulations “may be especially difficult for *pro se* petitioners . . . it has long been a basic principle that a person who invokes the right to participate in an NRC proceeding also voluntarily accepts the obligations attendant upon such participation.” *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), CLI-01-17, 54 NRC 3, 26 (2001) (internal quotation marks omitted).
- C In determining whether a petitioner has demonstrated a sufficient interest to intervene under section 2.309(d)(1), the Commission long has applied contemporaneous judicial concepts of standing. *See, e.g., Georgia Institute of Technology* (Georgia Tech Research Reactor, Atlanta, Georgia), CLI 95-12, 42 NRC 111, 115 (1995). Those concepts require a petitioner to allege “(1) an actual or threatened, concrete and particularized injury, that (2) is fairly traceable to the challenged action, (3) falls among the general interests protected by the [AEA] (or other applicable statute, such as the National Environmental Policy Act), and (4) is likely to be redressed by a favorable decision.” *Sequoyah Fuels Corp.* (Gore, Oklahoma Site Decommissioning), CLI-01-2, 53 NRC 9, 13 (2001).
- D In proceedings involving construction permits and operating licenses for nuclear power plants, the Commission recognizes a “‘proximity presumption’ in favor of standing for persons who [reside or] have ‘frequent contacts’ within a 50-mile radius of a nuclear power plant.” *PPL Bell Bend, LLC* (Bell Bend Nuclear Power Plant), CLI-10-7, 71 NRC 133, 138 (2010).
- E No “proximity presumption” is automatically applied in proceedings that, like this, do not involve nuclear power plants. Instead, “[w]hether and at what distance a petitioner can be presumed to be affected must be judged on a case-by-case basis, taking into account the nature of the proposed action and the significance of the radioactive source.” *Georgia Tech*, CLI-95-12, 42 NRC at 116-17. Pursuant to this so-called “proximity-plus” approach, a “presumption based on geographical proximity (albeit at distances much closer than 50 miles) may be applied where there is a determination that the proposed action involves a significant source of radioactivity producing an obvious potential for offsite consequences.” *Sequoyah Fuels Corp. and General Atomics* (Gore, Oklahoma Site), CLI-94-12, 40 NRC 64, 75 n.22 (1994).
- F In cases where the record fails to support the existence of a significant source of radioactivity producing an obvious potential for offsite consequences at a particular distance frequented by a petitioner, “it becomes the petitioner’s ‘burden to show a specific and plausible means’ of how the challenged action may harm him or her.” *USEC Inc.* (American Centrifuge Plant), CLI-05-11, 61 NRC 309, 312 (2005). In other words, when a petitioner cannot establish proximity plus standing, he or she must resort to establishing standing under traditional standing principles. *See Exelon Generation Co.* (Peach Bottom Atomic Power Station, Units 2 and 3), CLI-05-26, 62 NRC 577, 581 (2005).
- G The “petitioner bears the burden to provide facts sufficient to establish standing.” *Bell Bend Nuclear Power Plant*, CLI-10-7, 71 NRC at 139; *accord Commonwealth Edison Co.* (Zion Nuclear Power Station, Units 1 and 2), CLI-00-5, 51 NRC 90, 98 (2000). In meeting this burden, it is generally sufficient if the petitioner provides plausible factual allegations that satisfy each element of standing. *See Lujan v. Defenders of Wildlife*, 504 U.S. 555, 561 (1992).
- H In proceedings where a petitioner’s factual assertions in support of standing are challenged, untenable, conjectural, or conclusory, a Board need not uncritically accept such assertions. *See Consumers Energy Co.* (Palisades Nuclear Plant), CLI-07-18, 65 NRC 399, 410 (2007); *Zion Nuclear Power Station*, CLI-00-5, 51 NRC at 98. In such circumstances, a Board may be required to “weigh the information” and exercise judgment to determine if a standing element has been satisfied. *See Bell Bend Nuclear Power Plant*, CLI-10-7, 71 NRC at 139. *See also Babcock and Wilcox* (Apollo, Pennsylvania Fuel Fabrication Facility), LBP-93-4, 37 NRC 72, 82-83 (1993).
- I To be admissible, a contention must (10 C.F.R. § 2.309(f)(1)(i)-(vi)): (1) provide a specific statement of the issue of law or fact to be raised; (2) provide a brief explanation of the basis for the contention; (3) demonstrate that the issue raised is within the scope of the proceeding; (4) demonstrate that the issue raised is material to the findings the NRC must make to support the action involved in the proceeding; (5) provide a concise statement of the alleged facts or expert opinions that support the petitioner’s position and on which the petitioner intends to rely at the hearing; and (6) provide sufficient information to show that a genuine dispute exists with the applicant on a material issue of law or fact. Failure to satisfy any of these requirements is sufficient grounds to render the contention inadmissible. *See Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-99-10, 49 NRC 318, 325 (1999).

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- J It is emphatically the petitioner's burden to produce some "alleged facts or expert opinion which support [a contention]." 10 C.F.R. § 2.309(f)(1)(v).
- K Any member of the public may provide the NRC Staff with comments relating to health and safety at any time during the license-review process, and the NRC Staff "will consider and resolve all safety questions regardless of whether any hearing takes place." *Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 339 (1999) (internal quotation marks omitted). If an interested person wishes to propose health and safety measures after a license has been issued, such proposals may be submitted to the NRC by filing a petition pursuant to the enforcement process set forth in 10 C.F.R. § 2.206.
- LBP-10-5 LUMINANT GENERATION COMPANY, LLC (Comanche Peak Nuclear Power Plant, Units 3 and 4), Docket Nos. 52-034-COL, 52-035-COL (ASLBP No. 09-886-09-COL-BD01); COMBINED LICENSE; March 11, 2010; MEMORANDUM AND ORDER (Ruling on New SUNSI Contentions, Mootness of Original Contention 7, and Intervenor's Access to ISG-016)
- A Section 2.390(d)(1) of 10 C.F.R. provides legal authority for nondisclosure and protection of security-related information concerning the physical protection of nuclear power plants, and for the closing of portions of hearings and other sessions in which such information will necessarily be discussed. During closed portions of oral argument, only the Board, NRC Staff, Applicant, and individuals who signed nondisclosure affidavits pursuant to protective order would be permitted to remain in the hearing room. After the session, parties could propose creation of a public copy of the transcript, with appropriate redactions for protected information.
- B Under Commission precedent on contentions of omission, once information asserted to have been omitted is supplied, the original contention is moot and Intervenor must timely file new or amended contention(s) in order to raise specific challenges regarding the new information.
- C Intervenor's original Contention 7, asserting omission of information addressing requirements of 10 C.F.R. §§ 52.80(d) and 50.54(hh)(2), is ruled to be moot based on information newly supplied by Applicant, but the ruling does not address the adequacy of newly supplied information. Questions of adequacy will be addressed in rulings on Intervenor's new contentions.
- D A party requesting access to a document withheld as sensitive unclassified nonsafeguards information (SUNSI) protected under 10 C.F.R. § 2.390(d)(1) must, in the event no protective order addresses the matter and/or in the event of a dispute concerning such access, show that it needs the document in order to participate meaningfully in the proceeding, a standard that is not onerous.
- E The Licensing Board finds that Intervenor met the standard of showing need for the document in order to participate meaningfully in the proceeding, based on the following factors: (1) Intervenor noted expected issuance of the document and informed the Board and other parties about it at a reasonable time; (2) they followed its progress thereafter and requested access to it within a reasonable time after it was issued; (3) they have shown its relevance to matters at issue in the proceeding relating to the requirements of sections 52.80(d) and 50.54(hh)(2), which have been a concern of Intervenor from the outset of this proceeding; and (4) they have an expert who can provide support for any new contentions relating to these requirements and to any provisions of the document. Board also considered: lack of a publicly available version of the document; the fact that the document, even though merely guidance and not binding legal authority, has the purpose of assisting applicants and licensees with meeting requirements of 10 C.F.R. §§ 52.80(d) and 50.54(hh)(2), which provide somewhat minimal information themselves; the fact that Intervenor had signed nondisclosure affidavits pursuant to a joint protective order regarding related information; the fact that Intervenor could not use the document in preparation of current contentions because it was not then available to them; the inefficiency of waiting until the Commission finalizes the document; and considerations of basic fairness.
- F After obtaining access to a draft Staff guidance document, Intervenor would need to show that any future contentions based on the document are timely and that the information on which they are based was not available from any other reasonably available source prior to obtaining the document, and to provide more than merely what is in the guidance document, in the form of expert and/or other documentary support.
- G While a guidance document alone does not provide sufficient support for a contention, where there is expert support a guidance document may be part of the support for a contention.
- LBP-10-6 SOUTH CAROLINA ELECTRIC & GAS COMPANY and SOUTH CAROLINA PUBLIC SERVICE AUTHORITY (also referred to as SANTEE COOPER) (Virgil C. Summer Nuclear Station, Units

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- 2 and 3), Docket Nos. 52-027-COL, 52-028-COL (ASLBP No. 09-875-03-COL-BD01); COMBINED LICENSE; March 17, 2010; MEMORANDUM AND ORDER ON REMAND (Denying on Remand the Sierra Club and Friends of the Earth's Petition to Intervene)
- A The conditions for admission of a contention are "strict by design," *AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-06-24, 64 NRC 111, 118 (2006) (quoting *Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-01-24, 54 NRC 349, 358 (2001), *petition for reconsideration denied*, CLI-02-1, 55 NRC 1 (2002)); *see also Progress Energy Carolinas, Inc.* (Shearon Harris Nuclear Power Plant, Units 2 and 3), CLI-10-9, 71 NRC 245, 253 (2010); for a contention to be admissible it must satisfy, without exception, each of the criteria set out in 10 C.F.R. § 2.309(f)(1)(i) through (vi). *See* Changes to Adjudicatory Process, 69 Fed. Reg. 2182, 2221 (Jan. 14, 2004); *see also Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-99-10, 49 NRC 318, 325 (1999); *Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1, 2, and 3), CLI-91-12, 34 NRC 149, 155 (1991). Mere notice pleading is insufficient. *Fansteel, Inc.* (Muskogee, Oklahoma Site), CLI-03-13, 58 NRC 195, 203 (2003); *Oyster Creek*, CLI-06-24, 64 NRC at 119.
- B In order to be admissible, a contention must assert an issue of law or fact that is "material to the findings the NRC must make to support the action that is involved in the proceeding." 10 C.F.R. § 2.309(f)(1)(iv). Thus, the petitioner must show that "the subject matter of the contention would impact the grant or denial of a pending license application." *Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), LBP-08-13, 68 NRC 43, 62 (2008).
- C "Materiality" requires a showing that the alleged error or omission is of possible significance to the result of the proceeding, i.e., that some significant link exists between the claimed deficiency and either the health and safety of the public, or the environment. *Indian Point*, LBP-08-13, 68 NRC at 62 (citing *Portland Cement Ass'n v. Ruckelshaus*, 486 F.2d 375, 394 (D.C. Cir. 1973), *cert. denied sub nom. Portland Cement Corp. v. Administrator, Environmental Protection Agency*, 417 U.S. 921 (1974)). A dispute is material "if its resolution would 'make a difference in the outcome of the licensing proceeding.'" *Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 333-34 (1999) (citing Final Rule: "Rules of Practice for Domestic Licensing Proceedings — Procedural Changes in the Hearing Process," 54 Fed. Reg. 33,168, 33,170 (Aug. 11, 1989)).
- D Where a contention challenges the Applicant's compliance with the Commission's rules implementing NEPA, materiality relates not only to the Commission's determination regarding denial, issuance, or conditioning of the requested COL, but also to the Commission's fulfillment of its obligations under NEPA.
- E Contentions must be accompanied by "a concise statement of the alleged facts or expert opinions which support the requestor's/petitioner's position on the issue . . . together with references to the specific sources and documents on which [it] intends to rely to support its position." 10 C.F.R. § 2.309(f)(1)(v).
- F It is the petitioner's obligation to present the factual and expert support for its contention. *Palo Verde*, CLI-91-12, 34 NRC at 155-56; *Southern Nuclear Operating Co.* (Early Site Permit for Vogtle ESP Site), LBP-07-3, 65 NRC 237, 253 (2007); *Georgia Institute of Technology* (Georgia Tech Research Reactor, Atlanta, Georgia), LBP-95-6, 41 NRC 281, 305, *vacated in part and remanded on other grounds*, CLI-95-10, 42 NRC 1, *and aff'd in part*, CLI-95-12, 42 NRC 111 (1995). Failure to do so requires that the contention be rejected. *Palo Verde*, CLI-91-12, 34 NRC at 155-56; *Vogtle*, LBP-07-3, 65 NRC at 253.
- G A contention "will be ruled inadmissible if the petitioner 'has offered no tangible information, no experts, no substantive affidavits,' but instead only 'bare assertions and speculation.'" *Fansteel*, CLI-03-13, 58 NRC at 203 (quoting *GPU Nuclear, Inc.* (Oyster Creek Nuclear Generating Station), CLI-00-6, 51 NRC 193, 208 (2000)); *see also Consumers Energy Co.* (Palisades Nuclear Plant), CLI-07-18, 65 NRC 399, 414 (2007). "[E]xpert opinion that merely states a conclusion (e.g., the application is 'deficient,' 'inadequate,' or 'wrong') without providing a reasoned basis or explanation for that conclusion is inadequate because it deprives the Board of the ability to make the necessary, reflective assessment of the opinion." *USEC Inc.* (American Centrifuge Plant), CLI-06-10, 63 NRC 451, 472 (2006) (quoting *Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), LBP-98-7, 47 NRC 142, 181, *aff'd*, CLI-98-3, 48 NRC 26 (1998)).
- H Providing any material or document as the foundation for a contention, without setting forth an explanation of its significance, is inadequate to support the admission of a contention. *Fansteel*, CLI-03-13, 58 NRC at 204; *Indian Point*, LBP-08-13, 68 NRC at 63.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- I If a petitioner neglects to provide the requisite support for its contentions, the Board should not make assumptions of fact that favor the petitioner or supply information that is lacking. *Georgia Tech*, LBP-95-6, 41 NRC at 305 (citing *Palo Verde*, CLI-91-12, 34 NRC at 155-56); see also *Crow Butte Resources, Inc.* (North Trend Expansion Project), CLI-09-12, 69 NRC 535, 552-53 (2009); *Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), LBP-01-35, 54 NRC 403, 422 (2001).
- J A petitioner does not have to prove its contention at the admissibility stage. *Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-04-22, 60 NRC 125, 139 (2004); *North Anna*, LBP-08-15, 68 NRC at 335. That said, although a “Board may appropriately view [p]etitioners’ support for its contention in a light that is favorable to the [p]etitioner,” *Palo Verde*, CLI-91-12, 34 NRC at 155; see also *AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-09-7, 69 NRC 235, 275 (2009), a petitioner must provide that support for his or her contention.
- K The information, alleged facts, and expert opinions provided by the petitioner will be examined by the Board to confirm that the petitioner does indeed supply adequate support for the contention. *Vermont Yankee Nuclear Power Corp.* (Vermont Yankee Nuclear Power Station), ALAB-919, 30 NRC 29, 48 (1989), vacated in part on other grounds and remanded, CLI-90-4, 31 NRC 333 (1990); see also *American Centrifuge*, CLI-06-10, 63 NRC at 457; *Shearon Harris*, CLI-10-9, 71 NRC at 261-62.
- L A contention must “show that a genuine dispute exists . . . on a material issue of law or fact” with regard to the license application in question, challenge and identify either specific portions of, or alleged omissions from, the application, and provide the supporting reasons for each dispute. 10 C.F.R. § 2.309(f)(1)(vi). Any contention that “fails to controvert the application,” *Crow Butte*, CLI-09-12, 69 NRC at 557, or that mistakenly asserts that the application does not address a relevant issue, may be dismissed. See *American Centrifuge*, CLI-06-10, 63 NRC at 462-63 (rejecting contention asserting failure to analyze an alternative actually analyzed in the application).
- M It is the petitioner’s responsibility “to provide the necessary information to satisfy the basis requirement for the admission of its contentions and demonstrate that a genuine dispute exists within the scope of th[e] proceeding.” *Baltimore Gas & Electric Co.* (Calvert Cliffs Nuclear Power Plant, Units 1 and 2), CLI-98-14, 48 NRC 39, 41 (1998). If a petitioner fails to offer alleged facts or expert opinion and a “reasoned statement” explaining any alleged inadequacy in the application, the petitioner has not demonstrated a genuine dispute. See *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), LBP-90-16, 31 NRC 509, 521 & n.12 (1990).
- N The contention admissibility standards do not require dispositive proof of the contention or its bases, but they do require “a clear statement as to the bases for the contention[ ] and . . . supporting information and references to documents and sources that establish the validity of the contention.” *South Carolina Electric & Gas Co.* (Virgil C. Summer Nuclear Station, Units 2 and 3), CLI-10-1, 71 NRC 1, 8 (2010) (citations omitted).
- O Under 10 C.F.R. Part 51, the NRC’s regulations implementing NEPA, an ER must, in relevant part, contain a “discussion of alternatives . . . sufficiently complete to aid the Commission in developing and exploring, pursuant to section 102(2)(E) of NEPA, ‘appropriate alternatives to recommended courses of action . . . .’” 10 C.F.R. § 51.45(b)(3). However, the agency’s NEPA responsibilities (and, by extension, the applicant’s responsibilities under 10 C.F.R. Part 51) are subject to a “rule of reason.” *Louisiana Energy Services, L.P.* (National Enrichment Facility), LBP-06-8, 63 NRC 241, 258-59 (2006); *Long Island Lighting Co.* (Shoreham Nuclear Power Station), ALAB-156, 6 AEC 831, 836 (1973).
- P In the context of alternatives analyses, “[a]gencies need only discuss those alternatives that are reasonable and ‘will bring about the ends’ of the proposed action.” *Hydro Resources, Inc.* (P.O. Box 15910, Rio Rancho, NM 87174), CLI-01-4, 53 NRC 31, 55 (2001) (quoting *Citizens Against Burlington, Inc. v. Busey*, 938 F.2d 190, 195 (D.C. Cir.), cert. denied, 502 U.S. 994 (1991)).
- Q Where the agency’s action is to approve or deny a proposal by a private party, the agency should ordinarily “accord substantial weight to the preferences of the applicant and/or sponsor in the siting and design of the project.” Nuclear Energy Institute; Denial of Petition for Rulemaking, 68 Fed. Reg. 55,905, 55,909 (Sept. 29, 2003) (internal quotations omitted); accord *Citizens Against Burlington*, 938 F.2d at 199 (“An agency cannot redefine the goals of the proposal that arouses the call for action; it must evaluate alternative ways of achieving its goals, shaped by the application at issue and by the function that the agency plays in the decisional process.”).

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- R General assertions of insufficient consideration are inadequate to raise an admissible contention. *See* 10 C.F.R. § 2.309(f)(1)(v), (vi) (requiring “references to specific sources and documents” and “references to specific portions of the application . . . that the petitioner disputes and the supporting reasons for each dispute.”). To have presented an admissible contention, Petitioners needed to allege specific inadequacies in the Applicant’s analysis and provide some support or reasoning for any such alleged deficiencies.
- S Where Petitioners fail to connect the information and assertions contained in their supporting statements to alleged deficiencies or omissions in the Application, these statements do not provide the requisite support, in the form of alleged facts or reasoned (as opposed to merely conclusory) expert opinion, to show that Petitioners have raised a genuine dispute with the Application on a material issue of law or fact.
- T It is well established that there is no obligation under NEPA to consider every possible alternative. *Long Island Lighting Co.* (Shoreham Nuclear Power Station, Unit 1), CLI-91-2, 33 NRC 61, 71 (1991) (“An agency’s environmental review ‘must consider not every possible alternative, but every reasonable alternative.’” (quoting *Citizens for a Better Henderson v. Hodel*, 768 F.2d 1051, 1057 (9th Cir. 1985)); *see also Vermont Yankee Nuclear Power Corp. v. Natural Resources Defense Council, Inc.*, 435 U.S. 519, 551 (1978) (“the ‘detailed statement of alternatives’ cannot be found wanting simply because the agency failed to include every alternative device and thought conceivable by the mind of man”).
- U The burden rests upon a petitioner to propose a particular alternative, and bare generalizations will not support an admissible contention. *Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), LBP-05-19, 62 NRC 134, 158 (2005); *see also Shearon Harris*, CLI-10-9, 71 NRC at 264 (“The question before us . . . is whether [petitioner] has stated [a contention asserting] an environmentally preferable alternative to the proposed reactors.”); *id.* at 264-65 (affirming Board ruling that petitioner had not “properly challenged” applicant’s conclusion that no environmentally preferable alternative existed where “[t]he only alternative that [petitioner] mentions on appeal is the ‘no reactor’ option,” and petitioner neither raised that option before the Board nor supported its argument that it would always be environmentally preferable); *cf. Olmsted Citizens for a Better Community v. United States*, 793 F.2d 201, 209 (8th Cir. 1986); *Morongo Band of Mission Indians v. Federal Aviation Administration*, 161 F.3d 569, 576-77 (9th Cir. 1998). A board may not supply information that is missing or make assumptions of fact not provided by the petitioner. *Georgia Tech*, LBP-95-6, 41 NRC at 305; *see also Crow Butte*, CLI-09-12, 69 NRC at 552-53; *MOX*, LBP-01-35, 54 NRC at 422.
- V Where demand side management (DSM) reduces by a small portion Applicant’s demand for power, it should be analyzed as a surrogate for need for power. *See Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), LBP-05-19, 62 NRC 134, 159, *aff’d*, CLI-05-29, 62 NRC 801, 805-08 (2005); *see also Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), LBP-04-17, 60 NRC 229, 245 (2004).
- W Since it is widely recognized that energy sales projections are inherently uncertain, and the Commission is clear that it does not impose “burdensome attempts” to predict future conditions, and that it “should be sufficient to reasonably characterize the costs and benefits associated with proposed licensing actions,” *Summer*, CLI-10-1, 71 NRC at 17 (quoting 68 Fed. Reg. at 55,910), a contribution from DSM that would simply result in shifting the need curve back by 2 years cannot be material to the decision the NRC must make.
- X The ultimate objective of the NEPA requirement to examine alternatives is to ensure the NRC has made an informed decision by examining reasonable alternatives to the proposed action.
- Y The only alternatives which are, in the end, relevant to the NRC’s decision are those alternatives that are environmentally preferable.
- LBP-10-7 TENNESSEE VALLEY AUTHORITY (Bellefonte Nuclear Plant, Units 1 and 2), Docket Nos. 50-438-CP, 50-439-CP (ASLBP No. 10-896-01-CP-BD01); CONSTRUCTION PERMIT; April 2, 2010; MEMORANDUM AND ORDER (Ruling on Intervention Petition)
- A In this proceeding regarding the reinstatement of the Tennessee Valley Authority’s (TVA) previously withdrawn construction permits (CPs) for two partially completed reactors located on TVA’s existing Bellefonte Nuclear Power Plant site, the Licensing Board concludes that although two of the three named petitioners have established the requisite standing, because they failed to proffer an admissible contention in accord with the “good cause” standard that governs the proceeding, their intervention petition and hearing request must be denied.

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- B The 10 C.F.R. Part 52 combined license (COL) process has been described as follows: “an entity may apply for a single COL that authorizes both new reactor construction and operation. Specifically, Subpart C of Part 52 establishes procedures for the issuance of a combined construction permit and conditional operating license for a nuclear power plant and the conduct of the hearing that is afforded for a COL. The COL is ‘essentially a construction permit which also requires consideration and resolution of many of the issues currently considered at the operating license stage.’ *See* Early Site Permits; Standard Design Certifications; and Combined Licenses for Nuclear Power Reactors, 53 Fed. Reg. 32,060, 32,062 (Aug. 23, 1988).” *Tennessee Valley Authority* (Bellefonte Nuclear Power Plant, Units 3 and 4), LBP-08-16, 68 NRC 361, 374 (2008), *rev’d in part*, CLI-09-3, 69 NRC 68 (2009), and *referred ruling declined*, CLI-09-21, 70 NRC 927 (2009).
- C In contrast, the 10 C.F.R. Part 50 CP/operating license (OL) process has been described as follows: “[t]he 10 C.F.R. Part 50 licensing process that was applied to the 104 commercial nuclear power plants currently operating in the United States requires that an applicant first obtain a construction permit for the facility, followed by an operating license. Both licenses are issued separately and, under section 189a of the Atomic Energy Act (AEA) of 1954, as amended, 42 U.S.C. § [2239(a)], hearing rights accrue separately as to each requested permission.” *Id.*
- D In the statement of considerations accompanying the initial Part 52 proposed rule, the Commission offered this explanation of the reasons for, as well as the scope of, the two elements of the Part 50 CP/OL process: “In the early years of the nuclear power industry, there were many first-time nuclear plant applicants, designers, and consultants, and many novel design concepts. Accordingly, the process was structured to allow licensing decisions to be made while design work was still in progress and to focus on case-specific reviews of individual plant and site considerations. Construction permits were commonly issued with the understanding that open safety issues would be addressed and resolved during construction, and that issuance of a construction permit did not constitute Commission approval of any design feature. Consequently, the operating license review was very broad in scope.” 53 Fed. Reg. at 32,065.
- E In addition to the broad scope of the OL proceeding, however, it was also a well-established precept regarding the risk that accrues to an applicant under the Part 50 process that “[w]hen an applicant receives a construction permit . . . , it proceeds at its own risk. Prior to operation, the applicant must satisfy all safety requirements; and if additional research performed or data acquired during construction indicates that any safety requirement cannot be satisfied, the operating license must be denied or appropriately conditioned. . . . [T]his is so regardless of the amount of money which an applicant may have expended during construction.” *Consumers Power Co.* (Midland Plant, Units 1 and 2), ALAB-123, 6 AEC 331, 355 (1973); *see also Northern Indiana Public Service Co.* (Bailly Generating Station, Nuclear-1), CLI-79-11, 10 NRC 733, 742-43 (1979) (possession of CP no guarantee that OL will be received; if any aspect of facility fails to pass muster at OL stage, applicant bears risk the plant will not be allowed to operate).
- F Following (1) a safety and environmental review of a CP application by the Staff, (2) a safety review of the application by the Advisory Committee on Reactor Safeguards, (3) an adjudicatory hearing on any safety or environmental challenges to the application raised by any intervening party, and (4) a “mandatory hearing” in which safety and environmental matters not at issue in the contested adjudication are considered by a presiding officer (which could be either the Commission or a three-member Atomic Safety and Licensing Board), assuming all issues are appropriately resolved, a CP is issued to an applicant.
- G Consistent with AEA § 185a, 42 U.S.C. § 2235(a), a CP specifies a date by which construction of the unit is to be completed. If the CP holder is unable to finish construction by the date specified in the permit, under 10 C.F.R. § 50.55(b) the CP holder can apply for and obtain an extension of the CP. In doing so, it must provide “good cause” for the extension, a standard that is specified in AEA § 185a. As was the case with an initial CP application, an extension request could be the subject of an adjudicatory hearing challenge by a petitioner.
- H If for some reason a CP holder wishes to discontinue construction activities at a facility but continue to have its 10 C.F.R. Part 50 construction authorization remain effective, it can do so under the terms of the 1987 Commission Policy Statement on Deferred Plants. In that policy statement, the Commission outlines the maintenance, preservation, and documentation requirements that would apply to a facility in such a “deferred” status. *See* Commission Policy Statement on Deferred Plants, 52 Fed. Reg. 38,077, 38,078-79 (Oct. 14, 1987).
- I The 1987 Commission Policy Statement on Deferred Plants also describes the process under which, at the CP holder’s request, the facility can be reactivated from deferred status so that construction can begin

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

again, which includes providing 120 days' notice to the Staff before restarting construction activities. *See id.* at 38,079.

- J The 1987 Commission Policy Statement on Deferred Plants sets forth the process under which a plant could be placed in a terminated status pending the withdrawal of the CP, as well as the procedures and requirements associated with reactivating the facility from terminated status (assuming the CP has not been withdrawn). *See id.* at 38,079-80.
- K In determining whether an individual or organization is an "interested person" under section 189a of the Atomic Energy Act (AEA) of 1954, 42 U.S.C. § 2239(a)(1)(A), that has standing "as of right" such that it can be granted party status in a proceeding in accord with 10 C.F.R. § 2.309(d), the Commission applies contemporaneous judicial standing concepts that require a participant to establish that (1) it has suffered or will suffer a distinct and palpable injury that constitutes injury-in-fact within the zones of interests arguably protected by the governing statutes (e.g., the AEA, 42 U.S.C. § 2011 et seq., NEPA, 42 U.S.C. § 4321 et seq.); (2) the injury is fairly traceable to the challenged action; and (3) the injury is likely to be redressed by a favorable decision. *See Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), CLI-96-1, 43 NRC 1, 6 (1996).
- L In pertinent part, section 2.309(d)(1) requires that a hearing request/intervention petition must state (1) the name, address, and telephone number of the requestor/petitioner; (2) the nature of the requestor's/intervenor's right under the AEA to be made a party to the proceeding; (3) the nature and extent of the requestor's/petitioner's property, financial, or other interest in the proceeding; and (4) the possible effect of any decision or order issued in the proceeding on the petitioner's/requestor's interest. Additionally, section 2.309(d)(3) mandates that the presiding officer determine whether, considering these factors, the requestor/petitioner is a person whose interest may be affected by the proceeding in accord with AEA § 189a.
- M In proceedings involving the possible construction or operation of a nuclear power reactor, including proceedings regarding the extension of a construction permit, proximity to the proposed facility has been considered sufficient to establish standing. *See PPL Bell Bend, LLC* (Bell Bend Nuclear Power Plant), CLI-10-7, 71 NRC 133, 138 (2010); *Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), CLI-09-20, 70 NRC 911, 915 (2009); *Northern Indiana Public Service Co.* (Bailly Generating Station, Nuclear 1), ALAB-619, 12 NRC 558, 564-65 (1980).
- N The proximity presumption applies when an individual or organization, or an individual authorizing an organization to represent his or her interests as the organization seeks to establish its representational standing, resides within 50 miles of the proposed facility or has "frequent contacts" with the area affected by the proposed facility. *Calvert Cliffs*, CLI-09-20, 70 NRC at 915; *see Bell Bend*, CLI-10-7, 71 NRC at 138.
- O To establish the requisite proximity, a petitioner must clearly indicate where he or she resides and/or what contact he or she has with the site. *See Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), LBP-91-2, 33 NRC 42, 47 (1991) (no standing when petitioner alleged proximity but failed to state his physical address or elaborate on the extent of his activities in the area).
- P Ultimately, it is the petitioner's responsibility to "provide enough detail to allow the Board to distinguish a casual interest from a substantial one." *Bell Bend*, CLI-10-7, 71 NRC at 139.
- Q The notice of appearance information identifying the individual or individuals authorized to act on behalf of each participant should provide the means whereby any participant needing to reach another participant's authorized representatives to serve a filing or have a discussion about any litigation-related matters will be able to do so. The failure of an organizational participant to have a representative provide an appearance notice in accord with section 2.314(b) might, as could be the case for any other unresolved procedural deficiency that persists without adequate justification, provide cause for an appropriate sanction for failure properly to prosecute the litigation. Such a failure, however, does not fall into the same category as, for example, the failure under 10 C.F.R. § 2.309(d) to support an intervention petition with affidavits providing necessary information regarding the basis for representational standing, a deficiency directly associated with a petitioner's standing that could interpose a jurisdictional flaw potentially warranting the participant's dismissal from the proceeding.
- R Exactly when a notice of appearance must be filed (or a notice of withdrawal submitted when an attorney or representative is no longer acting as a participant representative) is not specified in the agency's rules of practice.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- S It is well established in NRC jurisprudence that each intervening participant that wishes to be a party to a proceeding must establish his or her own standing, *see Commonwealth Edison Co.* (Dresden Nuclear Power Station, Unit 1), CLI-81-25, 14 NRC 616, 623 (1981), a showing that depends on the particular circumstances associated with that participant rather than the standing of other entities or individuals with whom it may claim to be aligned relative to the substance of the matters at issue in the proceeding.
- T The Commission stated with respect to the scope of review governing a licensing board's consideration of a hearing request in a proceeding regarding reinstatement of a previously withdrawn CP that the board should "decide in the first instance whether Petitioners have established standing and have raised admissible contentions and if so, given their claims, whether reinstatement on the particular facts presented here is lawful and proper — that is, *whether there is 'good cause' for the reinstatement.*" CLI-10-6, 71 NRC 113, 126 (emphasis added). The Commission thus expressly directed the board to restrict its inquiry in the proceeding, including its consideration of contention admissibility matters, in line with the "good cause" standard of AEA § 185a, 42 U.S.C. § 2235(a), and the Commission's regulation implementing the good cause standard, 10 C.F.R. § 50.55(b).
- U As AEA § 185 and 10 C.F.R. § 50.55(b) adumbrate, up to this point the good cause standard's bailiwick has been the CP extension proceeding. Nonetheless, given the Commission's direction in CLI-10-6 that "good cause" should be the standard that governs consideration of a CP reinstatement request, a principal task for a licensing board is to determine how that standard should apply in the CP reinstatement proceeding before it.
- V Guidance regarding the meaning and scope of the "good cause" standard as the Commission intended it to be applied in a CP reinstatement proceeding is provided by an earlier Commission decision regarding the application of "good cause" in the context of a CP extension proceeding. In *Washington Public Power Supply System* (WPPSS Nuclear Project Nos. 1 & 2), CLI-82-29, 16 NRC 1221 (1982), a case involving a request for construction permit extension, the Commission noted that AEA § 185a indicated "no intent on the part of Congress to require the periodic relitigation of health, safety, or environmental questions in agency adjudications between the time a construction permit is granted and the time the facility is authorized to operate." *Id.* at 1228. The Commission further declared that section 50.55(b)'s "thrust is clearly that the Commission's inquiry will be into reasons that have contributed to the delay in construction and whether those reasons constitute 'good cause' for the extension," and that "[t]his same limitation should apply if any interested person seeks to challenge the request for an extension." *Id.*
- W Limitations on the scope of a CP extension proceeding "does not mean that those who wish to raise health, safety, or environmental concerns before the agency have no remedy prior to the operating license proceeding. This opportunity is afforded all persons under 10 CFR § 2.206, which allows any person to seek the institution of a show-cause proceeding under 10 CFR § 2.202." *Id.*
- X "[T]he most 'common sense' approach to the interpretation of section 185 and 10 CFR § 50.55 is that the scope of a construction permit extension proceeding is limited to direct challenges to the permit holder's asserted reasons that show 'good cause' justification for the delay." *Id.* at 1229.
- Y A CP holder who requests an extension of the CP completion date "must put forth reasons, founded in fact, that explain why the delay occurred and those reasons must, as a matter of law, be sufficient to sustain a finding of good cause." An intervenor thus is "always free to challenge a request for a permit extension by seeking to prove that, on balance, delay was caused by circumstances that do not constitute 'good cause.'" *Id.* at 1229-30.
- Z Two Commission-endorsed principles are apparent relative to the "good cause" standard. One is that an AEA § 185-related Part 50 CP proceeding is not to become a substitute for an ongoing or future Part 50 OL proceeding, albeit with section 2.206 providing an avenue for raising safety and environmental concerns regarding a proposed facility pending the OL proceeding. The other is that the "good cause" rationale that must be put forth by the CP holder to justify the relief sought is to be the focus of any intervenor challenge to the CP holder's request.
- AA A number of subsequent agency cases, such as the Commission's *Seabrook* case, *Public Service Co. of New Hampshire* (Seabrook Station, Unit 2), CLI-84-6, 19 NRC 975, 978 (1984), and the later Commission decision in *Texas Utilities Electric Co.* (Comanche Peak Steam Electric Station, Unit 1), CLI-86-15, 24 NRC 397 (1986), have devoted substantial attention to exploring the parameters of the latter precept regarding the scope of "good cause" in the context of making CP extension request contention admissibility determinations. None of these rulings, however, suggests any diminution of the tenet that for Part 50 applications, safety and environmental issues are generally to be adjudicated in the OL proceeding

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

rather than an AEA § 185 “good cause” proceeding regarding the continued viability of a previously issued CP. Certainly, nothing in the Commission’s more-recent adoption of the Part 52 COL process suggests that the Commission has identified any basis under the Part 50 rules to back away from the traditional application of that two-step licensing process, notwithstanding its acknowledged tendency to “backload” issues and thereby create substantial scheduling and resource uncertainties.

- BB A general concern regarding the potential for a significant squandering of time and resources if, at the OL stage, one or more of the matters sought to be raised in a CP reinstatement proceeding are found to mandate the denial of, or substantial revisions to an OL license is not untoward. Nonetheless, it is not a sufficient basis for a board to deviate from the well-established, Commission-endorsed approach to the application of the “good cause” standard in AEA § 185-related Part 50 CP proceedings as outlined in the Commission’s *WPPSS* decision and subsequent determinations.
- CC Section 2.309(f) of the Commission’s rules of practice specifies the requirements that must be met if a contention is to be deemed admissible. Specifically, a contention must provide (1) a specific statement of the legal or factual issue sought to be raised; (2) a brief explanation of the basis of the contention; (3) a concise statement of the alleged facts or expert opinions, including references to specific sources and documents, that support the petitioner’s position and upon which the petitioner intends to rely at hearing; and (4) sufficient information demonstrating that a genuine dispute exists in regard to a material issue of law or fact, including references to specific portions of the application that the petitioner disputes, or in the case when the application is alleged to be deficient, the identification of such deficiencies and supporting reasons for this belief. *See* 10 C.F.R. § 2.309(f)(1)(i), (ii), (v), and (vi). In addition, the petitioner must demonstrate that the issue raised in the contention is both “within the scope of the proceeding” and “material to the findings the NRC must make to support the action that is involved in the proceeding.” 10 C.F.R. § 2.309(f)(1)(iii)-(iv). Failure to comply with any of these requirements is grounds for dismissing a contention. *See Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-99-10, 49 NRC 318, 325 (1999); *see also Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1, 2, and 3), CLI-91-12, 34 NRC 149, 155-56 (1991).
- DD An adjudication is not the proper forum for challenging applicable statutory requirements or the basic structure of the agency’s regulatory process. *See Philadelphia Electric Co.* (Peach Bottom Atomic Power Station, Units 2 and 3), ALAB-216, 8 AEC 13, 20, *aff’d in part on other grounds*, CLI-74-32, 8 AEC 217 (1974). Similarly, a contention that attacks a Commission rule, or which seeks to litigate a matter that is, or clearly is about to become, the subject of a rulemaking, is inadmissible. *See* 10 C.F.R. § 2.335; *Potomac Electric Power Co.* (Douglas Point Nuclear Generating Station, Units 1 and 2), ALAB-218, 8 AEC 79, 85, 89 (1974). This includes contentions that advocate stricter requirements than agency rules impose or that otherwise seek to litigate a generic determination established by a Commission rulemaking. *See Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), LBP-01-6, 53 NRC 138, 159 (2001); *Pacific Gas and Electric Co.* (Diablo Canyon Nuclear Power Plant, Units 1 and 2), LBP-93-1, 37 NRC 5, 29-30 (1993); *Public Service Co. of New Hampshire* (Seabrook Station, Units 1 and 2), LBP-82-106, 16 NRC 1649, 1656 (1982); *see also Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), CLI-96-7, 43 NRC 235, 251 (1996); *Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1, 2, and 3), LBP-91-19, 33 NRC 397, 410, *aff’d in part and rev’d in part on other grounds*, CLI-91-12, 34 NRC 149 (1991). By the same token, a contention that simply states petitioner’s views about what regulatory policy should be does not present a litigable issue. *See Peach Bottom*, ALAB-216, 8 AEC at 20-21 & n.33.
- EE All proffered contentions must be within the scope of the proceeding as defined by the Commission in its initial hearing notice and order referring the proceeding to the licensing board. *See* 10 C.F.R. § 2.309(f)(1)(iii); *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), CLI-00-23, 52 NRC 327, 329 (2000); *Duke Power Co.* (Catawba Nuclear Station, Units 1 and 2), ALAB-825, 22 NRC 785, 790-91 (1985). As a consequence, any contention that falls outside the specified scope of the proceeding must be rejected. *See Portland General Electric Co.* (Trojan Nuclear Plant), ALAB-534, 9 NRC 287, 289 n.6 (1979).
- FF It is the petitioner’s obligation to present factual information and/or expert opinion necessary to support its contention. *See* 10 C.F.R. § 2.309(f)(1)(v); *Georgia Institute of Technology* (Georgia Tech Research Reactor, Atlanta, Georgia), LBP-95-6, 41 NRC 281, 305, *vacated in part and remanded on other grounds*, CLI-95-10, 42 NRC 1, and *aff’d in part*, CLI-95-12, 42 NRC 111 (1995). While a Board may appropriately view a petitioner’s supporting information in a light favorable to the petitioner, failure

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- to provide such information regarding a proffered contention requires that the contention be rejected. *See Palo Verde*, CLI-91-12, 34 NRC at 155. In this connection, neither mere speculation nor bare or conclusory assertions, even by an expert, alleging that a matter should be considered will suffice to allow the admission of a proffered contention. *See Fansteel, Inc.* (Muskogee, Oklahoma Site), CLI-03-13, 58 NRC 195, 203 (2003). If a petitioner neglects to provide the requisite support for its contentions, it is not within the Board's power to make assumptions of fact that favor the petitioner, nor may the Board supply information that is lacking. *See Palo Verde*, CLI-91-12, 34 NRC at 155; *Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), LBP-01-35, 54 NRC 403, 422 (2001); *Georgia Tech Research Reactor*, LBP-95-6, 41 NRC at 305.
- GG Simply attaching material or documents as a basis for a contention, without setting forth an explanation of that information's significance, is inadequate to support the admission of the contention. *See Fansteel*, CLI-03-13, 58 NRC at 204-05. Along these lines, any supporting material provided by a petitioner, including those portions of the material that are not relied upon, is subject to Board scrutiny. *See Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), LBP-96-2, 43 NRC 61, 90 (1996), *rev'd in part on other grounds*, CLI-96-7, 43 NRC 235 (1996). Thus, the material provided in support of a contention will be carefully examined by the Board to confirm that on its face it does supply adequate support for the contention. *See Vermont Yankee Nuclear Power Corp.* (Vermont Yankee Nuclear Power Station), ALAB-919, 30 NRC 29, 48 (1989), *vacated in part on other grounds and remanded*, CLI-90-4, 31 NRC 333 (1990).
- HH To be admissible, NRC regulations require that all contentions assert an issue of law or fact that is material to the outcome of a licensing proceeding, meaning that the subject matter of the contention must impact the grant or denial of a pending license application. *See* 10 C.F.R. § 2.309(f)(1)(iv). This requirement of materiality often dictates that any contention alleging deficiencies or errors in an application also indicate some significant link between the claimed deficiency and either the health and safety of the public or the environment. *See Yankee Nuclear*, LBP-96-2, 43 NRC at 75-76; *see also Pacific Gas and Electric Co.* (Diablo Canyon Power Plant Independent Spent Fuel Storage Installation), LBP-02-23, 56 NRC 413, 439-41 (2002), *petition for review denied*, CLI-03-12, 58 NRC 185, 191 (2003).
- II All properly formulated contentions must focus on the license application in question, challenging either specific portions of or alleged omissions from the application (including the Safety Analysis Report and the Environmental Report) so as to establish that a genuine dispute exists with the applicant on a material issue of law or fact. *See* 10 C.F.R. § 2.309(f)(1)(vi). Any contention that fails directly to controvert the application or that mistakenly asserts the application does not address a relevant issue will be dismissed. *See Sacramento Municipal Utility District* (Rancho Seco Nuclear Generating Station), LBP-93-23, 38 NRC 200, 247-48 (1993), *review declined*, CLI-94-2, 39 NRC 91 (1994); *Texas Utilities Electric Co.* (Comanche Peak Steam Electric Station, Unit 2), LBP-92-37, 36 NRC 370, 384 (1992).
- JJ The failure to specify the language of the issue framed by a contention and distinguish it from the discussion that provides the supporting foundation for that issue statement might be grounds for dismissing a contention. This approach to contention formulation is not one that should be emulated in future proceedings.
- LBP-10-8 SOUTHERN NUCLEAR OPERATING COMPANY (Vogtle Electric Generating Plant, Units 3 and 4), Docket Nos. 52-025-COL, 52-026-COL (ASLBP No. 09-873-01-COL-BD01); COMBINED LICENSE; May 19, 2010; MEMORANDUM AND ORDER (Ruling on Dispositive Motion Regarding Contention SAFETY-1)
- A In this proceeding regarding the application of Southern Nuclear Operating Company (SNC) for a 10 C.F.R. Part 52 combined license (COL) to construct and operate two new nuclear reactors at its existing Vogtle Electric Generating Plant (VEGP) site, in ruling on an SNC motion for summary disposition regarding contention SAFETY-1, which is the sole admitted contention and challenges the adequacy of SNC's final safety analysis report (FSAR) discussion of SNC's plans for storage of the low-level radioactive waste (LLRW) associated with proposed Units 3 and 4, finding that no material factual dispute has been interposed in connection with contention SAFETY-1 and concluding as a matter of law that the LLRW plan outlined in SNC's FSAR is in accord with the applicable regulatory provision, 10 C.F.R. § 52.79(a)(3), the Licensing Board grants SNC's dispositive motion and enters a judgment in SNC's favor regarding the contention, thereby resolving all the contested issues in the proceeding.
- B For proceedings such as this one conducted pursuant to the 10 C.F.R. Part 2, Subpart L "informal" hearing procedures, *see* LBP-09-3, 69 NRC 139, 165, *aff'd*, CLI-09-16, 70 NRC 33 (2009), summary

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

disposition motions are to be resolved in accord with the same standards for dispositive motions that are utilized for “formal” hearings as set forth in 10 C.F.R. Part 2, Subpart G. *See* 10 C.F.R. § 2.1205(c). Under Subpart G, 10 C.F.R. § 2.710 provides that summary disposition may be entered with respect to “all or any part of the matters involved in the proceeding” if the motion, along with any appropriate supporting materials (including affidavits, discovery responses, and documents), shows that there is “no genuine issue as to any material fact and that the moving party is entitled to a decision as a matter of law.” *Id.* § 2.710(a), (d)(2).

C The party proffering the motion bears the burden of making the requisite showing by providing “a separate, short, and concise statement of the material facts as to which the moving party contends that there is no genuine issue to be heard.” *Id.* § 2.710(a). A party opposing the motion must counter any adequately supported material facts provided by the movant with its own “separate, short, and concise statement of the material facts as to which it is contended there exists a genuine issue to be heard,” with the recognition that, to the degree the responsive statement fails to contravene any adequately supported material facts proffered by the movant, the movant’s facts “will be considered to be admitted.” *Id.*

D On the matter of whether paragraph (3) or paragraph (4) is the controlling provision of section 52.79(a) in this instance, although paragraph (a)(4) might require the more detailed design, location, and worker health impacts information sought by the intervenor, paragraph (a)(4) governs only those structures that are “a component of the facility to be constructed under the COL.” [SNC] Motion for Summary Disposition of Contention SAFETY-1 (Jan. 29, 2010) at 9; *see* NRC Staff Answer in Support of [SNC] Motion for Summary Disposition of Contention SAFETY-1 (Feb. 12, 2010) at 6. A contention declaring that a long-term onsite LLRW storage facility would only be needed “in the event an off-site waste disposal facility remains unavailable” when a new reactor unit begins operation and supporting information that at best suggests the COL applicant might not have an offsite option when needed following the beginning of facility operation is not the same as showing that an applicant must build an additional long-term onsite storage facility under the auspices of its COL to manage LLRW generated by a proposed facility because it is certain offsite storage or disposal will be unavailable when needed after facility operations begin. In such circumstances, a long-term LLRW storage facility for the proposed reactor would not be considered one that must be constructed under the COL. Certainly, such an interpretation is consistent with the longstanding agency recognition of the availability of the mechanisms under 10 C.F.R. §§ 50.59 or 50.90 for obtaining authorization to construct additional onsite LLRW storage facilities. *See* Office of Nuclear Reactor Regulation, NRC, NRC [RIS] 2008-32, Interim [LLRW] Storage at Reactor Sites at 2-4 (Dec. 30, 2008). The COL applicant’s contingent long-term onsite LLRW storage facility and the contents of the applicant’s FSAR with regard to that facility thus are not governed by section 52.79(a)(4) as a part of the reactor facilities to be constructed under the requested COL.

E Because section 52.79(a)(4) does not govern, the requisite content of the applicant’s FSAR discussion of long-term LLRW storage depends on the application of 10 C.F.R. § 52.79(a)(3) and what is meant by its requirement to provide information on the “means for controlling and limiting radioactive effluents and radiation exposures.” Nothing in the rule or cited Commission statements regarding LLRW indicates section 52.79(a)(3) requires the detailed design, location, and health impacts information outlined in the contention at issue. Unlike section 52.79(a)(4), section 52.79(a)(3) does not list “principal design criteria,” “design bases,” or “[i]nformation relative to materials of construction, arrangement, and dimensions” as items that must be discussed in the FSAR. *Compare* 10 C.F.R. § 52.79(a)(3) with *id.* § 52.79(a)(4)(i)-(iii). Nor does the Commission’s language in CLI-09-16 indicate that “means” includes actual design, location, or health impacts information. Rather, the Commission seems merely to have been stating that the information required under section 52.79(a)(3) is tied to the applicant’s “particular plans for compliance through,” but not necessarily the details of, “design, operational organization, and procedures” associated with any contingent long-term LLRW facility. CLI-09-16, 70 NRC at 37.

LBP-10-9 DETROIT EDISON COMPANY (Fermi Nuclear Power Plant, Unit 3), Docket No. 52-033-COL (ASLBP No. 09-880-05-BD01); COMBINED LICENSE; June 15, 2010; ORDER (Ruling on Proposed New Contentions 15 and 16)

A Several Licensing Boards have recently recognized a dichotomy between “new” contentions filed under 10 C.F.R. § 2.309(f)(2) and “nontimely” contentions filed under 10 C.F.R. § 2.309(c), based on both the regulatory text and the apparent absurdity of requiring intervenors with contentions rooted in new material information (“new” contentions) to make the same showing as intervenors who have simply delayed filing their contentions until after expiration of the regulatory deadline (“nontimely” contentions).

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- B Intervenor acted reasonably in waiting for NRC Staff to announce the results of its inspection and its determination, based on the Inspection Report, that DTE had in fact violated Appendix B requirements in three specific ways. To force intervenors to file contentions before the results of an ongoing NRC investigation are announced to the public would effectively force intervenors to speculate about the results of such investigations and the conclusions the Staff might reach. We doubt the Commission would want to encourage the filing of such speculative contentions.
- C Intervenor has standing based upon their proximity to the proposed Fermi Unit 3. The nature of their interest in the proceeding is based upon the fact that members of the intervenor organizations reside, work, or recreate within 50 miles of the proposed nuclear power plant. Any order that may be entered in this proceeding concerning QA issues may affect those interests.
- D Contention 15 will broaden the issues in this proceeding because none of the other admitted contentions concern QA violations. This might delay the proceeding to some extent, although we doubt any delay would be significant. To the extent there will be any delay, it is the price for affording the public the opportunity to litigate questions arising from an applicant's failure to comply with QA requirements. Licensing boards have recognized compliance with QA requirements as an important factor in the licensing decision, and we are reluctant to deny intervenors the chance to address this important issue based solely on the possibility of a minor delay.
- E Boards have the discretion to reformulate contentions so as to clarify the issues for litigation. We therefore need not reject a contention based solely on technical pleading defects. Instead, the Board will restate the contention to clarify the specific issues arising from the NOV that intervenors want to litigate and that relate to the licensing decision for Fermi Unit 3.
- F The scope of the proceeding is defined by the Commission in its initial hearing notice and order referring the proceeding to the Licensing Board; any contention that falls outside the specified scope of the proceeding is inadmissible.
- G DTE's QA violations create substantial uncertainty over whether the agency can rely on the tainted information in the FSAR to make the safety-related findings required to issue the license. The quality of the safety-related information in the FSAR is material to the licensing decision, and Contention 15A, by calling into question the quality of that information, raises a material issue.
- H The question asserted in Contention 15B of whether the COL applicant will in fact implement the QA program required by Appendix B is also material to the licensing decision. If the NRC is not confident that DTE will implement the QA program described in the FSAR, this would certainly raise a substantial question whether the agency could find "reasonable assurance that the facility will be constructed and will operate in conformity with the license, the provisions of the Act, and the Commission's regulations," and that "issuance of the license will not be inimical to the health and safety of the public."
- I An intervenor need not provide all supporting facts for a contention in the original submission or prove its case to have the contention admitted.
- J Intervenor has provided a concise statement of the alleged facts or expert opinions, including references to specific sources and documents, that support their position and upon which they intend to rely at the hearing. This is all that section 2.309(f)(1)(v) demands. To be sure, Applicant contends it did not violate any QA requirement, and NRC Staff maintains that DTE's QA violations are less extensive than intervenors allege. These disputes go to the merits, however, and we need not resolve them now in order to admit Contentions 15A and 15B.
- K As a general matter, a party may not present a new contention, or a new basis for a proposed contention, in its reply.
- L Arguments concerning the interpretation of debatable evidence are inappropriate in the context of a contention admissibility ruling, where we do not decide the merits or draw factual inferences in favor of the party opposing the admission of a contention.
- M While perfection in the applicant's QA program is not required, once a pattern of QA violations has been shown, the license applicant has the burden of showing that the license may be granted notwithstanding the violations.
- N Intervenor has provided no legal or factual basis for the Board to order partial suspension of the COLA adjudication. We see no realistic prospect of injury to intervenors if the adjudication continues because intervenors will have the opportunity to fully litigate Contentions 15A and 15B before the Commission makes a final decision whether to issue the license. The Commission's general policy is

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

to avoid unnecessary delays in adjudicatory proceedings, and Intervenor has not provided a sufficient justification to show that a delay in this proceeding is necessary.

O Because Intervenor cannot reasonably be expected to discover the QA issues that gave rise to the November NOV without the NOV itself as notice, we find that Intervenor has plausibly argued that the November NOV is new and materially different information. Because Contention 16 was filed within 30 days of the release of the NOV, as our Scheduling Order requires, we consider Contention 16 timely filed.

P Under 10 C.F.R. § 52.55(c), an applicant may reference a design certification that the Commission has docketed but not granted. Citing this regulation, the Commission has previously rejected a request to hold a license application in abeyance until the design certification rulemaking is completed. *Progress Energy Carolinas, Inc.* (Shearon Harris Nuclear Power Plant, Units 2 and 3), CLI-08-15, 68 NRC 1, 4 (2008).

Q Intervenor requests that “the ASLB and Commission . . . suspend design activities related to use of the ESBWR design by DTE until the quality problems at GEH are resolved.” This request must be denied because, although it sounds like a request for something analogous to injunctive relief, it actually represents another attempt by Intervenor to circumvent the regulation permitting license applicants to reference design certification applications that have not been granted. The fact that NRC Staff issued a NOV to GEH based on alleged QA violations in connection with the DCD for the standard design does not affect application of the regulation. DTE may accept the risk that the standard design certification will not be granted, because of GEH’s alleged QA violations or for any other reason.

R A licensing board may not ordinarily consider the validity of or a challenge to a Commission regulation. Although an intervenor may petition the Commission for permission to challenge a rule, the party must make a showing of “special circumstances.” The special circumstances required to obtain a waiver have been described as a prima facie showing that application of a rule in a particular way would not serve the purposes for which the rule was adopted.

S To comply with 10 C.F.R. § 2.309(f)(1)(vi), Intervenor must present sufficient information to demonstrate a genuine dispute with the application on a material issue of law or fact. Merely quoting or citing documents as the basis for a contention, as Intervenor has done for Contention 16, is not enough to fulfill this requirement.

T Commission policy dictates that, when a COLA references a docketed design certification application, a contention challenging an aspect of the standard reactor design should be resolved in the rulemaking proceeding for the standard design, not in the COL proceeding. Such a contention may be held in abeyance by a licensing board pending completion of the rulemaking, but for a board to take that action the contention must be “otherwise admissible.” Licensing Boards have interpreted “otherwise admissible” to mean a contention that meets the contention admissibility requirements of 10 C.F.R. § 2.309(f)(1) but for the fact that it challenges a yet-to-be-certified reactor design.

LBP-10-10 LUMINANT GENERATION COMPANY, LLC (Comanche Peak Nuclear Power Plant, Units 3 and 4), Docket Nos. 52-034-COL, 52-035-COL (ASLBP No. 09-886-09-COL-BD01); COMBINED LICENSE; June 25, 2010; MEMORANDUM AND ORDER (Ruling on Mootness of Contentions 13 and 18, and New Environmental Contentions)

A The Licensing Board majority finds one existing contention moot and another moot in part, denies admission of a number of new environmental contentions, and consolidates admissible portions of other new contentions with the remaining part of an existing contention on a proposed renewable fuels NEPA alternative.

B Where a contention alleges the omission of particular information or an issue from an application, and the information is later supplied by the applicant, the contention is moot and Intervenor must timely file a new or amended contention in order to raise specific challenges regarding the new information.

C Mootness occurs when a justiciable controversy no longer exists, or when an issue is no longer “live,” such that a party no longer has a legal interest in the issue.

D Admission of a contention establishes a legal interest on the part of intervenors in that contention being resolved in a legally appropriate manner. If all matters at issue in a “contention of omission” are addressed by an applicant through the actual (not purported or claimed) provision of information on all such matters, then no legal interest in that contention remains, and the contention is moot. The information need not be such that an intervenor agrees with it, but it must actually address in some way all of the issues encompassed within the admitted contention it purports to moot. If, on the other hand, not all matters at

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- issue in such a contention are addressed in information submitted by applicant, then intervenors retain a legal interest in having any unaddressed matter(s) appropriately resolved.
- E On issues of whether a contention has been rendered moot by provision of information by an applicant, the applicant bears the burden of persuasion.
- F A contention that impacts from a severe radiological accident at any one unit on operation of other units at the site had not been, and should be, considered in the application's environmental report is found to be moot. Although the original contention might arguably be viewed as conceptually including impacts from spent fuel pool accidents, intervenors' arguments are found unpersuasive in light of the bounding analysis provided by applicant, which is not overcome by intervenors, in light of the lack of any support in the original contention or subsequent arguments that the impact of such accidents would add meaningfully to the applicant's bounding analysis of severe accidents at all four units simultaneously.
- G A contention that the application's environmental report was inadequate, because it did not include consideration of alternatives to the proposed new units consisting of renewable energy sources such as wind and solar with technological advances in storage methods and supplemental use of natural gas to create baseload power, is found to be moot in part. The contention is found not to be moot insofar as it alleges applicant did not consider the combination of wind (relatively more productive at night) and solar (more productive during the day) to produce a uniform generating profile, notwithstanding applicant's argument that even if this combination were considered its overall impacts would not be significantly different from the impacts of either solar or wind in combination with storage methods and natural gas. Both the original contention and its support, and the contention as admitted, included references to wind and solar, and this combination would obviously be the most likely to have any chance of achieving the goal of producing baseload power. Passing references in the environmental report to wind and solar did not constitute significant consideration of the combination alternative at issue.
- H Although the requirements of NEPA are directed to federal agencies and the primary duties of NEPA accordingly fall on the NRC Staff in NRC proceedings, the initial requirement to analyze the environmental impacts of an action is directed to applicants under 10 C.F.R. § 51.45. Thus, at the outset of a proceeding, NEPA-related contentions are to be filed based on an applicant's environmental report, under 10 C.F.R. § 2.309(f)(2). Thereafter, the NRC Staff's issuance of its draft and final environmental impact statements may lead to the filing of additional contentions if the data or conclusions contained in them are significantly different from the data or conclusions found in the applicant's documents.
- I A contention that applicant's "failure to address externally initiated accident scenarios is a material omission from the Environmental Report" is found inadmissible, because applicant did address externally initiated events. Even if applicant addressed such events in less detail than intervenors would like, intervenors provided no evidence to dispute applicant's conclusion that the release frequency for such external events is "negligible compared to internal events." Also, applicant addressed related safety and emergency planning concerns raised in the contention in other parts of the application, and there is no requirement that such concerns must be raised in the environmental report.
- J A contention that applicant failed to consider and evaluate the impacts of severe accident scenarios, regardless of probability, with release times shorter than the duration needed to achieve cold shutdown, is found inadmissible, because intervenors ignored case law that "low probability is the key to applying NEPA's rule of reason test to contentions" on the environmental impacts of specific accident scenarios, and did not context the probability calculations in the application.
- K A contention alleging a failure to evaluate the impact of a severe accident at one unit on other units when the initiating event is an external event such as an earthquake is found inadmissible, because intervenors overlooked applicant's actual consideration of such events as well as applicant's bounding analysis of simultaneous accidents at all four units, which bounds any impacts of external events on a collocated unit.
- L A contention that applicant failed to address the radiological impacts of a severe accident at one unit during shutdown, when the primary containment head is removed, on other units is found inadmissible, because intervenors did not substantively contest applicant's determination that such events are remote and speculative or applicant's bounding analysis of simultaneous accidents at all four units.
- M A contention that applicant failed to address the impact of a chain reaction that leads to more than one unit experiencing a severe accident is found inadmissible, because intervenors provide no facts or expert opinion to challenge applicant's actual consideration of the potential for a chain reaction resulting from simultaneous accidents at all four units, nor demonstrate that applicant's conclusion that such a

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- chain reaction would not occur is incorrect, nor show that the analysis they request would result in any appropriate new SAMDA or cost-beneficial SAMA.
- N Parts of a contention concerning the impacts of wind power generation and storage are found inadmissible, because intervenors show no cause why they could not have raised the issues earlier. Other parts, relating to the combination of wind and storage, overlapping uses of land, and feasibility, amounted to more than “flyspecking” of the environmental report and are admitted, as consolidated with nonmoot and admissible parts of other contentions.
- O Parts of a contention concerning impacts of solar and storage are found inadmissible, because intervenors showed no cause why they could not have raised the issues earlier, and they are unrelated to baseload power, which the board already determined defines the scope of relevant issues relating to renewable fuels, or were actually addressed by applicant. Other parts, relating to the feasibility of thermal energy storage and combination with wind and an “integrated gas turbine,” and to some cost issues, are admitted, as consolidated with nonmoot and admissible parts of other contentions.
- P A contention challenging applicant’s determination that nuclear is environmentally preferable to renewable energy with storage and supplemental natural gas, was denied in part and admitted in part, insofar as it fits in the four-part solar/wind/storage/natural gas supplementation alternative consolidated contention. Intervenors’ experts are found to have provided enough support to warrant further inquiry.
- Q The central issue found admissible from Alternatives Contentions 1 through 3 is the feasibility of intervenors’ proposed four-part wind/solar/storage/natural gas supplementation combination, and all other admissible issues relate to this “feasibility” issue in one way or another.
- R The NEPA alternatives analysis is the “heart of the environmental impact statement,” and all “reasonable alternatives” must be identified and discussed in such analysis, under a “rule of reason.” The duty to consider alternatives originates with two provisions of NEPA: (1) 42 U.S.C. § 4322(2)(C)(iii), which requires that an agency’s environmental impact statement (EIS) include “a detailed statement [of the] alternatives to the proposed action,” and (2) 42 U.S.C. § 4322(2)(E), which requires that an agency “study, develop and describe appropriate alternatives to recommended courses of action in any proposal which involves unresolved conflicts concerning alternative uses of available resources.” The goals — the central one in this case being the production of baseload power — of an applicant are accorded substantial weight in determining what is “reasonable,” but such goals may not be defined so narrowly as to unreasonably circumscribe the range of alternatives considered.
- S In order to “make an impact statement something more than an exercise in frivolous boilerplate the concept of alternatives must be bounded by some notion of feasibility,” *Vermont Yankee Nuclear Power Corp. v. Natural Resources Defense Council, Inc.*, 435 U.S. 519, 551 (1978). Alternatives that are “remote and speculative” do not require detailed discussion, and a “detailed statement of alternatives” cannot be found wanting simply because [not] every alternative device and thought conceivable by the mind of Man” has not been included. *Id.* at 552-53. Moreover, while “the concept of ‘alternatives’ is an evolving one, requiring the agency to explore more or fewer alternatives as they become better known and understood,” it is “incumbent upon intervenors who wish to participate to structure their participation so that it is meaningful [and] alerts the agency to the intervenors’ position and contentions.” *Id.* Comments “must be significant enough to step over a threshold requirement of materiality . . . [.] cannot merely state that a particular mistake was made[, but] must show why the mistake was of possible significance.” *Id.* “[A]dministrative proceedings should not be a game or a forum to engage in unjustified obstructionism by making cryptic and obscure references to matters that ‘ought to be’ considered.” *Id.* at 553-54. The court viewed favorably the Commission’s statement that an intervenor should not be held to a prima facie burden at the contention admissibility stage of a proceeding, but that “the showing should be sufficient to require reasonable minds to inquire further.” *Id.* at 555.
- T The “notion of feasibility” includes the concept of “reasonable availability.” *Natural Resources Defense Council, Inc. v. Morton*, 458 F.2d 827, 834 (D.C. Cir. 1972). On the question whether “reasonably available” is essentially the same concept as “developed, proven, and available,” as used in NUREG-1555, a guidance document does not have the binding force of law but is entitled to some level of deference. To the extent that NUREG-1555’s standard of “developed, proven, and available in the relevant region” directs the inquiry to the question of reasonableness, this standard is relevant to the determination of “reasonable availability” and feasibility, and ultimately, to that of the overall reasonableness of the four-part combination. But to the extent this standard from NUREG-1555 would require a narrower

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

inquiry, it cannot, of course, overcome the legal principles of reasonableness, feasibility, and “reasonable availability” that are found in binding case law.

U On appropriately defining terms and reconciling concepts such as “reasonable,” “feasible,” and “reasonably available,” in an alternatives analysis, the board majority observes that the D.C. Circuit has noted that a “problem for agencies” is that even the term “alternatives” is “not self-defining.” *Citizens Against Burlington, Inc. v. Busey*, 938 F.2d 190, 195 (D.C. Cir. 1991). The “rule of reason governs ‘both which alternatives [must be discussed] and the extent to which [they must be discussed].’” *Id.* If an alternative is “viable,” it may not be rejected as not “reasonable” without appropriate examination or evaluation, according to several Courts of Appeals. Thus, to the extent that Staff, in making statements to the effect that if the Applicant rejects an alternative it is not required to do a detailed discussion of its impacts, appears to imply that Applicant’s elimination of alternatives from consideration is essentially beyond challenge, this is in error.

V Just because one or more parts of a proposed alternative taken separately would not be feasible as baseload power, if it is feasible to combine aspects of existing separate parts, which together might reasonably be able to produce baseload power, then the combination is an alternative that must be considered.

W The Board majority finds that Intervenor’s in the first three of their new contentions provide sufficient information to meet the requirements of 10 C.F.R. § 2.309(f)(1) and to warrant “further inquiry” on the feasibility and reasonable availability of the four-part alternative of wind and solar energy combined with storage (including CAES and molten salt) and natural gas supplementation, and certain related subissues, as consolidated and reformulated by the board majority. Intervenor’s arguments regarding such combinations and their components are perhaps not as well organized as they might be, but they are also neither cryptic nor obscure, and rather provide a sufficient showing to require reasonable minds to inquire further. The Board majority finds that both common sense and the interest in efficiency support reformulation of the admissible parts of the contentions in question.

X A contention on the viability of a baseload wind system is found inadmissible because it is insufficiently supported to show a genuine dispute on a material issue of law or fact, as required by 10 C.F.R. § 2.309(f)(1)(vi).

Y A contention alleging applicant did not take into account new ERCOT demand data, and the positive impacts of modular additions of renewable/storage combinations in meeting a declining and uncertain demand, is found inadmissible, because it could have been raised at a much earlier time and is thus untimely under 10 C.F.R. § 2.309(c).

Z A contention alleging that applicant has not shown that its proposed project is developed, proven, and available in the relevant ERCOT region is found inadmissible because it is untimely, not within the scope of the proceeding, and does not show a genuine dispute on a material issue of law or fact, as required by 10 C.F.R. § 2.309(f)(1)(vi).

LBP-10-11 U.S. DEPARTMENT OF ENERGY (High-Level Waste Repository), Docket No. 63-001-HLW (ASLBP No. 09-892-HLW-CAB04); CONSTRUCTION AUTHORIZATION; June 29, 2010; MEMORANDUM AND ORDER (Granting Intervention to Petitioners and Denying Withdrawal Motion)

A In this 10 C.F.R Part 63 proceeding regarding the application of the Department of Energy (DOE) to construct a national high-level nuclear waste repository at Yucca Mountain, Nevada, ruling on a motion of DOE to withdraw the application and five new intervention petitions, the Board denies the withdrawal motion and grants the five new intervention petitions.

B The Nuclear Waste Policy Act of 1982, as amended (NWPAA), does not permit the Secretary to withdraw the Application that the NWPAA mandates the Secretary file. Specifically, the NWPAA does not give the Secretary the discretion to substitute his policy for the one established by Congress in the NWPAA.

C Congress directed both that DOE file the Application and that the NRC consider the Application and issue a final, merits-based decision approving or disapproving the construction authorization application. Unless Congress directs otherwise, DOE may not single-handedly derail the legislated decisionmaking process by withdrawing the Application.

D The NWPAA set out a detailed, specific procedure for site selection and review by the Secretary of Energy, the President, and the Congress, followed by submission of the Application for a construction permit, review, and final decision thereon by the NRC. *See* 42 U.S.C. §§ 10132-10135.

E Allowing DOE to withdraw the Application at this stage in the process would be contrary to congressional intent, as reflected in the legislative history of the NWPAA.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- F In 42 U.S.C. § 10135, Congress clearly stated that Congress itself was to decide the policy question as to whether the Yucca Mountain project was to move forward by reserving final review authority of site selection. By overruling Nevada’s disapproval of the Yucca Mountain site, Congress was commanding, as a matter of policy, that Yucca Mountain was to move forward and its acceptability as a possible repository site was to be decided based on its technical merits.
- G Surely Congress did not contemplate that, by withdrawing the Application, DOE might unilaterally terminate the Yucca Mountain review process in favor of DOE’s independent policy determination that alternatives will better serve the public interest. At this point in the process created by Congress, it is not for DOE to do so.
- H Although the NWPA does not expressly repeal the Atomic Energy Act (AEA) — indeed, it specifically refers to it — it would be erroneous to interpret the AEA in a manner that would contravene the statutory scheme that Congress specifically adopted in the NWPA. The language, structure, and legislative history of the NWPA all contravene the notion that Congress intended to allow DOE to terminate the NRC’s consideration of the Application. *See* 42 U.S.C. §§ 10101-10270.
- I Section 2.107 of 10 C.F.R. does not “authorize” withdrawal here, but rather clarifies that licensing boards have authority to impose reasonable conditions upon voluntary withdrawals in appropriate circumstances. In effect, section 2.107 authorizes licensing boards to deny unconditional withdrawals.
- J Congress “does not alter the fundamental details of a regulatory scheme in vague terms or ancillary provisions — it does not, one might say, hide elephants in mouseholes.” *Whitman v. American Trucking Association*, 531 U.S. 457, 468 (2001). It would require a strained and tortured reading of the NWPA to conclude that Congress intended that its explicit mandate to the NRC — to consider and decide the merits of the Application — might be nullified by a nonspecific reference to an obscure NRC procedural regulation as being among the “laws” to be applied.
- K But where the statute is clear on its face, or is clear in light of its statutory scheme and legislative history, deference is inappropriate. *See Chevron U.S.A., Inc v. Natural Resources Defense Council, Inc.*, 467 U.S. 837, 842-43 (1984). This is especially so where, as here, DOE’s interpretation is reflected in nothing more formal than a motion before this Board — and not, for example, in a formal agency adjudication or notice-and-comment rulemaking. *See Christensen v. Harris County*, 529 U.S. 576, 587 (2000).
- L Under the framework of the NWPA, however, DOE’s application is not like any other application, and DOE is not just “any litigant,” because its policy discretion is clearly limited by the NWPA. The obvious difference is that Congress has never imposed a duty on private NRC applicants to pursue license applications, nor has Congress required that the Commission reach a decision on a private licensing application that the applicant chooses to withdraw. In contrast, Congress here required DOE to file the Application.
- M Statutes should not be interpreted so as to create internal inconsistencies, an absurd result, or an interpretation inconsistent with congressional intent. *See United States v. Turkette*, 452 U.S. 576, 580 (1981); *United States v. Raynor*, 302 U.S. 540, 547 (1938).
- N The possibility that the Application might not be granted — or, if granted, that the repository might ultimately not be constructed and become operational for any number of reasons — does not entitle DOE to terminate a statutorily prescribed review process.
- O In including funding for the Blue Ribbon Commission in the 2010 Appropriations Bill, Congress did not repeal the NWPA or declare that the Yucca Mountain site is inappropriate.
- P DOE says that it would be “absurd and unreasonable” to require DOE to proceed with an application that it no longer favors on policy grounds. Where the law is declared to require it, however, DOE and other agencies within the Executive Branch are often required to implement legislative directives in a manner with which they do not necessarily agree.
- Q In NRC practice, “it is highly unusual to dispose of a proceeding on the merits, *i.e.*, with prejudice, when in fact the health, safety and environmental merits of the application have not been reached.” *Puerto Rico Electric Power Authority* (North Coast Nuclear Plant, Unit 1), ALAB-662, 14 NRC 1125, 1133 (1981) (emphasis in original).
- R In determining whether an individual or organization should be granted party status “as of right,” the NRC applies judicial standing concepts that require a petitioner to establish: (1) a distinct and palpable harm that constitutes injury-in-fact; (2) the harm is fairly traceable to the challenged action; and (3) the

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

harm is likely to be redressed by a favorable decision. *See U.S. Department of Energy* (High-Level Waste Repository), LBP-09-6, 69 NRC 367, 381-82 (2009).

- S Where Aiken County relies on precisely the same legal arguments as South Carolina — arguments that do not require any factual support — we see no reason to prohibit its adoption of South Carolina’s contentions.
- T Where Aiken County’s contentions are based on the same triggering event as those of South Carolina — namely, DOE’s decision to seek withdrawal — we accept Aiken County’s incorporation of South Carolina’s timeliness arguments.
- U There is no requirement that a petitioner identify the time at which the asserted harm will occur when the subject is the storage of high-level waste any more than a petitioner must identify the moment an asserted accident might happen in a reactor proceeding.
- V To establish representational standing, an organization must: (1) demonstrate that the licensing action will affect at least one of its members; (2) identify that member by name and address; and (3) show it is authorized by that member to request a hearing on his or her behalf. *Vermont Yankee Nuclear Power Corp.* (Vermont Yankee Nuclear Power Station), CLI-00-20, 52 NRC 151, 163 (2000).
- W NARUC states that ratepayers, via the pass-throughs of regulated utilities, have contributed over 17 billion dollars to the Nuclear Waste Policy Fund (NWF) established under the NWPA, and will continue to pay into the NWF, even if DOE is permitted to abandon Yucca Mountain. We agree with NARUC that, because state utility commissioners are responsible for protecting ratepayers’ interests and overseeing the operations of regulated electric utilities, these economic harms constitute its members’ injury-in-fact.
- X The availability of new information is central to determining whether a petitioner has good cause for late filing. A petitioner must show that the information on which its new contention is based was not reasonably available to the public previously and that it filed its intervention petition promptly after learning of such new information. *Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-05-24, 62 NRC 551, 565 (2005).
- Y A petitioner cannot base an intervention petition on an unforeseeable “possibility” that an applicant might later withdraw an application, or on the possibility that the Commission might ultimately deny an application.
- Z *Amicus curiae* participation does not provide the same rights of participation as party status and cannot be considered a substitute means to protect a petitioner’s interest or preserve a petitioner’s appellate rights. *See* 10 C.F.R. § 2.309(c)(1)(v).
- AA Factor six instructs the Board to consider the extent a petitioner’s interests are represented by existing parties, not potential parties. *See* 10 C.F.R. § 2.309(c)(1)(vi).
- BB The Staff’s argument that somehow an admissible contention is relevant to analyzing whether a nontimely factor weighs in favor of a petitioner, an analysis that is a prerequisite to determining contention admissibility, is without merit.
- CC The Board does not read the Commission’s initial hearing notice without regard for the Commission’s subsequent pronouncements.
- DD Because the contention is purely legal in nature, petitioners need not satisfy all of the contention admissibility requirements applicable to a factual contention.
- LBP-10-12 TENNESSEE VALLEY AUTHORITY (Watts Bar Nuclear Plant, Unit 2), Docket No. 50-391-OL (ASLBP No. 09-893-01-OL-BD01); OPERATING LICENSE; June 29, 2010; MEMORANDUM AND ORDER (Denial of Petition to Waive 10 C.F.R. §§ 51.53(b), 51.95(b), 51.106(c) in the Watts Bar Operating License Proceeding)
- A While Commission regulations may not be directly attacked in adjudicatory proceedings, a party may petition for a waiver of the application of a regulation on the sole ground that special circumstances exist such that the application of the regulation would not serve the purpose for which it was adopted. 10 C.F.R. § 2.335(b).
- B As was outlined in the Commission’s 2005 ruling in *Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-05-24, 62 NRC 551, 559-60 (2005), to justify the waiver of a Commission rule or regulation, a party generally must show that: (1) the regulation’s application would not serve its original purpose; (2) special circumstances exist in the instant proceeding that were not considered in the rulemaking; (3) the special circumstances are unique to the instant proceeding; and (4) the waiver would be necessary in order to address a significant safety or environmental issue.

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- C Although a Licensing Board is not empowered to grant a waiver, if it concludes that a *prima facie* showing has been made, the Board must certify the matter to the Commission for a determination of whether the application of the regulation should be waived or an exception granted under the specific circumstances presented. 10 C.F.R. § 2.335(d).
- D Although the term *prima facie* is not defined in the Commission's regulations, we interpret it to mean a substantial showing. That is, the affidavits supporting the petition must present each element of the case for waiver in a persuasive manner with adequate supporting facts. See *Public Service Co. of New Hampshire* (Seabrook Station, Units 1 and 2), ALAB-895, 28 NRC 7, 22 (1988); *Pacific Gas and Electric Co.* (Diablo Canyon Nuclear Power Plant, Units 1 and 2), ALAB-653, 16 NRC 55, 72 (1981).
- E To certify a waiver petition the Board must find that the petitioner has met "extremely high standards" showing the existence of "compelling circumstances in which the rationale of [the regulation] is undercut." *Public Service Co. of New Hampshire* (Seabrook Station, Units 1 and 2), CLI-89-20, 30 NRC 231, 245 (1989).
- F Given the NRC's two-step licensing process (CP/OL), the need for power and alternative energy sources generally are not considered at the OL stage. Proposed Rule: "Need for Power and Alternative Energy Issues in Operating Licensing Proceedings," 46 Fed. Reg. 39,440 (Aug. 3, 1981). The need for power analysis was at the CP stage because, prior to construction, little environmental disturbance would have occurred and real alternatives, including the no-action alternative, existed. *Id.*
- G In promulgating the final rule in 1982, the Commission recognized that "in very unusual cases [at the OL stage], such as where it appears that an alternative exists that is clearly and substantially environmentally superior, the NRC Staff would be obligated under NEPA to address [the need for power and alternatives] in its environmental impact statement." Final Rule: "Need for Power and Alternative Energy Issues in Operating License Proceedings," 47 Fed. Reg. 12,940, 12,941 (Mar. 26, 1982). However, it is clear from these provisions that the petitioner has the burden of demonstrating that there is warrant for the waiver of the rule prohibiting consideration of the need for power and energy alternatives at the OL stage. See *Commonwealth Edison Co.* (Byron Nuclear Power Station, Units 1 and 2), ALAB-793, 20 NRC 1591, 1614-16 (1984).
- H When it published this rule, the Commission expressly stated that the *prima facie* showing needed to support a waiver request was a "much stricter standard than the current requirements for raising need for power and alternative energy sources in OL proceedings." 47 Fed. Reg. at 12,941.
- I Under the case law governing waiving the application of the "OL stage need for power rule," to meet its burden to justify certification of its waiver request, a petitioner must make a *prima facie* showing that the proposed facility "would not be needed: (1) to meet increased energy needs; (2) to replace older, less economical operating capacity; and (3) that there are viable alternatives . . . likely to exist which could tip the NEPA cost-benefit balance against issuance of the operating license." *Duquesne Light Co.* (Beaver Valley Power Station, Unit 2), LBP-84-6, 19 NRC 393, 401 (1984); see also *Georgia Power Co.* (Vogtle Electric Generating Plant, Units 1 and 2), LBP-84-35, 20 NRC 887, 893-94 (1984).
- J There is no NRC regulation that expressly governs the timing of waiver petitions. Accordingly, the appropriate standard for determining whether a waiver petition is timely is reasonableness.
- K The Commission has limited such waivers to "very unusual cases, such as where it appears that an alternative exists that is clearly and substantially environmentally superior," in which "the Commission would be obligated under NEPA to address [the need for power and alternatives] in its environmental impact statement." 47 Fed. Reg. at 12,941.
- L The Commission promulgated the OL-stage need-for-power rule based, in part, on its experience that at the time the OL application was submitted the vast majority of the environmental disruption would have already occurred and that an electric utility would use the new nuclear plant to meet increased energy demand or, in the alternative, if there was no increase in demand, to replace older, less economical generation capacity. *Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant), ALAB-837, 23 NRC 525, 547 (1986).
- M In *Shearon Harris*, which is binding precedent for the ASLBP, the Appeal Board held that, in order for intervenors to demonstrate that the purpose of the regulation excluding consideration of alternatives and the need for power from the OL phase would not be served, they must make a *prima facie* showing that the proposed facility "is not needed to meet increased energy demand and that it need not be used to displace an equivalent amount of older, less economical capacity." *Shearon Harris*, ALAB-837, 23 NRC at 547. The Appeal Board went on to state that "the petition [for waiver] must establish that all of the

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- applicant's fossil fuel baseload generation that is less efficient than [the facility under consideration] has been accounted for" to make its *prima facie* showing. *Id.* at 548.
- LBP-10-13 ENTERGY NUCLEAR OPERATIONS, INC. (Indian Point, Units 2 and 3), Docket Nos. 50-247-LR, 50-286-LR (ASLBP No. 07-858-03-LR-BD01); LICENSE RENEWAL; June 30, 2010; MEMORANDUM AND ORDER (Ruling on the Admissibility of New York's New and Amended Contentions 12B, 16B, 35, and 36)
- A In this license renewal proceeding, Intervenor filed two amended and two new contentions challenging the Applicant's SAMA Reanalysis. The Licensing Board ruled that one of the amended contentions was admissible in whole and one was admissible in part, while both new contentions were admissible in part.
- B The NRC has the authority and responsibility to supplement or to amend conditions to the current licensing basis (CLB) of an existing operating license at the time of license renewal if such supplements or amendments are deemed necessary to protect the environment.
- C Relative to the agency's acknowledged NEPA responsibilities in the license renewal context, the NRC's regulatory framework divides NEPA issues between Category 1 issues, which are those generically addressed by the NRC's Generic Environmental Impact Statement for License Renewal and thus inadmissible in a license renewal proceeding, and Category 2 issues, which are those issues that must be analyzed on a site-by-site basis and thus are within the scope of license renewal proceedings.
- D The NRC Staff's obligation regarding SAMAs under NEPA and Part 51 is met by taking a hard look at those SAMAs identified as potentially cost-beneficial. While the only cost-beneficial SAMAs that an applicant must implement as part of a license renewal safety review are those dealing with aging management, an order by the NRC Staff to implement SAMAs not dealing with aging management can be issued concurrently as part of a Part 50 CLB review. Consistent with the mandate of the Administrative Procedure Act (APA) and NEPA, if properly carried out, the NRC Staff's hard-look analysis of all potentially cost-beneficial SAMAs under NEPA and Part 51 (not just those that are aging-related) ensures that it has given proper consideration to all relevant factors in granting a license renewal.
- E If the benefit-to-cost ratio is glaringly large for a potentially cost-beneficial SAMA, the NRC Staff must, as a prerequisite to extending the license, impose implementation of that SAMA as a license condition or, in the alternative, explain why it is not requiring implementation of that SAMA. The failure to do either of these alternatives would be to act arbitrarily and capriciously.
- F The adequacy of emergency planning is outside the scope of license renewal proceedings.
- G While it may be that implementation of non-aging-related SAMAs cannot be directly required as license conditions within a Part 54 license renewal review, the NRC Staff nonetheless is authorized to impose such conditions that are necessary to protect the environment to an applicant's CLB under a Part 50 backfit procedure. Thus, when faced with cost-beneficial SAMAs, an alleged failure by the NRC Staff to explain why it has not instituted a backfit to a CLB as a condition precedent to license renewal could constitute a failure to meet the hard-look obligations the NRC Staff has under the APA and NEPA. Moreover, simply saying that implementation of SAMAs is outside of the scope of license renewal review is not sufficient to meet that obligation because the NRC Staff must review SAMAs under Part 51 and has the option, if necessary, to institute a backfit prior to license renewal under Part 50 as a result of its SAMA review.
- H As a part of a license renewal proceeding, an applicant is required pursuant to 10 C.F.R. § 51.53(c)(3)(ii)(L) to incorporate, as part of its ER, a consideration of alternatives to mitigate severe accidents. This review is not limited to consideration of accidents that would be the result of aging. Pursuant to NRC regulations, as required by the *Limerick* decision, the NRC Staff must evaluate an applicant's submission and take appropriate action in deciding whether to grant the requested license renewal. In order to meet its obligations under NEPA, once a SAMA has been identified as plainly cost-effective, the NRC Staff must either require implementation or, in the alternative, explain why it has decided not to require implementation prior to license renewal. Likewise, the applicant must supply information that is sufficiently complete for the Commission to be able to explain its decision.
- LBP-10-14 SOUTH TEXAS PROJECT NUCLEAR OPERATING COMPANY (South Texas Project, Units 3 and 4), Docket Nos. 52-12-COL, 52-13-COL (ASLBP No. 09-885-08-COL-BD01); COMBINED LICENSE; July 2, 2010; MEMORANDUM AND ORDER (Rulings on Motions to Dismiss Contentions 8, 9, 14, 16, 21; Amended Contentions 8 and 21; New Colocation Contentions; and New Main Cooling Reservoir Contentions)

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- A In this 10 C.F.R. Part 52 proceeding regarding the application of South Texas Project Nuclear Operating Company (STP) for a combined license (COL) to construct and operate two new nuclear units, using the Advanced Boiling Water Reactor (ABWR) certified design, at its site in Matagorda County, Texas, ruling on motions by Intervenor seeking to admit nine new contentions and to amend two other contentions, and by STP seeking to dismiss previously admitted contentions, the Licensing Board (1) grants Applicant's motion to dismiss Contentions 8, 9, 14, 16, and 21; (2) denies Intervenor's motion to amend Contentions 8 and 21; (3) denies Intervenor's motion to admit Contentions CL-1, MCR-1, MCR-2, MCR-3, MCR-4, and MCR-5; and (4) grants Intervenor's motion to admit Contentions CL-2, CL-3, and CL-4, reformulating them as Contention CL-2.
- B The Commission has recognized that a contention challenging an applicant's ER can be "superseded by the subsequent issuance of licensing-related documents" — whether a draft EIS or an applicant's response to a request for additional information." *Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-28, 56 NRC 373, 382 (2002) (quoting *Duke Power Co.* (Catawba Nuclear Station, Units 1 and 2), CLI-83-19, 17 NRC 1041, 1050 (1983)). In such situations, the Commission has distinguished between "contentions that merely allege an 'omission' of information and those that challenge substantively and specifically how particular information has been discussed in a license application." *Id.* at 382-83. For a contention of omission, if "the information is later supplied by the applicant or considered by the Staff in a draft EIS, the contention is moot [and] Intervenor must timely file a new or amended contention . . . in order to raise specific challenges regarding the new information." *Id.* at 383. Were it otherwise, parties could transform the original contention of omission into several new claims and circumvent the contention admissibility standards of 10 C.F.R. § 2.309(f)(1). *McGuire/Catawba*, CLI-02-28, 56 NRC at 383.
- C Generally, NEPA imposes procedural requirements on the NRC to take a "hard look" at the environmental impacts of building and operating a nuclear reactor. *Louisiana Energy Services, L.P.* (National Enrichment Facility), CLI-05-28, 62 NRC 721, 726 (2005). The NEPA "hard look" doctrine is subject to a "rule of reason," *Louisiana Energy Services, L.P.* (National Enrichment Facility), LBP-06-8, 63 NRC 241, 258-59 (2006), that the Commission has interpreted as obligating the agency to consider "all reasonable alternatives" to the proposed action. 10 C.F.R. Part 51, Subpart A, App. A. The alternatives analysis is the "heart of the environmental impact statement." *Id.* However, the agency is not required to consider every imaginable alternative to a proposed action; rather, it only need evaluate reasonable alternatives. *See, e.g., Long Island Lighting Co.* (Shoreham Nuclear Power Station, Unit 1), CLI-91-2, 33 NRC 61, 71 (1991).
- D The agency has broad discretion to determine how thoroughly it needs to analyze a particular subject for NEPA compliance. *Louisiana Energy Services, L.P.* (Claiborne Enrichment Center), CLI-98-3, 47 NRC 77, 103 (1998). For example, the Commission has held that where impacts are "remote and speculative" or "inconsequential small," they need not be examined. *Vermont Yankee Nuclear Power Corp.* (Vermont Yankee Nuclear Power Station), ALAB-919, 30 NRC 29, 44 (1989) (citing *Limerick Ecology Action, Inc. v. NRC*, 869 F.2d 719, 739 (3d Cir. 1989)), *vacated on other grounds*, CLI-90-4, 31 NRC 333 (1990). In the Commission's estimation, the agency can dispense with an examination of these less significant impacts because NEPA requires only an estimate of anticipated, but not unduly speculative, impacts. *Louisiana Energy Services, L.P.* (National Enrichment Facility), CLI-05-20, 62 NRC 523, 536 (2005). Finally, in the Commission's view, because issuing a license involves oversight of a private project, rather than a federally sponsored project, the agency is entitled to give the applicant's preferences substantial weight when considering project design alternatives. *See, e.g., Hydro Resources, Inc.* (P.O. Box 15910, Rio Rancho, NM 87174), CLI-01-4, 53 NRC 31, 55 (2001) (citing *Citizens Against Burlington, Inc. v. Busey*, 938 F.2d 190, 197 (D.C. Cir. 1991)).
- E Where an Intervenor challenges an issue already addressed in the Final Safety Evaluation Report (FSER) for the ABWR Design Control Document (DCD), the issue is closed to Licensing Boards as an impermissible attack on the ABWR certified design, as codified in 10 C.F.R. Part 52, Appendix A. *See* 10 C.F.R. § 2.335(a) ("no rule or regulation of the Commission . . . concerning the licensing of production and utilization facilities . . . is subject to attack by way of discovery, proof, argument, or other means in any adjudicatory proceeding"); *Northeast Nuclear Energy Co.* (Millstone Nuclear Power Station, Units 2 and 3), LBP-01-10, 53 NRC 273, 286-87 (2001).
- F Under NEPA, an agency must consider alternatives to the proposed action. 42 U.S.C. § 4332(2)(C)(iii). In the NRC licensing context, 10 C.F.R. § 51.45 requires an applicant's ER to discuss alternatives. 10

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

C.F.R. § 51.45(b)(3). The Commission has stated that severe accident mitigation alternatives (SAMA) analyses “are rooted in a cost-benefit assessment” and that the purpose of the assessment is to identify plant changes whose costs would be less than their benefit (i.e., the “potential for significantly improving severe accident safety performance”). *Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-17, 56 NRC 1, 5 (2002). Thus, challenges to a severe accident mitigation design alternative (SAMDA) analysis, which is a subset of SAMA analysis, are within the scope of a COL proceeding.

G Section 2.309(f)(1)(v) of 10 C.F.R. requires that contentions be supported by alleged facts or expert opinion. This requirement “generally is fulfilled when the sponsor of an otherwise acceptable contention provides a brief recitation of the factors underlying the contention or references to documents and text that provide such reasons.” *Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), LBP-09-4, 69 NRC 170, 194-95 (2009) (quoting *Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), LBP-06-23, 64 NRC 257, 356 (2006) (internal quotations omitted)).

H Section 521(c)(2) of the Clean Water Act prohibits an agency such as the NRC from using NEPA to impose additional effluent limitations on an applicant’s wastewater discharges to surface waters, such as the Main Cooling Reservoir. 33 U.S.C. § 1371(c)(2). That section provides that nothing in NEPA shall be deemed to “authorize any such agency to impose, as a condition precedent to the issuance of any license or permit, any effluent limitation other than any such limitation established pursuant to this chapter.” Certainly, the Clean Water Act does not authorize regulation of discharges to groundwater, *Exxon Corp. v. Train*, 554 F.2d 1310, 1312 (5th Cir. 1977), and so the Applicant’s ER must address those discharges to groundwater. Still, the provisions of the Texas Pollutant Discharge Elimination System (TPDES) permit cannot be adjudicated in this forum — responsibility for the terms and conditions of that TPDES permit lie with the State of Texas and the U.S. Environmental Protection Agency.

LBP-10-15 PACIFIC GAS AND ELECTRIC COMPANY (Diablo Canyon Nuclear Power Plant, Units 1 and 2), Docket Nos. 50-275-LR, 50-323-LR (ASLBP No. 10-890-01-LR-BD01); LICENSE RENEWAL; August 4, 2010; MEMORANDUM AND ORDER (Rulings on Standing, Contention Admissibility, Waiver Petition, and Selection of Hearing Procedures)

A The Board’s role, in considering a petition for waiver under 10 C.F.R. § 2.335, is limited to deciding whether the petitioner has made a *prima facie* showing of special circumstances that would support a waiver. 10 C.F.R. § 2.335(c)-(d). If no *prima facie* showing has been made, then the Board “may not further consider the matter.” 10 C.F.R. § 2.335(c). If the petitioner has made a *prima facie* showing of special circumstances, then the Board certifies the matter to the Commission. 10 C.F.R. § 2.335(d).

B A *prima facie* showing merely requires the presentation of enough information to allow the Board to infer (absent disproof) that special circumstances exist to support a waiver. It is not a ruling on the merits that a waiver is indeed warranted.

C NRC regulations require that a license renewal ER include a SAMA analysis (if not previously considered by the Staff). 10 C.F.R. § 51.53(c)(3)(ii)(L). Thus, the adequacy, or inadequacy, of PG&E’s SAMA analysis is certainly within the scope of this license renewal proceeding.

D The Commission’s NEPA review in the license renewal process is unlike the Commission’s Part 54 review because the NEPA review covers all environmental impacts associated with license renewal and is not limited to aging-related issues.

E A petitioner need not submit a sensitivity analysis in order to establish that a SAMA-related contention is “material” under 10 C.F.R. § 2.309(f)(1)(iv).

F A petitioner does not need to provide “expert opinion” or a “substantive affidavit” in order to satisfy 10 C.F.R. § 2.309(f)(1)(v).

G The Staff’s propositions at this point regarding what would effectively cure the omission are matters for a merits decision, not for a determination of whether or not a contention of omission is admissible. The determination of the sufficiency of any cure submitted by the Applicant is a matter for a later day, once such a cure has been submitted to the Staff.

H If the petitioner alleges that a new earthquake fault has been discovered within 600 meters of the nuclear reactors, and that the fruits of several new studies concerning the new fault will be available in the near term, then the contention that the environmental report is based on incomplete information (*see* 10 C.F.R. § 1502.22) is admissible and is not an improper request that the Board suspend the license renewal proceeding until the current studies are completed. To the contrary, once the contention is admitted, the

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

evidentiary hearing will proceed in the normal course and the Board will decide the merits of whether the environmental report is, or is not, adequate and complete.

I If the petitioner alleges that a new earthquake fault has been discovered within 600 meters of the nuclear reactors, and that the fruits of several new studies concerning the new fault will be available in the near term, then the contention that the environmental report is based on incomplete information (*see* 10 C.F.R. § 1502.22) is admissible and will not be rejected on the basis that there “will always be more data that could be gathered.”

J If the admission of a contention requires the grant of a waiver request under 10 C.F.R. § 2.335, then the Board’s role is to decide (a) whether the petitioner has made a *prima facie* showing for waiver, and (b) whether the contention is otherwise admissible. If both criteria are met, then the matter is referred to the Commission for a merits decision on the waiver. If either criterion is not met, the contention is dismissed.

K In order for a contention regarding environmental impacts of spent fuel storage to be “within the scope” of this proceeding, as required by 10 C.F.R. § 2.309(f)(1)(iii), and not violate 10 C.F.R. § 2.335(a), the Petitioner must obtain a waiver under 10 C.F.R. § 2.335(d).

L A *prima facie* case is defined as “1. The establishment of a legally required rebuttable presumption. 2. A party’s production of enough evidence to allow the fact-trier to infer the fact at issue and rule in the party’s favor.” *Black’s Law Dictionary* 1310 (9th ed. 2009).

M In the context of waiver petitions, “a *prima facie* showing . . . is one that is ‘legally sufficient to establish a fact or case unless disproved,’” *Public Service Co. of New Hampshire* (Seabrook Station, Units 1 and 2), ALAB-895, 28 NRC 7, 22 (1988) (quoting *Pacific Gas and Electric Co.* (Diablo Canyon Nuclear Power Plant, Units 1 and 2), ALAB-653, 16 NRC 55, 72 (1982)).

N The existence of a *prima facie* case is determined based on the sufficiency of the movant’s assertions and informational/evidentiary support alone. We need not find that the Petitioner would ultimately prevail on the merits for a waiver, or whether the fact or case has been disproved, in order to certify its waiver petition to the Commission. Indeed, the issue of the merits of the waiver request is not before us. *See* 10 C.F.R. § 2.335(c)-(d). We only address whether the Petitioner has provided sufficient information in support of its waiver request to warrant requiring a substantive response by the Applicant and the NRC Staff.

O In deciding whether the petitioner has established a *prima facie* case in support of a waiver petition, the Commission has said that the petitioner must show that the “*strict* application” of the regulation (from which waiver is sought) “‘would not serve the purposes for which [it] was adopted.’” *Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-05-24, 62 NRC 551, 559-60 (2005) (emphasis added). In this case, the central purpose of Part 51 Appendix B and 10 C.F.R. § 51.53(c)(2) is to allow the NRC to comply with NEPA by identifying and evaluating certain environmental impacts (in this instance, relating to the storage of spent fuel) that are generic to reactor license renewal proceedings, and then allowing the Applicant and NRC to dispense with site-specific evaluations of such environmental impacts in situations covered by the generic analysis. The purpose of the Part 51 rules is not simply to expedite the NEPA process. It is to apply generic determinations where the generic determinations are appropriate.

P Compliance with NEPA requires that, if new and significant information arises after the date of the issuance of the EIS and before the Agency decision, then the Agency must supplement or revise its EIS and consider such information. *Marsh v. Oregon Natural Resources Council*, 490 U.S. 360, 371-72 (1989).

Q SLOMFP has alleged sufficient new information concerning the seismic situation at Diablo Canyon to raise a *prima facie* showing for the first element needed for a waiver, i.e., that the strict application of the generic NEPA analysis of the management of spent fuel in nuclear reactors that is contained in NRC’s 1996 GEIS would not serve the purpose for which Part 51 Appendix B and 10 C.F.R. § 51.53(c)(2) were adopted.

R SLOMFP has alleged sufficient new information concerning the seismic situation at Diablo Canyon to raise a *prima facie* showing for the third element needed for a waiver, i.e., that the seismic risk factors at Diablo Canyon are unique and different from the NEPA analysis contained in NRC’s 1996 GEIS.

S The Commission has stated that, in the context of a safety contention, the petitioner must show a waiver of the regulation is necessary to reach a “significant safety problem.” *Millstone*, CLI-05-24, 62 NRC 560. In the context of an environmental contention, the petitioner needs to show that the waiver of the regulation is needed to reach a significant environmental problem. This is consistent with 10 C.F.R.

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- §§ 51.53(c)(iv) and 51.92(a)(2) which require NRC to consider new and significant information that arises after the environmental impact statement.
- T Although the terms “severe accident,” “severe accident mitigation alternatives,” and “SAMA” are not defined in NRC’s NEPA regulations, the NRC policy documents that originated these terms clearly limit them to nuclear reactors, and do not include spent fuel pools or storage. *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), CLI-01-17, 54 NRC 3, 21 (2001) (citing Policy Statement on Severe Reactor Accidents Regarding Future Designs and Existing Plants, 50 Fed. Reg. 32,138 (Aug. 8, 1985)).
- U SAMA analyses are not required for the spent fuel storage impacts associated with license renewals. *Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), CLI-10-14, 71 NRC 449, 471-75 (2010).
- V If the petition’s “header” for a contention uses the phrase “SAMA Analysis,” but the “statement of the contention” does not refer to the phrase “SAMA Analysis,” the petition never refers to the SAMA analysis regulation (10 C.F.R. § 51.53(c)(3)(ii)(L)), and the primary thrust of the briefing by all parties does not focus on SAMA analysis issues, then the Board may interpret the contention in accordance with the express “statement of the contention” and not reject it as an impermissible “SAMA analysis” contention.
- W NEPA requires the NRC to make an informed decision regarding the environmental consequences of the grant of this license renewal, and such information must either include consideration of the likelihood and consequences of such an event or indicate through reasonable analyses satisfactory under Ninth Circuit guidelines that the event is remote and speculative as the term is used in NEPA analyses. We believe that NEPA’s duty to consider the environmental impacts of a proposed action incorporates, at least implicitly, considerations of the probability of a particular consequence occurring.
- X The requirement of 10 C.F.R. § 2.335(d) that a waiver petition be accompanied by an affidavit that identifies the aspects of the subject matter of the licensing proceeding that warrant the waiver and that states the special circumstances that justify the waiver, does not require that the affiant be an expert.
- Y The petitioner has presented a *prima facie* showing for the waiver of the NRC regulation covering the environmental impacts of spent fuel pool accidents generically, and has shown that Contention EC-2 (concerning earthquake-induced spent fuel pool accidents at Diablo Canyon) is otherwise admissible. Accordingly, the contention is referred to the Commission for a ruling as to whether a waiver is warranted.
- Z A *prima facie* showing in support of a waiver requires a showing that there are special circumstances that are unique to the Diablo Canyon facility. The fact that NRC has evaluated the threat of terrorist attack at spent fuel pools at every power plant site in the United States does not show that the Diablo Canyon site is unique. Therefore Contention EC-3 is inadmissible because it is not supported by a *prima facie* showing of waiver.
- AA Under the Commission’s regulations implementing NEPA, the environmental report submitted by a license renewal applicant must include a SAMA analysis if such an analysis has not already been performed. 10 C.F.R. § 51.53(c)(3)(ii)(L).
- BB Although the obligations under NEPA fall to the agency (and therefore the NRC Staff), petitioners are required to raise environmental objections based on the ER, 10 C.F.R. § 2.309(f)(2), and therefore the assertion that there is relevant information missing from the SAMA analysis, which is part of the ER, is appropriate at this point.
- CC Given that consideration of terrorist attacks is part of the NRC’s NEPA obligations in the Ninth Circuit, the issue of whether terrorist attacks have been fully considered in the NEPA analysis for Diablo Canyon is plainly material to the decision the NRC must make, and thus satisfies 10 C.F.R. § 2.309(f)(1)(iv).
- DD This situation is distinguishable from the Commission’s ruling in *McGuire/Catawba*, where the Commission found a SAMA analysis contention to be inadmissible because it lacked supporting information regarding the relative costs and benefits of that proposed alternative. *See Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-17, 56 NRC 1, 11-12 (2001). Moreover, the Commission noted that the Applicant’s ER did address SAMAs related to the severe accident sequence at issue in the contention. *Id.* at 12. Here, by contrast, SLOMFP has alleged that “it’s an entire field that’s been neglected, just not addressed at all.” The Commission’s concern in *McGuire/Catawba* that, “[f]or any severe accident concern, there are likely to be numerous conceivable SAMAs and thus it will always be possible to come up with some type of mitigation alternative that has

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- not been addressed by the Licensee,” CLI-02-17, 56 NRC at 11, therefore is inapplicable to the present situation because SLOMFP asserts the omission of an entire class of scenarios.
- EE SLOMFP’s assertion that terrorist-act-originated SAMA analysis is required by Ninth Circuit law also satisfies the requirements of 10 C.F.R. § 2.309(f)(1)(iii) that the issue be within the scope of this proceeding. We are not persuaded that this issue has been generically addressed in the 1996 GEIS through its statement that the consequences of terrorist-act-initiated incidents would be “no worse than” those already considered in the ER and the GEIS resulting from other initiators. While the *consequences* may be no worse, that fact has no bearing upon the potential cost-benefit analysis of various mechanisms to *prevent* such a release by a terrorist attack, and possibly none upon mechanisms that might *ameliorate* its consequences. The referenced findings of the 1996 GEIS regard only the consequences; thus we do not find that this contention challenges the generic finding of the NRC.
- FF EC-4 raises the questions of: (a) whether because of the quantitative nature of the cost-benefit analyses which are the end product of SAMA analyses, a quantitative, as opposed to qualitative, analysis of terrorist attacks and the alternatives for mitigation and prevention is necessary; (b) how Staff should approach such an analysis when the data are, at best, sparse; and (c) the extent to which, and manner by which, SAMA analyses should consider matters and mechanisms already addressed by the NRC’s Design Basis Threat programs. In our view, these are novel legal or policy issues that would benefit from Commission review. *See* 10 C.F.R. § 2.323(f)(1).
- GG The NRC is not barred from considering a licensee’s past and continuing managerial and performance problems when it determines, under 10 C.F.R. § 54.29(a), whether the licensee has demonstrated that actions “will be taken” with respect to managing the effects of aging during the period of extended operation.
- HH The potential scope of adjudicatory hearings in license renewal proceedings is the same as the scope of the Staff’s review. If the ability of an applicant to adequately implement an aging management program cannot be raised in an adjudicatory proceeding, then, likewise, it cannot be considered by the Staff when it decides whether to allow the applicant to operate a nuclear power plant for an additional 20 years.
- II Under the limited circumstances of this case, the NRC’s determination under 10 C.F.R. § 54.29(a) can be informed by the applicant’s past performance that involved an alleged ongoing pattern of difficulty in managing current activities that have a direct link to the applicant’s ability to implement the aging management program during the proposed license renewal period.
- JJ The plain language of 10 C.F.R. § 54.29(a) requires that the NRC make predictive determinations about what the applicant will actually do in the future. The Commission must conclude that there is reasonable assurance that the required aging management activities have already “been taken” or “will be taken.” Identification of the needed actions, such as in an aging management program, is not enough. There must be assurance that the actions will actually be taken and “will continue to be conducted” in accordance with the current licensing basis during the period of extended operation.
- KK Nothing in 10 C.F.R. § 54.29(a) says that a licensee’s current noncompliance history or patterns of management problems or difficulties cannot be considered.
- LL The regulation does not say that the only thing the NRC can consider in making the 10 C.F.R. § 54.29(a) determination is the adequacy of the paperwork, i.e., the aging management program that states the applicant’s plan for satisfying the regulation. Neither 10 C.F.R. § 54.29 nor any of the Part 54 regulations ever use the terms “aging management program,” “aging management plan,” or “AMP.” The regulation does not say — “submit an adequate AMP.”
- MM Part 54 requires that the applicant demonstrate that the “effects of aging will be adequately managed.” 10 C.F.R. § 54.21(a)(3). The NRC must determine, to a reasonable assurance, that such a demonstration has been made. 10 C.F.R. § 54.29(a).
- NN The Commission has rejected the proposition that a “license renewal proceeding is *per se* an inappropriate forum” to consider the adequacy of the applicant’s current or past managerial performance. *Georgia Institute of Technology* (Georgia Tech Research Reactor, Atlanta, Georgia), CLI-95-12, 42 NRC 111, 120 (1995).
- OO The Commission has stated that “[i]n determining whether . . . to renew a license[ ], the Commission makes what is in effect predictive findings about the qualifications of an applicant. The past performance of management may help indicate whether a licensee will comply with agency standards. . . . Of course, the past performance must bear on the licensing action [renewal] currently under review.” *Georgia Tech*, CLI-95-12, 42 NRC at 120 (footnotes omitted).

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- PP It is not credible for the applicant to argue, in the face of three current and consecutive NRC inspections finding numerous violations at the applicant's facility and a continuing "adverse trend" in such violations, that it is "unsupported speculation" that the applicant will violate the NRC requirements in the future. These inspections rebut the assumption of compliance.
- QQ The Commission's general policy of not assuming that an applicant will violate NRC regulations is rebuttable. Past performance, such as NRC inspection reports of current and continuing patterns of violations, can undermine and rebut that assumption.
- RR In the context of 10 C.F.R. § 54.29, we reject the notion that the presumption of compliance is irrefutable or that, despite evidence to the contrary, the NRC must blindly assume that an applicant will always comply and/or will always be able to adequately implement future programs under any and all circumstances. This is especially so if there is a narrow and specific concern that has existed for years and continues to exist regarding the ability of a license renewal applicant to properly understand the very same CLB that it must comply with during the PEO.
- SS Trivial and random noncompliances that have no link to the essential elements of implementing an aging management program will not support the admission of a contention alleging that the applicant has failed to demonstrate, as required by 10 C.F.R. § 54.29(a), a reasonable assurance that it will in fact (as opposed to on paper) adequately manage aging during the period of extended operations in the PEO.
- TT Whether or not the current instances of noncompliance are of sufficient magnitude and pervasiveness to support a finding of no reasonable assurance" under 10 C.F.R. § 54.29(a) is a merits determination. Here we are only concerned with whether the contention is within the scope of this license renewal proceeding and admissible.
- UU The absence of perfect compliance does not rebut the presumption of compliance or support admission of a contention that the application does not satisfy 10 C.F.R. § 54.29(a). But a consistent, longstanding, and continuing pattern of problems in a specific area that is relevant to managing aging equipment will.
- VV Asserting that an applicant has not demonstrated a reasonable assurance that it will actually be able to adequately manage aging during the period of extended operation, as is required by 10 C.F.R. § 54.29(a) is not the same as asserting that the applicant does not meet the "character" test of Atomic Energy Act § 182. Contention TC-1 is not an attack on the character or integrity of the applicant.
- WW A narrow and specific contention that alleges facts, with supporting documentation, of a longstanding and continuing pattern of noncompliance or management difficulties, which are reasonably linked to whether the licensee will actually be able to adequately "manage aging" in accordance with the current licensing basis during the PEO, can be an admissible contention under 10 C.F.R. § 54.29(a).
- XX Nothing in 10 C.F.R. § 54.30, "Matters not subject to a renewal review," bars a contention that the applicant has failed to demonstrate that it will actually be able to adequately manage aging in the future, as required by 10 C.F.R. § 54.29. Section 54.30(a) says that a licensee is obliged to correct current noncompliances now. Section 54.30(b) says that whether or not the licensee complies with 10 C.F.R. § 54.30(a) is not within the scope of license renewal review. Neither provision prohibits a contention that challenges the applicant's demonstration regarding its future compliance during the license renewal period.
- YY The fact that current noncompliances are used as evidence to support the allegation that the applicant will not be able to manage aging in the future does not render the contention outside of the scope of 10 C.F.R. § 54.29 nor does it violate 10 C.F.R. § 54.30.
- ZZ The concept of "age-related degradation unique to license renewal" or "ARDUTL" was deleted from the license renewal regulations in 1995 because the NRC realized that aging is a continuous process and the aging in question does not need to be *unique* to the period of extended operation in order to be relevant to 10 C.F.R. § 54.29.
- AAA The current regulatory process, and compliance with the CLB, is not the primary focus of license renewal. We note, however, that there are exceptions. For example, the Commission states: "the portion of the CLB that can be impacted by the detrimental effects of aging is limited to the design bases aspects of the CLB." Nuclear Power Plant License Renewal; Revisions, 60 Fed. Reg. 22,461, 22,475 (May 8, 1995).
- BBB An ongoing pattern of management failures and/or past or current violations can be the subject of an admissible contention under 10 C.F.R. § 54.29(a) because the scope of adjudicatory review and the scope of the Staff's review are the same, see *Turkey Point*, CLI-01-17, 54 NRC at 10, and the Staff is not forbidden from considering a company's past performance when evaluating its license renewal application.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- CCC As required by 10 C.F.R. § 2.310, upon admission of a contention, the Board must identify the specific hearing procedures to be used.
- DDD The standard for allowing the parties to conduct cross-examination is the same under Subparts G and L, to wit — the Administrative Procedure Act (APA) standard for cross-examination in formal administrative proceedings as set forth in 5 U.S.C. § 556(d) (“A party is entitled . . . to conduct such cross examination as may be required for a full and true disclosure of the facts.”). See *Citizens Awareness Network, Inc. v. NRC*, 391 F.3d 338, 351 (1st Cir. 2004); see also *Changes to Adjudicatory Process*, 69 Fed. Reg. 2182, 2195-96 (Jan. 14, 2004).
- EEE APA § 556(d), which is the standard for allowing cross-examination under Subparts G and L, is a liberal standard, but does not provide an absolute right to conduct cross-examination. See *Seacoast Anti-Pollution League v. Costle*, 572 F.2d 872, 880 (1st Cir. 1978).
- FFF Even though the APA § 556(d) substantive standard is the same under Subparts G and L, NRC’s procedures differ. Cross-examination occurs virtually automatically in Subpart G hearings, subject to normal judicial management and the requirement to file a cross-examination plan. See 10 C.F.R. §§ 2.319, 2.711(c). In contrast, under Subpart L, a party seeking to conduct cross-examination must file a written motion and obtain leave of the Board. 10 C.F.R. § 2.1204(b).
- GGG The Board determines which hearing procedure to use on a contention-by-contention basis. See, e.g., 10 C.F.R. §§ 2.309(g), 2.310(d).
- HHH Section 2.310(b)-(h) enumerates specific situations where a certain procedure is mandated or available. If a contention does not fall within one of those categories, then proceedings may be conducted under Subpart L. 10 C.F.R. § 2.310(a). Thus, if no particular procedure is compelled, the Board must exercise its discretion and select the hearing procedure most appropriate for the newly admitted contentions.
- III The parties have not provided the Board with any showing that a particular procedure is compelled or that the Board should exercise its discretion to use a procedure other than Subpart L on any of the contentions. Therefore the Board exercises its discretion and selects Subpart L as the appropriate hearing procedure for the four admitted contentions.
- LBP-10-16 POWERTECH (USA), INC. (Dewey-Burdock In Situ Uranium Recovery Facility), Docket No. 40-9075-MLA (ASLBP No. 10-898-02-MLA-BD01); MATERIALS LICENSE AMENDMENT; August 5, 2010; MEMORANDUM AND ORDER (Ruling on Petitions to Intervene and Requests for Hearing)
- A A petitioner’s participation in a licensing proceeding hinges on a demonstration that the petitioner has standing. Section 189a of the Atomic Energy Act of 1954 (AEA), 42 U.S.C. §§ 2011 to 2297h-13 (2006), mandates that the NRC provide a hearing “upon the request of any person whose interest may be affected by the proceeding.” *Id.* § 2239(a)(1)(A). The Commission’s regulations specify that a petition for review and request for hearing must include a showing that the petitioner has standing and that the Board should consider (1) the nature of the petitioner’s right under the AEA or the National Environmental Policy Act (NEPA), 42 U.S.C. § 4321 (2006), to be made a party to the proceeding; (2) the nature and extent of the petitioner’s property, financial, or other interest in the proceeding; and (3) the possible effect of any decision or order that may be issued in the proceeding on the petitioner’s interest. 10 C.F.R. § 2.309(a), (d)(1)(ii)-(iv).
- B The Commission customarily follows judicial concepts of standing. *Quivira Mining Co.* (Ambrosia Lake Facility, Grants, New Mexico), CLI-98-11, 48 NRC 1, 5-6 (1998) (citing *Portland General Electric Co.* (Pebble Springs Nuclear Plant, Units 1 and 2), CLI-76-27, 4 NRC 610, 613-14 (1976)). In order to establish standing in federal court, a party must show three key elements: injury-in-fact, causation, and redressability. *Lujan v. Defenders of Wildlife*, 504 U.S. 555, 560-61 (1992). As the Commission has stated, standing requires that a petitioner allege “a particularized injury that is fairly traceable to the challenged action and is likely to be redressed by a favorable decision.” *Quivira*, CLI-98-11, 48 NRC at 6 (citing *Cleveland Electric Illuminating Co.* (Perry Nuclear Power Plant, Unit 1), CLI-93-21, 38 NRC 87, 92 (1993)).
- C In proceedings involving nuclear power reactors a petitioner is presumed to have standing to intervene without the need to specifically plead injury, causation, and redressability if the petitioner lives within 50 miles of the nuclear power reactor. See, e.g., *Florida Power & Light Co.* (St. Lucie Nuclear Power Plant, Units 1 and 2), CLI-89-21, 30 NRC 325, 329 (1989) (observing that the presumption applies in proceedings for nuclear power plant “construction permits, operating licenses, or significant amendments thereto”). However, no such proximity presumption applies in source materials cases such as this one. See *USEC Inc.* (American Centrifuge Plant), CLI-05-11, 61 NRC 309, 311-12 (2005).

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- D Under judicial concepts of standing, a petitioner must suffer from, or be in imminent danger of suffering, an injury-in-fact. The Supreme Court has defined injury-in-fact as “an invasion of a legally protected interest which is . . . concrete and particularized and actual or imminent rather than conjectural or hypothetical.” *Lujan*, 504 U.S. at 560. An injury-in-fact must go beyond generalized grievances to affect a petitioner “in a personal and individual way.” *Id.* at 560 n.1. Thus, standing generally has been denied when the threat of injury is not concrete and particularized. *See, e.g., Whitmore v. Arkansas*, 495 U.S. 149, 158-59 (1990); *Los Angeles v. Lyons*, 461 U.S. 95, 105-06 (1983).
- E A petitioner’s claimed injury must be arguably within the zone of interests protected by the governing statute in the proceeding. *Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), CLI-98-21, 48 NRC 185, 195-96 (1998). “In order to determine whether an interest is in the ‘zone of interests’ of a statute, it is necessary ‘first [to] discern the interests ‘arguably . . . to be protected’ by the statutory provision at issue,’ and ‘then [to] inquire whether the [petitioner’s] interests affected by the agency action are among them.’” *U.S. Enrichment Corp.* (Paducah, Kentucky Gaseous Diffusion Plant), CLI-01-23, 54 NRC 267, 273 (2001) (citing *National Credit Union Administration v. First National Bank*, 522 U.S. 479, 492 (1998)).
- F To establish causation, a petitioner must show that there is “a causal connection between the injury and the conduct complained of — the injury has to be ‘fairly . . . trace[able] to the challenged action of the defendant, and not . . . th[e] result [of] the independent action of some third party not before the court.’” *Lujan*, 504 U.S. at 560 (citing *Simon v. Eastern Kentucky Welfare Rights Organization*, 426 U.S. 26, 41-42 (1976)). In source materials cases, the petitioner has the burden of showing a “specific and plausible means” by which the proposed license activities may affect him or her. *See American Centrifuge*, CLI-05-11, 61 NRC at 311-12 (“Where there is no ‘obvious’ potential for [offsite] harm, . . . [the petitioner] must show a ‘specific and plausible means’ of how the challenged action may harm him or her.” (internal citations omitted)). Petitioners must therefore demonstrate a plausible chain of causation between the licensed activity and the alleged injury. A Board’s determination of standing does “not depend[ ] on whether the cause of the injury flows directly from the challenged action, but whether the chain of causation is plausible.” *Sequoiah Fuels Corp. and General Atomics* (Gore, Oklahoma Site), CLI-94-12, 40 NRC 64, 75 (1994). *See also Crow Butte Resources, Inc. (Crow Butte II)* (In Situ Leach Facility, Crawford, Nebraska), CLI-09-9, 69 NRC 331, 345 (2009).
- G The third requirement necessary for a petitioner to demonstrate standing is redressability. Redressability requires a petitioner to show that its alleged injury-in-fact could be cured or alleviated by some action of the tribunal. *Sequoiah Fuels Corp.* (Gore, Oklahoma Site Decommissioning), CLI-01-2, 53 NRC 9, 13-14 (2001); *Westinghouse Electric Corp.* (Nuclear Fuel Export License for Czech Republic — Temelin Nuclear Power Plants), CLI-94-7, 39 NRC 322, 331 (1994). For example, if a petitioner showed that the modification or denial of the Application would mitigate or eliminate her alleged injuries, then she would have satisfied the redressability requirement.
- H While an individual may establish standing by satisfying the foregoing criteria, an organization, such as an environmental group, state or local government, or Indian Tribe, must satisfy one of two additional criteria. It must demonstrate either “organizational” standing or “representational” standing. *Georgia Institute of Technology* (Georgia Tech Research Reactor, Atlanta, Georgia), CLI-95-12, 42 NRC 111, 115 (1995) (“An organization may base its standing on either immediate or threatened injury to its organizational interests, or to the interests of identified members. To derive standing from a member, the organization must demonstrate that the individual member has standing to participate, and has authorized the organization to represent his or her interests.” (internal citations omitted)).
- I To establish organizational standing under 10 C.F.R. § 2.309(d)(1), an organization must demonstrate that (1) the action at issue will cause an injury-in-fact to the organization’s interests and (2) the injury is within the zone of interests protected by NEPA or the AEA. *See Sierra Club v. Morton*, 405 U.S. 727, 739 (1972); *Georgia Tech*, CLI-95-12, 42 NRC at 115; *Yankee Atomic*, CLI-98-21, 48 NRC at 194-95; *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), ALAB-952, 33 NRC 521, 530 (1991). To assert an appropriate injury for organizational standing, an organization must demonstrate a palpable injury in fact to its organizational interests. *Turkey Point*, ALAB-952, 33 NRC at 530. The Supreme Court in *Sierra Club v. Morton*, 405 U.S. 727, explained that the injury-in-fact necessary to establish organizational standing must be more than “a mere ‘interest in a problem,’ no matter how longstanding the interest and no matter how qualified the organization is in evaluating the problem . . . .” *Id.* at 739. Instead, an organization must go beyond asserting an injury to a broad, generalized interest —

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

i.e., an interest in protecting the environment, an interest in preserving national parks — and establish that it is suffering, or will suffer, from a specific, concrete harm caused by a third party.

J An organization asserting “representational” standing must (1) demonstrate that the interest of at least one of its members will be harmed; (2) demonstrate that the member would have standing in his or her own right; (3) identify that member by name and address; and (4) demonstrate that the organization is authorized to request a hearing on behalf of that member. *See GPU Nuclear, Inc.* (Oyster Creek Nuclear Generating Station), CLI-00-6, 51 NRC 193, 194 (2000); *Vermont Yankee Nuclear Power Corp.* (Vermont Yankee Nuclear Power Station), CLI-00-20, 52 NRC 151, 163 (2000). Representational standing is based on an alleged harm to an organization’s members, whereas organizational standing involves an alleged harm to the organization itself.

K In cases involving ISL uranium mining and other source materials licensing, a petitioner must demonstrate the requisite elements of standing, i.e., injury, causation, and redressability, because the Commission has held that proximity to the proposed facility alone is not adequate to demonstrate standing. *See Consumers Energy Co.* (Big Rock Point Independent Spent Fuel Storage Installation), CLI-07-19, 65 NRC 423, 426 (2007); *International Uranium (USA) Corp.* (White Mesa Uranium Mill), CLI-98-6, 47 NRC 116, 117 n.1 (1998).

L The Commission has placed the burden on the petitioner to allege a “specific and plausible means” by which contaminants from mining activities may adversely affect him or her, *Nuclear Fuel Services, Inc.* (Erwin, Tennessee), CLI-04-13, 59 NRC 244, 248 (2004) (citing *Commonwealth Edison Co.* (Zion Nuclear Power Station, Units 1 and 2), CLI-00-5, 51 NRC 90, 98 (2000)); that is to say, each individual Petitioner must show that there is a “specific and plausible means” by which contaminants from the applicant’s proposed mine will reach the aquifer or surface waters from which that Petitioner draws water.

M In *HRI*, the Board held that standing can be granted to a petitioner in a materials licensing case where that petitioner “uses a substantial quantity of water personally or for livestock from a source that is reasonably contiguous to either the injection or processing sites,” as such a showing demonstrates a plausible injury-in-fact. *Hydro Resources, Inc.* (2929 Coors Road, Suite 101, Albuquerque, NM 87120), LBP-98-9, 47 NRC 261, 275 (1998). Where no petitioner claims to live on or immediately adjacent to the applicant’s proposed mining site, the Board must determine whether the individual Petitioners have presented sufficient evidence to establish that a plausible pathway exists through which contaminants could migrate from the proposed mining site to the Petitioners’ water sources. *See Crow Butte II*, CLI-09-9, 69 NRC at 345.

N A Board’s standing analysis must “avoid ‘the familiar trap of confusing the standing determination with the assessment of a petitioner’s case on the merits.’” *HRI*, LBP-98-9, 47 NRC at 272 (citing *Sequoyah Fuels Corp. and General Atomics* (Gore, Oklahoma Site Decontamination and Decommissioning Funding), LBP-94-5, 39 NRC 54 (1994)). Petitioners are not required to demonstrate their asserted injury with certainty at this stage, or to “provide extensive technical studies” in support of their standing argument. *Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant), LBP-99-25, 50 NRC 25, 31 (1999) (citing *Sequoyah Fuels*, CLI-94-12, 40 NRC at 72). Such determinations are reserved for adjudication of the merits. A determination that “the injury is fairly traceable to the [challenged] action . . . [does] not depend[ ] on whether the cause of the injury flows directly from the challenged action, but *whether the chain of causation is plausible.*” *Sequoyah Fuels*, CLI-94-12, 40 NRC at 75 (emphasis added).

O An individual petitioner may not request to intervene in his or her own right while simultaneously authorizing other petitioners to represent his or her interests in the proceeding. The Commission has stated that such multiple representation might lead to confusion as to whether the individual or the organization was speaking for the petitioner. *Big Rock*, CLI-07-19, 65 NRC at 426 (citing *Northern States Power Co.* (Pathfinder Atomic Plant), LBP-89-30, 30 NRC 311, 316 (1989) (“[A petitioner] can have her interest protected by participating as an individual or by having [an organization] represent her interest. It would be detrimental to the process to have a person appear in the proceeding individually and to be represented by an organization. . . .”).

P A federally recognized Indian tribe may seek to participate in this proceeding as provided in 10 C.F.R. § 2.309(d)(2). However, where the proposed facility will not be located within the Tribe’s boundaries, the Tribe must meet the standing requirements imposed by 10 C.F.R. § 2.309(d)(1) by showing “a concrete and particularized injury that is . . . fairly traceable to the challenged action and [is] likely to be redressed by a favorable decision.” *See, e.g., Yankee Atomic*, CLI-98-21, 48 NRC at 195; *Georgia Tech*, CLI-95-12, 42 NRC at 115; *Perry*, CLI-93-21, 38 NRC at 92 (citing *Lujan*, 504 U.S. at 561).

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- Q The preservation of Native American cultural traditions is a protected interest under federal law. *See Havasupai Tribe v. United States*, 752 F. Supp. 1471 (D. Ariz. 1990); *United States ex rel. Chunie v. Ringrose*, 788 F.2d 638 (9th Cir. 1986); *United States v. Pend Oreille County Public Utility District No. 1*, 585 F. Supp. 606 (D. Wash. 1984); *Ute Indians v. United States*, 28 Fed. Cl. 768 (1993). If this interest is endangered or harmed, it qualifies as a cognizable injury for AEA standing purposes under *Crow Butte II*.
- R Section 106 of the NHPA provides the Tribe with a procedural right to protect its interests in cultural resources. The Supreme Court has held that a party claiming violations of this procedural right is to be accorded a special status when it comes to standing: “The person who has been accorded a procedural right to protect his concrete interests can assert that right without meeting all the normal standards for redressability and immediacy.” *Lujan*, 504 U.S. at 572 n.7. To establish an injury-in-fact, a party merely has to show “some threatened concrete interest personal” to the party that NHPA was designed to protect. *Nulankeyutmonen Nkihtaqmikon v. Impson*, 503 F.3d 18 (1st Cir. 2007) (citing *Lujan*, 504 U.S. at 572-73 nn.7-8).
- S Federal law not only recognizes that Native American tribes have a protected interest in cultural resources found on their aboriginal land, but as well has imposed on federal agencies a consultation requirement under the NHPA to ensure the protection of tribal interests in cultural resources.
- T In order to participate as a party in a proceeding before the Board, a petitioner must not only establish standing, but must also proffer at least one admissible contention that meets the requirements of 10 C.F.R. § 2.309(f)(1). *See* 10 C.F.R. § 2.309(a). An admissible contention must: (i) provide a specific statement of the legal or factual issue sought to be raised; (ii) provide a brief explanation of the basis for the contention; (iii) demonstrate that the issue raised is within the scope of the proceeding; (iv) demonstrate that the issue raised is material to the findings the NRC must make to support the action that is involved in the proceeding; (v) provide a concise statement of the alleged facts or expert opinions, including references to specific sources and documents, that support the petitioner’s position and upon which the petitioner intends to rely at the hearing; and (vi) provide sufficient information to show that a genuine dispute exists in regard to a material issue of law or fact, including references to specific portions of the application that the petitioner disputes, or, in the case when the application is alleged to be deficient, the identification of such deficiencies and supporting reasons for this belief. *Id.* § 2.309(f)(1).
- U The purpose of these section 2.309(f)(1) requirements is to “focus litigation on concrete issues and result in a clearer and more focused record for decision.” Changes to Adjudicatory Process, 69 Fed. Reg. 2182, 2202 (Jan. 14, 2004). The Commission has stated that “the hearing process [is intended only for] issues that are ‘appropriate for, and susceptible to, resolution in an NRC hearing.’” *Id.* Furthermore, “[w]hile a board may view a petitioner’s supporting information in a light favorable to the petitioner . . . the petitioner (not the board) [is required] to supply all of the required elements for a valid intervention petition.” *AmerGen Energy Co. (Oyster Creek Nuclear Generating Station)*, CLI-09-7, 69 NRC 235, 260 (2009).
- V The rules on contention admissibility are “strict by design.” *See, e.g., Dominion Nuclear Connecticut, Inc. (Millstone Nuclear Power Station, Unit 2)*, CLI-03-14, 58 NRC 207, 213 (2003); *Dominion Nuclear Connecticut, Inc. (Millstone Nuclear Power Station, Units 2 and 3)*, CLI-01-24, 54 NRC 349, 358-59 (2001); *Duke Energy Corp. (Oconee Nuclear Station, Units 1, 2, and 3)*, CLI-99-11, 49 NRC 328, 334-35 (1999). Further, absent a waiver, contentions challenging applicable statutory requirements or Commission regulations are not admissible in agency adjudications. 10 C.F.R. § 2.335(a). Failure to comply with any of these requirements is grounds for not admitting a contention. *Dominion Nuclear Connecticut, Inc. (Millstone Nuclear Power Station, Units 2 and 3)*, CLI-04-36, 60 NRC 631, 636 (2004).
- W A contention of omission claims that “the application fails to contain information on a relevant matter as required by law . . . and [provides] the supporting reasons for the petitioner’s belief.” 10 C.F.R. § 2.309(f)(1)(vi). To satisfy section 2.309(f)(1)(i)-(ii), the contention of omission must describe the information that should have been included in the ER and provide the legal basis that requires the omitted information to be included. The petitioner must also demonstrate that the contention is within the scope of the proceeding. *Id.* § 2.309(f)(1)(iii).
- X Section 2.309(f)(1)(v) requires the petitioner to provide a concise statement of the alleged facts that support its position and upon which the petitioner intends to rely at the hearing. However, “the pleading requirements of 10 C.F.R. § 2.309(f)(1)(v), calling for a recitation of facts or expert opinion supporting the issue raised, are inapplicable to a contention of omission beyond identifying the legally required missing information.” *Virginia Electric and Power Co. (North Anna Power Station, Unit 3)*, LBP-08-15,

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- 68 NRC 294, 317 (2008) (quoting *Pa'ina Hawaii, LLC*, LBP-06-12, 63 NRC 403, 414 (2006)). Thus, for a contention of omission, the petitioner's burden is only to show the facts necessary to establish that the application omits information that should have been included. The facts relied on need not show that the facility cannot be safely operated, but only that the application is incomplete.
- Y If an applicant cures the omission, the contention will become moot. *North Anna*, LBP-08-15, 68 NRC at 317; *Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-28, 56 NRC 373, 383 (2002).
- Z If the contention makes a *prima facie* allegation that the application omits information required by law, "it necessarily presents a genuine dispute with the Applicant on a material issue in compliance with 10 C.F.R. § 2.309(f)(1)(vi) [and] . . . raises an issue plainly material to an essential finding of regulatory compliance needed for license issuance," *Pa'ina*, LBP-06-12, 63 NRC at 414, in accordance with section 2.309(f)(1)(iv).
- AA A petitioner, especially one represented by counsel, bears the burden of going forward and specifically addressing each of the six elements in 10 C.F.R. § 2.309(f)(1) for each contention proffered. A single sentence labeled a contention, with no reference to the six elements of section 2.309(f)(1), does not an admissible contention make.
- BB Commission case law supports the conclusion that it is not the Board's duty to forage through a petition in order to find statements or other support that may be located in various portions of the petition but not referenced in the contention. *Public Service Co. of New Hampshire* (Seabrook Station, Units 1 and 2), CLI-89-3, 29 NRC 234, 240-41 (1989) ("The Commission expects parties to bear their burden and to clearly identify the matters on which they intend to rely with reference to a specific point. The Commission cannot be faulted for not having searched for a needle that may be in a haystack."). A properly pled contention needs to lay out explicitly the required criteria of 10 C.F.R. § 2.309(f)(1)(i)-(vi) in order to be admissible, 69 Fed. Reg. at 2221; a licensing board cannot be expected to go on a veritable scavenger hunt to find the missing pieces needed for an admissible contention.
- CC Issues of disorganization in an application cannot be said to be germane to the licensing process. According to the Board in *HRI*, "[a]ny area of concern is germane if it is relevant to whether the license should be denied or conditioned." LBP-98-9, 47 NRC at 280. The organization or format of an application was not considered by that Board to be germane because the objection to the application's organization was not an objection to the licensing action at issue in the proceeding.
- DD It is not within the province of a Licensing Board to piece together and create an admissible contention from a lengthy petition with numerous affidavits, declarations, and exhibits in an effort to create a viable contention. Rather, it is the responsibility of the petitioner to submit a contention containing all six elements required by 10 C.F.R. § 2.309(f)(1) in an orderly and organized fashion. Simply put, it is a petitioner's burden of going forward at this stage of the proceeding to submit a complete, self-contained contention addressing each of the elements required by 10 C.F.R. § 2.309(f)(1). To be admissible, a contention must comply with every requirement listed in 10 C.F.R. § 2.309(f)(1).
- EE While the duty to comply with NEPA falls upon the agency and not upon the applicant or licensee, *Progress Energy Florida, Inc.* (Levy County Nuclear Power Plant, Units 1 and 2), CLI-10-2, 71 NRC 27, 34 (2010), the requirements of Part 51 must be met by the applicant. Section 51.45 clearly requires an applicant to discuss in its ER "[t]he impact of the proposed action on the environment." 10 C.F.R. § 51.45(b)(1). Since an impact analysis under NEPA requires that cultural and historic resources be considered, we conclude that a sufficient discussion of cultural and historic resources must be included in an applicant's ER.
- FF As the Commission made clear in *Crow Butte II*, it is not the duty of an applicant to consult with a Tribe regarding cultural resources at a proposed site, but instead is the duty of the agency to initiate and follow through with the consultation process. 36 C.F.R. § 800.2(c)(2)(ii)(D) (stating that "[w]hen Indian tribes . . . attach religious and cultural significance to historic properties off tribal lands, section 101(d)(6)(B) of the act requires *Federal agencies* to consult with such Indian tribes . . . ." (emphasis added)). The alleged failure to consult in this proceeding, therefore, cannot be the fault of the applicant. And, because the NRC Staff has not completed its environmental review of the proposed project, this Board cannot find that they have been dilatory in their duty to consult with the Tribe. As noted by the Commission in its *Crow Butte II* ruling, the Tribe is free to file a contention later on in this proceeding if, after the Staff releases its environmental documents, the Tribe believes that the Staff has failed to satisfy its obligations under NEPA and the NHPA. *Crow Butte II*, CLI-09-9, 69 NRC at 351.

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- GG Commission precedent makes clear that 10 C.F.R. § 40.31(h) applies to uranium mills, and not to ISL facilities. *Hydro Resources, Inc.* (2929 Coors Road, Suite 101, Albuquerque, NM 87120), CLI-99-22, 50 NRC 3, 8 (1999). In fact, the Commission has held that, while Part 40 generally applies to ISL mining, Appendix A to Part 40, including Criterion 1, was “designed to address the problems related to mill tailings and not problems related to injection mining.” *Id.* (citing *Hydro Resources, Inc.* (2929 Coors Road, Suite 101, Albuquerque, NM 87120), LBP-99-1, 49 NRC 29, 33 (1999)). There are, however, certain safety provisions in Appendix A, such as Criterion 2, that are relevant and do apply to ISL mining. *Id.* The Presiding Officer in *HRI* concluded that the principal regulatory standards for ISL applications are 10 C.F.R. § 40.32(c) and (d), “which mandate protection of public health and safety,” *HRI*, CLI-99-22, 50 NRC at 9; an exceedingly general requirement.
- HH It is settled law that an applicant is not bound by NEPA, but by NRC regulations in Part 51. *Levy County*, CLI-10-2, 71 NRC at 34. The NRC Staff, however, is bound by NEPA.
- II While this agency gives substantial deference to CEQ regulations, it is not bound to follow them. *Hydro Resources, Inc.* (P.O. Box 777, Crownpoint, New Mexico 87313), LBP-06-19, 64 NRC 53, 62 n.3 (2006) (citing *Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-02-25, 56 NRC 340, 348 n.22 (2002)). As an independent agency, the NRC has the authority to promulgate its own regulations implementing NEPA and is only bound by CEQ regulations when the NRC expressly adopts them. *Louisiana Energy Services, L.P.* (National Enrichment Facility), LBP-06-8, 63 NRC 241, 257 n.14 (2006); *Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), LBP-05-19, 62 NRC 134, 154 (2005). The NRC has recognized its obligation to comply with NEPA, however, and has promulgated the regulations in Part 51, which govern “the consideration of the environmental impact of the licensing and regulatory actions of the agency.” *Limerick Ecology Action, Inc. v. NRC*, 869 F.2d 719, 725 (3d Cir. 1989).
- JJ The regulations clearly state that a petitioner must file a NEPA contention challenging an applicant’s ER at the time the petitioner requests a hearing. 10 C.F.R. § 2.309(f)(2) (“On issues arising under the National Environmental Policy Act, the petitioner shall file contentions based on the applicant’s environmental report.”). Any challenge to this regulation is not litigable in this proceeding, and cannot be admitted as a contention under 10 C.F.R. § 2.335. Absent a showing of “special circumstances” under 10 C.F.R. § 2.335(b), this matter must be addressed through Commission rulemaking.
- KK In the context of the NEPA review process, the duty of the lead agency to consider the actions of other federal agencies involved in a licensing action, is the responsibility of the NRC and not of the applicant. *Levy County*, CLI-10-2, 71 NRC at 34.
- LL As required by 10 C.F.R. § 2.310(a), upon admission of a contention in a licensing proceeding, the Board must identify the specific hearing procedures to be used to settle the contention. NRC regulations provide for a number of different hearing procedures. First, there is Subpart G, 10 C.F.R. Part 2, which is mandated for certain proceedings, *see, e.g., id.* § 2.310(d). and establishes NRC “Rules for Formal Adjudications,” in which parties are permitted to “propound interrogatories, take depositions, and cross-examine witnesses without leave of the Board.” *Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-20, 64 NRC 131, 201-02 (2006). Second, there is Subpart L, 10 C.F.R. Part 2, which provides for more “informal” proceedings in which discovery is generally prohibited (except for (1) specified mandatory disclosures under 10 C.F.R. § 2.336(f), (a), and (b); and (2) the mandatory production of the hearing file under 10 C.F.R. § 2.1203(a)). *Id.* § 2.1203(d). Under Subpart L, the Board has the primary responsibility for questioning the witnesses at any evidentiary hearing. *Id.* § 2.1207(b)(6).
- MM The selection of hearing procedures for contentions at the outset of a proceeding is not immutable because, *inter alia*, the availability of Subpart G procedures under 10 C.F.R. § 2.310(d) depends critically on whether the credibility of eyewitnesses is important in resolving a contention, and witnesses relevant to each contention are not identified, under 10 C.F.R. § 2.336(a)(1), until *after* contentions are admitted. *See Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-07-15, 66 NRC 261, 272 (2007); *see also* 10 C.F.R. § 2.1402(b).
- LBP-10-17 VIRGINIA ELECTRIC AND POWER COMPANY d/b/a DOMINION VIRGINIA POWER and OLD DOMINION ELECTRIC COOPERATIVE (North Anna Power Station, Unit 3), Docket No. 52-017-COL (ASLBP No. 08-863-01-COL); COMBINED LICENSE; September 2, 2010; MEMORANDUM AND ORDER (Rulings on Motion to Dismiss Contention 10 and Proposed New Contention 11)
- A In this combined license proceeding, Intervenor filed a new contention challenging Applicant’s ability to revise its Combined License Application and the NRC Staff’s authority to review those revisions

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- without requiring the Applicant to file a new Application. Applicant filed a Motion to Dismiss the only admitted contention because the revisions in Applicant's Combined License Application rendered that contention moot. The Licensing Board granted Applicant's Motion to Dismiss the previously admitted contention on mootness grounds and denied admission of Intervenor's new contention for failure to demonstrate materiality and a genuine dispute of a material issue of law or fact. However, the Licensing Board did not terminate the proceeding because of the time it previously permitted Intervenor to file new contentions arising out of Applicant's revisions to its Combined License Application.
- B "[W]here a contention is 'superseded by the subsequent issuance of licensing-related documents' . . . the contention must be disposed of or modified." *Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-28, 56 NRC 373, 382 (2002)) (quoting *Duke Power Co.* (Catawba Nuclear Station, Units 1 and 2), CLI-83-19, 17 NRC 1041, 1050 (1983)).
- C An applicant's change of reactor design constitutes new and materially different information for the purposes of filing a new contention.
- D A Licensing Board is under an obligation to evaluate the timeliness of a proposed contention even if no party raises the issue. *See, e.g., Commonwealth Edison Co.* (Braidwood Nuclear Power Station, Units 1 and 2), CLI-86-8, 23 NRC 241, 250-51 (1986); *Boston Edison Co.* (Pilgrim Nuclear Power Station), ALAB-816, 22 NRC 461, 466 (1985).
- E A submission of a new contention within 30 days of the event giving rise to that contention is timely. *See, e.g., Progress Energy Florida, Inc.* (Levy County Nuclear Power Plant, Units 1 and 2), LBP-09-22, 70 NRC 640, 647 (2009); *Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-14, 63 NRC 568, 574 (2006).
- F The agency's procedural "rules permit contentions that raise issues of law as well as contentions that raise issues of fact." *U.S. Department of Energy* (High-Level Waste Repository), CLI-09-14, 69 NRC 580, 590 (2009).
- G Contentions raising legal issues, like fact-based contentions, must fall within the allowable scope of the proceeding to be admissible. *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), LBP-01-6, 53 NRC 138, 154 (2001). The scope of the proceeding is defined by the Commission in its initial hearing notice and order referring the proceeding to the Licensing Board. *Duke Power Co.* (Catawba Nuclear Station, Units 1 and 2), ALAB-825, 22 NRC 785, 790-91 (1985). Any contention that falls outside the specified scope of the proceeding is inadmissible. *See Portland General Electric Co.* (Trojan Nuclear Plant), ALAB-534, 9 NRC 287, 289-90 n.6 (1979).
- H Section 52.55(c) of 10 C.F.R. permits an applicant, at its own risk, to reference a pending design certification application, and that the Staff need not complete a design certification rulemaking before proceeding to evaluate an applicant's revised Combined License Application. The Commission has held that "[t]he design certification rulemaking and individual COL adjudicatory proceedings may proceed simultaneously, and issues raised in an adjudicatory proceeding that are appropriately addressed in the generic design certification rulemaking are to be referred to the rulemaking for resolution." *Progress Energy Carolinas, Inc.* (Shearon Harris Nuclear Power Plant, Units 1 and 2), CLI-09-8, 69 NRC 317, 329 (2009).
- I Licensing "[b]oards do not direct the staff in the performance of [its] administrative functions." *Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant, Units 1, 2, 3, and 4), CLI-80-12, 11 NRC 514, 516 (1980). *See also U.S. Department of Energy* (High-Level Waste Repository), CLI-08-20, 68 NRC 272, 274-75 (2008); *New England Power Co.* (NEP, Units 1 and 2), LBP-78-9, 7 NRC 271, 278-79 (1978). Therefore, a board may not order the Staff to cease review of an applicant's revised application or direct the Staff to require an applicant to submit a new application.
- J The sufficiency of an application is not a matter committed solely to the NRC Staff's discretion and thus is within the scope of an adjudicatory proceeding. *Progress Energy Florida, Inc.* (Levy County Nuclear Power Plant, Units 1 and 2), Licensing Board Order (Ruling on Joint Intervenor's Motion to File and Admit New Contention 8A) (Aug. 9, 2010) at 14-15 (unpublished).
- K Far from prohibiting amendments to a license application, the agency's regulations expressly contemplate such amendments. *See* 10 C.F.R. § 52.3(b)(2). The application may be modified or improved during the NRC review process. *See Curators of the University of Missouri* (TRUMP-S Project), CLI-95-8, 41 NRC 386, 395 (1995). Amendments are not limited to minor details, but may include significant changes to the application. *See Public Service Co. of New Hampshire* (Seabrook Station, Units 1 and 2), LBP-74-36, 7 AEC 877, 879 (1974).

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- L NRC regulations preserve the right to a hearing when an application is amended by allowing new or amended contentions to be filed in response to material new information. 10 C.F.R. § 2.309(f)(2). See *Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-04-33, 60 NRC 749, 754 (2004) (citing 10 C.F.R. § 2.309(c) and (f)(2)). Thus, an intervenor may request a hearing on issues arising from a revision that adds material new information to the original application.
- M No regulation requires a license application to be completely resubmitted because someone might find it difficult to understand. Such concerns can be addressed, as they were here, through a request for modification of a board's scheduling order.
- N The agency's NEPA-implementing regulations anticipate the possibility of "substantial changes in the proposed action that are relevant to environmental concerns," and provide that when this happens "the NRC staff will prepare a supplement to a final environmental impact statement." 10 C.F.R. § 51.92(a)(1). The filing of a revised application thus does not prevent the NRC from complying with its obligations under NEPA. It simply means that, in some instances, the NRC Staff may have to prepare a supplement to the environmental impact statement.
- LBP-10-18 BABCOCK & WILCOX NUCLEAR OPERATIONS GROUP, INC. (Lynchburg, VA Facility), Docket No. 70-27-EA (ASLBP No. 10-902-01-EA-BD01); ENFORCEMENT ACTION; October 12, 2010; MEMORANDUM AND ORDER (Approving Proposed Settlement Agreement and Dismissing Proceeding)
- LBP-10-19 ENTERGY NUCLEAR VERMONT YANKEE, LLC, and ENTERGY NUCLEAR OPERATIONS, INC. (Vermont Yankee Nuclear Power Station), Docket No. 50-271-LR (ASLBP No. 06-849-03-LR); LICENSE RENEWAL; October 28, 2010; MEMORANDUM AND ORDER (Ruling on Motion to Reopen Proffering New Contention)
- A This Board denies Intervenors' motion to reopen this proceeding to introduce a new contention asserting issues related to aging management of the effects of moist or wet environments on buried, below-grade, underground, or hard-to-access safety-related electrical cables, because the motion satisfies neither the timeliness nor the materially different result requirements of 10 C.F.R. § 2.326(a)(1) and (3).
- B Motions to reopen a proceeding to introduce an entirely new contention (i.e., a contention not previously in controversy among the parties) must successfully navigate at least nineteen different regulatory factors under 10 C.F.R. §§ 2.326, 2.309(c), and 2.309(f)(1).
- C At some point, a proceeding before an Atomic Safety and Licensing Board must end. Once the Board has admitted original contentions, conducted the evidentiary hearing, and issued its ruling on the merits, and after the parties have appealed that decision, and the Commission has rendered its decision on the merits of the matter, the adjudicatory proceeding should be over, absent some extenuating circumstances.
- D Under 10 C.F.R. § 2.326(a)(1), the timeliness of a motion to reopen in which the proponent of the motion proffers a new contention depends primarily on an assessment as to when the proponent of the motion first knew, or should have known, enough information to raise the issues presented in the new contention. If the motion and the proposed new contention are based on material information that was not previously available, then it qualifies as timely.
- E For purposes of the timeliness analysis under 10 C.F.R. § 2.326(a)(1), the question is: when should these issues have been identified and asserted? Are these complaints based on new information, or on information that has been available for a significant time period?
- F Where an issue has been apparent from information that has been available from the outset of a proceeding, a petitioner or intervenor may not wait to raise that issue in a new contention by proffering it in a motion to reopen after the record has been closed in that proceeding. Such a submission is not timely under 10 C.F.R. § 2.326(a)(1).
- G The proponent of a motion to reopen must do more than simply raise a safety issue. The proponent of the motion to reopen must show that the safety issue it raises is significant.
- H Under 10 C.F.R. § 2.326(a)(3), the proponent of a motion to reopen must demonstrate more than the mere possibility that the newly proffered evidence might warrant a materially different result. The movant must show that it is *likely* that the result would have been materially different, i.e., that it is more probable than not that the movant would have prevailed on the merits of the proposed new contention. A motion to reopen requires a demonstration that the movant is likely to succeed.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

November 18, 2010; MEMORANDUM AND ORDER (Denying Motion for Summary Disposition of Contention 8A)

- A Contention 8A (C-8A) alleges that the combined license application (COLA) by Progress Energy Florida, Inc. (PEF), which addresses the means by which PEF will manage low-level radioactive waste (LLRW) onsite for the period of time beyond the initial storage period (2 years) specified in the AP1000 Design Control Document (DCD), is inadequate. PEF's motion for summary disposition of C-8A is denied because PEF's LLWR plan (after the initial 2 years) fails to specify the "means for controlling and limiting radioactive effluent and radiation exposures within the limits set forth in Part 20," 10 C.F.R. § 52.79(a)(3), at "a level of information sufficient to enable the Commission to reach a final conclusion on all safety matters that must be resolved by the Commission before the issuance of a combined license" as required by 10 C.F.R. § 52.79(a). 10 C.F.R. § 52.79(a) (emphasis added).
- B Absent the existence of an offsite LLRW disposal facility that is currently licensed and available to accept LLRW from the Applicant's facility, it is reasonably foreseeable that LLRW generated by the normal operations of the facility will need to be stored onsite for longer than the 2-year term that is currently envisioned by the AP1000 DCD that is referenced in the COLA.
- C Disputes as to whether an offsite LLRW disposal facility will (or will not) be licensed and available within the initial 2-year term of the license are not material to this motion for summary disposition, because the motion assumes that more than 2 years of onsite management is needed, and asserts that PEF's extended LLRW plan is legally adequate to cover that extended time period.
- D An LLWR plan that states that "implementation of additional waste minimization strategies could extend the duration of temporary radwaste storage capability" and that the Applicant "will consider strategies to reduce generation of [LLRW] including reducing the in-service run length of resin beds, as well as resin selection, short loading, and point of generation aggregation techniques" provides no enforceable commitments as to whether the Applicant will implement a waste minimization plan, or, if so, what the plan will contain.
- E An LLRW plan that provides that "if additional storage capacity for [LLRW] is required, further temporary storage would be developed in accordance with NUREG-0800, Standard Review Plan 11.4, Appendix 11.4-4" does not provide enforceable commitments or a level of information sufficient to satisfy 10 C.F.R. § 52.79(a)(3). The NRC guidance document provides broad and general principles for designing an appropriate waste storage facility but does not provide sufficient information for the Commission to make a final safety determination, now, as to whether PEF has demonstrated the "means for controlling and limiting . . . radiation exposures" to be within the Part 20 limits. 10 C.F.R. § 52.79(a)(3).
- F Section 52.79(a) of 10 C.F.R. does not require the submission of design details or detailed construction plans. The term "details" is an unnecessary pejorative term that implies minutiae. But the regulation does require that the Final Safety Analysis Report specify the means for controlling and limiting radioactive effluents and radiation exposures within the limits set forth in Part 20 at a "level of information sufficient" to enable the Commission to reach a "final conclusion" on all safety matters that must be resolved by the Commission "before" issuance of a combined license." 10 C.F.R. § 52.79(a) and (a)(3).
- G The words of 10 C.F.R. § 52.79(a)(3), specify that an FSAR in a COL application must contain a "level of information" that is "sufficient" to enable the Commission to make the necessary safety determination. Thus, the relevant question is: Does the Extended LLRW Plan contain that level of information?
- H Committing to follow a process or a method by which compliance can be achieved does not, by itself, provide a level of information sufficient to allow the Commission to make the Part 20 determination now, before the COL is issued. While procedures can be a part of an LLRW plan, a plan which is entirely procedural is not sufficient to meet 10 C.F.R. § 52.79(a)(3). A commitment to comply with the law and NRC guidance, even with the normal presumption of compliance, does not, itself, provide sufficient information to satisfy 10 C.F.R. § 52.79(a)(3).
- I The Commission's holding that 10 C.F.R. § 52.79(a)(3) can be satisfied by an FSAR that states "how the COL applicant intends, through its design, operational organization, and procedures, to comply with relevant substantive radiation protection requirements in 10 C.F.R. Part 20" is stated in the conjunctive ("and"), not the disjunctive ("or"). The Commission did not state that an FSAR that is only procedural can satisfy the regulation.
- J The fact that the current FSAR does not specify concrete information about the additional onsite LLRW storage capacity during the extended time period (after 2 years), but instead specifies that the

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

Applicant will perform a risk and safety review pursuant to 10 C.F.R. § 50.59 later, before it constructs and operates such additional storage indicates, almost per se, that the current FSAR does not provide “a level of information sufficient to . . . reach a final conclusion on all safety matters . . . before issuance of the combined license” as required by 10 C.F.R. § 52.79(a).

K NRC Regulatory Issue Summary 2008-32, which repeatedly acknowledges that onsite storage of LLRW at reactor sites may be for a long and indefinite term and is not otherwise subject to independent licensing under Part 30, emphasizes the importance of carefully and fully reviewing the adequacy of extended onsite storage of LLRW now, as required by 10 C.F.R. § 52.79(a).

L The fact that the PEF’s extended LLRW plan is contingent does not mean that it does not need to comply with 10 C.F.R. § 52.79 or that it is subject to a relaxed standard. The “level of information sufficient” to satisfy 10 C.F.R. § 52.79(a) is the same, whether the plan is for the first 2 years and noncontingent, or it is for the second 2 years, and is contingent. In either case, the level of information must be sufficient for the Commission to be able to make the necessary Part 20 determination before the COL is issued.

M The fact that an LLRW plan postpones some decisions does not necessarily mean that it does not provide sufficient information. For example, an LLRW plan could specify that if, after 2 years, additional storage is needed, then the licensee will build an additional storage building with a capacity of 3900 cubic feet, or 7800 cubic feet, or 11,700 cubic feet. If each of these three options is described with a level of information sufficient for NRC to make the necessary safety determinations now, then postponing the decision between them would not violate 10 C.F.R. § 52.79(a). The problem with PEF’s Extended LLRW Plan is not postponement, but is its utter lack of content. The Extended LLRW Plan keeps *all* options open to PEF and does not provide sufficient information to make the necessary Part 20 determinations now.

N Requiring PEF to provide a level of information sufficient to meet 10 C.F.R. § 52.79(a) does not rob it of the flexibility necessary to deal with changes in circumstances (e.g., if Levy generates more LLRW per year than expected, or less LLRW, or different types of LLRW). Requiring PEF to provide sufficient information, now, to allow the NRC to make the necessary safety determinations, now, does not prevent PEF from *changing* these plans, as circumstances warrant, via the 10 C.F.R. § 50.59 and/or license amendment processes. Under our reading, PEF has all the flexibility it needs to deal with future contingencies.

LBP-10-21 SOUTHERN NUCLEAR OPERATING COMPANY (Vogtle Electric Generating Plant, Units 3 and 4), Docket Nos. 52-025-COL, 52-026-COL (ASLBP No. 10-903-01-COL-BD02); COMBINED LICENSE; November 30, 2010; MEMORANDUM AND ORDER (Ruling on Request to Admit New Contention)

A In this 10 C.F.R. Part 52 proceeding regarding the application of Southern Nuclear Operating Company (SNC) for a combined license (COL) to construct and operate two new nuclear reactors at its existing Vogtle Electric Generating Plant (VEGP) site, ruling on jointly filed motions by three public interest organizations seeking to (1) admit a new contention into the previously terminated contested portion of this proceeding; and (2) file out of time their reply pleading supporting their contention admission motion, the Licensing Board (1) grants the motion for leave to file the reply pleading out of time; and (2) denies the motion to admit new contention SAFETY-2 regarding the adequacy of SNC’s containment/coating inspection program for the two new proposed units, concluding that (a) despite having established their standing to intervene as of right, the organizations failed to meet their burden with respect to the reopening, nontimely petition, and new contention standards of 10 C.F.R. §§ 2.309(c)(1), (f)(2), 2.326, principally because they did not timely submit their new contention for consideration in the adjudicatory process, preferring to provide the report upon which they now place principal reliance as support for their contention initially to the Advisory Committee on Reactor Safeguards (ACRS) for review and action; and (b) the organizations failed with respect to the section 2.309(f)(1) contention admissibility standards because they sought to challenge aspects of the Advanced Passive (AP)1000 certified design and NRC regulations adopting American Society of Mechanical Engineers (ASME) inspection standards.

B The Commission’s rules of practice provide the licensing board with substantial authority to regulate hearing procedures. See *Statement of Policy on Conduct of Adjudicatory Proceedings*, CLI-98-12, 48 NRC 18, 19 (1998) [hereinafter 1998 Policy Statement]; *Statement of Policy on Conduct of Licensing Proceedings*, CLI-81-8, 13 NRC 452, 453-54 (1981) [hereinafter 1981 Policy Statement]. This authority encompasses, among other things, the power to set a proceeding’s schedule and to ensure compliance with

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

that schedule. *See* 10 C.F.R. § 2.319 (power of the presiding officer); *id.* § 2.332 (general case scheduling management); *id.* § 2.334 (implementing hearing schedule for proceeding).

- C While the participants generally must comply with the proceeding schedule established by the presiding officer, it has been recognized that participants might, in what one might hope are rare circumstances, be unable to meet established deadlines. *See* 1998 Policy Statement, CLI-98-12, 48 NRC at 21. Therefore, participants are permitted to request a filing deadline extension. In an instance when the licensing board established that a participant may file a written motion for extension of time at least 3 business days before the due date for the pleading or other submission for which an extension is sought, *see* Licensing Board Memorandum and Order (Initial Prehearing Order) (Dec. 2, 2008) at 6 (unpublished) [hereinafter Initial Prehearing Order]; *see also* 1981 Policy Statement, CLI-81-8, 13 NRC at 454-55 (“Requests for an extension of time should generally be in writing and should be received by the Board well before the time specified expires.”), a time extension motion must (1) indicate whether the request is opposed or supported by the other participants to the particular proceeding; and (2) demonstrate appropriate cause that supports allowing the extension, *see* Initial Prehearing Order at 6.
- D In establishing and enforcing schedule deadlines, a licensing board must remain cognizant that it must take care not to compromise the Commission’s fundamental commitment to a fair and thorough hearing process. *See* 1981 Policy Statement, CLI-81-8, 13 NRC at 453; *see also* 1998 Policy Statement, CLI-98-12, 48 NRC at 18-19. The Commission has long endorsed a balanced approach to hearings — one that both expedites the hearing process and ensures fairness — in an effort to produce a record that leads to high-quality decisions that adequately protect the public health and safety, the common defense and security, and the environment. *See* 1998 Policy Statement, CLI-98-12, 48 NRC at 19; 1981 Policy Statement, CLI-81-8, 13 NRC at 453. To achieve these ends, the Commission regards “good sense, judgment, and managerial skills” as the proper guideposts for conducting an efficient hearing. 1981 Policy Statement, CLI-81-8, 13 NRC at 453.
- E While sanctions may be necessary for a participant that breaches its obligations under a proceeding’s schedule, with an eye toward mitigating prejudice to the nonbreaching participants, the licensing board also must tailor those sanctions to bring about improved future compliance. *See* 1981 Policy Statement, CLI-81-8, 13 NRC at 454.
- F The Commission in its 1981 Policy Statement, CLI-81-8, 13 NRC at 454, mentioned a list of factors to aid in selecting the appropriate sanction, including “the relative importance of the unmet obligation, its potential for harm to other parties or the orderly conduct of the proceeding, whether its occurrence is an isolated incident or a part of a pattern of behavior, the importance of the safety or environmental concerns raised by the party, and all of the circumstances.”
- G In its recent decision in the *Bellefonte* construction permit proceeding in which the Commission elaborated on the standards for accepting an appeal filed out of time, *see Tennessee Valley Authority* (*Bellefonte* Nuclear Plant, Units 1 and 2), CLI-10-26, 72 NRC 474, 476-78 (2010), the Commission reiterated its longstanding rule that deadlines are to be strictly enforced. According to the Commission, strict enforcement furthers the dual interests of efficient case management and prompt resolution of adjudications. *See id.* at 476. Only in truly “unavoidable and extreme circumstances,” the Commission noted, would late filings be accepted. *See id.* (quoting 1998 Policy Statement, CLI-98-12, 48 NRC at 21); *see also Yankee Atomic Electric Co.* (*Yankee Nuclear Power Station*), CLI-98-21, 48 NRC 185, 202 (1998) (“extraordinary and unanticipated circumstances” (quoting *Consumers Power Co.* (*Midland Plant, Units 1 and 2*), ALAB-684, 16 NRC 162, 165 n.3 (1982))).
- H In making a determination about a request to file out of time, the Commission relied upon several factors. First, the Commission observed that a party at risk of filing out of time arguably never needs to file out of time because the party can first request an extension, doing so “well before the time specified expires.” *Bellefonte*, CLI-10-26, 72 NRC at 477 (quoting 1981 Policy Statement, CLI-81-8, 13 NRC at 455). In *Bellefonte*, the petitioners had the opportunity to request an extension of the appeal filing deadline in a timely fashion, but failed to do so. The Commission also noted that the petitioners knew when the board would likely issue its decision with an appeal deadline 10 days later, but the petitioners took no advanced action to request an extension for filing their appeal. *See id.* at 476.
- I A second element of concern to the Commission in *Bellefonte* was the need for a participant filing out of time to offer a satisfactory explanation for its lateness, including, if necessary, an account as to why a request for extension could not have been filed beforehand. *See id.* at 477 n.17. In that regard, however, the Commission did not find counsel’s alleged unfamiliarity with the agency’s rules of practice, *see id.* at

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

476 (citing *Florida Power & Light Co.* (Turkey Point Nuclear Generating Plant, Units 3 and 4), CLI-91-5, 33 NRC 238, 240 (1991)), or counsel's asserted busy schedule, *see id.* (citing 1981 Policy Statement, CLI-81-8, 13 NRC at 454), to be satisfactory explanations.

J In contrast, if a party can demonstrate that its filing out of time was truly the product of unavoidable and extreme circumstances, then the agency's case law indicates that the filing may be accepted on a motion for leave to file out of time. For instance, in *Kansas Gas and Electric*, an appeal board accepted a filing that was 3 days late, which the board characterized as not "excessively late," based on findings that the intervenor offered a reasonable explanation for the delay and the 3-day delay did not prejudice any of the other parties to the proceeding. *Kansas Gas and Electric Co.* (Wolf Creek Generating Station, Unit 1), ALAB-424, 6 NRC 122, 124 (1977).

K The unexpected action of intervenors' former attorney withdrawing from the proceeding, which left them without a responsive pleading on the day that pleading was due or any opportunity to file a timely motion requesting an extension of the filing deadline, presents the type of unavoidable and extreme circumstances that support the grant of a motion for leave to file out of time. To be sure, the agency's rules of practice permit a participant to appear on its own behalf, but the timing of the unexpected withdrawal of intervenors' counsel presented a setback not easily overcome in an afternoon and provides a satisfactory explanation for their request to file out of time.

L No Commission rule appears to apply directly to a situation in which counsel unilaterally withdraws from a proceeding, although 10 C.F.R. § 2.314(a) broadly provides that parties *and their representatives* are expected to conduct themselves "as they should before a court of law." Absent written consent of the party and the prior appearance of another attorney, many courts require a motion to withdraw. *See, e.g.*, D.D.C. R. 83.6(c). Further, ethical rules in most jurisdictions generally do not permit an attorney to withdraw from representing a client unless withdrawal can be accomplished without material adverse effect to the client's interests. *See, e.g.*, D.C. Rules of Prof'l Conduct R. 1.16.

M In determining whether an individual or organization should be granted party status in a proceeding based on standing "as of right" consistent with 10 C.F.R. § 2.309(d), the agency has applied contemporaneous judicial standing concepts that require a participant to establish (1) it has suffered or will suffer a distinct and palpable injury that constitutes injury-in-fact within the zones of interests arguably protected by the governing statutes (e.g., Atomic Energy Act of 1954 (AEA), 42 U.S.C. §§ 2011-2297; National Environmental Policy Act of 1969 (NEPA), 42 U.S.C. §§ 4321-4370); (2) the injury is fairly traceable to the challenged action; and (3) the injury is likely to be redressed by a favorable decision. *See Yankee Atomic Electric Co.* (Yankee Nuclear Power Station), CLI-96-1, 43 NRC 1, 6 (1996).

N In cases involving the possible construction or operation of a nuclear power reactor, proximity to the proposed facility has been an essential element in establishing the requisite standing elements. *See Florida Power & Light Co.* (St. Lucie Nuclear Power Plant, Units 1 and 2), CLI-89-21, 30 NRC 325, 329 (1989).

O When an entity seeks to intervene on behalf of its members, that entity must show it has an individual member who can fulfill all the necessary standing elements and who has formally authorized the organization to represent his or her interests. *See Vermont Yankee Nuclear Power Corp.* (Vermont Yankee Nuclear Power Station), CLI-00-20, 52 NRC 151, 163-64 (2000).

P In the context of a COL proceeding in which intervenors seek to resurrect a previously terminated contested portion of the proceeding by gaining the admission of a new contention, potentially pertinent is the Commission's case law that a petitioner must make a fresh standing demonstration in each individual proceeding in which intervention is sought. *See PPL Bell Bend, LLC* (Bell Bend Nuclear Power Plant), CLI-10-7, 71 NRC 133, 138 (2010) (citing *Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), CLI-09-9, 69 NRC 331, 343 (2009); *Texas Utilities Electric Co.* (Comanche Peak Steam Electric Station, Unit 2), CLI-93-4, 37 NRC 156, 162-63 (1993)).

Q Also of possible relevance, given intervenors' reply filing is their only pleading in which they address their standing, are recent cases that have recognized that a petitioner's standing showing can be corrected or supplemented to cure deficiencies by means of its reply pleading. *See Bell Bend*, CLI-10-7, 71 NRC at 139-40; *South Carolina Electric & Gas Co.* (Virgil C. Summer Nuclear Station, Units 2 and 3), CLI-10-1, 71 NRC 1, 7 (2010).

R To interpose a new contention in the previously terminated contested portion of a COL proceeding requires the submission of a "fresh intervention petition" that fulfills the applicable standards that govern such filings, presumably including an appropriate standing demonstration. *U.S. Army Installation*

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

*Command* (Schofield Barracks, Oahu, Hawaii, and Pohakuloa Training Area, Island of Hawaii, Hawaii), CLI-10-20, 72 NRC 185, 195 & n.56 (2010).

S As a general rule, it is not sufficient to seek to establish standing in a proceeding by merely cross-referencing the showing made in another proceeding, rather than making a new presentation or, at the very least, providing a submission that updates the factual information that was provided previously. *See Bell Bend*, CLI-10-7, 71 NRC at 138. “[B]ecause a petitioner’s circumstances may change from one proceeding to the next,” it is important that the presiding officer have up-to-date information regarding any standing claims. *Id.*

T Assuming a potential intervenor wishes to rely upon standing-related information already in the record of a proceeding, the central issue is whether that information is materially the same as when it was originally submitted. Thus, if the factual showing that the residence of an individual was within 50 miles of a facility was previously relied upon to establish standing, the certification necessary by a potential intervenor would be that there has not been a material change in that factual situation in the interim.

U Once the record of a proceeding is closed, new information may not be considered in the proceeding unless the reopening standards under 10 C.F.R. § 2.326(a) are met. *See Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 3), CLI-09-5, 69 NRC 115, 120-21, 124-25 (2005) (affirming licensing board ruling that petitioners seeking to introduce new contentions after the board had denied their initial petition to intervene needed to address the reopening standards). Section 2.326 states that for a motion to reopen to be granted: “(1) The motion must be timely. However, an exceptionally grave issue may be considered in the discretion of the presiding officer even if untimely presented; (2) The motion must address a significant safety or environmental issue; and (3) The motion must demonstrate that a materially different result would be or would have been likely had the newly proffered evidence been considered initially.” 10 C.F.R. § 2.326(a)(1)-(3); *see also Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Plant), LBP-10-19, 72 NRC 529, 545-50 (2010) (discussing and analyzing reopening standards).

V Relative to the reopening standards, a licensing board should consider both the timing and the significance of the issue raised in a motion to reopen such that a timely motion may be denied if it raises issues that “are not of ‘major significance to plant safety,’” while a nontimely motion may be granted if it raises an issue of sufficient gravity. *See Vermont Yankee Nuclear Power Corp.* (Vermont Yankee Nuclear Power Station), ALAB-138, 6 AEC 520, 523 (1973) (quoting *Vermont Yankee Nuclear Power Corp.* (Vermont Yankee Nuclear Power Station, ALAB-124, 6 AEC 358, 365 (1973))). In that regard, an untimely motion to reopen must demonstrate that the issue raised “is not merely ‘significant’ but ‘exceptionally grave.’” *Public Service Co. of New Hampshire* (Seabrook Station, Units 1 and 2), ALAB-886, 27 NRC 74, 78 (1988), *cited with approval in Hydro Resources, Inc.* (P.O. Box 15910, Rio Rancho, NM 87174), CLI-00-12, 52 NRC 1, 5 (2000).

W A motion to reopen must be accompanied by affidavits that “set forth the factual and/or technical bases for the movant’s claim that the criteria of paragraph (a) of this section have been satisfied,” including addressing each of the reopening criteria “separately” with “a specific explanation of why it has been met.” 10 C.F.R. § 2.326(b). Additionally, if the motion to reopen “relates to a contention not previously in controversy among the parties,” the movant must meet the nontimely filing requirements of 10 C.F.R. § 2.309(c). *Id.* § 2.326(d). The Commission has stated that when a petitioner seeks to introduce a new contention after the record has been closed, it should “address the reopening standards contemporaneously with a late-filed intervention petition, which must satisfy the standards for both contention admissibility and late filing.” *Millstone*, CLI-09-5, 69 NRC at 124.

X The Commission has also held that “the standard for admitting a contention after the record is closed is higher than for an ordinary late-filed contention,” i.e., to justify reopening the record to admit a new contention “the moving papers must be strong enough, in the light of any opposing filings, to avoid summary disposition,” and the new information “must be significant and plausible enough to require reasonable minds to inquire further.” *Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-05-12, 61 NRC 345, 350 (2005) (internal quotations omitted).

Y In an instance in which the contested portion of a proceeding was terminated following an unchallenged merits determination in favor of the applicant regarding the proceeding’s sole admitted contention, the licensing board’s focus must be on the requirements applicable to reopening a closed record set out in 10 C.F.R. § 2.326.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- Z The first factor under section 2.326(a) is whether the reopening motion is timely. The question of the “timeliness” of an intervention submission is a matter that has import relative to a number of the different admission standards that are implicated by that filing, including paragraphs (c)(1) and (f)(2) of section 2.309. This “timeliness” question, in turn, depends on two different considerations, i.e., what/when was the “trigger” that provided the footing for the new contention and was the motion seeking record reopening/contention admission filed timely after that “trigger” event.
- AA Although the first licensing board issued the summary disposition ruling that resolved all contested matters before that board after the new contention “trigger” event, any motion to admit a new contention could have been filed before the Commission or lodged with the board with the reasonable expectation that it would be appropriately referred.
- BB There is a strict procedural requirement that a reopening pleading must be accompanied by an affidavit that “separately” addresses each of the paragraph (a) provisions of section 2.326 and provides “a specific explanation of why it has been met.” 10 C.F.R. § 2.326(b). As is the case with unexplained material submitted in support of a contention, *see Fansteel, Inc.* (Muskogee, Oklahoma Site), CLI-03-13, 58 NRC 195, 204-05 (2003); *Powertech (USA), Inc.* (Dewey-Burdock In Situ Uranium Recovery Facility), LBP-10-16, 72 NRC 361, 398 (2010), the licensing board declines an offer to hunt in the intervention petition for information regarding section 2.326(a) criteria that the agency’s procedural rules require be explicitly identified and fully explained.
- CC As the Commission recently has noted, in an instance in which a contested proceeding has been terminated following the resolution of all submitted contentions, an individual, group, or governmental entity that wishes to interpose an additional issue in the case for litigation must submit a new intervention petition in which it addresses, among other things, the standards in section 2.309(c)(1) that govern nontimely intervention petitions. *See Schofield Barracks*, CLI-10-20, 72 NRC at 195; *see also* 10 C.F.R. § 2.326(d).
- DD Although the standard governing nontimely intervention petitions lists eight items that are to be addressed, given the licensing board standing ruling that essentially addresses factors (ii)-(iv) such that they would weigh in favor of intervention, the board need consider only factors (i), (v)-(viii), which are as follows: “(i) Good cause, if any, for the failure to file on time; . . . (v) The availability of other means whereby the requestor’s/petitioner’s interest will be protected; (vi) The extent to which the requestor’s/petitioner’s interests will be represented by other parties; (vii) The extent to which the requestor’s/petitioner’s participation will broaden the issues or delay the proceeding; and (viii) The extent to which the requestor’s/petitioner’s participation may reasonably be expected to assist in developing a sound record.” 10 C.F.R. § 2.309(c)(1)(i), (v)-(viii).
- EE Relative to the requisite weighing and balancing of these factors, agency case law establishes that factor (i) is of paramount importance, such that failure to meet this factor enhances considerably the burden of showing that the other factors justify admission of the nontimely petition. *See Long Island Lighting Co.* (Shoreham Nuclear Power Station, Unit 1), ALAB-743, 18 NRC 387, 397 (1983). Moreover, among the remaining four elements, factors (vii) and (viii) generally have been considered to have the most significance in the balancing process in instances in which there are no other parties or ongoing related proceedings. *See id.* at 399, 402.
- FF Regarding the section 2.309(c)(1) factors, intervenors’ failure to provide any specific discussion of most of these items or the weight they should be given in the balance that is required under this provision is a potentially fatal omission. *See Texas Utilities Electric Co.* (Comanche Peak Steam Electric Station, Units 1 and 2), CLI-93-11, 37 NRC 251, 255 (1993).
- GG Once the deadline for filing an initial intervention petition has passed, a party wishing to submit new (or amended) contentions on matters not associated with issuance of the Staff’s draft or final environmental impact statement (EIS) must satisfy the requirements of 10 C.F.R. § 2.309(f)(2) by showing that: “(i) The information upon which the amended or new contention is based was not previously available; (ii) The information upon which the amended or new contention is based is materially different than information previously available; and (iii) The amended or new contention has been submitted in a timely fashion based on the availability of the subsequent information.”
- HH In light of section 2.309(f)(2) requirements that any new contention be based on material information that was not previously available, the timeliness determination required under this provision and the section 2.326(a) reopening standard can be closely equated. *See Vermont Yankee*, LBP-10-19, 72 NRC at 545.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- II Section 2.309(f)(1) of the Commission's rules of practice specifies the requirements for admitting contentions. Specifically, a contention must provide (1) a specific statement of the legal or factual issue sought to be raised; (2) a brief explanation of the basis of the contention; (3) a concise statement of the alleged facts or expert opinions, including references to specific sources and documents, that support the petitioner's position and upon which the petitioner intends to rely at hearing; (4) a demonstration that the issue raised in the contention is within the scope of the proceeding; (5) a showing that the contention is material to the findings the NRC must make to support the action that is involved in the proceeding; and (6) sufficient information demonstrating that a genuine dispute exists in regard to a material issue of law or fact, including references to specific portions of the application that the petitioner disputes, or in the case when the application is alleged to be deficient, the identification of such deficiencies and supporting reasons for this belief. *See* 10 C.F.R. § 2.309(f)(1)(i)-(vi). Failure to comply with any of these requirements is grounds for dismissing a contention. *See Private Fuel Storage, L.L.C.* (Independent Spent Fuel Storage Installation), CLI-99-10, 49 NRC 318, 325 (1999) (citing *Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1, 2, and 3), CLI-91-12, 34 NRC 149, 155-56 (1991)).
- JJ In addition, of particular relevance is the precept that a contention that attacks a Commission rule, or which seeks to litigate a matter that is, or clearly is about to become, the subject of a rulemaking, is inadmissible. *See* 10 C.F.R. § 2.335(a); *Potomac Electric Power Co.* (Douglas Point Nuclear Generating Station, Units 1 and 2), ALAB-218, 8 AEC 79, 85, 89 (1974). This includes contentions that advocate stricter requirements than agency rules impose or that otherwise seek to litigate a generic determination established by a Commission rulemaking. The same is true relative to a contention that challenges applicable statutory requirements or the basic structure of the agency's regulatory process. *See, e.g., Philadelphia Electric Co.* (Peach Bottom Atomic Power Station, Units 2 and 3), ALAB-216, 8 AEC 13, 20, *aff'd in part on other grounds*, CLI-74-32, 8 AEC 217 (1974). By the same token, a contention that simply states the petitioner's views about what regulatory policy should be does not present a litigable issue. *See id.* at 20-21 & n.33.
- KK Generally, an additional authorities filing would be a submission that is the functional equivalent of a letter supplementing authorities, such as is permitted under Federal Rule of Appellate Procedure 28(j). A filing falls short that does not cite to any legal "authorities." *See Black's Law Dictionary* 153 (9th ed. 2009) ("authority" defined as "[a] legal writing taken as definitive or decisive; esp., a judicial or administrative decision cited as a precedent," or "[a] source, such as a statute, case, or treatise, cited in support of a legal argument"). Authorities may be binding, adverse, or merely persuasive, but all authorities must possess some legal and precedential/persuasive value.
- LL It is well established that a licensing proceeding is not the proper forum for challenging a standard reactor plant design. Rather, issues concerning a standard design, reviewed as part of a design certification application, are resolved in the design certification rulemaking and not in a site-specific COLA proceeding. *See* 10 C.F.R. § 52.63(a)(5) ("[I]n making the findings required for issuance of a [COL] . . . the Commission shall treat as resolved those matters resolved in connection with the issuance or renewal of a design certification rule."); *Progress Energy Carolinas, Inc.* (Shearon Harris Nuclear Power Plant, Units 2 and 3), CLI-08-15, 68 NRC 1, 4 (2008); *see also* 10 C.F.R. § 2.335(a); *Tennessee Valley Authority* (Bellefonte Nuclear Power Plant, Units 3 and 4), LBP-08-16, 68 NRC 361, 397 (2008).
- MM A petitioner wishing to raise an issue suited for a design certification rulemaking may pursue either seeking to amend the final design certification rule pursuant to section 52.63(a)(1) or commenting on a proposed design certification rule during the public comment period pursuant to section 52.51(a).
- NN Intervenors are precluded from challenging ASME inspection requirements in this proceeding because NRC regulations directly incorporate ASME inspection requirements by reference. *See* 10 C.F.R. § 2.335(a); *Peach Bottom*, ALAB-216, 8 AEC at 20; Tr. at 64. NRC regulations dictate that a COL application include, inter alia, a description of the programs, and their implementation, necessary to ensure that the systems and components meet the requirements of the ASME Boiler and Pressure Vessel Code in accordance with 10 C.F.R. § 50.55a. *See* 10 C.F.R. § 52.79(a)(11).
- LBP-10-22 U.S. DEPARTMENT OF ENERGY (High-Level Waste Repository), Docket No. 63-001-HLW (ASLBP No. 09-892-HLW-CAB04); CONSTRUCTION AUTHORIZATION; December 14, 2010; MEMORANDUM AND ORDER (Deciding Phase I Legal Issues and Denying Rule Waiver Petitions)
- A In this 10 C.F.R. Part 63 proceeding regarding the application of the Department of Energy (DOE) to construct a national high-level nuclear waste repository at Yucca Mountain, Nevada, the Board rules on ten Phase I legal issues and denies two rule waiver petitions filed by the State of Nevada (Nevada).

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- B Section 20.1101(b), requires licensees (including Part 63 licensees) to use, to the extent practical, procedures and engineering controls based upon sound radiation protection principles to achieve occupational doses and doses to members of the public that are as low as is reasonably achievable (ALARA). 10 C.F.R. § 20.1101(b).
- C In the language and context of the 10 C.F.R. § 20.1101 upon which NEI relies, we find support for the view that DOE need not weigh ALARA considerations outside the geologic repository operations area for which it is responsible.
- D The Commission said that NRC “regulations set a minimum standard for safety, not a maximum.” *Department of Energy* (High-Level Waste Repository), CLI-09-14, 69 NRC 580, 599 (2009). The Commission’s decision dictates our ruling here. DOE need not demonstrate that it meets applicable standards without “unnecessary expenditures.”
- E An analysis based upon the historical geologic record is not required by the regulations, nor is it necessarily sufficient. The plain language of 10 C.F.R. § 63.305 does not say anything about analyzing future climate based upon the historical record. It says “DOE must vary factors related to the geology, hydrology, and climate based upon cautious, but reasonable assumptions of the changes in these factors that could affect the Yucca Mountain disposal system during the period of geologic stability.” 10 C.F.R. § 63.305(c).
- F The Commission proposed adoption of a version of 10 C.F.R. Part 63 that included a provision (in proposed section 63.115(a)(3)) stating “[c]limate evolution shall be consistent with the geologic record of natural climate change in the region surrounding the Yucca Mountain site.” Proposed Rule: “Disposal of High-Level Radioactive Wastes in a Proposed Geologic Repository at Yucca Mountain, Nevada,” 64 Fed. Reg. 8640, 8677 (Feb. 22, 1999). The proposal was deleted from the final Part 63, with the explanation that “[r]equirements related to characteristics of the reference biosphere and critical group [in section 63.115] have been deleted from this section in light of the definitions and concepts necessary to estimate dose to the reasonably maximally exposed individual, now specified in subpart L [which included 10 C.F.R. § 63.305].” 66 Fed. Reg. at 55,778. Thus, the Commission considered whether it should require that projections of climate change be based upon the geologic record and ultimately decided not to do so, preferring instead the more general requirement in 10 C.F.R. § 63.305 that climate projections be based on “cautious, but reasonable assumption.”
- G Pursuant to section 63.342(c)(2), DOE must assess the effects of climate change during the 990,000-year period regardless of whether it necessarily must assess climate change during the initial 10,000-year period under the criteria set forth in sections 63.342(a) and (b).
- H DOE may elect to use the prescribed method specified in section 63.342(c)(2) to analyze the effects of climate change during the post-10,000-year period, regardless of whether it is required to analyze the effects of climate change during the initial 10,000-year period.
- I Pursuant to 10 C.F.R. § 63.114, only FEPs that produce significant changes in releases or doses within the first 10,000 years after disposal must be included in performance assessments. 10 C.F.R. § 63.114(a)(5). Section 63.342(a), in turn, requires analysis of only those FEPs that cannot be excluded on the basis of low probability of occurrence and whose exclusion would result in a significant change in the results of the performance assessment in the first 10,000-year period.
- J Section 63.342(c) does not require the post-10,000-year performance assessment to include the effects of erosion if it is assumed there is no showing that erosion causes increases in radiological exposures or releases within the first 10,000 years.
- K By its terms, the applicable NRC regulation requires merely that the License Application be “as complete as possible in light of the information that is reasonably available at the time of docketing.” 10 C.F.R. § 63.21(a). The only reference in the regulations to “final design” implies that a final design is not required. *Id.* § 63.21(c)(18). Rather, the regulations state that, in the License Application, “[s]pecial attention must be given to those items that may significantly influence the final design.” *Id.* It seems doubtful that the Commission would direct DOE to specify items that “may significantly influence the final design” of the repository if the License Application were to provide a final design.
- L Although coverage of a potential event by DOE’s quality assurance does not operate as a matter of law to exclude consideration of a feature, event, or process (FEP), the effects of the quality assurance program can be taken into account in determining the probability and consequences of the FEP.
- M No requirement for a quantitative evaluation of an individual barrier’s capabilities appears in the relevant statutory language. Section 121(b)(1)(B) of the Nuclear Waste Policy Act states merely that the

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- NRC's licensing regulations must "provide for the use of a system of multiple barriers in the design of a repository." 42 U.S.C. § 10141(b)(1)(B).
- N Because there is no requirement to demonstrate quantitatively the independent contribution of the drip shields, DOE need not perform a barrier neutralization analysis to ascertain each individual barrier's contribution to the repository's multiple barrier system.
- O Section 63.21(c)(7) requires that the License Application include a "description of plans for retrieval and alternate storage of the radioactive wastes, should retrieval be necessary." The most natural reading of this requirement is that the License Application must set forth a general "description" of plans that will be developed in greater detail "should retrieval be necessary."
- P Before authorizing construction of the proposed repository, the Commission must determine, pursuant to 10 C.F.R. § 63.31(a)(2), "[t]hat there is reasonable expectation that the materials can be disposed of without unreasonable risk to the health and safety of the public." Thereafter, pursuant to 10 C.F.R. § 63.41(a)(2), before issuing a license to receive and possess such materials at the repository, the Commission must find that construction of "[a]ny underground storage space required for initial operation" has been "substantially complete[d]."
- Q Under 10 C.F.R. §§ 63.113, 63.114, and Part 63 Subpart G, the performance margins analysis cannot be used to validate or provide confidence in the total systems performance assessment if its data and models are not qualified under DOE's quality assurance program.
- R The Commission has set forth a four-part test, under which a petitioner must demonstrate that: (1) the rule's strict application "would not serve the purpose for which [it] was adopted"; (2) the petitioner has alleged "special circumstances" that were "not considered, either explicitly or by necessary implication, in the rulemaking proceeding leading to the rule sought to be waived"; (3) those circumstances are "unique" to the facility, rather than "common to a large class of facilities"; and (4) a waiver of the regulation is necessary to reach a "significant safety problem." *Dominion Nuclear Connecticut Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CL-05-24, 62 NRC 551, 559-60 (2005).
- LBP-10-23 PROGRESS ENERGY FLORIDA, INC. (Levy County Nuclear Power Plant, Units 1 and 2), Docket Nos. 52-029-COL, 52-030-COL (ASLBP No. 09-879-04-COL-BD01); COMBINED LICENSE; December 22, 2010; MEMORANDUM AND ORDER (Granting Motion to Compel Disclosure of Groundwater Modeling Information)
- A In this decision, the Board grants the Intervenor's motion to compel disclosure of certain groundwater modeling information associated with PEF's application to construct and operate two nuclear power reactors in Levy County, Florida.
- B Under 10 C.F.R. § 2.336, each party to a proceeding must automatically disclose and provide all documents and data compilations in their possession, custody, or control that are relevant to the admitted contentions, without waiting for a party to file a discovery request.
- C Under 10 C.F.R. § 2.336(a), each party to a proceeding may either provide the other parties with an actual copy of the relevant document or data compilation, or describe it and provide it if the other party requests it.
- D The scope of the mandatory disclosure obligations under 10 C.F.R. § 2.336 is wide-reaching.
- E Analysis of a motion to compel the mandatory disclosure of information under 10 C.F.R. § 2.336(a) is contingent on six issues: (1) is the information, such as a computer model, a "document" or "data compilation" within the meaning of the regulation; (2) is it "relevant" to the contention; (3) is it in the "possession, custody, or control" of the party receiving the disclosure request; (4) is it "publicly available" such that no further mandatory disclosure is needed; (5) would the mandatory disclosure of the information be "unduly burdensome and costly," and (6) if so, should the holder of the information be excused from the duty to produce them?
- F The term "document" as used in 10 C.F.R. § 2.336, is not limited to paper documents and it refers to information stored on any medium or form, including electronically stored information or ESI.
- G The term "document" as used in 10 C.F.R. § 2.336 includes computer models and associated electronic inputs, outputs, data, and software.
- H When determining relevance of documents for discovery purposes in NRC proceedings, boards may look to the Federal Rules of Evidence (FRE) for useful guidance. Fed. R. Evid. 401 states that "'Relevant evidence' means evidence having any tendency to make the existence of any fact that is of consequence to the determination of the action more probable or less probable than it would be without the evidence."

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

- I The relevance standard of 10 C.F.R. § 2.336 is more flexible than the relevance standard of Fed. R. Evid. 401. When the Commission endorsed the use of the FRE as guidance for the boards, it did so with the express proviso that boards must apply the Part 2 rules with *greater flexibility* than the FRE. In addition, 10 C.F.R. § 2.336 is a *discovery* regulation, and the rules are clear that the scope of discovery is broader than the scope of admissible *evidence*. Finally, the Commission has affirmed that the mandatory disclosures in Subpart L proceedings encompass a “wide range of information.”
- J Although the phrase “possession, custody, or control” appears in the NRC regulations in three instances (10 C.F.R. §§ 2.336(a)(2)(i), 2.704(a)(2), and 2.707(a)(1)), as far as we are aware, no NRC decision has ever provided guidance as to what constitutes “control.”
- K We look to the Federal Rules of Civil Procedure for guidance on construing the term “control” as it applies to our ruling on the instant motion under 10 C.F.R. § 2.336(a)(2)(i). This is because the NRC’s regulation is based on Fed. R. Civ. P. 26(a)(1)(A)(ii). In addition, Fed. R. Civ. P. 34(a)(1), which also uses the term “control,” is essentially the same as NRC’s “production of documents” regulation, 10 C.F.R. § 2.707(a)(1). The case law construing these federal rules is useful guidance in interpreting the NRC regulations.
- L The phrase “possession, custody, or control” as found in the FRCP and 10 C.F.R. § 2.336(a) is in the disjunctive. Only one of the enumerated requirements needs to be met. Neither possession nor custody of a document is required.
- M Neither legal ownership nor title is required in order for a party to have “possession, custody, or control” of a document under the FRCP or 10 C.F.R. § 2.336(a).
- N Term “control” is broadly construed. Documents are deemed to be within the control of a party if the party has the right to obtain the documents on demand. In addition, a document is deemed to be within a party’s control if it is held by the party’s attorney, expert, insurance company, accountant, or agent.
- O The concept of control extends to situations in which the party has the practical ability to obtain materials in the possession of another, even if the party does not have the legal right to compel the other person or entity to produce the requested materials. Practical control by a party over the person in possession of the document is sufficient to require that the party produce the document.
- P The documents (computer models) prepared by CH2M Hill as a part of its expert consulting work for PEF on the Levy Nuclear Project are within PEF’s “control” for purposes of 10 C.F.R. § 2.336(a)(2)(i) and must be disclosed, even though the documents were not contract deliverables, PEF may have no formal legal “right” to force CH2M Hill to provide them, and PEF must compensate CH2M Hill for providing these documents. This is because the documents were prepared by PEF’s expert and PEF has the practical ability to obtain them.
- Q PEF’s “control” of these computer models, i.e., its practical ability to access and obtain them, is illustrated by the fact that PEF acknowledged that, if the NRC Staff requested these documents, PEF could obtain and provide them.
- R PEF’s “control” of these computer models, i.e., its practical ability to access and obtain them, is illustrated by the fact that they were prepared under quality control measures associated with this nuclear project and the fact that PEF has the contractual right to audit and review this information.
- S To rule that disclosure under 10 C.F.R. § 2.336(a)(2)(i) is limited to formal contractual deliverables would ignore practical reality. Such a reading of 10 C.F.R. § 2.336(a)(2)(i) would encourage applicants to draft consulting contracts to “insulate” themselves from the obligation to disclose critical computer modeling information. This is information that applicants routinely provide to the NRC Staff, if requested during the license application process.
- T Rather than focusing on the contractual formalities, we adopt the FRCP approach and focus on the practical realities. An applicant has “control” of a document under 10 C.F.R. § 2.336 if the applicant has the practical ability to obtain it, albeit for a cost or fee, from the expert consulting firm that generated the document while performing work for the applicant.
- U Under the mandatory disclosure regulation, 10 C.F.R. § 2.336(a)(2)(iii), a party is excused from producing a document if the document is publicly available and if the party specifies where the document may be found.
- V In the context of PEF’s application to construct and operate two large nuclear power reactors at a total cost in excess of \$14 billion dollars, and an NRC licensing process costing millions of dollars (disregarding any adjudicatory costs), PEF’s request to be excused from disclosing, as is required by 10 C.F.R. § 2.336(a), the key groundwater models involved in this application on the ground that such

## DIGESTS

### ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS

disclosure would entail the excessive and undue cost of \$30,000 is rejected. This is not an undue cost. This cost pales in comparison to the other costs involved in this project, including the cost PEF would incur in preparing and bringing the CH2M Hill environmental expert to the evidentiary hearing.

W PEF's claim that the computer models should be excused from the mandatory disclosure requirements of 10 C.F.R. § 2.336(a) because they entail proprietary information is rejected. Under the protective order that the Board has issued in this proceeding, the use of any proprietary information (e.g., trade secrets or confidential commercial or financial information) that is produced under 10 C.F.R. § 2.336 is strictly limited to this proceeding, and such information must be promptly returned at the close of this proceeding. We reject PEF's suggestion that it cannot produce the requested information because it is "proprietary," either to PEF, CH2M Hill, or to the company that provides software to CH2M Hill.

LBP-10-24 CALVERT CLIFFS 3 NUCLEAR PROJECT, LLC, and UNISTAR NUCLEAR OPERATING SERVICES, LLC (Calvert Cliffs Nuclear Power Plant, Unit 3), Docket No. 52-016-COL (ASLBP No. 09-874-02-COL-BD01); COMBINED LICENSE; December 28, 2010; ORDER (Ruling on Intervenors' Proposed New Contention 10)

A The use of the disjunctive phrase "data or conclusions" means it is sufficient that either data or conclusions in the Draft Environmental Impact Statement ("DEIS") differ significantly from those in the Environmental Report ("ER"); both need not do so. A contention may therefore challenge a DEIS even though its ultimate conclusion on a particular issue (e.g., the need for power) is the same as that in the ER, as long as the DEIS relies on significantly different data than the ER to support the determination. The reverse is also true: a significantly different conclusion in the DEIS may be challenged even though it is based on the same information that was cited in the ER.

B The regulations do not define or specify an exact number of days within which a new or amended contention must be filed in order to be considered "timely." Accordingly, unless a deadline has been specified in the scheduling order for the proceeding, the determination of timeliness is subject to a reasonableness standard that depends on the facts and circumstances of each situation.

C The Commission affirmed that "good cause" is the most significant of the late-filing factors set out in 10 C.F.R. § 2.309(c). If good cause is not shown, the board may still permit the late filing, but the petitioner must make a strong showing on the other factors.

D The regulations do not define the phrase "differ significantly." In the absence of a statutory definition, courts normally define a term by its ordinary meaning. The ordinary meaning of "significant" is "having meaning," "full of import," "indicative," "having or likely to have influence or effect," "deserving to be considered."

E When a new contention is filed challenging "new data or conclusions" in the NRC's environmental documents, the timeliness of the new contention is determined based on whether it was filed promptly after the NRC's National Environmental Policy Act ("NEPA") document became publicly available, not whether it was filed promptly after the information on which the intervenor bases its challenge became publicly available. The intervenor must show that (1) the new data or conclusions in the NRC Staff NEPA document differ significantly from those in the ER, and (2) the new contention was submitted promptly after the NRC Staff NEPA document was issued to the public. If these requirements are met, the new contention is timely even if it is based on information that predates the NRC Staff NEPA document. This contrasts with the alternative basis for filing a new contention in section 2.309(f)(2)(i)-(iii), which requires that a new or amended contention based on material new information be filed "in a timely fashion based on the availability of the subsequent information." Under this alternative, timeliness is determined based on the timing of the availability of the information on which the contention is based, not the timing of the NRC Staff NEPA document. The two tests are distinct, and therefore if the requirements of the first test are met we may not impose additional requirements derived from the second test.

F The Intervenors' failure to expressly address the late-filing criteria does not necessarily preclude the Board from doing so. Licensing boards and the Commission have considered the late-filing criteria even in cases where the factors were not fully addressed by the petitioners and/or the NRC Staff or were not addressed at all.

G Intervenors have good cause for filing Contention 10 in response to the DEIS because the NRC Staff NEPA document contains data or conclusions that differ significantly from those in the ER. By defining significantly different information in the DEIS as a permissible basis for filing a new contention, the Commission has in effect concluded that such new information is good cause for filing a new contention.

**DIGESTS**  
**ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

- H The assessment of need for power has historically been equated with the benefits of the proposed action for the cost-benefit balance consideration. If the need for power is less than the DEIS projects, then the benefits of the project might also be less, which might in turn alter the balance between the project's benefits and its environmental costs. Thus, the accuracy and reliability of the agency's need for power determination, as reflected in the DEIS, is material to the licensing decision.
- I Even if the NRC Staff finds that a State's evaluation satisfies the criteria of the Environmental Standard Review Plan ("ESRP") § 8.1, this does not relieve the NRC of its obligation under NEPA to consider more recent data showing that conditions have changed materially, as Intervenor's claim is true here. The NRC Staff's obligation to consider significant new information in preparing NEPA documents follows from the agency's NEPA regulations. Thus, if significant new information becomes available, the NRC Staff must explain how it took the new information into account in determining whether the State requires additional generating capacity. Chapter 8 of the DEIS fails to acknowledge the recent downturn in the demand for electrical power alleged by Intervenor, much less explain whether or how it affected the NRC's assessment of the need for power.
- J A short-term reduction in demand is not sufficient to necessitate an accounting in the DEIS for that changed demand. The longstanding position of the Commission is that inherent in any forecast of future electric power demands is a substantial margin of uncertainty. Thus, fluctuations in demand that may occur over a period of several years, such as changes brought about by an economic recession, are not a legally sufficient ground for challenging the need for power analysis under the Commission's interpretation of NEPA requirements.
- K The Council on Environmental Quality ("CEQ"), numerous courts, and parties to this proceeding, including the NRC Staff, acknowledge that the alternatives analysis is the "heart of the environmental impact statement." "The existence of reasonable but unexamined alternatives renders an EIS inadequate." The adequacy of the DEIS's evaluation of alternatives is therefore a material issue in the licensing proceeding.
- L The primary reason the DEIS did not consider either wind or solar power as a stand-alone alternative to Unit 3 is that neither of those sources was deemed capable of serving the purpose and need of the project, generating 1600 MW(e) of baseload power. Because Intervenor do not contest that basic conclusion, Contention 10B does not present a genuine dispute with the DEIS. Even if Intervenor are correct that the DEIS's analysis of wind and solar power is flawed, they have provided no basis to overturn the NRC Staff's conclusion that neither source of power could, standing alone, provide a reasonable alternative to Calvert Cliffs Unit 3.
- M The NRC may consistently with NEPA define baseload power generation as the purpose of and need for a project.
- N Intervenor have satisfied our contention admissibility requirements by identifying information to support their contention that the DEIS contains an inaccurate or incomplete comparison of the proposed action and the combined alternative. If Intervenor's contention is upheld on the merits, they will have shown that the DEIS violates NEPA even if they have not shown precisely how the DEIS should be revised or what ultimate conclusion it should reach. Federal courts have held that inaccurate, incomplete, or misleading information in an EIS concerning the comparison of alternatives is itself sufficient to render the EIS unlawful and to compel its revision.
- O We agree with the NRC Staff that, as a general proposition, "[a]n agency's consideration of alternatives is sufficient if it considers an appropriate range of alternatives, even if it does not consider every available alternative." In this instance, however, Intervenor cannot be accused of demanding that the NRC Staff analyze "every conceivable alternative." On the contrary, the combined alternative is the only alternative to the proposed action that the NRC Staff determined was a viable source of baseload power and that included renewable energy sources. A thorough and accurate analysis of the combined alternative is therefore particularly important to the agency's compliance with NEPA, because it represents the only opportunity the decisionmakers and the public will have to compare the proposed action to an alternative that includes renewable sources such as wind and solar power and is acknowledged to be capable of fulfilling the purpose and need of the project.
- P Under section 2.309(f)(2), an intervenor may file a new or amended contention "if there are data or conclusions in the NRC draft or final environmental impact statement . . . or any supplement relating thereto, that differ significantly from the data or conclusions in the applicant's documents." In this proceeding, the overnight capital cost estimate of \$4500 to \$6000/kW that appears in the DEIS also appears in Applicants'

### **ISSUANCES OF THE ATOMIC SAFETY AND LICENSING BOARDS**

Response to Request for Additional Information (“RAI”) No. 124, which clearly qualifies as part of “the applicant’s documents” under section 2.309(f)(2). Thus, because the same overnight capital cost estimate — \$4500 to \$6000/kW — appears in both the DEIS and Applicants’ documents, it cannot be said that the overnight capital cost estimates differ significantly between the DEIS and Applicants’ documents.

**DIGESTS**  
**ISSUANCES OF DIRECTORS' DECISIONS**

DD-06-1 CAROLINA POWER AND LIGHT COMPANY (Shearon Harris Nuclear Power Station, Unit 1; H.B. Robinson Plant, Unit 2), Docket Nos. 50-400, 50-261; CONSTELLATION ENERGY GROUP (R.E. Ginna Nuclear Power Plant), Docket No. 50-244; DUKE ENERGY CORPORATION (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), Docket Nos. 50-369, 50-370, 50-413, 50-414; ENTERGY NUCLEAR OPERATIONS, INC. (James A. FitzPatrick Nuclear Power Plant; Indian Point, Units 2 and 3; Vermont Yankee Nuclear Power Station; Waterford Steam Electric Station, Unit 3; Arkansas Nuclear One, Units 1 and 2), Docket Nos. 50-333, 50-247, 50-286, 50-271, 50-382, 50-313, 50-368; REQUEST FOR ACTION; January 9, 2006; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206

A The Petitioners requested that the U.S. Nuclear Regulatory Commission (NRC) engage emergency enforcement actions to modify and/or suspend operating licenses for the listed plants with regard to potential violations of NRC regulations for fire protection. Specifically, the petition requested the following actions: (1) Collect information through generic communications with nuclear industry to determine the extent of condition of the inoperable fire barriers, including the requirement that the licensees conduct a full inventory of the type of Hemyc/MT to include the amount in linear and square footage, its specific applications, and the identification of safe shutdown systems, which are currently unprotected by the noncompliance and an assessment of the safety significance of each application; (2) the communication should require, at minimum, that the above-named sites provide justification for operation in noncompliance with all applicable fire protection regulations; and (3) with the determination that any and/or all of the above-mentioned sites are operating in an unanalyzed condition and/or that assurance of public health and safety is degraded, promptly order a suspension of the license or a power reduction of the affected reactors until such time as it can be demonstrated that the licensees are operating in conformance with all other applicable fire protection regulations.

B The final Director's Decision on this petition was issued on January 9, 2006. It addresses the Petitioners' requested actions as follows: With regard to requests 1 and 2, the NRC Staff has granted the Petitioners' request through the generic communication process. Specifically, the NRC Staff is planning to issue a Generic Letter (GL) to all licensees asking them to provide detailed information about the use of Hemyc/MT in their nuclear power plants, and their programmatic controls that ensure that other fire barrier types will be assessed for potential degradation and adverse effects. With respect to request 3, the NRC Staff is planning to review the responses from all affected plants in detail and will take appropriate actions to resolve the issues with the use of Hemyc/MT material commensurate with the safety significance of the protected systems. The comment period for the proposed GL expired on September 23, 2005. The GL will be issued after the NRC's internal review process is completed.

DD-06-2 ENTERGY NUCLEAR VERMONT YANKEE, LLC, and ENTERGY NUCLEAR OPERATIONS, INC. (Vermont Yankee Nuclear Power Station), Docket No. 50-271 (License No. DPR-28); REQUEST FOR ACTION; March 4, 2006; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206

A The Petitioner requested that the U.S. Nuclear Regulatory Commission (NRC) issue an emergency order for a temporary closure or derating of the Vermont Yankee Nuclear Power Station (VY) as a result of flooding and storm damage to the city of Keene, the town of Hinsdale, and other portions of New Hampshire that are part of existing evacuation routes for VY, during local flooding that occurred on October 8 and 9, 2005.

B The final Director's Decision on this petition was issued on March 4, 2006. The final DD addresses the requested actions as follows: The NRC Staff, in consultation with the Federal Emergency Management Agency, confirmed that during the flooding on October 8 and 9, 2005, near VY, the State of New

**DIGESTS**  
**ISSUANCES OF DIRECTORS' DECISIONS**

Hampshire had established and coordinated potential alternate evacuation routes in the unlikely event of an emergency at VY and that shutting down or derating the station was not warranted. Therefore, Petitioner's request of October 11, 2005, to shut down or derate VY was denied. In addition, the NRC Staff found that the safe operation of VY was not threatened by the flooding and that the local emergency response organizations could implement protective actions if necessary, to protect public health and safety, in accordance with their emergency procedures, regardless of local severe weather conditions or other natural disasters coincident with an emergency at VY.

- C Accordingly, NRC denied the Petitioner's requests as stated above.
- DD-06-3 OPERATING AND DECOMMISSIONING POWER REACTORS and OPERATING AND DE-COMMISSIONING RESEARCH AND TEST REACTORS; REQUEST FOR ACTION; November 2, 2006; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206
- A The Petitioners requested that the U.S. Nuclear Regulatory Commission (NRC) issue Demands for Information (DFIs) to research, test, and power reactors to obtain responses to specific questions regarding leaks or potential leaks of radioactively contaminated water into the ground. As the basis for the request, the Petitioners cited several examples of contamination at NRC-licensed facilities and cited NRC regulations requiring licensees to have controls limiting the release of radioactive materials and limiting the radiation dose individuals receive from the operation of NRC-licensed facilities.
- B The final Director's Decision (DD) on this petition was issued on November 2, 2006. The final DD addresses the requested actions as follows: The portion of the Petition related to power reactors is considered granted in part, because power reactor licensees submitted a substantial amount of the requested information in response to an industry questionnaire. The portion of the Petition related to research and test reactors was denied, because existing NRC design and regulatory programs ensure that there is a minimal risk for a significant release of contaminated liquid effluents.
- DD-07-1 STP NUCLEAR OPERATING COMPANY (South Texas Project, Units 1 and 2), Docket Nos. 50-498, 50-499 (License Nos. NPF-76, NPF-80); REQUEST FOR ACTION; February 24, 2007; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206
- A The Petitioner requested that the Nuclear Regulatory Commission (NRC) issue demands for information (DFIs) to STP Nuclear Operating Company (STPNOC), Licensee for the South Texas Project (STP) Electric Generating Station, Units 1 and 2, to provide NRC the results of assessments of the safety-conscious work environment (SCWE) at STP conducted since January 1, 2004; summaries of action plans and results of actions to remedy the problems revealed by the assessments, including documents mentioned at an August 2005 meeting convened to discuss the STP SCWE; summaries of action plans and results of efforts to remedy problems revealed by such assessments in 2001 and 2003; and all correspondence between the NRC, STPNOC, and Wackenhut Corporation concerning the 2001, 2003, and 2005 comprehensive cultural assessments.
- B The Petitioner requested that NRC issue DFIs to obtain information in order to be better informed and to better assess the effectiveness of steps taken by STPNOC regarding Wackenhut Corporation and other entities who, according to the Petitioner, have had persistent problems. The Petitioner requested that NRC require the licensee to docket the information subject to DFIs.
- C The final Director's Decision (DD) was issued on February 24, 2007. The final DD addresses the Petitioner's requested actions as follows. Since the NRC already has reviewed and has ready access to all of the information requested by the Petitioner, and since issuance of the requested DFIs to STPNOC would not result in an order or other action, the requested DFIs are not warranted. Additionally, since the requested material was not required by a previous NRC order (Confirmatory Order Modifying License (Effective Immediately) of June 9, 1998) addressing the concerns with Wackenhut, which required STPNOC to conduct the actions for which the Petitioner requested that the NRC issue DFIs, and since the material was not submitted to the NRC, and is maintained at the Licensee's facility and readily accessible to the NRC Staff, docketing the requested information is unwarranted.
- D Accordingly, the NRC denied the Petitioner's requests to issue DFIs to STPNOC, and to require STPNOC to docket the documents for which DFIs were requested.
- DD-07-2 NUCLEAR MANAGEMENT COMPANY, LLC (Palisades Nuclear Plant), Docket Nos. 50-255, 72-7 (License No. DPR-20); REQUEST FOR ACTION; March 20, 2007; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206
- A On April 4, 2006, the Petitioners requested that the U.S. Nuclear Regulatory Commission (NRC) take enforcement action against the Licensee for the Palisades Nuclear Plant, Nuclear Management Company,

**DIGESTS**  
**ISSUANCES OF DIRECTORS' DECISIONS**

- LLC (NMC), by condemning and stopping the use of the two independent spent fuel storage installation (ISFSI) concrete pads holding dry spent fuel storage casks on the plant site. The Petitioners stated that the concrete cask storage pads do not conform with NRC regulations for earthquake stability, and therefore pose a hazard in case of an earthquake.
- B** The final Director's Decision on this petition was issued on March 20, 2007. The first two issues the petitioners raised, concerning the stability of the older ISFSI pad (constructed in 1992) and the potential for amplification of earthquakes on the newer pad, (constructed in 2003), were not accepted for review under 10 C.F.R. § 2.206, because the NRC Staff had already evaluated and resolved those issues. As discussed in the final Director's Decision, the sole issue NRC accepted for review concerned the adequacy of the Licensee's slope stability analysis of the newer ISFSI pad. The Licensee documented its revised slope stability analysis for the newer pad in October 2006. The NRC Staff reviewed the revised analysis and determined that the Licensee has performed written evaluations that establish that the newer cask storage pad at the Palisades ISFSI has been designed to adequately support the static and dynamic loads of the stored casks, considering potential effects of earthquakes, in compliance with applicable regulatory requirements.
- C** Therefore, the Staff found that the Petitioners' concerns have been adequately addressed, and the requested action, to condemn and stop the use of the two ISFSI concrete pads holding dry spent fuel storage casks at the Palisades site, was denied.
- DD-07-3** CAROLINA POWER & LIGHT COMPANY (Shearon Harris Nuclear Power Plant, Unit 1), Docket No. 50-400 (License No. NPF-63); REQUEST FOR ACTION; June 13, 2007; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206
- A** The Petitioners requested that the U.S. Nuclear Regulatory Commission (NRC) take an immediate enforcement action in the form of an order revoking the operating license for the Shearon Harris Nuclear Power Plant (SHNPP) Unit 1, or impose maximum fines for each violation for each day the plant has been in violation of fire protection regulations; participate in open and public proceedings with the petitioners, Carolina Power & Light (CP&L, the licensee), and other external stakeholders in the vicinity of the SHNPP during deliberations on the petition; and resolve all violations of federal regulations before accepting a license renewal application from Carolina Power & Light for the SHNPP.
- B** The final Director's Decision (DD) on this petition was issued on June 13, 2007. The NRC denied the Petitioners' request for an order that would revoke the SHNPP operating license or impose maximum fines for each violation for each day the plant has been in violation of fire protection regulations. The bases for this Decision are due to the fact that the Licensee has several levels of defense-in-depth in fire protection and has in place compensatory measures in accordance with NRC expectations to address noncompliances. Additionally, the Licensee is actively identifying and completing corrective actions, including plant modifications and reanalysis efforts associated with its transition to the 10 C.F.R. § 50.48(c) licensing basis. The NRC appropriately exercised its enforcement discretion under the NRC's "Interim Enforcement Policy Regarding Enforcement Discretion for Certain Fire Protection Issues (10 CFR 50.48(c))." The NRC follows existing regulatory processes, policies, and programs (e.g., the Reactor Oversight Process) to verify that the Licensee is properly implementing its fire protection program at SHNPP in accordance with the regulations.
- C** The NRC denied the Petitioners' request to conduct public meetings in the vicinity of SHNPP. As part of the 10 C.F.R. § 2.206 petition process, a public meeting may be held to give an opportunity to petitioners to provide additional information to the PRB. The Petitioners and the NRC Staff conducted one such public meeting on November 13, 2006, at NRC Headquarters. The Staff determined that an additional public meeting was not necessary.
- D** The NRC Staff denied the Petitioners' request to not accept the Licensee's application for license renewal at SHNPP. License renewal applications are licensing actions and are not considered under 10 C.F.R. § 2.206. If the Petitioners meet hearing request and intervention criteria, they have an opportunity in the licensing proceedings pursuant to 10 C.F.R. § 2.309 to raise issues and concerns relevant to license renewal at SHNPP.
- DD-08-1** ENTERGY NUCLEAR VERMONT YANKEE, LLC, and ENTERGY NUCLEAR OPERATIONS, INC. (Vermont Yankee Nuclear Power Station), Docket No. 50-271 (License No. DPR-28); REQUEST FOR ACTION; April 28, 2008; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206
- A** The New England Coalition (NEC or the Petitioner) requested that Nuclear Regulatory Commission (NRC) promptly restore reasonable assurance of adequate protection of public health and safety that is now

**DIGESTS**  
**ISSUANCES OF DIRECTORS' DECISIONS**

degraded by the failure of the Licensee and its employees to report adverse conditions leading to a reduction in plant safety margins at the Vermont Yankee Nuclear Power Station (Vermont Yankee), or otherwise order a derate or shutdown of Vermont Yankee until it can be determined to what extent Vermont Yankee is being operated in an unanalyzed condition. Specifically, the petition requested the following actions: (1) NRC completion of a Diagnostic Evaluation Team examination or Independent Safety Assessment of Vermont Yankee to determine the extent of condition of nonconformances, reportable items, hazards to safety, and the root causes thereof; (2) NRC completion of a safety culture assessment to determine why worker safety concerns were not previously reported and why assessments of safety culture under the Reactor Oversight Process failed to capture the fact or reasons that safety concerns have gone unreported; (3) derate Vermont Yankee to 50% of licensed thermal power with a mandatory hold at 50% until a thorough and detailed structural and performance analysis of the cooling towers, including the alternate cooling system, has been completed by the Licensee; reviewed and approved by NRC; and until the above steps (1) and (2) have been completed; and (4) NRC investigation and determination of whether or not similar nonconforming conditions and causes exist at other Entergy-run nuclear power plants.

B The Petition Review Board (PRB) reviewed the petition and decided to reject requests (1), (2), and (4) for review under the section 2.206 process and accept a portion of request (3) related to the cooling tower cell collapse.

C The final Director's Decision (DD) was issued on April 28, 2008. The final DD stated that the Office of Nuclear Reactor Regulation has decided to deny the Petitioner's request to derate Vermont Yankee, but has granted the petition related to the request for the NRC Staff's review of Entergy's evaluation and analysis of the partial cooling tower collapse and associated causes. The NRC Staff's evaluation of the concerns considered results of the inspection of the Licensee's cooling tower inspection program and processes, and the investigations associated with Entergy's Root Cause Analysis of the collapse. Based on the NRC Staff's evaluation and inspections, and Entergy's completed and planned corrective actions, the Staff concluded that the Petitioner's concerns have been adequately addressed and resolved.

DD-08-2 ENTERGY NUCLEAR OPERATIONS, INC. (Indian Point, Units 2 and 3), Docket Nos. 50-247, 50-286 (License Nos. DPR-26, DPR-64); REQUEST FOR ACTION; August 14, 2008; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206

A The Petitioner requested that, pursuant to 10 C.F.R. § 2.206, the NRC immediately suspend the Indian Point licenses until the issues described in the petition are remedied to full compliance with all local, state, and federal laws. The issues identified included: (1) radiological contamination through groundwater leakage from the Indian Point Unit 2 spent fuel pool (SFP), (2) the Licensee's failure to implement a new emergency notification siren system as required by NRC orders, and (3) over seventy safety, security, and enforcement issues identified over the past 6 years of plant operations.

B The Petitioner also requested rulemaking concerning 10 C.F.R. Part 54, "Requirements for Renewal of Operating Licenses for Nuclear Power Plants," and requested that the NRC not consider any new license renewal applications until the NRC revises its regulations. The Petitioner asserted that the current regulations in 10 C.F.R. Part 54, are prejudiced and biased, presume that license renewal is a foregone conclusion for all licensees, usurp stakeholder rights protected under the First Amendment of the Constitution, and abridge citizens' rights to due process and equal protection. The Petitioner also requested that the NRC refrain from taking any actions relative to the license renewal of Indian Point until the NRC amends 10 C.F.R. Part 54 as requested.

C By letter dated October 29, 2007, the NRC denied the petition for rulemaking because it did not provide any new information that was not previously considered by the NRC. The denial was published in the *Federal Register* on November 8, 2007 (72 Fed. Reg. 63,141).

D The NRC accepted, for review pursuant to 10 C.F.R. § 2.206, the Petitioner's concerns regarding the underground leakage of contaminated water at the Indian Point facility and the failure to implement the new emergency notification siren system in a timely manner. The NRC either denied the remaining issues or found that they did not meet the criteria for acceptance in the 10 C.F.R. § 2.206 process. The NRC consolidated the concern regarding the failure to implement the siren system in a timely manner with a similar issue raised in a separate letter from the Petitioner dated September 28, 2007. This Director's Decision (DD) addresses the issue of underground leakage of contaminated water at the Indian Point facility.

E The final DD was issued on August 14, 2008. The final DD addresses the Petitioner's requested actions as follows. The NRC reviewed Entergy's efforts to determine the cause and source of the

**DIGESTS**  
**ISSUANCES OF DIRECTORS' DECISIONS**

groundwater contamination conditions, assess the radiological impact on public health and safety and the environment, effect appropriate mitigation and remediation, and implement long-term monitoring to ensure continuing assessment of the condition, including the expected natural attenuation of remaining residual activity. The NRC has found Entergy's response to identified conditions to be reasonable and technically sound. The NRC has reviewed in detail the existence of onsite groundwater contamination, as well as the circumstances surrounding the causes of leakage and previous opportunities for identification and intervention. The NRC's inspection determined that public health and safety have not been, nor are likely to be, adversely affected, and the dose consequence to the public attributable to current onsite conditions associated with groundwater contamination is negligible with respect to conservatively established NRC regulatory limits. The inspection determined that Entergy conformed to all NRC regulatory requirements that were pertinent in this circumstance and applicable to assessing the cause and effect of the groundwater conditions relative to public health and safety and protection of the environment.

- F Accordingly, the NRC denied the Petitioner's request to suspend the operating licenses of the Indian Point Nuclear Generating Units No. 2 and 3.
- DD-09-1 ENTERGY NUCLEAR OPERATIONS, INC. (Indian Point, Units 2 and 3), Docket Nos. 50-247, 50-286 (License Nos. DPR-26, DPR-64); REQUEST FOR ACTION; May 29, 2009; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206
- A The Energy Policy Act of 2005 required that the Indian Point Nuclear Generating Units 2 and 3 (Indian Point) provide a backup electrical power supply for the emergency notification (i.e., siren) system. Entergy Nuclear Operations, Inc., the Indian Point Licensee, failed to meet multiple deadlines imposed by the Nuclear Regulatory Commission to fully implement the new siren system with a backup electrical power supply. Mr. Sherwood Martinelli, the Petitioner, submitted multiple letters pursuant to Title 10 of the *Code of Federal Regulations*, section 2.206 requesting that the Indian Point facility be immediately shut down and daily civil penalties be imposed until the new siren system is fully approved by all applicable government agencies and operational.
- B The NRC reviewed Entergy's efforts to design and implement a siren system with a backup power supply as required by the Energy Policy Act of 2005. The existing siren system remained operational while Entergy proceeded to place the new siren system into service. The existing system will remain available to be restored to service, if required, until the Federal Emergency Management Agency, FEMA, determines it can be dismantled.
- C On May 29, 2009, the Office of Nuclear Reactor Regulation issued the final Director's Decision which denied the Petitioner's request to suspend the operating licenses of the Indian Point Nuclear Generating Units 2 and 3 and the Petitioner's request to impose daily civil penalties for the untimely implementation of the new siren system. The NRC concluded that public health and safety had not been measurably affected by the untimely implementation of the new siren system. The \$780,000 in civil penalties already imposed and Entergy's subsequent actions to implement the siren system and comply with the NRC's Orders make further enforcement actions unnecessary.
- D In addition, the Petitioner's request to place Indian Point Units 2 and 3 in cold shutdown, and to suspend the licenses of Indian Point Units 2 and 3 until the Licensee comes into full compliance with the design basis threat, the current licensing basis, and all NRC rules, because of corrosion in siren components, is also denied. Entergy's corrective actions have adequately resolved the matter, and no further action is needed.
- DD-09-2 INDIANA MICHIGAN POWER COMPANY (Donald C. Cook Nuclear Plant, Unit 1), Docket No. 50-315 (License No. DPR-58); REQUEST FOR ACTION; September 4, 2009; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206
- A On December 16, 2008, the Union of Concerned Scientists (UCS) requested pursuant to 10 C.F.R. § 2.206 that the NRC issue a Demand for Information requiring the I&M (the Licensee) to docket the following four pieces of information at least 30 days before restarting the Donald C. Cook Nuclear Plant, Unit 1 (CNP-1) reactor from its current outage: (1) the vibration levels experienced in the control room, turbine building, and other structures during the event of September 20, 2008; (2) the vibration levels assumed in these locations during the safe-shutdown earthquake (SSE); (3) in locations where the vibration levels during the September 2008 event exceeded the vibration levels assumed for the SSE, the extent of piping, pipe supports, and other items replaced or repaired as a result of potential stress damage and the bases for not replacing other structures, systems, and components exposed to loading greater than the SSE; and (4) in locations where the vibration levels during the September 2008 event did not exceed the

**DIGESTS**  
**ISSUANCES OF DIRECTORS' DECISIONS**

vibration levels assumed for the SSE, the extent of measures taken to protect against spurious equipment operation and the bases for concluding that the as-left configuration will not pose a public health hazard in event of an SSE.

B The Petitioner stated that the September 20, 2008, main turbine generator failure event caused significant vibration levels that resulted in the spurious operation of standby equipment and may have contributed to a breach that seriously impaired the fire protection system. The Petitioner requested the information, in part, to ensure that the Licensee applied the proper lessons learned from the event to future operation of the CNP-1 reactor. The petition further stated that without this information, the NRC cannot be assured that the public is adequately protected from the significant adverse safety implications resulting from an SSE at CNP-1 that causes the spurious actuation of equipment.

C On January 21, 2009, the NRC accepted the petition for review pursuant to 10 C.F.R. § 2.206.

D In a letter dated May 12, 2009, the Licensee addressed the four parts of the Petitioner's request for information. The Licensee concluded that the condition of structures, systems, and components will not pose a hazard to public health and safety in the event of an SSE following return to service of CNP-1.

E The final Director's Decision (DD) was issued on September 4, 2009. The final DD addresses the Petitioner's requested actions as follows. The NRC technical staff reviewed the details in the Licensee's response and other docketed information (e.g., Licensee Event Report 315/2008-006-01 and NRC Special Inspection Team Report 05000315/2008009; 05000316/2008009) associated with the event. The Staff concluded that public health and safety were not affected by the event, nor would they be affected by a similar event in the future. The Staff also found the Licensee's event response and corrective actions to be reasonable and technically sound.

F Accordingly, the NRC denied the Petitioner's request to issue a Demand for Information from the Licensee prior to the restart of CNP-1.

DD-10-1 FLORIDA POWER & LIGHT COMPANY (Turkey Point Nuclear Generating Plant, Units 3 and 4), Docket Nos. 50-250, 50-251 (License Nos. DPR-31, DPR-41); REQUEST FOR ACTION; July 9, 2010; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206

A The Petition requested that the NRC issue a "Notice of Violation and Imposition of Civil Penalty" in the amount of \$1,000,000 and issue a confirmatory order modifying Florida Power & Light Co. (FPL) License Nos. DPR-31 and DPR-41. During a teleconference July 10, 2009, the Petitioner amended the original petition by asking the NRC, instead of issuing a civil penalty to FPL, to require FPL to create a monetary fund to enhance FPL's employee concerns program by generating cash rewards to employees who raise safety concerns; and raised a concern regarding an employee retention bonus agreement used by FPL, which you claim contains language that violates 10 C.F.R. § 50.7(f). Finally, the Petitioner filed a separate petition pursuant to 10 C.F.R. § 2.206 to NRC Chairman Gregory B. Jaczko on January 5, 2010. In this petition, it was requested that the NRC issue a confirmatory order requiring FPL to immediately place the Turkey Point and St. Lucie facilities in cold shutdown until such time as the NRC can make a full assessment of the work environments at those facilities and determine whether employees at those facilities are free, and feel free, to raise nuclear safety concerns to FPL management or directly to the NRC without fear of retaliation. The NRC combined Petitioner's second petition with the original petition and amendment.

B The final Director's Decision was issued on July 9, 2010. The Petitioner raised issues related to weaknesses in the ECP as a means of getting issues entered into the CAP and "chilling effects" that exist at Turkey Point and are spreading to St. Lucie where employees are dissuaded from freely raising nuclear safety concerns to the NRC or within FPL for fear of retaliation by FPL management. The NRC held a public meeting on October 20, 2009 (ADAMS Accession No. ML093090274), at the Region II Office in Atlanta, GA, to discuss FPL's processes for addressing employee concerns and planned, fleet-wide corrective actions for addressing FPL-identified weaknesses. The Licensee indicated that it planned to implement eighty-six corrective actions to address the weaknesses. Problem Identification and Resolution inspection reports 05000335/2010006 and 05000389/2010006 for St. Lucie dated April 19, 2010 focused on these concerns.

C The NRC has performed Problem Identification and Resolution inspections at Turkey Point and St. Lucie that cover the time frames indicated by the Petitioner. The inspections concluded that the CAP processes and procedures were effective and thresholds for identifying issues were appropriately low. Furthermore, the NRC is aware of the actions that the Licensee is taking to address the FPL-identified weaknesses, and the NRC will continue to assess the effectiveness of these actions during the next Problem

**DIGESTS**  
**ISSUANCES OF DIRECTORS' DECISIONS**

Identification and Resolution inspection. The NRC determined that FPL had made progress in improving all areas addressed by the improvement plan. The NRC also determined that employees felt free to raise concerns without fear of retaliation. As stated in Problem Identification and Resolution inspection reports 05000335/2010006 and 05000389/2010006 for St. Lucie dated April 19, 2010, the NRC concluded that based on discussions and interviews with plant employees from various departments, individuals remained aware of the processes for raising concerns, were not reluctant to raise safety concerns to management or the NRC, had initiated CAP items, and participated in the safety culture surveys. Therefore, the NRC concluded that public health and safety have not been affected by Licensee-identified weaknesses in the ECP. The NRC has also reviewed FPL's retention bonus agreement and has concluded that it does not violate 10 C.F.R. § 50.7(f).

- D Accordingly, NRC denied the Petitioner's requests as stated above.
- DD-10-2 NORTHERN STATES POWER COMPANY (Prairie Island Nuclear Generating Plant, Units 1 and 2), Docket Nos. 50-282, 50-306 (License Nos. DPR-42, DPR-60); REQUEST FOR ACTION; July 20, 2010; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206
- DD-10-3 IDAHO STATE UNIVERSITY (Idaho State University AGN-201), Docket No. 50-284 (License No. R-110), REQUEST FOR ACTION; July 30, 2010; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206
- A The Petitioner, Dr. Crawford, stated that during his tenure as the Reactor Supervisor at the Idaho State University research reactor from December 19, 1991, until March 12, 1993, he witnessed regulatory, criminal, and ethical violations associated with the operation of the NRC-licensed facility. Furthermore, Dr. Crawford contended that the NRC was grossly negligent in concealing violations in the Notice of Violation (NOV) (Inspection Report 50-284/93-01) (ADAMS Accession No. ML092600304) and that Idaho State University continues to operate its reactor in violation of regulatory requirements. The Petitioner provided a detailed historical chronology of events with regard to observed activity and alleged acts of misconduct involving Staff who worked during the said period of Dr. Crawford's tenure.
- B On September 15, 2009, the NRC Petition Review Board (PRB) convened to discuss the petition under consideration and determine whether it met the criteria for further review under the 10 C.F.R. § 2.206 process. The PRB comprised NRC technical and enforcement staff and legal counsel, and it was chaired by an NRC senior-level manager. The PRB determined that the petition under consideration met the criteria established in NRC Management Directive 8.11, "Review Process for 10 C.F.R. § 2.206 Petitions," and was accepted in part into the 10 C.F.R. § 2.206 process. Issues that were not accepted into the 2.206 petition process did not satisfy the criteria as specified in NRC Management Directive (MD) 8.11, "Review Process for 10 C.F.R. 2.206 Petitions."
- C During the week of February 23-24, 2010, a nonroutine inspection (Idaho State University–NRC Non-Routine Inspection Report No. 50-284/2010-201, ADAMS Accession No. ML100321367) was conducted at the Idaho State University research reactor to review logs, records, and observe the performance of licensed activities, pertinent to the issues accepted for Dr. Crawford's 2.206 Petition. Copies of Inspection Report No. 50-284/2010-201 were provided to reactor facility staff at the Idaho State University and to the Petitioner. Additionally, the observations made during the inspection supplemented the bases for the Final Director's Decision.
- D The Final Director's Decision (ADAMS Accession No. ML101160483) was issued on July 30, 2010. The Petitioner raised potential safety concerns that occurred during his tenure as Supervisor of the Idaho State University Research Reactor. The Petitioner requested that the NRC take enforcement action against the Licensee for continuing to operate in violation of their regulatory requirements.
- E The NRC technical staff reviewed the results from the inspection team and other docketed information associated with the past and present operation at the Licensee's facility. The NRC Staff concluded that reactor operation at Idaho State University maintains awareness and implements practices that were consistent with public health and safety. Based on the inspection and review, there were no current violations and no other violations that occurred in the past that were not appropriately addressed.
- F Accordingly, NRC denied the Petitioner's request for enforcement action against Idaho State University's research reactor.

**LEGAL CITATIONS INDEX**  
**CASES**

- A. Michael's Piano, Inc. v. Federal Trade Commission*, 18 F.3d 138, 147 (2d Cir. 1994)  
deliberative process protects several strong interests, including an agency's interest in preserving the integrity of its consultative functions and the public's interest in good government; LBP-06-25, 64 NRC 391 (2006)
- Abbott Laboratories v. Gardner*, 387 U.S. 136, 148-49 (1967)  
the basic rationale of the ripeness doctrine is to prevent the courts, through avoidance of premature adjudication, from entangling themselves in abstract disagreements over administrative policies, and also to protect agencies from judicial interference until an administrative decision has been formalized and its effects felt in a concrete way by the challenging parties; LBP-09-1, 69 NRC 38 n.114 (2009)
- Abbott Laboratories v. Gardner*, 387 U.S. 136, 149 (1967)  
in determining ripeness, boards are to consider both the fitness of the issue for judicial decision and the hardship to the parties of withholding court consideration; LBP-08-24, 68 NRC 721 (2008)  
it is appropriate to assess both the fitness of an issue for judicial decision and the hardship to the parties of withholding court consideration; LBP-09-1, 69 NRC 39 n.114 (2009)
- Abbs v. Sullivan*, 963 F.2d 918, 924 (7th Cir. 1992)  
a winner cannot appeal a judgment; CLI-10-17, 72 NRC 44 n.240 (2010)
- Abourezk v. Reagan*, 785 F.2d 1043, 1053 (D.C. Cir. 1986), *aff'd*, [484 U.S. 1] (1987)  
although administrative history and other available guidance may be consulted for background information and the resolution of ambiguities in a regulation's language, its interpretation may not conflict with the plain meaning of the wording used in that regulation; LBP-09-15, 70 NRC 214 (2009)
- Abraham v. Hodges*, 255 F. Supp. 2d 539, 552 n.9 (D.S.C. 2002)  
Congress abolished the Atomic Energy Commission, assigning the defunct agency's regulatory authority to the new NRC and its promotional authority to the new Energy Research and Development Administration; CLI-09-14, 69 NRC 607 (2009)
- Addamax Corp. v. Open Software Foundation, Inc.*, 148 F.R.D. 462, 467-68 (D. Mass. 1993)  
the concept of control extends to situations in which the party has the practical ability to obtain materials in the possession of another, even if the party cannot compel the other person or entity to produce the requested materials; LBP-12-23, 72 NRC 708 n.23 (2010)
- Adickes v. S.H. Kress & Co.*, 398 U.S. 144, 160 (1970)  
where the evidentiary matter in support of a summary disposition motion does not establish the absence of a genuine issue, summary judgment must be denied even if no opposing evidentiary matter is presented; LBP-08-7, 67 NRC 372 (2008)
- Advanced Medical Systems, Inc.* (One Factory Row, Geneva, Ohio 44041), CLI-93-22, 38 NRC 98, 102 (1993)  
a licensing board ruling on a summary disposition motion must view the record in the light most favorable to the party opposing such a motion and deny the motion if the moving party fails to meet its burden, even in the face of an inadequate response; LBP-07-12, 66 NRC 125 (2007); LBP-07-13, 66 NRC 131 (2007)  
an opponent of summary disposition does not have to show that it would prevail on the issues, but rather must demonstrate that there is a genuine factual issue to be tried; LBP-07-12, 66 NRC 125-26 (2007); LBP-07-13, 66 NRC 131 (2007)

## LEGAL CITATIONS INDEX

### CASES

- any doubt as to the existence of a genuine issue of material fact is resolved against the moving party; CLI-06-5, 63 NRC 121 (2006); LBP-10-20, 72 NRC 579 (2010)
- because the burden is on the proponent of summary disposition, the board must examine the record in the light most favorable to the nonmoving party and give the nonmoving party the benefit of all favorable inferences that can be drawn from the evidence; CLI-06-5, 63 NRC 122 (2006); LBP-10-20, 72 NRC 579 (2010)
- if a summary disposition proponent meets its burden, an opponent must set forth specific facts showing that there is a genuine issue, and may not rely on mere allegations or denials; CLI-06-5, 63 NRC 122 (2006); LBP-07-12, 66 NRC 125 (2007); LBP-07-13, 66 NRC 131 (2007)
- NRC standards governing summary disposition are based on those the federal courts apply to motions for summary judgment under Rule 56 of the Federal Rules of Civil Procedure; CLI-10-11, 71 NRC 297 (2010)
- summary disposition movant bears the burden of demonstrating that there is no genuine issue as to any material fact; CLI-06-5, 63 NRC 121 (2006); LBP-07-12, 66 NRC 125 (2007); LBP-10-20, 72 NRC 579 (2010)
- the Commission applies the same standard for summary disposition that the federal courts apply under Rule 56 of the Federal Rules of Civil Procedure when ruling on motions for summary judgment; CLI-06-5, 63 NRC 121 (2006); LBP-07-12, 66 NRC 125 (2007); LBP-10-20, 72 NRC 579 (2010)
- Advanced Medical Systems, Inc.* (One Factory Row, Geneva, Ohio 44041), CLI-93-22, 38 NRC 98, 102-03 (1993)
- a party opposing summary disposition must counter each adequately supported material fact with its own statement of material facts in dispute and supporting materials, or the movant's facts will be deemed admitted; LBP-06-9, 63 NRC 307 (2006)
- a summary disposition movant bears the initial burden of making the requisite showing that there is no genuine issue as to any material fact, which it attempts to do by means of a required statement of material facts not at issue and any supporting materials (including affidavits, discovery responses, and documents) that accompany its dispositive motion; LBP-06-9, 63 NRC 307 (2006)
- any fact not controverted will be deemed admitted; LBP-07-12, 66 NRC 126 (2007)
- summary disposition may be entered with respect to any matter (or all of the matters) in a proceeding if the motion, along with any appropriate supporting material, shows that there is no genuine issue as to any material fact and that the moving party is entitled to a decision as a matter of law; LBP-06-9, 63 NRC 307 (2006)
- Advanced Medical Systems, Inc.* (One Factory Row, Geneva, Ohio 44041), CLI-93-22, 38 NRC 98, 103 (1993)
- if a summary disposition movant satisfies its initial burden and supports its motion by affidavit, the opposing party must either proffer rebutting evidence or submit an affidavit explaining why it is impractical to do so; LBP-07-12, 66 NRC 126 n.61 (2007); LBP-07-13, 66 NRC 131 (2007)
- if the presiding officer determines from affidavits filed by the opposing party that the opposing party cannot present by affidavit the facts essential to justify its opposition, the presiding officer may order a continuance to permit such affidavits to be obtained, or may take other appropriate action; LBP-07-12, 66 NRC 126 n.61 (2007); LBP-07-13, 66 NRC 131 (2007)
- Advanced Medical Systems, Inc.* (One Factory Row, Geneva, Ohio 44041), CLI-93-8, 37 NRC 181, 185 (1993)
- although the Commission is not strictly bound by mootness doctrine, the agency's adjudicatory tribunals have generally adhered to the principle; LBP-09-15, 70 NRC 209 (2009)
- the mootness doctrine derives from the Constitution's limitation of federal courts' jurisdiction to cases or controversies; LBP-09-15, 70 NRC 209 (2009)
- Advanced Medical Systems, Inc.* (One Factory Row, Geneva, Ohio 44041), CLI-93-22, 38 NRC 98, 102 (1993)
- in NRC adjudicatory proceedings, summary disposition motions are the functional equivalent of summary judgment motions; LBP-08-7, 67 NRC 371 (2008)
- Advanced Medical Systems, Inc.* (One Factory Row, Geneva, Ohio 44041), CLI-94-6, 39 NRC 285, 297 (1994), *aff'd* *Advanced Medical Systems, Inc. v. NRC*, 61 F.3d 903 (6th Cir. 1995)
- appellant bears the responsibility of clearly identifying the errors in the decision below and ensuring that its brief contains sufficient information and cogent argument to alert the other parties and the

### CASES

- Commission to the precise nature of and support for the appellant's claims; CLI-06-10, 63 NRC 478 (2006)
- Advanced Medical Systems, Inc.* (One Factory Row, Geneva, Ohio 44041), CLI-94-6, 39 NRC 285, 302 & n.22 (1994)
- "reasonable assurance" requires that a case be proved by the "preponderance of the evidence" standard common to NRC proceedings, which has been interpreted as requiring only that the record underlying a finding makes it slightly more likely than not; LBP-08-22, 68 NRC 646 (2008)
- Advanced Medical Systems, Inc.* (One Factory Row, Geneva, Ohio 44041), CLI-94-6, 39 NRC 285, 306-07 (1994), *aff'd sub nom. Advanced Medical Systems, Inc. v. NRC*, 61 F.3d 903 (Table) (6th Cir. 1995) (per curiam)
- something more than suspicions or bald assertions are necessary as the basis for any purported material factual disputes; LBP-06-9, 63 NRC 308-09 n.8 (2006)
- Aeschliman v. NRC*, 547 F.2d 622, 626 (D.C. Cir. 1977)
- impact of proposed energy conservation alternatives regarding demand for energy must be susceptible to a reasonable degree of proof; LBP-10-10, 71 NRC 603 n.2 (2010)
- Aharon Ben-Haim*, CLI-99-14, 49 NRC 361, 364 (1999)
- on appeal, the Commission is loath to address complaints concerning a board's skepticism of expert witness's testimony, given that the Commission lacks the board's ability to observe the demeanor of the parties' expert witnesses in general and petitioner's witness in particular; CLI-10-17, 72 NRC 46-47 (2010)
- unreviewed licensing board decisions carry no precedential weight; CLI-08-19, 68 NRC 263 (2008); CLI-10-23, 72 NRC 222 (2010)
- Aharon Ben-Haim*, CLI-99-14, 49 NRC 361, 364 & n.2 (1999)
- licensing board findings of fact that turn on witness credibility receive the Commission's highest deference on appeal; CLI-10-23, 72 NRC 225 n.64 (2010)
- Air Courier Conference v. American Postal Workers Union*, 498 U.S. 517 (1991)
- standing was not granted where litigant tried to rely on very narrow statutory provisions to challenge the much broader aspects of a statute that had no meaningful relationship to the litigant's situation; LBP-09-6, 69 NRC 433 (2009)
- Airport Neighbors Alliance v. United States*, 90 F.3d 426, 432 (10th Cir. 1996)
- reasonable alternatives discussed in an environmental impact statement do not include alternatives that are impractical, that present unique problems, or that cause extraordinary costs; LBP-09-16, 70 NRC 298 (2009); LBP-09-7, 69 NRC 633 (2009)
- Akiak Native Community v. U.S. Postal Service*, 213 F.3d 1140, 1148 (9th Cir. 2000)
- it is not enough to consider only the proposed action and the no-action alternative in an environmental assessment; CLI-10-18, 72 NRC 84 (2010)
- Alabama Power Co.* (Joseph M. Farley Nuclear Plant, Units 1 and 2), ALAB-182, 7 AEC 210 (1974)
- the doctrine of collateral estoppel should be applied in appropriate circumstances in NRC proceedings; LBP-08-15, 68 NRC 310 (2008)
- Alabama Power Co.* (Joseph M. Farley Nuclear Plant, Units 1 and 2), ALAB-646, 13 NRC 1027, 1054 n.70 (1981)
- joint ventures are common within the nuclear industry and thus merit consideration in the alternatives analysis; LBP-07-9, 65 NRC 634 (2007)
- Alabama Power Co.* (Joseph M. Farley Nuclear Plant, Units 1 and 2), CLI-81-27, 14 NRC 795, 797 (1981)
- four factors should be considered in ruling on any request for stay; LBP-07-11, 66 NRC 98 (2007)
- when evaluating a motion for a stay the Commission places the greatest weight on irreparable injury to the moving party unless a stay is granted; CLI-10-8, 71 NRC 151 (2010)
- Alabama v. Shalala*, 124 F. Supp. 2d 1250, 1263-64 (M.D. Ala. 2000)
- when an adjudicating agency retroactively applies a new legal standard that significantly alters the rules of the game, the agency is obliged to give litigants proper notice and a meaningful opportunity to adjust; CLI-10-23, 72 NRC 224 (2010)
- Alaska Center for the Environment v. U.S. Forest Service*, 189 F.3d 851, 859 (9th Cir. 1999)
- an explanation of the applicability of a categorical exclusion is required where special circumstances necessitating an environmental review have been alleged; LBP-06-4, 63 NRC 108-09 n.36 (2006)

## LEGAL CITATIONS INDEX

### CASES

- Alaska Department of Transportation and Public Facilities*, CLI-04-26, 60 NRC 399, 404 (2004)  
boards are not to consider whether enforcement orders need strengthening; LBP-07-16, 66 NRC 306 (2007)  
the scope of a proceeding on a confirmatory order is exceedingly limited; LBP-08-14, 68 NRC 286 (2008)  
to the extent that petitioner's request for release of information seeks to enhance the enforcement measures already outlined by the Staff in the confirmatory order, this is also outside the scope of the proceeding; LBP-07-16, 66 NRC 293, 303, 311, 326 n.339 (2007)
- Alaska Department of Transportation and Public Facilities*, CLI-04-26, 60 NRC 399, 404-11, *reconsidered* denied, CLI-04-38, 60 NRC 652 (2004), *petition for review docketed sub nom. Farmer v. NRC*, No. 05-70718 (9th Cir. Feb. 11, 2005)  
enforcement orders typically limit adjudication to whether the facts as stated in the order are true, and whether the proposed sanction is supported by those facts; CLI-06-16, 63 NRC 720 (2006)
- Alaska Department of Transportation and Public Facilities*, CLI-04-26, 60 NRC 399, 405 (2004)  
if petitioner requests a remedy that is beyond the scope of the hearing, then the hearing request must be denied because redressability is an element of standing; LBP-07-16, 66 NRC 285 (2007); LBP-08-14, 68 NRC 287, 289 (2008)  
petitioners may not seek to enhance the measures outlined in an enforcement order; LBP-08-14, 68 NRC 291 (2008)  
the Commission limits the scope of a hearing on an enforcement order to the issue of whether the order should be sustained; LBP-07-16, 66 NRC 300, 305, 316-17, 324, 326 n.339 (2007)  
the issue of standing in an enforcement proceeding and whether a request for hearing raises allegations that are within the scope of the proceeding are closely related; LBP-07-16, 66 NRC 293, 296, 299, 301, 305, 308, 310, 316, 323 (2007); LBP-08-14, 68 NRC 290 (2008)
- Alaska Department of Transportation and Public Facilities*, CLI-04-26, 60 NRC 399, 406 (2004)  
an individual or organization requesting a hearing on an enforcement order must show that petitioner would be adversely affected by the enforcement order as it exists, rather than being adversely affected by the existing order as it might be compared to a hypothetical order that the petitioner asserts would be an improvement; LBP-08-14, 68 NRC 287, 290 (2008)  
an individual simply is not adversely affected by a confirmatory order that improves the safety situation over what it was in the absence of the order; LBP-07-16, 66 NRC 302 (2007)  
boards are not to consider whether enforcement orders need strengthening; LBP-07-16, 66 NRC 293 (2007)  
in a case involving an enforcement order, the relevant points of comparison are the individual's positions with and without the Staff's order, not whether the individual's position would be improved by some hypothetical substitute order; LBP-07-16, 66 NRC 302, 317 (2007)  
in addition to the distance of the individual from the facility, a link between the confirmatory order and the alleged harm to the individual is necessary to establish standing; LBP-07-16, 66 NRC 294, 311, 324 (2007)  
petitioner is required to show that his or her request is within the scope of the proceeding by demonstrating that he or she will be adversely affected by the actual terms of the enforcement order as they exist, rather than as a consequence of the order lacking certain provisions the petitioner claims are necessary; LBP-07-16, 66 NRC 285, 293-94, 306, 310, 311, 316, 317-18, 323, 324 (2007)
- Alaska Department of Transportation and Public Facilities*, CLI-04-26, 60 NRC 399, 406 n.28 (2004)  
it is unlikely that petitioners will often obtain hearings on confirmatory enforcement orders because such orders presumably enhance rather than diminish public safety; LBP-07-16, 66 NRC 285 (2007); LBP-08-14, 68 NRC 287 (2008); LBP-09-20, 70 NRC 578 n.67 (2009)
- Alaska Department of Transportation and Public Facilities*, CLI-04-26, 60 NRC 399, 407 (2004)  
NRC's adjudicatory process is not an appropriate forum for petitioners to second-guess enforcement decisions on resource allocation, policy priorities, or the likelihood of success at hearings; LBP-08-14, 68 NRC 292 (2008)
- Alaska Department of Transportation and Public Facilities*, CLI-04-26, 60 NRC 399, 408-09 (2004)  
claims by a nonlicensee to the effect that the root causes or facts underpinning a confirmatory order are inaccurate are not valid in a proceeding concerning a confirmatory order; LBP-08-14, 68 NRC 292 (2008)

## LEGAL CITATIONS INDEX

### CASES

- Alaska v. Andrus*, 580 F.2d 465, 474 (D.C. Cir. 1978), *vacated in part as moot sub nom. Western Oil & Gas Association v. Alaska*, 439 U.S. 922 (1978)  
the alternatives analysis is the heart of the environmental impact statement; LBP-10-24, 72 NRC 756 (2010)
- Aldens, Inc. v. Miller*, 610 F.2d 538, 541 (8th Cir. 1979)  
the “law of the case” doctrine is a flexible concept with exceptions; CLI-06-11, 63 NRC 488 (2006)
- Alfred J. Morabito* (Senior Operator License for Beaver Valley Power Station, Unit 1), CLI-88-4, 28 NRC 5, 6 (1988)  
unlike many cases in which a contention becomes moot, this is not an instance where an analysis of the merits would be an empty exercise; LBP-09-15, 70 NRC 212 (2009)  
where an applicant proposed that a senior reactor operator license be both issued and cancelled retroactively, the Commission declined to engage in such an empty exercise; LBP-09-14, 70 NRC 196 (2009)
- All Power Reactor Licensees and Research Reactor Licensees Who Transport Spent Nuclear Fuel*, CLI-05-6, 61 NRC 37 (2005)  
issuance of a post-9/11 security order does not amount to unlawfully promulgated regulations; CLI-10-3, 71 NRC 54 n.24 (2010)
- All Power Reactor Licensees and Research Reactor Licensees Who Transport Spent Nuclear Fuel*, CLI-05-6, 61 NRC 37, 41 (2005)  
an order modifying a license, such as a Staff order, falls well within the Administrative Procedure Act’s definition of adjudication, and as such, the Staff order does not trigger the notice-and-comment procedures applicable to rulemakings; CLI-10-3, 71 NRC 54 (2010)
- Allen v. United States*, 816 F.2d 1417 (10th Cir. 1987), *cert. denied*, 484 U.S. 1004 (1988)  
although the Army has the burden to protect the public from depleted uranium, that issue is not relevant to an inquiry on standing; LBP-10-4, 71 NRC 239 n.34 (2010)
- Allen v. Wright*, 468 U.S. 737, 751 (1984)  
to establish standing, petitioner must show that he or she has personally suffered or will personally suffer a distinct and palpable harm that constitutes injury in fact, the injury can fairly be traced to the challenged action, and the injury is likely to be redressed by a favorable decision; LBP-08-15, 68 NRC 302 (2008); LBP-09-4, 69 NRC 177 (2009)
- Allentown Mack Sales & Service, Inc. v. National Labor Relations Board*, 522 U.S. 359, 374 (1998)  
if a board does not explain how it has arrived at its findings of fact, it would fail to comply with its responsibilities under the Administrative Procedure Act to issue a reasoned decision; CLI-10-23, 72 NRC 224 n.58 (2010)
- Allied-General Nuclear Services* (Barnwell Nuclear Fuel Plant), LBP-74-41, 7 AEC 1015, 1020 & n.11 (1974)  
even “truly exceptional” expenses would not meet the irreparable impact standard governing a petition for interlocutory review; CLI-09-6, 69 NRC 134 (2009)
- Allied-General Nuclear Services* (Barnwell Nuclear Fuel Plant Separations Facility), ALAB-296, 2 NRC 671, 680 (1975)  
the adjudicatory record, the board decision, and any Commission appellate decisions become, in effect, part of the final environmental impact statement; CLI-08-26, 68 NRC 527 n.87 (2008)
- Allied-General Nuclear Services* (Barnwell Nuclear Fuel Plant Separations Facility), ALAB-296, 2 NRC 671, 684 (1975)  
expenses of any kind do not constitute irreparable injury; CLI-09-6, 69 NRC 135 n.25 (2009)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-06-24, 64 NRC 111 (2006)  
challenges to board rulings on late-filed contentions normally fall under the rules for interlocutory review; CLI-09-18, 70 NRC 862 (2009)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-06-24, 64 NRC 111, 118 (2006)  
conditions for admission of a contention are strict by design; LBP-09-26, 70 NRC 952 (2009); LBP-10-6, 71 NRC 358 (2010)

## LEGAL CITATIONS INDEX

### CASES

- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-06-24, 64 NRC 111, 118-19 (2006)  
contention admissibility standards call for a clear statement as to the basis for the contention and the submission of supporting information and references to specific documents and sources that establish the validity of the contention; CLI-10-1, 71 NRC 8 (2010)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-06-24, 64 NRC 111, 119 (2006)  
appeals of rejected contentions are permitted only when a petitioner claims that the board wrongly rejected all contentions; CLI-07-2, 65 NRC 11 (2007)  
if the Commission's supervisory authority constituted grounds for a party's own request for appellate review, there would be no limit to the kinds of arguments parties could legitimately present on appeal, and particularly on interlocutory appeal, a result at odds with the Commission's oft-expressed intent to limit the availability of such appeals; CLI-07-1, 65 NRC 7 (2007)  
longstanding Commission policy generally disfavors interlocutory review; CLI-09-6, 69 NRC 137 n.38 (2009)  
mere notice pleading is insufficient for contention admission; LBP-08-24, 68 NRC 730 (2008); LBP-10-6, 71 NRC 359 (2010)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-06-24, 64 NRC 111, 119 & n.44 (2006)  
petitions for interlocutory review are granted only under extraordinary circumstances; CLI-09-6, 69 NRC 133 (2009)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-06-24, 64 NRC 111, 121 (2006)  
the Commission defers to board rulings on threshold issues of standing and contention admissibility in the absence of clear error or abuse of discretion; CLI-07-20, 65 NRC 503 n.20 (2007); CLI-07-25, 66 NRC 104 (2007); CLI-08-17, 68 NRC 234 (2008); CLI-09-5, 69 NRC 119 (2009); CLI-09-7, 69 NRC 260 (2009); CLI-09-8, 69 NRC 324 (2009); CLI-09-9, 69 NRC 336 (2009); CLI-09-12, 69 NRC 543-44 (2009); CLI-09-14, 69 NRC 584, 610 (2009); CLI-09-16, 70 NRC 35 (2009); CLI-09-20, 70 NRC 914 (2009); CLI-09-22, 70 NRC 933 (2009); CLI-10-1, 71 NRC 5 (2010); CLI-10-2, 71 NRC 29 (2010); CLI-10-7, 71 NRC 138 (2010); CLI-10-9, 71 NRC 253 (2010)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-06-24, 64 NRC 111, 125-26 (2006)  
once a petition to intervene and request for hearing have been granted and contentions are admitted for hearing, appeals of board rulings on new or amended contentions are treated under section 2.341(f)(2), regardless of the subject matter of those contentions; CLI-10-16, 71 NRC 490 (2010)  
the Commission disfavors review of interlocutory board orders, which would result in unnecessary piecemeal interference with ongoing licensing board proceedings; CLI-08-2, 67 NRC 34 n.10 (2008)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-07-8, 65 NRC 124 (2007), *aff'd sub nom., New Jersey Department of Environmental Protection v. NRC*, 561 F.3d 132 (3d Cir. 2009)  
NEPA does not require the NRC to consider the environmental consequences of hypothetical terrorist attacks at NRC-licensed facilities; CLI-07-9, 65 NRC 140-41 (2007); CLI-07-10, 65 NRC 145 (2007); CLI-07-11, 65 NRC 149 n.4 (2007); LBP-09-17, 70 NRC 371, 381-82 (2009)  
the potential impacts of terrorism fall outside the scope of a license renewal proceeding; CLI-07-9, 65 NRC 140-41 (2007)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-07-8, 65 NRC 124, 126 (2007)  
NEPA demands no terrorism inquiry; LBP-10-10, 71 NRC 549 n.63 (2010)  
the Commission has declined to require the agency to consider terrorist threats outside the Ninth Circuit as part of the NEPA review process; CLI-08-1, 67 NRC 5 (2008); LBP-09-10, 70 NRC 116 (2009); LBP-09-17, 70 NRC 343 (2009)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-07-8, 65 NRC 124, 128-29 (2007), *aff'd sub nom., New Jersey Department of Environmental Protection v. NRC*, 561 F.3d 132 (3d Cir. 2009)  
environmental effects of aircraft impacts from terrorist attacks are outside the scope of the NRC's NEPA review; CLI-10-9, 71 NRC 257 n.71 (2010)  
NRC is not obligated to adhere, in all of its proceedings, to the first court of appeals decision to address a controversial question; LBP-08-13, 68 NRC 142 (2008); LBP-09-2, 69 NRC 104 n.69 (2009); LBP-09-17, 70 NRC 382 (2009)

## LEGAL CITATIONS INDEX

### CASES

terrorism is unrelated to the general category of aging issues that license renewal proceedings are meant to address; LBP-08-13, 68 NRC 163, 186 (2008)

the Commission follows the *Mothers for Peace* decision only in those cases arising in the geographical area where it is binding, but continues to adhere to prior precedent in all other cases; LBP-07-14, 66 NRC 185 (2007)

the Commission upheld a licensing board decision rejecting a contention challenging an applicant's failure to consider an aircraft attack scenario in its environmental report's SAMA analysis; LBP-07-11, 66 NRC 83 (2007)

*AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-07-8, 65 NRC 124, 128-29 & n.14 (2007)

the Commission is not obliged to adhere, in all of its proceedings, to the first court of appeals decision to address a controversial question, and is not prevented from relitigating the issue in future cases; LBP-07-14, 66 NRC 185 (2007)

*AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-07-8, 65 NRC 124, 128-31 (2007)

NEPA does not require applicants or licensees to consider terrorist attacks as part of their environmental reviews outside the Ninth Circuit; LBP-09-26, 70 NRC 980, 981 (2009)

*AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-07-8, 65 NRC 124, 128-32 (2007)

even if NEPA required an assessment of the environmental effects of a hypothetical terrorist attack on a nuclear facility, NRC has already made this assessment in the generic environmental Impact statement and a site-specific supplemental environmental impact statement; LBP-10-15, 72 NRC 319 (2010)

*AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-07-8, 65 NRC 124, 128-34 (2007), *aff'd*, *New Jersey Department of Environmental Protection v. NRC*, 561 F.3d 132 (3d Cir. 2009)

a NEPA analysis is not the vehicle for exploring questions about the potential for a terrorist attack upon a proposed nuclear facility; CLI-10-1, 71 NRC 13 (2010); LBP-07-3, 65 NRC 269 (2007); LBP-08-21, 68 NRC 567-68 n.12 (2008); LBP-09-2, 69 NRC 103 (2009)

licensing boards are required to apply the Commission's directive that outside the Ninth Circuit, NEPA does not require the evaluation of the impact of terrorist attacks by aircraft or other means; LBP-09-18, 70 NRC 413 (2009)

*AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-07-8, 65 NRC 124, 129 (2007)

a reasonably close causal relationship must exist between a federal agency action and any environmental consequences of that action in order to trigger a NEPA review; LBP-08-6, 67 NRC 332 (2008)

as a general matter, NEPA imposes no legal duty on the NRC to consider intentional malevolent acts in conjunction with commercial power reactor license renewal applications; CLI-07-9, 65 NRC 142 (2007); CLI-10-14, 71 NRC 476 (2010); LBP-07-11, 66 NRC 84 (2007)

NEPA does not require the NRC to consider the environmental consequences of hypothetical terrorist attacks on NRC-licensed facilities; CLI-09-15, 70 NRC 5 (2009); LBP-07-14, 66 NRC 194 (2007); LBP-08-6, 67 NRC 331, 332, 333 (2008); LBP-08-13, 68 NRC 143 (2008)

NRC is not obliged to adhere, in all of its proceedings, to the first court of appeals decision to address a controversial question; CLI-10-1, 71 NRC 14 n.67 (2010)

prior NRC precedent is consistent with Supreme Court NEPA doctrine, which requires a reasonably close causal relationship between federal agency action and environmental consequences before NEPA is triggered, a relationship similar to that of proximate cause in tort law; LBP-07-14, 66 NRC 186 (2007)

terrorism contentions are, by their very nature, directly related to security and are therefore, under NRC license renewal rules, unrelated to the detrimental effects of aging and thus are beyond the scope of, not material to, and inadmissible in, a license renewal proceeding; LBP-08-13, 68 NRC 142 (2008)

the environmental effect caused by third-party miscreants is simply too far removed from the natural or expected consequences of agency action to require a study under NEPA; CLI-07-10, 65 NRC 146-47 (2007); CLI-10-1, 71 NRC 13 (2010); LBP-07-11, 66 NRC 84, 87 (2007)

## LEGAL CITATIONS INDEX

### CASES

- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-07-8, 65 NRC 124, 129-30 (2007)  
NEPA does not require the NRC to consider the environmental consequences of hypothetical terrorist attacks on NRC-licensed facilities; CLI-07-9, 65 NRC 141 (2007)  
prior NRC precedent is consistent with Supreme Court NEPA doctrine, which requires a reasonably close causal relationship between federal agency action and environmental consequences before NEPA is triggered, a relationship similar to that of proximate cause in tort law; LBP-07-14, 66 NRC 186 (2007)  
terrorism contentions are, by their very nature, directly related to security and are therefore, under NRC's license renewal rules, unrelated to the detrimental effects of aging, and, consequently, are beyond the scope of, not material to, and inadmissible in a license renewal proceeding; CLI-07-9, 65 NRC 141 (2007)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-07-8, 65 NRC 124, 130 (2007)  
a relicensing decision is not related to any change in the risk of terrorist attack, and the terrorism issue is therefore not material; LBP-08-13, 68 NRC 163, 186 (2008)  
NRC licensing decisions are not the proximate cause of any environmental effects related to terrorist attacks on licensed facilities; LBP-07-14, 66 NRC 186, 195 (2007)  
the risk of terrorism at a nuclear facility is determined by factors external to the NRC licensing process; LBP-07-14, 66 NRC 186 (2007)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-07-8, 65 NRC 124, 130 n.25 (2007), *aff'g* LBP-06-7, 63 NRC 188 (2006)  
a license renewal application does not involve new construction, and so there is no change to the physical plant and thus no creation of a new terrorist target; LBP-07-11, 66 NRC 84 (2007)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-07-8, 65 NRC 124, 130-34 (2007)  
addressing the possibility of terrorist attack is best handled outside the context of licensing proceedings; LBP-07-14, 66 NRC 186 (2007)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-07-8, 65 NRC 124, 131 (2007)  
in developing its generic environmental impact statement, NRC performed a discretionary analysis of terrorist acts in connection with license renewal, and concluded that the core damage and radiological release from such acts would be no worse than the damage and release to be expected from internally initiated events; CLI-10-14, 71 NRC 476 (2010)  
the environmental report for licensing a power reactor already contains an analysis of the impacts of a beyond-design-basis severe accident, which might envelop any impacts asserted to arise from a terrorism incident; LBP-07-3, 65 NRC 269 n.19 (2007)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-07-8, 65 NRC 124, 131 (2007), *aff'g* LBP-06-7, 63 NRC 188 (2006)  
there is no basis for admitting a NEPA-terrorism contention in a license renewal proceeding because the GEIS has already performed a discretionary analysis of terrorist acts in connection with license renewal and concluded that the core damage and radiological release from such acts would be no worse than the damage and release to be expected from internally initiated events; LBP-07-11, 66 NRC 84 (2007)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-07-8, 65 NRC 124, 132-33 & n.38 (2007), *aff'd*, *New Jersey Department of Environmental Protection v. NRC*, 561 F.3d 132 (3d Cir. 2009)  
arguments or new facts raised for the first time on appeal are not considered unless their proponent can demonstrate that the information was previously unavailable; CLI-10-3, 71 NRC 51 n.7 (2010)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-07-8, 65 NRC 124, 133 (2007)  
attacks on NRC regulations are prohibited unless the NRC grants a waiver of the prohibition; CLI-07-16, 65 NRC 383 (2007)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-08-13, 67 NRC 396, 399 (2008)  
the Commission expects its adjudicatory boards to enforce reopening requirements rigorously; LBP-08-12, 68 NRC 28 (2008)

## LEGAL CITATIONS INDEX

### CASES

- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-08-13, 67 NRC 396, 400 (2008)  
a license renewal may be set aside or appropriately conditioned even after it has been issued, upon subsequent administrative or judicial review; CLI-10-8, 71 NRC 153 n.56 (2010); LBP-08-12, 68 NRC 28 (2008)  
a showing of a threat of immediate and irreparable harm that will result absent a stay is required for grant of the stay; CLI-10-8, 71 NRC 151 (2010)  
failure to satisfy the first two stay factors renders it unnecessary to make determinations on the two remaining factors, harm to other parties and where the public interest lies; CLI-10-8, 71 NRC 163 (2010)  
stay petitioner must show that success on the merits is a virtual certainty to warrant issuance of the stay; CLI-10-8, 71 NRC 154 (2010)  
the possibility that adequate compensatory or other corrective relief will be available at a later date, in the ordinary course of litigation, weighs heavily against a claim of irreparable harm; CLI-10-8, 71 NRC 153 n.56 (2010)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-08-23, 68 NRC 461, 468 (2008)  
a license renewal applicant's use of an aging management program identified in the Generic Aging Lessons Learned Report constitutes reasonable assurance that it will manage the targeted aging effect during the renewal period; CLI-10-17, 72 NRC 19 n.85, 36, 37 (2010); LBP-08-26, 68 NRC 948 (2008); LBP-10-15, 72 NRC 328 (2010)  
the elements to be addressed when an applicant's aging management plan differs from regulatory guidance are discussed; LBP-08-26, 68 NRC 948 (2008)  
the fact that the Commission has stated that use of an aging management plan identified in NUREG-1801 constitutes reasonable assurance does not mean that an AMP that consists solely of a bald statement that it is "comparable to," "based on," or "consistent with" NUREG-1801 provides such reasonable assurance or "demonstrates" that aging will be adequately managed; LBP-08-25, 68 NRC 871 (2008)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-08-23, 68 NRC 461, 476-77, 481-82, 486 (2008)  
the manner in which the Staff conducts its review is outside the scope of a proceeding; LBP-10-17, 72 NRC 512 (2010)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-08-28, 68 NRC 658, 663 (2008)  
cumulative use factor is a means of quantifying the fatigue that a particular metal component experiences during plant operation; CLI-10-17, 72 NRC 5 n.9 (2010)  
for any material, there is a characteristic number of stress cycles that it can withstand at a particular applied stress level before fatigue failure occurs; CLI-10-17, 72 NRC 14 (2010)  
the feedwater, reactor recirculation, and core spray nozzles on a BWR nuclear power reactor are part of the reactor coolant pressure boundary, and must be designed, fabricated, erected, and tested to the highest quality standards practical and must meet the Class I requirements of ASME BPV Code Section III; LBP-08-25, 68 NRC 801 (2008)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-08-28, 68 NRC 658, 663-66 (2008)  
a synopsis of the concepts of metal fatigue, CUF, CUFen, relevant regulations and Staff guidance, and the simplified Green's function methodology is provided; LBP-08-25, 68 NRC 800 n.50 (2008)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-08-28, 68 NRC 658, 664 n.24 (2008)  
some license renewal applicants have sought to satisfy more than one of the three subsections of 10 C.F.R. 54.21(c)(1)(i)-(iii); CLI-10-17, 72 NRC 18 n.79 (2010)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-08-28, 68 NRC 658, 665 (2008)  
the standard review plan presents one acceptable methodology for calculating the environmentally adjusted cumulative usage factor; CLI-10-17, 72 NRC 20 (2010)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-08-28, 68 NRC 658, 675 (2008)  
the Commission is generally disinclined to upset fact-driven licensing board determinations; CLI-10-17, 72 NRC 30 (2010)

## LEGAL CITATIONS INDEX

### CASES

- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-08-28, 68 NRC 658, 676 & n.73 (2008) 3 discovery is not permitted before a petition to intervene has been granted; CLI-10-24, 72 NRC 463 n.70 (2010)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-09-7, 69 NRC 235, 259 (2009) as an exercise of its inherent supervisory authority over adjudicatory proceedings, the Commission directs the board to provide the Commission with a status report outlining the board's timetable for resolving all pending matters; CLI-10-18, 72 NRC 96 (2010) as for conclusions of law, the Commission will reverse a licensing board's legal rulings if they are a departure from or contrary to established law; CLI-10-5, 71 NRC 99 (2010) legal questions are reviewed de novo and will be reversed if a licensing board's legal rulings are a departure from or contrary to established law; CLI-10-18, 72 NRC 73 (2010) on appeal, the Commission defers to a board's factual findings, correcting only clearly erroneous findings where the Commission has strong reason to believe that a board has overlooked or misunderstood important evidence; CLI-10-5, 71 NRC 99 (2010); CLI-10-18, 72 NRC 73 (2010) the licensing board's principal role in the adjudicatory process is to carefully review all of the evidence, including testimony and exhibits, and to resolve any factual disputes; CLI-10-5, 71 NRC 98 (2010); CLI-10-18, 72 NRC 72 (2010) the standard of clear error for overturning a board's factual findings is quite high; CLI-10-5, 71 NRC 99 (2010); CLI-10-18, 72 NRC 73 (2010) weighing of evidence and testimony is inherent in, and at the very heart of, adjudicatory fact-finding and is an area where the Commission has traditionally deferred to licensing boards; CLI-10-23, 72 NRC 241 (2010)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-09-7, 69 NRC 235, 260 (2009) although a board may view petitioner's supporting information in a light favorable to the petitioner, petitioner (not the board) is required to supply all of the required elements for a valid intervention petition; CLI-10-20, 72 NRC 192 n.39 (2010); LBP-09-10, 70 NRC 72 (2009); LBP-10-15, 72 NRC 278 (2010); LBP-10-16, 72 NRC 394 (2010) in the absence of clear error or abuse of discretion, boards are afforded deference on threshold issues such as contention admissibility; CLI-09-14, 69 NRC 610 (2009) requirements for filing both new and nontimely contentions are stringent; LBP-09-27, 70 NRC 998 (2009)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-09-7, 69 NRC 235, 261 (2009) good cause for the failure to file on time is the most important of the late-filing factors; LBP-09-26, 70 NRC 949 (2009); LBP-10-11, 71 NRC 639 (2010)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-09-7, 69 NRC 235, 263 (2009) like the Atomic Energy Act's standard of adequate protection, the reasonable assurance determination need not be reduced to a mechanical verbal formula or set of objective standards, but may be given content through case-by-case applications of the Commission's technical judgment, in light of all relevant information; CLI-10-14, 71 NRC 465 (2010) reasonable assurance is based on sound technical judgment of the particulars of a case and on compliance with NRC regulations; LBP-09-6, 69 NRC 422 n.272 (2009)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-09-7, 69 NRC 235, 271-72 (2009) contention admissibility and timeliness rules require a high level of discipline and preparation by petitioners, who must examine the publicly available material and set forth their claims and the support for their claims at the outset; CLI-10-27, 72 NRC 496 (2010) NRC's expanding adjudicatory docket makes it critically important that parties comply with NRC pleading requirements and that the board enforce those requirements; CLI-10-27, 72 NRC 496 (2010) there simply would be no end to NRC licensing proceedings if petitioners could disregard timeliness requirements and add new contentions at their convenience during the course of a proceeding based on information that could have formed the basis for a timely contention at the outset of the proceeding; CLI-10-27, 72 NRC 496 (2010)

## LEGAL CITATIONS INDEX

### CASES

- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-09-7, 69 NRC 235, 272-74 (2009)  
new contention is untimely if information on which it is based has been available since submission of applicant's environmental report; LBP-10-13, 71 NRC 694 (2010)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), CLI-09-7, 69 NRC 235, 275 (2009)  
a board may appropriately view petitioners support for its contention in a light that is favorable to the petitioner; LBP-10-6, 71 NRC 361 (2010)  
although a board may appropriately view petitioners' support for its contention in a light that is favorable to the petitioner, the petitioner must provide some support for his or her contention, in the form of either facts or expert testimony; LBP-09-26, 70 NRC 955 (2009)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), LBP-06-7, 63 NRC 188 (2006)  
the purpose of NRC adjudicatory hearings is to consider claims of deficiencies in a license application, and such contentions are commonplace at the outset of NRC adjudications; CLI-08-15, 68 NRC 3 (2008); CLI-08-20, 68 NRC 274 (2008)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), LBP-06-7, 63 NRC 188, 199-201 (2006), *aff'd*, CLI-07-8, 65 NRC 124 (2007)  
terrorist attacks are outside the scope of NEPA; LBP-10-15, 72 NRC 319 (2010)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), LBP-06-7, 63 NRC 188, 211, 217 (2006)  
examples of admitted contentions that satisfy the requirement to provide a specific statement of the issue of law or fact to be raised or controverted are provided; LBP-08-5, 67 NRC 235 n.79 (2008)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), LBP-06-7, 63 NRC 188, 211-12 (2006)  
buried structures, systems, and components that convey or contain radioactively contaminated water or other fluids are systems, structures, and components within the scope of license renewal proceedings; LBP-08-13, 68 NRC 80 (2008)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), LBP-06-11, 63 NRC 391, 395-96 & n.3 (2006)  
when new contentions are based on breaking developments or information, they are to be treated as new or amended, not as nontimely; LBP-07-14, 66 NRC 210 n.95 (2007); LBP-08-27, 68 NRC 955 (2008)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), LBP-06-11, 63 NRC 391, 396 n.3 (2006)  
if a contention satisfies the timeliness requirement of 10 C.F.R. 2.309(f)(2)(iii), then, by definition, it is not subject to 10 C.F.R. 2.309(c), which specifically applies to nontimely filings; LBP-09-27, 70 NRC 998-99 (2009)  
intervenor with contentions rooted in new material information need not make the same showing as intervenors who have simply delayed filing their contentions until after expiration of the regulatory deadline; LBP-10-9, 71 NRC 505 n.46 (2010)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), LBP-06-16, 63 NRC 737, 742 (2006)  
boards commonly reformulate, or expressly limit contentions, to focus them to the precise matters that are supported; LBP-08-9, 67 NRC 430 (2008)  
there is a difference between contentions that allege that a license application suffers from an improper omission and contentions that raise a specific substantive challenge to how particular information or issues have been discussed in a license application; LBP-08-12, 68 NRC 21 n.14 (2008)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), LBP-06-16, 63 NRC 737, 742 & n.7 (2006)  
contentions may be divided into a challenge to the application's adequacy based on the validity of the information that is in the application, a challenge to the application's adequacy based on its alleged omission of relevant information, or some combination of these two challenges; LBP-08-2, 67 NRC 64 (2008); LBP-08-3, 67 NRC 95 (2008)

## LEGAL CITATIONS INDEX

### CASES

- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), LBP-06-16, 63 NRC 737, 744-45 (2006)  
the first step in assessing the admissibility of a new contention is to determine if it is timely under 10 C.F.R. 2.309(f)(2)(iii) or nontimely under section 2.309(c); LBP-07-15, 66 NRC 266 (2007); LBP-09-10, 70 NRC 138 (2009)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), LBP-06-16, 63 NRC 737, 744-45 & n.12 (2006)  
a new or amended contention that is found to be timely in accord with section 2.309(f)(2) need not be assessed under the section 2.309(c) factors, which are considered to apply only to otherwise nontimely submissions; LBP-10-1, 71 NRC 187 (2010); LBP-10-14, 72 NRC 108 (2010)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), LBP-06-22, 64 NRC 229, 230-31 (2006)  
in a second contention on drywell corrosion, admitted in part after the first contention on the subject was ruled moot based on actions taken by that applicant to address a deficiency alleged in that contention, petitioners provide a relatively detailed argument; LBP-06-23, 64 NRC 323 n.309 (2006)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), LBP-06-22, 64 NRC 229, 235 (2006)  
quality assurance, physical protection (security), and radiation protection requirements are not subject to physical aging processes that may cause noncompliance with those aspects of the current licensing basis that can be impacted by the detrimental effects of aging; LBP-08-22, 68 NRC 601-02 n.50 (2008)  
the portion of the current licensing basis that can be impacted by the detrimental effects of aging is limited to the design-basis aspects of the CLB; LBP-08-22, 68 NRC 601-02 n.50 (2008)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), LBP-06-22, 64 NRC 229, 236 n.10 (2006)  
boards have discretion to reframe contentions for purposes of clarity, succinctness, and a more efficient proceeding; LBP-08-12, 68 NRC 30 n.1 (2008)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), LBP-06-22, 64 NRC 229, 237, 240-44 (2006)  
licensing boards may reformulate contentions to eliminate extraneous issues or to consolidate issues for a more efficient proceeding; CLI-09-12, 69 NRC 552 (2009); CLI-10-2, 71 NRC 33 (2010); LBP-10-16, 72 NRC 403 (2010)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), LBP-06-22, 64 NRC 229, 244 (2006)  
at the admissibility stage, petitioner does not have to prove its contentions and boards do not adjudicate disputed facts; LBP-09-6, 69 NRC 401 (2009)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), LBP-06-22, 64 NRC 229, 253 (2006)  
challenges to applicant's corrective action and quality assurance programs are outside the scope of license renewal; LBP-10-15, 72 NRC 327 (2010)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), LBP-07-17, 66 NRC 327, 340 (2007)  
applicant has the burden of proving that it has met the reasonable assurance standard by a preponderance of the evidence; LBP-08-25, 68 NRC 788 (2008)  
reasonable assurance does not denote a specific statistical parameter, but the standard is a flexible one that does not require focus on extreme values or precise quantification of parameters to a high degree of confidence; LBP-08-22, 68 NRC 645 (2008)  
the *sine qua non* of adequate protection to public health and safety is compliance with all applicable safety rules and regulations; LBP-08-25, 68 NRC 787 (2008)  
whether the reasonable assurance standard is satisfied is based on sound technical judgment applied on a case-by-case basis; LBP-09-6, 69 NRC 421-22 n.272 (2009)

## LEGAL CITATIONS INDEX

### CASES

- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), LBP-07-17, 66 NRC 327, 340, 371 (2007)  
“reasonable assurance” requires that a case be proved by the “preponderance of the evidence” standard common to NRC proceedings, which has been interpreted as requiring only that the record underlying a finding makes it slightly more likely than not; LBP-08-22, 68 NRC 646 (2008)
- AmerGen Energy Co., LLC* (Oyster Creek Nuclear Generating Station), LBP-08-12, 68 NRC 5, 21 (2008)  
as with all contentions of omission, if applicant supplies the missing information or performs the omitted analysis, the contention is moot; LBP-10-14, 72 NRC 109 n.31 (2010)
- AmerGen Energy Co., LLC* (Three Mile Island Nuclear Station, Unit 1), CLI-05-25, 62 NRC 572, 574 (2005)  
because applicant did not propose to change either operating or possession authority, there is no direct license transfer; CLI-08-19, 68 NRC 255 n.3 (2008)
- AmerGen Energy Co., LLC* (Three Mile Island Nuclear Station, Unit 1), CLI-05-25, 62 NRC 572, 574-75 (2005)  
proximity standing rests on the presumption that an accident associated with the nuclear facility could adversely affect the health and safety of people working, living, or regularly engaging in activities offsite but within a certain distance of that facility; CLI-08-19, 68 NRC 268 n.65 (2008)
- AmerGen Energy Co., LLC* (Three Mile Island Nuclear Station, Unit 1), CLI-05-25, 62 NRC 572, 574-76 (2005)  
in an indirect license transfer case involving no change in operating or possession authority, petitioners living and working within 12 miles of the plant did not qualify for proximity-based standing; CLI-08-19, 68 NRC 269 n.68 (2008)  
there is no obvious potential for offsite consequences from an ISFSI transfer sufficient to justify applying a presumption of standing based on proximity; CLI-07-19, 65 NRC 426 (2007)
- AmerGen Energy Co., LLC* (Three Mile Island Nuclear Station, Unit 1), CLI-05-25, 62 NRC 572, 576 (2005)  
proximity-based standing in license transfer proceedings has been denied to petitioners within 12 miles; CLI-07-21, 65 NRC 523 (2007)
- American Manufacturers Mutual Insurance Co. v. American Broadcasting — Paramount Theaters, Inc.*, 388 F.2d 272, 280 (2d Cir. 1967)  
an opponent of summary disposition does not have to show that it would prevail on the issues, but rather must demonstrate that there is a genuine factual issue to be tried; LBP-07-12, 66 NRC 126 (2007); LBP-07-13, 66 NRC 131 (2007)
- American Rivers v. Federal Energy Regulatory Commission*, 201 F.3d 1186, 1195 n.15 (9th Cir. 2000)  
a NEPA analysis relating to aquatic impacts must, as a practical matter, have a baseline from which to operate; LBP-07-3, 65 NRC 256 (2007)
- Amoco Production Co. v. Village of Gambell*, 480 U.S. 531, 542 (1987)  
the bases for injunctive relief are irreparable injury and inadequacy of legal remedies, and in each case, a court must balance the competing claims of injury and must consider the effect on each party of the granting or withholding of the requested relief; CLI-06-27, 64 NRC 401 n.9 (2006)
- Amoco Production Co. v. Village of Gambell*, 480 U.S. 531, 545 (1987)  
where, in weighing the balance of harms, injury to the environment is not at all probable, an injunction is not appropriate; CLI-06-27, 64 NRC 402 n.9 (2006)
- Anderson v. Bessemer City*, 470 U.S. 564, 573-76 (1985)  
although the Commission has discretion to review all underlying factual issues de novo, it generally steps in only to correct clearly erroneous findings; CLI-06-22, 64 NRC 40 (2006)  
on appeal, the Commission defers to a board’s factual findings, correcting only clearly erroneous findings, i.e., findings not even plausible in light of the record viewed in its entirety; CLI-06-15, 63 NRC 697 (2006); CLI-10-5, 71 NRC 99 (2010); CLI-10-18, 72 NRC 73 (2010)  
to show clear error, appellant must demonstrate that the board’s findings are not even plausible in light of the record viewed in its entirety; CLI-10-23, 72 NRC 225 (2010)
- Anderson v. Evans*, 314 F.3d 1006, 1018 (9th Cir. 2002)  
in determining whether there is no significant impact, the government does not need to show that there is no risk of injury, but only that the risk is not significant; CLI-08-1, 67 NRC 29 (2008)

## LEGAL CITATIONS INDEX

### CASES

- Anderson v. Liberty Lobby, Inc.*, 477 U.S. 242, 247-48 (1986)  
it is not sufficient for there to be merely the existence of some alleged factual dispute between the parties, but rather that there be no genuine issue of material fact; CLI-10-11, 71 NRC 297 (2010)
- Anderson v. Liberty Lobby, Inc.*, 477 U.S. 242, 248 (1986)  
facts are material if they will affect the outcome of a proceeding under the governing law; LBP-07-12, 66 NRC 125 (2007)  
only disputes over facts that might affect the outcome of a proceeding would preclude summary disposition, factual disputes that are unnecessary not being counted; CLI-10-11, 71 NRC 297 (2010)  
when petitioner has allegedly failed to dispute facts that might affect the outcome of the suit under the governing law, its remaining irrelevant or unnecessary claims should not be counted in ruling on applicant's motion for summary disposition; LBP-07-12, 66 NRC 118 (2007); LBP-07-13, 66 NRC 140 (2007)
- Anderson v. Liberty Lobby, Inc.*, 477 U.S. 242, 249 (1986)  
if evidence is not significantly probative, summary judgment may be granted; LBP-07-13, 66 NRC 140 n.8 (2007)  
the judge's function in ruling on summary disposition motions is not to weigh the evidence and determine the truth of the matter but to determine whether there is a genuine issue for hearing; CLI-10-11, 71 NRC 297-98 (2010)
- Anderson v. Liberty Lobby, Inc.*, 477 U.S. 242, 249-50 (1986)  
if the evidence in favor of the nonmoving party is merely colorable or not significantly probative, summary disposition may be granted; CLI-10-11, 71 NRC 297 (2010)
- Anderson v. Liberty Lobby, Inc.*, 477 U.S. 242, 249-52 (1986)  
at issue in summary disposition is not whether evidence unmistakably favors one side or the other, but whether there is sufficient evidence favoring the nonmoving party for a reasonable trier of fact to find in favor of that party; CLI-10-11, 71 NRC 297 (2010)
- Anderson v. Liberty Lobby, Inc.*, 477 U.S. 242, 250 (1986)  
a judge must grant summary disposition if, under the governing law, there can be but one reasonable conclusion as to the verdict; LBP-07-13, 66 NRC 140 n.8 (2007)  
the correct inquiry in deciding summary disposition motions is whether there are material factual issues that can be properly resolved only by a finder of fact because they may reasonably be resolved in favor of either party; CLI-10-11, 71 NRC 297 (2010)
- Anderson v. Liberty Lobby, Inc.*, 477 U.S. 242, 250-51 (1986)  
if reasonable minds could differ as to the import of the evidence, summary disposition is not appropriate; CLI-10-11, 71 NRC 298 (2010)
- Anderson v. Liberty Lobby, Inc.*, 477 U.S. 242, 252 (1986)  
in ruling on summary disposition motions, a judge must ask himself whether a fair-minded jury could return a verdict for the nonmovant on the evidence presented; LBP-07-13, 66 NRC 140 n.8 (2007)
- Anderson v. Liberty Lobby, Inc.*, 477 U.S. 242, 253 (1986)  
if there is no evidence upon which a reasonable mind might fairly conclude for the nonmovant, a summary disposition motion must be granted; LBP-07-13, 66 NRC 140 n.8 (2007)
- Anderson v. Liberty Lobby, Inc.*, 477 U.S. 242, 254 (1986)  
there is no genuine issue if the evidence presented in the opposing affidavits is of insufficient caliber or quantity to allow a rational finder of fact to find for opponent of summary disposition; LBP-07-13, 66 NRC 141 n.9 (2007)
- Anderson v. Liberty Lobby, Inc.*, 477 U.S. 242, 255 (1986)  
caution should be exercised in granting summary disposition, which may be denied if there is reason to believe that the better course would be to proceed to a full hearing; CLI-10-11, 71 NRC 298 (2010)  
in deciding a summary disposition motion the tribunal must examine the evidence in the light most favorable to the nonmoving party; LBP-08-7, 67 NRC 372 (2008)  
in ruling on a motion for summary disposition, a licensing board or presiding officer should not conduct a trial on affidavits; CLI-10-11, 71 NRC 297 (2010)  
in ruling on summary disposition motions, the evidence of the nonmovant is to be believed, and all justifiable inferences are to be drawn in his favor; CLI-10-11, 71 NRC 298 (2010)

## LEGAL CITATIONS INDEX

### CASES

- summary judgment is not appropriate if it would require a judge to engage in the making of credibility determinations, the weighing of the evidence, or the drawing of legitimate inferences from the facts; LBP-07-12, 66 NRC 126 (2007)
- Anderson v. Marion County Sheriff's Department*, 220 F.R.D. 555, 563-64 (S.D. Ind. 2004)  
a ten-point test for evaluating the law enforcement privilege under FOIA has been used; LBP-06-25, 64 NRC 385 (2006)
- Andrew Siemaszko*, CLI-06-12, 63 NRC 495, 500 (2006)  
a request to hold an enforcement proceeding in abeyance for an indeterminate length of time is extraordinary and is rarely granted; LBP-06-13, 63 NRC 536 n.32, 566 n.135 (2006)  
five factors are weighed to determine whether there is good cause to delay a proceeding regarding an immediately effective license suspension order; LBP-06-13, 63 NRC 535 n.28 (2006)  
the question whether to hold an NRC enforcement proceeding in abeyance pending a related criminal prosecution is generally suitable for interlocutory Commission review because the abeyance issue cannot await the end of the proceeding; CLI-06-19, 64 NRC 11 (2006)
- Andrew Siemaszko*, CLI-06-12, 63 NRC 495, 500, 502-04 (2006)  
whether continuation of an NRC enforcement adjudication could at least arguably jeopardize a related criminal proceeding is a key factor in any abeyance ruling in an NRC enforcement proceeding; CLI-06-19, 64 NRC 12 (2006)
- Andrew Siemaszko*, CLI-06-12, 63 NRC 495, 500, 504-05 (2006)  
harm from a delay of the enforcement proceeding is a key issue in any abeyance ruling; CLI-06-19, 64 NRC 12 (2006)
- Andrew Siemaszko*, CLI-06-12, 63 NRC 495, 501 & n.14 (2006)  
the Commission usually defers to boards' fact-based decisions; CLI-06-19, 64 NRC 11 (2006)
- Andrew Siemaszko*, CLI-06-12, 63 NRC 495, 502 (2006)  
DOJ must provide factual justification for delaying the NRC adjudicatory process; CLI-06-19, 64 NRC 13 (2006)  
Staff's mere assertion that it wishes to protect DOJ's pending criminal prosecution does not, without more, justify holding NRC's parallel administrative proceeding in abeyance; LBP-06-13, 63 NRC 538 n.44, 562 (2006)  
the Commission is generally inclined to accommodate an abeyance request from the Department of Justice as long as it provides at least some showing of potential detrimental effect on its parallel criminal case; CLI-07-6, 65 NRC 115 (2007)
- Andrew Siemaszko*, CLI-06-12, 63 NRC 495, 503 (2006)  
the weight to be given the Staff's reason for seeking an abeyance turns on the quality of the factual record; CLI-06-19, 64 NRC 12 (2006); CLI-07-6, 65 NRC 116 (2007); LBP-06-13, 63 NRC 541, 566 (2006)
- Andrew Siemaszko*, CLI-06-12, 63 NRC 495, 504 (2006)  
in ruling on an abeyance request from the Department of Justice, the Commission does not lightly second-guess DOJ's views on whether, and how, premature disclosure might affect its criminal prosecutions; CLI-06-19, 64 NRC 13 (2006); CLI-07-6, 65 NRC 115-16 (2007); LBP-06-13, 63 NRC 556, 566 (2006)  
NRC is loath to permit a criminal defendant to use its procedures to do an end run around rules prescribed by the Supreme Court and implicitly approved by Congress; CLI-07-6, 65 NRC 116 n.14 (2007)  
prejudice to the enforcement target's ability to litigate the enforcement proceeding and prejudice to his employment interests must be considered in ruling on an abeyance request; CLI-06-19, 64 NRC 13 n.27 (2006)
- Andrew Siemaszko*, CLI-06-12, 63 NRC 495, 504-05 (2006)  
where the individual who was the subject of a suspension order that was not immediately effective had already left the industry, there was no establishment of harm to his property interests; LBP-06-13, 63 NRC 543 (2006)
- Andrew Siemaszko*, CLI-06-12, 64 NRC 495 (2006)  
there were no factors that would interfere with the criminal prosecution if discovery in the civil enforcement matter went forward; LBP-09-24, 70 NRC 804-05 n.17 (2009)

## LEGAL CITATIONS INDEX

### CASES

- Andrew Siemaszko*, CLI-06-16, 63 NRC 708, 715-24 (2006)  
the hurdles that an entity seeking discretionary intervention must overcome are discussed; LBP-09-6, 69 NRC 438 n.386 (2009)
- Andrew Siemaszko*, CLI-06-16, 63 NRC 708, 718-19 (2006)  
on appeal, the Commission is loath to address complaints concerning a board's skepticism of expert witness testimony, given that the Commission lacks the Board's ability to observe the demeanor of the parties' expert witnesses in general and petitioner's witness in particular; CLI-10-17, 72 NRC 46-47 (2010)
- Andrew Siemaszko*, CLI-06-16, 63 NRC 708, 719-24 (2006)  
discretionary intervention is denied where petitioner had not demonstrated how its tangible interests would be affected by the proceeding, was essentially seeking only to support the subject of the enforcement action, and had provided what was deemed insufficient information about the contribution its experts could be expected to make; LBP-09-6, 69 NRC 438 (2009)
- Andrew Siemaszko*, CLI-06-16, 63 NRC 708, 720 (2006)  
a board's efforts at contention reformulation did not achieve the goal of clarity, succinctness, and a more efficient proceeding; CLI-09-12, 69 NRC 553 (2009)  
boards have discretion to reframe a contention for purposes of clarity, succinctness, and a more efficient proceeding; LBP-06-22, 64 NRC 236 n.10 (2006); LBP-08-12, 68 NRC 30 n.1 (2008)
- Andrew Siemaszko*, CLI-06-16, 63 NRC 708, 720-21 (2006)  
boards may reframe admissible contentions for purposes of clarity, succinctness, and a more efficient proceeding, but must not add material not raised by the petitioners to make an otherwise inadmissible contention admissible; CLI-09-12, 69 NRC 553 (2009); CLI-10-14, 71 NRC 464 n.80 (2010); LBP-08-11, 67 NRC 482 (2008)
- Andrew Siemaszko*, CLI-06-16, 63 NRC 708, 722, 724 (2006)  
petitioners may protect their interests by participating as appropriate, as *amici curiae*; CLI-10-12, 71 NRC 327 n.50 (2010)
- Andrew Siemaszko*, CLI-06-16, 63 NRC 708, 725-26 (2006)  
discretionary intervention is denied because the petitioner filed no contentions of its own, although the contention requirement might be viewed as ordinarily inapplicable to enforcement proceedings; LBP-09-6, 69 NRC 438 (2009)
- Andrus v. Sierra Club*, 442 U.S. 347, 350 (1979)  
an agency's preparation and public dissemination of the environmental impact statement serves to fulfill NEPA's twin aims because the detailed statement it requires is the outward sign that environmental values and consequences have been considered during the planning stage of agency actions; LBP-06-19, 64 NRC 62 (2006)
- Andrus v. Sierra Club*, 442 U.S. 347, 356-58 (1979)  
Council on Environmental Quality regulations receive substantial deference from federal courts in interpreting the requirements of NEPA; LBP-10-16, 72 NRC 418 n.275 (2010)
- Animal Defense Council v. Hodel*, 840 F.2d 1432, 1439 (9th Cir. 1988)  
where the information in the initial environmental impact statement is so incomplete or misleading that the decisionmaker and the public cannot make an informed comparison of the alternatives, revision of an EIS may be necessary to provide a reasonable, good-faith, and objective presentation of the subjects required by NEPA; LBP-10-24, 72 NRC 762, 763 (2010)
- APWU v. Potter*, 343 F.3d 619, 626 (2d Cir. 2003)  
a text should be construed so that effect is given to all its provisions, so that no part will be inoperative or superfluous, void or insignificant, and so that one section will not destroy another unless the provision is the result of obvious mistake or error; LBP-09-16, 70 NRC 264 n.118 (2009)
- ARCO Pipeline Co. v. S/S Trade Star*, 81 F.R.D. 416, 417 (E.D. Pa. 1978)  
in response to claims of attorney-client and attorney work product privilege, the identity of an expert retained by a party is discoverable; LBP-06-10, 63 NRC 335 n.68 (2006)
- Arizona Copper Co. v. Gillespie*, 230 U.S. 46, 52 (1913)  
farmer 25 miles downstream could sue to enjoin mining company from depositing slimes, slickens, and tailings into stream used for irrigation; CLI-09-12, 69 NRC 546 n.43 (2009)

## LEGAL CITATIONS INDEX

### CASES

regarding rivers generally and the question of how far contamination of various sorts may be carried in them, plaintiffs have been found to have a right to apply for preventive relief where copper mining tailings were carried 25 miles to plaintiff's farm; LBP-08-6, 67 NRC 286 (2008)

*Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1 and 2), LBP-82-117B, 16 NRC 2024, 2032 (1982)

the addition of a condition on a license to operate would constitute a materially different result warranting reopening; LBP-08-12, 68 NRC 40 n.12 (2008)

*Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1, 2, and 3), CLI-91-12, 34 NRC 149 (1991)

a licensing board may not make factual inferences on a petitioner's behalf, or supply information that is lacking; LBP-06-10, 63 NRC 340 (2006); LBP-06-23, 64 NRC 355 (2005)

*Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1, 2, and 3), CLI-91-12, 34 NRC 149, 155 (1991)

a board appropriately reviews the materials cited in support of a contention, while making no pronouncements on whether the information contained in the application or the claims made in the petition are valid; CLI-10-9, 71 NRC 261 (2010)

a board may appropriately view petitioners' support for its contention in a light that is favorable to the petitioner; LBP-08-13, 68 NRC 63 (2008); LBP-08-16, 68 NRC 384 (2008); LBP-08-26, 68 NRC 917 (2008)

a board may appropriately view petitioner's supporting information in a light favorable to the petitioner, but failure to provide such information regarding a proffered contention requires that the contention be rejected; LBP-07-3, 65 NRC 253 (2007); LBP-07-10, 66 NRC 23 (2007); LBP-07-16, 66 NRC 287 (2007); LBP-10-6, 71 NRC 361 (2010); LBP-10-7, 71 NRC 420 (2010)

a board must not redraft an inadmissible contention to cure deficiencies and thereby render it admissible; CLI-06-16, 63 NRC 721 n.38 (2006)

a board's authority to recast contentions is circumscribed in that it may not, on its own initiative, provide basic, threshold information required for contention admissibility; LBP-08-11, 67 NRC 482 (2008)

all of the contention admissibility requirements of 10 C.F.R. 2.309(f)(1) must be met for a contention to be admissible; LBP-08-18, 68 NRC 541 (2008); LBP-08-19, 68 NRC 546-47 (2008); LBP-08-20, 68 NRC 551 (2008)

although a board may appropriately view petitioner's support for its contention in a light that is favorable to the petitioner, the petitioner must provide some support for his or her contention, in the form of either facts or expert testimony; LBP-07-16, 66 NRC 288 (2007); LBP-09-17, 70 NRC 328 (2009); LBP-09-26, 70 NRC 955 (2009)

although a board may view a petitioner's supporting information in a light favorable to the petitioner, it cannot do so by ignoring the contention admissibility rules, which require the petitioner (not the board) to supply all of the required elements for a valid intervention petition; CLI-09-7, 69 NRC 260, 275 (2009)

although NRC may reasonably accommodate pro se petitioners who are not technically perfect in their pleadings, such parties must still meet the basic requirements of the contention admissibility rules, and if these are not met, boards may not "fill in" any missing support, but, rather, are legally required to deny the contention; LBP-07-4, 65 NRC 340 n.286 (2007)

as with a summary disposition motion, a board may appropriately view petitioners' support for its contention in a light that is favorable to the petitioner; LBP-08-9, 67 NRC 432 (2008)

failure to comply with any of the contention pleading requirements is grounds for dismissal of a contention; LBP-08-9, 67 NRC 430, 432 (2008); LBP-08-15, 68 NRC 312 (2008); LBP-08-26, 68 NRC 915 (2008)

failure to present factual information and expert opinions to support a contention adequately requires that the contention be rejected; LBP-06-20, 64 NRC 150 (2006); LBP-06-23, 64 NRC 356 (2005); LBP-08-13, 68 NRC 63 (2008); LBP-08-16, 68 NRC 384 (2008); LBP-08-26, 68 NRC 917 (2008); LBP-09-3, 69 NRC 153 (2009); LBP-09-26, 70 NRC 954 (2009)

for a contention to be admissible it must satisfy, without exception, each of the criteria set out in 10 C.F.R. 2.309(f)(1)(i)-(vi); LBP-10-6, 71 NRC 358-59 (2010)

## LEGAL CITATIONS INDEX

### CASES

if a question arises over the scope of an admitted contention, the board or Commission will refer back to the bases set forth in support of the contention; CLI-10-15, 71 NRC 482 (2010)

if petitioner fails to provide the requisite support for its contentions, the board may not make assumptions of fact that favor the petitioner or supply information that is lacking; LBP-07-3, 65 NRC 253 (2007); LBP-08-16, 68 NRC 385 (2008); LBP-08-17, 68 NRC 441 (2008)

if petitioner fails to provide the requisite support for its contentions, the board may not make assumptions of fact that favor the petitioner or supply information that is lacking; LBP-09-3, 69 NRC 153 (2009); CLI-09-12, 69 NRC 553 (2009); LBP-09-18, 70 NRC 404 (2009); LBP-10-7, 71 NRC 420 (2010); LBP-07-10, 66 NRC 23 (2007)

it is not up to licensing boards to search through pleadings or other materials to uncover arguments and support never advanced by the petitioners themselves, and boards may not simply infer unarticulated bases of contentions; CLI-06-10, 63 NRC 457 (2006)

support for a contention may be viewed in a light that is favorable to the petitioner and inferences that can be drawn from evidence may be construed in favor of the petitioner; LBP-06-20, 64 NRC 150 (2006); LBP-06-23, 64 NRC 356 (2005)

the initial burden of showing whether a contention meets admissibility standards lies with the petitioner; CLI-09-8, 69 NRC 325 (2009)

*Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1, 2, and 3), CLI-91-12, 34 NRC 149, 155-56 (1991)

a board may not make assumptions of fact that favor an intervention petitioner or supply information that is lacking in its petition; CLI-09-7, 69 NRC 260 n.132 (2009); LBP-06-7, 63 NRC 232 (2006)

although a board is free to view intervenors' support for its contention in the light most favorable to intervenors, the board may not ignore the contention admissibility requirements of 10 C.F.R. 2.309(f)(1); CLI-09-3, 69 NRC 73 (2009); CLI-09-8, 69 NRC 324 (2009)

contention admissibility standards call for a clear statement as to the basis for the contention and the submission of supporting information and references to specific documents and sources that establish the validity of the contention; CLI-10-1, 71 NRC 8 (2010)

contentions that do not satisfy the requirements of 10 C.F.R. 2.309(f)(1) must be rejected; CLI-09-8, 69 NRC 324 (2009); LBP-06-10, 63 NRC 336 (2006); LBP-06-23, 64 NRC 272, 351 (2006); LBP-07-3, 65 NRC 252 (2007); LBP-07-4, 65 NRC 303 (2007); LBP-07-10, 66 NRC 22 (2007); LBP-07-16, 66 NRC 286 (2007); LBP-08-6, 67 NRC 290 (2008); LBP-08-13, 68 NRC 61 (2008); LBP-08-16, 68 NRC 383 (2008); LBP-08-24, 68 NRC 716 (2008); LBP-09-3, 69 NRC 152 (2009); LBP-09-17, 70 NRC 324 (2009); LBP-09-21, 70 NRC 592 (2009); LBP-09-26, 70 NRC 952 (2009); LBP-10-7, 71 NRC 419 (2010); LBP-10-21, 72 NRC 651 (2010)

failure of a petitioner, even one found to have standing to proceed, to submit an admissible contention will result in dismissal of its petition and request for hearing; LBP-06-23, 64 NRC 351 (2005)

failure to provide adequate support for a contention requires that the contention be rejected; LBP-10-6, 71 NRC 360 (2010)

full compliance with the Commission's Rules of Practice is a condition precedent to the grant of a request for hearing on a materials license amendment; LBP-07-5, 65 NRC 344 (2007)

if petitioner neglects to provide the requisite support for its contentions, the board should not make assumptions of fact that favor the petitioner or supply information that is lacking; LBP-10-6, 71 NRC 361 (2010)

information in support of a contention must include references to the specific portions of the application (including the applicant's environmental report and safety report) that the petitioner disputes and the supporting reasons for each dispute; LBP-07-11, 66 NRC 56 (2007)

intervenors must provide a clear statement of the basis for their contentions and must submit of supporting information and references to specific documents and sources that establish the validity of the contentions; CLI-06-9, 63 NRC 437 (2006); CLI-06-24, 64 NRC 119 (2006); CLI-09-8, 69 NRC 323 (2009)

petitioner is obliged to present the factual and expert support for its contention; LBP-10-6, 71 NRC 360 (2010)

## LEGAL CITATIONS INDEX

### CASES

- Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1, 2, and 3), CLI-91-12, 34 NRC 149, 156 (1991)  
contentions must directly controvert a position taken by the applicant in the application and explain why the application is deficient; LBP-07-4, 65 NRC 306 (2007); LBP-07-11, 66 NRC 58 (2007); LBP-08-6, 67 NRC 292 (2008); LBP-09-17, 70 NRC 327 (2009)  
if a petitioner does not believe the Safety Analysis Report and the Environmental Report address a relevant issue, the petitioner is to explain why the application is deficient; LBP-06-10, 63 NRC 341 (2006); LBP-06-23, 64 NRC 358 (2005)
- Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1, 2, and 3), LBP-82-117A, 16 NRC 1964, 1990-91 (1982)  
a licensing board has no jurisdiction to consider any treaty-related or water-rights questions in an NRC adjudicatory proceeding; LBP-08-6, 67 NRC 269 n.107 (2008)
- Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1, 2, and 3), LBP-82-117A, 16 NRC 1964, 1991 (1982)  
licensing boards should not entertain collateral attacks upon the actions of other federal agencies on a matter over which the Commission has no jurisdiction; LBP-06-15, 63 NRC 630 (2006)
- Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1, 2, and 3), LBP-91-19, 33 NRC 397, 401 (1991)  
petitioners are usually permitted to amend petitions containing curable defects and pro se petitioners are held to a less rigorous standard; LBP-09-18, 70 NRC 396-97 (2009)
- Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1, 2, and 3), LBP-91-19, 33 NRC 397, 410, *aff'd in part and rev'd in part on other grounds*, CLI-91-12, 34 NRC 149 (1991)  
contentions that advocate stricter requirements than agency rules impose or that otherwise seek to litigate a generic determination established by a Commission rulemaking are inadmissible; LBP-07-3, 65 NRC 253 (2007); LBP-07-10, 66 NRC 22-23 (2007); LBP-08-16, 68 NRC 383 (2008); LBP-09-3, 69 NRC 153 (2009); LBP-10-7, 71 NRC 420 (2010); LBP-10-21, 72 NRC 651 (2010)
- Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1, 2, and 3), LBP-91-19, 33 NRC 397, 411-12 (1991), *appeal denied on other grounds*, CLI-91-12, 34 NRC 149 (1991)  
a contention must allege facts sufficient to establish that it falls directly within the scope of a proceeding; LBP-06-10, 63 NRC 338 (2006)
- Arizona Public Service Co.* (Palo Verde Nuclear Generating Station, Units 1, 2, and 3), LBP-91-19, 33 NRC 397, 412 (1991), *appeal denied on other grounds*, CLI-91-12, 34 NRC 149 (1991)  
a contention must allege facts sufficient to establish that it falls directly within the scope of a proceeding; LBP-06-23, 64 NRC 353 (2005); LBP-07-4, 65 NRC 304 (2007); LBP-07-11, 66 NRC 57 (2007)  
by referencing the license renewal application's aging management plan regarding buried pipes and tanks, petitioner has supported its contention sufficiently to establish that it falls directly within the scope of the proceeding; LBP-06-23, 64 NRC 310 (2006)
- Armed Forces Radiobiology Research Institute* (Cobalt-60 Storage Facility), ALAB-682, 16 NRC 150, 153-54 (1982)  
close proximity to a facility has always been deemed to be enough, standing alone, to establish the requisite interest to confer standing; LBP-06-7, 63 NRC 196 (2006)
- Armed Forces Radiobiology Research Institute* (Cobalt-60 Storage Facility), ALAB-682, 16 NRC 150, 155 (1982)  
although further analysis may show that there is no way for the radioactive materials and byproducts from ISL mining operations to cause harm to persons living nearby, a board cannot decide, when making a standing determination, that there is no reasonable possibility that such harm could occur; LBP-08-6, 67 NRC 280 (2008)  
it is enough that petitioner has demonstrated a realistic threat of sustaining a direct injury as a result of contaminated groundwater flowing from the site at issue to his property to establish standing; LBP-08-24, 68 NRC 709 (2008)
- Armstrong v. Board of School Directors of City of Milwaukee*, 616 F.2d 305 (7th Cir. 1980)  
when evaluating whether a settlement in an enforcement proceeding is in the public interest, four factors are considered; LBP-06-18, 63 NRC 837 (2006)

## LEGAL CITATIONS INDEX

### CASES

- Armstrong v. Executive Office of the President*, 97 F.3d 575, 582 (D.C. Cir. 1996)  
privileges protecting privacy interests are not absolute; LBP-06-25, 64 NRC 376 (2006)  
the privacy interest at stake may vary depending on the context in which it is asserted; LBP-06-25, 64 NRC 385 (2006)
- Armstrong v. Manzo*, 380 U.S. 545, 552 (1965)  
the right to a hearing is an empty promise unless there is an opportunity to be heard at a meaningful time and in a meaningful manner; LBP-08-11, 67 NRC 497 (2008)
- Arthur Andersen LLP v. United States*, 544 U.S. 696, 705 (2005)  
concerning criminal guilt, the words “knowledge” and “knowingly” are normally associated with awareness, understanding, or consciousness; CLI-10-23, 72 NRC 223 (2010)
- Ashley Creek Phosphate Co. v. Norton*, 420 F.3d 934,943-44 (9th Cir. 2005), *cert. denied*, 548 U.S. 903 (2006)  
the National Environmental Policy Act does not encompass concerns that are not tethered to the physical environment; CLI-08-16, 68 NRC 228 (2008)
- Ashworth v. Albers Medical, Inc.*, 229 F.R.D. 527 (S.D.W.V. 2005)  
sometimes the pendency of a criminal prosecution necessitates delaying a parallel civil or administrative proceeding; LBP-06-13, 63 NRC 537 (2006)
- Assiniboine & Sioux Tribe of the Fort Peck Indian Reservation v. Board of Oil & Gas Conservation*, 792 F.2d 782, 794-96 (9th Cir. 1986)  
a trust duty in the NRC as a federal permitting agency arises out of 1851 and 1868 treaties with Indian tribes; LBP-08-6, 67 NRC 267 (2008)
- Associated General Contractors of North Dakota v. Otter Tail Power Co.*, 611 F.2d 684, 688-90 (8th Cir. 1079)  
criteria for representational standing are applied to a trade association; CLI-08-19, 68 NRC 265 n.48 (2008)
- Associated General Contractors of North Dakota v. Otter Tail Power Co.*, 611 F.2d 684, 690-91 (1979)  
when an organization takes formal corporate action to initiate litigation not only germane but integral to its purpose, that action can constitute the requisite, if implicit, proof of authorization for intervention; LBP-09-6, 69 NRC 435 (2009)
- Association of Public Agency Customers v. Bonneville Power Administration*, 126 F.3d 1158, 1188 (9th Cir. 1997)  
the “no-action” alternative is most simply viewed as maintaining the status quo; CLI-06-10, 63 NRC 468 (2006)
- AT&T Corp. v. Federal Communications Commission*, 349 F.3d 692, 699 (D.C. Cir. 2003)  
ripeness for judicial review is determined on the basis of the fitness of the issue for judicial decision and the hardship to the parties of withholding court consideration; LBP-08-24, 68 NRC 721 (2008); LBP-09-6, 69 NRC 397 (2009)
- Atlantic Research Corp.* (Alexandria, Virginia), ALAB-594, 11 NRC 841, 849 (1980)  
licensing boards review NRC Staff’s enforcement order de novo; LBP-09-24, 70 NRC 706 (2009)
- Atlas Corp.* (Moab, Utah Facility), LBP-97-9, 45 NRC 414, 426 (1997)  
petitioner failed to specify any radiological contacts with enough concreteness to establish some impact on him that is sufficient to provide him with standing; LBP-10-11, 71 NRC 634 n.97 (2010)
- Atlas Corp.* (Moab, Utah Facility), LBP-97-9, 45 NRC 414, 426-27, *aff’d*, CLI-97-8, 46 NRC 21 (1997)  
descriptions of activities as being “near,” in “close proximity,” or “in the vicinity” of the facility in question are insufficient to establish standing; CLI-07-18, 65 NRC 410 n.27 (2007)
- Aushman v. Bank of America Corp.*, 212 F. Supp. 2d 435, 442-43 (D. Md. 2002)  
the purpose and scope of the duty of candor that is placed on lawyers is described; LBP-06-10, 63 NRC 371 n.10 (2006)
- Automobile Workers v. Brock*, 477 U.S. 274, 282 (1986)  
a three-pronged test for associational standing is applied to unions; CLI-08-19, 68 NRC 264 (2008)  
the same standing criteria are applied to unions as to public interest groups, trade associations, and similar groups; CLI-08-19, 68 NRC 265 n.48 (2008)

## LEGAL CITATIONS INDEX

### CASES

- Availability of Funds for Payment of Intervenor Attorney Fees — Nuclear Regulatory Commission*, 62 Comp. Gen. 692, 695 (1983)  
the terms of section 502 of the Energy and Water Development Appropriations Act of 1982 unambiguously prohibit the use of appropriated funds for payments of any kind to intervenors; LBP-09-1, 69 NRC 44 n.136 (2009)
- B.F. Goodrich Co. v. U.S. Filter Corp.*, 245 F.3d 587, 593 n.3 (6th Cir. 2001)  
a procedure that amounts to a trial of the action and technically is not a disposition by summary judgment is appropriate only if it is clear that there is nothing else to be offered by the parties and there is no prejudice in proceeding in this fashion; LBP-07-12, 66 NRC 127 n.71 (2007)
- Babcock & Wilcox Co.* (Apollo, Pennsylvania Fuel Fabrication Facility), LBP-92-35, 36 NRC 355, 358 n.9 (1992)  
one does not acquire standing as a consequence of being a member of a legislative tribunal; LBP-07-5, 65 NRC 351 (2007)
- Babcock & Wilcox Co.* (Apollo, Pennsylvania Fuel Fabrication Facility), LBP-93-4, 37 NRC 72, 81, *appeal dismissed*, CLI-93-9, 37 NRC 190 (1993)  
every petitioner bears the burden of demonstrating standing in order to participate in hearings before a licensing board; LBP-07-10, 66 NRC 15-16 (2007); LBP-09-18, 70 NRC 400 (2009)
- Babcock & Wilcox Co.* (Apollo, Pennsylvania Fuel Fabrication Facility), LBP-93-4, 37 NRC 72, 82-83 (1993)  
in proceedings where petitioner's factual assertions in support of standing are challenged, untenable, conjectural, or conclusory, a board may be required to weigh the information and exercise judgment to determine if a standing element has been satisfied; LBP-10-4, 71 NRC 230 n.14 (2010)
- Babcock & Wilcox Co.* (Apollo, Pennsylvania Fuel Fabrication Facility), LBP-93-4, 37 NRC 72, 83 (1993)  
the common thread in decisions applying the 50-mile presumption of standing is a recognition of the potential effects at significant distances from the facility of the accidental release of fissionable materials; LBP-09-4, 69 NRC 182 (2009)  
the nontrivial increased risk of living within 50 miles of a proposed reactor constitutes injury-in-fact, is traceable to the challenged action, and is likely to be redressed by a favorable decision that either denies a license or mandates compliance with legal requirements that protect the interests of the petitioners; CLI-09-20, 70 NRC 917 (2009)
- Babcock & Wilcox Co.* (Apollo, Pennsylvania Fuel Fabrication Facility), LBP-93-4, 37 NRC 72, 84 (1993)  
petitioner who relies on proximity to the facility without also demonstrating a causal link between the distance he resides from the facility and injury to his legitimate interests fails to establish standing in an enforcement proceeding; LBP-07-16, 66 NRC 304 (2007)
- Bailey v. United States*, 516 U.S. 137, 145 (1995)  
in interpreting regulations, not only the bare meaning of the word but also its placement and purpose in the statutory scheme are considered; LBP-09-15, 70 NRC 216 n.56 (2009)
- Baker v. Carr*, 369 U.S. 186, 204 (1962)  
whether petitioners have alleged such a personal stake in the outcome of a controversy as to assure that concrete adverseness that sharpens the presentation of issues upon which a tribunal so largely depends for illumination of difficult questions is the question that determines standing; LBP-08-6, 67 NRC 270 (2008)
- Baltimore Gas & Electric Co. v. Natural Resources Defense Council, Inc.*, 462 U.S. 87 (1983)  
reliance on generic environmental impact statement tiering comports with the National Environmental Policy Act; LBP-06-20, 64 NRC 159 (2006)
- Baltimore Gas & Electric Co. v. Natural Resources Defense Council, Inc.*, 462 U.S. 87, 90-91 (1983)  
the function of Table S-3 is described; LBP-09-4, 69 NRC 223 (2009)
- Baltimore Gas & Electric Co. v. Natural Resources Defense Council, Inc.*, 462 U.S. 87, 91 n.5 (1983)  
the tabulated impacts in Table S-3 include the acres of land committed to fuel cycle activities, the amount of water discharged by such activities, fossil fuel consumption, and chemical and radiological effluents (measured in curies), all normalized to the annual fuel requirement for a model 1000-megawatt light-water reactor; LBP-09-4, 69 NRC 223 (2009)

## LEGAL CITATIONS INDEX

### CASES

- Baltimore Gas & Electric Co. v. Natural Resources Defense Council, Inc.*, 462 U.S. 87, 97 (1983)  
NEPA does not require agencies to elevate environmental concerns over other appropriate considerations, requiring rather only that the agency take a hard look at the environmental consequences before taking a major action; LBP-06-19, 64 NRC 63 (2006)  
NEPA ensures that an agency considers every significant aspect of the environmental impact of a proposed action and informs the public that it has, in fact, considered environmental concerns in its decisionmaking process; LBP-06-19, 64 NRC 62 (2006); LBP-08-7, 67 NRC 365 n.1 (2008)  
publication of an environmental impact statement gives the public the assurance that the agency has indeed considered environmental concerns in its decisionmaking process and provides a springboard for public comment; LBP-06-23, 64 NRC 298 n.169 (2006); LBP-10-24, 72 NRC 763 (2010)  
to take the NEPA-required “hard look” at all significant consequences of a project, the consequences of the entire project must be examined at one time; CLI-06-11, 63 NRC 493 (2006)
- Baltimore Gas & Electric Co. v. Natural Resources Defense Council, Inc.*, 462 U.S. 87, 99 n.12 (1983)  
although the Commission is not bound by Council on Environmental Quality regulations that it has not expressly adopted, it gives them substantial deference; LBP-06-19, 64 NRC 63 n.3 (2006)  
the Supreme Court has expressly left open the issue of whether Council on Environmental Quality regulations are binding on the NRC; LBP-10-16, 72 NRC 418 n.275 (2010)
- Baltimore Gas & Electric Co. v. Natural Resources Defense Council, Inc.*, 462 U.S. 87, 101 (1983)  
generic analysis is clearly an appropriate method of meeting the agency’s statutory obligations under NEPA; CLI-07-3, 65 NRC 17 (2007)  
the Commission should, as appropriate, plug any generic rulemaking determination into agency adjudicatory proceedings; LBP-08-16, 68 NRC 424 n.21 (2008)
- Baltimore Gas & Electric Co.* (Calvert Cliffs Nuclear Power Plant), 4 AEC 243, 244 (1969)  
intervenor may not use a licensing proceeding to rewrite Commission regulations; LBP-06-1, 63 NRC 59-60 (2006)
- Baltimore Gas & Electric Co.* (Calvert Cliffs Nuclear Power Plant, Units 1 and 2), CLI-98-14, 48 NRC 39, *passim*, *motion to vacate denied*, CLI-98-15, 48 NRC 45, 51 (1998), *aff’d sub nom. National Whistleblower Center v. NRC*, 208 F.3d 256 (D.C. Cir. 2000), *cert. denied*, 531 U.S. 1070 (2001)  
the Commission has used *sua sponte* review as a vehicle to provide guidance to a licensing board; CLI-07-1, 65 NRC 5 (2007)
- Baltimore Gas & Electric Co.* (Calvert Cliffs Nuclear Power Plant, Units 1 and 2), CLI-98-14, 48 NRC 39, 41, *motion to vacate denied*, CLI-98-15, 48 NRC 45 (1998)  
applicant argues that petitioners have not asserted that an alleged noncompliance with fire protection regulations described in a 2.206 petition (and rejected by the acting director) constitutes a genuine dispute of fact in regard to whether a license should be renewed; LBP-07-11, 66 NRC 71 (2007)  
it is petitioner’s responsibility to provide the necessary information to satisfy the basis requirement for the admission of its contentions and demonstrate that a genuine dispute exists within the scope of the proceeding; LBP-10-6, 71 NRC 362 (2010)  
the provisions of Parts 51 and 54 relating to the scope of license renewal proceedings are discussed; LBP-06-10, 63 NRC 343 (2006); LBP-07-11, 66 NRC 59 (2007)  
the scope of license renewal proceedings is quite limited under Commission rules and case law; LBP-08-22, 68 NRC 598 (2008)  
the scope of license renewal proceedings, which generally concern requests to renew 40-year operating licenses for additional 20-year terms, is discussed; LBP-06-23, 64 NRC 274 (2006)  
the scope of safety and environmental issues relevant to license renewal are discussed; LBP-07-4, 65 NRC 306-07 (2007)
- Baltimore Gas & Electric Co.* (Calvert Cliffs Nuclear Power Plant, Units 1 and 2), CLI-98-15, 48 NRC 45, 52 (1998), *aff’d sub nom. National Whistleblower Center v. NRC*, 208 F.3d 256 (D.C. Cir. 2000), *cert. denied*, 531 U.S. 1070 (2001)  
the Commission has used *sua sponte* review as a vehicle to set a specific timetable; CLI-07-1, 65 NRC 4 (2007)
- Baltimore Gas & Electric Co.* (Calvert Cliffs Nuclear Power Plant, Units 1 and 2), CLI-98-15, 48 NRC 45, 53 (1998)  
the Commission has plenary supervisory authority to interpret and customize its process for individual cases; CLI-08-11, 67 NRC 383 n.24 (2008)

## LEGAL CITATIONS INDEX

### CASES

- Baltimore Gas & Electric Co.* (Calvert Cliffs Nuclear Power Plant, Units 1 and 2), CLI-98-25, 48 NRC 325, 342 (1998)  
in the interest of efficient case management and prompt resolution of adjudications, the Commission has generally enforced the 10-day deadline for appeals strictly, excusing it only in unavoidable and extreme circumstances; CLI-10-26, 72 NRC 476 (2010)
- Baltimore Gas & Electric Co.* (Calvert Cliffs Nuclear Power Plant, Units 1 and 2), CLI-98-25, 48 NRC 325, 343 n.3 (1998)  
unreviewed board rulings carry no precedential weight; CLI-09-14, 69 NRC 583 n.13 (2009); CLI-10-29, 72 NRC 563 n.36 (2010); CLI-10-30, 72 NRC 569 (2010)
- Baltimore Gas & Electric Co.* (Calvert Cliffs Nuclear Power Plant, Units 1 and 2), CLI-98-25, 48 NRC 325, 347 (1998)  
petitioner's failure to show that its newly presented contentions satisfy section 2.309(c) provides an independent and sufficient basis for not admitting its belated contentions; LBP-06-11, 63 NRC 396 n.3 (2006)  
prior to 2004, in addition to meeting the substantive admissibility criteria found in 10 C.F.R. 2.714(b)(2), the issue statement was based on the environmental impact statement or environmental assessment information that differed significantly from the data or conclusions in the applicant's environmental report; LBP-10-1, 71 NRC 186 (2010)
- Baltimore Gas & Electric Co.* (Calvert Cliffs Nuclear Power Plant, Units 1 and 2), CLI-98-25, 48 NRC 325, 347-48 (1998)  
failure to address the pleading requirements for late-filed contentions is reason enough to reject proposed new contentions; CLI-09-5, 69 NRC 126 (2009)
- Baltimore Gas & Electric Co.* (Calvert Cliffs Nuclear Power Plant, Units 1 and 2), CLI-98-25, 48 NRC 325, 349-50 (1998)  
members of the public with a cognizable interest in the particular license renewal application may obtain an independent adjudicatory review of their challenges to the application; CLI-08-23, 68 NRC 468 (2008)  
NRC has not, and will not, litigate claims about the adequacy of Staff's safety review in licensing adjudications; CLI-08-23, 68 NRC 477 n.64 (2008)  
petitioner may not simply wait for the Staff to identify missing information and then ground a new contention on that request; CLI-09-12, 69 NRC 550 (2009)  
petitioners must do more than rest on the mere existence of requests for additional information as a basis for their contention; LBP-08-6, 67 NRC 261 (2008)
- Baltimore Gas & Electric Co.* (Calvert Cliffs Nuclear Power Plant, Units 1 and 2), CLI-98-25, 48 NRC 325, 350 (1998)  
in adjudicatory proceedings it is the license application, not the NRC Staff review, that is at issue; CLI-08-15, 68 NRC 3 n.2 (2008)  
in some cases, petitioner may base a new contention on a request for additional information if the RAI or its response raises new information; CLI-09-12, 69 NRC 550 n.66 (2009)  
NRC Staff is required to consider and resolve all safety questions regardless of whether any hearing takes place; LBP-08-12, 68 NRC 28 (2008)  
NRC Staff's mere interest in an issue, its solicitation of public input on an issue, or its proposed revision to a generic guidance document will not, standing alone and lacking an articulated plant-specific safety concern, suffice as a contention's cornerstone; LBP-06-11, 63 NRC 399 (2006)
- Baltimore Gas & Electric Co.* (Calvert Cliffs Nuclear Power Plant, Units 1 and 2), CLI-98-25, 48 NRC 325, 351 (1998)  
discovery is not permitted for the purpose of developing a motion to reopen the record or to assist a petitioner in the framing of contentions; CLI-08-28, 68 NRC 676 n.73 (2008); LBP-08-12, 68 NRC 27 n.23 (2008)
- Baltimore Gas & Electric Co.* (Calvert Cliffs Nuclear Power Plant, Units 1 and 2), LBP-98-26, 48 NRC 232, 242 (1998)  
the fact that there are a number of requests for addition information outstanding does not give rise to an evidentiary hearing; LBP-08-9, 67 NRC 444 (2008)  
the focus of a case is on the adequacy of the application as it has been accepted and docketed for licensing review; LBP-08-13, 68 NRC 71 n.88 (2008)

## LEGAL CITATIONS INDEX

### CASES

- the manner in which NRC Staff conducts its sufficiency review and whether its decision to accept an application for review was correct are not matters within the purview of an adjudicatory proceeding; LBP-08-9, 67 NRC 444 (2008)
- Banks v. District of Columbia*, 377 F. Supp. 2d 85, 89 (D.D.C. 2005)  
although wholly conclusory statements for which no supporting evidence is offered need not be taken as true for summary judgment purposes, a court may not make credibility determinations or weigh the evidence at the summary judgment stage; LBP-07-12, 66 NRC 127 (2007); LBP-07-13, 66 NRC 131 (2007)
- Barker v. Wingo*, 407 U.S. 514 (1972)  
a four-factor test is applied to determine whether a delay violates the Sixth Amendment right to a speedy trial; LBP-06-13, 63 NRC 535 n.29 (2006)
- Barker v. Wingo*, 407 U.S. 514, 521 (1972)  
deprivation of the right to speedy trial does not per se prejudice the accused's ability to defend himself; LBP-06-13, 63 NRC 542 n.64 (2006)
- Barker v. Wingo*, 407 U.S. 514, 530 (1972)  
in deciding whether to delay a proceeding, an adjudicator can do little more than identify some of the factors that courts should assess in determining whether a particular defendant has been deprived of his right; LBP-06-13, 63 NRC 535 n.29 (2006)
- Barker v. Wingo*, 407 U.S. 514, 532 (1972)  
timely assertion of the right to a hearing is a relevant factor because failure to assert the right will make it difficult for the party opposing the delay to prove that he was denied a speedy trial; LBP-06-13, 63 NRC 543 (2006)
- Barry v. Barchi*, 443 U.S. 55, 64 (1979)  
a property interest in an employment-related license is sufficient to invoke the procedural protections of the Due Process Clause, the vindication of which certainly invokes a public interest; LBP-06-25, 64 NRC 385 n.70 (2006)
- Bartley v. Isuzu Motors, Ltd.*, 151 F.R.D. 659, 660-61 (D. Colo. 1993)  
computer modeling and all of the inputs, outputs, and software associated with it are within the scope of discovery; LBP-12-23, 72 NRC 704 n.15 (2010)
- Baur v. Veneman*, 352 F.3d 625, 634 (2d Cir. 2003)  
federal courts of appeal have failed to reach a consensus on the question whether a risk of future injury must exceed a numerical threshold; LBP-09-4, 69 NRC 184 (2009)
- Baxter v. Palmigiano*, 425 U.S. 308, 318 (1976)  
the Fifth Amendment does not prevent the trier of fact from making an adverse inference where the privilege is claimed by a party to a civil cause; LBP-06-13, 63 NRC 538 n.45 (2006)
- Bell v. Burson*, 402 U.S. 535, 539 (1971)  
a property interest in an employment-related license is sufficient to invoke the procedural protections of the Due Process Clause, the vindication of which certainly invokes a public interest; LBP-06-25, 64 NRC 385 n.70 (2006)
- Bellotti v. NRC*, 725 F.2d 1380 (D.C. Cir. 1983)  
a challenge to an enforcement order in which petitioner contends that the order needs strengthening is prohibited; LBP-06-12, 63 NRC 422 (2006)  
enforcement orders typically limit adjudication to whether the facts as stated in the order are true, and whether the proposed sanction is supported by those facts; CLI-06-16, 63 NRC 720 (2006)  
the scope of an enforcement adjudication is limited to the question of whether the order should be sustained; CLI-10-3, 71 NRC 53 (2010)
- Bellotti v. NRC*, 725 F.2d 1380, 1381 (D.C. Cir. 1983)  
the Commission, rather than petitioner, holds the authority to define the scope of a proceeding; LBP-09-20, 70 NRC 575 (2009)  
where the notice of hearing limits the scope to whether the order should be sustained, petitioner's sole remedy is rescission of the order; LBP-09-20, 70 NRC 575 (2009)  
with respect to orders modifying a license, petitioner must always request a remedy that falls within the scope of the proceeding, as articulated in the notice of hearing; LBP-09-20, 70 NRC 575 (2009)

## LEGAL CITATIONS INDEX

### CASES

- Bellotti v. NRC*, 725 F.2d 1380, 1381-82 (D.C. Cir. 1983)  
the scope of an enforcement adjudication is limited to the question of whether the order should be sustained; CLI-10-3, 71 NRC 54 (2010)
- Bellotti v. NRC*, 725 F.2d 1380, 1382 n.2 (D.C. Cir. 1983)  
intervention petitioners who think an order modifying a license should not be sustained, but might want further corrective measures, are precluded from intervention; LBP-09-20, 70 NRC 575 (2009)
- Bellotti v. NRC*, 725 F.2d 1380, 1383 (D.C. Cir. 1983)  
petitioners may raise their concerns with the Commission at any time by filing a petition under 10 C.F.R. 2.206; CLI-10-3, 71 NRC 54 (2010)  
the Commission's power to define the scope of a proceeding will lead to the denial of intervention when the Commission amends a license to require additional or better safety measures; LBP-09-20, 70 NRC 578 n.67 (2009)
- Benevolence International Foundation v. Ashcroft*, 200 F. Supp. 2d 935 (N.D. Ill. 2002)  
sometimes the pendency of a criminal prosecution necessitates delaying a parallel civil or administrative proceeding; LBP-06-13, 63 NRC 537 (2006)
- Bering Strait Citizens for Responsible Resource Development v. U.S. Army Corps of Engineers*, 524 F.3d 938, 953 (9th Cir. 2008)  
an agency, when preparing an environmental assessment, must provide the public with sufficient environmental information, considered in the totality of circumstances, to permit members of the public to weigh in with their views and thus inform the agency decisionmaking process; CLI-10-18, 72 NRC 71, 93 (2010)
- Bicycle Trails Council of Marin v. Babbitt*, 82 F.3d 1445, 1466-67 (9th Cir. 1996)  
the National Environmental Policy Act does not encompass concerns that are not tethered to the physical environment; CLI-08-16, 68 NRC 228 (2008)
- Black v. Sheraton Corp. of America*, 564 F.2d 531, 547 (D.C. Cir. 1977)  
even limited disclosure in a courtroom could harm the frankness of debate, which explains the lack of precedent for allowing deliberative process documents to be released under a protective order, or for even considering such a measure; LBP-06-25, 64 NRC 391 n.107 (2006)
- Blackwell v. Cole Taylor Bank*, 152 F.3d 666, 673 (7th Cir. 1998)  
silence about facts constitutes a waiver of the specific factual contentions made by the opposing party in a brief filed earlier; LBP-06-7, 63 NRC 200 n.7 (2006)
- Blue Mountains Biodiversity Project v. Blackwood*, 161 F.3d 1208, 1213 (9th Cir. 1998)  
under the National Environmental Policy Act, general statements about possible effects and some risk do not constitute a hard look absent a justification regarding why more definitive information could not be provided; CLI-10-18, 72 NRC 74 (2010)
- Blue Mountains Biodiversity Project v. Blackwood*, 161 F.3d 1208, 1214 (9th Cir. 1998)  
to take the NEPA-required "hard look" at all significant consequences of a project, the consequences of the entire project must be examined at one time and cannot be looked at piecemeal; CLI-06-11, 63 NRC 493 (2006)
- Board of County Supervisors v. Scottish & York Insurance Services*, 763 F.2d 176, 179 (4th Cir. 1985)  
issues not decided by special verdict are difficult to decipher for collateral estoppel purposes because of the uncertainty whether the precise issue was actually determined in the prior criminal case; CLI-10-23, 72 NRC 253 n.218 (2010)
- Board of License Commissioners v. Pastore*, 469 U.S. 238, 240 ((1985)  
counsel have a broader, more general duty of candor and good faith, which is related to the duty to update a tribunal about any development that may conceivably affect the outcome of litigation; LBP-06-10, 63 NRC 370 (2006)  
counsel have a continuing duty to update a tribunal of any development that may conceivably affect the outcome of litigation; LBP-06-10, 63 NRC 333 (2006)
- Board of Natural Resources v. Brown*, 992 F.2d 937, 942 (9th Cir. 1993)  
if one party's standing has been established, the standing of allied parties is not to be questioned; LBP-10-7, 71 NRC 414 (2010)
- Bob Marshall Alliance v. Hodel*, 852 F.2d 1223, 1228-29 (9th Cir. 1988)  
even when a proposed action does not require preparation of an environmental impact statement, the consideration of alternatives remains critical to the goals of NEPA; CLI-10-18, 72 NRC 75 (2010)

## LEGAL CITATIONS INDEX

### CASES

- Bonds v. Snapper Power Equipment Co.*, 935 F.2d 985, 988 (8th Cir. 1991)  
the civil law concept of “assumption of risk” requires not merely general knowledge of a risk but also that the risk assumed be specifically known, understood, and appreciated; CLI-10-23, 72 NRC 223 (2010)
- Bonneville Power Administration v. Federal Energy Regulatory Commission*, 422 F.3d 908, 916 (9th Cir. 2005)  
in statutory construction, the specific prevails over the general; CLI-08-26, 68 NRC 523 (2008)
- Boston Edison Co.* (Pilgrim Nuclear Generating Station, Unit 2), ALAB-479, 7 NRC 774, 779 (1978)  
there is no basis for providing an EIS description to such a level of detail that it can be duplicated by members of the public, so as to permit an individual to run applicable computer codes or make other detailed computations; LBP-06-9, 63 NRC 302, 310 n.10 (2006)
- Boston Edison Co.* (Pilgrim Nuclear Generating Station, Unit 2), ALAB-479, 7 NRC 774, 792-94 (1978)  
NRC hearings on safety issues concern the adequacy of the license application, not the NRC Staff’s work, but NRC hearings on NEPA issues focus entirely on the adequacy of the Staff’s work; CLI-07-17, 65 NRC 395 (2007)
- Boston Edison Co.* (Pilgrim Nuclear Power Station), ALAB-816, 22 NRC 461, 466 (1985)  
even if all parties are inclined to waive the tardiness, the board nevertheless is duty-bound to deny a petition on its own initiative unless it is persuaded that, on balance, the lateness factors point in the opposite direction; LBP-10-17, 72 NRC 508 n.21 (2010)
- Boston Edison Co.* (Pilgrim Nuclear Power Station), ALAB-816, 22 NRC 461, 468 n.28 (1985)  
because appellant submitted no offer of proof, its case could be so weak that the denial of a right to reply by the licensing board would have been harmless error; CLI-10-23, 72 NRC 246 (2010)  
parties taking appeals on purely procedural points are expected to explain precisely what injury to them was occasioned by the asserted error; CLI-10-23, 72 NRC 245 n.175 (2010)
- Boston Edison Co.* (Pilgrim Nuclear Power Station), CLI-82-16, 16 NRC 44, 45-46 (1982), *aff’d*, *Bellotti v. NRC*, 725 F.2d 1380 (D.C. Cir. 1983)  
the scope of any hearing on a confirmatory order is expressly limited to the issue of whether the order should be sustained; LBP-08-14, 68 NRC 286 (2008)  
the scope of the hearing on an enforcement matter is limited to the issue of whether the confirmatory order should be sustained; LBP-07-16, 66 NRC 283 (2007)
- Bourjaily v. United States*, 483 U.S. 171, 179-80 (1987)  
individual pieces of evidence, insufficient in themselves to prove a point, may in cumulation prove it; LBP-09-24, 70 NRC 849 (2009)
- Bowen v. Massachusetts*, 487 U.S. 879, 896-98 (1988)  
Congress can be presumed to be aware of one specific agency rule only when that rule has been expressly discussed in the legislative history; LBP-10-11, 71 NRC 625 n.52 (2010)
- Bowles v. Seminole Rock and Sand Co.*, 325 U.S. 410, 414 (1945)  
an agency’s interpretation of its own regulation is controlling provided it is not plainly erroneous or inconsistent with the regulation; CLI-10-13, 71 NRC 389 n.10 (2010)
- Bowman Transportation, Inc. v. Arkansas-Best Freight System, Inc.*, 419 U.S. 281, 285-86 (1974)  
if NRC Staff finds any severe accident mitigation alternative conferring a substantial benefit compared to its cost of implementation, it must make such SAMA a license condition for the renewed operating license; LBP-10-13, 71 NRC 689 n.77 (2010)
- Brock v. Nellis*, 809 F.2d 753, 755 (11th Cir. 1987)  
establishing a party’s actual knowledge requires showing more than that a party had a suspicion that something was awry; LBP-09-24, 70 NRC 708 n.46 (2009)
- Brotherhood of Locomotive Firemen and Enginemen v. Northern Pacific Railway Co.*, 274 F.2d 641, 646-47 (8th Cir. 1960)  
where possible, a regulation should be construed in a manner that avoids internal inconsistencies; LBP-06-1, 63 NRC 57 (2006)
- Brown & Williamson Tobacco Corp. v. Federal Trade Commission*, 710 F.2d 1165 (6th Cir. 1983)  
the First Amendment requires a presumption of openness in civil proceedings; LBP-10-2, 71 NRC 208 n.58 (2010)

## LEGAL CITATIONS INDEX

### CASES

- Brown v. Navajo Regional Director*, 41 IBIA 314, 2005 I.D. LEXIS 99, at 11 (Bureau of Indian Affairs, Dep't of Interior, Oct. 26, 2005)  
federal agencies, especially when acting through the adjudicatory process,) and state courts have recognized that similar policy considerations counsel against proceeding with an adjudication if there is no possibility of awarding the petitioner meaningful relief; LBP-09-14, 70 NRC 196 n.15 (2009)
- Brownell v. Roadway Package System, Inc.*, 185 F.R.D. 19, 25 (N.D.N.Y. 1999)  
if a company claims that the internal investigation establishes that it has met its obligation, then the company has waived the attorney-client privilege associated with the internal investigation; CLI-08-6, 67 NRC 184 (2008)  
if a defendant invokes the investigation as an affirmative defense, it cannot withhold the statements on which the investigation was based; CLI-08-6, 67 NRC 184 (2008)
- Bullcreek v. NRC*, 359 F.3d 536 (D.C. Cir. 2004)  
agency decisions on rulemaking petitions are judicially reviewable; CLI-07-13, 65 NRC 214 n.13 (2007)
- Bullcreek v. NRC*, 359 F.3d 536, 542 (D.C. Cir. 2004)  
Congress can be presumed to be aware of one specific agency rule only when that rule has been expressly discussed in the legislative history; LBP-10-11, 71 NRC 625 n.52 (2010)
- Burbank Anti-Noise Group v. Goldschmidt*, 622 F.2d 115, 116-17 (9th Cir. 1980), *cert. denied*, 450 U.S. 965 (1981)  
an EIS is not required when the proposed federal action will effect no change in the status quo; LBP-07-4, 65 NRC 330 n.246 (2007)
- Burlington Truck Lines v. United States*, 371 U.S. 156, 168 (1962)  
if NRC Staff finds any severe accident mitigation alternative conferring a substantial benefit compared to its cost of implementation, it must make such SAMA a license condition for the renewed operating license; LBP-10-13, 71 NRC 689 n.77 (2010)
- Burns v. United States*, 501 U.S. 129, 136 (1991)  
an inference drawn from congressional silence cannot be credited when it is contrary to all other textual and contextual evidence of congressional intent; LBP-10-11, 71 NRC 623 (2010)
- Burton v. Mottolese*, 835 A.2d 998, 1032 (Conn. 2003)  
the basis for and purpose of the duty of trial judges to deter and correct misconduct of attorneys with respect to their obligations as officers of the court lies in the need to safeguard the administration of justice and to protect the public from the misconduct or unfitness of those who are members of the legal profession; LBP-06-10, 63 NRC 369 (2006)
- Business and Professional People for the Public Interest v. AEC*, 502 F.2d 424, 426-29 (D.C. Cir. 1974)  
NRC's requirement that a petitioner identify specific contentions and the particular bases for the contentions is not inconsistent with section 189a of the Atomic Energy Act, which provides that a hearing shall be granted upon the request of any person whose interest may be affected by the proceeding; LBP-06-20, 64 NRC 205 (2006)
- Business and Professional People for the Public Interest v. AEC*, 502 F.2d 424, 428 (D.C. Cir. 1974)  
section 189a of the Atomic Energy Act does not confer the automatic right of intervention upon anyone; CLI-08-28, 68 NRC 678 n.80 (2008); LBP-08-18, 68 NRC 536 (2008)  
the contention pleading requirements of 10 C.F.R. 2.309(f) are meant to focus litigation on concrete issues and result in a clearer and more focused record for decision; LBP-06-4, 63 NRC 108 (2006); LBP-07-16, 66 NRC 285 (2007); LBP-08-9, 67 NRC 429 (2008); LBP-08-13, 68 NRC 61 (2008); LBP-08-15, 68 NRC 312 n.77 (2008); LBP-08-26, 68 NRC 915 (2008); LBP-09-26, 70 NRC 952 (2009)
- Butchers' Union Co. v. Crescent City Co.*, 111 U.S. 746, 762 (1884)  
the right to follow any of the common occupations of life is an inalienable right that was formulated as such under the phrase "pursuit of happiness" in the Declaration of Independence and it is a large ingredient in the civil liberty of the citizen; LBP-06-13, 63 NRC 547 n.89 (2006); LBP-09-24, 70 NRC 806 n.20 (2009)
- C3, Inc. v. United States*, 4 Cl. Ct. 790 (1984)  
sometimes the pendency of a criminal prosecution does not necessitate delaying a parallel civil or administrative proceeding; LBP-06-13, 63 NRC 538 n.42 (2006)

## LEGAL CITATIONS INDEX

### CASES

- California First Amendment Coalition v. Woodford*, 299 F.3d 868 (9th Cir. 2002)  
the First Amendment requires a presumption of openness in civil proceedings; LBP-10-2, 71 NRC 208 n.58 (2010)
- California Trout v. Schaefer*, 58 F.3d 469, 474 (9th Cir. 1995)  
concurrent but independent jurisdiction of two federal agencies is addressed; LBP-09-6, 69 NRC 405 (2009)
- California v. Block*, 690 F.2d 753, 761 (9th Cir. 1982)  
because there is no current proposal for a deep disposal site, it is reasonable to defer more detailed analysis until a concrete proposal crystallizes actual site data, allowing for a comprehensive, site-specific evaluation of probable impacts; CLI-06-15, 63 NRC 706 (2006)
- California v. Block*, 690 F.2d 753, 767 (9th Cir. 1982)  
an agency is not obligated to consider unreasonable alternatives, including those whose effect cannot be reasonably ascertained, and whose implementation is deemed remote and speculative; LBP-07-9, 65 NRC 607 (2007)
- California v. Federal Energy Regulatory Commission*, 329 F.3d 700, 707 (9th Cir. 2003)  
publication in the *Federal Register* is legally sufficient notice to all interested or affected persons regardless of actual knowledge or hardship resulting from ignorance, except those who are legally entitled to personal notice; LBP-09-20, 70 NRC 570 (2009)
- California Valley Miwok Tribe v. United States*, 515 F.3d 1262, 1264 (D.C. Cir. 2008)  
federal recognition by the Bureau of Indian Affairs is a formal political act confirming a tribe's existence as a distinct political society and institutionalizing the government-to-government relationship between the tribe and the federal government; LBP-09-13, 70 NRC 185 n.30 (2009)
- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), CLI-09-20, 70 NRC 911, 915 (2009)  
a proximity presumption applies when an individual or organization, or an individual authorizing an organization to represent his or her interests as the organization seeks to establish its representational standing, resides within 50 miles of the proposed facility or has frequent contacts with the area affected by the proposed facility; LBP-10-7, 71 NRC 410-11 (2010)  
in proceedings involving the possible construction or operation of a nuclear power reactor, including proceedings regarding the extension of a construction permit, proximity to the proposed facility has been considered sufficient to establish standing; LBP-10-7, 71 NRC 410 (2010)
- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), CLI-09-20, 70 NRC 911, 915-16 (2009)  
in proceedings involving the possible construction or operation of a nuclear power reactor, proximity to the proposed facility has been considered sufficient to establish standing; LBP-10-1, 71 NRC 176 (2010)  
the proximity presumption applies when petitioners live within 50 miles of the proposed facility or when they have frequent contacts with the area affected by the proposed facility; LBP-10-1, 71 NRC 176 (2010)  
the Commission recognizes a 50-mile proximity presumption to establish standing in proceedings concerning nuclear power reactor construction and operating licenses; LBP-09-28, 70 NRC 1024 (2009)
- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), CLI-09-20, 70 NRC 911, 915-17 (2009)  
in proceedings involving nuclear power reactors, petitioner is presumed to have standing to intervene without the need to specifically plead injury, causation, and redressability if petitioner lives within 50 miles of the proposed facility; LBP-10-15, 72 NRC 276 (2010)
- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), CLI-09-20, 70 NRC 911, 917 (2009)  
there is no conflict between the basic requirements for standing, as applied in the federal courts, and the NRC's proximity presumption; CLI-09-22, 70 NRC 933 (2009)
- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), CLI-09-20, 70 NRC 911, 923 (2009)  
the licensing board did not commit reversible error by admitting a contention based on low-level radioactive waste storage duration because the NRC Staff itself had issued a Request for Additional

## LEGAL CITATIONS INDEX

### CASES

- Information on this very issue and thus this conflicted with Staff's argument that the issue is immaterial to the findings that must be made on the application; LBP-09-27, 70 NRC 1015 n.123 (2009)
- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), CLI-09-20, 70 NRC 911, 923-24 (2009)
- a well-pleaded environmental contention concerning the effects of long-term onsite management of low-level radioactive waste is admissible; CLI-10-2, 71 NRC 4 (2010)
- applicants argument that proposed contentions are necessarily inadmissible because they are virtually identical to those rejected by the Commission after sua sponte review is not persuasive; CLI-10-2, 71 NRC 44 n.85 (2010)
- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), LBP-09-4, 69 NRC 170, 181-86 (2009)
- under the proximity presumption, petitioner in an operating license proceeding who lives within 50 miles of a nuclear power reactor is presumed to have standing without the need specifically to plead injury, causation, and redressability; LBP-09-26, 70 NRC 947 (2009)
- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), LBP-09-4, 69 NRC 170, 183 (2009)
- a board is not at liberty to abandon the Commission's 50-mile proximity presumption; LBP-09-16, 70 NRC 242 (2009)
- NRC's proximity presumption does not disregard contemporaneous judicial concepts of standing, but rather the Commission applied its expertise to determine that persons living within a 50-mile radius of a nuclear reactor face a realistic threat of harm if a release of radioactive material were to occur from the facility; LBP-09-16, 70 NRC 242 (2009)
- the nontrivial increased risk to persons living within a 50-mile radius of a nuclear reactor constitutes injury-in-fact, is traceable to the challenged action, and is likely to be redressed by a favorable decision that either denies a license or mandates compliance with legal requirements that protect the interests of the petitioners; LBP-09-16, 70 NRC 242 (2009)
- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), LBP-09-4, 69 NRC 170, 187 (2009)
- favorable rulings on petitioners' NEPA contentions would ensure that procedures are observed that require adequate analysis of potential impacts to their members' health and safety and to the environment where the members reside; LBP-09-16, 70 NRC 243 (2009)
- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), LBP-09-4, 69 NRC 170, 194-95 (2009)
- the requirement under 10 C.F.R. 2.309(f)(1)(v) that contentions be supported by alleged facts or expert opinion generally is fulfilled when the sponsor of an otherwise acceptable contention provides a brief recitation of the factors underlying the contention or references to documents and text that provide such reasons; LBP-10-14, 72 NRC 129 (2010)
- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), LBP-09-4, 69 NRC 170, 199 (2009)
- a board can only decide whether or not a current funding proposal fulfills NRC requirements; LBP-09-18, 70 NRC 422 (2009)
- it is beyond the authority of a board to say which method applicant must use to fulfill the decommissioning funding assurance requirement; LBP-09-18, 70 NRC 422 (2009)
- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), LBP-09-4, 69 NRC 170, 200 (2009)
- it is beyond licensing board authority to require applicant to choose a particular method of decommissioning funding; LBP-09-15, 70 NRC 207 (2009)
- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), LBP-09-4, 69 NRC 170, 202 (2009)
- although applicant's description of existing water quality conditions did not separately evaluate the contributions of specific sources, it nonetheless formed an environmental baseline against which to measure the cumulative impact of the proposed new reactor; LBP-09-16, 70 NRC 247 (2009)

## LEGAL CITATIONS INDEX

### CASES

- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), LBP-09-4, 69 NRC 170, 203-05 (2009)  
the environmental baseline reflects the effects of all currently existing pollution sources in the relevant watershed, including contributions of all nuclear power plants, and petitioners failed to provide information indicating that this aggregate analysis was insufficient under NEPA; LBP-09-16, 70 NRC 248 (2009)
- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), LBP-09-4, 69 NRC 170, 208 (2009)  
the NEPA requirement to consider alternatives to a proposed action is governed by the rule of reason applicable to all NEPA-required alternatives analyses and does not extend to events that are remote and speculative; LBP-09-26, 70 NRC 970 (2009)
- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), LBP-09-4, 69 NRC 170, 209 (2009)  
one in a million per year is the threshold above which accident scenarios should be evaluated for NEPA consideration; LBP-10-10, 71 NRC 556 (2010)
- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), LBP-09-4, 69 NRC 170, 217-18 (2009)  
a decision may be referred to the Commission if it raises significant and novel legal or policy issues, and resolution of the issues would materially advance the orderly disposition of the proceeding; LBP-09-18, 70 NRC 407 (2009)  
an attack on the Commission's proximity presumption is rejected; LBP-09-18, 70 NRC 397 (2009)  
contentions challenging the Waste Confidence Rule are inadmissible; LBP-09-17, 70 NRC 337 (2009)  
contentions on the environmental impacts of spent fuel storage are inadmissible; LBP-09-18, 70 NRC 406 (2009)
- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), LBP-09-4, 69 NRC 170, 220-21 (2009)  
boards have authority to narrow low-level radioactive waste contentions; LBP-09-16, 70 NRC 253 (2009)  
greater-than-Class-C waste is the responsibility of the federal government and is not affected by the partial closure of the Barnwell facility; CLI-10-2, 71 NRC 48 n.110 (2010)
- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), LBP-09-4, 69 NRC 170, 220-31 (2009)  
contentions that concern greater-than-Class-C waste, seek to require a change to the decommissioning cost estimate, or constitute a challenge to Table S-3 of 10 C.F.R. 51.51 are inadmissible; LBP-09-16, 70 NRC 253 (2009)
- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), LBP-09-4, 69 NRC 170, 221 (2009)  
only the management of Class B and Class C wastes is properly the subject of a contention in a combined license proceeding; LBP-09-16, 70 NRC 254 (2009)  
Part 61 does not apply to onsite facilities where the licensee intends to store its own low-level radioactive waste; LBP-09-10, 70 NRC 121 n.57 (2009)
- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), LBP-09-4, 69 NRC 170, 222 (2009)  
although boards are not required to narrow contentions to make them acceptable, they may do so; LBP-09-25, 70 NRC 875 n.37 (2009)  
arguments premised on the prediction that someday a nuclear plant site will become a permanent storage or disposal facility for low-level radioactive waste are too speculative and therefore not material to the findings the NRC must make to support the action that is involved in the present proceeding; LBP-09-16, 70 NRC 255 (2009)
- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), LBP-09-4, 69 NRC 170, 224-25 (2009)  
an application's lack of consideration of any alternative to offsite disposal of low-level radioactive waste is a material issue for litigation; LBP-09-18, 70 NRC 424 (2009)

## LEGAL CITATIONS INDEX

### CASES

- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), LBP-09-4, 69 NRC 170, 226-27 (2009)  
low-level radioactive waste disposal contentions have been admitted when that issue was not sufficiently discussed in the applications and there was no mention of the closure of the Barnwell facility; LBP-09-18, 70 NRC 410-11 (2009)
- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), LBP-09-15, 70 NRC 198, 214-19 (2009)  
at the time the combined license application is submitted, applicant must specify the method for decommissioning funding assurance that it proposes to use and must show that the method satisfies the applicable financial test; LBP-09-18, 70 NRC 422 (2009)
- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), LBP-09-15, 70 NRC 198, 218-19 (2009)  
at the time the combined license application is submitted, it must identify the method of decommissioning funding assurance that the applicant proposes to use and to show that the method complies with any applicable financial test; LBP-09-18, 70 NRC 418 n.215 (2009)
- Calvert Cliffs 3 Nuclear Project, LLC* (Calvert Cliffs Nuclear Power Plant, Unit 3), LBP-09-15, 70 NRC 198, 223 n.83 (2009)  
the role of a licensing board is to decide whether an applicant has supplied the requisite information to the NRC, and whether the petitioners have identified any defect in that information; LBP-09-18, 70 NRC 419 (2009)
- Calvert Cliffs' Coordinating Committee, Inc. v. AEC*, 449 F.2d 1109 (D.C. Cir. 1971)  
NRC must apply no lesser standard to its environmental review than it does to its safety review; LBP-06-28, 64 NRC 491 n.104 (2006)
- Calvert Cliffs' Coordinating Committee, Inc. v. AEC*, 449 F.2d 1109, 1112 (D.C. Cir. 1971)  
the greatest importance of NEPA may be that it requires the Commission and other agencies to consider environmental issues just as they consider other matters within their mandate; LBP-06-28, 64 NRC 484 n.73 (2006)
- Calvert Cliffs' Coordinating Committee, Inc. v. AEC*, 449 F.2d 1109, 1118 (D.C. Cir. 1971)  
in uncontested hearings, the board need not necessarily go over the same ground covered in the detailed environmental impact statement, but it must at least examine the statement carefully to determine whether the review by NRC staff has been adequate and it must independently consider the final balance among conflicting factors that is struck in the Staff's recommendation; LBP-06-17, 63 NRC 825 (2006); LBP-06-28, 64 NRC 484 n.73 (2006)  
in uncontested hearings, the board shall determine whether the application and the record of the proceeding contain sufficient information, and the review of the application by NRC staff has been adequate, to support affirmative findings on various non-environmental factors; LBP-06-17, 63 NRC 825 (2006)  
NEPA requires licensing boards to independently review NRC Staff environmental analyses and independently consider the final balance among conflicting factors, regardless of whether NEPA issues are raised by an intervenor; LBP-07-9, 65 NRC 558, 615, 616 (2007)
- Calvert Cliffs' Coordinating Committee, Inc. v. AEC*, 449 F.2d 1109, 1123 (D.C. Cir. 1971)  
abdication of water quality effects entirely to other agencies' certifications subverts the special purpose of NEPA; LBP-09-16, 70 NRC 278 (2009)  
NRC is required to evaluate and balance both the claimed benefits and the environmental costs of a proposed new reactor; LBP-09-16, 70 NRC 301 (2009)
- Campbell v. Eastland*, 307 F.2d 478, 487 (5th Cir. 1962), *cert. denied*, 375 U.S. 95 (1963)  
a judge should be sensitive to the difference in the rules of discovery in civil and criminal cases and that separate policies and objectives support these different rules; LBP-06-13, 63 NRC 539 n.48 (2006)  
a litigant should not be allowed to make use of the liberal discovery procedures applicable to a civil suit as a dodge to avoid the restrictions on criminal discovery and thereby obtain documents he would not otherwise be entitled to for use in his criminal suit; CLI-06-12, 63 NRC 503 n.27 (2006)  
the statement that "administrative policy gives priority to the public interest in law enforcement" has occasionally been cited for the proposition that a stay of the civil proceeding is always appropriate when there is a parallel criminal proceeding; LBP-06-13, 63 NRC 539 n.50 (2006)

## LEGAL CITATIONS INDEX

### CASES

- Campbell v. Eastland*, 307 F.2d 478, 487 n.12 (5th Cir. 1962)  
there are general factors, traditional justifications, for limitations on criminal discovery, and those include manufacture of evidence; LBP-06-13, 63 NRC 552 n.102 (2006)
- Cappaert v. United States*, 426 U.S. 128, 139 (1976)  
when the federal government reserves land, by implication it reserves water rights sufficient to accomplish the purposes of the reservation; LBP-08-24, 68 NRC 743 n.291 (2008)
- Career Education, Inc. v. Department of Education*, 6 F.3d 817, 820 (D.C. Cir. 1993)  
the Commission acts as adjudicator and in that light considers the reinstatement of a construction permit afresh, without regard for its earlier views; CLI-10-6, 71 NRC 120 (2010)
- Carolina Power & Light Co.* (H.B. Robinson, Unit 2), ALAB-569, 10 NRC 557, 558 (1979)  
although the licensing board conducted an in-depth examination of the plant's thermal discharge and tentatively concluded that the intervenor was right, it delayed issuing its partial initial decision addressing the merits of the intervenor's contention until the EPA had issued its own decision in a parallel case; CLI-07-16, 65 NRC 388 (2007)
- Carolina Power & Light Co.* (H.B. Robinson, Unit 2), ALAB-569, 10 NRC 557, 559 (1979)  
even if a licensing board disagrees with EPA on the thermal impact issue, it is nevertheless required by law to consider the EPA's decision as binding; CLI-07-16, 65 NRC 388 (2007)
- Carolina Power & Light Co.* (H.B. Robinson, Unit 2), ALAB-569, 10 NRC 557, 561 (1979)  
Congress, in enacting the Clean Water Act, removed the broad responsibility of multiple federal agencies for water quality standards and placed that responsibility solely in the hands of the EPA; CLI-07-16, 65 NRC 388 (2007)  
NRC may not undercut EPA by undertaking its own analyses and reaching its own conclusions on water quality issues already decided by EPA; CLI-07-16, 65 NRC 388 (2007)
- Carolina Power & Light Co.* (H.B. Robinson, Unit 2), ALAB-569, 10 NRC 557, 561 n.14 (1979)  
NRC abstinence from setting water quality standards is fully consistent with congressional general intent that the Clean Water Act is to be implemented in a way that will avoid needless duplication and unnecessary delays at all levels of government; CLI-07-16, 65 NRC 389 (2007)
- Carolina Power & Light Co.* (H.B. Robinson, Unit 2), ALAB-569, 10 NRC 557, 561-62 (1979)  
when water quality decisions have been made by a state pursuant to the Clean Water Act and these decisions are raised in NRC licensing proceedings, the NRC is bound to take EPA's considered decisions at face value; LBP-09-25, 70 NRC 885 (2009)
- Carolina Power & Light Co.* (H.B. Robinson, Unit 2), ALAB-569, 10 NRC 557, 562 (1979)  
boards must take state permit determinations at face value and are prohibited from undertaking any independent analysis of the permit's limits; LBP-08-13, 68 NRC 157 (2008)  
NRC is required to take EPA's considered decisions at face value; CLI-07-16, 65 NRC 388 (2007)  
where a state has assessed the aquatic impacts in approving a plant's cooling system, NRC must take the state's evaluation at face value and may not undercut the state's judgment by undertaking an independent analysis or establishing its own standards; LBP-06-20, 64 NRC 217 (2006)
- Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant), ALAB-837, 23 NRC 525, 546-48 (1986)  
deferral of review of board denial of rule waiver petition did not cause irreparable injury; CLI-10-29, 72 NRC 562 (2010)
- Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant), ALAB-837, 23 NRC 525, 547 (1986)  
for intervenors to demonstrate that the purpose of the regulation excluding consideration of alternatives and the need for power from the OL phase would not be served, they must make a prima facie showing that the proposed facility is not needed to meet increased energy demand and that it need not be used to displace an equivalent amount of older, less economical capacity; LBP-10-12, 71 NRC 670 (2010)  
the OL-stage need-for-power rule is based in part on the fact that at the time the OL application is submitted the vast majority of the environmental disruption would have already occurred and an electric utility would use the new nuclear plant to meet increased energy demand or replace older, less economical generation capacity; LBP-10-12, 71 NRC 670 (2010)
- Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant), ALAB-837, 23 NRC 525, 548 (1986)  
to make its prima facie showing, a petition for waiver of the regulation excluding consideration of alternatives and the need for power from the OL phase must establish that all of the applicant's

## LEGAL CITATIONS INDEX

### CASES

- fossil fuel baseload generation that is less efficient than the facility under consideration has been accounted for; LBP-10-12, 71 NRC 670 (2010)
- Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant), ALAB-843, 24 NRC 200, 204 (1986) arguments that an intervenor fails to adequately develop are treated as waived; LBP-06-19, 64 NRC 76 n.21 (2006)
- Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant), ALAB-852, 24 NRC 532, 544-45 (1986)
- applicant's failure to comply with a guidance document does not demonstrate failure to comply with the relevant regulations; LBP-07-14, 66 NRC 197 (2007)
- NUREGs and regulatory guides serve as guidance, do not prescribe requirements, are not substitutes for regulations, and are not binding authority; LBP-07-6, 65 NRC 440 n.31 (2007)
- Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant), CLI-00-11, 51 NRC 297, 299 (2000) the Commission itself may exercise its discretion to review a licensing board's interlocutory order if the Commission wants to address a novel or important issue; CLI-09-6, 69 NRC 138 (2009)
- the Commission's decision to review a licensing board's interlocutory order stems from its inherent supervisory authority over adjudications and in no way implies that parties have a right to seek interlocutory review on that same ground; CLI-09-6, 69 NRC 138 (2009)
- the Commission's supervisory authority does not constitute grounds for a party's own request for appellate review; CLI-07-1, 65 NRC 6 n.23 (2007)
- Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant), CLI-01-11, 53 NRC 370, 383-86 (2001) NRC's Subpart K process is described; CLI-08-1, 67 NRC 25 (2008)
- Subpart K implements the totally new procedure established under the Nuclear Waste Policy Act for adjudicating spent fuel storage controversies expeditiously; CLI-08-26, 68 NRC 514 (2008)
- the presiding officer is allowed to resolve factual and legal disputes in spent fuel storage controversies, including disagreements between experts, on the basis of a brief discovery period and written submissions and oral argument without a full trial-type evidentiary hearing; CLI-08-26, 68 NRC 514 (2008)
- under Subpart K and the Nuclear Waste Policy Act, the Commission resorts to full evidentiary hearings on spent fuel storage controversies only when necessary for accuracy; CLI-08-26, 68 NRC 514 (2008)
- Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant), CLI-01-11, 53 NRC 370, 384 (2001) summary disposition may be a useful device to eliminate the need for the time and cost of a hearing if the truth on a contested issue is clear and there is no genuine issue on any material fact; LBP-07-12, 66 NRC 127 (2007)
- Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant), CLI-01-11, 53 NRC 370, 386 & n.6 (2001), *petition for review denied, Orange County v. NRC*, 47 Fed. App'x 1, 2002 WL 31098379 (D.C. Cir. 2002)
- licensing board findings of fact that turn on witness credibility receive the Commission's highest deference on appeal; CLI-10-23, 72 NRC 225 n.64 (2010)
- Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant), CLI-01-7, 53 NRC 113, 117-18 (2001) only the Commission on its own initiative may review Staff's final no significant hazards consideration determination; LBP-08-20, 68 NRC 551 n.4 (2008)
- Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant), CLI-01-7, 53 NRC 113, 118 (2001) the Commission has inherent discretionary supervisory authority over the NRC Staff to stay the Staff's issuance of a power uprate amendment; CLI-06-8, 63 NRC 237 (2006)
- Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant), CLI-01-11, 53 NRC 370, 393 (2001) an attempt to circumvent page-limit rules by incorporating documents by reference could be grounds for sanctions; CLI-10-9, 71 NRC 278 n.205 (2010)
- Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant), LBP-99-25, 50 NRC 25 (1999) the proximity presumption was accorded to an interested county whose border was 17 miles from a facility that wanted to increase its spent fuel storage capacity; LBP-07-14, 66 NRC 183 (2007)
- Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant), LBP-99-25, 50 NRC 25, 29-31 (1999) as a foundation for establishing standing, licensing board precedents support the application of a similar proximity radius in cases involving large amounts of spent nuclear fuel; LBP-07-14, 66 NRC 187 (2007)

## LEGAL CITATIONS INDEX

### CASES

- Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant), LBP-99-25, 50 NRC 25, 31 (1999)  
petitioners are not required to demonstrate their asserted injury with certainty at the contention admission stage, or to provide extensive technical studies in support of their standing argument; LBP-07-14, 66 NRC 188 (2007); LBP-08-24, 68 NRC 708 (2008); LBP-10-16, 72 NRC 388 (2010)
- Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant), LBP-00-19, 52 NRC 85 (2000), *aff'd*, CLI-01-11, 53 NRC 370 (2001)  
risks and effects of high-density racking of spent fuel in pools have been studied and debated since 1979 and have been the subject of substantial litigation; LBP-06-20, 64 NRC 160 (2006)
- Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant), LBP-01-9, 53 NRC 239, 250 (2001)  
although the Federal Rules of Evidence are not mandated for NRC adjudicatory proceedings, the Commission has endorsed the use of the FRE as guidance for the boards with the express proviso that boards must apply the Part 2 rules with greater flexibility than the FRE; LBP-12-23, 72 NRC 705 (2010)
- Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant, Unit 1), LBP-07-11, 66 NRC 41, 52 (2007)  
an individual may satisfy standing requirements by demonstrating that his or her residence or activities are within the geographical area that might be affected by an accidental release of fission products, and in proceedings involving nuclear power plants this area has been defined as being within a 50-mile radius of such a plant; LBP-09-4, 69 NRC 178 (2009)  
for organizations to demonstrate standing to intervene, they must allege that the challenged action will cause a cognizable injury to the organization's interests or to the interests of its members; LBP-08-13, 68 NRC 60 (2008)  
the proximity presumption has been found to arise in a license renewal proceeding if the petitioner lives within a specific distance from the power reactor; LBP-08-26, 68 NRC 911 (2008)  
when seeking to intervene as the representative for its members, an organization must identify a member by name and address, show how that member would be affected by the licensing action, and demonstrate that the member has authorized the organization to request a hearing on his or her behalf; LBP-08-13, 68 NRC 60 (2008)  
if an organization seeks to intervene as a representative of its members, it must identify at least one member by name and address, show that member would have standing in his or her own right, and demonstrate that the member has authorized the organization to intervene on his or her behalf; LBP-09-26, 70 NRC 947 (2009)  
to demonstrate standing, an organization seeking to intervene in a proceeding must allege that the challenged action will cause a cognizable injury to the organization's interests or to the interests of its members; LBP-09-26, 70 NRC 947 (2009)  
under the proximity presumption, petitioner is presumed to have standing to intervene without the need to specifically plead injury, causation, and redressability if petitioner lives within 50 miles of the proposed facility; LBP-09-18, 70 NRC 395 (2009)
- Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant, Unit 1), LBP-07-11, 66 NRC 41, 57-58 (2007)  
petitioner may not challenge applicable statutory requirements as part of an administrative adjudication; CLI-09-14, 69 NRC 605 (2009)
- Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant, Units 1 and 2), LBP-82-119A, 16 NRC 2069, 2073 (1982)  
the special circumstances necessary to obtain waiver of a rule must be set forth with particularity and supported by an affidavit or other proof; LBP-10-9, 71 NRC 525 n.147 (2010)
- Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant, Units 1 and 2), LBP-83-27A, 17 NRC 971, 978-79 (1983)  
in response to claims of attorney-client and attorney work product privilege, the identity of an expert retained by a party is discoverable; LBP-06-10, 63 NRC 335 n.68 (2006)
- Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant, Units 1, 2, 3, and 4), CLI-79-5, 9 NRC 607, 609 (1979)  
inherent in any forecast of future electric power demands is a substantial margin of uncertainty; LBP-10-24, 72 NRC 748, 749 (2010)

## LEGAL CITATIONS INDEX

### CASES

- Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant, Units 1, 2, 3, and 4), CLI-79-5, 9 NRC 607, 609-10 (1979)  
a possible 1-year slip in construction schedule is clearly within the margin of uncertainty and, therefore, in the context of relitigating an issue, is unlikely to affect the need for power; LBP-10-6, 71 NRC 382 n.96 (2010)  
long-range forecasts for future electric power demands are especially uncertain in that they are affected by trends in usage, increasing rates, demographic changes, industrial growth or decline, and the general state of the economy, among others; LBP-10-24, 72 NRC 776 (2010)  
NRC's longstanding approach to electric power demand forecasting has emphasized historical, conservative planning to ensure electricity generating capacity will be available to meet reasonably expected needs; LBP-08-16, 68 NRC 406 (2008)
- Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant, Units 1, 2, 3, and 4), CLI-80-12, 11 NRC 514, 516 (1980)  
licensing boards are not to second-guess how the Staff performs its functions; CLI-08-23, 68 NRC 473-74 (2008); LBP-07-11, 66 NRC 77 n.154 (2007); LBP-10-17, 72 NRC 513 (2010)
- Carolina Power & Light Co.* (Shearon Harris Nuclear Power Plant, Units 1, 2, 3, and 4), CLI-80-12, 11 NRC 514, 516-17 (1980)  
absent delegated authority, our licensing boards lack authority to direct the Staff's nonadjudicatory actions; CLI-09-2, 69 NRC 63 (2009)  
as an exercise of the Commission's inherent supervisory authority over adjudicatory proceedings, the Commission directs the board to provide the Commission with a status report outlining the board's timetable for resolving all pending matters; CLI-10-18, 72 NRC 96 (2010)  
the Commission has inherent supervisory authority over licensing proceedings; CLI-09-7, 69 NRC 284 (2009)
- Carstens v. NRC*, 742 F.2d 1546, 1558-59 (D.C. Cir. 1984)  
NRC was reasonable in not providing a quantifiable definition for the key regulatory phrase "conservative manner," given that relevant judgment calls did not lend themselves to rigid statistical definitions; CLI-10-14, 71 NRC 466 n.89 (2010)
- CBS Corp.* (Waltz Mill Facility), CLI-07-15, 65 NRC 221, 235 (2007)  
until a court of competent jurisdiction determines that a regional compact cannot exclude foreign waste from a facility, the compact itself indicates to the Commission that it chooses not to exercise such authority, or some other basis upon which to address the disposal question arises, it would be inefficient to devote further adjudicatory and NRC Staff resources to an import/export license proceeding; CLI-08-24, 68 NRC 495 (2008)
- Celotex Corp. v. Catrett*, 477 U.S. 317, 323 (1986)  
the proponent of summary disposition bears the initial burden of informing the tribunal of the basis for its motion and identifying those portions of the record that demonstrate the absence of a genuine issue of material fact; LBP-08-7, 67 NRC 371 (2008)
- Celotex Corp. v. Catrett*, 477 U.S. 317, 324 (1986)  
the opponent of summary disposition cannot rest on the mere allegations or denials of a pleading, but must go beyond the pleadings and by the party's own affidavits, or by the depositions, answers to interrogatories, and admissions on file, designate specific facts showing that there is a genuine issue for trial; LBP-08-7, 67 NRC 372 (2008)
- Center for Biological Diversity v. National Highway Traffic Safety Administration*, 538 F.3d 1172, 1213 (9th Cir. 2008)  
an agency may be excused from complying with NEPA where it has no discretion to prevent, or to refuse to take, the action involved; LBP-09-6, 69 NRC 405 (2009)
- Center for Biological Diversity v. National Highway Traffic Safety Administration*, 538 F.3d 1172, 1217-18 (9th Cir. 2008)  
the agency must give full and meaningful consideration to all reasonable alternatives under NEPA; CLI-10-18, 72 NRC 75 (2010)

## LEGAL CITATIONS INDEX

### CASES

- Center for National Security Studies v. U.S. Department of Justice*, 331 F.3d 918, 928 (D.C. Cir. 2003), *cert. denied*, 540 U.S. 1104 (D.C. Cir. 2003)  
in reviewing the validity of a withholding under any FOIA exemption, deference must be accorded to the executive in its area of expertise so long as the government's declarations raise legitimate concerns that disclosure would impair national security; LBP-08-7, 67 NRC 376 (2008)
- Central Delta Water Agency v. United States*, 306 F.3d 938, 947-48 (9th Cir. 2002)  
federal courts of appeal have failed to reach a consensus on the question whether a risk of future injury must exceed a numerical threshold; LBP-09-4, 69 NRC 184 (2009)
- CFC Logistics, Inc.* (Cobalt-60 Irradiator), LBP-03-20, 58 NRC 311, 319 (2003)  
presumption of standing based on geographical proximity may be applied in nuclear materials licensing cases only when the activity at issue involves a significant source of radioactivity producing an obvious potential for offsite consequences; LBP-08-6, 67 NRC 272 (2008)
- CFC Logistics, Inc.* (Cobalt-60 Irradiator), LBP-03-20, 58 NRC 311, 323-33 (2003)  
determinations of admissibility of "areas of concern" based upon a standard of "germaneness" is no longer applicable in NRC proceedings; LBP-06-12, 63 NRC 406 (2006)
- CFC Logistics, Inc.* (Cobalt-60 Irradiator), LBP-03-20, 58 NRC 311, 327 (2003)  
the regulations in Part 36 set the standards that must be applied to an application, but they do not embody a determination that the facility meets those standards; LBP-06-12, 63 NRC 406 (2006)
- CFC Logistics*, LBP-05-1, 61 NRC 45, 50 n.8 (2005)  
the hearing process is a vehicle to permit the public to seek resolution of their concerns about the health, safety, and environmental impacts of a proposed licensing action, and that process operates most fairly and effectively when those who seek to use it have the benefit of accurate information regarding the agency's licensing review system and its possible outcomes; LBP-10-2, 71 NRC 208 (2010)
- Chapman v. United States*, 500 U.S. 453, 462 (1991)  
to interpret terms not expressly defined in a regulation or statute, the board may look to the ordinary meaning of the term; LBP-08-15, 68 NRC 305 (2008)
- Cheney v. U.S. District Court for District of Columbia*, 542 U.S. 367, 384 (2004)  
courts often engage in fact-specific balancing to determine the applicability, strength, and persuasiveness of qualified privileges, examining the nature of the proceeding; LBP-06-25, 64 NRC 377 (2006)
- Chevron U.S.A., Inc. v. Natural Resources Defense Council, Inc.*, 467 U.S. 837, 842-43 (1984)  
if the intent of Congress is clear, the court as well as the agency must give effect to the unambiguously expressed intent of Congress; LBP-10-11, 71 NRC 626 (2010)
- Chevron U.S.A., Inc. v. Natural Resources Defense Council, Inc.*, 467 U.S. 837, 844 (1984)  
courts generally accord considerable weight to an agency's construction of the statutes it administers; CLI-10-13, 71 NRC 389 n.9 (2010)
- Chevron U.S.A. v. United States*, 80 Fed. Cl. 340, 356 (2008)  
to overcome deliberative process privilege, petitioners must show that their need for the information outweighs potential harm to the agency from that disclosure; CLI-08-23, 68 NRC 483 n.103 (2008)
- Chicago Tribune Co. v. Bridgestone/Firestone, Inc.*, 263 F.3d 1304 (11th Cir. 2001)  
the First Amendment requires a presumption of openness in civil proceedings; LBP-10-2, 71 NRC 208 n.58 (2010)
- Christensen v. Harris County*, 529 U.S. 576, 587 (2000)  
NRC does not owe deference to DOE where DOE's interpretation of NRC's own responsibilities is reflected in nothing more formal than a motion before the board and not, for example, in a formal agency adjudication or notice-and-comment rulemaking; LBP-10-11, 71 NRC 626 (2010)
- Church of Scientology v. Cazares*, 638 F.2d 1272, 1276-80 (5th Cir. 1981)  
criteria for representational standing are applied to a church; CLI-08-19, 68 NRC 265 n.48 (2008)
- Cincinnati Gas and Electric Co.* (William H. Zimmer Nuclear Power Station, Unit 1), LBP-83-58, 18 NRC 640, 663 (1983)  
good cause to excuse the late-filing of a contention is the most important factor; CLI-08-1, 67 NRC 6 (2008); CLI-08-8, 67 NRC 197 n.26 (2008)

## LEGAL CITATIONS INDEX

### CASES

- Cincinnati Gas and Electric Co.* (Wm. H. Zimmer Nuclear Power Station), ALAB-595, 11 NRC 860, 863 (1980)  
the appeal board declined to entertain appeals by license applicants challenging partial board rulings; CLI-09-18, 70 NRC 861 n.10 (2009)
- Cities of Statesville v. AEC*, 441 F.2d 962, 976-77 (D.C. Cir. 1969)  
NRC has broad discretion to provide hearings or permit interventions in cases where these avenues of public participation would not be available as a matter of right; CLI-06-16, 63 NRC 715 (2006)
- Citizens Against Burlington, Inc. v. Busey*, 938 F.2d 190 (D.C. Cir. 1991)  
a reviewing agency should take into account the applicant's goals for the project; LBP-09-2, 69 NRC 109 n.86 (2009)
- Citizens Against Burlington, Inc. v. Busey*, 938 F.2d 190, 195 (D.C. Cir.), *cert. denied*, 502 U.S. 994 (1991)  
a reviewing agency determines whether an alternative is appropriate by looking at the objectives (i.e., purpose and need) of a project sponsor; LBP-09-2, 69 NRC 108 n.84 (2009)  
in the context of alternatives analyses, agencies need only discuss those alternatives that are reasonable and will bring about the ends of the proposed action; CLI-06-10, 63 NRC 469 (2006); LBP-10-6, 71 NRC 363 (2010)  
in the context of appropriately defining terms and reconciling concepts such as "reasonable," "feasible," and "reasonably available," a problem for agencies is that even the term "alternatives" is not self-defining; LBP-10-10, 71 NRC 584 (2010)  
NRC need only consider a range of alternatives in its environmental impact statement that are technologically feasible and economically practicable alternatives for producing baseload power; LBP-10-10, 71 NRC 581 (2010)  
when the purpose of a project is to accomplish one thing, it makes no sense to consider the alternative ways by which another thing might be achieved; CLI-06-10, 63 NRC 469 (2006); LBP-06-19, 64 NRC 87 (2006)
- Citizens Against Burlington, Inc. v. Busey*, 938 F.2d 190, 196 (D.C. Cir.), *cert. denied*, 502 U.S. 994 (1991)  
acceptance of applicant's undue narrowing of site options in order to predetermine the outcome of the alternative site review would render the NEPA alternative analysis a foreordained formality; CLI-07-27, 66 NRC 227 (2007)  
an agency may not define the objectives of its action in terms so unreasonably narrow that only one alternative from among the environmentally benign ones in the agency's power would accomplish the goals of the agency's action, and the EIS would become a foreordained formality; LBP-07-9, 65 NRC 608 n.96, 637, 638 (2007)  
the goal of the applicant was very narrow, i.e., to launch a new cargo hub thereby helping to fuel the local economy, and thus the NEPA alternative sites analysis did not need to include nonlocal sites; LBP-07-9, 65 NRC 636 (2007)  
when reviewing a license application filed by a private applicant, NRC should take into account the needs and goals of the parties involved in the application; CLI-06-10, 63 NRC 468 (2006)
- Citizens Against Burlington, Inc. v. Busey*, 938 F.2d 190, 197 (D.C. Cir. 1991)  
if issuing a license involves oversight of a private project rather than a federally sponsored project, the agency is entitled to give the applicant's preferences substantial weight when considering project design alternatives; LBP-06-8, 63 NRC 259 (2006); LBP-10-14, 72 NRC 110 (2010)  
when a federal agency acts, not as a proprietor, but to approve a project being sponsored by a local government or private applicant, the federal agency is necessarily more limited; CLI-06-10, 63 NRC 468 (2006)
- Citizens Against Burlington, Inc. v. Busey*, 938 F.2d 190, 197 n.6 (D.C. Cir. 1991)  
federal agencies are not required under the National Environmental Policy Act to canvas business choices, having neither the expertise nor the proper incentive structure to do so; LBP-09-2, 69 NRC 111 (2009)
- Citizens Against Burlington, Inc. v. Busey*, 938 F.2d 190, 199 (D.C. Cir.), *cert. denied*, 502 U.S. 994 (1991)  
a project's goal is to be determined by the applicant, not the agency; LBP-07-9, 65 NRC 607 (2007)  
an agency cannot redefine the applicant's goals, and the EIS alternatives analysis should be based around the applicant's goals, including its economic goals; LBP-09-17, 70 NRC 379 (2009)

## LEGAL CITATIONS INDEX

### CASES

- an agency cannot redefine the goals of a proposal but instead must evaluate alternative ways of achieving its goals, shaped by the application at issue and by the function that the agency plays in the decisional process; LBP-09-2, 69 NRC 109 n.86 (2009); LBP-10-6, 71 NRC 363 n.37 (2010)
- applicant may not define the objectives of its action in terms so unreasonably narrow that only one alternative would accomplish the applicant's goals, because this would make the agency's EIS alternatives analysis a foreordained formality; LBP-09-10, 70 NRC 128 (2009); LBP-09-17, 70 NRC 379 (2009)
- goals of the project's sponsor are given substantial weight in determining whether an alternative is reasonable, and an agency cannot redefine the applicant's goals; LBP-09-10, 70 NRC 127 (2009); LBP-09-17, 70 NRC 379 (2009)
- in considering alternatives under NEPA, an agency must take into account the needs and goals of the parties involved in the application; LBP-10-10, 71 NRC 598 n.345 (2010)
- project goals are to be determined by the applicant, not the agency; CLI-10-18, 72 NRC 78-79 (2010)
- Citizens Association for Sound Energy v. NRC*, 821 F.2d 725, 730 (D.C. Cir. 1987)
- administrative regularity in the regulatory process is assumed, and review of the operating license application takes place independently of that associated with plant construction; CLI-10-29, 72 NRC 562 (2010)
- Citizens Association for Sound Energy v. NRC*, 821 F.2d 725, 731 (D.C. Cir. 1987)
- NRC's broad discretion under the Atomic Energy Act was confirmed where the Commissions decided to extend an already-expired construction permit; CLI-10-6, 71 NRC 122 (2010)
- Citizens Awareness Network, Inc. v. NRC*, 59 F.3d 284 (1st Cir. 1995)
- a change to agency policy providing substantive guidance on its regulations requires compliance with the notice-and-comment requirements of the Atomic Energy Act; CLI-10-6, 71 NRC 133 (2010)
- Citizens Awareness Network, Inc. v. NRC*, 391 F.3d 338 (1st Cir. 2004)
- NRC's new contention admission procedures comply with the relevant provisions of the Administrative Procedure Act and the Commission has furnished an adequate explanation for the changes; LBP-07-4, 65 NRC 303 n.96 (2007)
- Citizens Awareness Network, Inc. v. NRC*, 391 F.3d 338, 343 (1st Cir. 2004)
- NRC's procedures for filing contentions comply with the relevant provisions of the Administrative Procedure Act and the Commission has furnished an adequate explanation for its changes; LBP-06-23, 64 NRC 273 n.45.; LBP-06-23, 64 NRC 352 n.6 (2006)
- Citizens Awareness Network, Inc. v. NRC*, 391 F.3d 338, 343, 351 (1st Cir. 2004)
- cross-examination is available under Subpart L whenever it is required for a full and fair adjudication of the facts; LBP-07-4, 65 NRC 303 n.96 (2007)
- Citizens Awareness Network, Inc. v. NRC*, 391 F.3d 338, 343, 351, 355 (1st Cir. 2004)
- the new contention admission procedures comply with the relevant provisions of the federal Administrative Procedure Act and the Commission has furnished an adequate explanation for the changes; LBP-07-11, 66 NRC 56 (2007); LBP-08-6, 67 NRC 291 n.255 (2008)
- Citizens Awareness Network, Inc. v. NRC*, 391 F.3d 338, 344-45, 350 (1st Cir. 2004)
- in a Subpart L proceeding, mandatory disclosure is the only form of discovery allowed, and all other forms are expressly prohibited; LBP-12-23, 72 NRC 702 (2010)
- Citizens Awareness Network, Inc. v. NRC*, 391 F.3d 338, 349, 360-61 (1st Cir. 2004)
- section 51.53(c)(3)(iv) creates an exception to section 51.53(c)(3)(i) in the context of the requirements for ERs and EISs but not with regard to the scope of issues permitted to be raised in contentions in a license renewal adjudication context, absent a waiver; LBP-06-23, 64 NRC 299 n.170 (2006)
- Citizens Awareness Network, Inc. v. NRC*, 391 F.3d 338, 350 (1st Cir. 2004)
- NRC's mandatory disclosure rules for Subpart L proceedings provide meaningful access to information from adverse parties in the form of a system of mandatory disclosure; CLI-09-12, 69 NRC 573 (2009)
- Citizens Awareness Network, Inc. v. NRC*, 391 F.3d 338, 351 (1st Cir. 2004)
- a party is entitled to conduct such cross-examination as may be required for a full and true disclosure of the facts; LBP-09-10, 70 NRC 145 (2009); LBP-09-22, 70 NRC 656 n.34 (2009); LBP-10-15, 72 NRC 343-44 (2010)
- cross-examination is available whenever it is required for a full and fair adjudication of the facts; LBP-06-20, 64 NRC 203 (2006)

## LEGAL CITATIONS INDEX

### CASES

- cross-examination rules in Subpart L have been upheld and found to meet the requirements of the Administrative Procedure Act; CLI-09-12, 69 NRC 572 (2009)
- the opportunity for cross-examination under 10 C.F.R. 2.1204(b)(3) of Subpart L is equivalent to the opportunity for cross-examination under the Administrative Procedure Act, 5 U.S.C. § 556(d); LBP-06-23, 64 NRC 349 n.477 (2006); LBP-08-6, 67 NRC 343 n.581 (2008)
- Citizens Awareness Network, Inc. v. NRC*, 391 F.3d 338, 351, 352, 355 (1st Cir. 2004)
- under Subpart L, mandatory disclosures replace traditional discovery, and witness questioning is conducted by the presiding officer rather than through cross-examination by the parties' representatives, which complies with requirements of the Administrative Procedure Act; CLI-09-7, 69 NRC 278 (2009)
- Citizens Awareness Network, Inc. v. NRC*, 391 F.3d 338, 354 (1st Cir. 2004)
- it is not arbitrary and capricious for the Commission to leave the determination of whether cross-examination will further the truth-seeking process in a particular proceeding to the discretion of the individual hearing officer, provided cross-examination is allowed in appropriate instances; CLI-09-7, 69 NRC 278 (2009)
- Citizens Bank of Maryland v. Strumpf*, 516 U.S. 16, 20 (1995)
- the language of a regulation should not be construed to destroy itself; LBP-07-6, 65 NRC 464 (2007)
- Citizens Committee to Save Our Canyons v. U.S. Forest Service*, 297 F.3d 1012, 1030 (10th Cir. 2002)
- agencies are not allowed to define objectives of a project so narrowly as to preclude a reasonable consideration of alternatives; CLI-10-18, 72 NRC 79 (2010)
- Citizens for a Better Henderson v. Hodel*, 768 F.2d 1051, 1057 (9th Cir. 1985)
- an agency's environmental review must consider not every possible alternative, but every reasonable alternative; LBP-10-6, 71 NRC 380 n.87 (2010); LBP-10-10, 71 NRC 604 n.3 (2010)
- Citizens for Safe Power v. NRC*, 524 F.2d 1291, 1297 (1975)
- absolute or perfect assurances are not required by the Atomic Energy Act, and neither present technology nor public policy admit of such a standard; LBP-08-22, 68 NRC 647 (2008)
- Citizens for Safe Power v. NRC*, 524 F.2d 1291, 1301 & n.15 (1975)
- neither the Atomic Energy Act nor the regulations require totally risk-free siting; LBP-08-22, 68 NRC 647 (2008)
- City of Angoon v. Hodel*, 803 F.2d 1016, 1021 (9th Cir. 1986)
- as long as the applicant has not set forth an unreasonably narrow objective of its project, NRC adheres to the principle that when the purpose is to accomplish one thing, it makes no sense to consider alternative ways by which another thing might be accomplished; LBP-09-2, 69 NRC 108 n.84 (2009)
- City of Angoon v. Hodel*, 803 F.2d 1016, 1021 (9th Cir. 1986), *cert. denied*, 484 U.S. 870 (1987)
- when the purpose of a proposed action is to accomplish one thing, it makes no sense to consider the alternative ways by which another thing might be achieved; LBP-06-19, 64 NRC 86-87 (2006)
- City of Bridgeton v. Federal Aviation Administration*, 212 F.3d 448, 458 (8th Cir. 2000)
- a rule of reason governs the agency's duty to identify and consider all reasonable alternatives under NEPA; LBP-09-10, 70 NRC 127 (2009); LBP-09-17, 70 NRC 379 (2009)
- federal courts now review the range of alternatives in an environmental impact statement under the rule of reason; LBP-09-21, 70 NRC 626 n.271 (2009)
- the environmental impact statement need not consider an infinite range of alternatives, only reasonable or feasible ones; LBP-07-9, 65 NRC 607 (2007)
- City of Carmel-by-the-Sea v. U.S. Department of Transportation*, 123 F.3d 1142, 1155 (9th Cir. 1997)
- applicant should not be allowed to purposely narrow the scope of its review of alternative sites so as to predetermine the outcome of the agency's environmental review; CLI-07-27, 66 NRC 226 (2007)
- the hard look required by NEPA is subject to a rule of reason, such that it is not necessary to look at every conceivable alternative to the proposed licensing action, but only those that are feasible and reasonably related to the scope and goals of the proposed action; LBP-08-13, 68 NRC 92, 95 (2008); LBP-10-10, 71 NRC 581 (2010)
- the stated goal of a project necessarily dictates the range of reasonable alternatives and an agency cannot define its objectives in unreasonably narrow terms; LBP-07-9, 65 NRC 608 n.96, 637 (2007)

## LEGAL CITATIONS INDEX

### CASES

- City of Chicago v. Environmental Defense Fund*, 511 U.S. 328, 337 (1994)  
it is presumed that Congress knows how to draft an exemption when it wants to; LBP-09-15, 70 NRC 218 n.61 (2009)
- City of Cleveland v. Cleveland Electric Illuminating Co.*, 538 F. Supp. 1257, 1267 (N.D. Ohio 1980)  
where expert reports are predicated upon complex data, calculations, and computer simulations that are neither discernible nor deducible from the written reports themselves, disclosure thereof is essential to the effective and efficient examination of the experts at trial; LBP-12-23, 72 NRC 704 n.15 (2010)
- City of Detroit v. Grinnell*, 495 F.2d 448 (2d Cir. 1974)  
when evaluating whether a settlement in an enforcement proceeding is in the public interest, four factors are considered; LBP-06-18, 63 NRC 837 (2006)
- City of Grapevine v. U.S. Department of Transportation*, 17 F.3d 1502, 1506 (D.C. Cir.), *cert. denied*, 513 U.S. 1043 (1994)  
NRC need only consider a range of alternatives in its environmental impact statement that are technologically feasible and economically practicable for producing baseload power; LBP-10-10, 71 NRC 581 (2010)  
the agency's alternative analysis should be based around the applicant's goals, including the applicant's economic goals; LBP-07-9, 65 NRC 608 (2007)  
when reviewing a license application filed by a private applicant, NRC may appropriately accord substantial weight to the preferences of the applicant and/or sponsor in the siting and design of the project; CLI-06-10, 63 NRC 468 (2006); LBP-06-8, 63 NRC 259 (2006)
- City of New York v. U.S. Department of Transportation*, 715 F.2d 732, 742 (2d Cir. 1983)  
which alternatives are considered reasonable is determined by a project's goals; LBP-07-9, 65 NRC 607 (2007)
- City of New York v. U.S. Department of Transportation*, 715 F.2d 732, 743 (2d Cir. 1983)  
an agency will not be permitted to narrow the objective of its action artificially and thereby circumvent the requirement that relevant alternatives be considered; LBP-07-9, 65 NRC 608 n.96, 637 (2007)  
applicant should not be allowed to purposely narrow the scope of its review of alternative sites so as to predetermine the outcome of the agency's environmental review; CLI-07-27, 66 NRC 226 (2007)  
goals of a project's sponsor are given substantial weight in determining whether a NEPA alternative is reasonable; LBP-09-10, 70 NRC 127 (2009); LBP-09-17, 70 NRC 379 (2009)
- City of Olmsted Falls v. Federal Aviation Administration*, 292 F.3d 261, 274 (D.C. Cir. 2002)  
to reopen a record, new information must paint a seriously different picture of the environmental landscape; CLI-06-3, 63 NRC 28 (2005)
- City of Shoreacres v. Waterworth*, 420 F.3d 440, 450 (5th Cir. 2005)  
the NEPA alternatives analysis is the heart of the environmental impact statement; LBP-07-9, 65 NRC 603, 631 (2007); LBP-09-10, 70 NRC 126 (2009); LBP-09-17, 70 NRC 378 (2009)
- City of Tenakee Springs v. Clough*, 915 F.2d 1308, 1312 (9th Cir. 1990)  
to take the NEPA-required "hard look" at all significant consequences of a project, the consequences of the entire project must be examined at one time and cannot be looked at piecemeal; CLI-06-11, 63 NRC 493 (2006)
- Clarkco Landfill Co. v. Clark City Solid Waste Management District*, 20 F. Supp. 2d 1185, 1191 (S.D. Ohio 1998)  
mere experience or background in a relevant technical field does not imply knowledge of the specific disputed facts in a case; CLI-10-22, 72 NRC 206 (2010)
- Clements v. Airport Authority of Washoe County*, 69 F.3d 321, 329-30 (9th Cir. 1995)  
a party's failure to advance a collateral estoppel argument does not perforce trigger the waiver principle, thus precluding a tribunal from applying collateral estoppel; LBP-09-24, 70 NRC 822 (2009)  
a tribunal retains discretion to overlook waiver in the collateral estoppel context, and its exercise of discretion should be based on a balancing of the relevant public and private interests; LBP-09-24, 70 NRC 822 (2009)

## LEGAL CITATIONS INDEX

### CASES

- Clements v. Airport Authority of Washoe County*, 69 F.3d 321, 330 (9th Cir. 1995)  
the collateral estoppel doctrine promotes the compelling public interest in preserving the acceptability of judicial dispute resolution against the corrosive disrespect that would follow if the same matter were twice litigated to inconsistent results; LBP-09-24, 70 NRC 809-10, 813 n.5, 822 (2009)
- Cleveland Board of Education v. Loudermill*, 470 U.S. 532, 542 (1985)  
prior to issuance of the immediately effective enforcement order the accused should be afforded some form of predeprivation hearing; LBP-09-24, 70 NRC 801 n.11, 852 n.45 (2009)
- Cleveland Board of Education v. Loudermill*, 470 U.S. 532, 543 (1985)  
when the NRC Staff can, consistent with its duty to protect public health and safety, accord some form of predeprivation hearing, such a course of action is advisable in light of the important private interest in retaining employment and the fact that such a proceeding provides some opportunity for the employee to present his side of the case; LBP-09-24, 70 NRC 801 n.11, 852 n.45 (2009)
- Cleveland Board of Education v. Loudermill*, 470 U.S. 532, 543 n.8 (1985)  
providing predeprivation notice and informal hearing permits the employee to give his version of the events and provides a meaningful hedge against erroneous action; LBP-09-24, 70 NRC 801 n.11, 852 n.45 (2009)
- Cleveland Electric Illuminating Co. (Perry Nuclear Power Plant, Unit 1)*, CLI-93-21, 38 NRC 87, 92 (1993)  
in determining whether an individual or organization should be granted party status in a proceeding based on standing "as of right," the agency applies contemporaneous judicial standing concepts; LBP-08-26, 68 NRC 911 (2008)  
intervention petitioners must establish a concrete and particularized injury that is fairly traceable to the challenged action, is likely to be redressed by a favorable decision, and is arguably within the zone of interests protected by the governing statute; CLI-09-20, 70 NRC 915 (2009); LBP-06-4, 63 NRC 103 (2006); LBP-07-5, 65 NRC 345 (2007); LBP-07-14, 66 NRC 182 (2007); LBP-08-24, 68 NRC 701 (2008); LBP-09-13, 70 NRC 176 (2009); LBP-09-16, 70 NRC 240 (2009); LBP-10-16, 72 NRC 380 (2010)  
when assessing whether an individual or organization has set forth a sufficient interest, the Commission has applied contemporaneous judicial concepts of standing; CLI-09-20, 70 NRC 915 (2009); LBP-09-16, 70 NRC 240 (2009)  
where a facility will not be located within an Indian tribes boundaries, the tribe must meet the standing requirements imposed by 10 C.F.R. 2.309(d)(1); LBP-10-16, 72 NRC 390-91 (2010)
- Cleveland Electric Illuminating Co. (Perry Nuclear Power Plant, Unit 1)*, CLI-93-21, 38 NRC 87, 95 (1993)  
in proceedings for construction permits and operating licenses for nuclear power plants, a proximity presumption is recognized in favor of standing for persons who have frequent contacts within a 50-mile radius of the plant; CLI-10-7, 71 NRC 138 (2010); LBP-09-4, 69 NRC 177 (2009)
- Cleveland Electric Illuminating Co. (Perry Nuclear Power Plant, Unit 1)*, LBP-92-4, 35 NRC 114, 125-26 (1992), *rev'd on other grounds*, CLI-93-21, 38 NRC 87 (1993)  
a board in one proceeding is not constrained to follow the rulings of another board absent explicit affirmation by the Commission; LBP-08-24, 68 NRC 703 (2008)  
it is better practice for petitioners to present a fully developed argument for standing in each proceeding in which they seek to intervene, especially given that a board in one proceeding is not bound to follow the ruling of another board absent explicit affirmation by the Commission; LBP-07-10, 66 NRC 19 n.9 (2007); LBP-07-14, 66 NRC 189 n.57 (2007)
- Cleveland Electric Illuminating Co. (Perry Nuclear Power Plant, Units 1 and 2)*, ALAB-298, 2 NRC 730, 736-37 (1975)  
key safety issues must be resolved in the hearing, not post-hearing by the Staff and applicant; LBP-08-25, 68 NRC 829 (2008)
- Cleveland Electric Illuminating Co. (Perry Nuclear Power Plant, Units 1 and 2)*, ALAB-443, 6 NRC 741, 754 (1977)  
no defense to an insufficient showing for summary disposition is required; LBP-08-7, 67 NRC 372 (2008)  
where the nonmoving party declines to oppose a motion for summary disposition, the moving party is not perforce entitled to a favorable judgment, but has the burden to show that he is entitled to judgment under established principles; LBP-08-7, 67 NRC 372 (2008)

## LEGAL CITATIONS INDEX

### CASES

- Cleveland Electric Illuminating Co.* (Perry Nuclear Power Plant, Units 1 and 2), ALAB-675, 15 NRC 1105, 1114 (1982)  
added delay and expense occasioned by the admission of a contention, even if erroneous, do not alone warrant interlocutory review; CLI-09-6, 69 NRC 133, 135 (2009)
- Cleveland Electric Illuminating Co.* (Perry Nuclear Power Plant, Units 1 and 2), ALAB-706, 16 NRC 1754, 1758 n.7 (1982)  
expenses of any kind do not constitute irreparable injury; CLI-09-6, 69 NRC 135 n.25 (2009)
- Cleveland Electric Illuminating Co.* (Perry Nuclear Power Plant, Units 1 and 2), ALAB-805, 21 NRC 596, 600 & n.16 (1985)  
even “truly exceptional” expenses would not meet the irreparable impact standard governing a petition for interlocutory review; CLI-09-6, 69 NRC 134 (2009)
- Cleveland Electric Illuminating Co.* (Perry Nuclear Power Plant, Units 1 and 2), ALAB-841, 24 NRC 64, 99 (1986)  
NRC has traditionally read the language “authorized by law” to be the functional equivalent of “not prohibited by law; LBP-07-6, 65 NRC 464 (2007)
- Cleveland Electric Illuminating Co.* (Perry Nuclear Power Plant, Units 1 and 2), CLI-86-7, 23 NRC 233, 235-36 (1986), *aff’d sub nom. Ohio v. NRC*, 814 F.2d 258 (6th Cir. 1987)  
the burden of satisfying the reopening requirements is on the movant; CLI-08-28, 68 NRC 675 (2008)
- Cleveland Electric Illuminating Co.* (Perry Nuclear Power Plant, Units 1 and 2), LBP-81-24, 14 NRC 175, 179 (1981)  
all six discretionary intervention factors, regardless of the result on the critical first factor, typically are examined; CLI-06-16, 63 NRC 722 n.47 (2006)
- Cleveland Electric Illuminating Co.* (Perry Nuclear Power Plant, Units 1, 2, and 3), LBP-92-4, 35 NRC 114, 125-26 (1992)  
merely because a petitioner might have had standing in an earlier proceeding does not automatically grant standing in subsequent proceedings; LBP-09-18, 70 NRC 402 (2009)
- Clinton v. City of New York*, 524 U.S. 417, 431 n.19 (1998)  
if one party’s standing has been established, the standing of allied parties is not to be questioned; LBP-10-7, 71 NRC 414 (2010)
- Clyde A. Wilson International Investigations, Inc. v. Travelers Insurance Co.*, 959 F. Supp. 756, 763 (S.D. Tex. 1997)  
one who signs a contract is presumed to know its contents; LBP-09-24, 70 NRC 708 n.47 (2009)
- Coalition on Sensible Transportation v. Dole*, 642 F. Supp. 573 (D.D.C. 1986), *aff’d*, 826 F.2d 60 (D.C. Cir. 1987)  
NEPA is not violated as long as the agency takes a hard look at alternatives and explains its reasons for rejecting them; LBP-10-10, 71 NRC 584-85 n.288 (2010)
- Cohen v. Brown University*, 101 F.3d 155, 167-68 (1st Cir. 1996), *cert. denied*, 520 U.S. 1186 (1997)  
legal determinations made on appeal in a case are controlling precedent, becoming the “law of the case,” for all later decisions in the same case; CLI-06-11, 63 NRC 488 (2006)
- Cohen v. Brown University*, 101 F.3d 155, 168 (1st Cir. 1996), *cert. denied*, 520 U.S. 1186 (1997)  
a prior decision should be followed unless it is clearly erroneous and its enforcement would work a manifest injustice, intervening controlling authority makes reconsideration appropriate, or substantially different evidence was adduced at a subsequent trial; CLI-06-11, 63 NRC 489 (2006)
- the “law of the case” doctrine is a flexible concept with exceptions; CLI-06-11, 63 NRC 488 (2006)
- Cohen v. Rice*, 800 F. Supp. 999, 1003 n.2 (D. Me. 1992)  
a test for representational standing is applied to unions; CLI-08-19, 68 NRC 264 (2008)
- Colorado Environmental Coalition v. Dombeck*, 185 F.3d 1162, 1172 (10th Cir. 1999)  
the test of compliance with NEPA and 40 C.F.R. 1502.22 is whether the analysis constitutes a reasonable, good-faith presentation of the best information available under the circumstances; LBP-10-15, 72 NRC 286 (2010)
- Comanche Nation v. United States*, 2008 WL 4426621 (Sept. 23, 2008) (slip op. at 4)  
in initiating the section 106 process, the agency is required to make a reasonable and good-faith effort to identify Indian tribes who may attach religious and cultural significance to historic properties that may be affected by the proposed undertaking and invite them to participate as consulting parties in the section 106 process; LBP-08-24, 68 NRC 722 n.166 (2008)

## LEGAL CITATIONS INDEX

### CASES

- Combustion Engineering, Inc.* (Hematite Fuel Fabrication Facility), LBP-89-23, 30 NRC 140, 145 (1989)  
one does not acquire standing as a consequence of being a member of a legislative tribunal;  
LBP-07-5, 65 NRC 351 (2007)
- Comeau v. Rupp*, 810 F. Supp. 1127, 1166 (D. Kan. 1992)  
control comprehends the right, authority, or ability to obtain the documents; LBP-12-23, 72 NRC 708  
n.23 (2010)
- Commissioner of Internal Revenue v. Sunnen*, 333 U.S. 591, 597 (1948)  
the collateral estoppel doctrine is grounded on considerations of economy of judicial time and the  
public policy favoring the establishment of certainty in legal relations; LBP-09-24, 70 NRC 809, 813  
n.5 (2009)
- Commonwealth Edison Co.* (Braidwood Nuclear Power Station, Units 1 and 2), CLI-86-8, 23 NRC 241, 244  
(1986)  
decisions on nontimely filings require a balancing of the eight factors set forth in 10 C.F.R.  
2.309(c)(1), the first of which, good cause for failure to file on time, is the most important;  
CLI-09-7, 69 NRC 262 (2009)  
good cause for the failure to file on time is the most important of the late-filing factors; CLI-08-1, 67  
NRC 6 (2008); CLI-08-8, 67 NRC 197 n.26 (2008); LBP-07-14, 66 NRC 191 n.64 (2007);  
LBP-09-26, 70 NRC 949 (2009)  
if good cause is not shown for late-filing of a contention under the pre-2004 rules, petitioner must  
make a compelling showing on the four remaining factors; CLI-08-1, 67 NRC 6 (2008); CLI-08-8,  
67 NRC 197-98 (2008); LBP-10-1, 71 NRC 181 (2010)
- Commonwealth Edison Co.* (Braidwood Nuclear Power Station, Units 1 and 2), CLI-86-8, 23 NRC 241,  
244-45 (1986)  
factors (v) and (vi) of 10 C.F.R. 2.309(c) generally are given less weight than factors (vii) and (viii);  
LBP-10-1, 71 NRC 181 (2010)
- Commonwealth Edison Co.* (Braidwood Nuclear Power Station, Units 1 and 2), CLI-86-8, 23 NRC 241, 245  
(1986)  
in an analysis of the five factors for contention admissibility under the pre-2004 rules, factors three  
and five are to be given more weight than factors two and four; CLI-08-1, 67 NRC 6 (2008);  
CLI-08-8, 67 NRC 198 (2008)
- Commonwealth Edison Co.* (Braidwood Nuclear Power Station, Units 1 and 2), CLI-86-8, 23 NRC 241,  
250-51 (1986)  
the board is obliged to evaluate the timeliness of a proposed contention even if no party raises the  
issue; LBP-10-17, 72 NRC 508 (2010)
- Commonwealth Edison Co.* (Braidwood Nuclear Power Station, Units 1 and 2), LBP-85-11, 21 NRC 609,  
615 (1985)  
nothing precludes an individual from seeking to intervene both on his/her own behalf and as a  
representative of others; CLI-07-19, 65 NRC 427 n.17 (2007)
- Commonwealth Edison Co.* (Braidwood Nuclear Power Station, Units 1 and 2), LBP-85-11, 21 NRC 609,  
632-33 (1985)  
compliance with quality assurance requirements is an important factor in the licensing decision;  
LBP-10-9, 71 NRC 508, 512 (2010)
- Commonwealth Edison Co.* (Braidwood Nuclear Power Station, Units 1 and 2), LBP-85-20, 21 NRC 1732,  
1741 (1985)  
consideration of the merits of a contention at the admissibility stage is improper; LBP-07-3, 65 NRC  
264 n.8 (2007)
- Commonwealth Edison Co.* (Byron Nuclear Power Station, Units 1 and 2), ALAB-793, 20 NRC 1591,  
1614-16 (1984)  
deferral of review of board denial of rule waiver petition did not cause irreparable injury; CLI-10-29,  
72 NRC 562 (2010)  
petitioner has the burden of demonstrating that there is warrant for waiver of a rule prohibiting  
consideration of the need for power and energy alternatives at the operating license stage;  
LBP-10-12, 71 NRC 662, 670 (2010)

## LEGAL CITATIONS INDEX

### CASES

- Commonwealth Edison Co.* (Byron Nuclear Power Station, Units 1 and 2), LBP-84-2, 19 NRC 36, 210 (1984), *rev'd on other grounds*, ALAB-793, 20 NRC 1591, 1627 (1984)  
key safety issues must be resolved in the hearing, not post-hearing by the Staff and applicant; LBP-08-25, 68 NRC 829 (2008)
- Commonwealth Edison Co.* (Carroll County Site), ALAB-601, 12 NRC 18, 24 (1980)  
contentions are not cognizable unless they are material to matters that fall within the scope of the proceeding for which the licensing board has been delegated jurisdiction as set forth in the Commission's notice of opportunity for hearing and order referring the proceeding to the board; LBP-06-10, 63 NRC 338 (2006); LBP-06-23, 64 NRC 354 (2005); LBP-07-4, 65 NRC 304 (2007); LBP-07-11, 66 NRC 57 (2007)
- Commonwealth Edison Co.* (Dresden Nuclear Power Station, Unit 1), CLI-81-25, 14 NRC 616, 623 (1981)  
each intervening participant that wishes to be a party to a proceeding must establish its own standing; LBP-10-7, 71 NRC 414 (2010)  
it is not sufficient to rely on the standing of one petitioner because Commission practice requires each party to separately establish standing; CLI-07-18, 65 NRC 412 (2007)
- Commonwealth Edison Co.* (Dresden Nuclear Power Station, Unit 1), LBP-82-52, 16 NRC 183, 194 (1982)  
a petitioner should not be entitled to discretionary intervention without an issue of its own worthy of exploration in an adjudication; CLI-06-16, 63 NRC 719-20 n.32 (2006)
- Commonwealth Edison Co.* (LaSalle County Nuclear Power Station, Units 1 and 2), CLI-73-8, 6 AEC 169, 170 (1973)  
diligent, even aggressive, probing for weaknesses in a witness's or counsel's position may be necessary if presiding officers are to fulfill their duty to develop an adequate record that will contribute to informed decisionmaking; CLI-10-17, 72 NRC 47 (2010)
- Commonwealth Edison Co.* (Zion Nuclear Power Station, Units 1 and 2), ALAB-116, 6 AEC 258, 258 (1973)  
a licensing board referral of an order is unacceptable if it fails to satisfy the standards applicable to such referrals, including whether prompt appellate review is necessary to prevent detriment to the public interest or unusual delay or expense; CLI-09-6, 69 NRC 134 (2009)
- Commonwealth Edison Co.* (Zion Nuclear Power Station, Units 1 and 2), ALAB-116, 6 AEC 258, 259 (1973)  
interlocutory review of a licensing board decision may be warranted where that decision threatens to impose truly exceptional delay or expense; CLI-09-6, 69 NRC 134 (2009)
- Commonwealth Edison Co.* (Zion Nuclear Power Station, Units 1 and 2), ALAB-185, 7 AEC 240, 241 n.3 (1974)  
even "truly exceptional" expenses would not meet the irreparable impact standard governing a petition for interlocutory review; CLI-09-6, 69 NRC 134 (2009)
- Commonwealth Edison Co.* (Zion Nuclear Power Station, Units 1 and 2), ALAB-196, 7 AEC 457, 469 (1974)  
in licensing proceedings, protective orders provide an effective means for safeguarding proprietary information, where the party seeking discovery is not a competitor; CLI-10-24, 72 NRC 463 n.74 (2010)  
withholding from public inspection shall not affect the right, if any, of persons properly and directly concerned to inspect a proprietary document; CLI-10-24, 72 NRC 463 n.74 (2010)
- Commonwealth Edison Co.* (Zion Nuclear Power Station, Units 1 and 2), ALAB-222, 8 AEC 229, 235, *aff'd in part on other grounds*, CLI-74-35, 8 AEC 374 (1974)  
Congress considers the Atomic Safety and Licensing Board to be a panel of experts; CLI-10-17, 72 NRC 49 (2010)
- Commonwealth Edison Co.* (Zion Nuclear Power Station, Units 1 and 2), ALAB-222, 8 AEC 229, 236-37, *aff'd in part on other grounds*, CLI-74-35, 8 AEC 374 (1974)  
diligent, even aggressive, probing for weaknesses in a witness's or counsel's position may be necessary if presiding officers are to fulfill their duty to develop an adequate record that will contribute to informed decisionmaking; CLI-10-17, 72 NRC 47 (2010)

## LEGAL CITATIONS INDEX

### CASES

- Commonwealth Edison Co.* (Zion Nuclear Power Station, Units 1 and 2), ALAB-226, 8 AEC 381, 406 (1974)  
licensing boards, though not obligated to reformulate contentions, are permitted to do so in certain circumstances; LBP-08-11, 67 NRC 482 (2008)  
there is no duty placed upon a licensing board by the Administrative Procedure Act, or by the Atomic Energy Act and the regulations promulgated thereunder, to recast contentions offered by one of the litigants for the purpose of making those contentions acceptable; LBP-08-11, 67 NRC 482 n.57 (2008)
- Commonwealth Edison Co.* (Zion Nuclear Power Station, Units 1 and 2), ALAB-616, 12 NRC 419, 421 (1980)  
in a license renewal proceeding, licensee must demonstrate that it satisfies the "reasonable assurance" standard by a preponderance of the evidence; LBP-07-17, 66 NRC 340 (2007); LBP-08-22, 68 NRC 646 (2008); LBP-08-25, 68 NRC 788, 835, 856 (2008)  
license renewal applicant must demonstrate that its aging management program for piping subject to flow accelerated corrosion is adequate; LBP-08-25, 68 NRC 856 (2008)  
license renewal applicant must demonstrate that its steam dryer aging management plan is adequate; LBP-08-25, 68 NRC 835 (2008)  
the "preponderance of the evidence" standard common to NRC proceedings has been interpreted as requiring only that the record underlying a finding makes it slightly more likely than not; LBP-08-22, 68 NRC 646 (2008)  
to meet its evidentiary burden, applicant is not obliged to meet an absolute standard but to provide reasonable assurance that public health, safety, and environmental concerns were protected, and to demonstrate that assurance by a preponderance of the evidence; CLI-09-7, 69 NRC 263 (2009)
- Commonwealth Edison Co.* (Zion Nuclear Power Station, Units 1 and 2), ALAB-616, 12 NRC 419, 426 (1980)  
the scope of a proceeding generally is defined by the Commission's notice of opportunity for hearing; LBP-06-12, 63 NRC 420 (2006); LBP-09-25, 70 NRC 889 n.138 (2009)
- Commonwealth Edison Co.* (Zion Nuclear Power Station, Units 1 and 2), ALAB-616, 12 NRC 419, 426-27 (1980)  
contentions are not cognizable unless they are material to matters that fall within the scope of the proceeding for which the licensing board has been delegated jurisdiction as set forth in the Commission's notice of opportunity for hearing and order referring the proceeding to the Board; LBP-06-10, 63 NRC 338 (2006); LBP-06-23, 64 NRC 354 (2005); LBP-07-4, 65 NRC 304 (2007); LBP-07-11, 66 NRC 57 (2007)
- Commonwealth Edison Co.* (Zion Nuclear Power Station, Units 1 and 2), CLI-99-4, 49 NRC 185, 188 (1999)  
although Article III of the Constitution does not constrain the NRC hearing process, and NRC hearings therefore are not governed by judicially created standing doctrine, the Commission nonetheless has generally looked to judicial concepts of standing where appropriate to determine those interests affected within the meaning of section 189a of the AEA; LBP-09-1, 69 NRC 25 n.54 (2009)
- Commonwealth Edison Co.* (Zion Nuclear Power Station, Units 1 and 2), CLI-99-4, 49 NRC 185, 188, 191 (1999)  
the benefits of the proximity presumption are not limited to those who reside within the area in which the presumption applies, but can be extended to those who conduct everyday activities or visit within that area; LBP-07-10, 66 NRC 17 (2007)
- Commonwealth Edison Co.* (Zion Nuclear Power Station, Units 1 and 2), CLI-99-4, 49 NRC 185, 188, 191-92 (1999)  
in the absence of a showing that the proposed license amendment obviously entails an increased potential for offsite consequences, petitioners must base their standing upon more than residence or activities within a particular proximity of the plant by making a showing of a plausible chain of events that would result in offsite radiological consequences posing a distinct new harm or threat to the participant; LBP-07-10, 66 NRC 15 (2007)

## LEGAL CITATIONS INDEX

### CASES

- to establish standing in operating license amendment cases, petitioners must assert an injury-in-fact associated with the challenged license amendment, not simply a general objection to the facility; LBP-07-10, 66 NRC 15 (2007)
- Commonwealth Edison Co.* (Zion Nuclear Power Station, Units 1 and 2), CLI-99-4, 49 NRC 185, 188-97 (1999), *petition for review denied sub nom. Dienenthal v. NRC*, 203 F.3d 52 (Table), 2000 WL 158835 (D.C. Cir. 2000)
- petitioners claiming standing have the burden of alleging in their pleadings how they may be harmed by a licensing action without any obvious radiological consequences; CLI-08-19, 68 NRC 261 (2008)
- Commonwealth Edison Co.* (Zion Nuclear Power Station, Units 1 and 2), CLI-99-4, 49 NRC 185, 189 (1999), *petition for review denied, Dienenthal v. NRC*, 203 F.3d 52 (D.C. Cir. 2000)
- a materials license amendment proceeding is not an appropriate forum to throw open an opportunity to engage in a free-ranging inquiry into the character of the licensee; LBP-09-1, 69 NRC 49 (2009)
- mere assertions and speculation that applicant officials or personnel would encourage or condone violations of NRC regulations do not present any ongoing pattern of violations or disregard for regulations that might be expected to occur in the future; CLI-06-10, 63 NRC 465 (2006)
- there must be some direct and obvious relationship between a licensee character issue and the licensing action in dispute; CLI-06-22, 64 NRC 47 n.38 (2006)
- Commonwealth Edison Co.* (Zion Nuclear Power Station, Units 1 and 2), CLI-99-4, 49 NRC 185, 191 (1999), *petition for review denied, Dienenthal v. NRC*, 203 F.3d 52 (D.C. Cir. 2000)
- a bare allegation that the member of an organization lives 50 miles from a passive structure presents no obvious potential of offsite radiological consequences for purpose of proximity-based standing; CLI-07-21, 65 NRC 522 (2007)
- petitioner cannot base its standing upon its distance from a nuclear facility unless the proposed action quite obviously entails an increased potential for offsite consequences; LBP-08-18, 68 NRC 541 (2008)
- petitioner must provide some plausible chain of causation or some scenario suggesting how license amendments would result in a distinct new harm or threat in order to establish standing; LBP-09-4, 69 NRC 178 n.20 (2009)
- proximity argument for standing is rejected in a proceeding for an amendment to reflect the plant's permanent shutdown status; LBP-08-18, 68 NRC 539 n.38 (2008)
- Commonwealth Edison Co.* (Zion Nuclear Power Station, Units 1 and 2), CLI-99-4, 49 NRC 185, 192 (1999)
- in demonstrating that a proposed action involves a significant source of radioactivity producing an obvious potential for offsite consequences, petitioner cannot rely on conclusory allegations about potential radiological harm, but must show how these various harms might result from the proposed action; LBP-09-20, 70 NRC 577 (2009)
- petitioner must show a plausible chain of events that would result in offsite radiological consequences posing a distinct new harm or threat from a purely administrative license amendment; LBP-08-18, 68 NRC 537 (2008)
- standing was denied where petitioner failed to indicate how the alleged harms might result from the license amendments, particularly given not only the shutdown status of the facility, but also the continued applicability of the NRC's safety-oriented regulations governing defueled nuclear plants; LBP-10-11, 71 NRC 634 n.97 (2010)
- Commonwealth Edison Co.* (Zion Nuclear Power Station, Units 1 and 2), CLI-99-4, 49 NRC 185, 194 (1999), *petition for review denied sub nom., Dienenthal v. NRC*, 203 F.3d 52 (D.C. Cir. 2000)
- absent extreme circumstances, the Commission will not consider on appeal either new arguments or new evidence supporting the contentions, which the board never had the opportunity to consider; CLI-06-10, 63 NRC 458 (2006)
- if a board misapprehends the intended meaning of a contention, the petitioner bears the responsibility for any misunderstanding; LBP-06-12, 63 NRC 408 (2006)
- it is not up to licensing boards to search through pleadings or other materials to uncover arguments and support never advanced by the petitioners themselves, and boards may not simply infer unarticulated bases of contentions; CLI-06-10, 63 NRC 457 (2006); CLI-10-15, 71 NRC 482 (2010); LBP-10-10, 71 NRC 567 n.179 (2010)

## LEGAL CITATIONS INDEX

### CASES

- not all organizations with governmental ties are entitled to participate in NRC proceedings as a local governmental body (county, municipality, or other subdivision); CLI-07-18, 65 NRC 413 (2007)  
rewriting a contention on appeal is not permitted; CLI-06-24, 64 NRC 122 (2006)  
the burden of setting forth a clear and coherent argument is on the petitioner; CLI-09-7, 69 NRC 277 n.230 (2009); LBP-06-12, 63 NRC 407 (2006)
- Commonwealth Edison Co.* (Zion Nuclear Power Station, Units 1 and 2), CLI-00-5, 51 NRC 90, 98 (2000)  
broad and conclusory statements by petitioners that they have direct information concerning the threat to health and safety posed by the license applicant are insufficient to establish standing; LBP-10-4, 71 NRC 238 (2010)  
burden is on petitioner to allege a specific and plausible means by which contaminants from mining activities may adversely affect him or her; LBP-10-16, 72 NRC 384 (2010)  
in proceedings where petitioner's factual assertions in support of standing are challenged, untenable, conjectural, or conclusory, a board need not uncritically accept such assertions; LBP-10-4, 71 NRC 230 n.14 (2010)  
petitioner bears the burden to provide facts sufficient to establish standing; CLI-10-7, 71 NRC 139 (2010); LBP-10-4, 71 NRC 229 (2010)
- Commonwealth Edison Co.* (Zion Nuclear Power Station, Units 1 and 2), LBP-98-24, 48 NRC 219, 222-23 (1998)  
licensing boards have no jurisdiction to consider an intervention petition seeking to challenge Staff's final no significant hazards consideration determination; LBP-08-20, 68 NRC 551 n.4 (2008)
- Communities, Inc. v. Busey*, 956 F.2d 619, 626 (6th Cir. 1992)  
NEPA requirements are tempered by a practical rule of reason; CLI-10-22, 72 NRC 208 (2010)  
NEPA requires NRC to provide a reasonable mitigation alternatives analysis, containing reasonable estimates, including full disclosures of any known shortcomings in methodology, incomplete or unavailable information, and significant uncertainties; CLI-10-22, 72 NRC 209 (2010)
- Communities, Inc. v. Busey*, 956 F.2d 619, 627 (6th Cir. 1992)  
NRC need only consider a range of alternatives in its environmental impact statement that are technologically feasible and economically practicable for producing baseload power; LBP-10-10, 71 NRC 581 (2010)  
reasonable alternatives discussed in an environmental impact statement do not include alternatives that are impractical, that present unique problems, or that cause extraordinary costs; LBP-09-7, 69 NRC 633 (2009); LBP-09-16, 70 NRC 298 (2009)
- Community Association for Restoration of Environment v. DeRuyter Bros. Dairy*, 54 F. Supp. 2d 974 (E.D. Wash. 1999)  
amicus briefs are normally allowed when the amicus has unique information or perspective that can help the court beyond the help that the lawyers for the parties are able to provide; LBP-08-6, 67 NRC 267 (2008)
- Concerned Citizens Coalition v. Federal Highway Administration*, 330 F. Supp. 2d 787, 796 (W.D. La. 2004)  
applicant and NRC Staff must conduct a rigorous and objective evaluation of all reasonable, nonspeculative alternatives in relation to the objectives of the proposed project; CLI-06-9, 63 NRC 448 (2006)  
the NHPA requirement for consideration of alternatives comes into play only if the project will have an adverse effect on historic properties, and only after that determination is made; CLI-06-9, 63 NRC 449 (2006)
- Conley v. Gibson*, 355 U.S. 41, 47 (1957)  
"notice pleading" is a broad standard requiring only a short and plain statement of the claim; LBP-08-26, 68 NRC 917 (2008); LBP-09-17, 70 NRC 328 (2009)
- Connecticut Bankers Association v. Board of Governors*, 627 F.2d 245, 251 (D.C. Cir. 1980)  
a petitioner does not become entitled to an evidentiary hearing merely on request, or on a bald or conclusory allegation that a dispute exists, but must make a minimal showing that material facts are in dispute, thereby demonstrating that an inquiry in depth is appropriate; LBP-06-10, 63 NRC 342 (2006); LBP-06-20, 64 NRC 151 (2006); LBP-06-23, 64 NRC 359 (2005); LBP-08-6, 67 NRC 292 (2008); LBP-09-17, 70 NRC 329 (2009)

## LEGAL CITATIONS INDEX

### CASES

- all that intervenors and their experts need to provide at the contention admission stage is a reasoned presentation sufficient to warrant further inquiry; LBP-10-10, 71 NRC 580 (2010)
- although support for a contention may be weak and the contention may be technically imperfect, it may still raise a valid and significant issue with reasonably specific factual and legal allegations and be sufficient to support further inquiry; LBP-06-10, 63 NRC 381 (2006)
- Connecticut Yankee Atomic Power Co.* (Haddam Neck Plant), CLI-01-25, 54 NRC 368, 373 (2001)
- mere legal error is not enough to warrant interlocutory review because interlocutory errors are correctable on appeal from final board decisions; CLI-08-2, 67 NRC 35 (2008)
- Connecticut Yankee Atomic Power Co.* (Haddam Neck Plant), CLI-01-25, 54 NRC 368, 374 (2001)
- increased litigation burden of one contention, where other contentions are pending in a proceeding, does not have pervasive effect on the structure of the litigation; CLI-08-2, 67 NRC 35 n.12 (2008)
- mere increase in the burden of litigation does not constitute serious and irreparable harm; CLI-09-6, 69 NRC 136 n.29 (2009)
- Connecticut Yankee Atomic Power Co.* (Haddam Neck Plant), LBP-01-21, 54 NRC 33, *petition for review denied*, CLI-01-25, 54 NRC 368 (2001)
- the purpose of NRC adjudicatory hearings is to consider claims of deficiencies in a license application, and such contentions are commonplace at the outset of NRC adjudications; CLI-08-15, 68 NRC 3 (2008); CLI-08-20, 68 NRC 274 (2008)
- Connecticut Yankee Atomic Power Co.* (Haddam Neck Plant), LBP-01-21, 54 NRC 33, 47 (2001)
- the statement of considerations should be given special weight in interpreting the regulations; LBP-09-15, 70 NRC 221 (2009)
- Connecticut Yankee Atomic Power Co.* (Haddam Neck Plant), LBP-01-25, 54 NRC 177, 184 (2001)
- administrative history and other available guidance may be consulted for background information and the resolution of ambiguities in a regulation's language; CLI-06-11, 63 NRC 491 (2006)
- although administrative history and other available guidance may be consulted for background information and the resolution of ambiguities in a regulation's language, its interpretation may not conflict with the plain meaning of the wording used in that regulation; CLI-06-5, 63 NRC 154 (2006)
- interpretation of a regulation, like interpretation of a statute, begins with the language and structure of the provision itself; CLI-08-12, 67 NRC 391 (2008)
- Connecticut Yankee Atomic Power Co.* (Haddam Neck Plant), LBP-03-18, 58 NRC 262 (2003)
- the preponderance of the evidence standard applies in a license renewal proceeding; LBP-08-22, 68 NRC 646 (2008)
- Connecticut Yankee Atomic Power Co.* (Haddam Neck Plant), LBP-03-18, 58 NRC 262, 264 (2003)
- licensing boards have granted state agencies the right to participate in its proceedings as the state's representative; LBP-09-16, 70 NRC 291 (2009)
- state agencies may be allowed to participate as nonparty interested states; LBP-08-15, 68 NRC 304 n.44 (2008)
- Consolidated Edison Co. of New York* (Indian Point, Unit 2), ALAB-188, 7 AEC 323 (1974)
- traditionally, a crucial issue at the operating license stage was whether the facility had indeed been constructed in accordance with the permit; LBP-07-14, 66 NRC 203 (2007)
- Consolidated Edison Co. of New York* (Indian Point, Unit 2), CLI-74-23, 7 AEC 947, 950-52 (1974)
- the mechanism of post-hearing resolution must not be employed to obviate the basic findings prerequisite to an operating license; LBP-08-25, 68 NRC 824 (2008)
- Consolidated Edison Co. of New York* (Indian Point, Unit 2), CLI-74-23, 7 AEC 947, 951-52 (1974)
- the mechanism of post-hearing resolution must not be employed to obviate the basic findings prerequisite to an operating license, including a reasonable assurance that the facility can be operated without endangering the health and safety of the public; CLI-06-1, 63 NRC 4 (2006); LBP-08-25, 68 NRC 829 (2008)
- Consolidated Edison Co. of New York* (Indian Point, Unit 2), CLI-81-7, 13 NRC 448, 449-50 (1981)
- NRC obeyed its FWPCA duties by deciding to accept as dispositive EPA determinations concerning one aspect of the overall environmental impact; CLI-07-16, 65 NRC 388 (2007)
- Consolidated Edison Co. of New York* (Indian Point, Unit 2), CLI-82-15, 16 NRC 27, 31 (1982)
- only eight petitions for discretionary intervention have ever been granted during the 30 years NRC has applied the current six-factor test; CLI-06-16, 63 NRC 717 (2006)

## LEGAL CITATIONS INDEX

### CASES

- Consolidated Edison Co. of New York* (Indian Point, Unit 2), CLI-82-15, 16 NRC 27, 31 (1982), *adopting as its own ruling the one-sentence dictum from* LBP-82-25, 15 NRC 715, 736 n.10 (1982)  
discretionary intervention is granted where petitioner's previous experience would provide valuable insight in developing a sound record; LBP-09-6, 69 NRC 438 n.386 (2009)
- Consolidated Edison Co. of New York* (Indian Point, Unit 2), CLI-82-15, 16 NRC 27, 37 (1982)  
the Commission generally declines to interfere with a board's day-to-day case management decisions unless there has been an abuse of power; CLI-08-7, 67 NRC 192 (2008)
- Consolidated Edison Co. of New York* (Indian Point, Unit 2), CLI-85-6, 21 NRC 1043, 1084 (1985)  
although the Federal Rules of Evidence are not mandated for NRC adjudicatory proceedings, the Commission has endorsed the use of the FRE as guidance for the boards with the express proviso that boards must apply the Part 2 rules with greater flexibility than the FRE; LBP-12-23, 72 NRC 705-06 (2010)
- Consolidated Edison Co. of New York* (Indian Point, Unit 2), LBP-82-25, 15 NRC 715, 734 (1982)  
there are certain organizations for which member authorization for organizational standing might be presumed; LBP-09-6, 69 NRC 434 (2009)
- Consolidated Edison Co. of New York* (Indian Point, Unit 2), LBP-83-5, 17 NRC 134, 136 (1983)  
although NRC may reasonably accommodate pro se petitioners who are not technically perfect in their pleadings, such parties must still meet the basic requirements of the contention admissibility rules, and if these are not met, boards may not "fill in" any missing support, but, rather, are legally required to deny the contention; LBP-07-4, 65 NRC 340 n.286 (2007)
- Consolidated Edison Co. of New York* (Indian Point, Unit 3), ALAB-281, 2 NRC 6, 7 n.2 (1975)  
requests for extension of time to file exceptions are to be determined by the relevant appellate body; LBP-07-17, 66 NRC 370 (2007)
- Consolidated Edison Co. of New York* (Indian Point, Unit 3), CLI-75-14, 2 NRC 835, 839 n.8 (1975)  
applicant has the burden of proving that it has met the reasonable assurance standard by a preponderance of the evidence; LBP-08-25, 68 NRC 788 (2008)
- Consolidated Edison Co. of New York* (Indian Point, Units 1 and 2), CLI-01-8, 53 NRC 225, 227 (2001)  
petitioners sought access to an unredacted version of the license transfer application in order to obtain confidential financial information relevant to the expected costs of the plant's operation and maintenance that had been redacted; CLI-10-24, 72 NRC 466 (2010)
- Consolidated Edison Co. of New York* (Indian Point, Units 1 and 2), CLI-01-8, 53 NRC 225, 228, 230-31 (2001)  
applicants are directed to provide petitioners with access to the unredacted version of the license transfer application pursuant to a confidentiality agreement; CLI-07-18, 65 NRC 415 n.53 (2007)
- Consolidated Edison Co. of New York* (Indian Point, Units 1 and 2), CLI-01-8, 53 NRC 225, 228, 231 (2001)  
following release of sensitive information, petitioners must file revised contentions within 20 days; CLI-07-18, 65 NRC 416 (2007)
- Consolidated Edison Co. of New York* (Indian Point, Units 1 and 2), CLI-01-8, 53 NRC 225, 228-29 (2001)  
licensing adjudication will not be held in abeyance pending completion of a related NRC enforcement action; CLI-10-17, 72 NRC 10 (2010)
- Consolidated Edison Co. of New York* (Indian Point, Units 1 and 2), CLI-01-8, 53 NRC 225, 229 (2001)  
litigation inevitably results in the parties' loss of both time and money; CLI-06-18, 64 NRC 5 (2006); CLI-09-6, 69 NRC 136 n.29 (2009)
- Consolidated Edison Co. of New York* (Indian Point, Units 1 and 2), CLI-01-8, 53 NRC 225, 230 (2001)  
petitioners asserted that they needed access to confidential commercial and financial information because without it they would be unable to submit sufficiently specific and supported contentions regarding the applicant's financial qualifications; CLI-10-24, 72 NRC 466 (2010)
- Consolidated Edison Co. of New York* (Indian Point, Units 1 and 2), CLI-01-8, 53 NRC 225, 230-31 (2001)  
upon a showing of need, petitioners' request to obtain access to an unredacted application was granted; CLI-10-24, 72 NRC 466 (2010)
- Consolidated Edison Co. of New York* (Indian Point, Units 1 and 2), CLI-01-19, 54 NRC 109, 131-32 (2001)  
two petitioners, each of whom has proffered an admissible contention of its own, are allowed to adopt the other's contentions; LBP-08-13, 68 NRC 65 (2008)

## LEGAL CITATIONS INDEX

### CASES

- Consolidated Edison Co. of New York* (Indian Point, Units 1 and 2), CLI-01-19, 54 NRC 109, 131-33 (2001)  
if the primary sponsor of an issue later withdraws from the proceeding, the remaining sponsor must then demonstrate to the presiding officer its independent ability to litigate the issue; LBP-06-20, 64 NRC 207 (2006)
- Consolidated Edison Co. of New York* (Indian Point, Units 1 and 2), CLI-01-19, 54 NRC 109, 132-33 (2001)  
incorporation by reference is not permitted where the effect would be to circumvent NRC-prescribed specificity requirements; LBP-08-24, 68 NRC 730 (2008)  
the Commission addresses whether a petitioner may adopt another petitioner's contention without demonstrating that it has standing and submitting at least one admissible contention of its own; LBP-08-13, 68 NRC 65 (2008)
- Consolidated Edison Co. of New York* (Indian Point, Units 1 and 2), CLI-01-19, 54 NRC 109, 132-33 & nn.17-18 (2001)  
the Commission disapproves of incorporation by reference in petitions for review, where it has the effect of bypassing the page limits set forth in NRC regulations; CLI-10-17, 72 NRC 45-46 n.247 (2010)
- Consolidated Edison Co. of New York* (Indian Point, Units 1 and 2), CLI-01-19, 54 NRC 109, 133 (2001)  
petitioners in direct license transfer cases who qualified for proximity-based standing lived within a 5-1/2-mile radius of their plant; CLI-08-19, 68 NRC 269 (2008)  
the Commission will not accept incorporation by reference of another petitioner's issues where the adopting petitioner has not independently met the requirements for admission as a party by demonstrating standing and submitting at least one admissible issue of its own; LBP-08-13, 68 NRC 65 (2008); LBP-10-11, 71 NRC 633 n.92 (2010)
- Consolidated Edison Co. of New York* (Indian Point, Units 1 and 2), CLI-01-19, 54 NRC 109, 142 (2001)  
decommissioning rules are designed to minimize the administrative effort of licensees and the Commission and to provide reasonable assurance that funds will be available to carry out decommissioning in a manner that protects public health and safety; LBP-09-21, 70 NRC 630 (2009)
- Consolidated Edison Co. of New York* (Indian Point, Units 1 and 2), CLI-01-19, 54 NRC 109, 143 (2001)  
NRC decommissioning funding regulations are intended to minimize the administrative effort and provide reasonable assurance that funds will be available to carry out decommissioning in a manner that protects public health and safety; LBP-09-4, 69 NRC 198 (2009)
- Consolidated Edison Co. of New York* (Indian Point, Units 1 and 2), CLI-01-19, 54 NRC 109, 143-44 (2001)  
a board's analysis of decommissioning cost estimates should be tailored to the specifics of the proceeding; CLI-06-22, 64 NRC 42 (2006)
- Construction & General Laborers' Union No. 230 v. City of Hartford*, 153 F. Supp. 2d 156, 163 (D. Conn. 2001)  
a test for representational standing is applied to unions; CLI-08-19, 68 NRC 264 (2008)
- Consumers Energy Co.* (Big Rock Point Independent Spent Fuel Storage Installation), CLI-07-19, 65 NRC 423, *reconsideration denied*, CLI-07-21, 65 NRC 519 (2007)  
the principle regarding the representational standing of unions is also applicable to public interest groups, who also, in significant part, exist to represent the interests of their members; CLI-08-19, 68 NRC 264-65 (2008)
- Consumers Energy Co.* (Big Rock Point Independent Spent Fuel Storage Installation), CLI-07-19, 65 NRC 423, 426 (2007)  
an independent spent fuel storage installation is essentially a passive structure rather than an operating facility, and therefore, there is less chance of widespread radioactive release; LBP-09-20, 70 NRC 577 (2009)  
an individual petitioner may not request to intervene in his or her own right while simultaneously authorizing other petitioners to represent his or her interests in the proceeding; LBP-10-16, 72 NRC 390 (2010)  
an individual's claim of residence within 50 miles of a plant might entitle him to a presumption of standing based on his proximity in a reactor construction permit or operating license proceeding; CLI-09-20, 70 NRC 916 n.16 (2009)

## LEGAL CITATIONS INDEX

### CASES

- in cases involving ISL uranium mining and other source materials licensing, petitioner must demonstrate injury, causation, and redressability because proximity to the proposed facility alone is not adequate to demonstrate standing; LBP-10-16, 72 NRC 384 (2010)
- in proceedings not involving power reactors, proximity alone is not sufficient to establish standing; LBP-08-6, 67 NRC 272 (2008)
- in proceedings other than for construction permits, operating licenses, or significant amendments thereto, the Commission decides on a case-by-case basis whether the proximity presumption should apply, taking into account any obvious potential for offsite radiological consequences, as well as the nature of the proposed action and the significance of the radioactive source; LBP-09-20, 70 NRC 575 (2009)
- presumption of standing based on geographical proximity may be applied in nuclear materials licensing cases only when the activity at issue involves a significant source of radioactivity producing an obvious potential for offsite consequences; LBP-08-6, 67 NRC 272 (2008)
- proximity alone is not sufficient to establish standing for a petitioner's proximity to a source materials activity; LBP-08-24, 68 NRC 704 (2008)
- the Commission declined to adopt a proximity presumption in an independent spent fuel storage installation license transfer proceeding, where petitioner had not demonstrated that the mere transfer of the ISFSI somehow increased his risk of radiological harm; LBP-09-20, 70 NRC 577-78 (2009)
- the Commission has accepted a proximity presumption granting standing to residents within 50 miles of a reactor, but has not accepted any such presumption in nonreactor cases; LBP-07-14, 66 NRC 178 (2007)
- Consumers Energy Co.* (Big Rock Point Independent Spent Fuel Storage Installation), CLI-07-19, 65 NRC 423, 426-27 (2007)
- with respect to a license transfer for an independent spent fuel storage installation, the proximity presumption was rejected for a petitioner living within 50 miles of the plant; LBP-07-14, 66 NRC 183 (2007)
- Consumers Energy Co.* (Big Rock Point Independent Spent Fuel Storage Installation), CLI-07-21, 65 NRC 519 (2007)
- petitioners seeking reconsideration of a Commission order must demonstrate that the Commission has committed clear error, must do so by raising new arguments, and must not previously have been able to make those arguments; CLI-07-22, 65 NRC 527 (2007)
- Consumers Energy Co.* (Big Rock Point Independent Spent Fuel Storage Installation), CLI-07-21, 65 NRC 519, 522 (2007)
- petitioners must seek leave to request reconsideration of a decision and set forth compelling circumstances that petitioners could not reasonably have anticipated and that would render the decision invalid; CLI-10-21, 72 NRC 201 n.15 (2010)
- Consumers Energy Co.* (Big Rock Point Independent Spent Fuel Storage Installation), CLI-07-21, 65 NRC 519, 522-23 (2007)
- the difference in potential risk between an independent spent fuel storage installation and an operating reactor justifies treating ISFSI and license transfer cases differently in terms of potential proximity presumption; LBP-07-10, 66 NRC 15, 18 (2007)
- Consumers Energy Co.* (Big Rock Point Independent Spent Fuel Storage Installation), CLI-07-21, 65 NRC 519, 523-24 (2007)
- standing is not presumed where contact has been limited to mere occasional trips to areas located close to reactors; LBP-10-1, 71 NRC 176 (2010)
- the benefits of the proximity presumption are not limited to those who reside within the area in which the presumption applies, but can be extended to those who conduct everyday activities or visits within that area; LBP-07-10, 66 NRC 17 (2007)
- the board must make its finding on standing based on the factual circumstances presented by the information before the board regarding petitioner's activities, which may include consideration of the proximity, timing, and duration of those activities; LBP-07-10, 66 NRC 19 (2007)
- to establish standing based on frequent contacts, petitioner must show that it frequently engages in substantial business and related activities in the vicinity of the facility, engages in normal, everyday activities in the vicinity, has regular and frequent contacts in an area near a licensed facility, or

## LEGAL CITATIONS INDEX

### CASES

- otherwise has visits of a length and nature showing an ongoing connection and presence; LBP-10-1, 71 NRC 176 (2010)
- Consumers Energy Co.* (Palisades Nuclear Plant), CLI-07-18, 65 NRC 399, 408-09, *reconsideration denied*, CLI-07-22, 65 NRC 525 (2007)
- an organization seeking to establish representational standing must show that at least one of its members may be affected by the proceeding; LBP-10-16, 72 NRC 389-90 (2010)
- to demonstrate standing, petitioner must identify an interest in the proceeding and specify the facts pertaining to that interest; CLI-08-19, 68 NRC 258 (2008)
- unlike federal court practice, the Commission does not accept mere notice pleading in support of an admissible contention; LBP-08-24, 68 NRC 730 (2008)
- Consumers Energy Co.* (Palisades Nuclear Plant), CLI-07-18, 65 NRC 399, 409 (2007)
- an organization must identify its authorizing member and show that the member has authorized the organization to represent him or her and request a hearing on his or her behalf; LBP-10-16, 72 NRC 390 (2010)
- for representational standing, a member must qualify for standing in his or her own right, the interests that the organization seeks to protect must be germane to its own purpose, and neither the petitioner's contentions nor the requested relief must require an individual member to participate in the proceeding; LBP-08-6, 67 NRC 272 (2008); LBP-09-6, 69 NRC 382 (2009); LBP-09-16, 70 NRC 240 (2009); LBP-09-18, 70 NRC 395, 399 (2009); LBP-09-20, 70 NRC 575 (2009); LBP-09-21, 70 NRC 591 (2009); LBP-09-28, 70 NRC 1024 (2009)
- interests that a representative organization seeks to protect must be germane to its own purpose, and neither the asserted claim nor the requested relief must require an individual member to participate in the organization's legal action; LBP-09-4, 69 NRC 178 (2009)
- organizational petitioner fails to identify any discrete institutional injury to itself, other than general environmental and policy interests of the sorts the federal courts and NRC repeatedly have found insufficient for organizational standing; CLI-10-3, 71 NRC 51 n.5 (2010)
- Consumers Energy Co.* (Palisades Nuclear Plant), CLI-07-18, 65 NRC 399, 409, *reconsideration denied*, CLI-07-22, 65 NRC 525 (2007)
- any organization seeking representational standing must show that at least one of its members may be affected by the Commission's approval of the transfer, must identify that member by name, and must demonstrate that the member has authorized the organization to represent him or her and to request a hearing on his or her behalf; CLI-08-19, 68 NRC 259 (2008)
- to establish representational standing, the member must qualify for standing in his or her own right, the interests that the organization seeks to protect must be germane to its own purpose, and neither petitioner's contentions nor the requested relief must require an individual member to participate in the proceeding; CLI-08-19, 68 NRC 259 (2008); LBP-08-17, 68 NRC 439 (2008); LBP-08-24, 68 NRC 702 (2008)
- Consumers Energy Co.* (Palisades Nuclear Plant), CLI-07-18, 65 NRC 399, 409, 411 (2007)
- for organizational standing, the organization must, in its own right, satisfy the same requirements of injury, causation, and redressability as an individual; LBP-09-28, 70 NRC 1024 (2009)
- organizations may demonstrate standing in either an organizational or a representational capacity; LBP-09-28, 70 NRC 1024 (2009)
- Consumers Energy Co.* (Palisades Nuclear Plant), CLI-07-18, 65 NRC 399, 409-10 (2007)
- an organization must submit written authorization from a member whose interests it purports to represent in order to have a concrete indication that the member wishes to have the organization represent his interests there; CLI-09-9, 69 NRC 343 (2009)
- representational standing will not be granted where petitioner has provided no supporting affidavits or other evidence that any member has authorized it to represent their interests in the proceeding; LBP-09-28, 70 NRC 1026 n.28 (2009)
- Consumers Energy Co.* (Palisades Nuclear Plant), CLI-07-18, 65 NRC 399, 409-10, *reconsideration denied*, CLI-07-22, 65 NRC 525, 527-28 (2007)
- the principle regarding the representational standing of unions is also applicable to public interest groups, who also, in significant part, exist to represent the interests of their members; CLI-08-19, 68 NRC 264 (2008)

## LEGAL CITATIONS INDEX

### CASES

- Consumers Energy Co.* (Palisades Nuclear Plant), CLI-07-18, 65 NRC 399, 409-11 (2007)  
Commission precedents describing the requirements for establishing representational and organizational standing are longstanding; LBP-09-5, 69 NRC 311 n.6 (2009)
- Consumers Energy Co.* (Palisades Nuclear Plant), CLI-07-18, 65 NRC 399, 410 (2007)  
in proceedings where petitioner's factual assertions in support of standing are challenged, untenable, conjectural, or conclusory, a board need not uncritically accept such assertions; LBP-10-4, 71 NRC 230 n.14 (2010)  
when an organization takes formal corporate action to initiate litigation not only germane but integral to its purpose, that action can constitute the requisite, if implicit, proof of authorization for intervention; LBP-09-6, 69 NRC 435 (2009)
- Consumers Energy Co.* (Palisades Nuclear Plant), CLI-07-18, 65 NRC 399, 411 (2007)  
because petitioner's pleadings fail to provide adequate information about the interests of the organization to which he belongs and how those interests would be adversely affected by the licensing proceeding, the board is precluded from granting organizational standing; LBP-10-4, 71 NRC 224 n.8 (2010)
- Consumers Energy Co.* (Palisades Nuclear Plant), CLI-07-18, 65 NRC 399, 411-12, *reconsideration denied*, CLI-07-22, 65 NRC 525 (2007)  
petitioner must show some risk of discrete institutional injury to itself, other than the general environmental and policy interests of the sort repeatedly found insufficient for organizational standing; CLI-08-19, 68 NRC 270 (2008); LBP-09-20, 70 NRC 576 (2009)
- Consumers Energy Co.* (Palisades Nuclear Plant), CLI-07-18, 65 NRC 399, 412 n.37 (2007)  
not all entities with governmental ties are entitled to participate in licensing proceedings as local governmental bodies; LBP-09-13, 70 NRC 186 (2009)
- Consumers Energy Co.* (Palisades Nuclear Plant), CLI-07-18, 65 NRC 399, 414 (2007)  
a contention will be ruled inadmissible if petitioner has offered no tangible information, no experts, no substantive affidavits, but instead only bare assertions and speculation; LBP-09-26, 70 NRC 954 (2009); LBP-10-6, 71 NRC 360 (2010)  
NRC pleading standards do not allow for mere notice pleading, or the filing of general, vague, or unsupported claims to be elaborated at some later time; CLI-09-5, 69 NRC 120 n.21 (2009)
- Consumers Energy Co.* (Palisades Nuclear Plant), CLI-07-18, 65 NRC 399, 416 (2007)  
petitioners are precluded from using discovery as a device to uncover additional information supporting the admissibility of contentions; CLI-08-28, 68 NRC 676 n.73 (2008)
- Consumers Energy Co.* (Palisades Nuclear Plant), CLI-07-22, 65 NRC 525, 526, 529 (2007)  
the role of "private attorney general" is not contemplated under section 189a of the Atomic Energy Act; CLI-08-19, 68 NRC 270 (2008)
- Consumers Energy Co.* (Palisades Nuclear Plant), CLI-07-22, 65 NRC 525, 527-28 (2007)  
petitioner may not claim standing based on vague assertions, and when that fails, attempt to repair the defective pleading with fresh details offered for the first time in a petition for reconsideration; CLI-08-19, 68 NRC 261 (2008)  
petitioner may not claim standing based on vague assertions, and when that fails, attempt to repair the defective pleading with fresh details offered for the first time in its reply; LBP-09-2, 69 NRC 94 nn.18, 20 (2009)
- Consumers Power Co.* (Midland Plant, Units 1 and 2), ALAB-123, 6 AEC 331, 334-35 (1973)  
licensing boards are authorized to accept assertions of the applicant and Staff that have not been controverted by a party; LBP-06-7, 63 NRC 200 n.7 (2006)
- Consumers Power Co.* (Midland Plant, Units 1 and 2), ALAB-123, 6 AEC 331, 345 (1973)  
once a party has introduced sufficient evidence to establish a prima facie case, the burden of proof then shifts to the applicant who must provide sufficient rebuttal to satisfy the board that it should reject the contention as a basis for denial of the permit or license; CLI-09-7, 69 NRC 269 (2009)
- Consumers Power Co.* (Midland Plant, Units 1 and 2), ALAB-123, 6 AEC 331, 355 (1973)  
when an applicant receives a construction permit, it proceeds at its own risk, regardless of the amount of money that it may have expended during construction; LBP-10-7, 71 NRC 405-06 (2010)
- Consumers Power Co.* (Midland Plant, Units 1 and 2), ALAB-395, 5 NRC 772, 779 (1977)  
expenses of any kind do not constitute irreparable injury; CLI-09-6, 69 NRC 135 n.25 (2009)

## LEGAL CITATIONS INDEX

### CASES

- Consumers Power Co.* (Midland Plant, Units 1 and 2), ALAB-452, 6 NRC 892, 902 (1977)  
joint ventures are common within the nuclear industry and thus merit consideration in the alternatives analysis; LBP-07-9, 65 NRC 634 (2007)
- Consumers Power Co.* (Midland Plant, Units 1 and 2), ALAB-452, 6 NRC 892, 902-03 (1977)  
the coordination services market is a market for the exchange of surplus electric power between utilities on a nonfirm basis and the joint and coordinated operation by utilities of their systems of generation and distribution, all with the purpose of achieving maximum efficiency and economies in their overall power supply operations; CLI-06-2, 63 NRC 16 n.27 (2006)
- Consumers Power Co.* (Midland Plant, Units 1 and 2), ALAB-452, 6 NRC 892, 973-74 & n.352 (1977)  
“distribution” refers generally to the transport of electricity by local distribution companies to the end users of the electricity (e.g., homes, shops, office buildings, factories); CLI-06-2, 63 NRC 14 n.16 (2006)  
“transmission services” is a concept central to the determination of standing in a license transfer proceeding; CLI-06-2, 63 NRC 14 n.16 (2006)  
“transmission services” refers to the transport of electricity on the wholesale market to local distribution companies; CLI-06-2, 63 NRC 14 n.16 (2006)
- Consumers Power Co.* (Midland Plant, Units 1 and 2), ALAB-458, 7 NRC 155, 162 (1978)  
if a board on remand were to rule in petitioners’ favor regarding the admissibility of one contention, then the board should also reconsider its prior ruling that related contentions were admissible; CLI-10-21, 72 NRC 199 (2010)  
it is inappropriate for the agency to consider economic costs when no environmentally preferable alternative has been identified; CLI-10-1, 71 NRC 23 (2010)  
the National Environmental Policy Act requires an applicant to present a cost-benefit analysis for nuclear power plants and facilities only where the applicant’s alternatives analysis indicates that there is an environmentally preferable alternative; LBP-08-21, 68 NRC 576 (2008)
- Consumers Power Co.* (Midland Plant, Units 1 and 2), ALAB-458, 7 NRC 155, 162-63 & nn.21-25 (1978)  
if an alternative to the applicant’s proposal is environmentally preferable, then NRC must determine whether the environmental benefits conferred by that alternative are worthwhile enough to outweigh any additional cost needed to achieve them; CLI-10-1, 71 NRC 24 (2010)
- Consumers Power Co.* (Midland Plant, Units 1 and 2), ALAB-458, 7 NRC 155, 163 (1978)  
costs for a project are relevant for the determination only if an environmentally preferable option is identified; LBP-09-2, 69 NRC 111 (2009)
- Consumers Power Co.* (Midland Plant, Units 1 and 2), ALAB-458, 7 NRC 155, 163 n.25 (1978)  
it is inappropriate for the agency to consider economic costs when no environmentally preferable alternative has been identified; CLI-10-9, 71 NRC 263 (2010)  
monetary considerations come into play only if an alternative to applicant’s proposal is environmentally preferable, and then boards must determine whether the environmental benefits conferred by that alternative are worthwhile enough to outweigh any additional cost needed to achieve them; LBP-10-10, 71 NRC 573 (2010)
- Consumers Power Co.* (Midland Plant, Units 1 and 2), ALAB-634, 13 NRC 96 (1981)  
all levels of NRC adjudicators have consistently applied the deliberative process privilege; LBP-06-25, 64 NRC 381 (2006)
- Consumers Power Co.* (Midland Plant, Units 1 and 2), ALAB-684, 16 NRC 162, 165 n.3 (1982)  
only in truly extraordinary and unanticipated circumstances are late filings to be accepted; LBP-10-21, 72 NRC 637 (2010)
- Consumers Power Co.* (Midland Plant, Units 1 and 2), ALAB-764, 19 NRC 633, 641 (1984)  
a board concluded that the protective order it was imposing would eliminate the harm movant perceived to its interest and then weighed this factor against the others and denied a motion to quash; LBP-06-25, 64 NRC 388 (2006)
- Consumers Power Co.* (Midland Plant, Units 1 and 2), ALAB-764, 19 NRC 633, 642 (1984)  
a licensing board rejected motions to quash in part because the board had, simultaneously with the issuance of the subpoenas, issued a strict protective order that limited the release of the information only to the parties, and only for use in that case; LBP-06-25, 64 NRC 388 (2006)

## LEGAL CITATIONS INDEX

### CASES

- main *Consumers Power Co.* (Midland Plant, Units 1 and 2), LBP-72-29, 5 AEC 142, 143 (1972) although the phrase “possession, custody, or control,” is used, no relevant interpretation or construction of the phrase, or of the term control, is provided; LBP-12-23, 72 NRC 706 (2010)
- Consumers Power Co.* (Midland Plant, Units 1 and 2), LBP-83-53, 18 NRC 282 (1983)  
a licensing board rejected motions to continue to withhold documents in part because the board had, simultaneously with the issuance of the subpoenas, issued a strict protective order that limited the release of the information only to the parties, and only for use in that case; LBP-06-25, 64 NRC 388 (2006)
- Consumers Power Co.* (Midland Plant, Units 1 and 2), LBP-83-53, 18 NRC 282, 287-88 (1983)  
licensing boards have continued to withhold documents or quash subpoenas once an applicable protective order has been issued or requested if the protective order may be breached; LBP-06-25, 64 NRC 388 n.85 (2006)
- Consumers Power Co.* (Midland Plant, Units 1 and 2), LBP-83-53, 18 NRC 282, 288 (1983)  
to counter a board’s normal assumption that protective orders will not be breached, the withholding party must show evidence of the likelihood of a breach; LBP-06-25, 64 NRC 388 n.85 (2006)
- Consumers Power Co.* (Midland Plant, Units 1 and 2), LBP-83-64, 18 NRC 766, 769 (1983)  
a licensing board rejected motions to continue to withhold documents in part because the board had, simultaneously with the issuance of the subpoenas, issued a strict protective order that limited the release of the information only to the parties, and only for use in that case; LBP-06-25, 64 NRC 388 (2006)
- Consumers Power Co.* (Palisades Nuclear Plant), ALAB-670, 15 NRC 493, 499-506, *vacated as moot*, CLI-82-18, 16 NRC 50 (1982)  
only eight petitions for discretionary intervention have *ever* been granted during the 30 years NRC has applied the current six-factor test; CLI-06-16, 63 NRC 717 (2006)
- Consumers Power Co.* (Palisades Nuclear Plant), CLI-82-18, 16 NRC 50, 52 (1982)  
the Commission has taken the unusual step of declaring that the grant of discretionary intervention carries no precedential weight; CLI-06-16, 63 NRC 717 (2006)
- Consumers Power Co.* (Palisades Nuclear Plant), LBP-81-26, 14 NRC 247, 253-55 (1981), *rev’d on other grounds*, ALAB-670, 15 NRC 493 (1982)  
requirements for representational standing apply to labor unions; CLI-08-19, 68 NRC 263 (2008)
- Cooper Cameron Corp. v. U.S. Department of Labor*, 280 F.3d 539 (5th Cir. 2002)  
challenges in FOIA cases routinely are resolved on the basis of summary judgment pleadings; LBP-08-7, 67 NRC 371 (2008)
- Coming Glass Works v. Brennan*, 417 U.S. 188, 202 (1974)  
technical terms of art should be interpreted by reference to the trade or industry to which they apply; CLI-06-14, 63 NRC 519 (2006)
- Costle v. Pacific Legal Foundation*, 445 U.S. 198, 204 (1980)  
petitioner must present sufficient information to show a genuine dispute and reasonably indicating that a further inquiry is appropriate; LBP-08-6, 67 NRC 292 (2008); LBP-09-17, 70 NRC 329 (2009)
- County of Suffolk v. Secretary of the Interior*, 562 F.2d 1368, 1372 (2d Cir. 1977)  
agencies are permitted to defer certain issues in an environmental impact statement for a multistage project when detailed useful information on a given topic is not meaningfully possible to obtain, and the unavailable information is not essential to determination at the earlier stage; CLI-07-27, 66 NRC 235 (2007)
- Covington v. Jefferson County*, 358 F.3d 626, 638-41 (9th Cir. 2004)  
to establish injury-in-fact, it is sufficient to allege that defendant’s actions caused reasonable concern of injury to the plaintiff; LBP-09-4, 69 NRC 185 n.44 (2009)
- Craig v. Harney*, 331 U.S. 367, 374 (1947)  
a trial is a public event, and what transpires in the courtroom is public property; LBP-10-2, 71 NRC 206 n.54 (2010)
- Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), CLI-09-9, 69 NRC 331, 336 (2009)  
the Commission defers to a board’s rulings on standing and contention admissibility unless the appeal points to an error of law or abuse of discretion; CLI-09-14, 69 NRC 584 (2009); CLI-09-16, 70 NRC 35 (2009); CLI-09-22, 70 NRC 933 (2009); CLI-10-1, 71 NRC 5 (2010); CLI-10-2, 71 NRC

## LEGAL CITATIONS INDEX

### CASES

- 29 (2010); CLI-10-3, 71 NRC 52 (2010); CLI-10-7, 71 NRC 138 (2010); CLI-10-9, 71 NRC 253 (2010); CLI-10-21, 72 NRC 200 (2010)
- Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), CLI-09-9, 69 NRC 331, 339 (2009)
- when denial of a license would alleviate a petitioner's asserted potential injury, any admissible contention with such a result can be prosecuted by a petitioner, regardless of whether that contention is directly related to that petitioner's articulated injury; LBP-09-16, 70 NRC 242 (2009)
- Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), CLI-09-9, 69 NRC 331, 339-41 (2009)
- as long as either denial of a license or issuance of a decision mandating compliance with legal requirements would alleviate a petitioner's potential injury, then under longstanding NRC jurisprudence the petitioner may prosecute any admissible contention that could result in the denial or in the compliance decision; CLI-09-20, 70 NRC 918 n.28 (2009)
- Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), CLI-09-9, 69 NRC 331, 340 (2009)
- a nexus between the injury and the relief is required rather than a nexus between the claimed injury and the contention; LBP-09-16, 70 NRC 242 (2009)
- Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), CLI-09-9, 69 NRC 331, 343 (2009)
- affidavits authorizing organizational representation are to be filed with specific reference to the proceeding in which standing is sought and providing the petitioners the opportunity to cure such defects in their affidavits; CLI-10-7, 71 NRC 138 (2010); LBP-09-13, 70 NRC 182 n.26 (2009)
- petitioner has not met the pleading requirements because it has not demonstrated any link between the purported violations at an existing unit and any future noncompliance or resulting safety risk affecting proposed units; CLI-10-9, 71 NRC 272 (2010)
- petitioner must make a fresh standing demonstration in each individual proceeding in which intervention is sought; LBP-10-21, 72 NRC 640 (2010)
- Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), CLI-09-9, 69 NRC 331, 345 (2009)
- a board's determination of standing does not depend on whether the cause of the injury flows directly from the challenged action, but whether the chain of causation is plausible; LBP-09-13, 70 NRC 177 (2009); LBP-10-16, 72 NRC 382 (2010)
- if none of the individuals in a materials licensing proceeding claims to live on or immediately adjacent to a proposed mining site, the board must determine whether petitioners have presented sufficient evidence to establish that a plausible pathway exists through which contaminants could migrate from the proposed mining site to the petitioners' water sources; LBP-10-16, 72 NRC 385 (2010)
- Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), CLI-09-9, 69 NRC 331, 348-51 (2009)
- Indian tribe's contention regarding compliance with the National Historic Preservation Act consultation requirements was not ripe for litigation; LBP-10-16, 72 NRC 419, 420, 421 (2010)
- Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), CLI-09-9, 69 NRC 331, 351 (2009)
- if, following publication of the Staff's environmental review document, petitioners continue to believe that the consultations were not performed as required, they may proffer such a contention pursuant to section 2.309(f)(2); CLI-09-12, 69 NRC 566 n.141 (2009); LBP-10-16, 72 NRC 422, 440 (2010)
- Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), CLI-09-9, 69 NRC 331, 352 (2009)
- at the contention admission stage, the board simply has to find that each of the elements of contention admissibility is satisfied, and need not weigh the merits of petitioner's arguments; LBP-09-10, 70 NRC 86 n.28 (2009)
- petitioner must provide a concise statement of the alleged facts or expert opinion that support the contention, references to sources and documents on which the petitioner intends to rely, and sufficient information to show that a genuine dispute exists; LBP-09-10, 70 NRC 136 n.75 (2009)

## LEGAL CITATIONS INDEX

### CASES

- Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), CLI-09-9, 69 NRC 331, 356 (2009)  
contention is rejected as lacking support for the premise that ongoing mining operations will drain or contaminate wetlands, such that their economic benefits will be decreased; LBP-10-16, 72 NRC 400 (2010)
- Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), CLI-09-9, 69 NRC 331, 362-64 (2009)  
contention based on a recent study suggesting a link between low levels of arsenic in drinking water and diabetes is rejected; CLI-09-12, 69 NRC 561 n.112 (2009)
- Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), CLI-09-9, 69 NRC 331, 363-64 (2009)  
board admission of late-filed contention was reversed because petitioners failed to support their fundamental premise that applicant's licensed activities have exposed petitioners and others to a toxic substance; CLI-10-20, 72 NRC 194 n.49 (2010)
- Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), CLI-09-9, 69 NRC 331, 365 (2009)  
once a petition to intervene and request for hearing have been granted and contentions are admitted for hearing, appeals of board rulings on new or amended contentions are treated under section 2.341(f)(2), regardless of the subject matter of those contentions; CLI-10-16, 71 NRC 490 (2010)  
rejection or admission of a contention, where petitioner has been admitted as a party and has other contentions pending, neither constitutes serious and irreparable impact nor affects the basic structure of the proceeding in a pervasive and unusual manner; CLI-10-16, 71 NRC 491 (2010)
- Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), CLI-09-9, 69 NRC 331, 365 & n.178 (2009)  
that interlocutory review will only be granted under extraordinary circumstances reflects the Commission's disfavor of piecemeal appeals during ongoing licensing board proceedings; CLI-10-16, 71 NRC 490 (2010)
- Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), LBP-08-24, 68 NRC 691, 720 (2008)  
if petitioner were to delay and submit contentions on National Environmental Policy Act topics addressed in the environmental report after issuance of the environmental impact statement, they would likely be characterized as late-filed contentions, subject to much more stringent admissibility standards; LBP-08-26, 68 NRC 932 (2008)
- Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), LBP-08-24, 68 NRC 691, 720-21 (2008)  
it is appropriate to assess both the fitness of the issue for judicial decision and the hardship to the parties of withholding court consideration; LBP-09-1, 69 NRC 38-39 n.114 (2009)
- Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), LBP-08-24, 68 NRC 691, 730 (2008)  
the board found the practice of incorporating by reference contrary to Commission case law and denied contentions on the basis on the dearth of information; LBP-10-16, 72 NRC 397 (2010)
- Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), LBP-08-24, 68 NRC 691, 745 (2008)  
the requirement of 10 C.F.R. 40.9(a) that applicant/licensee provide information that is accurate and complete in all material respects comes into play in enforcement proceedings, but this does not place the issue beyond consideration in a licensing proceeding; LBP-09-1, 69 NRC 32 n.83 (2009)
- Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), LBP-08-24, 68 NRC 691, 760 (2008)  
although a board in another materials license renewal proceeding allowed an Indian organization to participate in that proceeding as an interested Indian Tribe under 10 C.F.R. 2.315(c), that ruling is not binding on other boards; LBP-09-13, 70 NRC 187 n.33 (2009)
- Crow Butte Resources, Inc.* (In Situ Leach Facility, Crawford, Nebraska), LBP-08-24, 68 NRC 691, 760-61 (2008)  
licensing boards may resolve purely legal issues by asking the parties for immediate briefing on the issue in question; LBP-09-4, 69 NRC 201 n.118 (2009)

## LEGAL CITATIONS INDEX

### CASES

- Crow Butte Resources, Inc.* (North Trend Expansion Project), CLI-09-12, 69 NRC 535 (2009)  
licensing boards must exercise caution when reformulating contentions; CLI-10-14, 71 NRC 464 n.80 (2010)
- Crow Butte Resources, Inc.* (North Trend Expansion Project), CLI-09-12, 69 NRC 535, 543, 553 (2009)  
if a question arises over the scope of an admitted contention, the board or Commission will refer back to the bases set forth in support of the contention; CLI-10-15, 71 NRC 482 (2010)
- Crow Butte Resources, Inc.* (North Trend Expansion Project), CLI-09-12, 69 NRC 535, 549 (2009)  
the Commission upheld the licensing board's finding that the petitioner demonstrated good cause for its late filing; LBP-09-20, 70 NRC 572-73 (2009); LBP-10-24, 72 NRC 731 (2010)
- Crow Butte Resources, Inc.* (North Trend Expansion Project), CLI-09-12, 69 NRC 535, 549 n.61 (2009)  
good cause is the most significant of the late-filing factors set out in 10 C.F.R. 2.309(c); LBP-09-20, 70 NRC 573 (2009); LBP-10-9, 71 NRC 506 (2010); LBP-10-24, 72 NRC 731, 769 (2010)  
licensing boards and the Commission have considered the late-filing criteria even in cases where the factors were not fully addressed by petitioners and/or the NRC Staff or were not addressed at all; LBP-10-24, 72 NRC 743 (2010)
- Crow Butte Resources, Inc.* (North Trend Expansion Project), CLI-09-12, 69 NRC 535, 552 (2009)  
boards have discretion to reformulate contentions to eliminate extraneous issues or to consolidate issues for a more efficient proceeding; CLI-10-2, 71 NRC 33 (2010); LBP-09-16, 70 NRC 256 (2009); LBP-10-9, 71 NRC 510 (2010); LBP-10-14, 72 NRC 127 n.171 (2010); LBP-10-16, 72 NRC 406 (2010)  
the Commission found fault with the board's failure to identify clearly which of the diffuse and, in some cases, unsupported claims were admitted for hearing; CLI-10-2, 71 NRC 32 (2010)
- Crow Butte Resources, Inc.* (North Trend Expansion Project), CLI-09-12, 69 NRC 535, 552-53 (2009)  
boards have legal authority to reformulate contentions; LBP-10-16, 72 NRC 403 (2010)  
if petitioner neglects to provide the requisite support for its contentions, the board should not make assumptions of fact that favor the petitioner or supply information that is lacking; LBP-09-26, 70 NRC 954 (2009); LBP-10-6, 71 NRC 361 (2010)  
licensing boards may reformulate contentions to eliminate extraneous issues or to consolidate issues for a more efficient proceeding, but should not add material not raised by a petitioner in order to render a contention admissible; CLI-10-14, 71 NRC 464 n.80 (2010)
- Crow Butte Resources, Inc.* (North Trend Expansion Project), CLI-09-12, 69 NRC 535, 552-54 (2009)  
where the Commission found that the board did not provide clarity on the scope of admitted contentions, it exercised its authority to reformulate the contentions; CLI-10-18, 72 NRC 87 (2010)
- Crow Butte Resources, Inc.* (North Trend Expansion Project), CLI-09-12, 69 NRC 535, 553 (2009)  
a board may not supply information that is missing or make assumptions of fact not provided by the petitioner; LBP-10-6, 71 NRC 380 (2010)  
because the reach of a contention necessarily hinges upon its terms and its stated bases, the brief explanation helps define the scope of the contention; LBP-09-26, 70 NRC 953 (2009)  
boards are authorized to hold prehearing conferences to simplify or clarify the issues for hearing, after which they may admit a revised contention, as long as the revised contention does not add material not raised by the intervenor to make it admissible; LBP-10-14, 72 NRC 127 n.171 (2010)  
boards have reformulated contentions prepared and submitted by unrepresented petitioners; LBP-10-10, 71 NRC 591 n.312 (2010)  
parties were left without a clear roadmap as to which elements of several broadly worded claims were, in fact, admissible; CLI-10-2, 71 NRC 33 (2010)  
the scope of an admitted contention is defined by its bases; LBP-10-6, 71 NRC 366 n.49 (2010)
- Crow Butte Resources, Inc.* (North Trend Expansion Project), CLI-09-12, 69 NRC 535, 557 (2009)  
any contention that fails to controvert the application may be dismissed; LBP-10-6, 71 NRC 361 (2010)
- Crow Butte Resources, Inc.* (North Trend Expansion Project), CLI-09-12, 69 NRC 535, 566 (2009)  
petitioner is free to file a contention later on in the proceeding if, after Staff releases its environmental documents, petitioner believes that the Staff has failed to satisfy its obligations under NEPA and the National Historic Preservation Act; LBP-10-16, 72 NRC 440 (2010)

## LEGAL CITATIONS INDEX

### CASES

- Crow Butte Resources, Inc.* (North Trend Expansion Project), CLI-09-12, 69 NRC 535, 568 (2009)  
a reply cannot expand the scope of the arguments set forth in the original hearing request; LBP-09-16, 70 NRC 254 (2009)
- Crow Butte Resources, Inc.* (North Trend Expansion Project), CLI-09-12, 69 NRC 535, 572 (2009)  
mandatory disclosures, which apply to Subpart L proceedings, are wide-reaching; LBP-12-23, 72 NRC 701 (2010)
- Crow Butte Resources, Inc.* (North Trend Expansion Project), CLI-09-12, 69 NRC 535, 573 (2009)  
a board abused its discretion in reformulating and admitting contentions; LBP-10-16, 72 NRC 397 (2010)
- Crow Butte Resources, Inc.* (North Trend Expansion Project), LBP-08-6, 67 NRC 241, 271, 276-89 (2008)  
establishing standing for a contention involves a showing of a concrete and particularized injury that is fairly traceable to the challenged action and likely to be redressed by a favorable decision; LBP-09-1, 69 NRC 24 (2009)
- Crow Butte Resources, Inc.* (North Trend Expansion Project), LBP-08-6, 67 NRC 241, 278 (2008), *aff'd*, CLI-09-12, 69 NRC 535 (2009)  
although petitioner's reply cannot be used to remedy a deficient petition, because opposing parties have no opportunity to respond, petitioner asks the board to apply a standard of "fundamental fairness," because petitioner filed its initial petition without the assistance of counsel; LBP-09-6, 69 NRC 426 (2009)  
boards should afford greater latitude to a pleading submitted by a pro se petitioner; CLI-10-20, 72 NRC 189 (2010)
- Crow Butte Resources, Inc.* (North Trend Expansion Project), LBP-08-6, 67 NRC 241, 280 (2008)  
petitioner is not required to go further at the threshold contention admission stage to establish injury in fact; LBP-10-16, 72 NRC 388 (2010)
- Crow Butte Resources, Inc.* (North Trend Expansion Project), LBP-08-6, 67 NRC 241, 294-323 (2008)  
boards have reformulated contentions prepared and submitted by unrepresented petitioners; LBP-10-10, 71 NRC 591 n.312 (2010)
- Crow Butte Resources, Inc.* (North Trend Expansion Project), LBP-08-6, 67 NRC 241, 321 (2008)  
on appeal, the Commission found fault with the board's failure to identify clearly which of the diffuse and, in some cases, unsupported claims were admitted for hearing; CLI-10-2, 71 NRC 32 (2010)
- Crow Butte Resources, Inc.* (North Trend Expansion Project), LBP-08-6, 67 NRC 241, 323 (2008), *rev'd in part on other grounds*, CLI-09-12, 69 NRC 535 (2009)  
admissibility of contentions does not hinge on access to a draft guidance document, which is not a legal requirement; LBP-10-5, 71 NRC 343 (2010)  
guidance documents are not binding legal authority; LBP-10-5, 71 NRC 346 (2010)
- Crow Creek Sioux Tribe v. Brownlee*, 331 F.3d 912, 916 (D.C. Cir. 2003)  
a tribe does not have standing merely because it has statutory rights in burial remains and cultural artifacts, but rather, to establish standing, the Tribe must show some actual or imminent injury; LBP-08-24, 68 NRC 713 n.106 (2008); LBP-10-16, 72 NRC 392 n.112 (2010)
- Cumis Insurance Society, Inc. v. South-Coast Bank*, 610 F. Supp. 193, 196 (N.D. Ind. 1985)  
the phrase "possession, custody, or control" is in the disjunctive, and only one of the enumerated requirements need be met; LBP-12-23, 72 NRC 707 (2010)
- Cunningham v. Sears, Roebuck & Co.*, 854 F.2d 914, 916 (6th Cir. 1988)  
although counsel have duties to their clients, there is a degree of candor necessary for effective disposition of cases that counsel owes as an officer of the court; LBP-06-10, 63 NRC 370 (2006)
- Cuomo v. NRC*, 772 F.2d 972, 976 (D.C. Cir. 1985)  
a party seeking a stay must show it faces imminent, irreparable harm that is both certain and great; CLI-06-8, 63 NRC 237 (2006)
- Curators of the University of Missouri* (TRUMP-S Project), CLI-95-1, 41 NRC 71, 98 (1995)  
NUREGs and regulatory guides serve as guidance, do not prescribe requirements, are not substitutes for regulations, and are not binding authority; LBP-07-6, 65 NRC 440 n.31 (2007); LBP-08-25, 68 NRC 788 n.29 (2008); LBP-10-10, 71 NRC 584 (2010)
- Curators of the University of Missouri* (TRUMP-S Project), CLI-95-1, 41 NRC 71, 98, 100 (1995)  
applicant's failure to comply with a guidance document does not demonstrate failure to comply with the relevant regulations; LBP-07-14, 66 NRC 197 (2007)

## LEGAL CITATIONS INDEX

### CASES

- Curators of the University of Missouri* (TRUMP-S Project), CLI-95-1, 41 NRC 71, 121 (1995)  
it is the applicant, not the Staff, that has the burden of proof in litigation; CLI-08-23, 68 NRC 477, 486 (2008)
- Curators of the University of Missouri* (TRUMP-S Project), CLI-95-1, 41 NRC 71, 121 & n.67 (1995)  
NRC hearings on safety issues concern the adequacy of the license application, not the NRC Staff's work, but NRC hearings on NEPA issues focus entirely on the adequacy of the NRC Staff's work; CLI-07-17, 65 NRC 395 (2007)
- Curators of the University of Missouri* (TRUMP-S Project), CLI-95-1, 41 NRC 71, 121-22 (1995)  
a board's jurisdiction does not extend to overseeing or directing the NRC Staff in its license reviews; CLI-08-23, 68 NRC 473-74 (2008)  
it would be unfair to deny a meritorious application because the Staff's review was found lacking; CLI-08-23, 68 NRC 482 (2008)  
NRC has not, and will not, litigate claims about the adequacy of the Staff's safety review in licensing adjudications; CLI-08-23, 68 NRC 476 n.64 (2008); CLI-09-14, 69 NRC 602 (2009)
- Curators of the University of Missouri* (TRUMP-S Project), CLI-95-1, 41 NRC 71, 121-22, *aff'd on motion for reconsideration*, CLI-95-8, 41 NRC 386, 403 (1995)  
the issue in a licensing proceeding is the adequacy of the application, not the adequacy of the Staff's safety review; CLI-08-3, 67 NRC 168 n.73 (2008)
- Curators of the University of Missouri* (TRUMP-S Project), CLI-95-1, 41 NRC 71, 149-50 (1995)  
although NRC guidance documents are entitled to some weight, they do not have the force of a legally binding regulation and, like any guidance document, may be challenged in an adjudicatory proceeding; LBP-08-22, 68 NRC 614 (2008)
- Curators of the University of Missouri* (TRUMP-S Project), CLI-95-1, 41 NRC 71, 150 (1995)  
NUREGs are guidance documents, with no binding effect, but are entitled to special weight, such that it is appropriate to consider in evaluating contentions; LBP-09-17, 70 NRC 368 (2009)
- Curators of the University of Missouri* (TRUMP-S Project), CLI-95-1, 41 NRC 71, 165 (1995)  
intervenor are not entitled to litigate common defense and security considerations under 10 C.F.R. 40.32(d) unless the specific common defense and security risk asserted is reasonably related to, and would arise as a direct result of, the specific license amendments that the Commission is asked to approve; LBP-09-1, 69 NRC 37 (2009)
- Curators of the University of Missouri* (TRUMP-S Project), CLI-95-1, 41 NRC 71, 165-66 (1995)  
intervenor's nuclear proliferation concern is premised upon future third-party activities that are unrelated to the specific activities authorized by license amendments and is not litigable because it is not a direct consequence of the proposed license amendments or the Commission's approval thereof; LBP-09-1, 69 NRC 37-38 (2009)
- Curators of the University of Missouri* (TRUMP-S Project), CLI-95-8, 41 NRC 386, 395 (1995)  
license applications may be modified or improved during the NRC review process; LBP-10-17, 72 NRC 514 (2010)  
the fact that a combined license application is subject to, or even expected to, change does not make it legally deficient because the NRC follows a dynamic licensing process; LBP-09-10, 70 NRC 77 (2009)
- Curators of the University of Missouri* (TRUMP-S Project), CLI-95-8, 41 NRC 386, 395-96 (1995)  
the issue in adjudications is not the adequacy of the NRC Staff's review of the application but rather whether the license application raises health and safety concerns; LBP-08-13, 68 NRC 71 n.88 (2008)  
the manner in which the NRC Staff conducts its sufficiency review and whether its decision to accept an application for review was correct are not matters within the purview of an adjudicatory proceeding; LBP-08-9, 67 NRC 444 (2008)
- Curators of the University of Missouri* (TRUMP-S Project), CLI-95-8, 41 NRC 386, 397 (1995)  
regulatory guides and Staff review plans are worth noting, but they do not have the force of law and are not binding on the board's determination as to whether applicant's testing program satisfies the legal standards; LBP-06-23, 64 NRC 312 n.255 (2006); LBP-07-2, 65 NRC 173 (2007)
- Curators of the University of Missouri* (TRUMP-S Project), CLI-95-8, 41 NRC 386, 400 (1995)  
the Commission has long declined to assume that licensees will refuse to meet their obligations under their licenses or NRC regulations; LBP-07-14, 66 NRC 209 n.94 (2007)

## LEGAL CITATIONS INDEX

### CASES

- Curators of the University of Missouri* (TRUMP-S Project), LBP-90-30, 32 NRC 95, 103 (1990)  
intervenor may not act as private attorneys-general and raise issues that are of concern to them but do not affect them directly; CLI-07-18, 65 NRC 411 n.35 (2007)
- DaimlerChrysler Corp. v. Cuno*, 547 U.S. 332, 340, 349 (2006)  
standing on the part of plaintiffs is found at a bare minimum as municipal taxpayers under case law in which the peculiar relation of the corporate taxpayer to the corporation distinguishes such a case from the general bar on taxpayer suits; LBP-09-1, 69 NRC 23 (2009)
- DaimlerChrysler Corp. v. Cuno*, 547 U.S. 332, 349, 354 (2006)  
status as municipal taxpayers does not give plaintiffs standing to challenge the state franchise tax credit; LBP-09-1, 69 NRC 24 (2009)
- DaimlerChrysler Corp. v. Cuno*, 547 U.S. 332, 352 (2006)  
plaintiff must demonstrate standing for each claim he seeks to press and for each form of relief that is sought; LBP-09-1, 69 NRC 20-21, 24 (2009)
- DaimlerChrysler Corp. v. Cuno*, 547 U.S. 332, 353 n.5 (2006)  
once a litigant has standing to request invalidation of a particular agency action, it may do so by identifying all grounds on which the agency may have failed to comply with its statutory mandate; LBP-09-1, 69 NRC 24 n.52 (2009)
- Dallas v. Hall*, 562 F.2d 712, 718 (5th Cir. 2009)  
rejection of even viable and reasonable alternatives, after an appropriate evaluation, is not arbitrary and capricious; LBP-10-10, 71 NRC 584-85 n.288 (2010)
- Daniels v. Alander*, 844 A.2d 182, 187-88 (Conn. 2004)  
the duty of trial judges to deter and correct misconduct of attorneys with respect to their obligations as officers of the court is related to the need to support the authority of the tribunal and enable the proceeding to go forward with dignity; LBP-06-10, 63 NRC 369 (2006)
- Daniels v. Alander*, 844 A.2d 182, 188 (Conn. 2004)  
the ethical rule that prohibits the making of false statements, as well as failing to correct such statements, is not limited to affirmative misstatements, but also applies to failures to correct misstatements made in a lawyer's presence by another lawyer; LBP-06-10, 63 NRC 371 (2006)
- Daubert v. Merrell Dow Pharmaceuticals, Inc.*, 509 U.S. 579, 589-90 (1993)  
for purposes of summary disposition, mere allegations, including speculative or bare conclusory statements by an expert, are insufficient; LBP-07-13, 66 NRC 144 (2007)
- Daubert v. Merrell Dow Pharmaceuticals, Inc.*, 509 U.S. 579, 592 (1993)  
the term, "reasonable assurance," is interpreted; LBP-08-22, 68 NRC 644 n.261 (2008)
- Daubert v. Merrell Dow Pharmaceuticals, Inc.*, 509 U.S. 579, 592-93 (1993)  
reliability of scientific evidence is verified by assessing whether the reasoning or methodology underlying the evidence is scientifically valid; LBP-08-24, 68 NRC 739 n.267 (2008)
- Daubert v. Merrell Dow Pharmaceuticals, Inc.*, 509 U.S. 579, 597 (1993)  
trial judges have the task of ensuring that an expert's testimony both rests on a reliable foundation and is relevant; LBP-08-22, 68 NRC 646 (2008)
- David B. Kuhl, II* (Denial of Senior Reactor Operator License), LBP-09-14, 69 NRC 193, 196 (2009)  
unlike many cases in which a contention becomes moot, this is not an instance where an analysis of the merits would be an empty exercise; LBP-09-15, 70 NRC 212 (2009)
- David Geisen*, CLI-06-19, 64 NRC 9, 11 (2006)  
the question whether to hold an NRC enforcement proceeding in abeyance pending a related criminal prosecution is generally suitable for interlocutory Commission review because, unlike most interlocutory questions, the abeyance issue cannot await the end of the proceeding (it becomes moot); CLI-10-29, 72 NRC 561 n.32 (2010)
- David Geisen*, CLI-09-23, 70 NRC 935, 936 (2009)  
when evaluating a motion for a stay the Commission places the greatest weight on irreparable injury to the moving party unless a stay is granted; CLI-10-8, 71 NRC 151 (2010)
- David Geisen*, CLI-09-23, 70 NRC 935, 937 (2009)  
stay petitioner must show that success on the merits is a virtual certainty to warrant issuance of a stay; CLI-10-8, 71 NRC 154 (2010)

## LEGAL CITATIONS INDEX

### CASES

- David Geisen*, LBP-06-13, 63 NRC 523, 543, 558 (2006)  
a challenge to an order's immediate effectiveness could be brought on the basis of the long delay between investigation and action; LBP-06-26, 64 NRC 434 n.5 (2006)
- Davis v. Federal Election Commission*, 128 S. Ct. 2759, 2768-69 (2008)  
a candidate who had standing to challenge one statutory provision of a law would not necessarily have standing to challenge a different provision of that same law; CLI-09-9, 69 NRC 340 (2009)
- Davis v. Federal Election Commission*, 128 S. Ct. 2759, 2769 (2008)  
standing is not dispensed in gross, but rather plaintiff in federal court must demonstrate standing for each claim he seeks to press and for each form of relief that is sought; LBP-09-1, 69 NRC 19, 20, 21-22 (2009)
- Davis v. Latschar*, 202 F.3d 359, 369 (D.C. Cir. 2000)  
an environmental impact statement must be supplemented only when changed circumstances cause effects that are significantly different from those already studied; LBP-06-19, 64 NRC 99 (2006)
- Deal v. United States*, 508 U.S. 129, 132 (1993)  
it is a fundamental principle of statutory construction that the meaning of a word cannot be determined in isolation, but must be drawn from the context in which it is used; LBP-09-15, 70 NRC 217 n.57 (2009)
- Defenders of Wildlife v. Andrus*, 627 F.2d 1238, 1243-44 (D.C. Cir. 1980)  
the National Environmental Policy Act applies to agencies of the federal government, not to private parties such as applicants for NRC licenses; LBP-09-10, 70 NRC 87 (2009)
- Defenders of Wildlife v. U.S. Environmental Protection Agency*, 420 F.3d 946, 963 (9th Cir. 2005),  
*overruled on other grounds sub nom. National Association of Home Builders v. Defenders of Wildlife*, 127 S. Ct. 2518 (2007)  
an agency may be excused from complying with the National Environmental Policy Act where it has no discretion to prevent, or to refuse to take, the action involved; LBP-09-6, 69 NRC 405 (2009)
- Degen v. United States*, 517 U.S. 820, 825-26 (1996)  
although 10 C.F.R. 2.709 deals with special procedural norms for discovery against the Staff, there is no reason to believe, as to substantive content, that its repeated use of the relevance concept was not intended to embrace the universal understanding of that concept that shapes the scope and definition of discoverable evidence in both the federal courts and NRC adjudications; LBP-06-25, 64 NRC 390 n.102 (2006)
- Dellums v. NRC*, 863 F.2d 968, 971 (D.C. Cir. 1988)  
in determining whether an individual or organization should be granted party status in a proceeding based on standing "as of right," the agency applies contemporaneous judicial standing concepts; LBP-08-26, 68 NRC 911 (2008)  
intervention petitioner must be able to show how it would have personally suffered or will suffer a distinct and palpable harm that constitutes injury in fact; LBP-06-4, 63 NRC 103 (2006); LBP-07-14, 66 NRC 182 (2007); LBP-09-18, 70 NRC 400 (2009)
- Delong Equipment Co. v. Washington Mills Electro Minerals Corp.*, 990 F.2d 1186, 1196 (11th Cir.), *cert. denied*, 510 U.S. 1012 (1993)  
legal determinations made on appeal in a case are controlling precedent, becoming the "law of the case," for all later decisions in the same case; CLI-06-11, 63 NRC 488 (2006)
- Demko v. United States*, 216 F.3d 1049, 1053 (Fed. Cir. 2000)  
pursuant to the rule of the last antecedent, qualifying words, phrases, and clauses must be applied to the words or phrases immediately preceding them and are not to be construed as extending to and including others more remote; LBP-06-1, 63 NRC 56 n.11 (2006)
- Department of Interior v. Klamath Water Users*, 532 U.S. 1, 8-9 (2001)  
deliberative process privilege rests on the obvious realization that officials will not communicate candidly among themselves if each remark is a potential item of discovery and front page news, and its object is to enhance the quality of agency decisions, by protecting open and frank discussion among those who make them within the government; LBP-06-25, 64 NRC 381 (2006)
- Department of Transportation v. Public Citizen*, 541 U.S. 752 (2004)  
nothing in the Atomic Energy Act gives the agency authority to base licensing decisions on a project's potential to create or eliminate jobs; CLI-06-10, 63 NRC 467 (2006)

## LEGAL CITATIONS INDEX

### CASES

- Department of Transportation v. Public Citizen*, 541 U.S. 752, 754 (2004)  
because applicant dismissed solar with storage as not a viable alternative, this alternative does not meet NEPA's rule of reason; LBP-10-10, 71 NRC 572 (2010)  
because the Federal Motor Carrier Safety Administration has no ability to prevent cross-border operations, it lacks the power to act on whatever information might be contained in an EIS and could not act on whatever input the public could provide; CLI-07-16, 65 NRC 387 n.77 (2007)
- Department of Transportation v. Public Citizen*, 541 U.S. 752, 756-58 (2004)  
no environmental impact statement is necessary if the environmental assessment concludes with a finding of no significant impact, which briefly presents the reasons why the proposed action will not significantly impact the environment; LBP-08-7, 67 NRC 365 n.1 (2008)
- Department of Transportation v. Public Citizen*, 541 U.S. 752, 757 (2004)  
Council on Environmental Quality regulations receive substantial deference from federal courts in interpreting the requirements of NEPA; LBP-10-16, 72 NRC 418 n.275 (2010)
- Department of Transportation v. Public Citizen*, 541 U.S. 752, 765 (2004)  
primary obligation to satisfy the requirements of NEPA rests on the agency; CLI-10-18, 72 NRC 82 (2010)
- Department of Transportation v. Public Citizen*, 541 U.S. 752, 767 (2004)  
a reasonably close causal relationship between federal agency action and environmental consequences is necessary to trigger NEPA; CLI-07-8, 65 NRC 129, 130 (2007)  
inherent in the National Environmental Policy Act and its implementing regulations is a rule of reason, which ensures that agencies determine whether and to what extent to prepare an environmental impact statement based on the usefulness of any potential new information to the decision-making process; LBP-09-4, 69 NRC 204 n.126 (2009)  
it would be inconsistent with the National Environmental Policy Act's rule of reason to require that the cumulative impacts analysis individually analyze the effects of remote facilities absent a demonstration that such additional effort would lead to a different conclusion; LBP-09-4, 69 NRC 203-04 n.126 (2009)  
prior NRC precedent is consistent with Supreme Court NEPA doctrine, which requires a reasonably close causal relationship between federal agency action and environmental consequences before NEPA is triggered, a relationship similar to that of proximate cause in tort law; CLI-07-8, 65 NRC 130 (2007); LBP-07-14, 66 NRC 186 (2007)  
the claimed impact of a terrorist attack is too attenuated to find the proposed federal action of a license renewal to be the proximate cause of that impact; CLI-07-8, 65 NRC 129 (2007)  
the proximate cause test is required for NRC licensing decisions; CLI-07-8, 65 NRC 130 (2007)  
where the preparation of an environmental impact statement would serve no purpose in light of NEPA's regulatory scheme as a whole, no rule of reason worthy of that title would require an agency to prepare an EIS; CLI-07-27, 66 NRC 237 n.123 (2007)
- Department of Transportation v. Public Citizen*, 541 U.S. 752, 767-68 & n.2, 770 (2004)  
the Commission seeks the parties' views on whether the NRC lacks authority to reject an irradiation license for nonradiological food safety reasons and therefore need not consider food safety under NEPA; CLI-08-4, 67 NRC 172 (2008)
- Department of Transportation v. Public Citizen*, 541 U.S. 752, 768-69 (2004)  
applicant's comparison of the environmental impacts of nuclear and wind/CAES is inadequate to inform decision makers about the competing choices; LBP-10-10, 71 NRC 564 (2010)
- Department of Transportation v. Public Citizen*, 541 U.S. 752, 769 (2004)  
controls that other countries may impose on mining and milling, and the impacts of such activities, are outside the scope of a combined license proceeding; LBP-09-17, 70 NRC 370 (2009)
- Department of Transportation v. Public Citizen*, 541 U.S. 752, 770 (2004)  
an agency may be excused from complying with NEPA where it has no discretion to prevent, or to refuse to take, the action involved; LBP-09-6, 69 NRC 404 (2009)  
when an agency has no ability to prevent a certain effect due to its limited statutory authority, it cannot be considered a legally relevant cause of the effect; LBP-07-4, 65 NRC 330 n.246 (2007)
- Desert Palace v. Costa*, 539 U.S. 90, 99-100 (2003)  
plaintiff may prove his case by direct or circumstantial evidence; CLI-10-23, 72 NRC 242 n.157 (2010)

## LEGAL CITATIONS INDEX

### CASES

- Detroit Edison Co.* (Enrico Fermi Atomic Power Plant, Unit 2), ALAB-470, 7 NRC 473, 474-75 (1978)  
economic impact of a proposed action on ratepayers is outside the scope of a NEPA analysis;  
LBP-10-14, 72 NRC 126 (2010)
- Detroit Edison Co.* (Enrico Fermi Atomic Power Plant, Unit 2), ALAB-707, 16 NRC 1760, 1764-65 (1982)  
information in the public domain for 6 months does not establish good cause for late filing; CLI-09-5,  
69 NRC 126 (2009)
- Detroit Edison Co.* (Enrico Fermi Atomic Power Plant, Unit 2), LBP-78-37, 8 NRC 575, 584-85 (1978)  
the special circumstances required to obtain waiver of a rule have been described as a prima facie  
showing that application of a rule in a particular way would not serve the purposes for which the  
rule was adopted; LBP-10-9, 71 NRC 525 (2010)
- Detroit Edison Co.* (Enrico Fermi Atomic Power Plant, Unit 2), LBP-79-1, 9 NRC 73, 87-88 (1979)  
discretionary intervention is granted where petitioner's previous experience would provide valuable  
insight in developing a sound record; LBP-09-6, 69 NRC 438 n.386 (2009)  
only eight petitions for discretionary intervention have ever been granted during the 30 years NRC has  
applied the current six-factor test; CLI-06-16, 63 NRC 717 (2006)
- Detroit Edison Co.* (Fermi Nuclear Power Plant, Unit 3), CLI-09-4, 69 NRC 80 (2009)  
applicant may, at its own risk, submit a combined license application that does not reference a  
certified design; CLI-10-1, 71 NRC 9 (2010)
- Detroit Edison Co.* (Fermi Nuclear Power Plant, Unit 3), CLI-09-4, 69 NRC 80, 84 (2009)  
the Commission declines to suspend a proceeding pending outcome of the design certification process;  
LBP-09-3, 69 NRC 157 n.9 (2009)  
the standard for satisfying the likelihood-of-standing criterion in the context of filing a request for  
SUNSI entails relatively minimal effort; LBP-09-5, 69 NRC 311 (2009)
- Detroit Edison Co.* (Fermi Nuclear Power Plant, Unit 3), CLI-09-4, 69 NRC 80, 84-85 (2009)  
applicant for a construction permit or a combined license may, at its own risk, reference in its  
application a design for which a design certification application has been docketed but not granted;  
LBP-09-17, 70 NRC 334 (2009)
- Detroit Edison Co.* (Fermi Nuclear Power Plant, Unit 3), CLI-09-4, 69 NRC 80, 85 (2009)  
challenges to the Commission regulations regarding the design certification process are inadmissible;  
LBP-09-18, 70 NRC 414 (2009)  
NRC regulations permit an applicant to reference a docketed, but not yet certified, design; CLI-10-9,  
71 NRC 260 (2010)
- Detroit Edison Co.* (Fermi Nuclear Power Plant, Unit 3), LBP-09-16, 70 NRC 227, 249-52 (2009)  
contentions that challenge a Commission rule or rulemaking are inadmissible; LBP-09-26, 70 NRC  
979 (2009)
- Detroit Edison Co.* (Greenwood Energy Center, Units 2 and 3), ALAB-247, 8 AEC 936 (1974)  
even if offsite construction does not appear to be part of the plan, it does not follow that offsite  
consequences need not be considered; CLI-10-18, 72 NRC 91 (2010)  
NRC's environmental analysis in connection with licensing nuclear facilities should extend to related  
offsite construction projects such as transmission line routes extending 90 miles beyond the nuclear  
facility; LBP-09-6, 69 NRC 404 (2009)  
offsite health and safety impacts caused by onsite activities can support the admissibility of a  
contention; LBP-09-6, 69 NRC 435 (2009)
- Detroit Edison Co.* (Greenwood Energy Center, Units 2 and 3), ALAB-472, 7 NRC 570 (1978)  
the appeal board declined to entertain appeals by license applicants challenging partial board rulings;  
CLI-09-18, 70 NRC 861 n.10 (2009)
- Detroit Free Press v. Ashcroft*, 303 F.3d 681, 702 (6th Cir. 2002)  
as long as the administrative proceedings walk, talk, and squawk very much like an Article III judicial  
proceeding, they should be open to the public; LBP-10-2, 71 NRC 208 n.59 (2010)  
the First Amendment requires public access to deportation hearings despite government's strenuous  
objections that open hearings would enable terrorists to obtain information useful to their malevolent  
goals; LBP-10-2, 71 NRC 208 n.59 (2010)
- Detroit Free Press v. Ashcroft*, 303 F.3d 681, 703 (6th Cir. 2002)  
to determine whether a tribunal should block public access to a judicial proceeding, a two-part  
experience and logic test is applied; LBP-10-2, 71 NRC 207 n.61 (2010)

## LEGAL CITATIONS INDEX

### CASES

- Deukmejian v. NRC*, 751 F.2d 1287, 1321 (D.C. Cir. 1984)  
petitioners successfully obtained reopening of the record to determine whether applicant's design verification program established the adequacy of the unit's design notwithstanding the QA violations; LBP-10-9, 71 NRC 520 (2010)
- Digital Equipment Corp. v. Currie Enterprises*, 142 F.R.D. 8, 14 (D. Mass. 1991)  
conclusory allegations of potential abuse or simply the opportunity for the plaintiff to exploit civil discovery are generally unavailing to support a motion for stay; LBP-06-13, 63 NRC 541 n.56 (2006)
- Dirksen v. U.S. Department of Health and Human Services*, 803 F.2d 1456, 1459 (9th Cir.1986)  
NRC records are protected from disclosure under FOIA Exemption 2 to the extent they contain internal analytic guidance, operating rules, or practices, the disclosure of which would aid terrorists or saboteurs seeking to circumvent security measures designed to protect nuclear materials; LBP-08-7, 67 NRC 375 n.11 (2008)
- District of Columbia v. Schramm*, 631 F.2d 854, 862 (D.C. Cir. 1980)  
the National Environmental Policy Act applies to agencies of the federal government, not to private parties such as applicants for NRC licenses; LBP-09-10, 70 NRC 87 (2009)
- Diversified Industries, Inc. v. Meredith*, 572 F.2d 596 (8th Cir. 1977)  
voluntary disclosure of internal investigative materials to a government agency waives the attorney-client and work-product privileges not only with respect to the particular agency, but also as to third parties; CLI-08-6, 67 NRC 183 n.1 (2008)
- Doe v. Santa Fe Independent School District*, 933 F. Supp. 647, 650 (S.D. Tex. 1996)  
a First Amendment basis for public access to administrative proceedings is recognized; LBP-10-2, 71 NRC 208 n.59 (2010)
- Doe v. Southeastern Pennsylvania Transportation Authority*, 72 F.3d 1133, 1141 (3d Cir. 1995)  
in determinations of personal privacy privilege, the potential harm must be measured within the context of the disclosure that actually occurred; LBP-06-25, 64 NRC 386 (2006)
- Doe v. United States Postal Service*, 317 F.3d 339, 343 (D.C. Cir. 2003)  
the court draws no distinction between the probative value of direct and circumstantial evidence; CLI-10-23, 72 NRC 242 n.157 (2010)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 2), CLI-03-14, 58 NRC 207, 213 (2003)  
NRC's contention rule requires some reasonably specific factual or legal basis for a petitioner's allegations; CLI-06-10, 63 NRC 455 (2006)  
NRC's strict contention admission rules are intended to adjudicate genuine, substantive safety and environmental issues placed in contention by qualified intervenors; CLI-06-10, 63 NRC 455 (2006)  
rules on contention admissibility are strict by design; CLI-08-17, 68 NRC 233 (2008); LBP-09-4, 69 NRC 189 (2009); LBP-09-10, 70 NRC 72 (2009); LBP-09-16, 70 NRC 244 (2009); LBP-10-15, 72 NRC 278 (2010); LBP-10-16, 72 NRC 394 (2010)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 2), CLI-03-14, 58 NRC 207, 215-16, *petition for reconsideration denied*, CLI-03-18, 58 NRC 433 (2003)  
a threshold finding of standing does not render contentions admissible; CLI-06-9, 63 NRC 446 n.74 (2006)  
although a petitioner may have a sufficient interest in a proceeding for standing, he or she may have no genuine material dispute to adjudicate, or no specific factual or legal support to bring an issue to hearing; CLI-06-9, 63 NRC 446 n.74 (2006)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 2), CLI-03-14, 58 NRC 207, 216 (2003)  
the threat of injury from radiation exposure is sufficient to satisfy the injury in fact requirement of traditional standing; LBP-06-4, 63 NRC 104 (2006)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 2), CLI-03-14, 58 NRC 207, 217-18 (2003)  
petitioner's argument that "any increase in dose, no matter the amount, and regardless of whether the change complies with NRC radiological dose requirements, is unacceptable," amounts to an attack on NRC dosage regulations; LBP-07-3, 65 NRC 266 n.12 (2007)

## LEGAL CITATIONS INDEX

### CASES

- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 2), CLI-03-14, 58 NRC 207, 218 (2003)  
with limited exceptions, no rule or regulation of the Commission is subject to attack in any adjudicatory proceeding; LBP-07-16, 66 NRC 289 (2007); LBP-08-9, 67 NRC 431 (2008); LBP-08-13, 68 NRC 64 (2008); LBP-08-26, 68 NRC 916 (2008); LBP-09-2, 69 NRC 97 n.37 (2009); LBP-09-8, 69 NRC 739 n.13 (2009); LBP-09-26, 70 NRC 956 (2009)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 2), CLI-03-18, 58 NRC 433, 434 (2003)  
petitions for reconsideration should not be used merely to reargue matters that the Commission already has considered but rejected; CLI-06-27, 64 NRC 401 n.6 (2006)  
reconsideration petitions must establish an error in a Commission decision, based upon an elaboration or refinement of an argument already made, an overlooked controlling decision or principle of law, or a factual clarification; CLI-06-27, 64 NRC 401 n.6 (2006)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 2), LBP-03-12, 58 NRC 75 (2003)  
contentions are inadmissible where petitioner offers only bald assertions and provides little support for them; LBP-09-6, 69 NRC 415 n.234 (2009)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 2), LBP-03-12, 58 NRC 75, 83, 93-94, *aff'd*, CLI-03-14, 58 NRC 207 (2003)  
a contention that alleges that increases in radioactive releases create higher doses, but does not provide information or expert opinion to dispute the conclusion that the higher doses would still be under NRC regulatory limits or that the higher levels will cause harm, will not be admitted; LBP-07-3, 65 NRC 266 (2007); LBP-08-9, 67 NRC 446 (2008)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 3), CLI-02-27, 56 NRC 367 (2002)  
the National Environmental Policy Act imposes no legal duty on the NRC to consider intentional malevolent acts on a case-by-case basis in conjunction with commercial power reactor license renewal applications; LBP-06-7, 63 NRC 200 (2006); LBP-07-14, 66 NRC 195 (2007); LBP-08-13, 68 NRC 142-43 (2008)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 3), CLI-02-27, 56 NRC 367, 370 n.10 (2002)  
appellate briefs amicus curiae are welcome from parties in other Commission adjudications that have presented similar issues; CLI-10-17, 72 NRC 6 n.16 (2010)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 3), CLI-02-27, 56 NRC 367, 371 (2002)  
a NEPA analysis is not the vehicle for exploring questions about the potential for a terrorist attack upon a proposed nuclear facility; LBP-07-3, 65 NRC 269 (2007)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 3), CLI-08-17, 68 NRC 231, 233 (2008)  
rules on contention admissibility are strict by design; LBP-10-15, 72 NRC 278 (2010)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 3), CLI-08-17, 68 NRC 231, 234 (2008)  
petitioners may not skirt contention rules by initially filing unsupported contentions, and later recasting or modifying their contentions on appeal with new arguments never raised before the board; CLI-09-5, 69 NRC 123 (2009)  
the Commission defers to a board's rulings on standing and contention admissibility in the absence of clear error or abuse of discretion; CLI-09-5, 69 NRC 119 (2009); CLI-09-8, 69 NRC 324 (2009); CLI-09-9, 69 NRC 336 (2009); CLI-09-14, 69 NRC 584 (2009); CLI-10-2, 71 NRC 29 (2010); CLI-10-7, 71 NRC 138 (2010)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 3), CLI-08-17, 68 NRC 231, 237-38 (2008)  
a new contention will necessarily fail if it attacks the quality of the Staff's review rather than identifying a deficiency in the application; CLI-09-5, 69 NRC 123 (2009)

## LEGAL CITATIONS INDEX

### CASES

- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 3), CLI-08-17, 68 NRC 231, 239 n.38 (2008)  
a no-reactor or no-action alternative that was not raised before the board is therefore improperly raised on appeal; CLI-10-9, 71 NRC 265 (2010)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 3), CLI-08-17, 68 NRC 231, 240 (2008)  
a claim of deficiency in construction of the concrete containment is insufficient because it was not linked to the application at issue in the proceeding; CLI-10-9, 71 NRC 254-55 n.52 (2010)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 3), CLI-08-17, 68 NRC 231, 243 (2008)  
a license amendment adjudication is not the forum to address Petitioners' concern about past radiological releases; CLI-09-12, 69 NRC 560 n.108 (2009)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 3), CLI-09-5, 69 NRC 115, 119 (2009)  
the Commission defers to a board's rulings on standing and contention admissibility in the absence of clear error or abuse of discretion; CLI-09-8, 69 NRC 324 (2009); CLI-09-9, 69 NRC 336 (2009)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 3), CLI-09-5, 69 NRC 115, 120-21 (2009)  
the Commission's referral of a motion to reopen to the ASLBP and subsequent establishment of the board gives the board jurisdiction over the motion; LBP-10-21, 72 NRC 642 n.11 (2010)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 3), CLI-09-5, 69 NRC 115, 120-21, 124-25 (2009)  
petitioners seeking to introduce new contentions after the board has denied their initial petition to intervene need to address the reopening standards; LBP-10-21, 72 NRC 642-43 (2010)  
when the contested portion of a proceeding has been terminated following an unchallenged merits determination in favor of applicant regarding the proceeding's sole admitted contention, the board's focus must be on the requirements applicable to reopening a closed record set out in 10 C.F.R. 2.326; LBP-10-21, 72 NRC 644 (2010)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 3), CLI-09-5, 69 NRC 115, 123 n.39 (2009)  
contentions that inappropriately focus on Staff's review of the application rather than on the errors and omissions of the application itself are inadmissible; CLI-10-27, 72 NRC 493 (2010)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 3), CLI-09-5, 69 NRC 115, 124 (2009)  
extended power uprate proceeding that has been terminated may not be reopened; CLI-10-17, 72 NRC 10-11 n.37 (2010)  
when petitioner seeks to introduce a new contention after the record has been closed, it should address the reopening standards contemporaneously with a late-filed intervention petition, which must satisfy the standards for both contention admissibility and late filing; LBP-10-21, 72 NRC 643 (2010)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 3), CLI-09-5, 69 NRC 115, 126 (2009)  
to show good cause for the late filing of a contention, petitioner must show that the information on which the new contention is based was not reasonably available to the public, not merely that the petitioner recently found out about it; CLI-10-27, 72 NRC 496 n.70 (2010); LBP-09-26, 70 NRC 988 (2009); LBP-10-11, 71 NRC 640 n.124 (2010)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 3), LBP-08-9, 67 NRC 421, 431 (2008)  
the scope of a proceeding is defined in the Commission's initial hearing notice and order referring the proceeding to the licensing board; LBP-09-26, 70 NRC 953 (2009)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Unit 3), LBP-08-9, 67 NRC 421, 448 n.154 (2008)  
motion to strike is denied as moot; LBP-08-17, 68 NRC 457 (2008)

## LEGAL CITATIONS INDEX

### CASES

- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-01-24, 54 NRC 349, 358 (2001), *petition for reconsideration denied*, CLI-02-1, 55 NRC 1 (2002)
- although the pleading requirements of 10 C.F.R. 2.309 are strict by design, a licensing board may permit potential intervenors to cure defects in petitions in order to obviate dismissal of an intervention petition because of inarticulate draftsmanship or procedural or pleading defects; LBP-08-6, 67 NRC 277 (2008)
- bald or conclusory allegations that a licensee's application is deficient, without more, are insufficient to support admission of a contention; LBP-06-22, 64 NRC 253 (2006)
- compared to notice pleading in the federal courts, NRC's contention requirements have correctly been called "strict by design," but they are not intended to require the impossible; LBP-09-6, 69 NRC 417 (2009)
- petitioner must read the pertinent portions of the license application, including the safety analysis report and the environmental report, state the applicant's position and the petitioner's opposing view, and explain why petitioner disagrees with the applicant; LBP-06-23, 64 NRC 357 (2005); LBP-06-10, 63 NRC 340 (2006); LBP-07-4, 65 NRC 306 (2007); LBP-07-11, 66 NRC 58 (2007); LBP-08-6, 67 NRC 292 (2008); LBP-09-17, 70 NRC 327 (2009)
- requirements for admissibility of contentions are strict by design and any contention that does not satisfy these requirements will be rejected; CLI-06-9, 63 NRC 437 (2006); CLI-06-24, 64 NRC 118 (2006); LBP-06-4, 63 NRC 108 (2006); LBP-06-7, 63 NRC 198 (2006); LBP-06-20, 64 NRC 147 (2006); LBP-06-22, 64 NRC 235 (2006); LBP-08-13, 68 NRC 61 (2008); LBP-08-14, 68 NRC 288 (2008); LBP-08-15, 68 NRC 312 (2008); LBP-08-18, 68 NRC 540 (2008); LBP-08-26, 68 NRC 915 (2008); LBP-10-6, 71 NRC 358 (2010)
- the contention rule is strict by design, having been toughened in 1989 because in prior years licensing boards had admitted and litigated numerous contentions that appeared to be based on little more than speculation; CLI-06-10, 63 NRC 455 (2006); LBP-06-10, 63 NRC 337 (2006); LBP-06-23, 64 NRC 272, 352 (2005); LBP-07-4, 65 NRC 303 (2007); LBP-07-5, 65 NRC 352 (2007); LBP-07-11, 66 NRC 56 (2007); LBP-07-16, 66 NRC 286 (2007); LBP-08-6, 67 NRC 290 (2008); LBP-08-9, 67 NRC 429 (2008); LBP-09-17, 70 NRC 325 (2009); LBP-09-26, 70 NRC 952 (2009); LBP-10-15, 72 NRC 278 (2010)
- threshold contention standards are imposed to avoid admission of contentions based on little more than speculation and intervenors who have negligible knowledge of nuclear power issues; CLI-08-17, 68 NRC 233 (2008)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-01-24, 54 NRC 349, 358-59 (2001)
- rules on contention admissibility are strict by design; CLI-08-17, 68 NRC 233 (2008); LBP-09-4, 69 NRC 189 (2009); LBP-09-10, 70 NRC 72 (2009); LBP-09-16, 70 NRC 244 (2009); LBP-10-16, 72 NRC 394 (2010)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-01-24, 54 NRC 349, 359 (2001)
- parties and licensing boards must be on notice of the issues being litigated, so that they may prepare for summary disposition or for hearing; CLI-10-15, 71 NRC 482 (2010)
- procedural rules on contentions are designed to ensure focused and fair proceedings; CLI-10-15, 71 NRC 482 (2010)
- the scope of a contention is limited to issues of law and fact pleaded with particularity in the intervention petition, including its stated bases, unless the contention is satisfactorily amended in accordance with NRC rules; CLI-10-15, 71 NRC 482 (2010)
- there must be an explanation of the basis for a contention; CLI-08-3, 67 NRC 168 (2008)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-01-24, 54 NRC 349, 359-60 (2001)
- admissible contentions must explain, with specificity, particular safety or legal reasons requiring rejection of the contested application; LBP-06-10, 63 NRC 338 (2006); LBP-06-23, 64 NRC 353 (2005)
- intervention petitioners must point to specific portions of an application that are either deficient or do not comply with the Commission's regulations; LBP-07-11, 66 NRC 71 (2007)

## LEGAL CITATIONS INDEX

### CASES

- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-01-24, 54 NRC 349, 364 (2001)  
a contention may not attack a regulation unless the proponent requests a waiver from the Commission; CLI-07-3, 65 NRC 18 n.15 (2007)  
NRC regulations establish what the agency has found to be adequately protective radiological dose limits, and petitioners may not use an adjudicatory proceeding to challenge this generic regulatory framework; CLI-08-17, 68 NRC 243 (2008)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-01-24, 54 NRC 349, 365 (2001), *petition for reconsideration denied*, CLI-02-1, 55 NRC 1 (2002)  
to provide the basis of an admissible contention, allegations of management improprieties or lack of integrity must relate directly to the currently proposed licensing action and not be based on allegations of improprieties of only historical interest; LBP-08-15, 68 NRC 327 (2008); LBP-08-24, 68 NRC 728 (2008)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-01-24, 54 NRC 349, 365-66 (2001)  
as long as petitioner alleges, with sufficient support, that applicant's bad character or lack of integrity has direct and obvious relevance to the licensing action at issue in the proceeding, a character-based contention is admissible; LBP-09-6, 69 NRC 466, 467, 473 (2009)  
mere assertions and speculation that applicant officials or personnel would encourage or condone violations of NRC regulations do not present any ongoing pattern of violations or disregard for regulations that might be expected to occur in the future; CLI-06-10, 63 NRC 465 (2006)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-01-24, 54 NRC 349, 365-67 (2001)  
a relatively high threshold exists for the admission of contentions alleging that applicant or its management lack integrity or are guilty of improprieties such that the license being sought should not be granted; LBP-10-15, 72 NRC 337 (2010)  
historical actions by an applicant are not relevant to its current fitness unless there is some direct and obvious relationship between the asserted character issues and the licensing action in dispute; CLI-09-14, 69 NRC 606 n.149 (2009); CLI-10-20, 72 NRC 194 n.48 (2010)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-01-24, 54 NRC 349, 366 (2001), *petition for reconsideration denied*, CLI-02-1, 55 NRC 1 (2002)  
license amendment proceedings are not a forum to address past violations or accidents that have no direct bearing on the proposed amendment; CLI-09-12, 69 NRC 560 (2009); LBP-08-9, 67 NRC 440 n.119 (2008)  
strict limits are placed on contentions regarding character and integrity issues such that they must present an ongoing pattern that has a direct and obvious relationship to the licensing action at issue in order to be admitted; CLI-10-9, 71 NRC 255 (2010); LBP-09-6, 69 NRC 467 (2009)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-01-24, 54 NRC 349, 366-67 (2001)  
when character or integrity issues are raised, they are expected to be directly germane to the challenged licensing action; CLI-06-22, 64 NRC 47 n.38 (2006); CLI-10-9, 71 NRC 255 (2010)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-04-12, 59 NRC 237, 241-42 (2004)  
in conducting its acceptance review of the high-level waste repository construction authorization application, Staff only determines whether the license application contains sufficient information for the NRC to begin its safety review; CLI-08-20, 68 NRC 274 (2008)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-04-36, 60 NRC 631 (2004)  
although issues relating to fire protection at a plant cannot be addressed by petitioners in a license renewal proceeding, a possible license amendment application might also trigger another opportunity to petition to intervene, if appropriate and adequate contentions are timely and properly submitted under relevant requirements; LBP-07-11, 66 NRC 75 (2007)

## LEGAL CITATIONS INDEX

### CASES

- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-04-36, 60 NRC 631, 636 (2004)  
failure to comply with any of the contention pleading requirements is grounds for rejecting a contention; LBP-09-10, 70 NRC 73 (2009); LBP-09-26, 70 NRC 952 (2009); LBP-10-15, 72 NRC 278 (2010); LBP-10-16, 72 NRC 395 (2010)  
the Commission does not look with favor on amended or new contentions filed after the initial filing; CLI-07-20, 65 NRC 504 (2007)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-04-36, 60 NRC 631, 637 (2004)  
contentions not related to the potential effects of aging are beyond the scope of a license renewal proceeding; LBP-07-11, 66 NRC 70 (2007)  
the Commission defers to a board's rulings on admissibility of contentions unless the appeal points to an error of law or abuse of discretion; CLI-06-9, 63 NRC 439 n.32 (2006); CLI-06-24, 64 NRC 121 (2006); CLI-07-20, 65 NRC 503 n.20 (2007); CLI-07-25, 66 NRC 104 (2007)  
the Commission will affirm decisions on the admissibility of contentions where the appellant points to no error of law or abuse of discretion; CLI-09-7, 69 NRC 260 (2009); CLI-09-20, 70 NRC 914 (2009)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-04-36, 60 NRC 631, 637-38 (2004)  
a significant safety or environmental issue raised in a motion to reopen a license renewal proceeding must focus on the potential impacts of an additional 20 years of nuclear power plant operation, not on everyday operational issues; CLI-06-4, 63 NRC 37 (2006); CLI-10-27, 72 NRC 492 (2010)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-04-36, 60 NRC 631, 638 (2004)  
license renewal review does not focus on aging-related issues that are effectively addressed and maintained by ongoing agency oversight, review, and enforcement; CLI-10-27, 72 NRC 492 (2010)  
terrorist acts are outside the required purview of NEPA, and security-related issues related to such acts are simply not among the aging-related questions at stake in a license renewal proceeding; LBP-06-7, 63 NRC 201 n.8 (2006); LBP-06-20, 64 NRC 171, 173 (2006)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-04-36, 60 NRC 631, 639 (2004)  
neither petitioners nor the board may rely on a potential future GAO Report, the content of which is unknown, in support of a contention; LBP-07-11, 66 NRC 70 (2007)  
promises to provide factual material at a later date in support of a proffered contention do not support the contention's admissibility; LBP-07-11, 66 NRC 93 (2007)  
the Commission has previously rejected claims that NRC regulations require discharge permits of their licensees; LBP-09-25, 70 NRC 885 (2009)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-04-36, 60 NRC 631, 640 (2004)  
emergency planning issues already are the focus of ongoing regulatory processes and thus do not come within NRC safety review at the license renewal stage; LBP-07-11, 66 NRC 92 (2007)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-04-36, 60 NRC 631, 641 n.40 (2004)  
the Commission disapproves of incorporation by reference in petitions for review, where it has the effect of bypassing the page limits set forth in NRC regulations; CLI-10-17, 72 NRC 45-46 n.247 (2010)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-04-36, 60 NRC 631, 644 n.56 (2004)  
requirements for contention admissibility are described in 10 C.F.R. 2.309(f); CLI-09-5, 69 NRC 122 (2009)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-05-24, 62 NRC 551 (2005)  
although issues relating to fire protection at a plant cannot be addressed by petitioners in a license renewal proceeding, a possible license amendment application might also trigger another opportunity

## LEGAL CITATIONS INDEX

### CASES

- to petition to intervene, if appropriate and adequate contentions are timely and properly submitted under relevant requirements; LBP-07-11, 66 NRC 75 (2007)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-05-24, 62 NRC 551, 558 (2005)
- good cause is the most significant of the late-filing factors of 10 C.F.R. 2.309(c)(1); LBP-10-9, 71 NRC 506 (2010)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-05-24, 62 NRC 551, 559-60 (2005)
- a party may petition for a waiver of application of a regulation on the sole ground that special circumstances exist such that the application of the regulation would not serve the purpose for which it was adopted; LBP-10-12, 71 NRC 661 (2010)
- the Commission has set forth a four-part test for grant of a rule waiver, and all four factors must be met; LBP-10-22, 72 NRC 688 (2010)
- the conditions for grant of an exemption from or waiver of a rule are described; LBP-10-15, 72 NRC 279, 297, 303 (2010)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-05-24, 62 NRC 551, 560 (2005)
- in the context of a NEPA analysis, the question of whether application of a regulation would serve the purposes for which the rule or regulation was adopted can be addressed by examining the continued viability of the environmental analysis on which the regulation is based; LBP-10-15, 72 NRC 301 (2010)
- petitioner has made a prima facie showing that the special circumstances that are the basis of the waiver request are unique to the facility rather than common to a large class of facilities; LBP-10-15, 72 NRC 304 (2010)
- rule waivers are not granted where the circumstances on which the waiver's proponent relies are common to a large class of applicants or facilities; CLI-09-3, 69 NRC 75 n.38 (2009)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-05-24, 62 NRC 551, 560-61 (2005)
- consideration of emergency planning is outside the scope of a license renewal proceeding because, by its very nature, it is neither germane to age-related degradation nor unique to the period covered by the license renewal application; LBP-06-20, 64 NRC 201 (2006); LBP-06-10, 63 NRC 367 (2006); LBP-07-4, 65 NRC 336 (2007); LBP-08-13, 68 NRC 148 n.642, 165, 201 (2008)
- it makes no sense to spend the parties' and board's valuable resources litigating allegations of current deficiencies in a proceeding that is directed to future-oriented issues of aging; LBP-07-11, 66 NRC 92 (2007)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-05-24, 62 NRC 551, 562-63 (2005)
- although emergency planning issues are not admissible in a license renewal proceeding, NRC regulations provide two other procedural mechanisms by which petitioners may pursue their concerns about the adequacy of the applicants' current emergency plan; LBP-07-11, 66 NRC 94 (2007)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-05-24, 62 NRC 551, 564 (2005)
- good cause for the failure to file on time is the most important of the late-filing factors; CLI-10-12, 71 NRC 323 (2010); LBP-06-14, 63 NRC 575 (2006); LBP-09-6, 69 NRC 477 (2009); LBP-09-26, 70 NRC 949 (2009)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-05-24, 62 NRC 551, 564-65 (2005)
- absent a showing of good cause, petitioner's showing on the remaining factors must be highly persuasive; CLI-10-12, 71 NRC 323 (2010)
- decisions on nontimely filings require a balancing of the eight factors set forth in 10 C.F.R. 2.309(c)(1), the first of which, good cause for failure to file on time, is the most important; CLI-09-7, 69 NRC 262 (2009)
- good cause for late filing was shown where petitioners lacked constructive or actual notice before the filing deadline, and they filed as soon as possible thereafter; LBP-09-20, 70 NRC 573 (2009)

## LEGAL CITATIONS INDEX

### CASES

- petitioner must show that the information on which its new contention is based was not reasonably available to the public previously and that it filed its intervention petition promptly after learning of such new information; LBP-10-11, 71 NRC 639 (2010)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-05-24, 62 NRC 551, 565 (2005)
- absent a showing of good cause, a nontimely petition will not be excused unless the petitioner makes a compelling showing on the remaining factors; CLI-10-12, 71 NRC 323 (2010); LBP-09-26, 70 NRC 949 (2009); LBP-10-11, 71 NRC 639 (2010)
- consideration of emergency plans in license renewal proceedings is precluded because they are already covered by ongoing regulatory review; LBP-08-13, 68 NRC 165 (2008)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-05-24, 62 NRC 551, 565 n.60 (2005)
- publication in the *Federal Register* is legally sufficient notice to all interested or affected persons regardless of actual knowledge or hardship resulting from ignorance, except those who are legally entitled to personal notice; LBP-09-20, 70 NRC 570 (2009)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-05-24, 62 NRC 551, 565-66 (2005)
- petitioners may protect their interests by filing a request for Commission action under 10 C.F.R. 2.206; CLI-10-12, 71 NRC 327 n.50 (2010)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-05-24, 62 NRC 551, 567 (2005)
- emergency planning issues are not within the scope of a license renewal proceeding as a safety issue; LBP-07-11, 66 NRC 94 (2007)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-05-24, 62 NRC 551, 570 (2005)
- licensing boards lack the authority to supervise the NRC Staff in the performance of its nonadjudicatory duties; CLI-07-16, 65 NRC 385 n.69 (2007)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-06-4, 63 NRC 32, 35-36 (2006)
- once a licensing board has concluded board action on a licensing case, jurisdiction to decide a motion to reopen regarding that proceeding passes to the Commission, which retains jurisdiction until the license in question has been issued; LBP-10-21, 72 NRC 642 n.11 (2010)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-06-4, 63 NRC 32, 37 (2006)
- contentions that deal with operational issues are not within the scope of license renewal; LBP-08-13, 68 NRC 216 (2008)
- the purpose of aging management programs is not to prevent the radioactive contamination of the soil or groundwater, which is an everyday operational issue, but to manage the aging effects of critical plant functions that prevent and mitigate design basis accidents or other functions of principal importance to plant safety; LBP-07-12, 66 NRC 117 (2007)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-06-4, 63 NRC 32, 37-38 (2006)
- to the extent that petitioners have any basis for claiming that there are current, ongoing excessive radiological releases from a facility, petitioners may seek NRC enforcement action under 10 C.F.R. 2.206; CLI-08-17, 68 NRC 245 n.77 (2008)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-06-4, 63 NRC 32, 38 (2006)
- sanctions have been imposed against a party seeking to file a written request for hearing only when that party has not followed established Commission procedures; LBP-08-18, 68 NRC 542 (2008); LBP-08-19, 68 NRC 547 (2008); LBP-08-20, 68 NRC 552 (2008)
- the Commission may reject an appeal summarily for violating NRC procedural regulations; CLI-08-17, 68 NRC 234 (2008)

## LEGAL CITATIONS INDEX

### CASES

- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), CLI-06-4, 63 NRC 32, 38-39 (2006)  
consistent procedural noncompliance from an attorney resulted in direction to the Office of the Secretary to screen all filings bearing that counsel's signature, not to accept or docket them unless they meet all procedural requirements, and to reject summarily any nonconforming pleadings without referring them to the Atomic Safety and Licensing Board Panel or the Commission; CLI-08-29, 68 NRC 903 (2008)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), LBP-04-15, 60 NRC 81 (2004)  
although issues relating to fire protection at a plant cannot be addressed by petitioners in a license renewal proceeding, a possible license amendment application might also trigger another opportunity to petition to intervene, if appropriate and adequate contentions are timely and properly submitted under relevant requirements; LBP-07-11, 66 NRC 75 (2007)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), LBP-04-15, 60 NRC 81, 89 (2004), *aff'd*, CLI-04-36, 60 NRC 631 (2004)  
adequacy of the aging management program as it relates to underground pipes and tanks has health and safety significance and is material to whether the license renewal may be granted; LBP-06-23, 64 NRC 311 (2006)  
an issue is material only if there is some link between the claimed error or omission regarding the proposed licensing action and the NRC's role in protecting public health and safety or the environment; LBP-06-20, 64 NRC 149 (2006); LBP-06-23, 64 NRC 354 (2005)  
petitioner cannot include a reference as support without showing why the reference provides a basis to support its contention; LBP-10-10, 71 NRC 567 n.179 (2010)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), LBP-04-15, 60 NRC 81, 89 & n.26 (2004)  
contentions ought to be interpreted in light of the required specificity, so that adjudicators and parties need not search out broader meanings than were clearly intended; LBP-10-16, 72 NRC 398 n.153 (2010)  
petitioners are expected to clearly identify the matters on which they intend to rely with reference to a specific point; LBP-08-21, 68 NRC 570 n.14 (2008)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), LBP-04-15, 60 NRC 81, 89, 91, 94 (2004)  
simply attaching materials or documents, without explaining their significance, is insufficient for contention admission; LBP-08-17, 68 NRC 441 (2008)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), LBP-04-15, 60 NRC 81, 90, *aff'd*, CLI-04-36, 60 NRC 631 (2004)  
the Commission interprets the provisions of Parts 51 and 54 as they apply to license renewal proceedings; LBP-06-10, 63 NRC 343 (2006); LBP-07-11, 66 NRC 59 (2007)  
the scope of license renewal proceedings is quite limited under Commission rules and case law; LBP-08-22, 68 NRC 598 (2008)  
the scope of license renewal proceedings, which generally concern requests to renew 40-year operating licenses for additional 20-year terms, is discussed; LBP-06-23, 64 NRC 274 (2006); LBP-07-4, 65 NRC 307 (2007)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), LBP-04-15, 60 NRC 81, 92-93 (2004)  
whether applicant has a valid NPDES permit is outside the scope of a power uprate proceeding; LBP-08-9, 67 NRC 447 n.151 (2008)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), LBP-04-15, 60 NRC 81, 93 n.55, *aff'd*, CLI-04-36, 60 NRC 631, 638-39 (2004)  
NRC obeyed its FWPCA duties by deciding to accept as dispositive EPA determinations concerning one aspect of the overall environmental impact; CLI-07-16, 65 NRC 388 (2007)
- Dominion Nuclear Connecticut, Inc.* (Millstone Nuclear Power Station, Units 2 and 3), LBP-05-16, 62 NRC 56 (2005)  
although issues relating to fire protection at a plant cannot be addressed by petitioners in a license renewal proceeding, a possible license amendment application might also trigger another opportunity

## LEGAL CITATIONS INDEX

### CASES

- to petition to intervene, if appropriate and adequate contentions are timely and properly submitted under relevant requirements; LBP-07-11, 66 NRC 75 (2007)
- Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), CLI-07-27, 66 NRC 215, 223 (2007)
- an environmental report must identify all reasonable alternatives; LBP-10-10, 71 NRC 604 n.3 (2010)
- Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), CLI-07-27, 66 NRC 215, 223-24 (2007)
- with regard to alternative sites for an early site permit, NRC Staff must evaluate both the methodology used by the applicant and the reasonableness of the potential sites identified by that method; LBP-09-19, 70 NRC 488 (2009)
- Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), CLI-07-27, 66 NRC 215, 228-29 (2007)
- a rule of reason applies to the assessment of the adequacy of a NEPA analysis; CLI-10-18, 72 NRC 74 (2010)
- Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), CLI-07-27, 66 NRC 215, 228-32 (2007)
- where the final environmental impact statement discussion of alternative sites was insufficient, the board independently reviewed the record on greenfield, competitors' brownfield, noncompetitors' brownfield, and applicant's other nuclear sites to conclude that the Staff's underlying alternative site review was adequate; LBP-09-19, 70 NRC 488 (2009)
- Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), CLI-07-27, 66 NRC 215, 231-32 (2007)
- brownfield sites owned by companies other than the applicant may reasonably be excluded as alternative sites; LBP-09-19, 70 NRC 496 n.18 (2009)
- Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), CLI-07-27, 66 NRC 215, 232 (2007)
- applicant's initial consideration of DOE's Portsmouth, Ohio, and SRS sites as alternative sites was reasonable as part of its alternative site analysis for an early site permit; LBP-09-19, 70 NRC 496 n.18 (2009)
- Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), CLI-07-27, 66 NRC 215, 232 n.94 (2007)
- noninclusion of DOE sites in alternative sites analysis that are far outside applicant's region of interest is reasonable; LBP-09-19, 70 NRC 496 n.18 (2009)
- Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), CLI-07-27, 66 NRC 215, 237 & n.126 (2007)
- in evaluating early site permit applications, where detailed design information is not available, the Commission may defer resolution of severe accident mitigation alternatives until the construction permit or combined license stage; LBP-09-19, 70 NRC 536 (2009)
- Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), CLI-07-27, 66 NRC 215, 259 (2007)
- in the environmental context, the contents of the final environmental impact statement bound the reach of both issue preclusion and Staff inquiry into new and significant information in a future combined operating license proceeding referencing an early site permit; LBP-08-15, 68 NRC 322 (2008)
- Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), LBP-04-18, 60 NRC 253, 265 (2004)
- although a licensing board does not decide the merits or resolve conflicting evidence at the contention admissibility stage, materials cited as the basis for a contention are subject to scrutiny by the board to determine whether they actually support the facts alleged; LBP-08-17, 68 NRC 453 (2008); LBP-10-24, 72 NRC 750 (2010)
- Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), LBP-04-18, 60 NRC 253, 268-69 (2004)
- challenges to NRC regulations are inadmissible; LBP-08-21, 68 NRC 587 (2008)
- challenges to the Waste Confidence Rule are prohibited by 10 C.F.R. 2.335; LBP-08-17, 68 NRC 456 (2008); LBP-09-4, 69 NRC 217 (2009); LBP-09-10, 70 NRC 114 (2009)

## LEGAL CITATIONS INDEX

### CASES

- contentions on the environmental impacts of spent fuel storage are inadmissible; LBP-09-18, 70 NRC 406 (2009)
- licensing boards may not admit a contention that directly or indirectly challenges 10 C.F.R. 51.51, Table S-3; LBP-09-10, 70 NRC 115 (2009)
- Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), LBP-04-18, 60 NRC 253, 268-70 (2004)
- the Waste Confidence Rule is applicable to all new reactor proceedings and contentions challenging the rule or seeking its reconsideration are inadmissible; LBP-08-16, 68 NRC 416 (2008); LBP-09-17, 70 NRC 337 (2009); LBP-09-18, 70 NRC 406 (2009)
- Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), LBP-04-18, 60 NRC 253, 270 (2004)
- absent a showing of special circumstances under 10 C.F.R. 2.335(b), challenges to regulations must be addressed through Commission rulemaking; LBP-09-4, 69 NRC 218 (2009); LBP-10-16, 72 NRC 438 (2010)
- Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), LBP-04-18, 60 NRC 253, 270-72 (2004)
- contentions that challenge the Waste Confidence Rule are inadmissible; LBP-08-23, 68 NRC 686 (2008)
- Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), LBP-04-18, 60 NRC 253, 271, 276 (2004)
- licensing boards may reformulate contentions to eliminate extraneous issues or to consolidate issues for a more efficient proceeding; CLI-09-12, 69 NRC 553 (2009); CLI-10-2, 71 NRC 33 (2010); LBP-10-16, 72 NRC 403 (2010)
- Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), LBP-04-18, 60 NRC 253, 276 (2004)
- examples of admitted contentions that satisfied the requirement to provide a specific statement of the issue of law or fact to be raised or controverted are provided; LBP-08-5, 67 NRC 235 n.79 (2008)
- Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), LBP-07-9, 65 NRC 539 (2007), *aff'd*, CLI-07-23, 66 NRC 35 (2007)
- adequacy of Staff review is questioned by the licensing board; CLI-08-23, 68 NRC 473 (2008)
- Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), LBP-07-9, 65 NRC 539, 550 (2007)
- an early site permit focuses on the suitability of a proposed site, and is defined as a Commission approval for a site or sites for one or more nuclear power facilities; LBP-08-15, 68 NRC 299-300 (2008)
- an early site permit is a partial construction permit, whose issuance does not authorize an applicant to construct nuclear power reactors; LBP-08-15, 68 NRC 299 (2008)
- Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), LBP-07-9, 65 NRC 539, 550-51 (2007)
- the holder of an early site permit may not actually commence construction of any reactors on the site without having applied for and received a separate construction permit or combined operating license; LBP-08-15, 68 NRC 307 (2008)
- Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), LBP-07-9, 65 NRC 539, 559-60, *permit issuance authorized*, CLI-07-27, 66 NRC 215 (2007)
- with respect to certain NEPA findings, boards in early site permit proceedings are to make independent environmental judgments, though they need not rethink or redo every aspect of the NRC Staff's environmental findings or undertake their own fact-finding activities; LBP-09-19, 70 NRC 456 (2009)
- Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), LBP-07-9, 65 NRC 539, 588, 642 *permit issuance authorized*, CLI-07-27, 66 NRC 215 (2007)
- noninclusion of DOE sites in alternative sites analysis that are far outside applicant's region of interest is reasonable; LBP-09-19, 70 NRC 496 n.18 (2009)

## LEGAL CITATIONS INDEX

### CASES

- Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), LBP-07-9, 65 NRC 539, 607 (2007)  
the environmental impact statement need not consider an infinite range of alternatives, only reasonable or feasible ones; LBP-09-21, 70 NRC 626 n.271 (2009)
- Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), LBP-07-9, 65 NRC 539, 614 (2007)  
the environmental report must discuss each of the five subelements covered by NEPA § 102(2)(C); LBP-09-16, 70 NRC 263 (2009)
- Dominion Nuclear North Anna, LLC* (Early Site Permit for North Anna ESP Site), LBP-07-9, 65 NRC 539, 629, *permit issuance authorized*, CLI-07-27, 66 NRC 215 (2007)  
initial decisions are not effective until they are reviewed by the Commission; LBP-09-19, 70 NRC 460 (2009)
- Doyle v. Federal Bureau of Investigation*, 722 F.2d 554, 556 (9th Cir. 1983)  
*in camera* review of redacted information or sealed declarations ought to occur only in the exceptional case after the government has submitted as detailed public affidavits as possible; LBP-08-7, 67 NRC 372 n.7 (2008)
- Dr. James E. Bauer* (Order Prohibiting Involvement in NRC-Licensed Activities), LBP-94-40, 40 NRC 323, 330 (1994), *petition for review denied on other grounds*, CLI-95-3, 41 NRC 245 (1995)  
because enforcement cases are fact-specific and typically rely far more on witness testimony than do licensing adjudications, a long delay could result in the fading of witnesses' memories; CLI-06-12, 63 NRC 502 (2006)
- Druid Hills Civil Association v. Federal Highway Administration*, 772 F.2d 700, 709 (11th Cir. 1985)  
omitting consideration of accident scenarios anticipated under 10 C.F.R. 50.150 and 50.54(hh) is contrary to the requirements of 42 U.S.C. § 2133(d); LBP-10-10, 71 NRC 542 (2010)  
the Administrative Procedure Act directs review of agency action to determine if its decision is a product of consideration of relevant factors and whether a clear error of judgment has occurred; LBP-10-10, 71 NRC 548 n.53 (2010)
- Dubois v. United States Department of Agriculture*, 102 F.3d 1273, 1290 (1st Cir. 1996)  
in following the rule of reason test, both the applicant and the agency consider all alternatives that are feasible and reasonably apparent at the time of drafting the environmental impact statement; LBP-07-9, 65 NRC 607, 611, 612 (2007)
- Dubois v. United States Department of Agriculture*, 102 F.3d 1273, 1292-93 (1st Cir. 1996), *cert. denied*, 521 U.S. 1119 (1997)  
alternative mining sites considered in the final environmental impact statement that are subsets of applicant's proposed sites are well within the spectrum and range of alternatives discussed in the draft environmental impact statement; LBP-06-19, 64 NRC 100 (2006)
- Dudman Communications Corp. v. Department of the Air Force*, 815 F.2d 1565, 1569 (D.C. Cir.1987)  
draft versions of histories have been protected in certain circumstances by deliberative process privilege; LBP-06-25, 64 NRC 382 n.55 (2006)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), CLI-01-13, 53 NRC 478, 480 (2001)  
the Commission has used *sua sponte* review as a vehicle to customize its procedures for individual adjudications; CLI-07-1, 65 NRC 4 (2007)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), CLI-01-13, 53 NRC 478, 481 (2001)  
if new environmental information arises at a later phase of proceedings, existing rules provide for the possibility of supplements to the EIS and for late-filed hearing contentions; LBP-07-14, 66 NRC 191 (2007)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), CLI-01-13, 53 NRC 478, 483 (2001)  
corrective redrafting of a discretionary intervention petitioner's contention is tantamount to raising a new issue *sua sponte* without the required prior permission from the Commission; CLI-06-16, 63 NRC 721 (2006)

## LEGAL CITATIONS INDEX

### CASES

- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), CLI-01-13, 53 NRC 478, 484-86 (2001)  
the Commission has used *sua sponte* review as a vehicle to set a specific timetable; CLI-07-1, 65 NRC 4 (2007)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), CLI-01-28, 54 NRC 393 (2001)  
requests to suspend proceedings or hold them in abeyance in the exercise of the Commission's inherent supervisory powers over proceedings in the wake of the September 11 terrorist attacks pending the Commission's comprehensive review of anti-terrorist measures at licensed facilities were rejected; CLI-08-23, 68 NRC 485 (2008)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), CLI-01-28, 54 NRC 393, 399-401 (2001), *reconsideration denied*, CLI-02-2, 55 NRC 5 (2002)  
the Commission generally declines to hold proceedings in abeyance pending the outcome of other Commission actions or adjudications; CLI-10-17, 72 NRC 10 n.36 (2010)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), CLI-01-28, 54 NRC 393, 400 (2001), *reconsideration denied*, CLI-02-2, 55 NRC 5 (2002)  
there is no reason to postpone the MOX fuel proceeding which will require resolution of many issues having nothing to do with terrorism; CLI-10-17, 72 NRC 10 n.34 (2010)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), CLI-02-2, 55 NRC 5, 7 & n.3 (2002)  
raising new arguments in a motion for reconsideration is prohibited; CLI-06-27, 64 NRC 402 (2006)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), CLI-02-7, 55 NRC 205, 213 (2002)  
the Commission customarily does not entertain interlocutory appeals due in large part to its general unwillingness to engage in piecemeal interference in ongoing licensing board proceedings; CLI-07-1, 65 NRC 3 (2007)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), CLI-02-7, 55 NRC 205, 213-14 & n.15 (2002)  
the Commission undertook interlocutory review of a petition that questioned the very structure of the two-step licensing process announced for a proposed mixed oxide fuel fabrication facility; CLI-08-2, 67 NRC 35 n.16 (2008)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), CLI-02-7, 55 NRC 205, 217 (2002)  
NRC regulations contemplate approval of construction and approval for operation of a fuel fabrication facility; CLI-09-2, 69 NRC 59 (2009)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), CLI-02-7, 55 NRC 205, 220-21 (2002)  
all environmental effects of both constructing and operating the mixed oxide fuel fabrication facility are encompassed in the first proceeding; LBP-07-14, 66 NRC 184 (2007)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), CLI-02-19, 56 NRC 143 (2002)  
although Subpart I rules have been used in very few cases to disclose classified information in contested licensing proceedings, in those cases the information was necessary to evaluate challenges to the agency's compliance with security requirements of the Atomic Energy Act, not the National Environmental Policy Act; CLI-08-26, 68 NRC 523 (2008)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), CLI-02-24, 56 NRC 335 (2002)  
the National Environmental Policy Act imposes no legal duty on the NRC to consider intentional malevolent acts on a case-by-case basis in conjunction with commercial power reactor license renewal applications; LBP-06-7, 63 NRC 200 (2006); LBP-07-14, 66 NRC 185 (2007); LBP-08-6, 67 NRC 333 (2008); LBP-08-13, 68 NRC 143 (2008)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), CLI-02-24, 56 NRC 335, 338 (2002)  
there is no obligation under NEPA for the NRC to consider terrorism or malevolent acts in the MOX fuel fabrication facility licensing proceeding; LBP-07-14, 66 NRC 194 (2007)

## LEGAL CITATIONS INDEX

### CASES

- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), CLI-02-24, 56 NRC 335, 338-39 (2002)  
a NEPA analysis is not the vehicle for exploring questions about the potential for a terrorist attack upon a proposed nuclear facility; LBP-07-3, 65 NRC 269 (2007)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), LBP-01-35, 54 NRC 403, 415 (2001), *rev'd on other grounds*, CLI-02-24, 56 NRC 335 (2002)  
petitioner organizations have established standing based on their members' proximity to transportation routes, even where it was not possible to predict with accuracy which of its members were most likely to be harmed or the extent of the damage; LBP-09-6, 69 NRC 425 (2009)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), LBP-01-35, 54 NRC 403, 422 (2001)  
although NRC may reasonably accommodate pro se petitioners who are not technically perfect in their pleadings, such parties must still meet the basic requirements of the contention admissibility rules, and if these are not met, boards may not fill in any missing support, but, rather, are legally required to deny the contention; LBP-07-4, 65 NRC 340 n.286 (2007); LBP-08-11, 67 NRC 482 (2008)  
if petitioner neglects to provide the requisite support for its contentions, the board may not make assumptions of fact that favor the petitioner or supply information that is lacking; CLI-09-7, 69 NRC 260 n.132 (2009); LBP-06-7, 63 NRC 232 (2006); LBP-06-20, 64 NRC 150 (2006); LBP-06-23, 64 NRC 355 (2005); LBP-07-3, 65 NRC 253 (2007); LBP-08-9, 67 NRC 433 (2008); LBP-08-13, 68 NRC 63 (2008); LBP-08-16, 68 NRC 385 (2008); LBP-08-26, 68 NRC 918 (2008); LBP-09-3, 69 NRC 153 (2009); LBP-09-26, 70 NRC 954 (2009); LBP-10-6, 71 NRC 361, 380 (2010); LBP-10-7, 71 NRC 420 (2010)  
petitioners are prohibited from challenging NRC regulations; LBP-08-14, 68 NRC 287 (2008)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), LBP-01-35, 54 NRC 403, 422 (2001), *rev'd in part on other grounds*, CLI-02-24, 56 NRC 335 (2002)  
if a petitioner neglects to provide the requisite support for its contentions, the board should not make assumptions of fact that favor the petitioner, or supply information that is lacking; LBP-07-10, 66 NRC 23 (2007); LBP-07-16, 66 NRC 288 (2007)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), LBP-03-14, 58 NRC 104 (2003)  
payments from the NRC to an intervenor's expert witness, which are required by 10 C.F.R. 2.740a(h), are not barred by section 502 of the Energy and Water Development Appropriations Act; LBP-09-1, 69 NRC 44 n.136 (2009)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), LBP-03-14, 58 NRC 104, 112 (2003)  
assistance to all parties that obtain expert witnesses is required because the rule treats all parties the same; LBP-09-1, 69 NRC 44 n.136 (2009)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), LBP-03-21, 58 NRC 338, 342 (2003)  
as with a summary disposition motion, a board may appropriately view petitioner's support for its contention in a light that is favorable to the petitioner; LBP-08-9, 67 NRC 432 (2008); LBP-08-26, 68 NRC 917 (2008)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), LBP-03-21, 58 NRC 338, 346-47 (2003)  
a 30-day time frame for filing new contentions has been established; LBP-06-14, 63 NRC 574 (2006)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), LBP-04-9, 59 NRC 286, 292-93 (2004)  
a dispositive motion seeking dismissal of contentions of omission as moot is appropriate when applicant provides the missing information and petitioner fails to amend its contention for further challenges; LBP-08-2, 67 NRC 64 (2008); LBP-08-3, 67 NRC 96 (2008)  
contentions of omission charging that an application is missing certain design information must be amended to then challenge the quality of additional applicant information provided in a subsequent filing; LBP-08-2, 67 NRC 64 (2008); LBP-08-3, 67 NRC 95 (2008)

## LEGAL CITATIONS INDEX

### CASES

- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), LBP-05-4, 61 NRC 71, 78 (2005)  
a request to file a reply to a summary disposition answer is granted; LBP-08-2, 67 NRC 67 (2008); LBP-08-3, 67 NRC 98 (2008)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), LBP-05-4, 61 NRC 71, 79 (2005)  
if there is doubt as to whether the parties should be required to proceed further, a motion for summary disposition should be denied; LBP-07-12, 66 NRC 128 (2007)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), LBP-05-4, 61 NRC 71, 80 (2005)  
for purposes of summary disposition, mere allegations, including speculative or bare conclusory statements by an expert, are insufficient; LBP-07-13, 66 NRC 144 (2007)  
it is inappropriate at the summary disposition stage for a board to attempt to untangle the expert affidavits and decide which experts are more correct; CLI-08-2, 67 NRC 33 (2008); LBP-07-12, 66 NRC 127 (2007); LBP-07-13, 66 NRC 131 (2007)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), LBP-05-4, 61 NRC 71, 80-81 (2005)  
summary disposition is not the vehicle for untangling expert disputes so long as the experts are competent and the information they provide is adequately stated and explained; LBP-08-2, 67 NRC 71 n.12 (2008); LBP-08-3, 67 NRC 101 n.9 (2008)
- Duke Cogema Stone & Webster* (Savannah River Mixed Oxide Fuel Fabrication Facility), LBP-05-4, 61 NRC 71, 81 (2005)  
bare assertions and general denials are insufficient to defend against a properly supported motion for summary disposition; LBP-07-12, 66 NRC 127 (2007); LBP-07-13, 66 NRC 131 (2007)
- Duke Energy Carolinas, LLC* (William States Lee III Nuclear Station, Units 1 and 2), CLI-09-21, 70 NRC 927, 931 (2009)  
guidance is provided on declining review of referred rulings; CLI-10-9, 71 NRC 266 n.130 (2010)
- Duke Energy Carolinas, LLC* (William States Lee III Nuclear Station, Units 1 and 2), LBP-08-17, 68 NRC 431 (2008)  
challenges to the Waste Confidence Rule are prohibited; LBP-09-10, 70 NRC 114 (2009)  
the Commission addresses a board's additional views when the board refers its decision to the Commission; CLI-10-9, 71 NRC 266 n.130 (2010)
- Duke Energy Carolinas, LLC* (William States Lee III Nuclear Station, Units 1 and 2), LBP-08-17, 68 NRC 431, 438 (2008)  
the proximity presumption applies to combined license proceedings; LBP-09-16, 70 NRC 240 (2009)
- Duke Energy Carolinas, LLC* (William States Lee III Nuclear Station, Units 1 and 2), LBP-08-17, 68 NRC 431, 438-39 (2008)  
an individual may satisfy standing requirements by demonstrating that his or her residence or activities are within the geographical area that might be affected by an accidental release of fission products, and in proceedings involving nuclear power plants this area has been defined as being within a 50-mile radius of such a plant; LBP-09-4, 69 NRC 178 (2009)  
under the proximity presumption, petitioner is presumed to have standing to intervene without the need to specifically plead injury, causation, and redressability if petitioner lives within 50 miles of the proposed facility; LBP-09-18, 70 NRC 395 (2009)
- Duke Energy Carolinas, LLC* (William States Lee III Nuclear Station, Units 1 and 2), LBP-08-17, 68 NRC 431, 438-42 (2008)  
relevant case law on contention admissibility is presented; LBP-08-21, 68 NRC 560 n.4 (2008)
- Duke Energy Carolinas, LLC* (William States Lee III Nuclear Station, Units 1 and 2), LBP-08-17, 68 NRC 431, 440-42 (2008)  
a thorough discussion of relevant case law on the criteria for admission of contentions is presented; LBP-09-2, 69 NRC 95 (2009)
- Duke Energy Carolinas, LLC* (William States Lee III Nuclear Station, Units 1 and 2), LBP-08-17, 68 NRC 431, 442-43 (2008)  
challenges to NRC regulations are inadmissible; LBP-08-21, 68 NRC 587 (2008)

## LEGAL CITATIONS INDEX

### CASES

- Duke Energy Carolinas, LLC* (William States Lee III Nuclear Station, Units 1 and 2), LBP-08-17, 68 NRC 431, 444-45 (2008)  
contentions involving possible errors in Table S-3 have been referred to the Commission; LBP-09-21, 70 NRC 617 (2009)
- Duke Energy Carolinas, LLC* (William States Lee III Nuclear Station, Units 1 and 2), LBP-08-17, 68 NRC 431, 446 (2008)  
petitioner is obligated to read the pertinent portions of the license application, state the applicant's position and the petitioner's opposing view, and explain why it disagrees with the applicant; LBP-09-25, 70 NRC 882 n.87 (2009)
- Duke Energy Carolinas, LLC* (William States Lee III Nuclear Station, Units 1 and 2), LBP-08-17, 68 NRC 431, 456-57 (2008)  
contentions that challenge the Waste Confidence Rule are inadmissible; LBP-08-23, 68 NRC 689 (2008); LBP-09-17, 70 NRC 337 (2009)  
in light of the plain language of the rule and its regulatory history, the Waste Confidence Rule applies to combined license proceedings; LBP-09-4, 69 NRC 218 (2009); LBP-09-18, 70 NRC 407 (2009)
- Duke Energy Carolinas, LLC* (William States Lee III Nuclear Station, Units 1 and 2), LBP-08-17, 68 NRC 431, 457 (2008)  
licensing boards may not admit a contention that directly or indirectly challenges 10 C.F.R. 51.51, Table S-3; LBP-09-10, 70 NRC 114 (2009)
- Duke Energy Corp.* (Catawba Nuclear Station, Units 1 and 2), CLI-04-6, 59 NRC 62, 67, 73 (2004)  
a board's determination on a request for access to sensitive unclassified nonsafeguards information is reviewed de novo; CLI-10-24, 72 NRC 461 (2010)
- Duke Energy Corp.* (Catawba Nuclear Station, Units 1 and 2), CLI-04-6, 59 NRC 62, 67, 74 (2004)  
the Commission has used *sua sponte* review as a vehicle to address unappealed orders or to provide guidance to a licensing board; CLI-07-1, 65 NRC 4 (2007)
- Duke Energy Corp.* (Catawba Nuclear Station, Units 1 and 2), CLI-04-6, 59 NRC 62, 70 (2004)  
the Commission's longstanding general policy disfavors interlocutory review; CLI-06-24, 64 NRC 119 (2006)
- Duke Energy Corp.* (Catawba Nuclear Station, Units 1 and 2), CLI-04-6, 59 NRC 62, 71 (2004)  
review at the end of the case would be meaningless because the Commission cannot later, on appeal from a final board decision, rectify an erroneous disclosure order; CLI-10-29, 72 NRC 561 n.32 (2010)  
to be "irreparable," the harm must be of a kind that cannot be reversed on appeal, as when the challenged order would reveal safeguards or privileged information to persons not authorized to review it; CLI-08-2, 67 NRC 36 n.20 (2008)
- Duke Energy Corp.* (Catawba Nuclear Station, Units 1 and 2), CLI-04-6, 59 NRC 62, 74 (2004)  
NRC has not, and will not, litigate claims about the adequacy of the Staff's safety review in licensing adjudications; CLI-08-23, 68 NRC 476-77 n.64 (2008)
- Duke Energy Corp.* (Catawba Nuclear Station, Units 1 and 2), CLI-04-11, 59 NRC 203 (2004)  
an appeal was dismissed as premature because the board decision that granted a hearing request constituted only a partial ruling on the intervention petition because it left unaddressed a group of proposed contentions; CLI-09-18, 70 NRC 861 (2009)
- Duke Energy Corp.* (Catawba Nuclear Station, Units 1 and 2), CLI-04-11, 59 NRC 203, 207 (2004)  
to be appealable, a disputed order must dispose of the entire petition so that a successful appeal by a nonpetitioner will terminate the proceeding as to the appellee petitioner; CLI-09-18, 70 NRC 861 (2009)
- Duke Energy Corp.* (Catawba Nuclear Station, Units 1 and 2), CLI-04-11, 59 NRC 203, 208 (2004)  
appeals of rejected contentions are permitted only where a petitioner claims that the board wrongly rejected all contentions; CLI-07-2, 65 NRC 11 (2007)
- Duke Energy Corp.* (Catawba Nuclear Station, Units 1 and 2), CLI-04-11, 59 NRC 203, 208 n.12 (2004)  
the Commission often refers to the Statement of Considerations as an aid in interpreting its regulations; CLI-08-3, 67 NRC 163 n.46 (2008)

## LEGAL CITATIONS INDEX

### CASES

- Duke Energy Corp.* (Catawba Nuclear Station, Units 1 and 2), CLI-04-11, 59 NRC 203, 208, 209 & n.15 (2004)  
with respect to an applicant's appeal under section 2.311(d)(1), applicant must contend that, after considering all pending contentions, the board has erroneously granted a hearing to the petitioner; CLI-09-18, 70 NRC 861-62 n.10 (2009)
- Duke Energy Corp.* (Catawba Nuclear Station, Units 1 and 2), CLI-04-19, 60 NRC 5 (2004)  
petitioners or intervenors may request and, where appropriate, obtain under protective order or other measures information withheld from the general public for proprietary or security reasons; CLI-06-10, 63 NRC 460 (2006)
- Duke Energy Corp.* (Catawba Nuclear Station, Units 1 and 2), CLI-04-21, 60 NRC 21, 27 (2004)  
although the Federal Rules of Evidence are not mandated for NRC adjudicatory proceedings, the Commission has endorsed the use of the FRE as guidance for licensing boards; LBP-12-23, 72 NRC 705 (2010)  
licensing boards normally have considerable discretion in making evidentiary rulings; CLI-10-5, 71 NRC 99 (2010); CLI-10-18, 72 NRC 73 (2010)  
the abuse of discretion standard properly applies to a board evidentiary ruling regarding expert qualification; CLI-10-24, 72 NRC 461 n.65 (2010)  
the standard of review on appeal is abuse of discretion; CLI-10-5, 71 NRC 99 (2010); CLI-10-24, 72 NRC 461 (2010)  
the Commission has inherent supervisory power over its adjudications and may direct the licensing boards' conduct of proceedings; CLI-06-20, 64 NRC 21 (2006)
- Duke Energy Corp.* (Catawba Nuclear Station, Units 1 and 2), CLI-04-21, 60 NRC 21, 27, 31 (2004)  
a board's determination on a request for access to sensitive unclassified nonsafeguards information is reviewed de novo; CLI-10-24, 72 NRC 461 (2010)
- Duke Energy Corp.* (Catawba Nuclear Station, Units 1 and 2), CLI-04-21, 60 NRC 21, 27-28 & n.14 (2004)  
boards review the education, experience, and qualifications of the individuals offering expert opinions on behalf of the litigants to determine whether these individuals qualify as experts; LBP-08-12, 68 NRC 17 n.10 (2008)
- Duke Energy Corp.* (Catawba Nuclear Station, Units 1 and 2), CLI-04-21, 60 NRC 21, 31 (2004)  
for an issue involving access to safeguards information, the stated Commission practice is to review such issues closely; CLI-10-24, 72 NRC 461 n.65 (2010)
- Duke Energy Corp.* (Catawba Nuclear Station, Units 1 and 2), CLI-05-14, 61 NRC 359, 361 n.2 (2005)  
Staff's significant hazards consideration determination is final, subject only to the Commission's discretion, on its own initiative, to review the determination; LBP-07-10, 66 NRC 32 n.22 (2007)
- Duke Energy Corp.* (Catawba Nuclear Station, Units 1 and 2), CLI-05-14, 61 NRC 359, 363-64 (2005)  
if a board determines that a purely legal issue can be decided through regulatory interpretation or examination of NRC case law, it will rule on the contention; LBP-09-4, 69 NRC 201 (2009)  
if a board determines that the regulations are ambiguous and that this is ultimately an NRC policy issue, it will refer the contention to the Commission; LBP-09-4, 69 NRC 201 (2009)
- Duke Energy Corp.* (Catawba Nuclear Station, Units 1 and 2), LBP-04-4, 59 NRC 129, 149-50 (2004)  
there is no basis for providing an EIS description to such a level of detail that it can be duplicated by members of the public, so as to permit an individual to run applicable computer codes or make other detailed computations; LBP-06-9, 63 NRC 302, 310 n.10 (2006)
- Duke Energy Corp.* (Catawba Nuclear Station, Units 1 and 2), LBP-05-10, 61 NRC 241 (2005)  
the preponderance-of-the-evidence standard applies in a license renewal proceeding; LBP-08-22, 68 NRC 646 (2008)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2), CLI-03-17, 58 NRC 419, 428-29 (2003)  
contention admissibility and timeliness requirements demand a level of discipline and preparedness on the part of petitioners, who must examine the publicly available material and set forth their claims and the support for their claims at the outset; LBP-06-11, 63 NRC 396 n.3 (2006)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-01-20, 54 NRC 211, 212 (2001)  
license renewal proceedings are limited to a review of the plant structures and components that will require an aging management review for the period of extended operation and the plant's systems, structures, and components that are subject to an evaluation of time-limited aging analyses;

## LEGAL CITATIONS INDEX

### CASES

- CLI-10-17, 72 NRC 16 (2010); LBP-06-7, 63 NRC 198, 222 (2006); LBP-06-22, 64 NRC 235, 241 (2006); LBP-07-17, 66 NRC 229 (2007); LBP-08-22, 68 NRC 599 (2008); LBP-08-25, 68 NRC 786 (2008)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-01-20, 54 NRC 211, 214 (2001)  
the evidentiary hearing should not commence until after completion of the final safety evaluation report and final environmental impact statement, unless the licensing board in its discretion finds that starting the hearing with respect to safety issues prior to the issuance of the FSAR will expedite the proceeding without adversely impacting the Staff's ability to complete its evaluations in a timely manner; CLI-07-17, 65 NRC 395 (2007)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-01-27, 54 NRC 385, 389-91 (2001)  
the Commission generally declines to hold proceedings in abeyance pending the outcome of other Commission actions or adjudications; CLI-10-17, 72 NRC 10 n.36 (2010)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-14, 55 NRC 278, 290 (2002)  
a draft supplemental environmental impact statement must address significant new circumstances or information relevant to a license renewal, including new and significant information relating to Category 1 issues; LBP-06-20, 64 NRC 149 (2006)  
after considering public comments on the draft supplemental environmental impact statement, covering both plant-specific Category 2 issues and new and significant information on Category 1 issues, the Staff weighs the expected environmental impacts of license renewal and sets forth its conclusions in the final supplemental environmental impact statement; LBP-06-20, 64 NRC 149 (2006)  
applicant must provide additional analysis of even a Category 1 issue if new and significant information has surfaced; LBP-06-20, 64 NRC 156 (2006); LBP-06-23, 64 NRC 294 (2006)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-14, 55 NRC 278, 290-91 (2002)  
the final supplemental environmental impact statement must consider new and significant information on Category 1 issues; LBP-06-20, 64 NRC 149, 156 (2006)  
the final supplemental environmental impact statement also takes account of public comments, including new information on generic findings; LBP-06-23, 64 NRC 294 n.151 (2006)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-14, 55 NRC 278, 291 (2002)  
the vehicle by which a petitioner may seek to raise issues that would otherwise be beyond the scope of a license renewal proceeding is discussed; LBP-07-11, 66 NRC 79 n.163 (2007)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-14, 55 NRC 278, 293 (2002)  
NRC licensing proceedings are not occasions for far-reaching speculation about unimplemented and uncertain plans of applicants or licensees; LBP-08-17, 68 NRC 455 (2008)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-14, 55 NRC 278, 293-94 (2002)  
contention related to facility's possible future use of mixed oxide fuel is irrelevant to and outside the scope of a license renewal application that did not request approval for use of such fuel, despite evidence that applicant might request approval to use such fuel in a separate, future proceeding; CLI-09-12, 69 NRC 570 n.160 (2009)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-14, 55 NRC 278, 294 (2002)  
NRC proceedings are to be based on the application as it exists at a given time and not on any potential future amendments; LBP-08-11, 67 NRC 478 (2008)  
to the extent a contention concerns future changes to the combined license application that may come about as a result of amendments to the certified design, it is inadmissible; CLI-09-8, 69 NRC 325 n.36 (2009)

## LEGAL CITATIONS INDEX

### CASES

- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-14, 55 NRC 278, 295 (2002)  
a possible future action must at least constitute a proposal pending before the agency to be ripe for adjudication; LBP-08-11, 67 NRC 479 (2008)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-17, 56 NRC 1 (2002)  
the evaluation of risk is at the heart of a SAMA analysis, and only by considering risk can one determine those alternatives that provide the greatest benefit for the dollars expended; LBP-06-23, 64 NRC 327 (2006)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-17, 56 NRC 1, 5 (2002)  
if the cost of implementing a particular severe accident mitigation alternative is greater than its associated benefit, the SAMA would not be considered cost-beneficial; LBP-06-7, 63 NRC 199 n.6 (2006)  
severe accident mitigation alternatives are rooted in a cost-benefit assessment, the purpose of which is to identify plant changes whose costs would be less than their benefit, i.e., the potential for significantly improving severe accident safety performance; LBP-10-14, 72 NRC 127 n.171 (2010)  
the purpose of the severe accident mitigation alternatives review is to ensure that any plant changes that have a potential for significantly improving severe accident safety performance are identified and assessed; CLI-10-11, 71 NRC 291 (2010)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-17, 56 NRC 1, 7-8 (2002)  
if intervenors provide no facts or expert opinion explaining why a conclusion in applicant's environmental report is incorrect, or fail to identify any SAMDAs that should be adopted if some unspecified new analysis were performed or any cost-beneficial SAMAs, their contention should be dismissed; LBP-10-10, 71 NRC 563 (2010)  
use of probabilistic risk assessment and modeling is accepted and standard practice in SAMA analyses; LBP-06-23, 64 NRC 340 (2006)  
whether a SAMA may be worthwhile to implement is based upon a cost-benefit analysis; LBP-06-23, 64 NRC 327 (2006)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-17, 56 NRC 1, 7-8 n.14 (2002)  
petitioner must approximate the relative cost and benefit of a challenged severe accident mitigation alternative in order to get an adjudicatory hearing; LBP-08-13, 68 NRC 103 (2008)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-17, 56 NRC 1, 8 n.14 (2002)  
reductions in risk are assessed in terms of the total averted risk; LBP-06-23, 64 NRC 327 (2006)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-17, 56 NRC 1, 9-10 (2002)  
a factual dispute cannot be resolved against petitioners at the contention admissibility stage, especially when petitioners' version of the facts is supported by sworn affidavits and applicant's version is not; LBP-09-6, 69 NRC 418 (2009)  
at the contention admissibility stage, intervenors are not required, under the rubric of materiality, to run a sensitivity analysis and/or to prove that alleged defects would change the result; LBP-10-14, 72 NRC 128 n.182 (2010)  
to require petitioners to rerun a model themselves, in order to demonstrate the individual or collective effects of the defects they allege, would improperly require boards to adjudicate the merits of contentions before admitting them; LBP-09-6, 69 NRC 416 (2009)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-17, 56 NRC 1, 10 (2002)  
although NEPA does not require agencies to select particular options, it is intended to foster both informed decisionmaking and informed public participation, and thus to ensure the agency does not act on incomplete information, only to regret its decision after it is too late to correct; LBP-06-23, 64 NRC 340 (2006)

## LEGAL CITATIONS INDEX

### CASES

- if further analysis is called for, that in itself is a valid and meaningful remedy under the National Environmental Policy Act; LBP-10-13, 71 NRC 697 (2010)
- SAMA contentions will be admitted in license renewal proceedings only if it looks genuinely plausible that inclusion of an additional factor or use of other assumptions or models may change the cost-benefit conclusions for the SAMA candidates evaluated; LBP-10-13, 71 NRC 692 (2010)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-17, 56 NRC 1, 11-12 (2002)
- petitioner must proffer some indication of what the differences might be if a proposed severe accident mitigation alternative is performed; LBP-08-13, 68 NRC 104 (2008)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-17, 56 NRC 1, 12 (2002)
- a contention that fails to provide even a ballpark figure for the cost of implementing any proposed severe accident mitigation alternatives is inadmissible because it is difficult to assess whether a SAMA may be cost-beneficial and thus warrant serious consideration; LBP-09-26, 70 NRC 969 n.151 (2009)
- the Commission is unwilling to throw open its hearing doors to petitioners who have done little in the way of research or analysis, provide no expert opinion, and rest merely on unsupported conclusions; LBP-10-15, 72 NRC 320 (2010)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-26, 56 NRC 358 (2002)
- NRC has no legal duty to consider the environmental impacts of terrorism at NRC-licensed facilities; LBP-08-6, 67 NRC 333 (2008)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-26, 56 NRC 358, 361 (2002)
- there is no need to address terrorism issues in license renewal proceedings because it is sensible not to devote resources to the likely impact of terrorism during the license renewal period, but instead to concentrate on how to prevent a terrorist attack in the near term at the already licensed facilities; LBP-06-23, 64 NRC 300 (2006)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-26, 56 NRC 358, 363 (2002)
- contentions not related to the potential effects of aging are beyond the scope of a license renewal proceeding; LBP-07-11, 66 NRC 70 (2007)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-26, 56 NRC 358, 363-64 (2002)
- even if terrorism issues require analysis under NEPA, the generic environmental impact statement concluded that if such an event were to occur, the resultant core damage and radiological release would be no worse than those expected from internally initiated events; LBP-06-23, 64 NRC 285 (2006)
- license renewal proceedings generally concern requests to renew 40-year operating licenses for additional 20-year terms; LBP-06-23, 64 NRC 274 (2006)
- the Commission has specifically excluded emergency planning from license renewal proceedings because the issue is not germane to age-related degradation or unique to the period of time covered by the license renewal; LBP-07-4, 65 NRC 336 (2007)
- the provisions of Parts 51 and 54 relating to the scope of license renewal proceedings are discussed; LBP-06-10, 63 NRC 343 (2006)
- the scope of a license renewal proceeding is limited to a review of the plant structures and components that will require an aging management review for the period of extended operation and the plant's systems, structures, and components that are subject to an evaluation of time-limited aging analyses; LBP-06-7, 63 NRC 198 (2006); LBP-06-22, 64 NRC 235, 241 (2006); LBP-06-23, 64 NRC 274 (2006)
- the scope of license renewal proceedings is quite limited under Commission rules and case law; LBP-08-22, 68 NRC 598 (2008)

## LEGAL CITATIONS INDEX

### CASES

- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-26, 56 NRC 358, 363-65 (2002)  
the scope of safety and environmental issues relevant to license renewal is discussed; LBP-07-4, 65 NRC 306 (2007)  
the Commission interprets the provisions of Parts 51 and 54 as they apply to license renewal proceedings; LBP-07-11, 66 NRC 59 (2007)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-26, 56 NRC 358, 364 (2002)  
an "aircraft attack" scenario is outside the scope of, and not material to, a license renewal proceeding; LBP-06-7, 63 NRC 201 (2006)  
because the Commission's ongoing regulatory oversight programs routinely address many safety issues and will continue to address them in years 41 through 60 of a plant's life, consideration of those issues in a license renewal proceeding would be unnecessary and wasteful; LBP-06-7, 63 NRC 225 (2006)  
security issues are not among the aging-related questions that are relevant in license renewal review; LBP-06-20, 64 NRC 171 (2006)  
terrorism contentions are, by their very nature, directly related to security and are therefore, under NRC license renewal rules, unrelated to the detrimental effects of aging and thus are beyond the scope of, not material to, and inadmissible in a license renewal proceeding; CLI-07-8, 65 NRC 129 (2007); CLI-07-9, 65 NRC 141 (2007); LBP-06-7, 63 NRC 226 n.36 (2006); LBP-06-20, 64 NRC 173 (2006); LBP-08-13, 68 NRC 142 (2008)  
the scope of a license renewal hearing excludes consideration of matters that are the subject of the agency's ongoing regulatory oversight programs which routinely address many safety issues and will continue to address them in years 41 through 60 of a plant's life; LBP-06-7, 63 NRC 229 (2006)  
the scope of a license renewal proceeding is far more limited than the Atomic Energy Act issues that a licensing board addresses when reviewing an initial operating license application; LBP-06-7, 63 NRC 225 (2006)  
there is no need to address terrorism issues in license renewal proceedings because it is sensible not to devote resources to the likely impact of terrorism during the license renewal period, but instead to concentrate on how to prevent a terrorist attack in the near term at the already-licensed facilities; LBP-06-20, 64 NRC 160 (2006)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-26, 56 NRC 358, 365 (2002)  
particularly in the case of a license renewal application, where reactor operation will continue for many years regardless of the Commission's ultimate decision, it is sensible not to devote resources to the likely impact of terrorism during the license renewal period, but instead to concentrate on how to prevent a terrorist attack in the near term at the already licensed facilities; CLI-07-8, 65 NRC 134 (2007)  
the National Environmental Policy Act imposes no legal duty on NRC to consider intentional malevolent acts on a case-by-case basis in conjunction with commercial power reactor license renewal applications; CLI-07-8, 65 NRC 129 (2007); CLI-10-14, 71 NRC 476 (2010); LBP-06-7, 63 NRC 201 (2006); LBP-07-11, 66 NRC 87 (2007); LBP-08-13, 68 NRC 142 (2008)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-26, 56 NRC 358, 365 n.24 (2002)  
in its Generic Environmental Impact Statement for License Renewal of Nuclear Plants, the NRC Staff performed a discretionary analysis of terrorist acts in connection with license renewal, and it concluded that the core damage and radiological release from such acts would be no worse than the damage and release to be expected from internally initiated events; LBP-06-7, 63 NRC 201 n.8 (2006); LBP-06-20, 64 NRC 154, 160-61 (2006)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-26, 56 NRC 358, 365-66 (2002)  
a NEPA analysis is not the vehicle for exploring questions about the potential for a terrorist attack upon a proposed nuclear facility; LBP-07-3, 65 NRC 269 (2007)

## LEGAL CITATIONS INDEX

### CASES

- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-28, 56 NRC 373, 378-81 (2002)  
the scope of a contention is limited to issues of law and fact pleaded with particularity in the intervention petition, including its stated bases; CLI-10-5, 71 NRC 100 (2010)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-28, 56 NRC 373, 379 (2002)  
because the reach of a contention necessarily hinges upon its terms and its stated bases, the brief explanation helps define the scope of the contention; LBP-09-26, 70 NRC 953 (2009)  
where any issue arises over the proper scope of a contention, NRC opinions have long referred back to the bases set forth in support of the contention; CLI-09-12, 69 NRC 553 (2009); CLI-10-11, 71 NRC 309 (2010); LBP-07-3, 65 NRC 255 (2007); LBP-07-16, 66 NRC 286 (2007); LBP-08-9, 67 NRC 430 (2008); LBP-08-13, 68 NRC 61 (2008); LBP-08-16, 68 NRC 386 (2008); LBP-10-6, 71 NRC 366 n.49 (2010)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-28, 56 NRC 373, 379, 383 (2002)  
the reach of a contention necessarily hinges upon its terms coupled with its stated bases; CLI-10-11, 71 NRC 309 (2010)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-28, 56 NRC 373, 379, 386 (2002)  
if a question arises over the scope of an admitted contention, the board or Commission will refer back to the bases set forth in support of the contention; CLI-10-15, 71 NRC 482 (2010)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-28, 56 NRC 373, 382 (2002)  
a contention challenging an applicant's environmental report can be superseded by the subsequent issuance of licensing-related documents, whether a draft environmental impact statement or an applicant's response to a request for additional information; LBP-10-14, 72 NRC 108, 112 (2010)  
where a contention is superseded by the subsequent issuance of licensing-related documents, the contention must be disposed of or modified; LBP-10-17, 72 NRC 507 (2010)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-28, 56 NRC 373, 382-83 (2002)  
intervenor must timely file a new or amended contention that addresses the factors in section 2.714(b) in order to raise specific challenges regarding new information; LBP-10-10, 71 NRC 604 (2010)  
the distinction between contentions of omission and contentions of inadequacy does not appear in NRC contention pleading regulations, but rather is a useful concept from agency case law; CLI-10-2, 71 NRC 36 n.44 (2010)  
there is a difference between contentions that merely allege an omission of information and those that challenge substantively and specifically how particular information has been discussed in a license application; CLI-10-9, 71 NRC 270 (2010); LBP-08-11, 67 NRC 488 n.68 (2008); LBP-10-14, 72 NRC 108-09 (2010)  
when facility proponents bring forward a solution that allegedly cures the deficiency alleged in a contention and then move to dismiss the contention, this triggers a period during which petitioners can amend the original contention to challenge the solution's substance; LBP-07-14, 66 NRC 206 (2007)  
where a contention alleges the omission of particular information or an issue from an application, and the information is later supplied by the applicant or considered by the Staff in a draft EIS, the contention is moot; LBP-07-2, 65 NRC 157 n.7 (2007); LBP-10-10, 71 NRC 604 (2010)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-28, 56 NRC 373, 382-84 (2002)  
a contention of omission that has been cured can be dismissed as moot; CLI-07-8, 65 NRC 127 (2007); CLI-07-11, 65 NRC 150 n.8 (2007)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-28, 56 NRC 373, 383 (2002)  
a contention of omission alleges the improper omission of particular information or an issue from an application; LBP-08-12, 68 NRC 20 (2008)

## LEGAL CITATIONS INDEX

### CASES

- an intervenor attempting to litigate an issue based on expressed concerns about the draft environmental impact statement may need to amend the admitted contention or, if the information in the DEIS is sufficiently different from that in the environmental report that supported the contention's admission, submit a new contention; LBP-08-2, 67 NRC 64 (2008); LBP-08-3, 67 NRC 95 (2008)
- facts relied upon in a contention of omission need not show that the facility cannot be safely operated, but rather that the application is incomplete; LBP-09-4, 69 NRC 190 (2009)
- for contentions or portions of contentions challenging an application as having omitted a required item or items, post-contention admission events, such as issuance of a Staff DEIS, can render the contention subject to dismissal as moot; LBP-08-2, 67 NRC 63 (2008); LBP-08-3, 67 NRC 94 (2008)
- if applicant cures the omission on which a contention is based, the contention will become moot; CLI-08-28, 68 NRC 676 n.72 (2008); CLI-06-9, 63 NRC 444 (2006); LBP-06-16, 63 NRC 742 (2006); LBP-08-12, 68 NRC 21 (2008); LBP-08-15, 68 NRC 317 (2008); LBP-08-24, 68 NRC 748 n.325 (2008); LBP-09-4, 69 NRC 190 (2009); LBP-10-14, 72 NRC 109, 136 (2010); LBP-10-16, 72 NRC 395 (2010)
- NRC contention rules require reasonably specific factual and legal allegations at the outset to ensure that matters admitted for hearing have at least some minimal foundation, are material to the proceeding, and provide notice to opposing parties of the issues they will need to defend against; CLI-10-11, 71 NRC 309 (2010)
- once information asserted to have been omitted is supplied, the original contention is moot, and intervenors must timely file a new or amended contention in order to raise specific challenges regarding the new information; CLI-06-9, 63 NRC 444 (2006); LBP-08-15, 68 NRC 318 (2008); LBP-09-15, 70 NRC 210, 211 (2009); LBP-09-16, 70 NRC 245 (2009); LBP-09-21, 70 NRC 596 n.59 (2009); LBP-09-27, 70 NRC 999 (2009); LBP-10-5, 71 NRC 339 (2010); LBP-10-10, 71 NRC 540 (2010); LBP-10-14, 72 NRC 109, 136 (2010)
- petitioner's burden on a contention of omission is only to show the facts necessary to establish that the application omits information that should have been included; LBP-09-4, 69 NRC 190 (2009)
- when a contention of omission has been rendered moot, and the intervenor wishes to raise specific challenges regarding the new information, it may timely file a new contention that addresses the admissibility factors of 10 C.F.R. 2.309(f)(1); LBP-06-16, 63 NRC 744 (2006); LBP-09-27, 70 NRC 999 (2009)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-28, 56 NRC 373, 383 n.45 (2002)
- it may be necessary to examine the language of the bases to determine a contention's scope; LBP-06-16, 63 NRC 742 (2006)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-28, 56 NRC 373, 383-84 (2002)
- in a case with an open record, when a contention of omission is rendered moot, the intervenor may be permitted to timely file a new contention arising from the new information; LBP-08-12, 68 NRC 22 n.15 (2008)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-28, 56 NRC 373, 386 (2002)
- hearing petitioners have an ironclad obligation to examine the publicly available documentary material pertaining to the facility in question with sufficient care to enable the petitioner to uncover any information that could serve as the foundation for a specific contention; CLI-09-2, 69 NRC 65 n.47 (2009); CLI-10-27, 72 NRC 496 (2010)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-28, 56 NRC 373, 386 & n.61 (2002)
- intervenors may not freely change the focus of an admitted contention at will to add a host of new issues and objections that could have been raised at the outset; CLI-10-11, 71 NRC 309 (2010)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-02-28, 56 NRC 373, 388 n.77 (2002)
- an order by NRC Staff to implement severe accident mitigation alternatives not dealing with aging management can be issued concurrently as part of a Part 50 current licensing basis review; LBP-10-13, 71 NRC 679 (2010)

## LEGAL CITATIONS INDEX

### CASES

- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-03-17, 58 NRC 419 (2003)  
contentions are inadmissible where intervenors did not perform the bare minimum preparations and there was no attempt to perform any independent analysis; LBP-09-6, 69 NRC 415 n.234 (2009)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-03-17, 58 NRC 419, 424 (2003)  
although technical perfection is not an essential element of contention pleading, the rules have nonetheless been held to bar contentions where petitioners have only what amounts to generalized suspicions, hoping to substantiate them later; LBP-06-10, 63 NRC 338 (2006); LBP-06-23, 64 NRC 353 (2005); LBP-08-6, 67 NRC 292 (2008); LBP-08-17, 68 NRC 441 (2008); LBP-09-6, 69 NRC 390 (2009); LBP-09-17, 70 NRC 326 (2009); LBP-09-18, 70 NRC 404 (2009)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-03-17, 58 NRC 419, 426-28 (2003)  
contention standards require pleading specific grievances, not simply providing general notice pleadings; CLI-10-11, 71 NRC 308 n.101 (2010)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-03-17, 58 NRC 419, 427 (2003)  
petitioners must raise and reasonably specify at the outset their objections to a licensing action; CLI-08-3, 67 NRC 169 (2008)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-03-17, 58 NRC 419, 428 (2003)  
contention standards require petitioners to plead specific grievances, not simply to provide general notice pleadings; CLI-10-15, 71 NRC 482 (2010)  
unlike federal court practice, the Commission does not accept mere notice pleading in support of an admissible contention; CLI-06-9, 63 NRC 437 (2006); CLI-06-24, 64 NRC 119 (2006); LBP-08-24, 68 NRC 730 (2008)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-03-17, 58 NRC 419, 428-29 (2003)  
a listing of issues with which petitioners disagree with the application is the form of notice pleading that the Commission has long held is insufficient; LBP-10-16, 72 NRC 414 (2010)  
a reply may not be used as a vehicle to introduce new arguments or support, may not expand the scope of arguments set forth in the original petition, and may not attempt to cure an otherwise deficient contention; LBP-09-17, 70 NRC 323 (2009)  
admission of new contentions under 10 C.F.R. 2.309(f)(2) does not run afoul of the Commission's aversion to petitioners who disregard NRC's timeliness requirements, nor does it allow petitioners to add new contentions that simply did not occur to them at the outset; LBP-09-10, 70 NRC 139 (2009)  
contention admissibility and timeliness rules require a high level of discipline and preparation by petitioners, who must examine the publicly available material and set forth their claims and the support for their claims at the outset; CLI-09-7, 69 NRC 272 (2009); LBP-06-12, 63 NRC 405 (2006)  
once an initial intervention petition is filed, facility proponents routinely press within the adjudicatory process to ensure that any attempt thereafter to cure any deficiencies is rejected as untimely; LBP-08-11, 67 NRC 507 (2008)  
petitioners have an ironclad obligation to search the public record for information supporting their contentions; LBP-08-6, 67 NRC 256 (2008)  
there simply would be no end to NRC licensing proceedings if petitioners could disregard the timeliness requirements and add new bases or new issues that simply did not occur to them at the outset; CLI-08-19, 68 NRC 262 (2008); LBP-06-12, 63 NRC 405 (2006)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-03-17, 58 NRC 419, 429 (2003)  
petitioners have an obligation to examine the application and publicly available information, and to set forth their claims at the earliest possible moment; CLI-07-18, 65 NRC 413-14 n.46 (2007)

## LEGAL CITATIONS INDEX

### CASES

- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), CLI-03-17, 58 NRC 419, 431 (2003)  
a litigable NEPA issue is one that concerns whether the NRC Staff has taken the requisite hard look at mitigation in sufficient detail to ensure that environmental consequences of the proposed project have been fairly evaluated; LBP-10-13, 71 NRC 679 (2010)  
for a mitigation analysis, the National Environmental Policy Act demands no fully developed plan or detailed examination of specific measures that will be employed to mitigate adverse environmental effects; CLI-10-11, 71 NRC 316 (2010)  
NRC adjudicatory hearings are not environmental impact statement editing sessions; CLI-09-11, 69 NRC 533 (2009); LBP-10-10, 71 NRC 581 n.266 (2010)  
under NEPA, mitigation need only be discussed in sufficient detail to ensure that environmental consequences of the proposed project have been fairly evaluated; LBP-06-23, 64 NRC 329 (2006)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), LBP-02-4, 55 NRC 49 (2002)  
a Category 1 issue does not require a site-specific analysis and is outside the scope of a license renewal proceeding; LBP-08-13, 68 NRC 216 (2008)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), LBP-02-4, 55 NRC 49, 66 (2002)  
expert opinion must not be limited to bald conclusory statements such as that the application under consideration is “deficient,” “inadequate,” or “wrong”; LBP-09-6, 69 NRC 411 (2009)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), LBP-02-4, 55 NRC 49, 77 (2002)  
although pro se intervenors must be afforded some latitude in their pleadings, the board expects that an organization that has appeared several times previously will have a heightened awareness of the agency’s pleading rules; LBP-08-16, 68 NRC 405-06 (2008)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), LBP-02-4, 55 NRC 49, 80 (2002)  
intervention petitioners must point to specific portions of an application that are either deficient or do not comply with the Commission’s regulations; LBP-07-11, 66 NRC 71 (2007)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), LBP-02-4, 55 NRC 49, 85-87 (2002)  
a Category 1 environmental issue that is adequately addressed by the generic environmental impact statement is outside the scope of a license renewal proceeding; LBP-08-13, 68 NRC 195 (2008)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), LBP-03-17, 58 NRC 221 (2003)  
contention is inadmissible where intervenors did not show that a model was defective or used incorrectly but simply that a different result would be achieved using their own model; LBP-09-6, 69 NRC 415 n.234 (2009)
- Duke Energy Corp.* (McGuire Nuclear Station, Units 1 and 2; Catawba Nuclear Station, Units 1 and 2), LBP-03-17, 58 NRC 221, 240-41 (2003)  
regulatory guidance documents are merely suggestions with no legal authority to supersede the plain language of the regulatory criteria that requires aging management review for a structure or component that performs its safety functions without moving parts and without a change in configuration or properties; LBP-08-13, 68 NRC 88 (2008)
- Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-98-17, 48 NRC 123, 125 (1998)  
the Commission interprets the provisions of Parts 51 and 54 as they apply to license renewal proceedings; LBP-06-10, 63 NRC 343 (2006); LBP-07-11, 66 NRC 59 (2007)  
the scope of safety and environmental issues relevant to license renewal is discussed; LBP-07-4, 65 NRC 307 (2007)  
the scope of license renewal proceedings is quite limited under Commission rules and case law; LBP-08-22, 68 NRC 598 (2008)  
the scope of license renewal proceedings, which generally concern requests to renew 40-year operating licenses for additional 20-year terms, is discussed; LBP-06-23, 64 NRC 274 (2006)

## LEGAL CITATIONS INDEX

### CASES

- Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 333-34 (1999)  
a dispute is material if its resolution would make a difference in the outcome of the licensing proceeding; LBP-10-6, 71 NRC 360 (2010)
- Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 333-35 (1999)  
NRC contention rules require reasonably specific factual and legal allegations at the outset to ensure that matters admitted for hearing have at least some minimal foundation, are material to the proceeding, and provide notice to opposing parties of the issues they will need to defend against; CLI-10-11, 71 NRC 309 (2010)
- Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 334 (1999)  
a licensing proceeding is plainly not the proper forum for an attack on applicable statutory requirements or for challenges to the basic structure of the Commission's regulatory process; CLI-09-5, 69 NRC 123 (2009); LBP-08-9, 67 NRC 443 n.135 (2008)  
admission standards for contentions were raised in an effort to obviate serious hearing delays caused in the past by poorly defined or supported contentions; CLI-06-10, 63 NRC 455 (2006); LBP-06-10, 63 NRC 380 (2006)  
at the contention admission stage, petitioner must simply proffer some minimal factual foundation sufficient to raise a genuine dispute regarding the existence of a corrosive environment; LBP-06-22, 64 NRC 243, 244 (2006)  
contention pleading rules are designed to ensure both that only well-defined issues are admitted for hearing and that parties admitted to litigate sophisticated technical issues are qualified to do so; CLI-09-12, 69 NRC 552 (2009)  
NRC procedural rules include the need for a petitioner to show at least some minimal factual and legal foundation in order to trigger a full adjudicatory hearing, which must be focused on real disputes susceptible of resolution in an adjudication; LBP-07-4, 65 NRC 340 n.286 (2007); LBP-09-6, 69 NRC 453 (2009)  
NRC's strict contention admission rules are intended to adjudicate genuine, substantive safety and environmental issues placed in contention by qualified intervenors; CLI-06-10, 63 NRC 455 (2006)  
NRC's strict contention pleading rule fosters fair and meaningful adjudicatory hearings; CLI-06-9, 63 NRC 440 (2006)  
petitioners cannot seek to use a specific adjudicatory proceeding to attack generic NRC regulations and requirements, or express generalized grievances about NRC policies; CLI-08-17, 68 NRC 233, 242 (2008)  
section 2.309(f)(1)(v) is not designed to erect an onerous evidentiary hurdle, but rather helps to ensure that full adjudicatory hearings are triggered only by those able to proffer at least some minimal factual and legal foundation in support of their contentions; LBP-06-7, 63 NRC 221 n.33 (2006)  
the contention rule is strict by design, having been toughened in 1989 because in prior years licensing boards had admitted and litigated numerous contentions that appeared to be based on little more than speculation; LBP-06-10, 63 NRC 336 (2006); LBP-06-23, 64 NRC 272, 352 (2006); LBP-07-4, 65 NRC 303 (2007); LBP-07-11, 66 NRC 56 (2007); LBP-08-6, 67 NRC 290 (2008); LBP-09-6, 69 NRC 453 (2009); LBP-09-17, 70 NRC 325 n.47 (2009)  
the sole question before a board in ruling on an intervention petition is whether petitioner has submitted the requisite minimal factual and legal foundation to support its contention; LBP-06-7, 63 NRC 225 (2006)  
the strict contention pleading rule is designed to focus the hearing process on genuine disputes susceptible of resolution, puts the other parties on notice of the specific grievances at issue, and restricts participation to those able to proffer at least some minimal factual and legal foundation in support of their contentions; CLI-08-1, 67 NRC 8 (2008); LBP-06-10, 63 NRC 337 (2006); LBP-06-23, 64 NRC 273, 352 (2006); LBP-08-6, 67 NRC 291 (2008)  
the strict contention rule serves multiple interests; LBP-07-4, 65 NRC 304 (2007); LBP-07-11, 66 NRC 56 (2007); LBP-09-17, 70 NRC 325 (2009)
- Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 334-35 (1999)  
rules on contention admissibility are strict by design; LBP-09-10, 70 NRC 72 (2009); CLI-08-17, 68 NRC 233 (2008); LBP-09-4, 69 NRC 189 (2009); LBP-09-16, 70 NRC 244 (2009); LBP-10-15, 72 NRC 278 (2010); LBP-10-16, 72 NRC 394 (2010)

## LEGAL CITATIONS INDEX

### CASES

- Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 335 (1999) although support for a contention may be weak and the contention may be technically imperfect, it may still raise a valid and significant issue with reasonably specific factual and legal allegations and be sufficient to support further inquiry; LBP-06-10, 63 NRC 381 (2006) in revising its contention admissibility requirements, the Commission sought to preclude a contention from being admitted where an intervenor had no facts to support its positions, but rather hoped to use discovery or cross-examination as a fishing expedition; LBP-09-6, 69 NRC 453 (2009) the contention requirements were never intended to be turned into a fortress to deny intervention; CLI-07-18, 65 NRC 414 (2007); LBP-06-7, 63 NRC 225 (2006); LBP-09-6, 69 NRC 453 (2009); LBP-09-21, 70 NRC 602 n.94 (2009)
- Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 336 (1999) issuance of requests for additional information does not alone establish deficiencies in an application; LBP-09-16, 70 NRC 270 n.134 (2009)
- Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 336-37 (1999) contention that the mere existence of numerous requests for additional information constituted prima facie evidence that the application is incomplete is rejected; CLI-08-17, 68 NRC 242 (2008); CLI-09-12, 69 NRC 550 n.65 (2009); LBP-08-9, 67 NRC 444 (2008) mere issuance of a Staff request for additional information does not establish grounds for a litigable contention; CLI-06-6, 63 NRC 164 (2006); LBP-09-10, 70 NRC 144 (2009)
- Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 336-39 (1999) NRC Staff issuance of a request for additional information does not alone establish deficiencies in an application, and intervention petitioner must do more than merely quote an RAI to justify admission of a contention; CLI-09-16, 70 NRC 38 n.25 (2009)
- Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 337 (1999) a petitioner may not ground a contention on the Staff's request for additional information, when the request shows only an ongoing Staff dialogue with the applicant, not any ultimate Staff determinations; LBP-06-11, 63 NRC 399 (2006) contentions are inadmissible if petitioners provide no analysis, discussion, or information on their own on any of the issues raised in Staff requests for additional information; LBP-09-10, 70 NRC 76 (2009); LBP-09-16, 70 NRC 271 n.135 (2009)
- Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 337-39 (1999) although technical perfection is not an essential element of contention pleading, the rules have nonetheless been held to bar contentions where petitioners have only what amounts to generalized suspicions, hoping to substantiate them later; LBP-06-10, 63 NRC 338 (2006); LBP-06-23, 64 NRC 353 (2005); LBP-08-6, 67 NRC 292 (2008); LBP-08-17, 68 NRC 441 (2008); LBP-09-17, 70 NRC 326 (2009); LBP-09-18, 70 NRC 404 (2009) it is legitimate for the Commission to screen out contentions of doubtful worth and to avoid starting down the path toward a hearing at the behest of petitioners who themselves have no particular expertise or expert assistance and no particularized grievance, but are hoping something will turn up later as a result of NRC Staff work; LBP-06-23, 64 NRC 356 (2005)
- Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 338 (1999) Commission rules bar contentions where petitioners have only what amounts to generalized suspicions, hoping to substantiate them later; LBP-09-6, 69 NRC 390 (2009) NRC contention rules require petitioners to work within a limited time frame to review the license application and any available related licensing documents, and this can pose a significant burden, especially for pro se petitioners who are likely to have less available time and resources; CLI-06-10, 63 NRC 456 (2006) petitioners have an ironclad obligation to search the public record for information supporting their contentions; LBP-08-6, 67 NRC 256 (2008)
- Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 338-39 (1999) a person who invokes the right to participate in an NRC proceeding also voluntarily accepts the obligations attendant upon such participation; CLI-09-8, 69 NRC 329 (2009) obligations of parties include participation within the schedule established for the proceeding despite the burden on a participant's time and resources and despite uncertainties engendered by the potential for new information; CLI-09-8, 69 NRC 329 n.53 (2009)

## LEGAL CITATIONS INDEX

### CASES

- Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 339 (1999)  
any member of the public may provide the NRC Staff with comments relating to health and safety at any time during the license review process, and the NRC Staff will consider and resolve all safety questions regardless of whether any hearing takes place; LBP-10-4, 71 NRC 231 n.16 (2010)
- Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 341-42 (1999)  
a contention must explain why the application is deficient through reference to specific portions of the application, and it must directly controvert a position taken by the applicant in the application; LBP-09-17, 70 NRC 327 (2009)
- Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 342 (1999)  
contentions must directly controvert a position taken by the applicant in the application; LBP-08-6, 67 NRC 292 (2008)  
expert support is not required for admission of a contention because a fact-based argument may be sufficient on its own; LBP-08-27, 68 NRC 956 (2008)  
it is legitimate for the Commission to screen out contentions of doubtful worth and to avoid starting down the path toward a hearing at the behest of petitioners who themselves have no particular expertise or expert assistance and no particularized grievance, but are hoping something will turn up later as a result of NRC Staff work; LBP-06-10, 63 NRC 339 (2006)  
petitioner must support its contentions with documents, expert opinion, or at least a fact-based argument; LBP-08-6, 67 NRC 292, 318 (2008); LBP-09-17, 70 NRC 329 (2009)  
petitioners are not required to provide expert support at the contention admissibility stage, although expert support is certainly one means to supply the basis and specificity NRC rules do require; CLI-09-12, 69 NRC 553 (2009)  
whether petitioners have expert assistance can be related to how qualified petitioners may be to effectively litigate issues put forth in contentions, and whether contentions should therefore be admitted; LBP-06-10, 63 NRC 380 (2006)
- Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 343 (1999)  
Category 1 waste issues may not be introduced into a license renewal proceeding; CLI-06-17, 63 NRC 734 n.29 (2006)  
in the area of waste storage, the Commission largely has chosen to proceed generically through the rulemaking process instead of litigating issues case-by-case in adjudicatory proceedings; CLI-10-19, 72 NRC 99 (2010)
- Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 343-44 (1999)  
because onsite spent fuel is a Category 1 issue, a contention challenging licensee's SAMA analysis for failing to consider spent fuel pool vulnerability is beyond the scope of a license renewal proceeding and thus not admissible; LBP-06-7, 63 NRC 202 (2006)  
the expected increase in the volume of spent fuel from an additional 20 years of operation can be safely accommodated onsite with small environmental effects through dry or pool storage at all plants if a permanent repository or monitored retrievable storage is not available; LBP-06-23, 64 NRC 291 (2006)
- Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 344 n.4 (1999)  
issues involving an independent spent fuel storage installation are outside the scope of a license renewal proceeding; CLI-06-17, 63 NRC 733 (2006)
- Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 344-45 (1999)  
issues related to the environmental impact of onsite spent fuel storage after the license renewal term are outside the scope of a license renewal proceeding because contentions may not challenge the NRC's Waste Confidence Rule; LBP-06-20, 64 NRC 170 (2006)
- Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 345 (1999)  
contentions that attack a Commission rule, or seek to litigate a matter that is, or clearly is about to become, the subject of a rulemaking, are inadmissible; CLI-10-9, 71 NRC 273 (2010); CLI-10-19, 72 NRC 100 (2010); LBP-06-7, 63 NRC 203 (2006); LBP-06-23, 64 NRC 312 n.255 (2006); LBP-08-16, 68 NRC 383 (2008); LBP-09-17, 70 NRC 338, 339, 340-41 (2009); LBP-09-18, 70 NRC 403 (2009); LBP-09-26, 70 NRC 978 (2009)  
if petitioners are dissatisfied with NRC's generic approach to the waste disposal issue, their remedy lies in the rulemaking process, not in a licensing proceeding; CLI-10-19, 72 NRC 100 (2010); LBP-06-7, 63 NRC 204 n.10 (2006); LBP-08-23, 68 NRC 689 n.50 (2008); LBP-09-4, 69 NRC 218

## LEGAL CITATIONS INDEX

### CASES

- (2009); LBP-09-10, 70 NRC 116 n.52 (2009); LBP-09-16, 70 NRC 251 (2009); LBP-09-18, 70 NRC 408 n.127 (2009); LBP-09-21, 70 NRC 600 (2009)
- the SAMDA analysis is part of the design certification application and thus intervenor's contention constitutes an impermissible challenge to a future rulemaking; LBP-10-10, 71 NRC 563 (2010)
- Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), CLI-99-11, 49 NRC 328, 346 (1999)
- it would be counterproductive and contrary to longstanding agency policy to initiate litigation on an issue that by all accounts very soon will be resolved generically; CLI-10-19, 72 NRC 100 (2010)
- Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), LBP-98-33, 48 NRC 381, 385 n.1 (1998)
- the distance from the significant source of radioactivity that is presumed to affect the petitioners in license renewal cases logically must be the same 50-mile distance that forms the current basis for the proximity presumption for reactor construction permit and initial operating license proceedings; LBP-06-7, 63 NRC 197 (2006)
- the proximity presumption extends to petitioners living in or having frequent contacts with an area within a 50-mile radius of a nuclear reactor; LBP-08-18, 68 NRC 539 (2008)
- Duke Energy Corp.* (Oconee Nuclear Station, Units 1, 2, and 3), LBP-98-33, 48 NRC 381, 385 n.1 (1998), *aff'd*, CLI-99-11, 49 NRC 328 (1999)
- the 50-mile proximity presumption should apply to license extension cases because reactor operation over the additional period is subject to the same equipment failure and personnel errors; LBP-07-10, 66 NRC 18 (2007)
- Duke Power Co. v. Carolina Environmental Study Group*, 438 U.S. 59 (1978)
- constitutionality of the Price-Anderson Act has been upheld against a constitutional due process challenge; LBP-08-17, 68 NRC 452 (2008)
- Duke Power Co. v. Carolina Environmental Study Group*, 438 U.S. 59, 62-68, 81-82 (1978)
- in deciding the ripeness question, it is important to look to whether delayed resolution of issues would foreclose any relief from the present injury suffered by appellees; LBP-09-1, 69 NRC 38 n.114 (2009)
- Duke Power Co. v. Carolina Environmental Study Group*, 438 U.S. 59, 72-78 (1978)
- not building a proposed nuclear power plant satisfies the redressability criterion for standing; CLI-09-9, 69 NRC 340 (2009)
- Duke Power Co. v. Carolina Environmental Study Group*, 438 U.S. 59, 74 (1978)
- the threat of injury from radiation exposure is sufficient to satisfy the injury in fact requirement of traditional standing; LBP-06-4, 63 NRC 104 (2006)
- Duke Power Co. v. Carolina Environmental Study Group*, 438 U.S. 59, 78 (1978)
- petitioners need not demonstrate a substantial likelihood of redressability, but rather need only show that redress is likely as opposed to speculative; LBP-10-11, 71 NRC 636 n.101 (2010)
- Duke Power Co. v. Carolina Environmental Study Group*, 438 U.S. 59, 78-79 (1978)
- a "nexus" requirement is not required for cases other than taxpayer lawsuits; CLI-09-9, 69 NRC 340 (2009)
- Duke Power Co. v. Carolina Environmental Study Group*, 438 U.S. 59, 78-81 (1978)
- a requirement for a nexus between the injury claimed and the right being asserted was rejected; LBP-09-1, 69 NRC 18 (2009)
- Duke Power Co. v. Carolina Environmental Study Group*, 438 U.S. 59, 81-82 (1978)
- it is appropriate to assess both the fitness of the issue for judicial decision and the hardship to the parties of withholding court consideration; LBP-09-1, 69 NRC 39 n.114 (2009)
- Duke Power Co.* (Catawba Nuclear Station, Units 1 and 2), ALAB-355, 4 NRC 397, 410 (1976)
- NRC's longstanding approach to electric power demand forecasting has emphasized historical, conservative planning to ensure electricity generating capacity will be available to meet reasonably expected needs; LBP-08-16, 68 NRC 406 (2008)
- Duke Power Co.* (Catawba Nuclear Station, Units 1 and 2), ALAB-355, 4 NRC 397, 411 & n.46 (1976)
- asserted procedural defects should be called to an agency's attention when, if in fact they were defects, they would have been correctable; CLI-10-14, 71 NRC 471 (2010)
- objections not raised at hearing are deemed waived; CLI-10-14, 71 NRC 469 (2010)

## LEGAL CITATIONS INDEX

### CASES

- Duke Power Co.* (Catawba Nuclear Station, Units 1 and 2), ALAB-687, 16 NRC 460, 467 (1982)  
a licensing board is not authorized to admit conditionally, for any reason, a contention that falls short of meeting the specificity requirements set forth in NRC procedural rules; CLI-09-2, 69 NRC 63 n.33 (2009)
- Duke Power Co.* (Catawba Nuclear Station, Units 1 and 2), ALAB-687, 16 NRC 460, 468 (1982)  
petitioners have an ironclad obligation to search the public record for information supporting their contentions; LBP-06-20, 64 NRC 188 (2006); LBP-08-6, 67 NRC 256 (2008)
- Duke Power Co.* (Catawba Nuclear Station, Units 1 and 2), ALAB-768, 19 NRC 988, 992 & n.14 (1984)  
even "truly exceptional" expenses would not meet the irreparable impact standard governing a petition for interlocutory review; CLI-09-6, 69 NRC 134 (2009)
- Duke Power Co.* (Catawba Nuclear Station, Units 1 and 2), ALAB-794, 20 NRC 1630, 1635 (1984)  
failure to satisfy the first two stay factors renders it unnecessary to make determinations on the two remaining factors, harm to other parties and where the public interest lies; CLI-10-8, 71 NRC 163 (2010)
- Duke Power Co.* (Catawba Nuclear Station, Units 1 and 2), ALAB-813, 22 NRC 59, 86 (1985)  
licensing boards should not accept in individual license proceedings contentions that are (or are about to become) the subject of general rulemaking by the Commission; LBP-06-23, 64 NRC 312 n.255 (2006)
- Duke Power Co.* (Catawba Nuclear Station, Units 1 and 2), ALAB-825, 22 NRC 785, 790-91 (1985)  
a contention is not cognizable unless it is material to matters that fall within the scope of the proceeding for which the licensing board has been delegated jurisdiction; LBP-06-23, 64 NRC 354 (2005); LBP-07-4, 65 NRC 304 (2007); LBP-07-11, 66 NRC 57 (2007)  
all proffered contentions must be within the scope of the proceeding as defined by the Commission in its initial hearing notice and order referring the proceeding to the licensing board; LBP-07-3, 65 NRC 253 (2007); LBP-07-10, 66 NRC 23 (2007); LBP-07-16, 66 NRC 286 (2007); LBP-08-13, 68 NRC 62 (2008); LBP-08-15, 68 NRC 314 (2008); LBP-08-16, 68 NRC 384 (2008); LBP-08-26, 68 NRC 916 (2008); LBP-09-3, 69 NRC 153 (2009); LBP-10-7, 71 NRC 420 (2010)  
the scope of a proceeding is generally established by the Commission in its initial hearing notice and any order referring the proceeding to a licensing board; LBP-06-20, 64 NRC 148 (2006); LBP-08-9, 67 NRC 431 (2008); LBP-09-6, 69 NRC 462 (2009); LBP-09-26, 70 NRC 953 (2009); LBP-10-17, 72 NRC 511 (2010)
- Duke Power Co.* (Catawba Nuclear Station, Units 1 and 2), CLI-83-19, 17 NRC 1041, 1043 (1983)  
the unavailability of documents does not constitute a showing of good cause for admitting a late-filed contention when the factual predicate for that contention is available from other sources in a timely manner; CLI-10-27, 72 NRC 496 n.69 (2010)
- Duke Power Co.* (Catawba Nuclear Station, Units 1 and 2), CLI-83-19, 17 NRC 1041, 1048 (1983)  
a person who invokes the right to participate in an NRC proceeding also voluntarily accepts the obligations attendant upon such participation; CLI-09-8, 69 NRC 329 (2009)  
although an intervenor may have fewer resources and less ability than other participants, both share the same burden of uncovering relevant information that is publicly available; LBP-08-12, 68 NRC 32 (2008)
- Duke Power Co.* (Catawba Nuclear Station, Units 1 and 2), CLI-83-19, 17 NRC 1041, 1049 (1983)  
adequacy of NRC's environmental review as reflected in the adequacy of an environmental impact statement is an appropriate issue for litigation in a licensing proceeding; LBP-10-24, 72 NRC 746 (2010)  
although all environmental contentions may, in a general sense, ultimately be challenges to the NRC's compliance with NEPA, factual disputes of particular issues can be raised before the draft environmental impact statement is prepared; CLI-10-2, 71 NRC 34 n.30 (2010)  
much of the information in an applicant's environmental report is used in the draft environmental impact statement; LBP-09-16, 70 NRC 263 (2009)  
should NRC Staff provide a different analysis in its draft environmental statement than applicant in its environmental report, there will be ample opportunity to either amend or dispose of contentions based on the ER; LBP-09-4, 69 NRC 228 (2009)

## LEGAL CITATIONS INDEX

### CASES

- when environmental contentions are involved, the burden of proof shifts to the Staff, because the NRC, not an applicant, has the burden of complying with the National Environmental Policy Act; LBP-09-7, 69 NRC 635 (2009)
- Duke Power Co.* (Catawba Nuclear Station, Units 1 and 2), CLI-83-19, 17 NRC 1041, 1050 (1983) a contention challenging applicant's environmental report can be superseded by the subsequent issuance of licensing-related documents, whether a draft environmental impact statement or an applicant's response to a request for additional information; CLI-06-9, 63 NRC 444 (2006); LBP-10-14, 72 NRC 108 (2010)
- although the ultimate burden with respect to NEPA lies with the NRC Staff, NRC policy with respect to the identification of issues for hearing has long been that such issues must be raised as early as possible; CLI-10-2, 71 NRC 34-35 (2010)
- where a contention is superseded by the subsequent issuance of licensing-related documents the contention must be disposed of or modified; LBP-10-17, 72 NRC 507 (2010)
- Duke Power Co.* (Catawba Nuclear Station, Units 1 and 2), LBP-82-107A, 16 NRC 1791, 1808 (1982) relitigation of issues that were decided against petitioner in its earlier administrative litigation is prohibited; LBP-08-15, 68 NRC 337 (2008)
- the doctrine of collateral estoppel should be applied in appropriate circumstances in NRC proceedings; LBP-08-15, 68 NRC 310 (2008)
- Duke Power Co.* (Catawba Nuclear Station, Units 1 and 2), LBP-82-116, 16 NRC 1937, 1946 (1982) a contention about a matter not covered by a specific rule need only allege that the matter poses a significant safety problem; LBP-06-23, 64 NRC 316 (2006)
- Duke Power Co.* (Catawba Nuclear Station, Units 1 and 2), LBP-83-8A, 17 NRC 282, 285 (1983) although NRC may require an applicant to submit certain information, the NRC cannot delegate its duty to comply with the National Environmental Policy Act to the applicant; LBP-09-10, 70 NRC 87 (2009)
- Duke Power Co.* (Perkins Nuclear Station, Units 1, 2, and 3), ALAB-431, 6 NRC 460, 462 (1977) determinations on any nontimely filing of a petition must be based on a balancing of factors under 10 C.F.R. 2.309(c), the most important of which is good cause, if any, for the failure to file on time; LBP-08-6, 67 NRC 257 (2008)
- Duke Power Co.* (Perkins Nuclear Station, Units 1, 2, and 3), LBP-82-81, 16 NRC 1128, 1140-41 (1982) licensing boards have awarded payment of litigation fees and expenses from a licensee to an intervenor if there has been legal harm to the intervenors caused by some activity or action of the licensee; LBP-09-1, 69 NRC 43 n.134 (2009)
- Duke Power Co.* (William B. McGuire Nuclear Station, Units 1 and 2), ALAB-128, 6 AEC 399, 401 (1973) a contention that merely seeks to advance generalizations regarding a petitioner's particular view of what applicable policies ought to be is not admissible; CLI-07-25, 66 NRC 106 (2007)
- Duke Power Co.* (William B. McGuire Nuclear Station, Units 1 and 2), ALAB-669, 15 NRC 453, 475 (1982)
- although the Federal Rules of Evidence are not mandated for NRC adjudicatory proceedings, the Commission has endorsed the use of the FRE as guidance for the boards with the express proviso that boards must apply the Part 2 rules with greater flexibility than the FRE; LBP-12-23, 72 NRC 705-06 (2010)
- an abuse of discretion standard is applied to Commission review of decisions on evidentiary questions; CLI-10-18, 72 NRC 73 (2010)
- licensing boards normally have considerable discretion in making evidentiary rulings; CLI-10-5, 71 NRC 99 (2010); CLI-10-18, 72 NRC 73 (2010)
- Duncan v. Walker*, 533 U.S. 167, 174 (2001)
- a statute ought, on the whole, to be so construed that, if it can be prevented, no clause, sentence, or word shall be superfluous, void, or insignificant; LBP-07-11, 66 NRC 78 n.161 (2007)
- Duncan's Point Lot Owners Association, Inc. v. Federal Energy Regulatory Commission*, 522 F.3d 371 (D.D.C. 2008)
- tribes that have addressed procedural violations of the National Historic Preservation Act have uniformly been granted standing under the relaxed standard and have proceeded directly to the merits of the NHPA claim; LBP-08-24, 68 NRC 715 (2008); LBP-10-16, 72 NRC 393 n.123 (2010)

## LEGAL CITATIONS INDEX

### CASES

- Duquesne Light Co.* (Beaver Valley Power Station, Unit 2), LBP-84-6, 19 NRC 393, 401 (1984)  
to meet its burden to justify certification of its request to waive 10 C.F.R. 51.53(b), 51.95(b), and 51.106(c), petitioner must make a *prima facie* showing that the proposed facility would not be needed to meet increased energy needs or to replace older, less economical operating capacity, and that there are viable alternatives likely to exist that could tip the NEPA cost-benefit balance against issuance of the operating license; LBP-10-12, 71 NRC 663, 670 (2010)
- Earth Island Institute v. U.S. Forest Service*, 351 F.3d 1291, 1300-31 (9th Cir. 2003)  
an environmental assessment shall identify the proposed action and include a list of agencies and persons consulted, and identification of sources used; CLI-08-1, 67 NRC 14 (2008)
- Eastern Testing & Inspection, Inc.*, LBP-96-11, 43 NRC 279, 282 n.1 (1996)  
when an adjudicatory proceeding has been terminated before a licensing board pursuant to a settlement agreement, the board loses its jurisdiction over, and thus its authority to act with respect to, that licensing action; LBP-09-23, 70 NRC 668 n.27 (2009)
- Elflow International Co.*, CLI-76-6, 3 NRC 563, 574, 578, 589-91 (1976)  
standing as of right is not available in export license proceedings but the Commission has exercised its discretion to hold an open legislative-type hearing; LBP-09-1, 69 NRC 39 n.115 (2009)
- Electric Power Supply Association v. Federal Energy Regulatory Commission*, 391 F.3d 1255 (D.C. Cir. 2004)  
petitioners may enforce procedural rights only if the procedures in question are designed to protect some threatened concrete interest of theirs that is the ultimate basis of their standing; LBP-10-11, 71 NRC 635 n.100 (2010)
- Electric Power Supply Association v. Federal Energy Regulatory Commission*, 391 F.3d 1255, 1262 (D.C. Cir. 2004)  
petitioner's standing is not defeated by the fact that it cannot show, with any certainty, that its or its members' financial interests will be damaged by the operation of a rule; LBP-10-11, 71 NRC 635 n.100 (2010)
- Eli Lilly & Co. v. Medtronic, Inc.*, 496 U.S. 661, 668-69 (1990)  
a provision of a regulation should not be read in a way that is inconsistent with its purpose; LBP-07-6, 65 NRC 464 (2007)
- Elmore v. Sands*, 54 N.Y. 512 (1874)  
presiding officer questions whether Staff SERs are good long enough to keep a licensing proceeding moving at the mandated speed but not long enough to guide that proceeding to its eventual destination; LBP-08-11, 67 NRC 500 (2008)
- Emery Mining Co. v. Secretary of Labor, Mine Safety & Health Administration*, 744 F.2d 1411, 1414 (10th Cir. 1984)  
courts must construe regulations in light of the statutes they implement, keeping in mind that where there is an interpretation of an ambiguous regulation that is reasonable and consistent with the statute, that interpretation is to be preferred; LBP-09-16, 70 NRC 261 (2009)
- Energy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), CLI-06-26, 64 NRC 225, 226 (2006)  
petitioners' request for the imposition of backfit requirements is not a proper subject for consideration in license renewal adjudication; LBP-07-11, 66 NRC 96 (2007)
- Energy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), CLI-10-11, 71 NRC 287, 315 (2010)  
although there will always be more data that could be gathered, agencies must have some discretion to draw the line and move forward with decisionmaking; LBP-10-15, 72 NRC 285 (2010)
- EnergySolutions, LLC* (Radioactive Waste Import/Export Licenses), CLI-08-24, 68 NRC 491, 493 (2008)  
a facility that is licensed to receive only Class A low-level radioactive waste it is not pertinent to a contention regarding Class B and C waste; LBP-09-18, 70 NRC 423 n.250 (2009)
- Enos v. United States*, 672 F. Supp. 1391, 1993-94 (D. Wyo. 1987)  
a trust duty in the NRC as a federal permitting agency arises out of 1851 and 1868 treaties with Indian tribes; LBP-08-6, 67 NRC 267 (2008)
- Entergy Nuclear Generation Inc.* (Pilgrim Nuclear Power Station), CLI-07-2, 65 NRC 10, 11 (2007)  
if the Commission's supervisory authority constituted grounds for a party's own request for appellate review, there would be no limit to the kinds of arguments parties could legitimately present on appeal, and particularly on interlocutory appeal, a result at odds with the Commission's oft-expressed intent to limit the availability of such appeals; CLI-07-1, 65 NRC 7 (2007)

## LEGAL CITATIONS INDEX

### CASES

- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), CLI-07-2, 65 NRC 10, 11-12 (2007)  
once a petition to intervene and request for hearing have been granted and contentions are admitted for hearing, appeals of board rulings on new or amended contentions are treated under section 2.341(f)(2), regardless of the subject matter of those contentions; CLI-10-16, 71 NRC 490 (2010)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), CLI-07-2, 65 NRC 10, 12 (2007)  
the Commission disfavors review of interlocutory board orders, which would result in unnecessary piecemeal interference with ongoing licensing board proceedings; CLI-08-2, 67 NRC 34 n.10 (2008); CLI-09-6, 69 NRC 137 n.38 (2009)  
the rejection or admission of a contention, where the petitioner has been admitted as a party and has other contentions pending, neither constitutes serious and irreparable impact, nor affects the basic structure of the proceeding in a pervasive and unusual manner; CLI-08-7, 67 NRC 192 (2008); CLI-09-9, 69 NRC 365 (2009)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), CLI-08-2, 67 NRC 31, 35 (2008)  
the mere potential for legal error in a contention admissibility decision is not a ground for interlocutory review; CLI-10-30, 72 NRC 568 (2010)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), CLI-08-9, 67 NRC 353, 355 (2008)  
the purpose of obtaining "interested state" status was so that a state could request a suspension of the license renewal proceeding; LBP-08-25, 68 NRC 783 n.13 (2008)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), CLI-09-11, 69 NRC 529, 533 (2009)  
a genuine material dispute is one that could lead to a different conclusion on potential cost-beneficial severe accident mitigation alternatives; LBP-09-26, 70 NRC 969 (2009)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), CLI-10-11, 71 NRC 287, 293, 317 (2010)  
SAMA contentions will be admitted in license renewal proceedings only if it looks genuinely plausible that inclusion of an additional factor or use of other assumptions or models may change the cost-benefit conclusions for the SAMA candidates evaluated; LBP-10-13, 71 NRC 692 (2010)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), CLI-10-11, 71 NRC 287, 293-94 n.26 (2010)  
the only severe accident mitigation alternatives that applicant must implement as part of a license renewal safety review are those dealing with aging management; LBP-10-13, 71 NRC 679 (2010)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), CLI-10-11, 71 NRC 287, 297 (2010)  
summary disposition rules 2.1205 and 2.710 are substantially similar; LBP-10-20, 72 NRC 579 n.10 (2010)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), CLI-10-11, 71 NRC 287, 315, 316-17 (2010)  
contention is deficient because it does not allege that additional SAMAs should have been identified as potentially cost-beneficial or that any significant errors were made in applicant's SAMA reanalysis; LBP-10-13, 71 NRC 694 (2010)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), CLI-10-14, 71 NRC 449, 453-54 (2010)  
the current licensing basis is the set of NRC requirements (including regulations, orders, technical specifications, and license conditions) applicable to a specific plant and includes licensee's written, docketed commitments for ensuring compliance with applicable NRC requirements and the plant-specific design basis; LBP-10-13, 71 NRC 678 n.12 (2010)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), CLI-10-14, 71 NRC 449, 453-56 (2010)  
broad-based issues akin to safety culture, such as operational history, quality assurance, quality control, management competence, and human factors, are beyond the bounds of a license renewal proceeding; CLI-10-27, 72 NRC 491 n.47 (2010)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), CLI-10-14, 71 NRC 449, 454 (2010)  
the aging management review for license renewal does not focus on all aging-related issues; CLI-10-27, 72 NRC 492 n.53 (2010)  
the only safety issue where the regulatory process may not adequately maintain a plant's current licensing basis involves the potential detrimental effects of aging on the functionality of certain systems, structures, and components in the period of extended operations; CLI-10-27, 72 NRC 491 n.47 (2010)

## LEGAL CITATIONS INDEX

### CASES

- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), CLI-10-14, 71 NRC 449, 463 (2010)  
the regulatory process continuously reassesses whether there is a need for additional oversight or regulations to protect public health and safety; CLI-10-27, 72 NRC 492 (2010)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), CLI-10-14, 71 NRC 449, 466 (2010)  
the Atomic Safety and Licensing Board is considered to be a panel of experts; CLI-10-17, 72 NRC 49-50 n.276 (2010)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), CLI-10-14, 71 NRC 449, 471-75 (2010)  
SAMA analyses are not required for the spent fuel storage impacts associated with license renewals; LBP-10-15, 72 NRC 308 (2010)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), CLI-10-15, 71 NRC 479, 482 (2010)  
a listing of issues with which petitioners disagree with the application is the form of notice pleading that the Commission has long held is insufficient; LBP-10-16, 72 NRC 414 (2010)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), LBP-06-23, 64 NRC 257 (2006)  
a well-supported contention is admissible; LBP-09-6, 69 NRC 415 n.234 (2009)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), LBP-06-23, 64 NRC 257, 270 (2006)  
the proximity presumption extends to petitioners living in or having frequent contacts with an area within a 50-mile radius of a nuclear reactor; LBP-08-18, 68 NRC 539 (2008)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), LBP-06-23, 64 NRC 257, 272-74 (2006)  
to intervene in a proceeding a petitioner must, in addition to demonstrating standing, submit at least one contention meeting the requirements of 10 C.F.R. 2.309(f)(1); LBP-08-6, 67 NRC 289 (2008)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), LBP-06-23, 64 NRC 257, 272-74 (2006), *aff'd*, CLI-07-3, 65 NRC 13, *reconsideration denied*, CLI-07-13, 65 NRC 211 (2007)  
to intervene in an NRC proceeding, a petitioner must, in addition to demonstrating standing, submit at least one contention meeting the requirements of 10 C.F.R. § 2.309(f)(1); LBP-07-11, 66 NRC 55 n.37 (2007)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), LBP-06-23, 64 NRC 257, 272-74, 351-59 (2006)  
details of requirements a contention must meet are described; LBP-07-4, 65 NRC 302 n.89 (2007); LBP-07-14, 66 NRC 184 (2007)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), LBP-06-23, 64 NRC 257, 288, 294-300 (2006), *aff'd*, CLI-07-3, 65 NRC 13, *reconsideration denied*, CLI-07-13, 65 NRC 211 (2007)  
new and significant information about a Category 1 issue is not a proper subject for a contention, absent a waiver of section 51.53(c)(3)(i); LBP-07-4, 65 NRC 311 n.134 (2007); LBP-07-11, 66 NRC 64 n.83 (2007)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), LBP-06-23, 64 NRC 257, 288-93 (2006)  
although the terms “severe accident,” “severe accident mitigation alternatives,” and “SAMA” are not defined in NRC’s NEPA regulations, the NRC policy documents that originated these terms clearly limit them to nuclear reactors, and do not include spent fuel pools or storage; LBP-10-15, 72 NRC 307 (2010)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), LBP-06-23, 64 NRC 257, 300 (2006), *aff'd*, CLI-07-3, 65 NRC 13, *reconsideration denied*, CLI-07-13, 65 NRC 211 (2007)  
as a general matter, NEPA imposes no legal duty on the NRC to consider intentional malevolent acts in conjunction with commercial power reactor license renewal applications; LBP-07-11, 66 NRC 84 (2007)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), LBP-06-23, 64 NRC 257, 323-41 (2006)  
a contention involving certain emergency evacuation issues was admitted because it was in the context of three of the specific input data for the severe accident mitigation alternatives analysis that license renewal applicants are required to perform; LBP-07-4, 65 NRC 336 n.277 (2007)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), LBP-06-23, 64 NRC 257, 338-41 (2006), *aff'd*, CLI-07-3, 65 NRC 13, *reconsideration denied*, CLI-07-13, 65 NRC 211 (2007)  
a contention challenging the input data for certain parameters related to emergency planning issues in a severe accident mitigation alternatives analysis has been admitted in a license renewal proceeding as an environmental issue; LBP-07-11, 66 NRC 95 (2007)

## LEGAL CITATIONS INDEX

### CASES

- a contention related to emergency planning that touches on the adequacy of a severe accident mitigation alternative analysis in the context of environmental review during license renewal proceedings is admissible; LBP-08-13, 68 NRC 165-66 (2008)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), LBP-06-23, 64 NRC 257, 340 (2006)
- a generic challenge to the MACCS2 code is inadmissible; LBP-08-13, 68 NRC 101 (2008)
- probabilistic risk assessment is the Commission's accepted and standard practice in severe accident mitigation alternatives analyses; LBP-10-15, 72 NRC 282, 286 (2010)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), LBP-06-23, 64 NRC 257, 341 (2006)
- licensing boards may reformulate contentions to eliminate extraneous issues or to consolidate issues for a more efficient proceeding; CLI-09-12, 69 NRC 552 (2009); CLI-10-2, 71 NRC 33 (2010); LBP-10-16, 72 NRC 403 (2010)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), LBP-06-23, 64 NRC 257, 351-59 (2006), *aff'd*, CLI-07-3, 65 NRC 13, *reconsideration denied*, CLI-07-13, 65 NRC 211 (2007)
- a detailed summary of relevant case law on contention admissibility is provided; LBP-07-11, 66 NRC 55 n.39 (2007); LBP-08-6, 67 NRC 289 (2008); LBP-09-17, 70 NRC 324 n.44 (2009)
- the scope of license renewal proceedings generally concerns requests to renew 40-year reactor operating licenses for additional 20-year terms; LBP-07-11, 66 NRC 59 (2007)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), LBP-06-23, 64 NRC 257, 355 (2006)
- petitioner must provide documents or other factual information or expert opinion that sets forth the necessary technical analysis to show why the proffered bases support its contention; LBP-09-4, 69 NRC 216 (2009)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), LBP-06-23, 64 NRC 257, 356 (2006)
- failure to present factual information and expert opinions to support a contention adequately requires that the contention be rejected; LBP-08-9, 67 NRC 432 (2008); LBP-08-26, 68 NRC 917 (2008)
- petitioner does not have to provide a complete or final list of its experts or evidence or prove the merits of its contention at the admissibility stage; LBP-09-6, 69 NRC 410 (2009)
- the requirement under 10 C.F.R. 2.309(f)(1)(v) that contentions be supported by alleged facts or expert opinion generally is fulfilled when the sponsor of an otherwise acceptable contention provides a brief recitation of the factors underlying the contention or references to documents and text that provide such reasons; LBP-09-4, 69 NRC 195, 207 (2009); LBP-10-14, 72 NRC 129 (2010)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), LBP-06-23, 64 NRC 257, 358 (2006)
- an expert opinion that merely states a conclusion that the application is deficient, inadequate, or wrong without providing a reasoned basis or explanation for that conclusion is inadequate because it deprives the board of its ability to make the necessary, reflective assessment of the opinion; LBP-10-6, 71 NRC 368 n.54 (2010)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), LBP-06-23, 64 NRC 257, 359 (2006)
- documents that provide legitimate amplification of originally filed contentions are discussed; LBP-08-6, 67 NRC 258 (2008)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), LBP-07-13, 66 NRC 131, 142-43 (2007)
- a generic challenge to the MACCS2 code is inadmissible; LBP-08-13, 68 NRC 101 (2008)
- Entergy Nuclear Generation Co.* (Pilgrim Nuclear Power Station), LBP-08-22, 68 NRC 590, 648 (2008)
- reasonable assurance requires a licensing board to take all relevant facts and circumstances into account; LBP-09-6, 69 NRC 422 n.272 (2009)
- Entergy Nuclear Operations, Inc.* (Big Rock Point Plant), CLI-08-19, 68 NRC 251, 258-59, 266 (2008)
- when an organization requests a hearing, it may seek to establish standing either on its own behalf or on behalf of one or more of its members; LBP-10-16, 72 NRC 389 (2010)
- Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), CLI-07-28, 66 NRC 275 (2007)
- the Commission generally declines to interfere with a board's day-to-day case management decisions unless there has been an abuse of power; CLI-08-7, 67 NRC 192 (2008)
- Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), CLI-07-28, 66 NRC 275, 275-76 (2007)
- sanctions have been imposed against a party requesting a hearing only when that party has not followed established Commission procedures; LBP-08-18, 68 NRC 543 (2008); LBP-08-19, 68 NRC 547 (2008); LBP-08-20, 68 NRC 552 (2008)

## LEGAL CITATIONS INDEX

### CASES

- Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), CLI-08-7, 67 NRC 187 (2008)  
adjudicatory boards have broad discretion to regulate the course of proceedings and the conduct of participants, and the Commission is reluctant to embroil itself in day-to-day case management issues; CLI-08-14, 67 NRC 406 (2008)
- Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), CLI-08-7, 67 NRC 187, 191 (2008)  
oral argument on contention admissibility is not a right; LBP-08-23, 68 NRC 683 (2008)
- Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), CLI-08-7, 67 NRC 187, 192 (2008)  
boards have broad discretion to issue procedural orders to regulate the course of proceedings and the conduct of participants, and as a general matter, the Commission declines to interfere with the board's day-to-day case management decisions, unless there has been an abuse of power; CLI-08-29, 68 NRC 901 (2008); CLI-10-28, 72 NRC 554 (2010); LBP-08-23, 68 NRC 683 (2008)  
rejection or admission of a contention, where petitioner has been admitted as a party and has other contentions pending, neither constitutes serious and irreparable impact nor affects the basic structure of the proceeding in a pervasive and unusual manner; CLI-09-9, 69 NRC 365 (2009); CLI-10-16, 71 NRC 491 (2010)
- Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), CLI-08-27, 68 NRC 655, 656 (2008)  
licensing board decisions denying a petition for rule waiver generally are not appealable until the board has issued a final decision resolving the case, unless a party seeking review shows that one of the grounds for interlocutory review has been met; CLI-10-29, 72 NRC 560 (2010)
- Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), CLI-09-6, 69 NRC 128, 132 (2009)  
petitioners may request, and the Commission, in its discretion, may grant interlocutory review if it is shown that the issue threatens petitioners with immediate and serious irreparable impacts or affects the basic structure of the proceeding in a pervasive manner; LBP-09-10, 70 NRC 148 n.89 (2009)
- Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), CLI-09-6, 69 NRC 128, 132, 137 (2009)  
because it disfavors piecemeal appeals, the Commission will grant interlocutory review only in extraordinary circumstances; CLI-10-29, 72 NRC 560(2010)
- Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), CLI-09-6, 69 NRC 128, 133 (2009)  
interlocutory review is granted only in extraordinary circumstances; CLI-10-30, 72 NRC 568 (2010)
- Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), CLI-09-6, 69 NRC 128, 137 (2009)  
that interlocutory review will only be granted under extraordinary circumstances reflects the Commission's disfavor of piecemeal appeals during ongoing licensing board proceedings; CLI-10-16, 71 NRC 490 (2010)
- Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), CLI-09-6, 69 NRC 128, 138 (2009)  
the Commission generally does not entertain requests to invoke its inherent supervisory authority over adjudications; CLI-10-13, 71 NRC 388 n.6 (2010)
- Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), LBP-08-13, 68 NRC 43, 61 (2008)  
the purpose of the contention admissibility rules is to focus litigation on concrete issues and result in a clearer and more focused record for decision; LBP-09-26, 70 NRC 952 (2009)
- Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), LBP-08-13, 68 NRC 43, 62 (2008)  
contentions that fall outside the scope of the proceeding must be rejected; LBP-09-26, 70 NRC 953 (2009)  
materiality requires a showing that the alleged error or omission is of possible significance to the result of the proceeding; LBP-09-26, 70 NRC 953 (2009)  
petitioner must show that the subject matter of a contention would impact the grant or denial of a pending license application; LBP-09-26, 70 NRC 953 (2009); LBP-10-6, 71 NRC 359 (2010)
- Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), LBP-08-13, 68 NRC 43, 63 (2008)  
determining whether the contention is adequately supported by a concise allegation of the facts or expert opinion is not a hearing on the merits; LBP-09-26, 70 NRC 954 (2009)  
providing any material or document as the foundation for a contention without setting forth an explanation of its significance is inadequate to support the admission of a contention; LBP-09-26, 70 NRC 954 (2009); LBP-10-6, 71 NRC 361 (2010)
- Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), LBP-08-13, 68 NRC 43, 64 (2008)  
a contention that attacks applicable statutory requirements or represents a challenge to the basic structure of the Commission's regulatory process must be rejected; LBP-09-26, 70 NRC 956 (2009)

## LEGAL CITATIONS INDEX

### CASES

- Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), LBP-08-13, 68 NRC 43, 86 (2008)  
commitment of one party to fulfill its statutory duties in the application process is not enough to demonstrate that the issue will be properly addressed; LBP-08-24, 68 NRC 720 (2008)
- Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), LBP-08-13, 68 NRC 43, 89 (2008)  
admissibility of contentions does not hinge on access to a draft guidance document, which is not a legal requirement; LBP-10-5, 71 NRC 343 (2010)  
guidance documents are not binding legal authority; LBP-10-5, 71 NRC 346 (2010)
- Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), LBP-08-13, 68 NRC 43 (2008)  
a contention that is not well supported by the expert is not admissible; LBP-09-6, 69 NRC 415 n.234 (2009)
- Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), LBP-08-13, 68 NRC 43, 102 (2008)  
contention challenging cost estimates for site remediation after a severe accident is admissible; LBP-08-26, 68 NRC 925 (2008)
- Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), LBP-08-13, 68 NRC 43, 109-10 (2008)  
petitioners fail to explain why more recent information regarding earthquakes would make a material change in the conclusions of the seismic severe accident mitigation alternatives analysis and fail to suggest feasible alternatives to address new risks or estimate costs of additional measures; LBP-10-15, 72 NRC 283 (2010)
- Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), LBP-08-13, 68 NRC 43, 110-13 (2008)  
contention challenging a particular use of a straight-line Gaussian air dispersion model in the applicant's SAMA analysis is admissible in a license renewal proceeding; CLI-09-11, 69 NRC 533 n.27 (2009)
- Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), LBP-08-13, 68 NRC 43, 138 (2008)  
applicant's proposal to perform the modified calculations in the future, albeit in accordance with specified guidance, is unacceptable because these calculations are not a component of an aging management plan, but are the fundamental fatigue analyses for time-limited aging required to be included in the license renewal application; LBP-08-25, 68 NRC 827 (2008)
- Entergy Nuclear Operations, Inc.* (Indian Point, Units 2 and 3), LBP-08-13, 68 NRC 43, 199 (2008)  
NEPA is the only legal grounds for an admissible contention relating to environmental justice issues; LBP-09-18, 70 NRC 430 (2009)  
to qualify as an environmental justice contention, the contention must show that the affected local population qualifies as a minority or low-income population; LBP-09-18, 70 NRC 430 (2009)
- Entergy Nuclear Operations, Inc.* (Palisades Nuclear Plant), CLI-08-19, 68 NRC 251, 260 (2008)  
absent an obvious potential for harm, it is petitioner's burden to show how harm will or may occur; LBP-09-28, 70 NRC 1026 (2009)
- Entergy Nuclear Operations, Inc.* (Palisades Nuclear Plant), CLI-08-19, 68 NRC 251, 261 (2008)  
it is not acceptable in NRC practice for petitioner to claim standing based on vague assertions, and when that fails, to attempt to repair the defective pleading with fresh details offered for the first time in its reply; LBP-09-2, 69 NRC 94 nn.18, 20 (2009); CLI-10-1, 71 NRC 6 (2010)
- Entergy Nuclear Operations, Inc.* (Palisades Nuclear Plant), CLI-08-19, 68 NRC 251, 261 n.30 (2008)  
petitioner's reply must narrowly focus upon the legal and factual arguments first presented in its petition and cannot be used as a vehicle to remedy a very deficient petition to which opposing parties have no opportunity to respond; LBP-09-6, 69 NRC 424 n.283 (2009)
- Entergy Nuclear Operations, Inc.* (Palisades Nuclear Plant), CLI-08-19, 68 NRC 251, 263 n.40 (2008)  
licensing board decisions carry no precedential weight; CLI-10-23, 72 NRC 222 (2010)
- Entergy Nuclear Operations, Inc.* (Palisades Nuclear Plant), CLI-08-19, 68 NRC 251, 269-70 (2008)  
no obvious potential for offsite consequences sufficient to establish organizational standing was shown even though the organization's office was a mere 3 miles from the facility; LBP-09-28, 70 NRC 1025 n.35 (2009)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-06-8, 63 NRC 235, 237 (2006)  
a party seeking a stay must show it faces imminent, irreparable harm that is both certain and great; CLI-09-23, 70 NRC 936 n.4 (2009)  
the proponent of a stay must show that likelihood of success on the merits, irreparable harm, absence of harm to others, and the public interest weigh in its favor; CLI-08-13, 67 NRC 399 (2008)

## LEGAL CITATIONS INDEX

### CASES

- when evaluating a motion for a stay, the Commission places the greatest weight on irreparable injury to the moving party unless a stay is granted; CLI-10-8, 71 NRC 151 (2010)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-06-8, 63 NRC 235, 237 n.4 (2006)
- a motion to stay issuance of a license might be granted where the factors usually considered in granting emergency injunctive relief are satisfied; CLI-08-13, 67 NRC 399 (2008)
- although technically not applicable to a request for a stay of NRC Staff action, the section 2.342(e) standards simply restate commonplace principles of equity universally followed when judicial (or quasi-judicial) bodies consider stays or other forms of temporary injunctive relief; CLI-10-8, 71 NRC 147 n.25 (2010)
- four factors should be considered in ruling on any request for stay; LBP-07-11, 66 NRC 98 (2007)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-06-8, 63 NRC 235, 237-38 & nn.4-7 (2006)
- as litigation moves forward or terminates, the equities that traditionally govern stays or injunctive relief may change; CLI-06-23, 64 NRC 109 (2006)
- there is no presumption that irreparable damage occurs whenever there is a failure to adequately evaluate the environmental impact of a proposed project; CLI-06-27, 64 NRC 402 n.9 (2006)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-06-8, 63 NRC 235, 238 (2006)
- a license renewal may be set aside or appropriately conditioned even after it has been issued, upon subsequent administrative or judicial review; CLI-08-13, 67 NRC 400 (2008)
- if a board determines after full adjudication that the license amendment should not have been granted, it may be revoked or conditioned; LBP-07-2, 65 NRC 159 (2007)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-07-1, 65 NRC 1, 3 (2007)
- NRC rules set a high bar for interlocutory review petitions; CLI-09-6, 69 NRC 137 n.38 (2009)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-07-1, 65 NRC 1, 4-5 nn.11-19 (2007)
- the Commission may review a board ruling pursuant to the inherent supervisory powers where a significant issue may affect multiple pending or imminent licensing proceedings; CLI-08-2, 67 NRC 34 n.12 (2008)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-07-1, 65 NRC 1, 5 (2007)
- interlocutory review is granted where the issues are significant, have potentially broad impact, and may well recur in the likely license renewal proceedings for other plants; CLI-10-27, 72 NRC 489 (2010)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-07-3, 65 NRC 13 (2007), *reconsideration denied*, CLI-07-13, 65 NRC 211 (2007)
- a contention on spent fuel pool fires is rejected as an impermissible challenge to NRC regulations and the license renewal generic environmental impact statement; CLI-10-11, 71 NRC 305 n.93 (2010)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-07-3, 65 NRC 13, 16 (2007)
- spent fuel pool fires are Category 1 environmental issues and are addressed in the generic environmental impact statement for license renewals; LBP-08-13, 68 NRC 185 (2008)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-07-3, 65 NRC 13, 17 (2007)
- a petition for rulemaking that addresses issues related to spent fuel pool fires would be a more appropriate venue to seek relief for resolving generic concerns about spent fuel fires than a site-specific contention in an adjudication; LBP-08-13, 68 NRC 186 (2008)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-07-3, 65 NRC 13, 19-21 (2007)
- because onsite storage of spent fuel during the license renewal term is a Category 1 issue, and as such explicitly has been found not to warrant any additional site-specific analysis of mitigation measures, the required SAMA analysis for license renewal is intended to focus on reactor accidents; CLI-10-14, 71 NRC 472 (2010)

## LEGAL CITATIONS INDEX

### CASES

- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-07-3, 65 NRC 13, 20 (2007) reconsideration denied, CLI-07-13, 65 NRC 211 (2007)  
a contention seeking ER analysis of long-term effects of high-density spent fuel pool storage inappropriately challenges rule-based generic environmental findings for reactor life extension proceedings; LBP-07-3, 65 NRC 267-68 (2007)  
in the hearing process, petitioners with new information showing that a generic rule would not serve its purpose at a particular plant may seek a waiver of the rule; LBP-07-11, 66 NRC 84 (2007)  
only Category 2 environmental issues must be addressed in an environmental report and may therefore be litigated at an adjudicatory hearing; CLI-07-16, 65 NRC 390 (2007)  
petitioners seeking to challenge a rule or regulation must first request a waiver or exception to the application of a rule in a particular adjudicatory proceeding; LBP-07-3, 65 NRC 268 (2007)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-07-3, 65 NRC 13, 22 & n.37 (2007)  
where there is no threat of immediate and irreparable harm and license renewal is not imminent, a motion for a stay of license renewal is premature; CLI-08-13, 67 NRC 400 (2008)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-07-13, 65 NRC 211, 214-15 (2007)  
only if one has been admitted as a party to a proceeding, through showing standing and submitting an admissible contention, can one have a request for stay considered by a presiding officer; LBP-07-11, 66 NRC 97 (2007)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-07-16, 65 NRC 371, 377 (2007)  
petitioner may not demand a hearing to challenge a federal statute; LBP-08-17, 68 NRC 452 (2008)  
the Clean Water Act precludes NRC from either second-guessing the conclusions in NPDES permits or imposing its own effluent limitations, thermal or otherwise; LBP-08-9, 67 NRC 448 n.151 (2008)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-07-16, 65 NRC 371, 383 (2007)  
adjudication is not the proper forum for challenging applicable statutory requirements or the basic structure of the agency's regulatory process; LBP-08-16, 68 NRC 384 (2008)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-07-16, 65 NRC 371, 383-84 (2007)  
an administratively extended state-issued permit satisfies the 10 C.F.R. 51.53(c)(3)(ii)(B) requirements; LBP-08-13, 68 NRC 152 (2008)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-07-16, 65 NRC 371, 385 n.69 (2007)  
absent delegated authority, licensing boards lack authority to direct the Staff's nonadjudicatory actions; CLI-09-2, 69 NRC 63 (2009)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-07-16, 65 NRC 371, 387 (2007)  
licensing boards must defer to a state's ruling on once-through cooling as reflected in equivalent permits; LBP-08-13, 68 NRC 156 (2008)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-07-16, 65 NRC 371, 387-88 (2007)  
boards must take state permit determinations at face value and are prohibited from undertaking any independent analysis of the permit's limits; LBP-08-13, 68 NRC 157 (2008)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-07-16, 65 NRC 371, 389 (2007)  
legislative intent is to implement the Clean Water Act in a way that avoids duplication and unnecessary delays; LBP-08-13, 68 NRC 157 (2008)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), CLI-10-17, 72 NRC 1 (2010)  
licensing boards have the authority to regulate the course of the proceeding, and the Commission generally defers to boards on case management decisions; CLI-10-28, 72 NRC 554 (2010)

## LEGAL CITATIONS INDEX

### CASES

- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), DD-05-2, 62 NRC 389, 396 (2005)  
differences between proposed and codified design criteria are not a concern for operating plants and whether a plant was issued a construction permit based on plant-specific criteria or final criteria presents no issue for license renewal proceedings; LBP-08-13, 68 NRC 75 (2008)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-04-28, 60 NRC 548, 552 (2004)  
when assessing whether petitioner has set forth a sufficient interest to intervene, licensing boards apply judicial concepts of standing; LBP-08-14, 68 NRC 286 (2008); LBP-08-15, 68 NRC 302 (2008); LBP-08-18, 68 NRC 538 (2008); LBP-09-4, 69 NRC 177 (2009)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-04-28, 60 NRC 548, 552-53 (2004)  
intervention petitioner must show that it has personally suffered or will personally suffer in the future a distinct and palpable harm that constitutes injury-in-fact, the injury can be fairly traced to the challenged action, and the injury is likely to be redressed by a favorable decision; LBP-08-18, 68 NRC 538 (2008)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-04-28, 60 NRC 548, 553-54 (2004)  
an extended power uprate amendment involves an increase in reactor core radioactivity with obvious potential for offsite consequences; LBP-07-10, 66 NRC 18 (2007)  
in an uprate proceeding, demonstrating proximity-based standing requires a determination that the proposed action involves a significant source of radioactivity producing an obvious potential for offsite consequences; LBP-08-9, 67 NRC 427, 428 (2008)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-04-28, 60 NRC 548, 555 (2004)  
petitioner need not prove its case at the contention admissibility stage of the proceeding; LBP-09-4, 69 NRC 195 (2009)  
petitioner's issues will be ruled inadmissible if petitioner has offered no tangible information, no experts, no substantive affidavits, but instead only bare assertions and speculation; LBP-09-4, 69 NRC 216 (2009)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-04-28, 60 NRC 548, 557 (2004)  
it is the admissibility of the contention, not the basis, that must be determined; LBP-08-17, 68 NRC 447 (2008)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-04-28, 60 NRC 548, 560 n.16 (2004)  
wholesale endorsement of pleadings by an expert affiant seriously undermines the board's ability to differentiate between the legal pleadings and the facts and opinions expressed by the expert; CLI-09-7, 69 NRC 292 n.318 (2009)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-04-28, 60 NRC 548, 580 (2004)  
examples of admitted contentions that satisfied the requirement to provide a specific statement of the issue of law or fact to be raised or controverted are provided; LBP-08-5, 67 NRC 235 n.79 (2008)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-04-31, 60 NRC 686, 692 (2004)  
the informal procedural rules of Part 2, Subpart L place greater emphasis and responsibility on the presiding officer to oversee the development of a full and complete record; CLI-10-17, 72 NRC 48 n.264 (2010)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-04-31, 60 NRC 686, 692-93 (2004)  
as NRC hearings have moved away from the traditional trial-type adversarial format and toward a more informal model, the inquisitorial role of the presiding officer necessarily has increased; CLI-10-17, 72 NRC 47-48 (2010)

## LEGAL CITATIONS INDEX

### CASES

- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-04-31, 60 NRC 686, 704-06 (2004)  
if no particular hearing procedure is compelled, the board must exercise its discretion and select the hearing procedure most appropriate for the newly admitted contentions; LBP-09-10, 70 NRC 146 (2009)  
Subpart L and Subpart N cannot simultaneously govern license renewal proceedings for materials licensees; LBP-10-15, 72 NRC 344 (2010)  
there is no mandatory or automatic default to Subpart L procedures for contentions in license renewal proceedings; LBP-07-15, 66 NRC 272 (2007)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-04-31, 60 NRC 686, 705 (2004)  
the board determines the specific hearing procedures to be used on a contention-by-contention basis, selecting the hearing procedure most appropriate for the specific contentions before it; LBP-06-20, 64 NRC 204 (2006); LBP-07-15, 66 NRC 272 (2007); LBP-08-24, 68 NRC 758 (2008); LBP-08-24, 68 NRC 759 n.390 (2008)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-04-31, 60 NRC 686, 710 (2004)  
since the opportunity for cross-examination under Subpart L is equivalent to the opportunity for cross-examination under the Administrative Procedure Act, it is likewise consistent with the state's reasonable opportunity to interrogate witnesses under 42 U.S.C. § 2021(i); LBP-06-20, 64 NRC 203 (2006)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-04-33, 60 NRC 749 (2004)  
it is common for applicants to modify and amend their applications, often many times, and this does not, per se, render the application deficient; LBP-09-10, 70 NRC 77 (2009)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-04-33, 60 NRC 749, 754 (2004)  
NRC regulations preserve the right to a hearing when an application is amended by allowing new or amended contentions to be filed in response to material new information; LBP-10-17, 72 NRC 515 (2010)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-05-24, 62 NRC 429, 431 (2005)  
a contention of omission is rendered moot by applicant's submission to the NRC of its confirmatory analysis; CLI-08-28, 68 NRC 676 n.72 (2008)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-05-24, 62 NRC 429, 433 (2005)  
to give petitioner the opportunity to file a new contention raising a specific substantive challenge to applicant's new periodic UT program for the sand bed region, the board forbears from issuing an order of dismissal for 20 days from the date of the Memorandum and Order; LBP-06-16, 63 NRC 744 (2006)  
when a contention of omission has been rendered moot, and the intervenor wishes to raise specific challenges regarding the new information, the new contention shall address the remaining factors in 10 C.F.R. 2.309(f)(2), as well as the admissibility factors in section 2.309(f)(1); LBP-06-16, 63 NRC 744 (2006)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-05-32, 62 NRC 813, 821 (2005)  
a new or amended contention that is found to be timely in accord with section 2.309(f)(2) need not be assessed under the section 2.309(c) factors, which are considered to apply only to otherwise nontimely submissions; LBP-10-1, 71 NRC 187 (2010); LBP-10-14, 72 NRC 108 n.27 (2010)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-05-32, 62 NRC 813, 821 n.21 (2005)  
if a contention satisfies the timeliness requirement of 10 C.F.R. 2.309(f)(2)(iii), then, by definition, it is not subject to 10 C.F.R. 2.309(c) which specifically applies to nontimely filings; LBP-06-11, 63 NRC 396 n.3 (2006); LBP-09-27, 70 NRC 998-99 (2009)

## LEGAL CITATIONS INDEX

### CASES

- intervenors with contentions rooted in new material information need not make the same showing as intervenors who have simply delayed filing their contentions until after expiration of the regulatory deadline; LBP-07-14, 66 NRC 210 n.95 (2007); LBP-08-27, 68 NRC 955 (2008); LBP-10-9, 71 NRC 506 n.46 (2010)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-05-33, 62 NRC 828, 839 (2005)
- all levels of NRC adjudicators have consistently applied the deliberative process privilege; LBP-06-25, 64 NRC 381 (2006)
- the fact that the Staff puts a document on a privilege log, and thus labels a document as deliberative, is not sufficient to assess whether it is; LBP-06-25, 64 NRC 379 n.35 (2006)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-05-33, 62 NRC 828, 843 (2005)
- materials are deliberative if they reflect a consultative process; LBP-06-25, 64 NRC 381 (2006)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-05-33, 62 NRC 828, 846-47 (2005)
- to earn recognition, deliberative process privilege must be asserted by a qualified person, such as the head of the department or division, having both expertise and an overview-type perspective concerning the balance between the agency's duty of disclosure versus its need to conduct frank internal debate; LBP-06-25, 64 NRC 383 (2006)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-5, 63 NRC 116, 121 (2006)
- summary disposition is not a tool for trying to convince a licensing board to decide, on written submissions, genuine issues of material fact that warrant resolution at a hearing; LBP-07-12, 66 NRC 126 (2007)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-5, 63 NRC 116, 121-22 (2006)
- summary disposition is not a tool for trying to convince a licensing board to decide, on written submissions, genuine issues of material fact that warrant resolution at a hearing; LBP-07-13, 66 NRC 131 (2007)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-5, 63 NRC 116, 122 (2006)
- a summary disposition movant fails to meet its burden when the filings demonstrate the existence of a genuine material fact, when the evidence introduced does not show that the nonmovant's position is a sham, when the matters presented fail to foreclose the possibility of a factual dispute, or when there is an issue as to the credibility of the moving party's evidentiary material; LBP-07-12, 66 NRC 125 (2007)
- if a summary disposition proponent meets its burden, an opponent must set forth specific facts showing that there is a genuine issue, and may not rely on mere allegations or denials; LBP-07-12, 66 NRC 125 (2007); LBP-07-13, 66 NRC 131 (2007)
- summary judgment is not appropriate if it would require a judge to assess the correctness of facts and conclusions that are embodied in the competing, well-founded opinions of the parties' experts; LBP-07-12, 66 NRC 127 (2007); LBP-07-13, 66 NRC 131 (2007)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-5, 63 NRC 116, 125 (2006)
- weighing the affidavits of competing experts is not appropriate at the summary disposition stage; LBP-07-2, 65 NRC 158 (2007)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-5, 63 NRC 116, 128 (2006)
- to be sincere, movant should contact other parties sufficiently in advance to provide enough time for the possible resolution of the matter or issues in question; LBP-09-22, 70 NRC 649 n.24 (2009)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-14, 63 NRC 568 (2006)
- new, amended, or nontimely contentions would have to meet the requirements of 10 C.F.R. 2.309(c) and (f)(1); LBP-06-20, 64 NRC 174 (2006)

## LEGAL CITATIONS INDEX

### CASES

- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-14, 63 NRC 568, 572 (2006)  
the first step in assessing the admissibility of a new contention is to determine if it is timely under 10 C.F.R. 2.309(f)(2)(iii) or nontimely under section 2.309(c); LBP-07-15, 66 NRC 266 (2007); LBP-09-10, 70 NRC 138 (2009)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-14, 63 NRC 568, 572-74 (2006)  
a new or amended contention that is found to be timely in accord with section 2.309(f)(2) need not be assessed under the section 2.309(c) factors, which are considered to apply only to otherwise nontimely submissions; LBP-10-1, 71 NRC 187 (2010); LBP-10-14, 72 NRC 108 (2010)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-14, 63 NRC 568, 572-74 & n.14 (2006)  
if petitioner files a new contention within the 20-day time limit set by the board, and if it satisfies the remaining factors in section 2.309(f)(2), petitioner need not address the requirements under section 2.309(c), which apply to nontimely filings; LBP-06-16, 63 NRC 745 n.12 (2006)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-14, 63 NRC 568, 573 n.14 (2006)  
if a contention satisfies the timeliness requirement of 10 C.F.R. 2.309(f)(2)(iii), then, by definition, it is not subject to section 2.309(c) which specifically applies to nontimely filings; LBP-10-9, 71 NRC 506 n.46 (2010)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-14, 63 NRC 568, 573-74 (2006)  
if a contention satisfies the timeliness requirement of 10 C.F.R. 2.309(f)(2)(iii), then, by definition, it is not subject to 10 C.F.R. 2.309(c) which specifically applies to nontimely filings; LBP-09-27, 70 NRC 998-99 (2009)  
intervenors with contentions rooted in new material information need not make the same showing as intervenors who have simply delayed filing their contentions until after expiration of the regulatory deadline; LBP-10-9, 71 NRC 505-06 n.46 (2010)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-14, 63 NRC 568, 574 (2006)  
submission of a new contention within 30 days of the event giving rise to that contention is timely; LBP-08-12, 68 NRC 33 n.2 (2008); LBP-10-17, 72 NRC 509 n.25 (2010)  
thirty days is a reasonable limit for fulfilling the timing requirement of 10 C.F.R. 2.309(f)(2)(iii) because of the significant effort involved in identifying new information, assembling the required expertise, and then drafting a contention that satisfies 10 C.F.R. 2.309(f)(1); LBP-09-27, 70 NRC 1003 (2009)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-14, 63 NRC 568, 575 (2006)  
a newly filed contention must meet the requirements of 10 C.F.R. 2.309(f)(2) as well as the six basic contention admissibility standards set forth in section 2.309(f)(1)(i)-(vi); LBP-08-27, 68 NRC 955 (2008)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-14, 63 NRC 568, 579 (2006)  
when information forming the foundation for a new or amended contention becomes available piecemeal over time, the admissibility decision turns on a determination about when, as a cumulative matter, the separate pieces of the information puzzle were sufficiently in place to make the particular concerns reasonably apparent; LBP-09-10, 70 NRC 143 n.82 (2009)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-14, 63 NRC 568, 581 (2006)  
pro se petitioners are held to less rigid pleading standards, so that parties with a clear but imperfectly stated interest in the proceeding are not excluded; CLI-10-20, 72 NRC 192 (2010)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-20, 64 NRC 131, 146-52 (2006)  
a short discussion of the general admissibility criteria of 10 C.F.R. 2.309(f)(1)(i)-(vi) is provided; LBP-09-9, 70 NRC 45 n.12 (2009)

## LEGAL CITATIONS INDEX

### CASES

- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-20, 64 NRC 131, 147 (2006)  
at the admission stage of the proceedings, boards admit contentions, not bases; LBP-09-26, 70 NRC 988 (2009)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-20, 64 NRC 131, 147-51 (2006)  
details of requirements a contention must meet are described; LBP-07-14, 66 NRC 184 (2007)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-20, 64 NRC 131, 149 (2006)  
a dispute is not material unless it involves a significant inaccuracy or omission and resolution of the dispute could affect the outcome of the licensing proceeding; LBP-10-14, 72 NRC 117 n.93 (2010)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-20, 64 NRC 131, 151 (2006)  
determining whether a contention is adequately supported by a concise allegation of the facts or expert opinion is distinct from what is required to support petitioner's case at a hearing on the merits; LBP-08-9, 67 NRC 432 (2008); LBP-08-26, 68 NRC 917 (2008)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-20, 64 NRC 131, 155-59 (2006), *aff'd*, CLI-07-3, 65 NRC 13, *reconsideration denied*, CLI-07-13, 65 NRC 211 (2007)  
new and significant information about a Category 1 issue is not a proper subject for a contention, absent a waiver of section 51.53(c)(3)(i); LBP-07-4, 65 NRC 311 n.134 (2007); LBP-07-11, 66 NRC 64 n.83 (2007)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-20, 64 NRC 131, 160 (2006), *aff'd*, CLI-07-3, 65 NRC 13, 17-18 (2007)  
contentions dealing with risks associated with the high-density storage and racking of spent nuclear fuel in pools encompass information and grounds characterized as a board as well trod, rather than new information; LBP-09-10, 70 NRC 143 (2009)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-20, 64 NRC 131, 179 (2006), *rev'd on other grounds*, CLI-07-16, 65 NRC 371, 381-85 (2007)  
while NEPA requires consideration of information regarding other regulatory requirements and permits, the fact that the applicant is subject to and complying with them does not obviate the NEPA mandate that the federal agency perform an EIS covering these topics; LBP-09-16, 70 NRC 279 (2009)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-20, 64 NRC 131, 182, 198-99 (2006)  
a reply may not be used as a vehicle to introduce new arguments or support, may not expand the scope of arguments set forth in the original petition, and may not attempt to cure an otherwise deficient contention; LBP-09-17, 70 NRC 323 (2009)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-20, 64 NRC 131, 183, 187, 192 (2006)  
examples of admitted contentions that satisfy the requirement to provide a specific statement of the issue of law or fact to be raised or controverted are provided; LBP-08-5, 67 NRC 235 n.79 (2008)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-20, 64 NRC 131, 186-87 (2006)  
an aging management plan that merely summarizes options for future plans does not meet the specific requirement for demonstrating that the effects of aging will be adequately managed for the period of extended operations as required by Part 54; LBP-08-13, 68 NRC 140, 173 (2008)  
it is not sufficient for an applicant to propose a plan to develop a plan; LBP-08-13, 68 NRC 172 (2008)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-20, 64 NRC 131, 200-01 (2006), *rev'd on other grounds*, CLI-07-16, 65 NRC 371 (2007)  
in the absence of documentary or expert support, reliance on a guidance document to form the basis of a proposed contention does not, by itself, demonstrate a dispute with applicant; LBP-10-5, 71 NRC 343 (2010)

## LEGAL CITATIONS INDEX

### CASES

- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-20, 64 NRC 131, 201 (2006), *aff'd*, CLI-07-3, 65 NRC 13 (2007)  
under Part 2, Subpart G procedures, parties are permitted to propound interrogatories, take depositions, and cross-examine witnesses without leave of the board; LBP-09-10, 70 NRC 145 (2009)  
use of the permissive term, “may,” in 10 C.F.R. 2.310(a) indicates that licensing boards have some discretion in determining whether to hold hearings under Subpart L or Subpart G; LBP-08-6, 67 NRC 343 (2008)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-20, 64 NRC 131, 201-02 (2006)  
in Subpart G proceedings, parties are permitted to propound interrogatories, take depositions, and cross-examine witnesses without leave of the board; LBP-10-15, 72 NRC 343 (2010); LBP-10-16, 72 NRC 442 (2010)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-20, 64 NRC 131, 202 (2006), *aff'd*, CLI-07-3, 65 NRC 13 (2007)  
Subpart G procedures are used if the resolution of the contention meets specified criteria; LBP-09-10, 70 NRC 145 (2009)  
the board determines which hearing procedure to use on a contention-by-contention basis; LBP-10-15, 72 NRC 344 (2010)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-20, 64 NRC 131, 206 (2006)  
two petitioners, each of which has submitted an admissible contention, may adopt the contentions of a third petitioner, and of each other; LBP-08-13, 68 NRC 65 (2008)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-20, 64 NRC 131, 206-08 (2006)  
the issue of contention adoption in a license renewal proceeding is addressed; LBP-08-13, 68 NRC 65 (2008)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-06-20, 64 NRC 131, 207-08 (2006)  
in ruling that petitioners could adopt contentions, a board found unpersuasive the Commission’s dicta in an earlier decision that an adopting party must demonstrate an independent ability to litigate; LBP-08-13, 68 NRC 66 (2008)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-07-15, 66 NRC 261, 264 (2007)  
if CUFen metal fatigue analysis produces a value of greater than unity, then the analysis indicates that the component would be likely to develop metal fatigue cracks that might affect their function during the 20-year license renewal period of extended operation, and thus requires an aging management program; LBP-09-9, 70 NRC 43 n.4 (2009)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-07-15, 66 NRC 261, 265 n.5 (2007)  
if a contention meets the 10 C.F.R. 2.309(f)(2) criteria, it is timely and the intervenor proffering the contention need not also make a showing under 10 C.F.R. 2.309(c); LBP-10-1, 71 NRC 187 (2010); LBP-10-14, 72 NRC 108 (2010)  
the first step in assessing the admissibility of a new contention is to determine if it is timely under 10 C.F.R. 2.309(f)(2)(iii) or nontimely under section 2.309(c); LBP-09-10, 70 NRC 138 (2009)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-07-15, 66 NRC 261, 266 n.11 (2007)  
unless a deadline has been specified in the scheduling order for the proceeding, the determination of timeliness is subject to a reasonableness standard that depends on the facts and circumstances of each situation; LBP-10-24, 72 NRC 731, 741 (2010)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-07-15, 66 NRC 261, 266-67 (2007)  
a detailed analysis of the legal standards governing the admission of new contentions is provided; LBP-09-9, 70 NRC 45 n.11 (2009)

## LEGAL CITATIONS INDEX

### CASES

- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-07-15, 66 NRC 261, 272 (2007)  
selection of hearing procedures for contentions at the outset of a proceeding is not immutable because the availability of Subpart G procedures depends critically on whether the credibility of eyewitnesses is important in resolving a contention, and witnesses relevant to each contention are not identified until after contentions are admitted; LBP-09-10, 70 NRC 147 n.88 (2009); LBP-10-15, 72 NRC 345 n.99 (2010); LBP-10-16, 72 NRC 443 n.471 (2010)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-08-25, 68 NRC 763, 824 (2008)  
to defer determining a significant safety issue until after the license has already been issued would impermissibly remove it from the opportunity to be reviewed in the hearing process; LBP-09-15, 70 NRC 222 (2009)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-08-25, 68 NRC 763, 824-25 (2008)  
licensing boards are not bound by NRC Staff's position or by changes in that position; LBP-10-9, 71 NRC 522 n.133 (2010)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-10-19, 72 NRC 529, 545 (2010)  
in light of the requirements that any new contention be based on material information that was not previously available, the timeliness determination required under section 2.309(f)(2) and the section 2.326(a) reopening standard can be closely equated; LBP-10-21, 72 NRC 650 (2010)
- Entergy Nuclear Vermont Yankee, LLC* (Vermont Yankee Nuclear Power Station), LBP-10-19, 72 NRC 529, 545-50 (2010)  
reopening standards are discussed and analyzed; LBP-10-21, 72 NRC 643 (2010)
- Envirocare of Utah, Inc. v. NRC*, 194 F.3d 72 (D.C. Cir. 1999)  
although Article III of the Constitution does not constrain the NRC hearing process, and NRC hearings therefore are not governed by judicially created standing doctrine, the Commission nonetheless has generally looked to judicial concepts of standing where appropriate to determine those interests affected within the meaning of section 189a of the Atomic Energy Act; LBP-09-1, 69 NRC 25 n.54 (2009)  
interest in the promotion of economic use of energy falls outside the zone of interests protected by either the Atomic Energy Act or the National Environmental Policy Act; CLI-07-18, 65 NRC 411 n.32 (2007)
- Envirocare of Utah, Inc. v. NRC*, 193 F.3d 72, *passim* (D.C. Cir. 1999)  
although the Commission has long looked for guidance to judicial concepts of standing, it is not bound to do so; CLI-08-19, 68 NRC 265 (2008)
- Envirocare of Utah, Inc. v. NRC*, 194 F.3d 72, 74 (D.C. Cir. 1999)  
because agencies are not constrained by Article III of the Constitution, nor are they governed by judicially created standing doctrines restricting access to federal courts, the criteria for establishing administrative standing may permissibly be less demanding than the criteria for judicial standing; CLI-09-20, 70 NRC 915 (2009); LBP-08-24, 68 NRC 702 n.32 (2008); LBP-09-18, 70 NRC 397 (2009)  
even if NRC's proximity presumption is viewed as more lenient than judicial standing requirements, NRC may choose to retain it; CLI-09-20, 70 NRC 917 n.27 (2009)
- Envirocare of Utah, Inc. v. NRC*, 194 F.3d 72, 75 (D.C. Cir. 1999)  
although the Commission commonly looks to Article III concepts for guidance, it is not required to automatically follow them in all respects because NRC proceedings are not subject to Article III; LBP-09-15, 70 NRC 210 (2009)
- Envirocare of Utah, Inc. v. NRC*, 194 F.3d 72, 75-76 (D.C. Cir. 1999)  
although licensing boards are encouraged to apply contemporaneous judicial concepts of standing, the ultimate test is not whether the NRC's test for standing conforms to that applied by federal courts, but whether the NRC's test represents a reasonable construction of section 189a of the Atomic Energy Act; LBP-09-4, 69 NRC 186 (2009)

## LEGAL CITATIONS INDEX

### CASES

- Envirocare of Utah, Inc.* (Salt Lake City, Utah), DD-98-9, 48 NRC 173, 176 (1998)  
challenges to an Agreement State's program may be raised in a section 2.206 petition; CLI-10-8, 71 NRC 153 n.57 (2010)
- Environmental Law & Policy Center v. NRC*, 470 F.3d 676, 681 (7th Cir. 2006)  
a request for judicial review must be brought immediately after a decision is final; CLI-07-13, 65 NRC 214 (2007)
- Environmental Law & Policy Center v. NRC*, 470 F.3d 676, 682 (7th Cir. 2006)  
deferral of the NEPA analysis of the need for power until the combined operating license stage does not violate NEPA; LBP-07-9, 65 NRC 604 (2007)  
reviewing courts must decide a narrow issue as to whether the agency action was arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law; LBP-07-9, 65 NRC 602 n.92 (2007)
- Environmental Law & Policy Center v. NRC*, 470 F.3d 676, 683 (7th Cir. 2006)  
a narrower project goal and subsequently narrower collection of alternatives was approved partly because the applicant was in no position to implement the additional alternatives; CLI-07-27, 66 NRC 227 (2007); LBP-07-9, 65 NRC 608 (2007)  
agencies are permitted to defer certain issues in an environmental impact statement for a multistage project when detailed useful information on a given topic is not meaningfully possible to obtain, and the unavailable information is not essential to determination at the earlier stage; CLI-07-27, 66 NRC 235 (2007)  
blindly adopting applicant's goals is a losing proposition because it does not allow for the full range of alternatives required by NEPA; LBP-09-10, 70 NRC 128 (2009); LBP-09-17, 70 NRC 379 (2009)  
NEPA requires an agency to exercise a degree of skepticism in dealing with the self-serving statements from the prime beneficiary of a project and to look at the general goal of the project, rather than only those alternatives by which a particular applicant can reach its own specific goals; LBP-07-9, 65 NRC 636 (2007); LBP-09-10, 70 NRC 128 (2009); LBP-09-17, 70 NRC 379 (2009)
- Environmental Law & Policy Center v. NRC*, 470 F.3d 676, 684 (7th Cir. 2006)  
NRC may, consistent with NEPA, define baseload power generation as the purpose of and need for a project; LBP-10-24, 72 NRC 757 n.79 (2010)  
the National Environmental Policy Act does not require consideration of energy efficiency alternatives when applicant is in no position to implement such measures; LBP-08-13, 68 NRC 99 n.282 (2008)
- Environmental Law & Policy Center v. NRC*, 470 F.3d 676, 685 (7th Cir. 2006)  
an environmental impact statement must discuss alternatives to the proposed action, and this discussion must incorporate a hard look at alternatives to a proposed action; LBP-10-10, 71 NRC 581 (2010)
- Environmental Protection Agency v. Mink*, 410 U.S. 73, 87-88 (1973)  
deliberative process privilege applies only if the information is both predecisional and deliberative; LBP-06-3, 63 NRC 91 (2006)  
deliberative process privilege does not extend to factual material severable from the deliberative context; LBP-06-3, 63 NRC 91 (2006)  
Staff communications that summarize the applicable procedures or report on the status of a matter are factual in nature and are not protected by deliberative process privilege; LBP-06-3, 63 NRC 93 (2006)
- Environmental Protection Agency v. Mink*, 410 U.S. 73, 91 (1973)  
purely factual material is not generally protected by the deliberative process privilege; LBP-06-25, 64 NRC 382, 389 (2006)
- Environmental Protection Information Center v. U.S. Forest Service*, 451 F.3d 1005, 1009 (9th Cir. 2006)  
the purpose of an environmental assessment is to determine whether an action has a significant impact, thus informing the decision whether the preparation of an EIS and detailed assessment of impacts is required; CLI-08-1, 67 NRC 29 (2008)
- Environmental Protection Information Center v. U.S. Forest Service*, 451 F.3d 1005, 1016 (9th Cir. 2006)  
the obligation of agencies to consider alternatives is a lesser one under an environmental assessment than under an environmental impact statement; CLI-10-18, 72 NRC 75 n.106 (2010)
- Excel Communications, Inc. v. AT&T Corp.*, 528 U.S. 946 (1999)  
denial of *certiorari* carries with it no implication whatever regarding the Court's views on the merits of a case which it has declined to review; LBP-07-11, 66 NRC 87 n.206 (2007)

## LEGAL CITATIONS INDEX

### CASES

- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-04-31, 60 NRC 461, 465-66 (2004)
- the Commission is generally reluctant to consider interlocutory appeals; CLI-09-2, 69 NRC 61 (2009)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-04-31, 60 NRC 461, 466 (2004)
- added delay and expense occasioned by the admission of a contention, even if erroneous, do not alone warrant interlocutory review; CLI-09-6, 69 NRC 133, 135 (2009)
- routine rulings on contention admissibility are usually not occasions for the Commission to exercise its authority to undertake interlocutory review; CLI-09-3, 69 NRC 72 (2009); CLI-09-6, 69 NRC 133 n.16, 138 (2009)
- the Commission customarily does not entertain interlocutory appeals due in large part to its general unwillingness to engage in piecemeal interference in ongoing licensing board proceedings; CLI-07-1, 65 NRC 3 (2007); CLI-07-2, 65 NRC 12 (2007)
- the Commission has authority to review board rulings sua sponte, in the exercise of its inherent supervisory authority over NRC adjudications; CLI-09-3, 69 NRC 72 (2009)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-04-31, 60 NRC 461, 466-67 (2004)
- the Commission disfavors review of interlocutory board orders, which would result in unnecessary piecemeal interference with ongoing licensing board proceedings; CLI-08-2, 67 NRC 34 n.10 (2008)
- the rejection or admission of a contention, where the petitioner has been admitted as a party and has other contentions pending, neither constitutes serious and irreparable impact, nor affects the basic structure of the proceeding in a pervasive and unusual manner; CLI-08-7, 67 NRC 192 (2008); CLI-09-9, 69 NRC 365 (2009)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-04-31, 60 NRC 461, 467 (2004)
- claims that a board has wrongly rejected a contention are commonplace and cannot, without more, be said to affect a proceeding's 'basic structure'; CLI-07-2, 65 NRC 12 (2007)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-04-31, 60 NRC 461, 468 (2004)
- appeals of rejected contentions are permitted only where a petitioner claims that the board wrongly rejected all contentions; CLI-07-2, 65 NRC 11 (2007)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-17, 62 NRC 5 (2005)
- in its mandatory review, boards are not to undertake a de novo review of the application, but rather are to perform merely a sufficiency review of the NRC Staff's findings; CLI-06-20, 64 NRC 19 (2006)
- the mandatory hearing board is required to answer six questions for the uncontested early site permit proceedings; LBP-08-15, 68 NRC 301 (2008)
- the procedures to be followed by the licensing board when an application for a construction permit is uncontested are described; LBP-07-6, 65 NRC 437 (2007)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-17, 62 NRC 5, 21-22 (2005)
- in uncontested proceedings, boards must narrow their inquiry to those topics or sections in Staff documents that they deem most important and should concentrate on portions of the documents that do not on their face adequately explain the logic, underlying facts, and applicable regulations and guidance; LBP-07-1, 65 NRC 35-36 (2007)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-17, 62 NRC 5, 30 (2005)
- on NEPA baseline issues, the board has a special responsibility and the scope of the board's review is significantly different; LBP-07-9, 65 NRC 555 (2007)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-17, 62 NRC 5, 33 n.32 (2005)
- in a mandatory early site permit hearing, NRC must address whether issuance of an ESP will be inimical to the common defense and security or to the health and safety of the public; CLI-07-27, 66 NRC 221 (2007)
- in a mandatory early site permit hearing, NRC must address whether, taking into consideration the site criteria contained in 10 C.F.R. Part 100, a reactor, or reactors, having the characteristics that fall within the parameters for the site, can be constructed and operated without undue risk to the health and safety of the public; CLI-07-27, 66 NRC 221 (2007)
- on AEA Safety Issue 1, the board must determine whether the application and the record of the proceeding contain sufficient information, and the review of the application by NRC Staff has been

## LEGAL CITATIONS INDEX

### CASES

- adequate, to support a negative finding on the question of whether the issuance of the early site permit will be inimical to the common defense and security or to the health and safety of the public; LBP-07-9, 65 NRC 556, 598 (2007)
- on AEA Safety Issue 2, the board must decide whether, taking into consideration the site criteria contained in 10 C.F.R. Part 100, a reactor or reactors having the characteristics that fall within the parameters for the site can be constructed without undue risk to the health and safety of the public; LBP-07-9, 65 NRC 557, 599-600 (2007)
- Exelon Generation Co. LLC* (Early Site Permit for Clinton ESP Site), CLI-05-17, 62 NRC 5, 35 n.40 (2005)
- although Appendix A to Part 2 was rescinded, the licensing board may still rely on it as an authoritative expression of the Commission's policy; LBP-07-9, 65 NRC 554 n.23 (2007)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-17, 62 NRC 5, 39 (2005)
- in a mandatory hearing, a board's task is to ensure that NRC Staff's review is adequate and that the Staff has made findings with reasonable support in logic and fact; CLI-06-20, 64 NRC 19, 25 (2006); LBP-07-1, 65 NRC 35 (2007); LBP-07-6, 65 NRC 437 (2007); LBP-09-19, 70 NRC 456 (2009)
- in a mandatory hearing, the licensing board's role in evaluating the record and the adequacy of the Staff's review is analogous to that of an appellate court applying the substantial-evidence test; LBP-07-9, 65 NRC 555, 598 (2007)
- mandatory hearings do not involve a de novo review of the NRC Staff's findings, but rather whether the safety and environmental record is sufficient to support license issuance; CLI-07-5, 65 NRC 111 n.9 (2007); LBP-07-1, 65 NRC 35 (2007); LBP-07-6, 65 NRC 437 (2007); LBP-09-19, 70 NRC 456 (2009)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-17, 62 NRC 5, 39-40 (2005)
- a board's role in an early site permit proceeding is to carefully probe Staff findings by asking appropriate questions and by requiring supplemental information when necessary, but Staff's underlying technical and factual findings are not open to board reconsideration unless, after a review of the record, the board finds the NRC Staff review inadequate or its findings insufficient; CLI-06-20, 64 NRC 19 (2006); LBP-07-9, 65 NRC 555 (2007); LBP-09-19, 70 NRC 457 (2009)
- Exelon Generation Co. LLC* (Early Site Permit for Clinton ESP Site), CLI-05-17, 62 NRC 5, 40 (2005)
- a licensing board's sufficiency review is not to be a rubber stamp, but instead must carefully probe NRC Staff findings by asking appropriate questions and by requiring supplemental information; CLI-06-20, 64 NRC 19 (2006); LBP-07-9, 65 NRC 555 (2007)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-17, 62 NRC 5, 44 (2005)
- with respect to certain NEPA findings, boards in early site permit proceedings are to make independent environmental judgments, though they need not rethink or redo every aspect of the NRC Staff's environmental findings or undertake their own fact-finding activities; LBP-09-19, 70 NRC 456 (2009)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-17, 62 NRC 5, 45 (2005)
- on baseline NEPA issues in early site permit cases, boards must reach their own independent determination, but should do so without second-guessing underlying technical or factual findings by the NRC Staff; LBP-09-19, 70 NRC 459 (2009)
- on NEPA baseline issues, a board must independently determine whether the applicable requirements of NEPA have been complied with and, after considering the final balance among conflicting factors, independently determine whether the license should be issued, denied, or appropriately conditioned to protect the environment; LBP-07-1, 65 NRC 37 (2007); LBP-07-6, 65 NRC 438 (2007); LBP-07-9, 65 NRC 555, 559-60, 598, 614 (2007)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-17, 62 NRC 5, 48 (2005)
- at the early site permit stage the boards' reasonable alternatives responsibilities are limited and focus on the consideration and comparison of alternative sites; CLI-07-27, 66 NRC 237 (2007); LBP-07-1, 65 NRC 36 n.14 (2007)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-29, 62 NRC 801 (2005)
- energy conservation or efficiency or, as it is sometimes called, demand-side management, is not a reasonable alternative that would advance the goals of the applicant's project; LBP-09-2, 69 NRC 109 n.86 (2009)

## LEGAL CITATIONS INDEX

### CASES

- the reasonableness of energy conservation as an alternative in light of the need for a large amount of baseload electric power is questioned; LBP-09-10, 70 NRC 132 (2009)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-29, 62 NRC 801, 805, 807 (2005), *aff'g* LBP-05-19, 62 NRC 134 (2005)
- energy conservation is not a reasonable alternative that would advance the goals of a nuclear energy project; LBP-08-13, 68 NRC 91 (2008)
- the National Environmental Policy Act does not require an analysis of conservation as an alternative; LBP-08-13, 68 NRC 205 (2008)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-29, 62 NRC 801, 805-08 (2005)
- consideration of energy efficiency is not a reasonable alternative, where that alternative would not achieve applicant's goal of providing additional power to sell on the open market, and is not possible for an applicant who has no transmission or distribution system of its own, and no link to the ultimate power consumer; CLI-10-21, 72 NRC 199 n.7 (2010)
- there is no requirement that an applicant for a uranium enrichment facility must also specifically consider potential electricity conservation measures; CLI-06-10, 63 NRC 462 n.59 (2006)
- when reviewing a license application filed by a private applicant, NRC may appropriately accord substantial weight to the preferences of the applicant and/or sponsor in the siting and design of the project; CLI-06-10, 63 NRC 468 (2006)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-29, 62 NRC 801, 806 (2005), *aff'g* LBP-05-19, 62 NRC 134 (2005)
- neither NRC nor the applicant has the mission or authority to implement a general societal interest in energy efficiency; LBP-08-13, 68 NRC 99 n.282 (2008)
- NRC makes no practical distinction between energy efficiency and energy conservation; LBP-08-13, 68 NRC 99 (2008)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-29, 62 NRC 801, 806-07 (2005)
- the National Environmental Policy Act does not require an analysis of energy conservation or efficiency as an alternative to an early site permit; LBP-08-13, 68 NRC 93 (2008)
- the NEPA rule of reason does not require applicant to consider energy efficiency in its NEPA analysis, because energy efficiency is not a reasonable alternative for a merchant power producer; CLI-10-1, 71 NRC 20 (2010)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-29, 62 NRC 801, 806-08 (2005)
- the National Environmental Policy Act's rule of reason excludes consideration of demand-side management if the proposed new plant is intended to be a merchant plant, selling power on the open market, because it is not feasible for licensee to engage in demand-side management; CLI-10-21, 72 NRC 199 (2010)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-29, 62 NRC 801, 806-08 (2005), *aff'd sub nom. Environmental Law & Policy Center v. NRC*, 470 F.3d 676, 685 (7th Cir. 2006)
- NRC need only consider a range of alternatives in its environmental impact statement that are technologically feasible and economically practicable alternatives for producing baseload power; LBP-10-10, 71 NRC 581 (2010)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-29, 62 NRC 801, 807 (2005)
- applicant is not required to evaluate demand-side management as an alternative because it is not an alternative to the proposal to build new baseload power generation; LBP-09-21, 70 NRC 624 (2009)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-29, 62 NRC 801, 807-08 (2005), *aff'g* LBP-05-19, 62 NRC 134 (2005)
- the National Environmental Policy Act's rule of reason does not demand an analysis of energy efficiency, because conservation measures are beyond the ability of an applicant to implement, and are therefore outside the scope required by a National Environmental Policy Act analysis of reasonable alternatives; LBP-08-13, 68 NRC 93 (2008)

## LEGAL CITATIONS INDEX

### CASES

- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-29, 62 NRC 801, 808 (2005), *aff'd sub nom. Environmental Law & Policy Center v. NRC*, 470 F.3d 676 (7th Cir. 2006)
- applicant is not obliged to examine general efficiency or conservation proposals that would do nothing to satisfy the particular project's goals of producing baseload power; LBP-06-19, 64 NRC 87 (2006); LBP-09-17, 70 NRC 377 (2009); LBP-09-21, 70 NRC 623 (2009)
- contention pleading requirements are deliberately strict, and any contention that does not satisfy them will not be admitted; CLI-06-9, 63 NRC 437 (2006); CLI-06-10, 63 NRC 455 (2006); CLI-06-24, 64 NRC 118 (2006); LBP-07-5, 65 NRC 352 (2007)
- intervenor is obliged to offer specific contentions on material issues, supported by 'alleged facts or expert opinion; CLI-09-8, 69 NRC 323 (2009)
- mere notice pleading does not suffice for admission of contentions; CLI-06-24, 64 NRC 119 (2006)
- NRC contention admission rules require a clear statement of the bases for contentions and the submission of supporting information and references to specific documents and sources that establish the validity of the contention; CLI-06-9, 63 NRC 437 (2006); CLI-06-24, 64 NRC 119 (2006)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-29, 62 NRC 801, 810 (2005), *aff'd sub nom. Environmental Law & Policy Center v. NRC*, 470 F.3d 676 (7th Cir. 2006)
- a solely wind- or solar-powered facility could not satisfy a project's purpose of providing baseload power; LBP-09-17, 70 NRC 377 (2009); LBP-10-6, 71 NRC 383 n.99 (2010)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-05-29, 62 NRC 801, 811 (2005)
- significant inaccuracies and omissions from the environmental report are proper subjects of contentions but details or nuances are not, nor are boards to flyspeck environmental documents; LBP-07-3, 65 NRC 266 n.13 (2007); LBP-10-10, 71 NRC 581 (2010)
- there may be mistakes in an environmental impact statement, but in an NRC adjudication, it is intervenor's burden to show their significance and materiality; LBP-07-3, 65 NRC 266 n.13 (2007); LBP-10-6, 71 NRC 384 n.104 (2010)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-06-20, 64 NRC 15, 20-21 (2006)
- the Commission may review a board ruling pursuant to the inherent supervisory powers where novel questions of potentially broad application are involved; CLI-08-2, 67 NRC 34 n.12 (2008)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-06-20, 64 NRC 15, 21 (2006)
- the Commission has used sua sponte review as a vehicle to provide guidance to a licensing board; CLI-07-1, 65 NRC 5 (2007)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-06-20, 64 NRC 15, 21-22 (2006)
- in a mandatory hearing, a licensing board must narrow its inquiry to those topics or sections in Staff documents that it deems most important and should concentrate on portions of the documents that do not on their face adequately explain the logic, underlying facts, and applicable regulations and guidance; LBP-07-6, 65 NRC 437 (2007); LBP-09-19, 70 NRC 456 (2009)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-07-12, 65 NRC 203, 205 (2007)
- an initial decision is not effective until the Commission completes its review and takes final agency action; LBP-07-9, 65 NRC 549, 616 (2007)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-07-12, 65 NRC 203, 207-08 (2007)
- the Commission expressly rejected the idea that the Staff's review of the ESP application had not been adequate; CLI-08-23, 68 NRC 480 (2008)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), CLI-07-12, 65 NRC 203, 209 (2007)
- if certain safety issues cannot be meaningfully assessed at the ESP stage, the Staff's decision to defer consideration of those effects until a time when they can be accurately assessed is consistent with NEPA's requirements; CLI-07-27, 66 NRC 236 n.116 (2007)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), LBP-04-17, 60 NRC 229, 241 (2004)
- a contention that attacks a Commission rule, or which seeks to litigate a matter that is, or clearly is about to become, the subject of a rulemaking, is inadmissible; LBP-09-8, 69 NRC 739 n.13 (2009)
- neither mere speculation nor bare or conclusory assertions, even by an expert, alleging that a matter should be considered will suffice to allow the admission of a proffered contention; LBP-06-20, 64 NRC 164, 165, 188 (2006)

## LEGAL CITATIONS INDEX

### CASES

- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), LBP-04-17, 60 NRC 229, 245 (2004)  
the concept of need for power and the use of demand-side management as an alternative to building additional generation capacity are inextricably linked; LBP-10-6, 71 NRC 377 n.80 (2010)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), LBP-04-17, 60 NRC 229, 245, 252 (2004), *review denied*, CLI-04-31, 60 NRC 461 (2004)  
licensing boards may reformulate contentions to eliminate extraneous issues or to consolidate issues for a more efficient proceeding; CLI-09-12, 69 NRC 552-53 (2009); CLI-10-2, 71 NRC 33 (2010); LBP-10-16, 72 NRC 403 (2010)
- Exelon Generation Co., LLC* (Early Site Permit for Clinton ESP Site), LBP-04-17, 60 NRC 229, 246-47 (2004)  
a decision may be referred to the Commission if it raises significant and novel legal or policy issues, and resolution of the issues would materially advance the orderly disposition of the proceeding; LBP-09-18, 70 NRC 407 (2009)
