allowing discovery or an evidentiary hearing with respect to safety-related issues to proceed before the final safety evaluation report is issued will serve to further the Commission's objective to ensure a fair, prompt, and efficient resolution of contested issues; CLI-09-15, 70 NRC 1 (2009)

although a presiding officer should issue a separate partial initial decision regarding a limited work authorization request, the board finds no practical or logical basis for separating its consideration of the adequacy of the LWA request from its determination regarding the early site permit with which it is associated; LBP-09-19, 70 NRC 433 (2009)

an initial scheduling order is designed to ensure proper case management; LBP-09-22, 70 NRC 640 (2009)

binding requirements and related recommendations pertaining to petitions to intervene, contentions, responses and replies, standing arguments, and referencing or attaching supporting materials are provided for high-level waste repository proceeding; LBP-08-10, 67 NRC 450 (2008)

## SUBJECT INDEX

boards are authorized to hold prehearing conferences to simplify or clarify the issues for hearing, after which they may admit a revised contention, as long as the revised contention does not add material not raised by the intervenor to make it admissible; LBP-10-14, 72 NRC 101 (2010)

boards have an obligation to establish a case scheduling order, and to advise the Commission of any significant delay in meeting major activities set forth in the hearing schedule; CLI-09-17, 70 NRC 309 (2009)

boards have discretion to reframe a contention for purposes of clarity, succinctness, and a more efficient proceeding; LBP-06-22, 64 NRC 229 (2006)

boards have the duty to conduct a fair and impartial hearing according to law, to take appropriate action to control the prehearing and hearing process, to avoid delay, and to maintain order; LBP-09-22, 70 NRC 640 (2009)

boards' case management decisions, such as determinations of whether to permit additional slide shows or enlarged exhibits, lie well within the discretion of the board; CLI-10-17, 72 NRC 1 (2010)

decisions on evidentiary questions fall within boards' authority to regulate hearing procedures; CLI-10-5, 71 NRC 90 (2010); CLI-10-18, 72 NRC 56 (2010)

examples of sanctions include warning a party that offending conduct will not be tolerated in the future, refusing to consider a filing, denying the right to cross-examine or present evidence, dismissing contentions, imposing sanctions on counsel, or dismissing the party from the proceeding; LBP-10-21, 72 NRC 616 (2010)

if no particular procedure is compelled, the board must exercise its discretion and select the hearing procedure most appropriate for the newly admitted contentions; LBP-10-15, 72 NRC 257 (2010)

if the board concludes that it has no questions for any witness concerning a particular contention, it will so advise the parties and will resolve that contention; LBP-09-22, 70 NRC 640 (2009)

in addressing a petition for a rule waiver, the board, in lieu of holding oral argument to obtain answers to its questions, poses questions for NRC Staff about the waiver petition; LBP-09-29, 70 NRC 1028 (2009)

in establishing and enforcing schedule deadlines, boards must take care not to compromise the Commission's fundamental commitment to a fair and thorough hearing process; LBP-10-21, 72 NRC 616 (2010)

in procedural and scheduling matters, where first-hand contact with and appreciation for all the circumstances surrounding a case are necessary, maximum reliance on the proper discretion of a presiding officer is essential; CLI-10-17, 72 NRC 1 (2010)

in the interest of efficient case management and prompt resolution of adjudications, the Commission has generally enforced the 10-day deadline for appeals strictly, excusing it only in unavoidable and extreme circumstances; CLI-10-26, 72 NRC 474 (2010)

in uncontested cases, boards are expected to issue their final initial decisions generally within 4 to 6 months of the Staff's safety evaluation report and final environmental impact statement issuances; CLI-06-20, 64 NRC 15 (2006)

licensing boards are expected to use the applicable techniques to ensure prompt and efficient resolution of contested issues; CLI-10-4, 71 NRC 56 (2010)

licensing boards have authority to control the schedule for a proceeding to ensure that intervenors have adequate time to prepare new or amended contentions in response to new information; LBP-10-17, 72 NRC 501 (2010)

licensing boards have authority to regulate the course of proceedings, and the Commission generally defers to the boards on case management decisions; CLI-07-28, 66 NRC 275 (2007); CLI-10-28, 72 NRC 553 (2010)

licensing boards have broad discretion to issue procedural orders to regulate the course of proceedings and the conduct of participants; CLI-08-7, 67 NRC 187 (2008)

licensing boards have substantial authority to regulate hearing procedures; LBP-10-21, 72 NRC 616 (2010)

licensing boards may reformulate contentions to eliminate extraneous issues or to consolidate issues for a more efficient proceeding; CLI-09-12, 69 NRC 535 (2009); CLI-10-2, 71 NRC 27 (2010); LBP-10-14, 72 NRC 101 (2010)

licensing boards normally have considerable discretion in making evidentiary rulings; CLI-10-5, 71 NRC 90 (2010)

## SUBJECT INDEX

NRC rules of procedure authorize boards to hold prehearing conferences for the purposes of simplifying or clarifying the issues for hearing, after which a board might admit a revised contention; CLI-09-12, 69 NRC 535 (2009)

NRC's expanding adjudicatory docket makes it critically important that parties comply with NRC pleading requirements and that the board enforce those requirements; CLI-10-27, 72 NRC 481 (2010)

only in truly unavoidable and extreme circumstances are late filings to be accepted; LBP-10-21, 72 NRC 616 (2010)

selection of hearing procedures for contentions at the outset of a proceeding is not immutable because the availability of Subpart G procedures depends critically on whether the credibility of eyewitnesses is important in resolving a contention, and witnesses relevant to each contention are not identified until after contentions are admitted; LBP-10-16, 72 NRC 361 (2010)

strict enforcement of deadlines furthers the dual interests of efficient case management and prompt resolution of adjudications; LBP-10-21, 72 NRC 616 (2010)

the Commission generally declines to interfere with a board's day-to-day case management decisions unless there has been an abuse of power; CLI-08-7, 67 NRC 187 (2008)

the Commission regards good sense, judgment, and managerial skills as the proper guideposts for conducting an efficient hearing; LBP-10-21, 72 NRC 616 (2010)

the initial scheduling order is to be issued within 55 days of the board decision granting intervention and admitting contentions; LBP-09-22, 70 NRC 640 (2009)

the licensing board shall not entertain motions for summary disposition in a uranium enrichment facility proceeding unless the board finds that such motions, if granted, are likely to expedite the proceeding; CLI-09-15, 70 NRC 1 (2009); LBP-09-22, 70 NRC 640 (2009)

the presiding officer is authorized to hold conferences before or during the hearing for settlement, simplification of contentions, or any other proper purpose; LBP-08-11, 67 NRC 460 (2008)

to avoid unnecessary delays in a uranium enrichment facility proceeding, the licensing board should not routinely grant requests for extensions of time and should manage the schedule such that the overall hearing process is completed within 28-1/2 months; CLI-09-15, 70 NRC 1 (2009)

to the extent applicant may be subject to unreasonable or burdensome discovery requests in the future, it is free to seek relief from the board, which has ample authority to prevent or modify unreasonable discovery demands; CLI-09-6, 69 NRC 128 (2009)

upon admission of a contention in a licensing proceeding, the board must identify the specific hearing procedures to be used to settle the contention; LBP-10-16, 72 NRC 361 (2010)

with an eye toward mitigating prejudice to nonbreaching participants, boards must tailor sanctions to bring about improved future compliance; LBP-10-21, 72 NRC 616 (2010)

### CASE OR CONTROVERSY

a justiciable controversy must involve adverse parties representing a true clash of interests and the questions raised must be presented in an adversary context and in a form historically viewed as capable of resolution through the judicial process; LBP-09-14, 70 NRC 193 (2009); LBP-09-25, 70 NRC 867 (2009)

although the Commission is not strictly bound by the mootness doctrine, the agency's adjudicatory tribunals have generally adhered to the principle; LBP-09-15, 70 NRC 198 (2009)

the mootness doctrine derives from the Constitution's limitation of federal courts' jurisdiction to cases or controversies; LBP-09-15, 70 NRC 198 (2009)

this requirement of Article III is rooted in the separation of powers; LBP-09-15, 70 NRC 198 (2009)

when a federal court dismisses a claim as moot and avoids any further consideration of the merits of that claim, it does so because the claim no longer satisfies the case or controversy requirement of Article III; LBP-09-15, 70 NRC 198 (2009)

### CATEGORICAL EXCLUSION

certain actions are designated as categorically excluded from the requirement to prepare an environmental assessment or an environmental impact statement; CLI-10-18, 72 NRC 56 (2010)

such actions do not individually or cumulatively have a significant effect on the human environment and thus neither an environmental assessment nor an environmental impact statement is required; CLI-10-18, 72 NRC 56 (2010)

the Commission may find special circumstances warranting a categorical exclusion upon its own initiative, or upon the request of an interested person; CLI-10-18, 72 NRC 56 (2010)

## SUBJECT INDEX

### CERTIFICATION

applicant, 2 years before and 1 year before the scheduled date for the initial fuel loading, shall submit a report to NRC containing a certification updating the financial information, including a copy of the financial instrument to be used; LBP-09-18, 70 NRC 385 (2009)

because petitioner had not made a prima facie case for rule waiver, the Board declined to certify the matter to the Commission and found that it was prohibited from considering the matter further; CLI-10-29, 72 NRC 556 (2010)

boards must certify the matter of rule waiver to the Commission for a determination of whether the application of the regulation should be waived or an exception granted under the specific circumstances presented; LBP-10-12, 71 NRC 656 (2010)

for combined license applications, the report must contain a certification that financial assurance for decommissioning will be provided no later than 30 days after the Commission publishes notice in the *Federal Register* of the initial fuel load; LBP-09-18, 70 NRC 385 (2009)

if applicant chooses to submit a complete and integrated emergency plan at the early site permit stage, applicant also is required to make a good-faith effort to obtain a certification from federal, state, and local governmental agencies with emergency planning responsibilities; LBP-09-19, 70 NRC 433 (2009)

if petitioner has made a prima facie showing of special circumstances for rule waiver, then the board certifies the matter to the Commission; LBP-10-15, 72 NRC 257 (2010)

in the pre-license application phase, the board denies the Department of Energy's motion to strike the State of Nevada's certification that it has made all its documentary material available on the Licensing Support Network; LBP-08-5, 67 NRC 205 (2008)

licensing boards must promptly certify to the Commission all novel legal or policy issues that would benefit from early Commission consideration; CLI-09-15, 70 NRC 1 (2009)

motions will be rejected if they do not include certification by the attorney or representative of the moving party that they have made a sincere effort to contact the other parties in the proceeding, to explain to them the factual and legal issues raised in the motion, and to resolve those issues; LBP-09-22, 70 NRC 640 (2009)

section 2.1009(b) requires certification to the Pre-License Application Presiding Officer that the party or potential party has complied with the implementation procedures of section 2.1009(a)(2) and that to the best of his or her knowledge, the documentary material specified in 10 C.F.R. 2.1003 has been identified and made electronically available; LBP-09-6, 69 NRC 367 (2009)

the board may refer certain rulings to the Commission, and certain participants in the proceeding may request that the presiding officer certify to the Commission rulings not otherwise immediately appealable pursuant to 10 C.F.R. 2.1015(b); CLI-10-10, 71 NRC 281 (2010)

to certify a waiver petition to the Commission, the board must find that petitioner has met extremely high standards showing the existence of compelling circumstances in which the rationale of the regulation is undercut; LBP-10-12, 71 NRC 656 (2010)

See also Design Certification; Directed Certification; Reactor Design Certification

### CERTIFIED QUESTIONS

boards are encouraged to certify, as soon as possible, novel legal or policy questions related to admitted issues; CLI-08-4, 67 NRC 171 (2008)

outside the context of petitions for interlocutory review, the Commission may take interlocutory review of questions or rulings that a licensing board either refers or certifies to the Commission; CLI-07-1, 65 NRC 1 (2007)

the Commission addresses a certified question by a licensing board on the admissibility of proposed contentions involving the Waste Confidence Rule; CLI-10-19, 72 NRC 98 (2010)

where appropriate, the Commission will exercise its authority to instruct the board to certify novel license renewal issues; CLI-07-1, 65 NRC 1 (2007)

### CERTIORARI

a conflict in the Circuits is a key criterion informing the exercise of the Supreme Court's certiorari jurisdiction; CLI-07-8, 65 NRC 124 (2007)

### CHEMICAL SPILLS

hydrofluoric acid exposure to licensee operators is assessed a civil monetary penalty in the amount of \$32,500 on the basis of a determined Severity Level III violation; LBP-10-18, 72 NRC 519 (2010)

## SUBJECT INDEX

### CIVIL PENALTIES

for failure of the radio-only activation feature of the emergency notification system to meet its test acceptance criteria, a civil penalty of \$130,000 was imposed on licensee; DD-09-1, 69 NRC 501 (2009)  
hydrofluoric acid exposure to licensee operators is assessed a civil monetary penalty in the amount of \$32,500 on the basis of a determined Severity Level III violation; LBP-10-18, 72 NRC 519 (2010)

### CLASSIFIED INFORMATION

a dispute over the Commission's authority to direct the Department of Energy to disclose classified information to cleared state representatives over DOE's objection as the originating agency is deferred until there is an actual controversy over a specific document request; CLI-08-21, 68 NRC 351 (2008)  
access to such information for introduction into a proceeding or for the preparation of a party's case is controlled by 10 C.F.R. 2.905; CLI-08-21, 68 NRC 351 (2008)

all decisions on questions of classification or declassification of information shall be made by appropriate classification officials in the NRC and are not subject to de novo review; CLI-09-15, 70 NRC 1 (2009)

documents containing classified information or safeguards information must be evaluated paragraph by paragraph and those paragraphs containing classified information or SGI are to be redacted and the remaining paragraphs not containing such sensitive material are to be made available for disclosure to the public; LBP-10-2, 71 NRC 190 (2010)

FOIA exemption from disclosure applies; LBP-10-2, 71 NRC 190 (2010)

guidance governing the classification of information related to the design, construction, operation, and safeguarding of a uranium enrichment facility is described; CLI-09-15, 70 NRC 1 (2009)

hearings on alternative terrorist scenario claims could not be conducted in a meaningful way without substantial disclosure of classified and safeguards information on threat assessments and security arrangements and without substantial litigation over their significance; CLI-08-26, 68 NRC 509 (2008)  
hearings on the essentially limitless range of conceivable but highly unlikely terrorist scenarios could not be meaningfully conducted without substantial disclosure of classified and safeguards information on threat assessments and security arrangements and without substantial litigation over their significance; CLI-08-1, 67 NRC 1 (2008)

NRC Staff must include a notice of intent to introduce classified information in the notice of hearing, if it would be impracticable to avoid such introduction; CLI-08-21, 68 NRC 351 (2008)

persons needing access to classified portions of a uranium enrichment facility license application will be required to have the appropriate security clearance for the level of classified information to which access is required; CLI-09-15, 70 NRC 1 (2009)

### CLEAN WATER ACT

Congress severely limited NRC's scope of inquiry into section 316(a) determinations to examining whether the EPA or the state agency considered its permit to be a section 316(a) determination; CLI-07-16, 65 NRC 371 (2007)

for purposes of NPDES permits, effluent is defined as liquid waste that is discharged into a river, lake, or other body of water, and it includes heat; CLI-07-16, 65 NRC 371 (2007)

if applicant's plant utilizes a once-through cooling system, applicant shall provide a copy of a Clean Water Act § 316a variance or equivalent state permit and supporting documentation; CLI-07-16, 65 NRC 371 (2007)

NPDES permits may address thermal discharges into bodies of water; CLI-07-16, 65 NRC 371 (2007)

regulation of discharges to groundwater is not authorized by the act, and so applicant's environmental report must address those discharges; LBP-10-14, 72 NRC 101 (2010)

### CLIMATE CHANGE

allegation that the Final Safety Analysis report must address the impact of global warming on the transmission grid and the increased probability of loss of offsite power events is inadmissible; LBP-08-16, 68 NRC 361 (2008)

applicant may perform its climate change analysis for the high-level waste repository using a specified percolation rate; LBP-10-22, 72 NRC 661 (2010)

applicant's climate change analysis for the 990,000-year period may be limited to the effects of increased water flow through the repository as a result of climate change; LBP-10-22, 72 NRC 661 (2010)

climate projections should be based on cautious but reasonable assumptions; LBP-10-22, 72 NRC 661 (2010)

## SUBJECT INDEX

contention alleging that the environmental report failed to address the alleged greenhouse gas and global climate disruption impacts resulting from prematurely killing trees is inadmissible; LBP-09-10, 70 NRC 51 (2009)

DOE may elect to use the method specified in 10 C.F.R. 63.342(c)(2) to analyze the effects of climate change during the post-10,000-year period, regardless of whether it is required to analyze the effects of climate change during the initial 10,000-year period; LBP-10-22, 72 NRC 661 (2010)

DOE must assess the effects of climate change during the 990,000-year period regardless of whether it necessarily must assess climate change during the initial 10,000-year period under the criteria set forth in section 63.342(a) and (b); LBP-10-22, 72 NRC 661 (2010)

the plain language of 10 C.F.R. 63.305 does not say anything about analyzing future climate based upon the historical geological record; LBP-10-22, 72 NRC 661 (2010)

this issue clearly falls within any reasonable consideration of the concepts expressed in 10 C.F.R. 51.45; LBP-08-6, 67 NRC 241 (2008)

### CLOSED HEARINGS

all NRC hearings are to be public except as requested under section 181 of the Atomic Energy Act or otherwise ordered by the Commission; LBP-10-5, 71 NRC 329 (2010)

before a licensing board will close future proceedings, the party seeking closure must demonstrate that the need to close the hearing outweighs the strong presumption that all licensing board proceedings will be open to the public; LBP-10-2, 71 NRC 190 (2010)

during closed portions of oral argument, only the board, NRC Staff, applicant, and individuals who signed nondisclosure affidavits pursuant to protective order would be permitted to remain in the hearing room; LBP-10-5, 71 NRC 329 (2010)

legal authority exists for nondisclosure and protection of security-related information concerning the physical protection of nuclear power plants under 10 C.F.R. 2.390(d)(1); LBP-10-5, 71 NRC 329 (2010)

licensing boards have authority to hold in camera hearings under 10 C.F.R. 2.390(b)(6); LBP-10-5, 71 NRC 329 (2010)

parties can propose creation of a public copy of the transcript, with appropriate redactions for protected information; LBP-10-5, 71 NRC 329 (2010)

section 2.390(d)(1) of 10 C.F.R. provides legal authority for nondisclosure and protection of security-related information concerning the physical protection of nuclear power plants, and for the closing of portions of hearings and other sessions in which such information will necessarily be discussed; LBP-10-5, 71 NRC 329 (2010)

to determine whether a tribunal should block public access to a judicial proceeding, a two-part experience and logic test is applied; LBP-10-2, 71 NRC 190 (2010)

### COLLATERAL ESTOPPEL

a board in one proceeding is not constrained to follow the rulings of another board absent explicit affirmation by the Commission; LBP-08-24, 68 NRC 691 (2008)

a court inclined to apply collateral estoppel based on a judgment that is subject to appeal may want to avoid the question by staying the case pending the appeal; LBP-09-24, 70 NRC 676 (2009)

a party's failure to advance a collateral estoppel argument does not perforce trigger the waiver principle, thus precluding a tribunal from applying collateral estoppel; LBP-09-24, 70 NRC 676 (2009)

a tribunal, when considering the applicability of collateral estoppel, may not look behind the decision to determine whether its findings of fact and conclusions of law were well founded; LBP-09-24, 70 NRC 676 (2009)

an exception to the application of collateral estoppel occurs when broad public policy considerations or special public interest factors are involved such that an agency's need for flexibility outweighs the reasons underlying this repose doctrine so as to favor relitigation of a particular issue; LBP-09-24, 70 NRC 676 (2009)

application is appropriate in administrative adjudicatory proceedings; LBP-09-24, 70 NRC 676 (2009)

boards have some leeway to consider the existence of other factors that could outweigh the jurisprudential reasons for applying the doctrine; LBP-09-24, 70 NRC 676 (2009)

collateral estoppel effect is given to judgments granting a motion to dismiss, when the party against which collateral estoppel is invoked had a full and fair opportunity to oppose the dismissal; LBP-08-23, 68 NRC 679 (2008)

## SUBJECT INDEX

correctness of a prior decision is not a public policy factor upon which the application of the doctrine depends; CLI-10-23, 72 NRC 210 (2010)

in ASLBP proceedings, collateral estoppel may bar a party from relitigating the admissibility of a contention when an earlier board refused to admit the same contention in an earlier proceeding involving the same facility; LBP-08-23, 68 NRC 679 (2008)

in determining whether to apply collateral estoppel, a board should not look into the jury trial to determine whether the verdict was correct; CLI-10-23, 72 NRC 210 (2010)

issues not decided by special verdict are difficult to decipher for collateral estoppel purposes because of the uncertainty whether the precise issue was actually determined in the prior criminal case; CLI-10-23, 72 NRC 210 (2010)

licensing boards may give collateral estoppel effect to issues previously decided in a district court proceeding; CLI-10-23, 72 NRC 210 (2010)

pendency of an appeal need not preclude reliance on the lower court's decision being appealed to estop relitigation of the same matter in another forum; LBP-09-24, 70 NRC 676 (2009)

potentially duplicative and unnecessary litigation in the second forum does not take place while an appeal is pending, but if the appeal later proves successful, thus invalidating the original judgment upon which collateral estoppel had been based, then the litigation in the second forum is allowed to proceed; LBP-09-24, 70 NRC 676 (2009)

questions over the equivalence of the "knowledge" standard that governed the jury and the standard applicable in the administrative proceeding can lead a board to exercise its discretion not to apply collateral estoppel; LBP-09-24, 70 NRC 676 (2009)

relitigation of issues of law or fact that have been finally adjudicated by a tribunal of competent jurisdiction in a proceeding involving the same parties or their privies is precluded; CLI-10-23, 72 NRC 210 (2010); LBP-08-15, 68 NRC 294 (2008)

the board is prohibited from considering in a COL proceeding matters that were resolved in an ESP proceeding when the COL application references the ESP; LBP-08-23, 68 NRC 679 (2008)

the doctrine has long been recognized as part of NRC adjudicatory practice; CLI-10-23, 72 NRC 210 (2010)

the doctrine is applicable if the issue sought to be precluded is the same as that involved in the prior action, the issue was actually litigated in a prior action, there is a valid and final judgment in the prior action, and the determination was essential to the prior judgment; CLI-10-23, 72 NRC 210 (2010)

the doctrine is grounded on considerations of economy of judicial time and the public policy favoring the establishment of certainty in legal relations; LBP-09-24, 70 NRC 676 (2009)

the doctrine promotes the compelling public interest in preserving the acceptability of judicial dispute resolution against the corrosive disrespect that would follow if the same matter were twice litigated to inconsistent results; LBP-09-24, 70 NRC 676 (2009)

the party against which collateral estoppel is applied must have had a full and fair opportunity to litigate its position, but it need not necessarily have had discovery or an evidentiary hearing; LBP-08-23, 68 NRC 679 (2008)

the party to be prevented from relitigating an issue must have been a party to the prior action, but the party seeking to prevent relitigation through the application of collateral estoppel need not have been a party; CLI-10-23, 72 NRC 210 (2010)

the possibility that the jury verdict was internally inconsistent can lead a board to exercise its discretion not to apply collateral estoppel; LBP-09-24, 70 NRC 676 (2009)

this form of issue preclusion prevents the relitigation of issues of law or fact that have been finally adjudicated by a tribunal of competent jurisdiction in a proceeding involving the same parties or their privies; LBP-09-24, 70 NRC 676 (2009)

to determine whether to apply collateral estoppel to a general verdict, a trial judge is to examine the record of the prior trial in detail to see if the jury might have disbelieved some aspects of the acts charged; LBP-09-24, 70 NRC 676 (2009)

to preclude the relitigation of an issue, four factors must be present; LBP-09-24, 70 NRC 676 (2009)

where all factors are met, the application of collateral estoppel by the subsequent tribunal is to some degree a discretionary matter; LBP-09-24, 70 NRC 676 (2009)

## SUBJECT INDEX

where the impact of delay is a concern, the desirability of avoiding any further delay in reaching a final merits determination can be a key discretionary factor counseling nonreliance upon the collateral estoppel principle, even if that doctrine otherwise appeared applicable; LBP-09-24, 70 NRC 676 (2009)  
whether collateral estoppel should be applied is a legal question that the Commission reviews de novo; CLI-10-23, 72 NRC 210 (2010)

### COLOCATED UNITS

a contention challenging the absence in the environmental report of consideration of impacts from a severe radiological accident at one unit on other collocated units is admitted; LBP-09-17, 70 NRC 311 (2009)  
a contention that impacts from a severe radiological accident at any one unit on operation of other units at the site had not been, and should be, considered in the application's environmental report is found to be moot; LBP-10-10, 71 NRC 529 (2010)  
contention that applicant failed to address the impact of a chain reaction that leads to more than one unit experiencing a severe accident is found inadmissible; LBP-10-10, 71 NRC 529 (2010)

### COMBINED LICENSE APPLICATION

a challenge to applicant's site-specific measurements of adsorption and retention coefficients relative to hydrological radionuclide transport is an admissible contention; LBP-09-16, 70 NRC 227 (2009)  
a COLA must include a description of the programs, and their implementation, necessary to ensure that the systems and components meet the requirements of the ASME Boiler and Pressure Vessel Code in accordance with 10 C.F.R. 50.55a; LBP-10-21, 72 NRC 616 (2010)  
a contention asserting that the COLA is incomplete because it incorporates by reference a standard design certification and a pending application for a revision to that certified design is inadmissible; LBP-09-10, 70 NRC 51 (2009)  
a contention was found to be inadmissible because the COL application contained petitioner's asserted omissions; CLI-10-1, 71 NRC 1 (2010)  
a description of equipment and measures taken to ensure that any exposures to radioactive materials such as low-level radioactive waste are kept as low as reasonably achievable, including a description of the provisions for storage of solid waste containing radioactive materials is required; LBP-09-10, 70 NRC 51 (2009)  
a license application will not be held in abeyance until the design certification rulemaking is completed; LBP-09-16, 70 NRC 227 (2009)  
a NEPA analysis is not the vehicle for exploring questions about the potential for a terrorist attack upon a proposed nuclear facility; LBP-08-16, 68 NRC 361 (2008)  
a report must be included that indicates how reasonable assurance will be provided that funds will be available to decommission the facility; LBP-09-18, 70 NRC 385 (2009)  
a Staff request to an applicant for more information does not make an application incomplete; CLI-08-15, 68 NRC 1 (2008)  
agencies are to exercise a degree of skepticism in dealing with the self-serving statements from the prime beneficiary of a project and to look at the general goal of the project, rather than only those alternatives by which a particular applicant can reach its own specific goals; LBP-09-10, 70 NRC 51 (2009)  
although petitioners need to explain how or why they disagree with statements in the application or environmental report, there is no presumption that statements and assessments in the application or ER are correct or accurate; LBP-09-10, 70 NRC 51 (2009)  
amendment of a combined license application to comply with an amended aircraft impacts rule during the pendency of the COL application could form the basis for a late-filed contention; CLI-10-1, 71 NRC 1 (2010)  
amendments to license applications are not limited to minor details, but may include significant changes; LBP-10-17, 72 NRC 501 (2010)  
an agency is not authorized to grant conditional approval to plans that do nothing more than promise to do tomorrow what the statute requires today; LBP-10-20, 72 NRC 571 (2010)  
an application's lack of consideration of any alternative to offsite disposal of low-level radioactive waste is a material issue for litigation; LBP-09-18, 70 NRC 385 (2009)

## SUBJECT INDEX

an Atomic Safety and Licensing Board should hold any contentions on the reactor design filed in the COLA adjudication in abeyance, pending the results of the rulemaking proceeding on the design certification; CLI-09-4, 69 NRC 80 (2009)

analysis of compliance with section 103d of the Atomic Energy Act is a function performed by the NRC Staff as part of its evaluation of the COLA; CLI-09-20, 70 NRC 911 (2009)

applicant fails to address the management of low-level radioactive waste plan for a longer term than envisioned in the COLA; LBP-10-20, 72 NRC 571 (2010)

applicant for a combined license is expressly authorized by NRC's regulations to incorporate by reference a certified design; CLI-09-8, 69 NRC 317 (2009); LBP-09-2, 69 NRC 87 (2009); LBP-09-8, 69 NRC 736 (2009)

applicant for a construction permit or a combined license may, at its own risk, reference in its application a design for which a design certification application has been docketed but not granted; CLI-10-1, 71 NRC 1 (2010); LBP-09-10, 70 NRC 51 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-10-17, 72 NRC 501 (2010); LBP-10-20, 72 NRC 571 (2010)

applicant is required to present a cost-benefit analysis (and therefore provide cost estimates) for nuclear power plants and facilities only where the applicant's alternatives analysis indicates that there is an environmentally preferable alternative; LBP-08-21, 68 NRC 554 (2008)

applicant may not define the objectives of its action in terms so unreasonably narrow that only one alternative would accomplish the applicant's goals because this would make the agency's EIS alternatives analysis a foreordained formality; LBP-09-10, 70 NRC 51 (2009)

applicant may reference a design certification that the Commission has docketed but not granted; LBP-08-17, 68 NRC 431 (2008); LBP-09-16, 70 NRC 227 (2009); LBP-10-9, 71 NRC 493 (2010)

applicant may reference both an early site permit and a standard design certification in its application; LBP-09-19, 70 NRC 433 (2009)

applicant must describe plans for implementing guidance and strategies intended to maintain or restore core cooling, containment, and spent fuel pool cooling capabilities if large areas of the plant are lost due to explosions or fire; LBP-10-5, 71 NRC 329 (2010)

applicant must describe the means for controlling and limiting the radioactive effluents and radiation exposures from the proposed nuclear reactors; LBP-10-20, 72 NRC 571 (2010)

applicant must file an environmental report that describes the proposed action, states its purposes, describes the environment affected, and discusses the project's environmental impacts in proportion to their significance and alternatives to the proposal; CLI-10-2, 71 NRC 27 (2010)

applicant must have a program to achieve occupational doses and doses to members of the public that are as low as is reasonably achievable; LBP-10-20, 72 NRC 571 (2010)

applicant must include the proposed inspections, tests, and analyses, including those applicable to emergency planning, to be performed and the acceptance criteria that are necessary and sufficient to support the Commission's finding that a COL can be granted; LBP-09-19, 70 NRC 433 (2009)

applicant should explain its current plan for management of low-level radioactive waste, given the lack of an offsite disposal facility, and the potential environmental impact of retaining LLRW at the reactor site for an extended period; LBP-09-16, 70 NRC 227 (2009); LBP-09-27, 70 NRC 992 (2009)

applicant's COLA discussion of LLRW management contained no omission where the applicant addressed the closure of the Barnwell LLRW disposal facility, discussed in detail additional waste minimization measures, and committed to build an additional storage facility in accordance with NRC guidelines if further additional storage became necessary; LBP-10-20, 72 NRC 571 (2010)

applicant's contingent long-term onsite low-level radioactive waste storage facility and the contents of its final safety analysis report with regard to that facility are not governed by 10 C.F.R. 52.79(a)(4) as a part of the reactor facilities to be constructed under the requested combined licenses; LBP-10-8, 71 NRC 433 (2010)

applicant's environmental report is required to analyze the alternatives available for reducing or avoiding adverse environmental effects; LBP-09-10, 70 NRC 51 (2009)

applicant's environmental report must address the environmental costs of management of low-level wastes and high-level wastes related to uranium fuel cycle activities; LBP-08-15, 68 NRC 294 (2008)

applicants are not required to address or demonstrate whether the issuance of a COL will improve the general welfare, increase the standard of living, or strengthen free competition in private enterprise; LBP-08-17, 68 NRC 431 (2008)

## SUBJECT INDEX

applicants are to consider long-term onsite low-level radioactive waste storage, but 10 C.F.R. 52.79(a)(3) sets no quantity or time restrictions relative to onsite storage of such waste; CLI-09-16, 70 NRC 33 (2009)

applicants must submit a decommissioning report containing a certification that the funding assurance will be provided no later than 30 days after the NRC publishes notice in the *Federal Register* of its scheduled date for initial fuel loading; LBP-09-18, 70 NRC 385 (2009); LBP-09-21, 70 NRC 581 (2009)

applications may be modified or improved during the NRC review process; LBP-10-17, 72 NRC 501 (2010)

at the time the COLA is submitted, it must identify the method of decommissioning funding assurance that the applicant proposes to use and to show that the method complies with any applicable financial test; LBP-09-18, 70 NRC 385 (2009)

because a contention focuses on the safety-related aspects of a COL application, it is not apparent that the issue resolved in the board's admissibility ruling has any particular implications for a contention challenging the environmental impacts of long-term onsite low-level radioactive waste storage admitted and pending in another proceeding; LBP-10-8, 71 NRC 433 (2010)

because the environmental report is the only environmental document available when NRC issues its notice of opportunity to request a hearing, all initial contentions necessarily focus on the adequacy of the applicant's ER, but the public will have a new opportunity to file environmental contentions when the NRC Staff issues the environmental impact statement or environmental analysis; LBP-09-10, 70 NRC 51 (2009)

because the requirement of 10 C.F.R. 50.75(b)(3) applies to the amount of financial assurance specified in the decommissioning report, it is readily apparent that the report must explain how that requirement will be fulfilled; LBP-09-15, 70 NRC 198 (2009)

challenges to the Commission regulations regarding the design certification process are inadmissible; LBP-09-18, 70 NRC 385 (2009)

Commission policy of permitting the conduct of an adjudicatory proceeding on a combined license that references a design certification that the Commission has not approved does not violate the Atomic Energy Act of 1954, 10 C.F.R. Part 52, or judicial decisions; CLI-09-4, 69 NRC 80 (2009)

design certification rulemaking and individual combined license adjudicatory proceedings may proceed simultaneously, and issues raised in an adjudicatory proceeding that are appropriately addressed in the generic design certification rulemaking are to be referred to the rulemaking for resolution; CLI-09-8, 69 NRC 317 (2009)

detailed design, location, and health impacts information on low-level radioactive waste storage is not required in the combined license application; LBP-10-20, 72 NRC 571 (2010)

docketing decisions are not challengeable in an adjudicatory proceeding; CLI-08-15, 68 NRC 1 (2008)

each environmental report must take Table S-3 as the basis for evaluating the contribution of the environmental effects of the fuel cycle to the environmental costs of licensing the reactor; CLI-09-21, 70 NRC 927 (2009)

electric utilities need not include operating and maintenance costs in their demonstration of financial qualifications; LBP-09-10, 70 NRC 51 (2009)

emergency planning information for the emergency planning zone, generally consisting of an area with a 10-mile radius from the proposed reactor, must be included; LBP-09-10, 70 NRC 51 (2009)

environmental reports and environmental impact statements must include an assessment of all environmental impacts and alternatives, even though NRC has no jurisdiction to regulate such impacts or jurisdiction to impose such alternatives; LBP-09-10, 70 NRC 51 (2009)

focus of a contention must be on the COLA as it exists when the contention is filed and must point out an omission or deficiency with regard to the application as of that moment in time; LBP-09-10, 70 NRC 51 (2009)

for a contention of omission, petitioner need only identify the regulatively required missing information and provide enough facts to show that the application is incomplete; LBP-09-3, 69 NRC 139 (2009)

from a safety standpoint, the required low-level radioactive waste storage information is tied to the COL applicant's particular plans for compliance through design, operational organization, and procedures; CLI-10-2, 71 NRC 27 (2010)

## SUBJECT INDEX

- if a COLA is amended or material new information subsequently becomes available, petitioners must be given a fair opportunity to file new or amended contentions challenging these changes; LBP-09-10, 70 NRC 51 (2009)
- if new information becomes available in the course of Waste Confidence Rulemaking proceedings that contravenes the COLA, petitioner may file a motion to admit a new or amended contention; LBP-09-18, 70 NRC 385 (2009)
- if the application references an early site permit, applicant must demonstrate that the chosen design falls within the parameters specified in the ESP or, on the safety side, request a variance; LBP-09-19, 70 NRC 433 (2009)
- if the environmental impact of mining activities is potentially significant, then the failure of the environmental report to disclose the location of the offsite mine does not immunize it from being the subject of a legitimate contention; LBP-09-10, 70 NRC 51 (2009)
- in adjudicatory proceedings it is the license application, not the NRC Staff review, that is at issue; CLI-08-15, 68 NRC 1 (2008)
- including language deferring the obligation that would otherwise apply to COL applicants in 10 C.F.R. 50.75(b)(4), but including no equivalent provision in section 50.75(b)(3), confirms that the Commission did not intend to defer the requirement of section 50.75(b)(3) until after the license is issued; LBP-09-15, 70 NRC 198 (2009)
- information in the form of a report, as described in 10 C.F.R. 50.75, indicating how reasonable assurance will be provided that funds will be available to decommission the facility must be included; LBP-09-15, 70 NRC 198 (2009)
- information on kinds and quantities of materials expected to be produced during plant operation and the means for controlling and limiting radioactive effluents and radiation exposures to comply with Part 20 limits must be included; CLI-09-16, 70 NRC 33 (2009)
- information required in a COLA by section 52.79(a)(3) is largely dependent on the individual applicant's plans; LBP-09-27, 70 NRC 992 (2009)
- it is not only the statistical improbability of a severe accident that bears on the determination whether a severe accident should be anticipated and thereby considered in the context of a combined license application; LBP-10-10, 71 NRC 529 (2010)
- low-level radioactive waste storage information required by 10 C.F.R. 52.79(a)(3) is tied to the COL applicant's particular plans for compliance through design, operational organization, and procedures; LBP-10-20, 72 NRC 571 (2010)
- NRC is required to consider measures to mitigate the environmental impacts of the project; LBP-09-10, 70 NRC 51 (2009)
- NRC regulations permit an applicant to reference a docketed, but not yet certified, design; CLI-10-9, 71 NRC 245 (2010)
- NRC safety regulations require that applicant address the mitigation and potential consequences of a severe accident; LBP-09-10, 70 NRC 51 (2009)
- NRC Staff issuance of a request for additional information does not alone establish deficiencies in an application, and intervention petitioner must do more than merely quote an RAI to justify admission of a contention; CLI-09-16, 70 NRC 33 (2009); LBP-09-10, 70 NRC 51 (2009)
- paragraph (4) of 10 C.F.R. 52.79(a) governs only those structures that are a component of the facility to be constructed under the combined license; LBP-10-8, 71 NRC 433 (2010)
- Part 51 does not authorize NRC to regulate or enforce compliance with all other environmental laws and regulations; LBP-09-10, 70 NRC 51 (2009)
- perfection in applicant's QA program is not required, but once a pattern of QA violations has been shown, applicant has the burden of showing that the license may be granted notwithstanding the violations; LBP-10-9, 71 NRC 493 (2010)
- petitioner is obligated to read the pertinent portions of the license application, state the applicant's position and the petitioner's opposing view, and explain why it disagrees with the applicant; LBP-09-25, 70 NRC 867 (2009)
- petitioners' claim that applicant must pursue the prepayment method for decommissioning conflicts with NRC guidance and rules and so is outside the permissible scope of the COL proceeding; LBP-09-21, 70 NRC 581 (2009)

## SUBJECT INDEX

- petitioners' request for additional information on redacted portions of the combined license application is denied because the public record indicates the nature of the redacted information; CLI-09-4, 69 NRC 80 (2009)
- purported failures to provide detailed information regarding design, location, and worker health impacts do not identify a deficiency in final safety analysis report low-level radioactive waste information that is required to be provided in the COL application; LBP-10-8, 71 NRC 433 (2010)
- reasonable assurance of adequate decommissioning funding must be provided, and this assurance must identify the method or methods of funding the applicant plans to use, and the assurance must provide the information required by 10 C.F.R. 50.75(e)(1)(iii)(B) if applicant plans to use a parent company guarantee; LBP-09-15, 70 NRC 198 (2009)
- reference to an early site permit must include a safety analysis report that either includes or incorporates by reference the ESP site safety analysis report and that contains additional information and analyses sufficient to demonstrate that the design of the facility falls within the site characteristics and design parameters specified in the ESP; LBP-09-19, 70 NRC 433 (2009)
- safety regulations in 10 C.F.R. 52.79(a)(3) require applicant to describe the kinds and quantities of radioactive materials that will be produced in operating a proposed new power plant and to describe the means for controlling and limiting the radioactive effluents and radiation exposures; CLI-10-2, 71 NRC 27 (2010)
- section 2.309(f)(1)(vi) is not a second hurdle of materiality that an intervenor must meet, but rather requires that intervenor identify the specific parts of the COLA that it disputes and show that resolution of those disputes is material to the licensing decision; LBP-09-27, 70 NRC 992 (2009)
- severe accident mitigation alternatives analysis must be site specific and given careful consideration in order to comply with the Atomic Energy Act and the National Environmental Policy Act; LBP-09-10, 70 NRC 51 (2009)
- the application must explain how applicant intends to manage low-level radioactive waste in the absence of an offsite disposal facility; LBP-09-4, 69 NRC 170 (2009)
- the board did not create a new regulatory requirement in finding that an application must show how the proposed facility will deal with long-term storage of low-level radioactive waste; CLI-10-2, 71 NRC 27 (2010)
- the environmental report is required to address a list of environmental considerations that correspond to the environmental considerations that NEPA § 102(2)(C)(i)-(v) requires the agency to address in the environmental impact statement; LBP-09-16, 70 NRC 227 (2009)
- the environmental report shall discuss the impacts of the proposed action on the environment in proportion to their significance; LBP-09-25, 70 NRC 867 (2009)
- the fact that a COL is subject to, or even expected to, change does not make it legally deficient because NRC follows a dynamic licensing process; LBP-09-10, 70 NRC 51 (2009)
- the fact that an extended low-level radioactive waste storage plan is contingent does not mean that it does not need to comply with 10 C.F.R. 52.79 or that it is subject to a relaxed standard; LBP-10-20, 72 NRC 571 (2010)
- the final safety analysis report must contain analysis of a severe accident involving a fission product release from the core into the containment including any fission product cleanup systems intended to mitigate the consequences of the accidents; LBP-09-10, 70 NRC 51 (2009)
- the final safety analysis report must include the kinds and quantities of radioactive materials expected to be produced by low-level radioactive waste in the operation and the means for controlling and limiting radioactive effluents and radiation exposures within the limits set forth in 10 C.F.R. Part 20; LBP-10-20, 72 NRC 571 (2010)
- the FSAR shall include a level of information sufficient to enable the Commission to reach a final conclusion on all safety matters that must be resolved by the Commission before issuance of a combined license; LBP-10-20, 72 NRC 571 (2010)
- the issue of need for power is a part of NRC's COL NEPA review process; LBP-08-16, 68 NRC 361 (2008)
- the requirement of Part 51 that the environmental report cover all significant environmental impacts associated with a project includes offsite as well as onsite impacts; LBP-09-10, 70 NRC 51 (2009)

## SUBJECT INDEX

- the requirement that the designated amount of financial assurance be covered by an acceptable method arises concurrently with the requirement that the applicant submit a decommissioning report to NRC; LBP-09-15, 70 NRC 198 (2009)
- there is no prohibition on an applicant using a plan for compliance with section 52.79(a)(3) that includes contingent plans should future low-level radioactive waste storage become necessary; LBP-10-20, 72 NRC 571 (2010)
- there is no requirement in section 52.79(a)(3) for applicant's FSAR to include details regarding building materials and high-integrity containers, exact location, or health impacts on employees for the contingent onsite long-term LLRW storage facility; LBP-10-20, 72 NRC 571 (2010)
- topics that must be covered in the final safety analysis report and the level of information that is sufficient for each topic are specified in 10 C.F.R. 52.79; LBP-10-20, 72 NRC 571 (2010)
- when a COLA references an early site permit, neither applicant nor Staff needs to address environmental issues resolved in the ESP proceeding unless new and significant information arises on those issues; LBP-10-1, 71 NRC 165 (2010)
- when an applicant decides it no longer wishes to have the agency evaluate its application, the usual approach is for the applicant to request that the agency permit it to withdraw its licensing request; LBP-09-23, 70 NRC 659 (2009)
- COMBINED LICENSE PROCEEDING**
- any power level selected at the COL stage other than the target value used in the environmental impact statement's alternative energy analysis for the early site permit would constitute new information that, if found to be significant, would have to be evaluated at the construction permit or combined license application stage; CLI-07-14, 65 NRC 216 (2007)
- compliance with applicable radiation standards is deferred at the early site permit stage, and can only be determined in a COL or CP proceeding; CLI-07-27, 66 NRC 215 (2007)
- it is appropriate to defer issues concerning the effects of short-term damage to the environment and the irretrievable commitment of resources to the construction permit or combined license stage; CLI-07-14, 65 NRC 216 (2007)
- when one or more particular environmental impacts cannot be meaningfully assessed at the ESP stage, those matters may be designated as "unresolved," provided they do not interfere with the Staff's ability to determine whether there is any obviously superior alternative to the proposed site; CLI-07-27, 66 NRC 215 (2007)
- COMBINED LICENSE PROCEEDINGS**
- a claim of deficiency in construction of the concrete containment is insufficient because it was not linked to the application at issue in the proceeding; CLI-10-9, 71 NRC 245 (2010)
- a contention alleging a breakdown of applicant's quality assurance program must provide evidence that there is legitimate doubt as to whether the plant can be operated safely; LBP-10-9, 71 NRC 493 (2010)
- a contention arising from a matter resolved in an early site permit proceeding is within the scope of a combined license proceeding that references the ESP if it concerns whether emergency planning matters resolved in the ESP should be revisited; LBP-08-15, 68 NRC 294 (2008)
- a contention challenging information in a design certification rulemaking, if otherwise admissible, should be referred to the Staff for consideration in the rulemaking, and held in abeyance by the licensing board pending the outcome of the rulemaking; LBP-09-3, 69 NRC 139 (2009)
- a contention that challenges compliance with fire protection regulations at an existing unit is outside the scope of a combined license proceeding; CLI-10-9, 71 NRC 245 (2010)
- a decision dismissing the contested adjudication relating to a COL has no impact on the subsequent need to conduct a mandatory hearing relating to the COLA, over which the Commission would preside; LBP-09-23, 70 NRC 659 (2009)
- a matter need not be actually litigated in order to be "resolved" in an early site permit proceeding; LBP-08-15, 68 NRC 294 (2008)
- a safety contention arising from a matter resolved in an early site permit proceeding is within the scope of a combined license proceeding that references the ESP if it concerns whether the site characteristics and design parameters or a term or condition specified in the ESP have been met or whether a variance from the ESP requested by the COL applicant is unwarranted or should be modified; LBP-08-15, 68 NRC 294 (2008)

## SUBJECT INDEX

a well-pleaded environmental contention concerning the effects of long-term onsite management of low-level radioactive waste is admissible; CLI-10-2, 71 NRC 27 (2010)

adequacy of applicant's control room and equipment design for radiological protections, in light of the fact that the reactor is proposed to be located within the EPZ of an existing reactor, is an issue that is appropriate in a combined license or standard design certification proceeding; LBP-09-10, 70 NRC 51 (2009)

all proffered contentions must be within the scope of the proceeding as defined by the Commission in its initial hearing notice and order referring the proceeding to the licensing board; LBP-09-3, 69 NRC 139 (2009)

allegation that NRC has inadequately characterized human health impacts of radiation exposure from the high-level waste repository is inadmissible in a combined license proceeding; LBP-08-16, 68 NRC 361 (2008)

an environmental contention is not litigable in a COL proceeding if it has already been resolved in an early site permit proceeding; CLI-09-3, 69 NRC 68 (2009)

an environmental contention may be admitted during a COL proceeding if it concerns a significant issue that was not resolved in the early site permit proceeding or if it involves the impacts of construction and operation of the facility and significant new information has been identified; LBP-08-15, 68 NRC 294 (2008)

an uncontested proceeding is subject to the mandatory hearing requirements; LBP-08-15, 68 NRC 294 (2008)

any contention directed at a design undergoing rulemaking review fails on its face to satisfy the admission requirements because all matters that are the subject of a rulemaking are outside the scope of licensing proceedings; LBP-09-8, 69 NRC 736 (2009)

applicant's plan for storage of low-level radioactive waste is a litigable issue because it is material to the findings the NRC must make to support the action that is involved in a combined license proceeding; LBP-08-15, 68 NRC 294 (2008)

assertion that applicant might need to obtain a Part 72 license is irrelevant, because a grant of the COL could be accompanied by grant of a Part 72 general license if the applicant complies with certain conditions; LBP-09-21, 70 NRC 581 (2009)

assertions that building two new nuclear reactors in a troubled economy is fiscally irresponsible is outside the scope the proceeding; LBP-09-10, 70 NRC 51 (2009)

business strategies in the context of need for power and any challenges to them are outside the scope of a licensing proceeding; LBP-10-10, 71 NRC 529 (2010)

challenges to a severe accident mitigation design alternatives analysis are within the scope of COL proceedings; LBP-10-14, 72 NRC 101 (2010)

character or integrity issues are expected to be directly germane to the challenged licensing action; CLI-10-9, 71 NRC 245 (2010)

claims related to the decommissioning of the facility are not currently ripe for review and are outside the scope of the proceeding; LBP-09-16, 70 NRC 227 (2009)

contention alleging that the environmental report failed to address the alleged greenhouse gas and global climate disruption impacts resulting from prematurely killing trees is inadmissible; LBP-09-10, 70 NRC 51 (2009)

contention alleging that the threatened eastern fox snake inhabits the nuclear plant site and that construction activities for the new reactor will kill snakes, destroy their habitat, and might eliminate them from the area is within the scope of the proceeding; LBP-09-16, 70 NRC 227 (2009)

contention challenging applicant's failure to consider deliberate and malicious aircraft crashes in its environmental report is inadmissible; LBP-08-21, 68 NRC 554 (2008)

contention that concerns onsite and offsite impacts of active and passive dewatering associated with the proposed project satisfies the admissibility criteria; LBP-09-10, 70 NRC 51 (2009)

contentions concerning an applicant's plan for disposal of Greater-Than-Class-C radioactive waste cannot be admitted because disposal of that type of waste is the responsibility of the federal government; LBP-09-4, 69 NRC 170 (2009)

contentions on information a COL applicant should supply in order to satisfy NRC regulations regarding the safety of long-term storage of low-level radioactive waste are application-specific and thus would benefit from further development by the board and the parties; CLI-09-16, 70 NRC 33 (2009)

## SUBJECT INDEX

- contentions on the environmental impacts of spent fuel storage are inadmissible; LBP-09-18, 70 NRC 385 (2009)
- controls other countries may impose on mining and milling, and the impacts of such activities, are outside the scope of the proceeding; LBP-09-17, 70 NRC 311 (2009)
- even assuming arguendo that applicant might someday require a permit under Part 61 for a disposal facility, that issue is too speculative at the combined license stage and is therefore not material to the findings the NRC must make to support the action that is involved in the COL proceeding; LBP-09-27, 70 NRC 992 (2009)
- failure to frame a safety concern arising from the interaction of the proposed design certification document amendment with the existing certified standard design and/or a facility-specific provision of the COLA leaves the contention as an inadmissible challenge to the Part 52 regulatory framework; LBP-09-3, 69 NRC 139 (2009)
- generic issues are to be resolved as part of the design certification rulemaking process, and any concerns related to those issues must be addressed in the rulemaking and not within the scope of a COL proceeding; LBP-09-8, 69 NRC 736 (2009)
- given that the *Federal Register* notice defines the scope of the issues that may properly be raised in a request for a hearing, it also defines the scope of the issues that could reasonably be deemed resolved during an ESP proceeding; LBP-08-15, 68 NRC 294 (2008)
- how applicant intends to handle low-level radioactive waste in the absence of an offsite disposal facility is material to the findings the agency must make on a combined license; LBP-09-3, 69 NRC 139 (2009)
- if a combined license application references a design certification, then the presiding officer shall not admit a contention concerning severe accident design mitigation alternatives unless the contention demonstrates that the site characteristics fall outside the site parameters in the standard design certification; LBP-09-10, 70 NRC 51 (2009)
- if applicant proceeds with a site-specific reactor design instead of a certified design, any admissible issues would have to be addressed in the licensing adjudication; CLI-08-15, 68 NRC 1 (2008)
- if applicant requests a Commission finding on the completion of inspections, tests, analyses, and acceptance criteria needed for issuance of a COL, the Commission is required to identify these ITAAC in the notice of hearing published in the *Federal Register* for the proceeding; LBP-09-19, 70 NRC 433 (2009)
- if petitioner identifies specific omissions in the combined license application, those omissions should be addressed in a contention to the board which, in turn, should refer such a contention to the Staff for consideration in the design certification rulemaking, and hold that contention in abeyance, if it is otherwise admissible; LBP-08-21, 68 NRC 554 (2008)
- in a future proceeding, petitioner could proffer an application-specific contention suitable for litigation on the subject of onsite storage of low-level radioactive waste; CLI-09-3, 69 NRC 68 (2009)
- in ASLBP proceedings, collateral estoppel may bar a party from relitigating the admissibility of a contention when an earlier board refused to admit the same contention in an earlier proceeding involving the same facility; LBP-08-23, 68 NRC 679 (2008)
- in cases involving construction or operation of a nuclear power reactor, proximity to the proposed facility has been considered sufficient to establish the requisite standing elements; LBP-09-3, 69 NRC 139 (2009)
- in determining whether an individual or organization should be granted party status in a proceeding based on standing as of right, the agency applies contemporaneous judicial standing concepts; LBP-09-3, 69 NRC 139 (2009)
- in the absence of a 10 C.F.R. 2.335 waiver petition, any challenge brought to aspects of a referenced certified reactor design is outside the scope of a COL proceeding; LBP-08-16, 68 NRC 361 (2008)
- in the overall COLA/DCD process, petitioners will have an opportunity to file new contentions related to material new information regarding site-specific plant design issues; LBP-09-8, 69 NRC 736 (2009)
- inadequacy of environmental report's reliance on Table S-3 regarding radioactive effluents from the uranium fuel cycle is not litigable in a COL proceeding; LBP-08-16, 68 NRC 361 (2008)
- issues concerning a reactor design certification application should be resolved in the design certification rulemaking and not in an individual COL proceeding; CLI-08-15, 68 NRC 1 (2008)

## SUBJECT INDEX

items for which sufficient information is lacking at the early site permit stage of the licensing process may be subject to deferral for consideration at the combined license stage; LBP-09-19, 70 NRC 433 (2009)

licensing boards should refer contention challenging a reactor design certification to the Staff for consideration in the design certification rulemaking, and hold that contention in abeyance, if it is otherwise admissible; CLI-08-15, 68 NRC 1 (2008)

low-level radioactive waste disposal contentions have been admitted when that issue was not sufficiently discussed in the applications and there was no mention of the closure of the Barnwell facility; LBP-09-18, 70 NRC 385 (2009)

matters resolved in an early site permit proceeding are considered resolved in a subsequent COL proceeding when the COL application references the ESP, subject to certain exceptions; LBP-08-15, 68 NRC 294 (2008)

members of intervenor organizations who reside, work, or recreate within 50 miles of the proposed nuclear power plant have proximity-based standing; LBP-10-9, 71 NRC 493 (2010)

NRC adjudicatory hearings are not EIS editing sessions; LBP-10-10, 71 NRC 529 (2010)

only the management of Class B and Class C wastes is properly the subject of a contention in a combined license proceeding; LBP-09-16, 70 NRC 227 (2009)

Part 61 is inapplicable in a combined license proceeding because it applies only to land disposal facilities that receive waste from others, not to onsite facilities where licensee intends to store its own low-level radioactive waste; LBP-09-27, 70 NRC 992 (2009)

petitioner has not met the pleading requirements because it has not demonstrated any link between the purported violations at an existing unit and any future noncompliance or resulting safety risk affecting proposed units; CLI-10-9, 71 NRC 245 (2010)

petitioner's assertions regarding the historical fire protection situation at the existing unit is outside the scope of the combined license proceeding; LBP-08-21, 68 NRC 554 (2008)

petitioner's challenge to the one-fire assumption in the AP1000 design constitutes an impermissible challenge to Commission regulations; CLI-10-9, 71 NRC 245 (2010)

petitioner's dispute with the combined license application concerning completeness of the AP1000 Design Certification Document is referred to Staff for resolution during the rulemaking on the certification of the AP1000 design and any hearing on the merits is held in abeyance pending the outcome of the rulemaking; LBP-08-21, 68 NRC 554 (2008)

petitioners may not attack Commission regulations; CLI-08-15, 68 NRC 1 (2008)

petitioners' concerns regarding applicant's commitments to relax conservatism in its laboratory testing and groundwater release analysis are in regard to the revised analysis to be submitted in response to the Staff request for additional information and therefore are dismissed as outside the scope of the proceeding; LBP-09-16, 70 NRC 227 (2009)

portions of a contention that allege that the environmental report also failed to adequately address the zone of environmental impact, impact on listed species, and appropriate mitigation are admissible; LBP-09-10, 70 NRC 51 (2009)

questions of the safety and environmental impacts of onsite low-level waste storage are largely site- and design-specific and appropriately decided in an individual licensing proceeding, provided that litigants proffer properly framed and supported contentions; LBP-09-10, 70 NRC 51 (2009); LBP-09-16, 70 NRC 227 (2009)

ratepayer impacts are outside the scope of the proceeding because the state, not the NRC, is charged with protecting ratepayers' interests; LBP-09-10, 70 NRC 51 (2009)

rationale for and scope of process are explained; LBP-10-7, 71 NRC 391 (2010)

releases from the nuclear fuel cycle in general, incidences of childhood cancers near nuclear power plants, and a request for the NRC to address radioactive releases from the burning of coal at fossil fuel plants are outside the scope of the proceeding; LBP-09-16, 70 NRC 227 (2009)

request that a combined license application be held in abeyance until the design certification is completed must be denied; LBP-09-18, 70 NRC 385 (2009)

revenue decoupling is a state regulatory matter that is outside the scope of, and not material to, the NRC licensing process; LBP-09-10, 70 NRC 51 (2009)

## SUBJECT INDEX

- standing to intervene in proceedings involving nuclear power reactors without the need to plead injury, causation, and redressability is presumed if petitioner lives within 50 miles of the nuclear power reactor; LBP-08-15, 68 NRC 294 (2008)
- state agencies may participate as nonparty interested states; LBP-08-15, 68 NRC 294 (2008)
- Table S-3 does not include health effects from the effluents described in the table, and that issue may be the subject of litigation in individual licensing proceedings; LBP-09-16, 70 NRC 227 (2009)
- the appropriate path for any petitioner's challenges to proposed reactor design revisions is through participation in those rulemaking proceedings, not through a combined license proceeding; LBP-09-2, 69 NRC 87 (2009)
- the board is prohibited from considering in a COL proceeding matters that were resolved in an ESP proceeding when the COL application references the ESP; LBP-08-23, 68 NRC 679 (2008)
- the Commission may have more to offer regarding the need for a NEPA carbon footprint analysis in new reactor licensing proceedings; LBP-09-19, 70 NRC 433 (2009)
- the design certification rulemaking and individual COL adjudicatory proceedings may proceed simultaneously, and issues raised in an adjudicatory proceeding that are appropriately addressed in the generic design certification rulemaking are to be referred to the rulemaking for resolution; LBP-10-17, 72 NRC 501 (2010)
- the environmental impacts related to storage of spent fuel under Part 72 have been generically evaluated under two previous rulemakings and the Commission's waste confidence proceedings, and thus need not be reassessed; LBP-09-21, 70 NRC 581 (2009)
- the fact that disposal of dredged or fill material in wetlands is regulated by the Environmental Protection Agency and the U.S. Army Corps of Engineers does not render a contention inadmissible; LBP-09-10, 70 NRC 51 (2009)
- the licensing board rules on issues that concern guidance and strategies for addressing certain circumstances that might arise from potential beyond-design-basis explosions and fires; LBP-10-5, 71 NRC 329 (2010)
- the need for design features to guard against design basis threats is outside the scope of a COL proceeding because it is the subject of an ongoing rulemaking; LBP-09-2, 69 NRC 87 (2009)
- the proximity presumption applies to hearings on combined licenses; LBP-09-16, 70 NRC 227 (2009)
- the scope of the proceeding and thus of admissible contentions is defined by the Commission in its initial hearing notice and order referring the proceeding to the Licensing Board; LBP-10-9, 71 NRC 493 (2010)
- the universe of potential contentions includes site-specific contentions that do not implicate issues appropriately considered in a design certification rulemaking; CLI-09-8, 69 NRC 317 (2009)
- the Waste Confidence Rule is applicable to all new reactor proceedings and contentions challenging the rule or seeking its reconsideration are inadmissible; LBP-09-18, 70 NRC 385 (2009)
- to the degree the general precept that a rule, including a design certification, cannot be challenged in an adjudication might be seen as placing such matters outside the scope of the proceeding; LBP-10-21, 72 NRC 616 (2010)
- use of the term "resolved" in 10 C.F.R. 52.39(a) implies an intent to grant preclusive effect only when the appropriate agency official makes a determination concerning the issue in dispute; LBP-08-15, 68 NRC 294 (2008)
- whether applicant will improve the general welfare, increase the standard of living, or strengthen free competition in private enterprise is not a litigable issue; LBP-08-16, 68 NRC 361 (2008)
- whether other permits may be required from other agencies is outside the scope of NRC proceedings, and those concerns are properly raised before those respective permitting authorities; LBP-09-21, 70 NRC 581 (2009)
- COMBINED LICENSES**
- a COL is issued for a period of 40 years; LBP-09-16, 70 NRC 227 (2009)
- a license will not be prohibited if the foreign entity's influence is on other licensing activities not of primary concern to the NRC, or if the corporation follows NRC-implemented conditions to isolate safety matters from foreign control; LBP-09-4, 69 NRC 170 (2009)
- absent a future exemption request, applicant cannot obtain a combined license for its proposed facility until the design certification rulemaking process for a COLA-referenced revision to the

## SUBJECT INDEX

COLA-referenced design certification document is completed by incorporating the revision into the certified standard design; LBP-09-3, 69 NRC 139 (2009)

action items identify significant information requirements that do not affect Staff's ability to make the requisite safety findings for issuance of an early site permit, but nevertheless merit tracking and resolution during the safety review performed for a subsequent CP or COL application referencing the ESP; CLI-07-27, 66 NRC 215 (2007)

an opportunity for hearing will be provided in the *Federal Register* notice of fuel loading, regarding whether inspections, tests, or analyses that have not been found to have been met under 10 C.F.R. 52.97(a)(2) prior to issuance of the COL; LBP-09-19, 70 NRC 433 (2009)

any permit conditions imposed that are not met before a combined license referencing the early site permit is issued will attach to the COL; LBP-09-19, 70 NRC 433 (2009)

applicant is required to establish a quality assurance program and to apply that program to its safety-related activities; LBP-10-9, 71 NRC 493 (2010)

applicant must obtain the financial instrument for decommissioning funding and submit a copy to the Commission as provided in 10 C.F.R. 50.75(e)(3); LBP-09-15, 70 NRC 198 (2009)

applicant who may apply for a construction permit under Part 50, or a COL under Part 52, may apply for an early site permit; LBP-09-19, 70 NRC 433 (2009)

applicant will also have to demonstrate that the site-specific parameters are bounded by the parameters developed for the certified design; LBP-09-2, 69 NRC 87 (2009)

decommissioning plans are not required until the applicant files a post-shutdown decommissioning activities report, which is not due until 2 years before permanent cessation of operation; LBP-09-21, 70 NRC 581 (2009)

each combined license applicant will have to determine whether it will adopt *in toto* the certified design, or whether it will take exemptions thereto and/or departures therefrom; LBP-09-2, 69 NRC 87 (2009)

funding for financial assurance for decommissioning must be covered by prepayment, an external sinking fund, or a surety method, insurance, or other guarantee including a parent company guarantee; LBP-09-18, 70 NRC 385 (2009)

holder of a combined license must begin filing biannual reports on the status of decommissioning funding once the Commission has made a finding that all acceptance criteria in the license have been met; LBP-09-15, 70 NRC 198 (2009)

if licensee changes its method of decommissioning funding assurance, the new method will also have to pass any applicable financial test; LBP-09-15, 70 NRC 198 (2009)

in making the findings required for issuance of a combined license, the Commission shall treat as resolved those matters resolved in connection with the issuance or renewal of a design certification rule; LBP-10-21, 72 NRC 616 (2010)

interested persons may request a hearing as to the adequacy of construction after issuance of a combined license; CLI-09-2, 69 NRC 55 (2009)

no later than 1 year after issuance of the COL or at the start of construction, whichever is later, the COL licensee must submit its schedule for completing the inspections, tests, or analyses and provide schedule updates; LBP-09-19, 70 NRC 433 (2009)

Part 61 only applies to the land disposal of radioactive waste received from other persons and is therefore inapplicable to the issue of low-level waste generated and managed onsite at the nuclear power plant; LBP-09-10, 70 NRC 51 (2009)

perfection in plant construction and the construction quality assurance program is not a precondition for a license, but rather what is required is reasonable assurance that the plant, as built, can and will be operated without endangering the public health and safety; LBP-10-9, 71 NRC 493 (2010)

procedures for issuance of a combined construction permit and conditional operating license for a nuclear power plant and the conduct of the hearing are described; LBP-10-7, 71 NRC 391 (2010)

representations, assumptions, and unresolved issues discussed in the final environmental impact statement neither place limitations on the ESP or the ESP holder, nor bind a CP or COL applicant in the preparation of future applications referencing the ESP; CLI-07-27, 66 NRC 215 (2007)

Staff's environmental impact statement for a COL must discuss the reasonably foreseeable environmental impacts of the proposed project; CLI-10-2, 71 NRC 27 (2010)

the financial test for a parent company guarantee is a material issue because the Staff must decide whether the test is satisfied in order to grant the COL; LBP-09-15, 70 NRC 198 (2009)

## SUBJECT INDEX

the parent company guarantee is based on a financial test and may only be used if the guarantee and test are as contained in Appendix A to 10 C.F.R. Part 30; LBP-09-18, 70 NRC 385 (2009)

the process for taking exemptions to and departures from a certified design is set forth in 10 C.F.R. Part 52, App. D, § VIII; LBP-09-2, 69 NRC 87 (2009)

the purpose of the financial qualification requirements of 10 C.F.R. 50.33(f) is to ensure the protection of public health and safety and the common defense and security, not to evaluate the financial wisdom of the proposed project; LBP-09-10, 70 NRC 51 (2009)

the requirements of 10 C.F.R. 50.75 are intended to ensure that entities who construct and operate a nuclear power plant will have sufficient funds at the end of the operational life of the plant to complete the decommissioning of the plant; LBP-09-15, 70 NRC 198 (2009)

the Waste Confidence Rule applies to the spent fuel discharged from any new generation of reactor designs; LBP-08-21, 68 NRC 554 (2008)

the Waste Confidence Rule covers the storage of spent fuel in new or existing facilities; LBP-09-10, 70 NRC 51 (2009); LBP-09-17, 70 NRC 311 (2009)

to demonstrate financial qualification, applicant must show that it possesses funds or has reasonable assurance of obtaining funds necessary to cover estimated construction and fuel cycle costs; LBP-09-10, 70 NRC 51 (2009)

### COMITY

the Commission's decision not to entertain a state intervenor's integrity and competence contentions in the high-level waste repository proceeding is consistent with its practice of extending comity to other governmental entities; CLI-09-14, 69 NRC 580 (2009)

### COMMENTS

the draft environmental impact statement is distributed for public comment and, based on the comments received, a review of information provided by the applicant, and supplemental independent information and analysis, the Staff prepares and issues a final EIS; LBP-09-7, 69 NRC 613 (2009)

### COMMISSIONERS, AUTHORITY

NRC may not disqualify attorneys representing multiple witnesses, unless it has concrete evidence that the attorney will obstruct and impede the investigation; CLI-08-11, 67 NRC 379 (2008)

NRC regulations do not address conflicts of interest as such, but the absence of a specific rule does not interfere with the Commission's inherent supervisory authority over the conduct of adjudicatory proceedings; CLI-08-11, 67 NRC 379 (2008)

the Commission could disqualify a party's counsel from participating in an NRC proceeding upon a concrete showing that a conflict of interest or other ethics concern would obstruct its obtaining a full range of necessary safety or environmental information, or would otherwise threaten the integrity of its regulatory process; CLI-08-11, 67 NRC 379 (2008)

the Commission has plenary supervisory authority to interpret and customize its process for individual cases; CLI-08-11, 67 NRC 379 (2008)

### COMMON DEFENSE AND SECURITY

a board must determine whether an ESP application and the record of the proceeding contain sufficient information, and the review of the application by the NRC Staff has been adequate, to support a negative finding on the question of whether the issuance of an early site permit will be inimical to the common defense and security or to the health and safety of the public; LBP-07-9, 65 NRC 539 (2007)

a domestic corporation in which a foreign entity has an ownership interest is considered controlled or dominated if its will is subjugated to the will of the foreign entity on primary safety matters or access policies that may be inimical to the national defense and security of the United States; LBP-09-4, 69 NRC 170 (2009)

an affirmative finding by the Commission that issuance of a license for a uranium enrichment facility will not be inimical to the common defense and security is required; CLI-09-15, 70 NRC 1 (2009)

an application to renew the operating license of a commercial nuclear power plant may be granted only if the Commission finds that the continued operation of the facility will be in accord with the common defense and security and will provide adequate protection to the health and safety of the public; LBP-08-24, 68 NRC 691 (2008); LBP-08-25, 68 NRC 763 (2008)

congressional intent for the phrase "common defense and security," is analyzed in the context of foreign ownership prohibitions; LBP-08-6, 67 NRC 241 (2008)

## SUBJECT INDEX

creditor regulations may be augmented by license conditions as necessary to allow ownership arrangements, such as sale and leaseback, not covered by this section, provided it can be found that such arrangements are not inimical to the common defense and security of the United States; CLI-09-15, 70 NRC 1 (2009); CLI-10-4, 71 NRC 56 (2010)

in cases involving no concern over import or export of nuclear materials, common defense and security considerations under 10 C.F.R. 40.32(d) are not implicated; LBP-09-1, 69 NRC 11 (2009)

in the absence of unusual circumstances, the Commission need not look beyond the nonproliferation safeguards in determining whether the common defense and security standard is met; LBP-09-1, 69 NRC 11 (2009)

intervenor are not entitled to litigate common defense and security considerations under 10 C.F.R. 40.32(d) unless the specific common defense and security risk asserted is reasonably related to, and would arise as a direct result of, the specific license amendments that the Commission is asked to approve; LBP-09-1, 69 NRC 11 (2009)

intervenor's nuclear proliferation concern is premised upon future third-party activities that are unrelated to the specific activities authorized by license amendments and is not litigable because it is not a direct consequence of the proposed license amendments or the Commission's approval thereof; LBP-09-1, 69 NRC 11 (2009)

NRC case law and precedent do not prohibit considering the percentage of foreign ownership as one element in NRC's overall analysis and finding of whether the foreign entity is a threat to the national defense and security of the United States; LBP-09-4, 69 NRC 170 (2009)

the requirement that materials licenses not be inimical to the common defense and security has been interpreted as referring to the absence of foreign control over the applicant; LBP-09-1, 69 NRC 11 (2009)

this standard refers principally to the safeguarding of special nuclear material, the absence of foreign control over the applicant, the protection of restricted data, and the availability of special nuclear material for defense needs; CLI-09-9, 69 NRC 331 (2009)

**COMPENSATORY DAMAGES**

licensing boards have awarded payment of litigation fees and expenses from a licensee to an intervenor if there has been legal harm to the intervenors caused by some activity or action of the licensee; LBP-09-1, 69 NRC 11 (2009)

**COMPLIANCE**

a declaration of compliance is not a demonstration of compliance; LBP-08-25, 68 NRC 763 (2008)

compliance with NRC guidance documents is neither necessary nor necessarily sufficient to satisfy the legal requirements that each application must meet under the Atomic Energy Act; LBP-08-25, 68 NRC 763 (2008)

failure of an applicant to address any guidance topics or deviation from the guidance provided does not rise to the level of failure to comply with NRC regulations; LBP-08-9, 67 NRC 421 (2008)

in the absence of evidence to the contrary, NRC does not presume that a licensee will violate agency regulations wherever the opportunity arises; LBP-10-20, 72 NRC 571 (2010)

with an eye toward mitigating prejudice to nonbreaching participants, boards must tailor sanctions to bring about improved future compliance; LBP-10-21, 72 NRC 616 (2010)

**COMPUTER MODELING**

applicant's claim that computer models should be excused from the mandatory disclosure requirements because they entail proprietary information is rejected; LBP-10-23, 72 NRC 692 (2010)

applicant's "control" of computer models prepared by and in possession of a contractor is illustrated by the fact that if NRC Staff requested these documents, applicant could obtain and provide them; LBP-10-23, 72 NRC 692 (2010)

the term "document" as used in 10 C.F.R. 2.336 includes computer models and associated electronic inputs, outputs, data, and software; LBP-10-23, 72 NRC 692 (2010)

to rule that disclosure under 10 C.F.R. 2.336(a)(2)(i) is limited to formal contractual deliverables would encourage applicants to draft consulting contracts to insulate themselves from the obligation to disclose critical computer modeling information; LBP-10-23, 72 NRC 692 (2010)

## SUBJECT INDEX

### CONCLUSIONS OF LAW

the Commission will review legal questions de novo, and will reverse a licensing board's legal rulings if they are a departure from or contrary to established law; CLI-09-7, 69 NRC 235 (2009); CLI-10-5, 71 NRC 90 (2010); CLI-10-18, 72 NRC 56 (2010)

### CONCRETE

a claim of deficiency in construction of the concrete containment is insufficient because it was not linked to the application at issue in the proceeding; CLI-10-9, 71 NRC 245 (2010)  
burden is on applicant to show that concrete in containment structures will maintain its integrity during the extended period of operations or to develop an aging management plan that ensures that any indication of degradation is detected and remediated; LBP-08-13, 68 NRC 43 (2008)  
the stability of ISFSI concrete pads holding dry spent fuel storage casks during earthquakes is addressed; DD-07-2, 65 NRC 365 (2007)

### CONDUCT OF PARTIES

licensing boards have broad discretion to sanction willful, prejudicial, and bad-faith behavior; LBP-09-1, 69 NRC 11 (2009)  
parties and their representatives are expected to conduct themselves as they should before a court of law; LBP-10-21, 72 NRC 616 (2010)

### CONFIDENTIAL INFORMATION

although the SUNSI access procedures do not impose a high threshold for demonstrating need, they must be applied consistent with the principle that it is important to prevent unnecessary disclosure of sensitive information; LBP-09-5, 69 NRC 303 (2009)  
handling of confidential commercial or financial (proprietary) information that has been submitted to the agency is governed by 10 C.F.R. 2.390; CLI-10-24, 72 NRC 451 (2010)  
if applicants and petitioners cannot agree on the terms of a confidentiality and nondisclosure agreement, then they shall inform the presiding officer, indicate specifically the areas where they disagree, and then move the presiding officer for issuance of a protective order; CLI-07-18, 65 NRC 399 (2007)  
if petitioners offer a reason for needing such information material to the findings a licensing board must make and otherwise explain why publicly available versions of the application would not be sufficient to provide the basis and specificity for a proffered contention, they would satisfy the need criterion; LBP-09-5, 69 NRC 303 (2009)  
NRC records are protected from disclosure under FOIA Exemption 2 to the extent they contain internal analytic guidance, operating rules, or practices, the disclosure of which would aid terrorists or saboteurs seeking to circumvent security measures designed to protect nuclear materials; LBP-08-7, 67 NRC 361 (2008)  
petitioner's lack of access to SUNSI may hinder it in its ability to demonstrate why publicly available versions of the application would not be sufficient to provide the basis and specificity for a proffered contention, but this does not absolve a petitioner from at least endeavoring to address this criterion; LBP-09-5, 69 NRC 303 (2009)  
the condition that requires investigation of an individual's character to grant access to restricted data is not linked to the general license criteria; LBP-09-6, 69 NRC 367 (2009)  
the procedure for seeking access to SUNSI does not provide a method for general or topical access, but only access to information necessary to meaningfully participate in an adjudicatory proceeding and to provide the basis and specificity of a proffered contention; LBP-09-5, 69 NRC 303 (2009)  
the requirement to discuss the basis for a proffered contention to obtain access to SUNSI is not to be equated with the discussion that would be necessary to support an admissible contention; LBP-09-5, 69 NRC 303 (2009)

### CONFIRMATORY ANALYSIS

NRC Staff's revision of the Final Safety Evaluation Report to account for applicant's confirmatory analysis would not, standing alone, be a materially different result that justifies reopening the record, because it would neither change the outcome of the renewal proceeding nor impose a different licensing condition on an applicant; LBP-08-12, 68 NRC 5 (2008)

### CONFIRMATORY ORDER

claims by a nonlicensee to the effect that the root causes or facts underpinning a confirmatory order are inaccurate are not valid claims in an enforcement proceeding; LBP-08-14, 68 NRC 279 (2008)

## SUBJECT INDEX

it is unlikely that petitioners will often obtain hearings on confirmatory enforcement orders because such orders presumably enhance rather than diminish public safety; LBP-08-14, 68 NRC 279 (2008); LBP-09-20, 70 NRC 565 (2009)

petitioners may not seek to enhance the measures outlined in an enforcement order; LBP-08-14, 68 NRC 279 (2008)

the scope of an enforcement proceeding is limited to whether an enforcement order should be sustained; LBP-07-16, 66 NRC 277 (2007)

### CONFLICT OF INTEREST

NRC may not disqualify attorneys representing multiple witnesses, unless it has concrete evidence that the attorney will obstruct and impede the investigation; CLI-08-11, 67 NRC 379 (2008)

NRC regulations do not address conflicts of interest as such, but the absence of a specific rule does not interfere with the Commission's inherent supervisory authority over the conduct of adjudicatory proceedings; CLI-08-11, 67 NRC 379 (2008)

the Commission could disqualify a party's counsel from participating in an NRC proceeding upon a concrete showing that a conflict of interest or other ethics concern would obstruct its obtaining a full range of necessary safety or environmental information, or would otherwise threaten the integrity of its regulatory process; CLI-08-11, 67 NRC 379 (2008)

the Commission takes seriously any allegation that an unresolved conflict of interest or other ethical breach threatens the integrity of an NRC licensing proceeding; CLI-08-11, 67 NRC 379 (2008)

### CONSERVATION

See Energy Conservation

### CONSIDERATION OF ALTERNATIVES

a categorical exclusion exists for materials licenses associated with irradiators; CLI-10-18, 72 NRC 56 (2010)

a federal agency must study, develop, and describe appropriate alternatives to the recommended courses of action in any proposal that involves unresolved conflicts concerning alternative uses of available resources; LBP-06-28, 64 NRC 460 (2006)

a no-reactor or no-action alternative that was not raised before the board is therefore improperly raised on appeal; CLI-10-9, 71 NRC 245 (2010)

a practical definition of "reasonable" for use when selecting alternative concepts would be that an alternative is reasonable if it is both feasible (possible, viable) and nonspeculative; LBP-10-10, 71 NRC 529 (2010)

a reviewing agency determines whether an alternative is appropriate by looking at the objectives (i.e., purpose and need) of a project sponsor; LBP-09-2, 69 NRC 87 (2009)

a rule of reason governs the agency's duty to identify and consider all reasonable alternatives under the National Environmental Policy Act; LBP-09-10, 70 NRC 51 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-26, 70 NRC 939 (2009)

a rule of reason is implicit in NEPA's requirement that an agency consider reasonable alternatives to a proposed action; CLI-10-18, 72 NRC 56 (2010); CLI-10-22, 72 NRC 202 (2010)

a SAMA analysis contention was found to be inadmissible because it lacked supporting information regarding the relative costs and benefits of that proposed alternative; LBP-10-15, 72 NRC 257 (2010)

a solely wind- or solar-powered facility could not satisfy the project's purpose to generate baseload power; LBP-09-17, 70 NRC 311 (2009); LBP-10-6, 71 NRC 350 (2010)

accuracy of project cost estimates only becomes relevant if an environmentally preferable alternative has been identified; LBP-09-2, 69 NRC 87 (2009)

adequacy of the draft environmental impact statement's evaluation of alternatives is a material issue in a licensing proceeding; LBP-10-24, 72 NRC 720 (2010)

adequacy of the final environmental impact statement discussion and analysis of the alternative of implementing a dry cooling system for the proposed units is decided; LBP-09-7, 69 NRC 613 (2009)

adequacy of the NEPA alternatives analysis is judged on the substance rather than the sheer number of the alternatives examined; CLI-10-18, 72 NRC 56 (2010)

agencies are not allowed to define objectives of a project so narrowly as to preclude a reasonable consideration of alternatives; CLI-10-18, 72 NRC 56 (2010)

agencies are required to exercise a degree of skepticism in dealing with self-serving statements from the prime beneficiary of a project and to look at the general goal of the project, rather than only those

## SUBJECT INDEX

alternatives by which a particular applicant can reach its own specific goals; LBP-09-10, 70 NRC 51 (2009); LBP-09-17, 70 NRC 311 (2009)

agencies are required to study, develop, and describe appropriate alternatives to recommended courses of action in any proposal that involves unresolved conflicts concerning alternative uses of available resources and include a detailed statement of the alternatives to the proposed action in its environmental impact statement; LBP-09-10, 70 NRC 51 (2009); LBP-09-19, 70 NRC 433 (2009)

agencies need only consider those alternatives that can achieve the purposes of the project; CLI-06-10, 63 NRC 451 (2006)

agencies need only discuss those alternatives that are reasonable and will bring about the ends of the proposed action; LBP-10-6, 71 NRC 350 (2010)

all reasonable alternatives to the site proposed for the early site permit are to be identified; LBP-09-19, 70 NRC 433 (2009)

alternative energy sources that will be dependent on future environmental safeguards and technological developments need not be considered; LBP-09-7, 69 NRC 613 (2009)

alternatives that are remote and speculative do not require detailed discussion in an environmental impact statement; LBP-10-10, 71 NRC 529 (2010)

alternatives that do not advance the purpose of the project will not be considered reasonable or appropriate; CLI-10-18, 72 NRC 56 (2010)

although applicant's goals are given substantial weight, the National Environmental Policy Act does not allow applicant to define its goals so narrowly as to unreasonably circumscribe the range of alternatives that must be considered; LBP-09-10, 70 NRC 51 (2009); LBP-09-17, 70 NRC 311 (2009)

although substantial weight is accorded to a license applicant's preferences, if the identified purpose of a proposed project reasonably may be accomplished at locations other than the proposed site, the board may require consideration of those alternative sites; CLI-10-18, 72 NRC 56 (2010)

although the discussion of alternatives in the environmental assessment need only be brief, it must be sufficient to fully comply with the requirement to study, develop, and describe appropriate alternatives; CLI-10-18, 72 NRC 56 (2010)

an adverse effect is a required precondition under the National Historic Preservation Act; CLI-06-9, 63 NRC 433 (2006)

an agency cannot redefine the applicant's goals, and the environmental impact statement alternatives analysis should be based around the applicant's goals, including its economic goals; LBP-09-17, 70 NRC 311 (2009)

an agency is required to address the purpose of the proposed project, reasonable alternatives to the project, and to what extent the agency should explore each particular reasonable alternative; CLI-10-18, 72 NRC 56 (2010)

an agency must consider all reasonable alternatives but is not required to choose the most environmentally benign site; LBP-07-9, 65 NRC 539 (2007)

an agency must consider alternatives that are appropriate alternatives to recommended courses of action; LBP-09-2, 69 NRC 87 (2009)

an agency must take into account the needs and goals of the parties involved in the application; LBP-10-10, 71 NRC 529 (2010)

an agency's consideration of alternatives is sufficient if it considers an appropriate range of alternatives, even if it does not consider every available alternative; LBP-10-24, 72 NRC 720 (2010)

an agency's environmental review must consider not every possible alternative, but every reasonable alternative; LBP-10-6, 71 NRC 350 (2010); LBP-10-10, 71 NRC 529 (2010)

an environmental impact statement must describe the potential environmental impact of a proposed action and discuss any reasonable alternatives; LBP-10-10, 71 NRC 529 (2010)

an environmental impact statement must incorporate a hard look at alternatives to a proposed action; LBP-10-10, 71 NRC 529 (2010)

an environmental impact statement must rigorously explore and objectively evaluate all reasonable alternatives, and for alternatives that were eliminated from detailed study, briefly discuss the reasons for their having been eliminated; LBP-10-10, 71 NRC 529 (2010); LBP-10-24, 72 NRC 720 (2010)

an environmental report and an environmental impact statement for a materials license must include a statement on the alternatives to the proposed action, including a discussion of the no-action alternative; CLI-09-15, 70 NRC 1 (2009)

## SUBJECT INDEX

an environmental report must identify all reasonable alternatives; LBP-10-10, 71 NRC 529 (2010)

an environmental report prepared for a license renewal need not discuss economic or technical benefits and costs of the proposed action or alternatives except as they are either essential for determining whether an alternative should be included or relevant to mitigation; LBP-08-13, 68 NRC 43 (2008)

an otherwise reasonable alternative will not be excluded from discussion in an environmental impact statement solely on the ground that it is not within the jurisdiction of the NRC; LBP-09-10, 70 NRC 51 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-10-10, 71 NRC 529 (2010)

analysis of alternatives is the heart of the environmental impact statement; LBP-10-24, 72 NRC 720 (2010)

applicant is not obliged to examine general efficiency or conservation proposals that would do nothing to satisfy the particular project's goals of producing baseload power; LBP-09-17, 70 NRC 311 (2009); LBP-09-21, 70 NRC 581 (2009)

applicant is required to evaluate only alternatives that support the purpose of the project; LBP-09-21, 70 NRC 581 (2009)

applicant is required to present a cost-benefit analysis (and therefore provide cost estimates) for nuclear power plants and facilities only where the applicant's alternatives analysis indicates that there is an environmentally preferable alternative; LBP-08-21, 68 NRC 554 (2008)

applicant may not define the objectives of its action in terms so unreasonably narrow that only one alternative would accomplish the applicant's goals because this would make the agency's EIS alternatives analysis a foreordained formality; LBP-09-10, 70 NRC 51 (2009)

applicant's comparison of the environmental impacts of nuclear and wind/compressed air energy storage is inadequate to adequately inform decision makers about the competing choices; LBP-10-10, 71 NRC 529 (2010)

applicant's decision to exclude renewable energy options from its alternatives analysis is reasonable because these sources are not always available and, with the current technology, cannot meet the goals of the license renewal application; LBP-08-13, 68 NRC 43 (2008)

applicant's environmental report must contain a discussion of alternatives sufficiently complete to aid the Commission in developing and exploring, pursuant to section 102(2)(E) of NEPA, appropriate alternatives to recommended courses of action; LBP-10-6, 71 NRC 350 (2010)

applicant's environmental report must include an evaluation of alternative sites to determine whether there is any obviously superior alternative to the site proposed; LBP-09-19, 70 NRC 433 (2009)

applicant's initial consideration of DOE's Portsmouth, Ohio, and SRS sites as alternative sites was reasonable as part of its alternative site analysis for an early site permit; LBP-09-19, 70 NRC 433 (2009)

as long as all reasonable alternatives have been considered and an appropriate explanation is provided as to why an alternative was eliminated, the regulatory requirement is satisfied; CLI-10-18, 72 NRC 56 (2010)

as long as applicant has not set forth an unreasonably narrow objective of its project, NRC adheres to the principle that when the purpose is to accomplish one thing, it makes no sense to consider alternative ways by which another thing might be accomplished; LBP-09-2, 69 NRC 87 (2009)

at the early site permit stage, applicant is excused from examination, in its environmental report, of the benefits of the proposed project or analysis regarding energy alternatives, and relevant regulations may not be construed to require that the draft or final environmental impact statement include an assessment of the benefits of the proposed action; LBP-06-28, 64 NRC 460 (2006)

at the operating license stage, licensing boards will not admit contentions concerning the need for power or alternative energy sources; LBP-10-12, 71 NRC 656 (2010)

because blending down highly enriched uranium for reactor fuel would not promote applicant's primary purpose of maintaining the viability of a dwindling domestic uranium industry, it is outside the scope of reasonable alternatives that must be considered under NEPA; LBP-06-19, 64 NRC 53 (2006)

because demand-side management reduces by a small portion applicant's demand for power, it should be analyzed in this instance as a surrogate for need for power; LBP-10-6, 71 NRC 350 (2010)

because petitioners fail to create a genuine issue, the board need not resolve whether applicant's purpose is unreasonably narrow or whether a proposed alternative is so far beyond the realm of reason that it must be rejected out of hand; LBP-09-21, 70 NRC 581 (2009)

## SUBJECT INDEX

boards must decide whether the final environmental impact statement alternatives discussion is sufficiently complete to aid the Commission in developing and exploring appropriate alternatives to recommended courses of action in any proposal that involves unresolved conflicts concerning alternative uses of available resources; LBP-09-7, 69 NRC 613 (2009)

brownfield sites owned by companies other than the applicant may reasonably be excluded as alternative sites; LBP-09-19, 70 NRC 433 (2009)

business decisions of licensees or applicants are beyond NRC purview; CLI-10-1, 71 NRC 1 (2010)

consideration of energy efficiency is not a reasonable alternative, where that alternative would not achieve applicant's goal of providing additional power to sell on the open market, and is not possible for an applicant who has no transmission or distribution system of its own, and no link to the ultimate power consumer; CLI-10-21, 72 NRC 197 (2010)

consideration of environmental impacts need not address every impact that could possibly result, but rather only those that are reasonably foreseeable or have some likelihood of occurring; LBP-09-7, 69 NRC 613 (2009)

cost issues only become relevant if an intervenor identifies an environmentally preferable, reasonable alternative; LBP-10-10, 71 NRC 529 (2010)

discussion of the no-action alternative in a final environmental impact statement is governed by a rule of reason and need not be exhaustive or inordinately detailed; LBP-06-19, 64 NRC 53 (2006)

DOE is precluded from the need to consider alternatives to geologic disposal, or alternative sites to the Yucca Mountain site; LBP-09-6, 69 NRC 367 (2009)

DOE's environmental impact statement is not to consider the need for the repository, the time of initial availability of a repository, alternative sites to the Yucca Mountain site, or nongeologic alternatives to such site; LBP-10-11, 71 NRC 609 (2010)

energy sales projections are inherently uncertain, and the Commission does not impose burdensome attempts to predict future conditions, and it should be sufficient to reasonably characterize the costs and benefits associated with proposed licensing actions; LBP-10-6, 71 NRC 350 (2010)

environmental reports must include an analysis that considers and balances the environmental effects of the proposed action, the environmental impacts of alternatives to the proposed action, and alternatives available for reducing or avoiding adverse environmental effects; LBP-10-16, 72 NRC 361 (2010)

existence of reasonable but unexamined alternatives renders an environmental impact statement inadequate; LBP-10-24, 72 NRC 720 (2010)

failure to provide facts or expert opinion sufficient to show that the environmental report disregarded a feasible alternative based on either wind power, solar power, or some combination of the two renders a contention inadmissible; LBP-09-16, 70 NRC 227 (2009)

federal agencies are required to study, develop, and describe appropriate alternatives to recommend courses of action in any proposal that involves unresolved conflicts concerning alternative uses of available resources; CLI-10-18, 72 NRC 56 (2010); LBP-06-17, 63 NRC 747 (2006)

federal agencies must take a hard look at the environmental impacts of a proposed action, as well as reasonable alternatives to that action; LBP-09-7, 69 NRC 613 (2009)

federal courts and the NRC use a rule of reason in identifying alternatives and do not require that unreasonable alternatives be examined; LBP-07-9, 65 NRC 539 (2007)

for an early site permit, NRC is required to provide a detailed statement on alternatives to the proposed action; CLI-07-27, 66 NRC 215 (2007)

for purposes of the environmental impact statement, the potential construction and operation of the plant or plants for which the early site permit is being obtained is the proposed action that must be the focus of the board's NEPA review; LBP-07-1, 65 NRC 27 (2007)

further review of need for power and alternative energy sources is precluded once a construction permit has been issued; CLI-10-29, 72 NRC 556 (2010)

goals of a project's sponsor are given substantial weight in determining whether a NEPA alternative is reasonable; LBP-09-10, 70 NRC 51 (2009); LBP-09-17, 70 NRC 311 (2009)

if an alternative to the applicant's proposal is environmentally preferable, then NRC must determine whether the environmental benefits conferred by that alternative are worthwhile enough to outweigh any additional cost needed to achieve them; CLI-10-1, 71 NRC 1 (2010)

if NRC Staff has not previously considered severe accident mitigation alternatives for the applicant's plant in an environmental impact statement or related supplement or in an environmental assessment, a

## SUBJECT INDEX

consideration of alternatives to mitigate severe accidents must be provided; LBP-07-13, 66 NRC 131 (2007)

if petitioner has proffered an admissible contention asserting an environmentally preferable alternative to the proposed reactors, this also would trigger the requirement that the environmental report contain cost estimates; CLI-10-9, 71 NRC 245 (2010)

if the proposed siting of a plant slated for an early site permit involves unresolved conflicts concerning alternative uses of available resources, then this discussion must be sufficiently complete to allow the Staff to develop and to explore appropriate alternatives to the ESP pursuant to NEPA § 102(2)(E); LBP-09-19, 70 NRC 433 (2009)

impact of proposed energy conservation alternatives regarding demand for energy must be susceptible to a reasonable degree of proof; LBP-10-10, 71 NRC 529 (2010)

implicit in NEPA is a rule of reason, under which the agency may limit the alternatives discussion where there is no environmental effect or where an effect is simply not significant; LBP-10-10, 71 NRC 529 (2010)

in its environmental review of a private applicant's proposed project, the agency may accord appropriate deference to the applicant's proposed siting and design plans; LBP-06-19, 64 NRC 53 (2006)

in the context of appropriately defining terms and reconciling concepts such as "reasonable," "feasible," and "reasonably available," a problem for agencies is that even the term "alternatives" is not self-defining; LBP-10-10, 71 NRC 529 (2010)

inaccurate, incomplete, or misleading information in an environmental impact statement concerning the comparison of alternatives is itself sufficient to render the EIS unlawful and to compel its revision; LBP-10-24, 72 NRC 720 (2010)

it is inappropriate for the agency to consider economic costs when no environmentally preferable alternative has been identified; CLI-10-1, 71 NRC 1 (2010)

it is not enough to consider only the proposed action and the no-action alternative in an environmental assessment; CLI-10-18, 72 NRC 56 (2010)

it is not reasonable or necessary to consider, as a system design alternative to the application for an early site permit for Units 3 and 4, the imposition of water conservation measures on preexisting Units 1 and 2; LBP-07-9, 65 NRC 539 (2007)

neither NRC nor applicant has the mission or authority to implement a general societal interest in energy efficiency; LBP-08-13, 68 NRC 43 (2008)

NEPA imposes no obligation to select the most environmentally benign alternative; LBP-06-19, 64 NRC 53 (2006)

NEPA requires consideration only of feasible, nonspeculative alternatives; LBP-10-10, 71 NRC 529 (2010)

NEPA requires federal agencies to consider the likely environmental impacts of the preferred course of action as well as reasonable alternatives; LBP-10-24, 72 NRC 720 (2010)

NEPA requires the NRC to provide a reasonable mitigation alternatives analysis, containing reasonable estimates, including full disclosures of any known shortcomings in methodology, incomplete or unavailable information and significant uncertainties; CLI-10-22, 72 NRC 202 (2010)

NEPA's rule of reason does not demand an analysis of energy efficiency because conservation measures are beyond the ability of an applicant to implement, and are therefore outside the scope required by a NEPA review of reasonable alternatives; LBP-08-13, 68 NRC 43 (2008)

no discussion of need for power or alternative energy sources is required in a supplemental environmental report at the operating license stage; LBP-09-26, 70 NRC 939 (2009)

no-action alternative discussions can be brief and can incorporate by reference other sections of an environmental report discussing the project's adverse consequences; LBP-07-3, 65 NRC 237 (2007)

noninclusion of DOE sites in alternative sites analysis that are far outside applicant's region of interest is reasonable; LBP-09-19, 70 NRC 433 (2009)

NRC has broad discretion to determine how thoroughly it needs to analyze a particular subject for NEPA compliance; LBP-10-14, 72 NRC 101 (2010)

NRC is not required to consider every imaginable alternative to a proposed action, but rather only reasonable alternatives; LBP-10-14, 72 NRC 101 (2010)

NRC regulations do not impose a numerical floor on alternatives to be considered; CLI-10-18, 72 NRC 56 (2010)

## SUBJECT INDEX

NRC Staff is required under NEPA to evaluate reasonable technological and geographical alternatives to a proposed irradiator; CLI-10-18, 72 NRC 56 (2010)

NRC Staff's environmental impact statement prepared during review of an early site permit application must include an evaluation of alternative sites to determine whether there is any obviously superior alternative to the site proposed; LBP-09-19, 70 NRC 433 (2009)

NRC Staff's final environmental impact statement need not include a discussion of the need for power or alternative energy sources; LBP-10-12, 71 NRC 656 (2010)

NRC's alternatives analysis should be based around the applicant's goals, including the applicant's economic goals; LBP-07-9, 65 NRC 539 (2007)

NRC's NEPA responsibilities and, by extension, the applicant's responsibilities under 10 C.F.R. Part 51, are subject to a rule of reason; LBP-10-6, 71 NRC 350 (2010)

petition for waiver of regulation excluding consideration of alternatives and need for power from the operating license phase must establish that all of applicant's fossil fuel baseload generation that is less efficient than the facility under consideration has been accounted for; LBP-10-12, 71 NRC 656 (2010)

petitioner did not properly challenge applicant's conclusion that no environmentally preferable alternative existed where the only alternative that petitioner mentions on appeal is the no-reactor option, and petitioner neither raised that option before the board nor supported its argument that it would always be environmentally preferable; LBP-10-6, 71 NRC 350 (2010)

presentation of alternatives in an applicant's environmental report and in an NRC environment impact statement must be in comparative form; LBP-09-19, 70 NRC 433 (2009)

presentation of an alternative analysis is, without more, insufficient to support a contention alleging that the original analysis failed to meet applicable requirements; LBP-08-13, 68 NRC 43 (2008)

project goals are to be determined by the applicant, not the agency; CLI-10-18, 72 NRC 56 (2010)

reasonable alternatives for license renewal proceedings are limited to discrete electric generation sources that are technically feasible and commercially available; LBP-08-13, 68 NRC 43 (2008)

reasonable alternatives under the National Environmental Policy Act do not include alternatives that are impractical, that present unique problems, or that cause extraordinary costs; LBP-09-7, 69 NRC 613 (2009); LBP-09-16, 70 NRC 227 (2009)

regarding consideration of specific combination alternatives, the burden rests upon a petitioner to propose a particular alternative, and bare generalizations will not support an admissible contention; LBP-10-6, 71 NRC 350 (2010)

rejection of even viable and reasonable alternatives, after an appropriate evaluation, is not arbitrary and capricious; LBP-10-10, 71 NRC 529 (2010)

request for waiver of application of 10 C.F.R. 51.53(b), 51.95(b), and 51.106(c) precluding consideration of need for power and alternative energy sources from a Part 50 operating license proceeding fails to provide the prima facie showing required; LBP-10-12, 71 NRC 656 (2010)

Staff must evaluate alternatives to determine whether there are any obviously superior options to the proposed action; LBP-07-6, 65 NRC 429 (2007)

technologically unproven alternatives need not be considered in an environmental impact statement; LBP-09-7, 69 NRC 613 (2009)

the alternatives provision of NEPA § 102(2)(E) applies both when an agency prepares an environmental impact statement and when it prepares an environmental assessment; CLI-10-18, 72 NRC 56 (2010)

the board erred in admitting a contention concerning the economic value of wetlands without requiring petitioners to demonstrate that the proposed licensing action or no-action alternative would have any effect on wetlands; CLI-09-9, 69 NRC 331 (2009)

the Commission may find special circumstances warranting a categorical exclusion upon its own initiative, or upon the request of an interested person; CLI-10-18, 72 NRC 56 (2010)

the Commission's discussion of the Staff's underlying review adds necessary additional details and constitutes a supplement to the final environmental impact statement's alternative site review; CLI-07-27, 66 NRC 215 (2007)

the concept of alternatives must be bounded by some notion of feasibility; LBP-09-17, 70 NRC 311 (2009); LBP-10-10, 71 NRC 529 (2010)

the decision as to whether an alleged environmental impact or alternative is significant or reasonable is the merits of a NEPA contention and should not be adjudicated at the contention admissibility stage under the guise of materiality or scope; LBP-09-10, 70 NRC 51 (2009)

## SUBJECT INDEX

- the discussion in the environmental report or environmental impact statement need not include every possible alternative, only reasonable alternatives; LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-21, 70 NRC 581 (2009)
- the discussion of alternatives in the final environmental impact statement shall identify reasonable alternatives, present the environmental impacts of the proposal and the alternatives in comparative form, and include a final recommendation on the action to be taken; LBP-06-19, 64 NRC 53 (2006)
- the Generic Environmental Impact Statement addresses the need to consider energy conservation for the no-action alternative; LBP-08-13, 68 NRC 43 (2008)
- the hard look required by NEPA is subject to a rule of reason, such that it is not necessary to look at every conceivable alternative to the proposed licensing action, but only those that are feasible, and reasonably related to the scope and goals of the proposed action; LBP-10-10, 71 NRC 529 (2010)
- the National Environmental Policy Act's rule of reason excludes consideration of demand-side management if the proposed new plant is intended to be a merchant plant, selling power on the open market, because it is not feasible for licensee to engage in demand-side management; CLI-10-21, 72 NRC 197 (2010)
- the NEPA alternatives analysis is the heart of the environmental impact statement; LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009)
- the NEPA hard-look doctrine is subject to a rule of reason that the Commission has interpreted as obligating the agency to consider all reasonable alternatives to the proposed action; LBP-10-14, 72 NRC 101 (2010)
- the NEPA rule of reason does not require applicant to consider energy efficiency in its NEPA analysis, because energy efficiency is not a reasonable alternative for a merchant power producer; CLI-10-1, 71 NRC 1 (2010)
- the obligation of agencies to consider alternatives is a lesser one under an environmental assessment than under an environmental impact statement; CLI-10-18, 72 NRC 56 (2010)
- the only alternatives that are relevant to NRC's decision are those that are environmentally preferable; LBP-10-6, 71 NRC 350 (2010)
- the range of alternatives that must be considered need not extend beyond those reasonably related to the purposes of the project, and a rule of reason necessarily informs that choice; CLI-10-18, 72 NRC 56 (2010)
- the reasonableness of energy conservation as an alternative in light of the need for a large amount of baseload electric power is questioned; LBP-09-10, 70 NRC 51 (2009)
- the requirement to discuss alternatives in the environmental report parallels NEPA's requirement that an environmental impact statement provide a detailed statement of reasonable alternatives to a proposed action; LBP-09-16, 70 NRC 227 (2009)
- there is no requirement for an applicant to analyze in detail options that are not discrete, feasible sources of baseload energy; LBP-08-13, 68 NRC 43 (2008)
- to meet its burden to justify certification of its request to waive 10 C.F.R. 51.53(b), 51.95(b), and 51.106(c), petitioner must make a prima facie showing that the proposed facility would not be needed to meet increased energy needs or to replace older, less economical operating capacity, and that there are viable alternatives likely to exist that could tip the NEPA cost-benefit balance against issuance of the operating license; LBP-10-12, 71 NRC 656 (2010)
- under the National Environmental Policy Act, Staff is obliged to perform a severe accident mitigation alternatives analysis; LBP-07-13, 66 NRC 131 (2007)
- waivers are limited to very unusual cases, such as where it appears that an alternative exists that is clearly and substantially environmentally superior; LBP-10-12, 71 NRC 656 (2010)
- when NRC reviews an application filed by a private entity, as opposed to a project initiated by the federal government, it may accord substantial weight to the applicant's preferences with regard to consideration of alternatives, including choices regarding site selection and project design; CLI-06-10, 63 NRC 451 (2006); CLI-10-18, 72 NRC 56 (2010); LBP-06-8, 63 NRC 241 (2006); LBP-10-6, 71 NRC 350 (2010)
- when the purpose of a proposed action is to accomplish one thing, it makes no sense to consider the alternative ways by which another thing might be achieved; LBP-06-19, 64 NRC 53 (2006)
- where the final environmental impact statement discussion of alternative sites was insufficient, the board independently reviewed the record on greenfield, competitors' brownfield, noncompetitors' brownfield,

## SUBJECT INDEX

and applicant's other nuclear sites to conclude that the Staff's underlying alternative site review was adequate; LBP-09-19, 70 NRC 433 (2009)

wind or solar power are not considered as stand-alone alternatives because neither source is deemed capable of serving the purpose and need of the project, generating 1600 MW(e) of baseload power; LBP-10-24, 72 NRC 720 (2010)

with regard to alternative sites for an early site permit, NRC Staff must evaluate both the process (i.e., methodology) used by the applicant and the reasonableness of the product (e.g., potential sites) identified by that process; LBP-09-19, 70 NRC 433 (2009)

See also No-Action Alternative

### CONSTRUCTION

a claim of deficiency in construction of the concrete containment is insufficient because it was not linked to the application at issue in the proceeding; CLI-10-9, 71 NRC 245 (2010)

activities requiring a limited work authorization are the driving of piles, subsurface preparation, placement of backfill, concrete, or permanent retaining walls within an excavation, installation of foundations, or in-place assembly, erection, fabrication, or testing that are for safety-related structures, systems, or component; LBP-09-16, 70 NRC 227 (2009); LBP-09-19, 70 NRC 433 (2009)

activities that are not considered "construction" are site exploration, clearing, grading, or installation of environmental mitigation measures, erection of fences and other access control measures, excavation, erection of support buildings for use in connection with construction, building of service facilities, and procurement or offsite fabrication of facility components; LBP-09-19, 70 NRC 433 (2009)

an NRC license is unnecessary for construction activity on an independent spent fuel storage installation; CLI-06-23, 64 NRC 107 (2006)

applicant is authorized to perform certain site preparation activities that would otherwise only be permitted following the issuance of a Part 50 construction permit or a Part 52 combined license; LBP-09-19, 70 NRC 433 (2009)

boards are to determine whether the site redress plan will adequately redress the activities performed under a limited work authorization should the activities be terminated by either the holder of the LWA or by Commission denial of any corresponding early site permit or combined license; LBP-09-19, 70 NRC 433 (2009)

if limited work authorization activities are approved by NRC in conjunction with an early site permit, the ESP as issued shall specify those authorized activities; LBP-09-19, 70 NRC 433 (2009)

no later than 1 year after issuance of the combined license or at the start of construction, whichever is later, the COL licensee must submit its schedule for completing the inspections, tests, or analyses and provide schedule updates; LBP-09-19, 70 NRC 433 (2009)

preconstruction monitoring and testing to establish background information is exempted from the prohibition on commencement of construction; LBP-10-16, 72 NRC 361 (2010)

the Commission may authorize construction of the proposed repository if the application provides a reasonable assurance of preclosure safety and a reasonable expectation of postclosure safety; LBP-09-6, 69 NRC 367 (2009)

### CONSTRUCTION AUTHORIZATION APPLICATION

applicant would be permitted to incorporate information from its original construction permit application in a new application; CLI-10-6, 71 NRC 113 (2010)

should the Director of the Office of Nuclear Material Safety and Safeguards reject a construction authorization application, applicant will be informed of this determination and of the respects in which the application is deficient; CLI-08-20, 68 NRC 272 (2008)

the Director of the Office of Nuclear Material Safety and Safeguards must determine whether the tendered application is complete and acceptable for docketing; CLI-08-20, 68 NRC 272 (2008)

the Secretary of the Department of Energy does not have the discretion to substitute his policy for the one established by Congress that mandates progress toward a merits decision by NRC on a construction permit for the high-level waste repository; LBP-10-11, 71 NRC 609 (2010)

### CONSTRUCTION COMPLETION

with respect to combined licenses, interested persons may request a hearing as to the adequacy of construction after issuance of a combined license; CLI-09-2, 69 NRC 55 (2009)

## SUBJECT INDEX

### CONSTRUCTION OF MEANING

an ambiguous provision is construed most strongly against the person who selected the language; LBP-08-16, 68 NRC 361 (2008)

any ambiguity relative to the filing date for hearing requests arising from the language of the agency's hearing opportunity notice should be construed in favor of a participant who was seeking to comply with the notice; LBP-08-16, 68 NRC 361 (2008)

boards are to construe intervention petitions in a light most favorable to petitioners; LBP-08-16, 68 NRC 361 (2008); LBP-08-21, 68 NRC 554 (2008); LBP-10-1, 71 NRC 165 (2010)

concerning criminal guilt, the words "knowledge" and "knowingly" are normally associated with awareness, understanding, or consciousness; CLI-10-23, 72 NRC 210 (2010)

in determining whether petitioner has established standing, boards may construe the petition in favor of the petitioner; LBP-10-15, 72 NRC 257 (2010); LBP-10-21, 72 NRC 616 (2010)

in statutory construction, the specific prevails over the general; CLI-08-26, 68 NRC 509 (2008)

in the absence of a statutory definition, courts normally define a term by its ordinary meaning; LBP-10-24, 72 NRC 720 (2010)

knowledge of a fact requires not only an awareness of that fact but also an understanding or recognition of its significance; CLI-10-23, 72 NRC 210 (2010)

one who does something "frequently" does so at frequent or short intervals, "frequent" being defined as often or habitually; LBP-10-1, 71 NRC 165 (2010)

one who performs an act "regularly" does so in a regular, orderly, or methodical way; LBP-10-1, 71 NRC 165 (2010)

"otherwise admissible" has been interpreted to mean a contention that meets the admissibility requirements of 10 C.F.R. 2.309(f)(1) but for the fact that it challenges a yet-to-be-certified reactor design; LBP-10-9, 71 NRC 493 (2010)

pursuant to the rule of the last antecedent, qualifying words, phrases, and clauses must be applied to the words or phrases immediately preceding them and are not to be construed as extending to and including others more remote; LBP-06-1, 63 NRC 41 (2006)

the civil law concept of "assumption of risk" requires not merely general knowledge of a risk but also that the risk assumed be specifically known, understood, and appreciated; CLI-10-23, 72 NRC 210 (2010)

the distinction between "frequently" and "regularly" highlights the importance of making a more detailed factual showing, rather than relying on conclusory adjectives and adverbs, when a standing claim rests on the nature of petitioner's activities purportedly near to, or bearing some connection with, the reactor facility at issue; LBP-10-1, 71 NRC 165 (2010)

willfulness means nothing more in the context of a false statement than that the defendant knew that his statement was false when he made it or consciously disregarded or averted his eyes from its likely falsity; CLI-10-23, 72 NRC 210 (2010)

See also Definitions; Regulations, Interpretation; Statutory Construction

### CONSTRUCTION OF TERMS

a term that lacks a statutory or regulatory definition should be construed in accord with its ordinary or natural meaning; LBP-06-1, 63 NRC 41 (2006)

reasonable assurance is not quantified as equivalent to a 95% (or any other percent) confidence level, but is based on sound technical judgment of the particulars of a case and on compliance with the Commission's regulations; CLI-09-7, 69 NRC 235 (2009)

technical terms of art should be interpreted by reference to the trade or industry to which they apply; CLI-06-14, 63 NRC 510 (2006)

use of the disjunctive phrase "data *or* conclusions" means that it is sufficient that either data or conclusions in the draft environmental impact statement differ significantly from those in the environmental report; LBP-10-24, 72 NRC 720 (2010)

See also Definitions

### CONSTRUCTION PERMIT EXTENSION

a construction permit holder must provide good cause for the extension; LBP-10-7, 71 NRC 391 (2010)

earliest and latest dates for completion of construction or modification shall be stated, and unless the construction or modification of the facility is completed by the completion date, the permit shall expire

## SUBJECT INDEX

- and all rights thereunder be forfeited, unless upon good cause shown the Commission extends the completion date; LBP-10-7, 71 NRC 391 (2010)
- if a construction permit holder is unable to finish construction by the date specified in the permit, the CP holder can apply for and obtain an extension; LBP-10-7, 71 NRC 391 (2010)
- CONSTRUCTION PERMIT EXTENSION PROCEEDINGS**
- as was the case with an initial CP application, an extension request could be the subject of an adjudicatory hearing challenge by a petitioner; LBP-10-7, 71 NRC 391 (2010)
- CONSTRUCTION PERMIT PROCEEDING**
- an admissible contention under the good cause standard must allege that a permit holder's reasons for past delay failed to constitute good cause for a CP extension and be supported by a showing that construction delay is traceable to permit holder action that was intentional and without a valid business purpose; LBP-10-7, 71 NRC 391 (2010)
- any power level selected at the COL stage other than the target value used in the environmental impact statement's alternative energy analysis for the early site permit would constitute new information that, if found to be significant, would have to be evaluated at the construction permit or combined license application stage; CLI-07-14, 65 NRC 216 (2007)
- boards should restrict their inquiry in a reinstatement proceeding, including their consideration of contention admissibility matters, in line with the good cause standard of the Atomic Energy Act; LBP-10-7, 71 NRC 391 (2010)
- compliance with applicable radiation standards is deferred at the early site permit stage, and can only be determined in a COL or CP proceeding; CLI-07-27, 66 NRC 215 (2007)
- it is appropriate to defer issues concerning the effects of short-term damage to the environment and the irretrievable commitment of resources to the construction permit or combined license stage; CLI-07-14, 65 NRC 216 (2007)
- whether or not any petitioner challenges the construction permit, the NRC Staff will address each COL action item at the construction permit stage; CLI-07-12, 65 NRC 203 (2007)
- CONSTRUCTION PERMITS**
- a combined license is essentially a construction permit that also requires consideration and resolution of many of the issues currently considered at the operating license stage; LBP-10-7, 71 NRC 391 (2010)
- a construction permit will not expire and no rights under the permit will be forfeited unless the facility is not completed and the latest date for completion has passed; CLI-10-6, 71 NRC 113 (2010)
- a facility can be reactivated from deferred status so that construction can begin again, which includes providing 120 days' notice to the Staff before restarting construction activities; LBP-10-7, 71 NRC 391 (2010)
- a future applicant for a construction permit, an operating license, or a combined license may seek early NRC review and approval of some siting and environmental issues, and therefore, "bank" a site for up to 20 years in anticipation of its future reference in an application for a CP or COL; LBP-06-28, 64 NRC 460 (2006)
- a generalized assertion, without specific ties to NRC regulatory requirements or to safety in general, does not provide adequate support demonstrating the existence of a genuine dispute of fact or law with respect to the construction authorization application; LBP-09-27, 70 NRC 992 (2009)
- a mandatory hearing for the reinstatement of previously issued construction permits is not required because a hearing already occurred when the permits were initially issued; CLI-10-6, 71 NRC 113 (2010)
- administrative regularity in the regulatory process is assumed, and review of the operating license application takes place independently of that associated with plant construction; CLI-10-29, 72 NRC 556 (2010)
- although analysis of aircraft impact is required, reactors whose construction permits were issued prior to July 13, 2009, are excluded, and the rule is not NEPA-based; LBP-09-26, 70 NRC 939 (2009)
- an applicant who may apply for a construction permit under Part 50, or a combined license under Part 52, may apply for an early site permit; LBP-09-19, 70 NRC 433 (2009)
- an early site permit applicant may make a number of choices regarding the scope, and therefore the content, of its ESP application; LBP-06-28, 64 NRC 460 (2006)

## SUBJECT INDEX

an early site permit applicant may submit a plan for redress of the site, which if accepted as part of an approved ESP would allow an applicant to perform certain preconstruction activities without additional authorization; LBP-06-28, 64 NRC 460 (2006)

an early site permit is considered a partial construction permit, and thus requires action by the Commission even in the absence of any appeal from the board's initial decision; CLI-07-12, 65 NRC 203 (2007)

applicant does not need an NRC license for construction of an independent spent fuel storage installation, but proceeds with construction at its own risk; LBP-06-27, 64 NRC 399 (2006)

applications must consider the consequences of design basis events; CLI-10-1, 71 NRC 1 (2010)

because an early site permit is a type of construction permit, a mandatory hearing is required by the Atomic Energy Act and thus the case will continue as an uncontested proceeding; LBP-06-24, 64 NRC 360 (2006)

before authorizing construction of the proposed repository, the Commission must determine that there is reasonable expectation that the materials can be disposed of without unreasonable risk to the health and safety of the public; LBP-10-22, 72 NRC 661 (2010)

earliest and latest dates for completion of construction or modification shall be stated in the permit, and unless the construction or modification of the facility is completed by the completion date, the permit shall expire and all rights thereunder be forfeited, unless upon good cause shown the Commission extends the completion date; LBP-10-7, 71 NRC 391 (2010)

early site permits are partial construction permits and, as such, are subject to the mandatory hearing requirements under AEA § 189a; LBP-07-1, 65 NRC 27 (2007)

further review of need for power and alternative energy sources are precluded once a construction permit has been issued; CLI-10-29, 72 NRC 556 (2010)

General Design Criteria are not applicable to nuclear power plants with construction permits issued prior to May 21, 1971; LBP-08-13, 68 NRC 43 (2008)

if a construction permit holder wishes to discontinue construction activities at a facility but continue to have its 10 C.F.R. Part 50 construction authorization remain effective, it can do so under the terms of the 1987 Commission Policy Statement on Deferred Plants; LBP-10-7, 71 NRC 391 (2010)

NRC may use its broad discretion of authority under the Atomic Energy Act to reinstate expired construction permits that licensee inadvertently failed to renew; CLI-10-6, 71 NRC 113 (2010)

reinstatement of construction permits did not authorize construction of reactors, but rather was to place the facility in a terminated plant status; CLI-10-26, 72 NRC 474 (2010)

rights under a permit are forfeited only when a construction permit has expired and has not been extended; CLI-10-6, 71 NRC 113 (2010)

the 10 C.F.R. Part 50 licensing process that was formerly applied to commercial nuclear power plants required that an applicant first obtain a construction permit for the facility, followed by an operating license; LBP-10-7, 71 NRC 391 (2010)

the 1987 Commission Policy Statement on Deferred Plants sets forth the process under which a plant could be placed in a terminated status pending withdrawal of the CP, as well as procedures and requirements for reactivating the facility from terminated status; LBP-10-7, 71 NRC 391 (2010)

the Commission acts as adjudicator and in that light considers the reinstatement of a construction permit afresh, without regard for its earlier views; CLI-10-6, 71 NRC 113 (2010)

the Commission must hold a hearing on each application for a construction permit for a facility; LBP-07-1, 65 NRC 27 (2007)

the date by which construction of the unit is to be completed is specified; LBP-10-7, 71 NRC 391 (2010)

the term "reinstatement" is not directly or indirectly mentioned in section 185 of the Atomic Energy Act; CLI-10-6, 71 NRC 113 (2010)

the voluntary surrender of a construction permit that has not expired, i.e., where the construction completion date had not yet arrived, does not constitute a situation to which the "forfeiture" provision of the Atomic Energy Act applies; CLI-10-6, 71 NRC 113 (2010)

voluntary surrender of a valid permit does not amount to wrongful activity that would warrant revocation; CLI-10-6, 71 NRC 113 (2010)

when an applicant receives a construction permit, it proceeds at its own risk, regardless of the amount of money that it may have expended during construction; LBP-10-7, 71 NRC 391 (2010)

## SUBJECT INDEX

### CONSULTATION DUTY

- a consulting tribe is entitled to a reasonable opportunity to identify its concerns about historic properties, to advise on the identification and evaluation of them (including those of traditional religious and cultural importance), to articulate its views on the undertaking's effects on such properties, and to participate in the resolution of adverse effects; LBP-08-6, 67 NRC 241 (2008); LBP-10-16, 72 NRC 361 (2010)
- a federal agency must consult with a tribe concerning a federal action that might affect sites of cultural interest to the tribe; CLI-09-9, 69 NRC 331 (2009)
- a form letter is not sufficient to constitute the reasonable effort that section 106 of the National Historic Preservation Act requires; LBP-08-6, 67 NRC 241 (2008)
- a mere request for information is not necessarily sufficient to constitute the reasonable effort that section 106 of the National Historic Preservation Act requires; LBP-08-6, 67 NRC 241 (2008)
- a party in the high-level waste proceeding who files a motion must certify that he or she has made a reasonable effort to consult with counsel for the other parties in an effort to resolve the matter in advance of filing the motion; CLI-08-25, 68 NRC 497 (2008)
- a summary disposition movant must make a sincere effort to contact other parties in the proceeding and to resolve the issues raised in the motion; LBP-06-5, 63 NRC 116 (2006)
- a tribe may become a consulting party if its property, potentially affected by a federal undertaking, has religious or cultural significance; LBP-08-24, 68 NRC 691 (2008); LBP-10-16, 72 NRC 361 (2010)
- dispositive motions may be filed 20 days after the occurrence or circumstance from which the motion arises, rather than the 10-day time frame, provided that the moving party commences sincere efforts to contact and consult all other parties within 10 days of the occurrence or circumstance, and the accompanying certification so states; LBP-09-22, 70 NRC 640 (2009)
- ensuring that NRC Staff meets its consultation obligations under section 106 of the National Historic Preservation Act is an issue material to the findings the NRC must make in support of the action involved in a materials license renewal proceeding; LBP-08-24, 68 NRC 691 (2008)
- federal agencies are to consult with a tribe if that tribe ascribes cultural or religious significance to properties not on tribal lands; LBP-08-24, 68 NRC 691 (2008)
- federal agencies must follow notification and consultation procedures prior to a federal undertaking to consider the undertaking's effect on historic properties; LBP-10-16, 72 NRC 361 (2010)
- federal agencies must notify all consulting parties, including Indian tribes, when a finding of no effect has been made, and to provide those consulting parties with an invitation to inspect the documentation prior to approving the undertaking; LBP-08-6, 67 NRC 241 (2008)
- federal agencies should be sensitive to the special concerns of Indian tribes in historic preservation issues, which often extend beyond Indian lands to other historic properties, and should invite the governing body of the responsible tribe to be a consulting party and to concur in any agreement; LBP-08-24, 68 NRC 691 (2008); LBP-10-16, 72 NRC 361 (2010)
- if the attorney or representative of a party is contacted pursuant to the consultation requirement, then that person (or his or her alternate) must make a sincere effort to make himself or herself available to listen and to respond to the moving party's explanation, and to resolve the factual and legal issues raised in the motion; LBP-09-22, 70 NRC 640 (2009)
- it is inconsistent with the dispute avoidance/resolution purposes of a section, and thus insufficient, for the contacted attorney or representative to fail or refuse to consider the substance of the consultation attempt, or for the party to respond that it takes no position on the motion (or issues) and that it reserves the right to file a response to the motion when it is filed; LBP-09-22, 70 NRC 640 (2009)
- it is not the duty of applicant to consult with a tribe regarding cultural resources at a proposed site, but instead is the duty of the agency to initiate and follow through with the consultation process; LBP-10-16, 72 NRC 361 (2010)
- motions will be rejected if they do not include certification by the attorney or representative of the moving party that they have made a sincere effort to contact the other parties in this proceeding, to explain to them the factual and legal issues raised in the motion, and to resolve those issues; CLI-08-22, 68 NRC 355 (2008); LBP-09-22, 70 NRC 640 (2009)
- NRC Staff must consult with interested Indian tribes as part of its review of the application; CLI-09-12, 69 NRC 535 (2009)

## SUBJECT INDEX

- only Indian Tribes that appear on the Department of the Interior's list of recognized tribes have consultation rights under the National Historic Preservation Act; LBP-09-13, 70 NRC 168 (2009)
- parties must make good-faith efforts to resolve with the other parties the subject matter of their motion; CLI-10-10, 71 NRC 281 (2010)
- petitioners' contention that NRC Staff has not consulted with an affected Indian tribe is premature if it is filed prior to the time for the Staff to act; CLI-09-9, 69 NRC 331 (2009)
- the fact that NRC Staff consultation with interested Indian tribes had not yet taken place at the time a materials license amendment application was filed did not reflect a deficiency in the application and thus a contention alleging a deficiency in the application was inadmissible; CLI-09-12, 69 NRC 535 (2009)
- to be sincere, movant should contact other parties sufficiently in advance to provide enough time for the possible resolution of the matter or issues in question; LBP-09-22, 70 NRC 640 (2009)
- whether the consultation process conducted by applicant with a Native American tribe complies with relevant requirements of law is an admissible issue; LBP-08-6, 67 NRC 241 (2008)
- without consultation with a tribe, culturally significant resources will go unidentified and unprotected, resulting in development or use of the land that might cause damage to these cultural resources, thereby injuring the protected interests of the tribe; LBP-08-24, 68 NRC 691 (2008)
- CONTAINMENT**
- a claim of deficiency in construction of the concrete containment is insufficient because it was not linked to the application at issue in the proceeding; CLI-10-9, 71 NRC 245 (2010)
- burden is on applicant to show that concrete in containment structures will maintain its integrity during the extended period of operations or to develop an aging management plan that ensures that any indication of degradation is detected and remediated; LBP-08-13, 68 NRC 43 (2008)
- motion to reopen the record to admit new contention regarding adequacy of applicant's containment/coating inspection program for two new proposed units is denied; LBP-10-21, 72 NRC 616 (2010)
- the Commission asks the parties to address whether the structural analysis that applicant has committed to perform on its primary containment drywell shell matches or bounds the sensitivity analyses that one of the ALSBP judges would impose; CLI-08-10, 67 NRC 357 (2008)
- the containment vessel is identified as an ASME Code Class MC component in both the inservice inspection subsection of section 50.55a as well as the inspection requirements subsection of the AP1000 DCD; LBP-10-21, 72 NRC 616 (2010)
- CONTAINMENT DESIGN**
- early site permit applicants must submit a safety assessment that includes an analysis of a fission product release from an accident, using the expected demonstrable containment leak rate and any fission product cleanup systems intended to mitigate the consequences of the accidents; LBP-09-19, 70 NRC 433 (2009)
- CONTAMINATION, RADIOLOGICAL**
- See Radiological Contamination
- CONTEMPT**
- boards may reprimand, censure, or suspend intervenors for contemptuous conduct; CLI-07-28, 66 NRC 275 (2007)
- courts have been careful to strictly limit the exercise of summary contempt power to cases in which it was clear that all of the elements of misconduct were personally observed by the judge; LBP-09-24, 70 NRC 676 (2009)
- CONTENTIONS**
- a brief explanation of the basis is an explanation of the rationale or theory of the contention; LBP-09-10, 70 NRC 51 (2009)
- a challenge to applicant's environmental report can be superseded by the subsequent issuance of licensing-related documents, whether a draft environmental impact statement or an applicant's response to a request for additional information; LBP-10-14, 72 NRC 101 (2010)
- a classic "contention of omission" occurs when petitioners allege that certain necessary safety-related steps or analyses have not been taken; LBP-07-14, 66 NRC 169 (2007)

## SUBJECT INDEX

- a contention may challenge a draft environmental impact statement even though its ultimate conclusion on a particular issue is the same as that in the environmental report, as long as the DEIS relies on significantly different data than the ER to support the determination; LBP-10-24, 72 NRC 720 (2010)
- a contention of inadequacy asserts that the pertinent portion of the application contains a discussion or analysis of a relevant subject that is inadequate in some material respect; LBP-08-2, 67 NRC 54 (2008)
- a contention of omission challenges a portion of the application because it fails in toto to address a required subject matter; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)
- a “contention of omission” is one that claims the application fails to contain information on a relevant matter as required by law and the supporting reasons for the petitioner’s belief; LBP-08-15, 68 NRC 294 (2008); LBP-09-16, 70 NRC 227 (2009); LBP-09-27, 70 NRC 992 (2009); LBP-10-16, 72 NRC 361 (2010)
- a contention that impacts from a severe radiological accident at any one unit on operation of other units at the site had not been, and should be, considered in the application’s environmental report is found to be moot; LBP-10-10, 71 NRC 529 (2010)
- a licensing board erred in referring a contention to the NRC Staff without making an appropriate contention admissibility determination; CLI-10-9, 71 NRC 245 (2010)
- a motion and proposed new contention shall be deemed timely if it is filed within 30 days of the date when the new and material information on which it is based first becomes available; LBP-09-22, 70 NRC 640 (2009)
- a petitioner seeking discretionary intervention must propose at least one admissible contention; CLI-06-16, 63 NRC 708 (2006)
- a recitation of facts or expert opinion supporting the issue raised is inapplicable to a contention of omission beyond identifying the regulatorily required missing information; LBP-06-12, 63 NRC 403 (2006)
- all material facts set forth in the statement required to be served by the moving party will be considered to be admitted unless controverted by the statement required to be served by the opposing party; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)
- although all environmental contentions may, in a general sense, ultimately be challenges to the NRC’s compliance with NEPA, factual disputes of particular issues can be raised before the draft environmental impact statement is prepared; CLI-10-2, 71 NRC 27 (2010)
- although exhibits are not themselves either “petitions” or “contentions,” the board considers the timeliness of their filing; LBP-08-6, 67 NRC 241 (2008)
- although latitude is to be afforded a pro se intervenor in the mechanics of contention pleading and citation, an organization that has appeared several times previously is expected to have a heightened awareness of the agency’s pleading rules; LBP-08-16, 68 NRC 361 (2008)
- although NRC recognizes a difference between contentions of omission and contentions of inadequacy, the board did not err in reading the contention as one of inadequacy despite the contentions’ occasional use of terms such as “failed to address”; CLI-10-2, 71 NRC 27 (2010)
- although the February 2004 revision of the NRC procedural rules no longer permits the amendment and supplementation of petitions and filing of contentions after the original filing of petitions, the substantive admissibility standards are essentially the same; LBP-07-11, 66 NRC 41 (2007)
- although the obligations under NEPA fall to the agency and therefore the NRC Staff, petitioners are required to raise environmental objections based on the applicant’s environmental report; LBP-10-15, 72 NRC 257 (2010)
- although the ultimate burden with respect to NEPA lies with the NRC Staff, NRC policy with respect to the identification of issues for hearing has long been that such issues must be raised as early as possible; CLI-10-2, 71 NRC 27 (2010)
- answers in the high-level waste repository proceeding shall be limited to addressing specific alleged deficiencies in particular contentions; LBP-08-10, 67 NRC 450 (2008)
- appeals of partial initial decisions are not the proper procedural context in which to revise contentions; CLI-10-17, 72 NRC 1 (2010)
- applicant’s reliance on a facility for low-level radioactive waste disposal that will no longer permit out-of-compact entities to import LLRW for disposal at its site could provide the basis for a new contention; LBP-10-8, 71 NRC 433 (2010)

## SUBJECT INDEX

boards commonly reformulate, or expressly limit contentions to focus them to the precise matters that are supported; LBP-08-9, 67 NRC 421 (2008)

boards have discretion to reframe a contention for purposes of clarity, succinctness, and a more efficient proceeding; CLI-06-16, 63 NRC 708 (2006); LBP-06-22, 64 NRC 229 (2006); LBP-08-12, 68 NRC 5 (2008)

boards have legal authority to reformulate contentions; LBP-10-16, 72 NRC 361 (2010)

boards must not redraft inadmissible contentions to cure deficiencies and thereby render them admissible; CLI-06-16, 63 NRC 708 (2006)

challenges to a combined license application must focus on the application as it exists when the contention is filed and must point out an omission or deficiency with regard to the application as of that moment in time; LBP-09-10, 70 NRC 51 (2009)

common sense is a relevant consideration in determining whether to reformulate contentions; LBP-10-10, 71 NRC 529 (2010)

contentions are comparable to neither “forms of relief” nor Article III “claims,” but are instead comparable to various “grounds” that may be asserted in opposition to a proposed agency action at issue; LBP-09-1, 69 NRC 11 (2009)

contentions must be based on documents or information available when the hearing petition is to be filed; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)

contentions must be filed with the original petition within 60 days of notice of the proceeding in the *Federal Register*, unless a longer period is therein specified, an extension is granted, or the contentions meet certain criteria for late-filed or new contentions based on information that is available only at a later time; LBP-07-4, 65 NRC 281 (2007); LBP-09-17, 70 NRC 311 (2009)

detailed pleadings put other parties in the proceeding on notice of the petitioners’ specific grievances, thereby giving them a good idea of the claims they will be either supporting or opposing; LBP-07-11, 66 NRC 41 (2007)

even if the term “contention,” as used in 10 C.F.R. 2.336(a)(1) must be read as pertaining only to formal contentions admitted under section 2.309(f)(1), the term “claim,” is not so constrained, and can only be read in its normal sense; LBP-09-30, 70 NRC 1039 (2009)

for a contention of omission, if the information is later supplied by applicant or considered by Staff in a draft environmental impact statement, the contention is moot and intervenors must timely file a new or amended contention in order to raise specific challenges regarding the new information; LBP-10-14, 72 NRC 101 (2010)

for a petitioner to be admitted as a party in a materials license amendment proceeding, it must propose at least one admissible contention that meets the requirements of 10 C.F.R. 2.309(f)(1); LBP-06-6, 63 NRC 167 (2006)

format of pleadings for high-level waste repository proceeding are specified; LBP-08-10, 67 NRC 450 (2008)

if a contention alleges the omission of particular information or an issue from an application, and the information is later supplied by the applicant, the contention is moot; CLI-06-9, 63 NRC 433 (2006); LBP-06-16, 63 NRC 737 (2006)

if a notice of adoption of a contention is filed within a reasonable time (such as 20 days) after the contention has been filed and admitted, then it is deemed timely; LBP-06-20, 64 NRC 131 (2006)

if the board concludes that it has no questions for any witness concerning a particular contention, it will so advise the parties and will resolve that contention; LBP-09-22, 70 NRC 640 (2009)

in a future proceeding, petitioner could proffer an application-specific contention suitable for litigation on the subject of onsite storage of low-level radioactive waste; CLI-09-3, 69 NRC 68 (2009)

in passing upon the question as to whether an intervention petition should be granted, it is not the function of a licensing board to reach the merits of any contention contained therein; LBP-06-6, 63 NRC 167 (2006)

in the high-level waste repository proceeding, except for readily available legal authorities, materials that cannot be attached because of copyright restrictions, and documents available on the LSN, all documents that are referenced in support of one or more contentions shall be electronically attached to the petition; LBP-08-10, 67 NRC 450 (2008)

intervenor’s representational status is one factor in determining whether reformulation is appropriate, and pro se status may provide additional cause for reformulation; LBP-10-10, 71 NRC 529 (2010)

## SUBJECT INDEX

intervenor are required to file environmental contentions in the first instance based on the applicant's environmental report; LBP-09-7, 69 NRC 613 (2009)

intervenor have an ironclad obligation to regularly and diligently search publicly available NRC or applicant documents for information relevant to their contentions; CLI-09-2, 69 NRC 55 (2009)

"issues" in license transfer proceedings constitute "contentions" under 10 C.F.R. 2.309(f) and must therefore meet the standards for admissibility set forth in that regulation; CLI-07-18, 65 NRC 399 (2007)

issues that raise legal or factual challenges related to an application are appropriately considered as proposed contentions in the context of a merits hearing on the application; CLI-08-20, 68 NRC 272 (2008)

it may be necessary to examine the language of the bases to determine a contention's scope; LBP-06-16, 63 NRC 737 (2006)

licensing boards may reformulate contentions to eliminate extraneous issues or to consolidate issues for a more efficient proceeding; CLI-09-12, 69 NRC 535 (2009); LBP-08-11, 67 NRC 460 (2008); LBP-10-14, 72 NRC 101 (2010)

motion for summary disposition of contention questioning applicant's handling of its severe accident mitigation alternatives analysis concerning evacuation times, economic consequences, and meteorological patterns is granted; LBP-07-13, 66 NRC 131 (2007)

NRC rules permit contentions that raise issues of law as well as contentions that raise issues of fact; LBP-09-10, 70 NRC 51 (2009)

NRC Staff's issuance of its draft and final environmental impact statements may lead to the filing of additional contentions if the data or conclusions contained in them are significantly different from the data or conclusions found in the applicant's documents; LBP-10-10, 71 NRC 529 (2010)

on issues arising under the National Environmental Policy Act, petitioner shall file contentions based on the applicant's environmental report; LBP-10-10, 71 NRC 529 (2010); LBP-10-24, 72 NRC 720 (2010)

on issues of whether a contention has been rendered moot by provision of information by an applicant, the applicant bears the burden of persuasion; LBP-10-10, 71 NRC 529 (2010)

once standing to intervene in the licensing process is established, petitioners will then be free to assert any contention, which, if proved, will afford them the relief they seek; LBP-09-21, 70 NRC 581 (2009); LBP-10-15, 72 NRC 257 (2010)

only one admissible contention is required for each petitioner to intervene; LBP-10-11, 71 NRC 609 (2010)

petitioner may amend contentions based on the applicant's environmental report or file new contentions if there are data or conclusions in the NRC draft or final environmental impact statement, environmental assessment, or any supplements relating thereto, that differ significantly from the data or conclusions in the applicant's documents; LBP-10-24, 72 NRC 720 (2010)

petitioner may in instances of exigent or unavoidable circumstances file a request for an extension of time to file an original hearing petition and contentions; LBP-09-17, 70 NRC 311 (2009)

petitioner must read pertinent portions of the license application, including the safety analysis report and the environmental report, state applicant's position and petitioner's opposing view, and explain why petitioner disagrees with applicant; LBP-07-11, 66 NRC 41 (2007)

petitioner must set forth with particularity the contentions sought to be raised; CLI-06-21, 64 NRC 30 (2006)

petitioners are not required to show standing for each contention separately; LBP-09-1, 69 NRC 11 (2009)

petitioners must raise NEPA contentions in response to the environmental report, rather than await the agency's draft environmental impact statement; LBP-09-4, 69 NRC 170 (2009)

proof of independent ability to litigate a contention by an adopting party is not required; LBP-06-20, 64 NRC 131 (2006)

recommendations are made for the adoption of contentions by other parties in the high-level waste repository proceeding; LBP-08-10, 67 NRC 450 (2008)

resolution of factual disputes is not the appropriate subject of inquiry at the contention admissibility stage of the proceeding; LBP-06-4, 63 NRC 99 (2006)

## SUBJECT INDEX

strict pleading requirements help to ensure that full adjudicatory hearings are triggered only by those able to proffer at least some minimal factual and legal foundation in support of their contentions; LBP-07-11, 66 NRC 41 (2007)

the 30-day hearing petition and contention-filing deadlines set forth in this section have been modified for the high-level waste proceeding; CLI-08-25, 68 NRC 497 (2008)

the bar against corrective redrafting of contentions is particularly compelling in the context of a request for discretionary intervention because rewriting undermines the very basis for granting discretionary intervention, i.e., the petitioner's demonstrated ability to contribute to the record; CLI-06-16, 63 NRC 708 (2006)

the Commission distinguishes between contentions that merely allege an omission of information and those that challenge substantively and specifically how particular information has been discussed in a license application; LBP-10-14, 72 NRC 101 (2010)

the Commission shall permit intervention by the state and local governmental body in which the geologic repository operations area is located, and by any affected federally recognized Indian tribe if the contention requirements in 10 C.F.R. 2.309(f) are satisfied with respect to at least one contention; CLI-08-25, 68 NRC 497 (2008)

the distinction between contentions of omission and contentions of inadequacy does not appear in NRC contention pleading regulations, but rather is a useful concept from agency case law; CLI-10-2, 71 NRC 27 (2010)

the February 2004 revision of NRC procedural rules no longer permits the amendment and supplementation of petitions and the filing of contentions after the original filing of petitions; LBP-06-10, 63 NRC 314 (2006)

the plain language of a contention will reveal whether it is a claim of omission, a specific substantive challenge to an application, or a combination of both; LBP-06-16, 63 NRC 737 (2006)

the purpose of NRC adjudicatory hearings is to consider claims of deficiencies in a license application; CLI-08-20, 68 NRC 272 (2008)

the reach of a contention necessarily hinges upon its terms coupled with its stated bases; LBP-08-9, 67 NRC 421 (2008)

the strict contention rule focuses the hearing process on real disputes susceptible of resolution in an adjudication; LBP-07-11, 66 NRC 41 (2007)

the term "contention" in 10 C.F.R. 2.336(a)(1) means simply a point or argument asserted or advanced by any party; LBP-09-30, 70 NRC 1039 (2009)

there is a difference between contentions that merely allege an omission of information and those that challenge substantively and specifically how particular information has been discussed in a license application; CLI-10-9, 71 NRC 245 (2010); LBP-06-16, 63 NRC 737 (2006); LBP-08-11, 67 NRC 460 (2008)

there is no requirement for any nexus between an asserted injury and a contention; LBP-09-1, 69 NRC 11 (2009)

to ensure a more efficient proceeding, the board merges two contentions; LBP-10-16, 72 NRC 361 (2010)

to intervene in a proceeding a petitioner must, in addition to demonstrating standing, submit at least one contention meeting the requirements of 10 C.F.R. 2.309(f)(1); LBP-06-23, 64 NRC 257 (2006); LBP-07-11, 66 NRC 41 (2007); LBP-08-6, 67 NRC 241 (2008)

under the 2004 Part 2 revisions, contentions are now required to be included with, rather than being submitted sometime subsequent to the filing of, the intervention petition; LBP-10-1, 71 NRC 165 (2010)

use of the disjunctive phrase "data or conclusions" means that it is sufficient that either data or conclusions in the draft environmental impact statement differ significantly from those in the environmental report; LBP-10-24, 72 NRC 720 (2010)

when a contention of omission encompasses issues that are addressed completely in materials the applicant subsequently files, the contention is rendered moot; LBP-09-21, 70 NRC 581 (2009)

when a Notice of Hearing is issued before construction is commenced, additional petitions to intervene or statements of contentions may be filed as construction unfolds and reveals potential shortcomings; LBP-07-14, 66 NRC 169 (2007)

when Staff has prepared a draft environmental impact statement or final EIS by the time environmental contentions come before a licensing board on the merits, such contentions are appropriately treated as challenges to the EIS; LBP-09-7, 69 NRC 613 (2009)

## SUBJECT INDEX

- where a contention is superseded by the subsequent issuance of licensing-related documents, the contention must be disposed of or modified; LBP-10-17, 72 NRC 501 (2010)
- where petitioner has established standing to intervene, but has not submitted an admissible contention, its request for an evidentiary hearing is denied; LBP-08-17, 68 NRC 431 (2008)
- where the Commission found that the board did not provide clarity on the scope of admitted contentions, it exercised its authority to reformulate the contentions; CLI-10-18, 72 NRC 56 (2010)
- whether and how the Staff fulfills its National Historic Preservation Act and NEPA obligations are issues that could form the basis of a new contention; LBP-10-16, 72 NRC 361 (2010)
- See also Abeyance of Contention; Adoption of Contentions; Amendment of Contentions
- CONTENTIONS, ADMISSIBILITY**
- a board abused its discretion in reformulating and admitting contentions; LBP-10-16, 72 NRC 361 (2010)
- a board appropriately rejected the contention of a petitioner who failed to support his premise that a river water intake valve is a safety-related system with information or expert opinion; CLI-07-25, 66 NRC 101 (2007)
- a board appropriately reviews the materials cited in support of a contention, while making no pronouncements on whether the information contained in the application or the claims made in the petition are valid; CLI-10-9, 71 NRC 245 (2010)
- a board could refer a contention relating to a certified design to the Staff for consideration in the design certification rulemaking and hold that contention in abeyance if the contention is otherwise admissible; LBP-10-21, 72 NRC 616 (2010)
- a board did not err in reformulating a contention to state that the application failed to comply with 10 C.F.R. Part 51, rather than with the National Environmental Policy Act; CLI-10-2, 71 NRC 27 (2010)
- a board erred in admitting a contention on adverse health effects of exposure to arsenic, where petitioners had not laid a foundation and their arguments were speculative; CLI-09-9, 69 NRC 331 (2009)
- a board erred in referring a contention to the Staff for consideration in conjunction with the design certification rulemaking without first assessing its admissibility; CLI-10-1, 71 NRC 1 (2010)
- a board erred when it disregarded the rule that a reply cannot expand the scope of the arguments set forth in the original hearing request; CLI-09-12, 69 NRC 535 (2009)
- a board is free to decide an issue on a theory different from those argued by the litigants, but only if it explains the specific basis of its ruling and gives the litigants a chance to present arguments and, where appropriate, evidence regarding the board's new theory; CLI-09-3, 69 NRC 68 (2009)
- a board is not to permit incorporation by reference where the effect would be to circumvent NRC-prescribed specificity requirements; LBP-08-24, 68 NRC 691 (2008)
- a board may appropriately view petitioners' support for its contention in a light that is favorable to the petitioner; LBP-08-26, 68 NRC 905 (2008)
- a board may consider environmental contentions contesting applicant's environmental report as challenges to NRC's subsequent draft environmental impact statement as long as the DEIS analysis or discussion at issue is essentially *in para materia* with the ER analysis or discussion that is the focus of the contention; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)
- a board may not simply infer the bases for a contention; CLI-09-7, 69 NRC 235 (2009)
- a board ruling on a contention may be referred to the Commission if it raises significant and novel legal or policy issues or the referral would materially advance the orderly disposition of the proceeding; LBP-09-26, 70 NRC 939 (2009)
- a board's authority to recast contentions is circumscribed in that it may not, on its own initiative, provide basic, threshold information required for contention admissibility; LBP-08-11, 67 NRC 460 (2008)
- a brief explanation of the basis for the contention is a necessary prerequisite; LBP-07-16, 66 NRC 277 (2007)
- a challenge to the agency's overall enforcement policy is outside the scope of the enforcement proceeding and therefore is inadmissible; CLI-06-16, 63 NRC 708 (2006); LBP-06-12, 63 NRC 403 (2006)
- a challenge to applicant's site-specific measurements of adsorption and retention coefficients relative to hydrological radionuclide transport is an admissible contention; LBP-09-16, 70 NRC 227 (2009)
- a challenge to the pending EPA proposed rule setting standards for offsite releases from radioactive materials that would be stored in the proposed Yucca Mountain high-level waste geologic repository is inadmissible; LBP-08-16, 68 NRC 361 (2008)

## SUBJECT INDEX

- a challenge to the Waste Confidence Rule, which is the subject of a rulemaking, is inadmissible; CLI-10-9, 71 NRC 245 (2010); LBP-08-16, 68 NRC 361 (2008); LBP-08-17, 68 NRC 431 (2008); LBP-08-23, 68 NRC 679 (2008); LBP-09-17, 70 NRC 311 (2009)
- a change in the controlling law in a different Circuit does not constitute previously unavailable information to excuse late filing; CLI-07-10, 65 NRC 144 (2007)
- a claim of deficiency in construction of the concrete containment is insufficient because it was not linked to the application at issue in the proceeding; CLI-10-9, 71 NRC 245 (2010)
- a clear statement of the basis for contentions and the submission of supporting information and references to specific documents and sources that establish the validity of the contention are required; CLI-06-24, 64 NRC 111 (2006)
- a combined license application's lack of consideration of any alternative to offsite disposal of low-level radioactive waste is a material issue for litigation; LBP-09-18, 70 NRC 385 (2009)
- a contention alleging that a breakdown of applicant's quality assurance program must provide evidence that there is legitimate doubt as to whether the plant can be operated safely; LBP-10-9, 71 NRC 493 (2010)
- a contention alleging that a license application omits material information becomes moot when the applicant cures the omission; LBP-09-15, 70 NRC 198 (2009)
- a contention alleging that the applicant's plan to manage metal fatigue is too vague and is really only a "plan to develop a plan" raises an admissible and material issue as to whether the applicant has met its requirement to demonstrate that the effects of aging will be adequately managed; LBP-06-20, 64 NRC 131 (2006)
- a contention alleging that the applicant's proposed monitoring techniques are not adequate because they are based on computer models that were not benchmarked is admissible; LBP-06-20, 64 NRC 131 (2006)
- a contention arguing that the proposed reactor does not fit into the site parameters of the ESP, or that the terms and conditions of the ESP are not met, is potentially admissible at the COL stage; CLI-07-12, 65 NRC 203 (2007)
- a contention arising from a matter resolved in an early site permit proceeding is within the scope of a combined license proceeding that references the ESP if it concerns whether emergency planning matters resolved in the ESP should be revisited; LBP-08-15, 68 NRC 294 (2008)
- a contention asserting that a license application for an irradiator sited at an airport fails to analyze aircraft crash probabilities and consequences presents a genuine dispute on a material issue; LBP-06-12, 63 NRC 403 (2006)
- a contention asserting that an application is incomplete because it incorporates by reference a standard design certification and a pending application for a revision to that certified design is inadmissible; LBP-09-10, 70 NRC 51 (2009)
- a contention based on another agency's draft environmental assessment that does not apply to the time period in which proposed reactor units would be operational is not material to the findings the licensing board must make in the proceeding; LBP-10-1, 71 NRC 165 (2010)
- a contention based on new information will be considered timely if it is filed within 30 days of the availability of the new information; LBP-10-14, 72 NRC 101 (2010); LBP-10-16, 72 NRC 361 (2010)
- a contention calling for a siting safety analysis for an irradiator is not barred by the Part 36 regulatory scheme, but must be sufficiently supported, in light of the Statement of Considerations' conclusions; CLI-08-3, 67 NRC 151 (2008)
- a contention can be one of omission as well as one of inadequacy when it alleges that the environmental report is insufficient because it fails to discuss all aspects of a topic adequately; LBP-09-10, 70 NRC 51 (2009)
- a contention challenging the absence in the environmental report of consideration of impacts from a severe radiological accident at one unit on other collocated units is admitted; LBP-09-17, 70 NRC 311 (2009)
- a contention challenging the failure to include in the environmental impact statement for license renewal any consideration of the effects of an aircraft attack is inadmissible; LBP-10-10, 71 NRC 529 (2010)
- a contention concerning environmental impacts of offsite mining is rejected because petitioner failed to support the allegations with information indicating that such impacts are even plausibly significant; LBP-09-10, 70 NRC 51 (2009)

## SUBJECT INDEX

- a contention filed within 30 days of the issuance of a document that legitimately undergirds the contention would be timely and presumptively meet the good cause requirement; CLI-10-18, 72 NRC 56 (2010)
- a contention is admissible if it raises a genuine dispute that is material to the findings the NRC must make to support the action involved; LBP-09-25, 70 NRC 867 (2009)
- a contention is inadmissible where intervenors did not show that a model was defective or used incorrectly but simply that a different result would be achieved using their own model; LBP-09-6, 69 NRC 367 (2009)
- a contention is material if it shows that some significant link exists between the claimed deficiency and either the health and safety of the public, or the environment; LBP-09-26, 70 NRC 939 (2009)
- a contention is not admissible if it is not plausibly explained or supported by alleged facts; LBP-09-21, 70 NRC 581 (2009)
- a contention is not an impermissible challenge to agency regulations merely because the applicant and the Staff believe the regulations have been satisfied; LBP-06-12, 63 NRC 403 (2006)
- a contention is not cognizable unless it is material to matters that fall within the scope of the proceeding for which the licensing board has been delegated jurisdiction; LBP-07-4, 65 NRC 281 (2007)
- a contention is timely to the extent it challenges the adequacy of the new low-level radioactive waste storage plan, but untimely as to those aspects of the contention that merely reargue issues already decided by the board, without identifying any new information relevant to those issues; LBP-09-27, 70 NRC 992 (2009)
- a contention may be held in abeyance by a licensing board pending completion of a rulemaking, but the contention must be otherwise admissible; LBP-10-9, 71 NRC 493 (2010)
- a contention must allege facts sufficient to establish that it falls directly within the scope of a proceeding; LBP-07-11, 66 NRC 41 (2007)
- a contention must explain why the application is deficient through reference to specific portions of the application, and it must directly controvert a position taken by the applicant in the application; LBP-09-17, 70 NRC 311 (2009)
- a contention must explain, with specificity, particular safety or legal reasons requiring rejection of the contested application, and demonstrate that there has been sufficient foundation assigned for it to warrant further exploration; LBP-06-10, 63 NRC 314 (2006)
- a contention must meet certain specificity and basis requirements and must fall within the scope of the proceeding; CLI-06-16, 63 NRC 708 (2006)
- a contention must meet five pleading requirements; LBP-07-3, 65 NRC 237 (2007)
- a contention must provide sufficient information to show that a genuine dispute exists on a material issue of law or fact; LBP-06-22, 64 NRC 229 (2006)
- a contention must show that a genuine dispute exists on a material issue of law or fact with regard to the license application, challenge and identify either specific portions of, or alleged omissions from, the application, and provide the supporting reasons for each dispute; LBP-09-26, 70 NRC 939 (2009)
- a contention of omission claims that the application fails to contain information on a relevant matter as required by law and provides the supporting reasons for the petitioner's belief; LBP-09-16, 70 NRC 227 (2009)
- a contention of omission is subject to dismissal in connection with those aspects for which it is appropriately established that the Staff DEIS provides any purported missing analysis or discussion; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)
- a contention of "omission" that has been cured can be dismissed as moot; CLI-07-8, 65 NRC 124 (2007); CLI-09-8, 69 NRC 317 (2009); LBP-09-16, 70 NRC 227 (2009)
- a contention on spent fuel pool fires is rejected as an impermissible challenge to NRC regulations and the license renewal generic environmental impact statement; CLI-10-11, 71 NRC 287 (2010)
- a contention questioning whether particular bits of information taken from an emergency plan are sufficiently accurate for use in computing the health and safety consequences of a severe accident, as an environmental issue, is admissible; LBP-06-23, 64 NRC 257 (2006)
- a contention raised in a combined license hearing challenging information in a design certification rulemaking, if otherwise admissible, should be referred to the Staff for consideration in the rulemaking, and held in abeyance by licensing board pending outcome of rulemaking; CLI-09-4, 69 NRC 80 (2009); LBP-09-3, 69 NRC 139 (2009)

## SUBJECT INDEX

- a contention revolving around the possibility of future design changes to a facility is speculative and thus inadmissible; LBP-08-11, 67 NRC 460 (2008)
- a contention shall not be admitted if the admissibility requirements are not satisfied or if the contention, even if proven, would not entitle the petitioner to relief; CLI-08-1, 67 NRC 1 (2008)
- a contention should be dismissed if it does not directly controvert a position taken by the applicant in the license application; LBP-09-27, 70 NRC 992 (2009)
- a contention stating that monitoring activities may not be sufficient to identify and control the effects of aging that will occur during the 20-year renewal period falls within the scope of a license renewal proceeding; LBP-06-7, 63 NRC 188 (2006)
- a contention that applicant has failed to identify non-safety-related systems, structures, and components in the security area whose failure could prevent satisfactory accomplishment of the functions of safety-related systems, structures, and components is not admissible because security-related issues are not within the scope of a license renewal proceeding; LBP-06-20, 64 NRC 131 (2006)
- a contention that applicant's aging management program fails to adequately assure the continued integrity of the drywell liner for the requested license extension is denied; LBP-06-23, 64 NRC 257 (2006)
- a contention that applicant's aging management program is inadequate with regard to aging management of buried pipes and tanks that contain radioactively contaminated water because it does not provide for monitoring wells that would detect leakage is admitted; LBP-06-23, 64 NRC 257 (2006)
- a contention that applicant's severe accident mitigation alternatives analysis is deficient regarding input data on evacuation times, economic consequences, and meteorological patterns, resulting in incorrect conclusions about the costs versus benefits of possible mitigation alternatives, is admitted; LBP-06-23, 64 NRC 257 (2006)
- a contention that attacks a Commission rule, or which seeks to litigate a matter that is, or clearly is about to become, the subject of a rulemaking, is inadmissible; CLI-10-9, 71 NRC 245 (2010); LBP-07-3, 65 NRC 237 (2007); LBP-09-2, 69 NRC 87 (2009); LBP-09-3, 69 NRC 139 (2009); LBP-09-8, 69 NRC 736 (2009); LBP-10-7, 71 NRC 391 (2010)
- a contention that attacks applicable statutory requirements, challenges the basic structure of the NRC's regulatory process, or merely expresses generalized policy grievances is not appropriate for a board hearing; LBP-09-3, 69 NRC 139 (2009); LBP-09-6, 69 NRC 367 (2009)
- a contention that challenges any Commission rule is outside the scope of the proceeding because, absent a waiver, no rule or regulation of the Commission is subject to attack in any adjudicatory proceeding; CLI-07-16, 65 NRC 371 (2007); LBP-07-4, 65 NRC 281 (2007)
- a contention that challenges compliance with fire protection regulations at an existing unit is outside the scope of a combined license proceeding; CLI-10-9, 71 NRC 245 (2010)
- a contention that fails to address the information in the application and show a genuine dispute thereon is inadmissible; CLI-09-5, 69 NRC 115 (2009)
- a contention that fails to comply with any of the pleading requirements will not be admitted for litigation; LBP-06-22, 64 NRC 229 (2006)
- a contention that fails to provide even a ballpark figure for the cost of implementing any proposed severe accident mitigation alternatives is inadmissible because it is difficult to assess whether a SAMA may be cost-beneficial and thus warrant serious consideration; LBP-09-26, 70 NRC 939 (2009)
- a contention that involves an issue of state law is outside the scope of a materials license renewal proceeding; LBP-08-24, 68 NRC 691 (2008)
- a contention that merely seeks to advance generalizations regarding a petitioner's particular view of what applicable policies ought to be is not admissible; CLI-07-25, 66 NRC 101 (2007)
- a contention that new and significant information about cancer rates in communities around a plant shows that another 20 years of operations may result in greater offsite radiological impacts on human health than was previously known is denied; LBP-06-23, 64 NRC 257 (2006)
- a contention that raises the question as to whether requirements of 10 C.F.R. 51.53(c)(3)(ii)(B) supplement the more general requirements of 10 C.F.R. 51.45(c) and 51.53(c), or instead displace and supplant the latter requirements, raises an admissible and material issue of interpretation and construction of the regulations; LBP-06-20, 64 NRC 131 (2006)
- a contention that seeks to impose new requirements on applicants and licensees is an impermissible challenge to the agency's regulations; LBP-09-26, 70 NRC 939 (2009)

## SUBJECT INDEX

- a contention that simply states the petitioner's views about what regulatory policy should be does not present a litigable issue; LBP-07-3, 65 NRC 237 (2007); LBP-09-3, 69 NRC 139 (2009)
- a contention was found to be inadmissible because the combined license application contained petitioner's asserted omissions; CLI-10-1, 71 NRC 1 (2010)
- a contention will be ruled inadmissible if the petitioner has offered no tangible information, no experts, no substantive affidavits, but instead only are assertions and speculation; LBP-06-7, 63 NRC 188 (2006); LBP-10-6, 71 NRC 350 (2010)
- a contention's proponent, not the licensing board, is responsible for formulating the contention and providing the necessary information to satisfy the basis requirement; CLI-06-10, 63 NRC 451 (2006)
- a design-based challenge involving a postulated cask drop on a sealed source is within the scope of, and material to, an irradiator licensing proceeding; LBP-06-12, 63 NRC 403 (2006)
- a detailed summary of relevant case law on contention admissibility is presented; LBP-07-4, 65 NRC 281 (2007)
- a dispute is material if its resolution would make a difference in the outcome of the licensing proceeding; LBP-10-6, 71 NRC 350 (2010)
- a dispute is not material unless it involves a significant inaccuracy or omission and resolution of the dispute could affect the outcome of the licensing proceeding; LBP-10-14, 72 NRC 101 (2010)
- a document put forth by an intervenor as supporting the basis for a contention is subject to scrutiny, for both what it does and does not show; LBP-09-27, 70 NRC 992 (2009)
- a factual dispute cannot be resolved against petitioners at the contention admissibility stage, especially when petitioners' version of the facts is supported by sworn affidavits and applicant's version is not; LBP-09-6, 69 NRC 367 (2009)
- a finding that applicant has cured an omission does not preclude litigation concerning the adequacy of the information the applicant has supplied and intervenors must timely file a new or amended contention that addresses the factors in 10 C.F.R. 2.309(f)(1); LBP-09-15, 70 NRC 198 (2009)
- a general assessment of radioactivity within waters of the Great Lakes Basin does not address specific issues with regard to the proposed reactor, and it does not provide any support for petitioners' assertions; LBP-09-16, 70 NRC 227 (2009)
- a generalized assertion, without specific ties to NRC regulatory requirements or to safety in general, do not provide adequate support demonstrating the existence of a genuine dispute of fact or law with respect to the construction authorization application; LBP-09-27, 70 NRC 992 (2009)
- a genuine dispute exists despite the fact that character or integrity is not required by regulation to be addressed in the license application; LBP-09-6, 69 NRC 367 (2009)
- a genuine material dispute is one that could lead to a different conclusion on potential cost-beneficial severe accident mitigation alternatives; LBP-09-26, 70 NRC 939 (2009)
- a justiciable controversy must involve adverse parties representing a true clash of interests and the questions raised must be presented in an adversary context and in a form historically viewed as capable of resolution through the judicial process; LBP-09-25, 70 NRC 867 (2009)
- a late-filed contention can be admitted only when the information on which the amended or new contention is based was previously unavailable; CLI-07-10, 65 NRC 144 (2007)
- a late-filed contention will be rejected as untimely unless the petitioner demonstrates that the eight-factor balancing test in 10 C.F.R. 2.309(c) militates in favor of considering the contention's admissibility; LBP-06-22, 64 NRC 229 (2006)
- a late-filed environmental contention may be admitted only where petitioner relies upon newly available, significant information, meets the nontimely filing requirements, or successfully argues for supplementing the EIS; LBP-08-11, 67 NRC 460 (2008)
- a legal issue contention need not satisfy all the contention admissibility criteria; LBP-09-29, 70 NRC 1028 (2009)
- a legal issue contention raises a genuine dispute with the application, because it challenges DOE's performance assessment for the post-10,000-year period; LBP-09-29, 70 NRC 1028 (2009)
- a license renewal proceeding is an appropriate occasion for appraising the entire past performance of the licensee; LBP-08-24, 68 NRC 691 (2008)
- a licensing board is not permitted to draw any inferences on behalf of a petitioner; LBP-06-23, 64 NRC 257 (2006)

## SUBJECT INDEX

- a licensing board order canceling oral argument on the admissibility of petitioner's proposed contention did not cause serious and irreparable harm to petitioner; CLI-08-7, 67 NRC 187 (2008)
- a licensing board will grant a request for a hearing if it determines that the requestor has standing has proposed at least one admissible contention; LBP-10-4, 71 NRC 216 (2010)
- a litany of "facts" and "figures" on various items without citation to a specific document, expert opinion, or other supporting source reduces them to bare assertions and speculation that will not support the contention admission; LBP-08-16, 68 NRC 361 (2008)
- a litigable NEPA issue is one that concerns whether the NRC Staff has taken the requisite hard look at mitigation in sufficient detail to ensure that environmental consequences of the proposed project have been fairly evaluated; LBP-10-13, 71 NRC 673 (2010)
- a materials license amendment proceeding is not an appropriate forum to throw open an opportunity to engage in a free-ranging inquiry into the character of the licensee; LBP-09-1, 69 NRC 11 (2009)
- a matter need not be actually litigated in order to be "resolved" in an early site permit proceeding; LBP-08-15, 68 NRC 294 (2008)
- a matter raised for the first time in a prehearing conference would only be admissible if the petitioner could satisfy the test for admitting late-filed contentions; CLI-07-25, 66 NRC 101 (2007)
- a new contention will necessarily fail if it attacks the quality of the Staff's review rather than identifying a deficiency in the application; CLI-09-5, 69 NRC 115 (2009)
- a new issue is raised only when the argument itself (as distinct from its chances of success) was not apparent at the time of the application; CLI-09-7, 69 NRC 235 (2009)
- a new non-NEPA contention is admissible if it is based on information that was not previously available, if the new information is materially different from previously available information, and if the contention is submitted in a timely manner once the new information becomes available; LBP-07-15, 66 NRC 261 (2007)
- a new or amended contention that is found to be timely in accord with 10 C.F.R. 2.309(f)(2) need not be assessed under the section 2.309(c) factors, which are considered to apply only to otherwise nontimely submissions; LBP-10-1, 71 NRC 165 (2010)
- a new safety contention can be filed, with leave of the board, on a showing that the new contention is based on information that was not previously available and is materially different from previously available information, and the new contention has been submitted in a timely fashion based on the availability of the subsequent information; LBP-09-9, 70 NRC 41 (2009)
- a nexus between the injury and the relief is required rather than a nexus between the claimed injury and the contention; LBP-09-16, 70 NRC 227 (2009)
- a party cannot satisfy the "not previously available" standard of 10 C.F.R. 2.309(f)(2)(i) by showing that, as a subjective matter, he or she only recently became aware of, or realized the significance of, public information that was previously available to all; LBP-09-10, 70 NRC 51 (2009)
- a party may not present a new contention, or a new basis for a proposed contention, in its reply; LBP-10-9, 71 NRC 493 (2010)
- a petitioner is not required to prove its case at the contention admission stage; LBP-06-10, 63 NRC 314 (2006)
- a petitioner may not demand an adjudicatory hearing to attack generic NRC requirements or regulations, or to express generalized grievances about NRC policies; LBP-06-23, 64 NRC 257 (2006)
- a petitioner may, within the adjudicatory context, submit a request for waiver of a rule; LBP-07-4, 65 NRC 281 (2007)
- a petitioner seeking to reopen the record does not show the existence of a significant safety issue by showing merely that a plant component performs safety functions and thus has safety significance; LBP-08-12, 68 NRC 5 (2008)
- a petitioner who believes that a license application fails to contain information on a relevant matter as required by law must identify each failure and the supporting reasons for the petitioner's belief; LBP-06-10, 63 NRC 314 (2006)
- a petitioner who fails to develop an argument in its petition is foreclosed from doing so in the first instance in its reply brief; CLI-06-17, 63 NRC 727 (2006); LBP-06-7, 63 NRC 188 (2006)
- a petitioner who fails to satisfy the contention pleading requirements in its initial contention submission may not use its reply to rectify those inadequacies or to raise new arguments, but may use the reply to flesh out contentions that have already met the pleading requirements; LBP-06-20, 64 NRC 131 (2006)

## SUBJECT INDEX

- a petitioner who without reason fails to argue that a nontimely contention satisfies the eight-factor balancing test in 10 C.F.R. 2.309(c) may be deemed as having waived that argument; LBP-06-22, 64 NRC 229 (2006)
- a possible 1-year slip in the construction schedule is clearly within the margin of uncertainty and therefore, in the context of relitigating an issue, is unlikely to affect the need for power; LBP-10-6, 71 NRC 350 (2010)
- a possible future action must at least constitute a proposal pending before the agency to be ripe for adjudication; LBP-08-11, 67 NRC 460 (2008)
- a presiding officer considering environmental contentions in the high-level waste proceeding should apply NRC reopening procedures and standards in 10 C.F.R. 2.326 to the extent possible; CLI-08-25, 68 NRC 497 (2008)
- a properly pleaded contention of omission must challenge a specific portion of the application and provide a basis for demonstrating the alleged deficiency; LBP-09-26, 70 NRC 939 (2009)
- a proposed contention that fails to directly controvert the application or that mistakenly asserts the application does not address a relevant issue is subject to dismissal; LBP-09-27, 70 NRC 992 (2009)
- a proposed new contention challenging the adequacy of applicant's recently issued metal fatigue calculations meets both the three-factor and six-factor tests for admissibility; LBP-07-15, 66 NRC 261 (2007)
- a proposed new or amended contention shall be deemed timely if it is filed within 30 days of the date when the new and material information on which it is based first becomes available; LBP-10-9, 71 NRC 493 (2010)
- a purely legal-issue contention need not allege facts or present arguments by affidavit; LBP-09-6, 69 NRC 367 (2009)
- a recent e-mail from an expert that provided no indication of when petitioners contacted the expert and that primarily referenced articles published years earlier is untimely support and does not constitute legitimate amplification of originally filed contentions; LBP-08-6, 67 NRC 241 (2008)
- a reply cannot be used to substantively supplement or amend a contention; LBP-08-18, 68 NRC 533 (2008)
- a reply may not be used as a vehicle to introduce new arguments or support, may not expand the scope of arguments set forth in the original petition, and may not attempt to cure an otherwise deficient contention; LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009)
- a request for an exemption from a particular regulatory provision does not render a license application deficient; CLI-06-10, 63 NRC 451 (2006)
- a ruling granting summary disposition on a single contention, where other contentions are still pending in an adjudication, is not a final decision, and is not susceptible to Commission review; CLI-08-2, 67 NRC 31 (2008)
- a safety contention arising from a matter resolved in an early site permit proceeding is within the scope of a combined license proceeding that references the ESP if it concerns whether the site characteristics and design parameters or a term or condition specified in the ESP have been met or whether a variance from the ESP requested by the COL applicant is unwarranted or should be modified; LBP-08-15, 68 NRC 294 (2008)
- a SAMA analysis contention was found to be inadmissible because it lacked supporting information regarding the relative costs and benefits of that proposed alternative; LBP-10-15, 72 NRC 257 (2010)
- a single past violation of licensee's state permit could not demonstrate an ongoing pattern of violations or disregard for regulations that might be expected to recur in the future; CLI-09-9, 69 NRC 331 (2009)
- a single sentence labeled a contention, with no reference to the six elements of 10 C.F.R. 2.309(f)(1), is not admissible; LBP-10-16, 72 NRC 361 (2010)
- a specific statement of the issue of law or fact to be raised or controverted must be provided; CLI-10-2, 71 NRC 27 (2010)
- a Staff request for additional information ordinarily may not be used to support admission of a new contention because such a request, standing alone, generally does not give rise to a genuine dispute on material issues; LBP-06-11, 63 NRC 391 (2006)
- a Staff request to an applicant for more information does not make an application incomplete; CLI-08-15, 68 NRC 1 (2008)

## SUBJECT INDEX

- a statement of petitioner's views about what regulatory policy should be does not present a litigable issue; CLI-08-17, 68 NRC 231 (2008); LBP-08-16, 68 NRC 361 (2008); LBP-08-17, 68 NRC 431 (2008)
- a successful challenge to a contention admissibility ruling must demonstrate that the ruling either constitutes clear error or reflects an abuse of discretion; CLI-10-17, 72 NRC 1 (2010)
- a timely motion to reopen may be denied if it raises issues that are not of major significance to plant safety whereas a nontimely motion may be granted if it raises an issue of sufficient gravity; LBP-10-21, 72 NRC 616 (2010)
- a waiver of 10 C.F.R. 2.335 is necessary to litigate an applicant's failure to include new and significant information concerning a Category 1 issue in its environmental report; LBP-06-20, 64 NRC 131 (2006)
- a well-pleaded environmental contention concerning the effects of long-term onsite management of low-level radioactive waste is admissible; CLI-10-2, 71 NRC 27 (2010)
- absence of perfect compliance by licensee does not rebut the presumption of compliance or support admission of a contention that the application does not satisfy 10 C.F.R. 54.29(a), but a consistent, longstanding, and continuing pattern of problems in a specific area that is relevant to managing aging equipment will; LBP-10-15, 72 NRC 257 (2010)
- absent a waiver pursuant to 10 C.F.R. 2.335, a contention that attacks a Commission rule or that seeks to litigate a matter that is, or clearly is about to become, the subject of a rulemaking, is inadmissible; CLI-08-15, 68 NRC 1 (2008); CLI-08-17, 68 NRC 231 (2008); LBP-08-13, 68 NRC 43 (2008); LBP-08-16, 68 NRC 361 (2008); LBP-08-17, 68 NRC 431 (2008); LBP-08-21, 68 NRC 554 (2008)
- absent a waiver pursuant to 10 C.F.R. 2.335, Category 1 issues cannot be addressed in a license renewal proceeding; LBP-08-13, 68 NRC 43 (2008)
- absent a waiver, contentions challenging applicable statutory requirements or Commission regulations are not admissible in agency adjudications; CLI-09-3, 69 NRC 68 (2009); CLI-09-20, 70 NRC 911 (2009); LBP-09-6, 69 NRC 367 (2009); LBP-09-10, 70 NRC 51 (2009); LBP-10-15, 72 NRC 257 (2010); LBP-10-16, 72 NRC 361 (2010)
- absent evidence to the contrary, a licensing board will not assume that a licensee will act in derogation of its formal commitments to the NRC Staff; LBP-06-7, 63 NRC 188 (2006)
- absent extreme circumstances, the Commission will not consider on appeal either new arguments or new evidence supporting a contention that the licensing board never had the opportunity to consider; CLI-06-10, 63 NRC 451 (2006); CLI-10-21, 72 NRC 197 (2010)
- accuracy and reliability of the agency's need-for-power determination, as reflected in the draft EIS, is material to the licensing decision; LBP-10-24, 72 NRC 720 (2010)
- adequacy of emergency planning is outside the scope of license renewal proceedings; LBP-10-13, 71 NRC 673 (2010)
- adequacy of the draft environmental impact statement's evaluation of alternatives is a material issue in the licensing proceeding; LBP-10-24, 72 NRC 720 (2010)
- adequacy of the seismic analysis for the site found in the Final Safety Analysis Report is not a litigable issue; LBP-08-16, 68 NRC 361 (2008)
- adequacy or inadequacy of applicant's severe accident mitigation alternatives analysis is certainly within the scope of a license renewal proceeding; LBP-10-15, 72 NRC 257 (2010)
- adjudicating Category 1 issues site by site based merely on a claim of new and significant information would defeat the purpose of resolving generic issues in a generic environmental impact statement; CLI-07-3, 65 NRC 13 (2007)
- adjudication is not the proper forum for challenging applicable statutory requirements or the basic structure of the agency's regulatory process; LBP-08-16, 68 NRC 361 (2008); LBP-10-7, 71 NRC 391 (2010)
- adjudicatory boards should not be expected, unaided by the parties, to sift through the parties' pleadings to uncover and resolve arguments not advanced by litigants themselves; LBP-10-10, 71 NRC 529 (2010)
- administrative proceedings should not be a game or a forum to engage in unjustified obstructionism by making cryptic and obscure references to matters that "ought to be" considered; LBP-10-10, 71 NRC 529 (2010)
- admissible contentions must satisfy the six pleading requirements of 10 C.F.R. 2.309(f)(1); LBP-09-6, 69 NRC 367 (2009); LBP-09-8, 69 NRC 736 (2009)

## SUBJECT INDEX

admission of a grand contention of omission based on failure to meet the requirements of 10 C.F.R. 70.23(a)(8) regarding facility completion could be justified; LBP-08-11, 67 NRC 460 (2008)

affidavits supporting environmental contentions must set forth factual and/or technical bases for the claim that it is not practicable to adopt the DOE environmental impact statement; LBP-09-6, 69 NRC 367 (2009)

all nuclear safety and environmental issues concerning severe accident mitigation design alternatives associated with NRC's environmental assessment for the AP1000 design and Appendix 1B of the generic Design Control Document are considered resolved by the Commission; LBP-09-2, 69 NRC 87 (2009)

all proffered contentions must be within the scope of the proceeding as defined by the Commission in its initial hearing notice and order referring the proceeding to the licensing board; LBP-07-10, 66 NRC 1 (2007); LBP-09-3, 69 NRC 139 (2009); LBP-09-6, 69 NRC 367 (2009)

all properly formulated contentions must focus on the license application in question, challenging either specific portions of or alleged omissions from the application (including the Safety Analysis Report and the Environmental Report) so as to establish that a genuine dispute exists with the applicant on a material issue of law or fact; LBP-07-3, 65 NRC 237 (2007)

allegation of facts, with supporting documentation, of a longstanding and continuing pattern of noncompliance or management difficulties that are reasonably linked to whether licensee will actually be able to adequately manage aging in accordance with the current licensing basis during the period of extended operation can be an admissible contention; LBP-10-15, 72 NRC 257 (2010)

allegation of failure to include in the combined license application any information regarding the project's greenhouse gas emissions or carbon footprint is inadmissible; LBP-08-16, 68 NRC 361 (2008)

allegation that NRC has inadequately characterized human health impacts of radiation exposure from the high-level waste repository is inadmissible in a combined license proceeding; LBP-08-16, 68 NRC 361 (2008)

allegation that some aspect of a license application is "inadequate" or "unacceptable" does not give rise to a genuine dispute unless it is supported by facts and a reasoned statement of why the application is unacceptable in some material respect; LBP-06-10, 63 NRC 314 (2006); LBP-07-11, 66 NRC 41 (2007); LBP-08-17, 68 NRC 431 (2008)

allegation that the environmental report is based on incomplete information because a new earthquake fault has been discovered within 600 meters of nuclear reactors and the results of studies concerning the new fault will be available in the near term is admissible; LBP-10-15, 72 NRC 257 (2010)

allegation that the environmental report's analysis of cancer deaths and illnesses relative to natural radiation source exposures is inadequate is inadmissible; LBP-08-16, 68 NRC 361 (2008)

allegation that the Final Safety Analysis Report must address the impact of global warming on the transmission grid and the increased probability of loss of offsite power events is inadmissible; LBP-08-16, 68 NRC 361 (2008)

allegations of deficiencies or errors in an application also must indicate some significant link between the claimed deficiency and either the health and safety of the public or the environment; LBP-07-10, 66 NRC 1 (2007)

allegations of management improprieties must be of more than historical interest; CLI-09-9, 69 NRC 331 (2009)

allegations of radiological and nonradiological contamination of drinking water are outside the scope of a license renewal proceeding because they involve no aging-related issues and are Category 1, or generic, issues; LBP-06-10, 63 NRC 314 (2006)

allegations of several serious safety problems that had persisted with respect to the reactor over a period of years are a legitimate attack on management quality and integrity; CLI-09-9, 69 NRC 331 (2009)

allowing new claims in a reply would unfairly deprive other participants of an opportunity to rebut the new claims; LBP-09-6, 69 NRC 367 (2009)

although a board is free to view intervenors' support for its contention in the light most favorable to intervenors, the board may not ignore the contention admissibility requirements of 10 C.F.R. 2.309(f)(1); CLI-09-3, 69 NRC 68 (2009); CLI-09-7, 69 NRC 235 (2009)

although a board may appropriately view a petitioner's supporting information in a light favorable to the petitioner, failure to provide such information regarding a proffered contention requires that the contention be rejected; LBP-07-3, 65 NRC 237 (2007); LBP-09-3, 69 NRC 139 (2009)

## SUBJECT INDEX

- although a board may appropriately view petitioners' support for its contention in a light that is favorable to the petitioner, the petitioner must provide some support for his or her contention, in the form of either facts or expert testimony; LBP-07-16, 66 NRC 277 (2007); LBP-09-26, 70 NRC 939 (2009); LBP-10-6, 71 NRC 350 (2010)
- although a board may deny certain portions of a multipart contention as outside the scope or too attenuated, applying all six criteria of 10 C.F.R. 2.309(f)(1) to each subpart of the contention is inappropriate; LBP-09-10, 70 NRC 51 (2009)
- although a board may view petitioner's supporting information in a light favorable to the petitioner, petitioner (not the board) is required to supply all of the required elements for a valid intervention petition; CLI-10-20, 72 NRC 185 (2010); LBP-10-15, 72 NRC 257 (2010); LBP-10-16, 72 NRC 361 (2010)
- although a contention regarding the risks of terrorism related to the high-density racking of spent fuel in pools is new and significant information concerning a Category 1 matter, the contention is inadmissible; LBP-06-20, 64 NRC 131 (2006)
- although a licensing board will take into account any information from reply briefs that legitimately amplifies issues presented in the original petitions, it will not consider instances of what essentially constitute untimely attempts to amend the original petitions; LBP-09-17, 70 NRC 311 (2009)
- although a motion to reopen must be timely, an exceptionally grave issue may be considered even if the motion is not timely; LBP-10-19, 72 NRC 529 (2010)
- although a petitioner does not have to prove its contention at the admissibility stage, mere notice pleading is insufficient; LBP-08-17, 68 NRC 431 (2008); LBP-09-6, 69 NRC 367 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-18, 70 NRC 385 (2009)
- although admitting the new contention would broaden the issues in dispute, in the early stage of the proceeding this does not weigh heavily against a petitioner; LBP-10-1, 71 NRC 165 (2010)
- although an expert may be misinterpreting data submitted by applicant, this is not considered at the contention admissibility stage; LBP-09-27, 70 NRC 992 (2009)
- although boards are not required to narrow contentions to make them acceptable, they may do so; LBP-09-25, 70 NRC 867 (2009)
- although boards are to provide latitude to pro se participants, petitioner's decision to provide an expert affidavit, available when it filed its hearing petition, at the time it submitted its reply runs afoul of the Commission's directive that reply pleadings cannot be used to introduce additional supporting information relative to a contention; LBP-08-16, 68 NRC 361 (2008)
- although boards generally are to litigate a contention rather than the basis that provides the issue statement's foundational support, the reach of a contention necessarily hinges upon its terms coupled with its stated basis; LBP-07-3, 65 NRC 237 (2007); LBP-08-16, 68 NRC 361 (2008)
- although boards may appropriately view a petitioner's supporting information in a light favorable to the petitioner, failure to provide such information regarding a proffered contention requires the contention be rejected; LBP-08-16, 68 NRC 361 (2008)
- although boards should not "flyspeck" environmental documents, petitioners may raise contentions seeking correction of significant inaccuracies and omissions in the environmental report; LBP-10-24, 72 NRC 720 (2010)
- although licensing boards frequently hold oral argument on contention admissibility, a board may instead elect to dispense with oral argument; LBP-08-23, 68 NRC 679 (2008)
- although NRC may reasonably accommodate pro se petitioners who are not technically perfect in their pleading, such parties must still meet the basic requirements of the contention admissibility rules, and if these are not met, boards may not "fill in" any missing support, but, rather, are legally required to deny the contention; LBP-07-4, 65 NRC 281 (2007); LBP-07-5, 65 NRC 341 (2007)
- although petitioner could participate in another federal agency's comment process relating to a proposed environmental assessment that is the focus of a new contention and thus does have some alternative means for protecting its interests, for the purpose of 10 C.F.R. 2.309(c)(1)(v), that process is not analogous to participation in an NRC adjudicatory proceeding and therefore does not weigh heavily against the petitioner's intervention in the NRC proceeding; LBP-10-1, 71 NRC 165 (2010)
- although petitioner has established the requisite standing, the hearing request must be denied because of a failure to proffer one admissible contention; CLI-10-7, 71 NRC 133 (2010); LBP-10-1, 71 NRC 165 (2010)

## SUBJECT INDEX

although the Commission is disinclined to step into the middle of a labor dispute or involve itself in the personnel decisions of licensees, it has recognized that there may be cases where employment-related contentions are closely tied to specific health-and-safety concerns or to potential violations of NRC rules that can be admitted for a hearing; CLI-06-21, 64 NRC 30 (2006)

although the contention admissibility rule imposes on a petitioner the burden of going forward with a sufficient factual basis, it does not shift the ultimate burden of proof from applicant to petitioner; LBP-09-27, 70 NRC 992 (2009); LBP-10-24, 72 NRC 720 (2010)

an adjudication is not the proper forum for challenging applicable statutory requirements or the basic structure of the agency's regulatory process; LBP-07-3, 65 NRC 237 (2007)

an admissible contention under the good cause standard must allege that a construction permit holder's reasons for past delay failed to constitute good cause for a CP extension and be supported by a showing that construction delay is traceable to permit holder action that was intentional and without a valid business purpose; LBP-10-7, 71 NRC 391 (2010)

an alleged failure to address "new and significant information" does not give rise to an admissible contention, absent a waiver of the rule in 10 C.F.R. 51.53(c)(3)(i) that Category 1 issues need not be addressed in a license renewal; LBP-06-23, 64 NRC 257 (2006)

an amended contention challenging applicant's final safety analysis report on its low-level radioactive waste storage plan was admitted based on intervenor's adequately supported challenge to the plan's provisions regarding waste volume reduction; LBP-10-8, 71 NRC 433 (2010)

an application-specific contention concerning the environmental consequences of the need for extended onsite storage of low-level radioactive waste is admissible if it satisfies the requirements of 10 C.F.R. 2.309(f)(1); LBP-09-4, 69 NRC 170 (2009)

an assertion that some analysis, calculation, or survey must be included in an environmental report or impact statement is not necessarily sufficient, in and of itself, to require consideration of whether that additional information gathering and disclosure mechanism should be included; LBP-08-16, 68 NRC 361 (2008)

an attack on applicable statutory requirements or a challenge to the basic structure of the Commission's regulatory process does not form an admissible contention; LBP-07-16, 66 NRC 277 (2007)

an emergency evacuation issue was admitted in a license renewal proceeding because it was in the context of three of the specific input data for the severe accident mitigation alternatives analysis that license renewal applicants are required to perform; LBP-07-4, 65 NRC 281 (2007)

an enforcement contention might appropriately address the factual underpinnings of the NRC Staff's finding of violation or the mitigating factors to be considered in determining the penalty; CLI-06-16, 63 NRC 708 (2006)

an environmental contention is not litigable in a combined license proceeding if it has already been resolved in an early site permit proceeding; CLI-09-3, 69 NRC 68 (2009)

an environmental contention may be admitted during a COL proceeding if it concerns a significant issue that was not resolved in the early site permit proceeding or if it involves the impacts of construction and operation of the facility and significant new information has been identified; LBP-08-15, 68 NRC 294 (2008)

an exception to the general policy limiting interlocutory review permits an appeal of a board's ruling on contention admissibility when a board grants a petition to intervene following consideration of the full petition; CLI-09-18, 70 NRC 859 (2009)

an expert opinion that merely states a conclusion (e.g., the application is deficient, inadequate, or wrong) without providing a reasoned basis or explanation for that conclusion is inadequate because it deprives the board of the ability to make the necessary, reflective assessment of the opinion; CLI-06-10, 63 NRC 451 (2006); LBP-09-16, 70 NRC 227 (2009)

an intervenor may not attempt to use a license application proceeding to rewrite NRC regulations; LBP-06-1, 63 NRC 41 (2006)

an investigation into applicant's character should also include a review of the applicant's good character; LBP-09-6, 69 NRC 367 (2009)

an issue can be related to plant aging and still not warrant review at the time of a license renewal application, if the aging-related issue is adequately dealt with by regulatory processes on an ongoing basis; LBP-06-10, 63 NRC 314 (2006); LBP-07-4, 65 NRC 281 (2007); LBP-07-11, 66 NRC 41 (2007)

## SUBJECT INDEX

- an otherwise admissible contention that raises challenges to information in a design certification rulemaking should be referred to the Staff for resolution in the rulemaking; CLI-09-8, 69 NRC 317 (2009)
- analysis of entrainment and impingement of fish, and heat shock, is required only for plants with once-through cooling or cooling ponds, because it has been determined generically that such impacts are small for plants that use cooling towers; LBP-07-4, 65 NRC 281 (2007)
- any challenge to an NRC Staff decision to grant an exemption from a 1-hour barrier to a 24/30-minute barrier is a direct challenge to the current licensing basis and unrelated to the effects of plant aging and the license renewal application; LBP-08-13, 68 NRC 43 (2008)
- any challenge to the established terms and conditions of an early site permit can only be raised as a petition to modify a license under section 2.206; CLI-07-12, 65 NRC 203 (2007)
- any contention alleging deficiencies or errors in an application must also indicate some significant link between the claimed deficiency and either the health and safety of the public or the environment; LBP-07-3, 65 NRC 237 (2007)
- any contention directed at a design undergoing rulemaking review fails on its face to satisfy the admission requirements because all matters that are the subject of a rulemaking are outside the scope of licensing proceedings; LBP-09-8, 69 NRC 736 (2009)
- any contention that fails directly to controvert the application or that mistakenly asserts the application does not address a relevant issue will be dismissed; LBP-07-3, 65 NRC 237 (2007); LBP-08-17, 68 NRC 431 (2008); LBP-09-3, 69 NRC 139 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-10-6, 71 NRC 350 (2010); LBP-10-7, 71 NRC 391 (2010)
- any contention that falls outside the specified scope of the proceeding is inadmissible; LBP-07-3, 65 NRC 237 (2007); LBP-07-10, 66 NRC 1 (2007); LBP-08-9, 67 NRC 421 (2008); LBP-09-3, 69 NRC 139 (2009); LBP-10-17, 72 NRC 501 (2010)
- any new contentions filed by petitioners, whose original petition was timely and who have demonstrated their standing, that are attributable to the applicant's construction activity or change of plans or design, are governed by the basic provisions of 10 C.F.R. 2.309(f)(2) rather than by the more restrictive elements applicable to nontimely filings; LBP-07-14, 66 NRC 169 (2007)
- any purported adverse effects caused by a confirmatory order's failure to include revised or additional provisions sought by petitioner shall be deemed irrelevant; LBP-08-14, 68 NRC 279 (2008)
- any supporting material offered by intervenors is subject to board scrutiny both for what it does and does not show; LBP-10-7, 71 NRC 391 (2010); LBP-10-10, 71 NRC 529 (2010)
- any supporting material provided by a petitioner, including those portions of the material that are not relied upon, is subject to board scrutiny; LBP-07-10, 66 NRC 1 (2007); LBP-07-16, 66 NRC 277 (2007); LBP-08-16, 68 NRC 361 (2008); LBP-08-26, 68 NRC 905 (2008); LBP-09-3, 69 NRC 139 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-26, 70 NRC 939 (2009)
- applicant has the right to file an interlocutory appeal of board orders admitting contentions, but only if the appeal challenges the admissibility of all admitted contentions; CLI-06-13, 63 NRC 508 (2006)
- applicant's change of reactor design constitutes new and materially different information for the purposes of filing a new contention; LBP-10-17, 72 NRC 501 (2010)
- applicant's failure to consider deliberate and malicious aircraft crashes in its environmental report is inadmissible in a combined license proceeding; LBP-08-21, 68 NRC 554 (2008)
- applicant's failure to disclose ownership by a foreign corporation in its license renewal application constitutes a contention of omission; LBP-08-24, 68 NRC 691 (2008)
- applicant's plan for storage of low-level radioactive waste is a litigable issue because it is material to the findings NRC must make to support the action that is involved in a combined license proceeding; LBP-08-15, 68 NRC 294 (2008)
- applicants are not required to address or demonstrate whether the issuance of a combined license will improve the general welfare, increase the standard of living, or strengthen free competition in private enterprise; LBP-08-16, 68 NRC 361 (2008); LBP-08-17, 68 NRC 431 (2008)
- applying the standards for late-filed contentions, a board concluded that an e-mail citing only sources that had been published, in some cases years earlier, contained no new information; CLI-09-12, 69 NRC 535 (2009)
- arguments premised on the prediction that someday a nuclear plant site will become a permanent storage or disposal facility for low-level radioactive waste are too speculative and therefore not material to the

## SUBJECT INDEX

findings the NRC must make to support the action that is involved in a combined license proceeding; LBP-09-16, 70 NRC 227 (2009)

as long as either denial of a license or issuance of a decision mandating compliance with legal requirements would alleviate a petitioner's potential injury, then under longstanding NRC jurisprudence the petitioner may prosecute any admissible contention that could result in the denial or in the compliance decision; CLI-09-20, 70 NRC 911 (2009)

as long as petitioner alleges, with sufficient support, that applicant's bad character or lack of integrity has direct and obvious relevance to the licensing action at issue in the proceeding, a character-based contention is admissible; LBP-09-6, 69 NRC 367 (2009)

as with a summary disposition motion, a board may appropriately view petitioners' support for its contention in a light that is favorable to the petitioner; LBP-08-9, 67 NRC 421 (2008)

asserted deficiencies in the environmental report intake/discharge impact discussion as it is associated with the baseline discussion of aquatic resources, if properly supported, can be admitted for further litigation; LBP-08-16, 68 NRC 361 (2008)

assertions regarding purported water fouling incidents by members of applicant's corporate family who are not NRC licensees fall far short of what is required to establish circumstances that would create a genuine material dispute; LBP-07-10, 66 NRC 1 (2007)

assertions that building two new nuclear reactors in a troubled economy is fiscally irresponsible is outside the scope of a combined license proceeding; LBP-09-10, 70 NRC 51 (2009)

at the admission stage, a board simply has to find that each of the elements of contention admissibility is satisfied, and need not weigh the merits of the petitioner's arguments; CLI-09-9, 69 NRC 331 (2009)

at the admission stage, all that is required is that the petitioner provide an expert opinion or some alleged fact, or facts, in support of its position; LBP-09-26, 70 NRC 939 (2009)

at the admission stage, arguments that petitioners' claims are unfounded go to the merits of the contention and do not show that there is no genuine dispute over the substance of the contention; CLI-09-9, 69 NRC 331 (2009)

at the admission stage, boards admit contentions, not bases; LBP-09-26, 70 NRC 939 (2009)

at the admission stage, intervenors are not required, under the rubric of materiality, to run a sensitivity analysis and/or to prove that alleged defects would change the result; LBP-10-14, 72 NRC 101 (2010)

at the admission stage, it is not necessary to establish a general probability threshold for irradiators to assess in qualitative terms the significance and plausibility of particular asserted siting-related threats; CLI-08-3, 67 NRC 151 (2008)

at the admission stage, petitioner does not have to prove its contentions and boards do not adjudicate disputed facts; LBP-09-6, 69 NRC 367 (2009)

at the admission stage, petitioner is not required to prove its contention or to provide all the evidence for its contention that may be required later in the proceeding; LBP-06-20, 64 NRC 131 (2006)

at the admission stage, petitioner must simply proffer some minimal factual foundation sufficient to raise a genuine dispute regarding the existence of a corrosive environment; LBP-06-22, 64 NRC 229 (2006)

at the contention admission stage, the board's purpose in applying 10 C.F.R. 2.309(f)(1) is only to ensure that the adjudicatory process is used to address real, concrete, specific issues that are appropriate for litigation; LBP-06-20, 64 NRC 131 (2006)

at the contention filing stage, a licensing board will not adjudicate merits-related issues; LBP-06-7, 63 NRC 188 (2006)

at the contention filing stage, the factual support necessary to show that a genuine dispute exists need not be in formal evidentiary form or be as strong as that necessary to withstand a summary disposition motion; LBP-06-7, 63 NRC 188 (2006); LBP-06-10, 63 NRC 314 (2006)

at the operating license stage, licensing boards will not admit contentions concerning the need for power or alternative energy sources; LBP-10-12, 71 NRC 656 (2010)

attacks on applicable statutory requirements, challenges to the basic structure of the NRC's regulatory process, or mere expression of generalized policy grievances are not appropriate for a licensing board hearing; LBP-09-18, 70 NRC 385 (2009)

availability of Staff review outside the hearing process generally does not constitute adequate protection of a private party's rights when considering 10 C.F.R. 2.309(c)(1)(ii); LBP-08-12, 68 NRC 5 (2008)

because a contention focuses on safety-related aspects of a COL application, it is not apparent that the issue resolved in the board's admissibility ruling has any particular implications for a contention

## SUBJECT INDEX

challenging the environmental impacts of long-term onsite low-level radioactive waste storage admitted and pending in another proceeding; LBP-10-8, 71 NRC 433 (2010)

because a generic environmental analysis was incorporated into a regulation, the conclusions of that analysis are not subject to attack in an individual adjudication unless the rule is waived or suspended; CLI-07-3, 65 NRC 13 (2007)

because applicant did not apply for an early site permit, petitioners thus are not precluded from raising an environmental issue relative to failure of applicant's environmental report to assess the onsite impacts of potential long-term storage of low-level waste; LBP-08-16, 68 NRC 361 (2008)

because deferral of the consideration of the balance of petitioner's contentions might prejudice parties' legitimate interests, they will be subject to the filing of a timely motion for reconsideration; LBP-07-5, 65 NRC 341 (2007)

because disposal of Greater-Than-Class-C waste is the responsibility of the federal government, the disposal of GTCC radioactive waste is not directly affected by the partial closure of the Barnwell disposal facility and so is not an admissible aspect of a contention; LBP-08-16, 68 NRC 361 (2008)

because intervenors cannot reasonably be expected to discover the QA issues that gave rise to a notice of violation without the NOV itself as notice, they have plausibly argued that their new contention is based on new and materially different information; LBP-10-9, 71 NRC 493 (2010)

because intervenors' inability to satisfy the contention admissibility rules is due to factors beyond their control, the Commission declines to require them to meet both the strict late-filing requirements and the even stricter reopening standards if they identify safety issues during the upcoming years of ongoing construction of a fuel fabrication facility; CLI-09-2, 69 NRC 55 (2009)

because NEPA is a procedural statute, petitioners need not show that favorable rulings on their NEPA contentions will require denial of the license, but rather that procedures intended for protection of their members' concrete interests will be observed; LBP-09-16, 70 NRC 227 (2009)

because petitioners fail to create a genuine issue, the board need not resolve whether applicant's purpose is unreasonably narrow or whether a proposed alternative is so far beyond the realm of reason that it must be rejected out of hand; LBP-09-21, 70 NRC 581 (2009)

because the environmental report is the only environmental document available when NRC issues its notice of opportunity to request a hearing, initial contentions necessarily focus on the adequacy of the applicant's ER under Part 51; LBP-09-10, 70 NRC 51 (2009); LBP-09-25, 70 NRC 867 (2009)

because the reach of a contention necessarily hinges upon its terms and its stated bases, the brief explanation helps define the scope of the contention; LBP-09-26, 70 NRC 939 (2009)

because the significance of the current capacity limitation for the deep waste repository is unclear, a contention is admitted as a legal issue; LBP-09-6, 69 NRC 367 (2009)

before a board may refer a design certification-related contention to the Staff and hold it in abeyance, the contention must first be found to be admissible; CLI-10-1, 71 NRC 1 (2010)

before the board can consider a new contention, petitioner must show that it is based on information that was not previously available, is based on information that is materially different than information previously available, and has been submitted in a timely fashion; LBP-09-29, 70 NRC 1028 (2009)

boards are authorized to hold prehearing conferences to simplify or clarify the issues for hearing, after which they may admit a revised contention, as long as the revised contention does not add material not raised by the intervenor to make it admissible; LBP-10-14, 72 NRC 101 (2010)

boards are obliged to evaluate the timeliness of a proposed contention even if no party raises the issue; LBP-10-17, 72 NRC 501 (2010)

boards cannot be expected to sift through reams of data to determine whether a contention is admissible; LBP-07-3, 65 NRC 237 (2007)

boards have authority to narrow low-level radioactive waste contentions; LBP-09-16, 70 NRC 227 (2009)

boards have confined their inquiry to whether, with or without references to particular sources or documents, the supporting expert opinion has offered enough to justify a conclusion that the contention is worthy of further consideration on its merits; LBP-09-6, 69 NRC 367 (2009)

boards have discretion to reformulate contentions so as to clarify the issues for litigation; CLI-10-14, 71 NRC 449 (2010); LBP-10-9, 71 NRC 493 (2010)

boards look to both the contention and its stated bases; LBP-08-9, 67 NRC 421 (2008)

## SUBJECT INDEX

boards may appropriately view petitioner's supporting information in a light favorable to the petitioner, but failure to provide such information regarding a proffered contention requires that the contention be rejected; LBP-10-7, 71 NRC 391 (2010)

boards may appropriately view petitioners' support for their contentions in a light favorable to petitioners, but it is petitioners' burden to establish the admissibility of contentions; LBP-09-17, 70 NRC 311 (2009)

boards may examine both the statements in the document that support the petitioner's assertions and those that do not; LBP-10-24, 72 NRC 720 (2010)

boards may not supply information that is missing or make assumptions of fact not provided by the petitioner; CLI-10-14, 71 NRC 449 (2010); LBP-10-6, 71 NRC 350 (2010)

boards may reformulate contentions to eliminate extraneous issues or to consolidate issues for a more efficient proceeding; LBP-09-16, 70 NRC 227 (2009)

boards should treat as a cognizable new consideration an attack on the Yucca Mountain environmental impact statements based on significant and substantial information that, if true, would render the statements inadequate; LBP-09-6, 69 NRC 367 (2009)

broad-based issues akin to safety culture, such as operational history, quality assurance, quality control, management competence, and human factors, are beyond the bounds of a license renewal proceeding; CLI-10-27, 72 NRC 481 (2010)

by complying with the six contention requirements in 10 C.F.R. 2.309(f)(1)(i)-(vi), petitioner must demonstrate that a contention raises an issue that is appropriate for a licensing board hearing and that such a hearing would not likely be a waste of time and resources; LBP-08-17, 68 NRC 431 (2008)

by complying with the six contention requirements, an admissible contention must raise an issue that is both within the scope of the proceeding (normally defined by the hearing notice) and material to the findings the NRC must make to support the action involved; LBP-09-17, 70 NRC 311 (2009); LBP-09-18, 70 NRC 385 (2009)

by defining significantly different information in the draft EIS as a permissible basis for filing a new contention, the Commission has in effect concluded that such new information is good cause for filing a new contention; LBP-10-24, 72 NRC 720 (2010)

by definition, contentions admitted under 10 C.F.R. 2.309(f)(2)(i)-(iii) are timely because they are founded on material new information that was not available at the time when the petition was initially due; LBP-09-10, 70 NRC 51 (2009)

Category 1 issues, which are those generically addressed by the NRC's Generic Environmental Impact Statement for License Renewal, are inadmissible in a license renewal proceeding; LBP-10-13, 71 NRC 673 (2010)

Category 1, or generic, issues in Appendix B to Subpart A of Part 51 are not within the scope of a license renewal proceeding; LBP-06-10, 63 NRC 314 (2006)

Category 2 issues are not essentially similar for all plants because they must be reviewed on a site-specific basis and thus challenges relating to these issues are properly part of a license renewal proceeding; LBP-08-13, 68 NRC 43 (2008)

Category 2 issues, for which an applicant must make a plant-specific analysis of environmental impacts in its environmental report and the NRC Staff must prepare a supplemental environmental impact statement, ordinarily are deemed to be within the scope of license renewal proceedings; LBP-06-7, 63 NRC 188 (2006); LBP-06-10, 63 NRC 314 (2006)

challenge to adequacy of a plant's evacuation plan must be denied because emergency planning is not within the scope of license renewal as a safety issue; LBP-07-11, 66 NRC 41 (2007)

challenge to specific input data to the severe accident mitigation alternatives analysis could bring a contention on adequacy of an evacuation plan within the scope of license renewal; LBP-07-11, 66 NRC 41 (2007)

challenge to the severe accident mitigation design alternatives analysis performed for the AP1000 certified design constitutes an impermissible challenge to NRC regulations; CLI-10-1, 71 NRC 1 (2010)

challenge to the technical adequacy of baseline water quality data and adequate confinement of the host aquifer in applicant's environmental report is admissible; LBP-10-16, 72 NRC 361 (2010)

challenges to a Commission rule or that seek to litigate a matter that is, or clearly is about to become, the subject of a rulemaking, are inadmissible; LBP-09-17, 70 NRC 311 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-09-21, 70 NRC 581 (2009); LBP-09-26, 70 NRC 939 (2009)

## SUBJECT INDEX

challenges to a severe accident mitigation design alternatives analysis are within the scope of a combined license proceeding; LBP-10-14, 72 NRC 101 (2010)

challenges to an issue already addressed in the Final Safety Evaluation Report for the ABWR Design Control Document are closed to licensing boards as an impermissible attack on the ABWR certified design; LBP-10-14, 72 NRC 101 (2010)

challenges to applicable statutory requirements or Commission regulations are not admissible in agency adjudications; LBP-08-26, 68 NRC 905 (2008); LBP-09-16, 70 NRC 227 (2009)

challenges to applicant's reliance on a pending reactor design certification fundamentally on procedural grounds constitutes an impermissible challenge to NRC regulations that allow the procedure applicant has chosen; LBP-08-17, 68 NRC 431 (2008)

challenges to Commission rules or regulations are inadmissible, unless a waiver is requested under 10 C.F.R. 2.335(b); LBP-09-17, 70 NRC 311 (2009); LBP-09-21, 70 NRC 581 (2009)

challenges to dose limits in NRC regulations are not appropriate for admission; LBP-08-6, 67 NRC 241 (2008)

challenges to how the Staff performs its reviews are outside the scope of licensing proceedings; LBP-08-9, 67 NRC 421 (2008)

challenges to license applications must be in the form of an asserted omission from the application of required information or an asserted error in a specific analysis or other technical matter set out in the application; LBP-08-9, 67 NRC 421 (2008)

challenges to NRC's authority to engage in administrative dispute resolution is beyond the scope of enforcement order proceedings; LBP-08-14, 68 NRC 279 (2008)

challenges to the adequacy of Table S-3, which was initially prepared more than 25 years ago, may be made through a petition for rulemaking; LBP-08-17, 68 NRC 431 (2008)

challenges to the adequacy of the NRC's groundwater restoration standards are impermissible; LBP-08-6, 67 NRC 241 (2008)

challenges to the Commission regulations regarding the design certification process are inadmissible; LBP-09-18, 70 NRC 385 (2009)

challenges to the current licensing basis are outside the scope of a license renewal proceeding; LBP-10-15, 72 NRC 257 (2010)

challenges to the current operating license are outside the scope of matters challengeable in a power uprate application; LBP-08-9, 67 NRC 421 (2008)

challenges to the implementing procedures for a reactor emergency plan are not material in a materials license proceeding; LBP-06-12, 63 NRC 403 (2006)

challenges to the merits of contentions must await either motions for summary disposition or an evidentiary hearing; LBP-07-5, 65 NRC 341 (2007)

challenges to the position of an applicant that is based on a condition in its current license are permissible; LBP-08-6, 67 NRC 241 (2008)

challenges to the Waste Confidence Rule must be made in the context of a rulemaking, not in an adjudicatory proceeding; CLI-10-19, 72 NRC 98 (2010)

citation to specific and potentially inconsistent portions of applicant's documents together with the declaration of petitioner's unchallenged expert provide alleged facts or expert opinion that are sufficient to meet the contention pleading requirements; LBP-06-20, 64 NRC 131 (2006)

claims about the adequacy of the Staff's safety review are not litigable in licensing proceedings; CLI-08-23, 68 NRC 461 (2008)

claims by a nonlicensee to the effect that the root causes or facts underpinning a confirmatory order are inaccurate are not valid claims in an enforcement proceeding concerning that order; LBP-08-14, 68 NRC 279 (2008)

claims related to the decommissioning of the facility are not currently ripe for review and are outside the scope of a combined license proceeding; LBP-09-16, 70 NRC 227 (2009)

claims that are not a challenge to the adequacy of the application are insufficient to establish an admissible contention; LBP-08-6, 67 NRC 241 (2008)

Commission pleading rules permit contentions that raise issues of law as well as contentions that raise issues of fact; CLI-09-14, 69 NRC 580 (2009)

Commission regulations do not contemplate filing a vague, unsupported pleading as a placeholder for a more detailed pleading to follow; CLI-09-5, 69 NRC 115 (2009)

## SUBJECT INDEX

Commission regulations may not be directly attacked in adjudicatory proceedings, but a party may petition for a waiver of the application of a regulation; LBP-10-12, 71 NRC 656 (2010)

Commission rules and longstanding precedent bar discovery in connection with the preparation of proposed contentions; CLI-08-28, 68 NRC 658 (2008)

Commission rules bar contentions where petitioners have only what amounts to generalized suspicions that they hope to substantiate later; LBP-08-17, 68 NRC 431 (2008)

compared to notice pleading in the federal courts, NRC's contention requirements have correctly been called "strict by design," but they are not intended to require the impossible; LBP-09-6, 69 NRC 367 (2009)

compliance with regulations of other federal agencies, such as Environmental Protection Agency drinking water contamination limits, is beyond a board's jurisdiction and outside the scope of a materials license proceeding; LBP-06-8, 63 NRC 241 (2006)

concerns raised by petitioners related to the applicant's foreign ownership are potentially material to the safety and environmental requirements; LBP-08-6, 67 NRC 241 (2008)

contention admissibility requirements are deliberately strict and any contention that does not satisfy the requirements of 10 C.F.R. 2.309(f)(1) will be rejected; CLI-09-14, 69 NRC 580 (2009); CLI-09-20, 70 NRC 911 (2009); CLI-10-9, 71 NRC 245 (2010); LBP-09-26, 70 NRC 939 (2009); LBP-10-6, 71 NRC 350 (2010)

contention admissibility requirements are rigorous and demand a level of discipline and preparedness on the part of petitioners, who must examine the publicly available material and set forth their claims and the support for their claims at the outset; LBP-06-12, 63 NRC 403 (2006)

contention alleging a failure to evaluate the impact of a severe accident at one unit on other units when the initiating event is an external event such as an earthquake is inadmissible; LBP-10-10, 71 NRC 529 (2010)

contention alleging foreign ownership of applicant, failure to disclose, and various ramifications of such ownership is admissible; LBP-09-1, 69 NRC 11 (2009)

contention alleging that depleted uranium-contaminated bombing plume dust causes health issues in the community is inadmissible because it lacks a supporting statement of the alleged facts or expert opinions; LBP-10-4, 71 NRC 216 (2010)

contention alleging that the Army employs truckers to remove depleted uranium-contaminated soil from its site and dump it in the community is inadmissible; LBP-10-4, 71 NRC 216 (2010)

contention alleging that the environmental report failed to address the alleged greenhouse gas and global climate disruption impacts resulting from prematurely killing trees is inadmissible; LBP-09-10, 70 NRC 51 (2009)

contention alleging that the threatened eastern fox snake inhabits the nuclear plant site and that construction activities for the new reactor will kill snakes, destroy their habitat, and might eliminate them from the area is within the scope of a combined license proceeding; LBP-09-16, 70 NRC 227 (2009)

contention alleging that worldwide uranium supplies will be inadequate is dismissed for failure to provide expert opinion, documents, or other sources to support its allegation; LBP-08-15, 68 NRC 294 (2008)

contention asserting that DOE's description of its expert elicitation relating to a probabilistic volcanic hazard analysis update fails to comply with this section or the NRC guidance document that DOE formally committed to follow, is admissible; LBP-09-29, 70 NRC 1028 (2009)

contention based on a recent study suggesting a link between low levels of arsenic in drinking water and diabetes is rejected; CLI-09-12, 69 NRC 535 (2009)

contention challenging a particular use of a straight-line Gaussian air dispersion model in the applicant's severe accident mitigation alternatives analysis is admissible in a license renewal proceeding; CLI-09-11, 69 NRC 529 (2009)

contention disputing the cost estimate for decommissioning is an indirect challenge to 10 C.F.R. 50.75(c) and therefore inadmissible; LBP-09-16, 70 NRC 227 (2009)

contention in combined license proceeding focusing exclusively on regulations governing waste disposal is inadmissible; CLI-09-16, 70 NRC 33 (2009)

contention is rejected as lacking support for the premise that ongoing mining operations will drain or contaminate wetlands, such that their economic benefits will be decreased; LBP-10-16, 72 NRC 361 (2010)

## SUBJECT INDEX

contention pleading requirements serve to focus litigation on concrete issues and result in a clearer and more focused record for decision; LBP-08-9, 67 NRC 421 (2008)

contention raising question of whether a quantitative as opposed to qualitative analysis of terrorist attacks and the alternatives for mitigation and prevention is necessary is referred to the Commission as a novel issue; LBP-10-15, 72 NRC 257 (2010)

contention requirements were never intended to be turned into a fortress to deny intervention; LBP-09-6, 69 NRC 367 (2009)

contention standards require pleading specific grievances, not simply providing general notice pleadings; CLI-10-11, 71 NRC 287 (2010)

contention that a license renewal application fails to satisfy NEPA because it does not address environmental impacts of an attack by deliberate and malicious crash of aircraft into the plant is denied; LBP-07-11, 66 NRC 41 (2007)

contention that applicant failed to address the impact of a chain reaction that leads to more than one unit experiencing a severe accident is inadmissible; LBP-10-10, 71 NRC 529 (2010)

contention that applicant failed to consider and evaluate the impacts of severe accident scenarios, regardless of probability, with release times shorter than the duration needed to achieve cold shutdown, is inadmissible; LBP-10-10, 71 NRC 529 (2010)

contention that applicant's failure to address externally initiated accident scenarios is a material omission from the environmental report is inadmissible; LBP-10-10, 71 NRC 529 (2010)

contention that asks the licensing board to determine whether applicant would be able to obtain permits from and comply with regulatory requirements imposed by other agencies is outside NRC's jurisdiction; LBP-08-15, 68 NRC 294 (2008)

contention that concerns onsite and offsite impacts of active and passive dewatering associated with the proposed project satisfies the admissibility criteria; LBP-09-10, 70 NRC 51 (2009)

contention that suggests that financial qualifications information should be provided in the application submitted by a regulated electric utility represents an impermissible challenge to Commission regulations; LBP-08-17, 68 NRC 431 (2008)

contention that the high-level waste application inadequately addresses generalized corrosion because it relies on flawed experimental data raises a genuine, material dispute with the application by pointing to specific sections that allegedly fail to comply with the NRC's requirements for conducting a post-closure performance assessment; LBP-09-29, 70 NRC 1028 (2009)

contention that the mere existence of numerous requests for additional information constituted *prima facie* evidence that the application is incomplete is rejected; CLI-09-12, 69 NRC 535 (2009)

contention that worldwide uranium supplies will be inadequate to permit the anticipated power production benefits during the license term is potentially material to the licensing proceeding; LBP-08-15, 68 NRC 294 (2008)

contentions alleging deficiencies or errors in an application must indicate some significant link between the claimed deficiency and either the health and safety of the public or the environment; LBP-08-16, 68 NRC 361 (2008)

contentions are inadmissible where intervenors did not perform the bare minimum preparations and there was no attempt to perform any independent analysis; LBP-09-6, 69 NRC 367 (2009)

contentions are inadmissible where petitioner offers only bald assertions and provides little support for them; LBP-09-6, 69 NRC 367 (2009)

contentions challenging low-level radioactive waste storage may not rely on 10 C.F.R. Part 61, which pertains to land disposal facilities; CLI-10-2, 71 NRC 27 (2010)

contentions challenging Staff's significant hazards consideration determination are not appropriate for review in a license amendment proceeding; LBP-08-18, 68 NRC 533 (2008); LBP-08-19, 68 NRC 545 (2008); LBP-08-20, 68 NRC 549 (2008)

contentions concerning an applicant's plan for disposal of Greater-Than-Class-C radioactive waste cannot be admitted because disposal of that type of waste is the responsibility of the federal government; LBP-09-4, 69 NRC 170 (2009)

contentions for which petitioners have only what amounts to generalized suspicions, hoping to substantiate them later, are barred; LBP-08-6, 67 NRC 241 (2008); LBP-09-6, 69 NRC 367 (2009)

contentions may be amended or new contentions filed, with permission from the presiding officer, if petitioner shows that information on which the contention is based was not previously available and is

## SUBJECT INDEX

materially different than information previously available and the contention has been submitted in a timely fashion based on the availability of the subsequent information; CLI-10-18, 72 NRC 56 (2010)

contentions must assert an issue of law or fact that is material to the outcome of a licensing proceeding, meaning that the subject matter of the contention must impact the grant or denial of a pending license application; LBP-08-16, 68 NRC 361 (2008)

contentions must be accompanied by a concise statement of the alleged facts or expert opinions that support the requestor's/petitioner's position on the issue together with references to the specific sources and documents on which it intends to rely to support its position; LBP-09-10, 70 NRC 51 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-10-6, 71 NRC 350 (2010)

contentions must be based on a genuine material dispute, not the possibility that petitioners, if they perform their own additional analyses, may ultimately disagree with the application; CLI-06-10, 63 NRC 451 (2006)

contentions must be based on documents available at the time the petition is to be filed, such as the environmental report filed by an applicant; LBP-07-14, 66 NRC 169 (2007); LBP-08-6, 67 NRC 241 (2008)

contentions must be filed with the original intervention petition within 60 days of notice of the proceeding in the *Federal Register*, unless a longer period is therein specified, an extension is granted, or the contentions meet certain criteria for late-filed or new contentions based on information that is available only at a later time; LBP-08-6, 67 NRC 241 (2008)

contentions must be within the scope of the proceeding as defined by the Commission in its initial hearing notice and order referring the proceeding to the licensing board; LBP-08-16, 68 NRC 361 (2008); LBP-10-7, 71 NRC 391 (2010)

contentions must directly controvert a position taken by the applicant in the application and explain why the application is deficient; LBP-08-6, 67 NRC 241 (2008)

contentions must fall within the scope of the proceeding in which intervention is sought; CLI-06-24, 64 NRC 111 (2006)

contentions must focus on the license application in question, challenging either specific portions of or alleged omissions from the application; LBP-08-16, 68 NRC 361 (2008)

contentions must include a specific statement of the issue of law or fact to be raised or controverted as well as a brief explanation of the basis for the contention; LBP-08-26, 68 NRC 905 (2008)

contentions must meet the six requirements of 10 C.F.R. 2.309(f)(1); LBP-06-4, 63 NRC 99 (2006); LBP-08-13, 68 NRC 43 (2008); LBP-10-4, 71 NRC 216 (2010); LBP-10-14, 72 NRC 101 (2010)

contentions must specifically challenge the license application to be admissible; LBP-08-9, 67 NRC 421 (2008)

contentions of omission must describe the information that should have been included in the environmental report and provide the legal basis that requires the omitted information to be included; LBP-09-16, 70 NRC 227 (2009)

contentions on information a COL applicant should supply in order to satisfy NRC regulations regarding the safety of long-term storage of low-level radioactive waste are application-specific and thus would benefit from further development by the board and the parties; CLI-09-16, 70 NRC 33 (2009)

contentions raising legal issues, like fact-based contentions, must fall within the allowable scope of the proceeding to be admissible; LBP-10-17, 72 NRC 501 (2010)

contentions relating to the conclusions that the NRC Staff reaches in its NEPA analysis with regard to the environmental impacts from radiological releases to groundwater must await future publication of its supplemental environmental impact statement; LBP-08-13, 68 NRC 43 (2008)

contentions that advocate stricter requirements than agency rules impose or that otherwise seek to litigate a generic determination established by a Commission rulemaking are inadmissible; LBP-07-3, 65 NRC 237 (2007); LBP-07-10, 66 NRC 1 (2007); LBP-08-16, 68 NRC 361 (2008); LBP-08-17, 68 NRC 431 (2008); LBP-09-3, 69 NRC 139 (2009); LBP-09-6, 69 NRC 367 (2009); LBP-10-7, 71 NRC 391 (2010); LBP-10-21, 72 NRC 616 (2010)

contentions that applicant's environmental report fails to satisfy NEPA because it does not address the environmental impacts of severe spent fuel pool accidents, and fails to address severe accident mitigation alternatives that would reduce the potential for spent fuel pool water loss and fires, are inadmissible; LBP-06-23, 64 NRC 257 (2006)

contentions that are not well supported by an expert are not admissible; LBP-09-6, 69 NRC 367 (2009)

## SUBJECT INDEX

contentions that attack a Commission rule, or that seek to litigate a matter that is, or clearly is about to become, the subject of a rulemaking, are inadmissible; LBP-07-10, 66 NRC 1 (2007); LBP-10-21, 72 NRC 616 (2010)

contentions that call for requirements in excess of those imposed by the Commission must be rejected as a collateral attack on the regulations; LBP-08-9, 67 NRC 421 (2008)

contentions that challenge applicable statutory requirements or the basic structure of the agency's regulatory process are inadmissible; LBP-10-21, 72 NRC 616 (2010)

contentions that concern greater-than-Class-C waste, seek to require a change to the decommissioning cost estimate, or constitute a challenge to Table S-3 of 10 C.F.R. 51.51 are inadmissible; LBP-09-4, 69 NRC 170 (2009); LBP-09-16, 70 NRC 227 (2009)

contentions that do not satisfy the requirements of 10 C.F.R. 2.309(f)(1) must be rejected; CLI-09-8, 69 NRC 317 (2009)

contentions that fail to directly controvert the application or that mistakenly assert the application does not address a relevant issue can be dismissed; LBP-08-16, 68 NRC 361 (2008)

contentions that fail to provide supporting facts or expert opinion are inadmissible; LBP-08-19, 68 NRC 545 (2008)

contentions that fail to raise a genuine dispute of material fact or law with the applicant are inadmissible; LBP-08-19, 68 NRC 545 (2008)

contentions that fail to satisfy the pleading requirements of 10 C.F.R. 2.309(f)(1) are inadmissible; LBP-08-18, 68 NRC 533 (2008); LBP-08-19, 68 NRC 545 (2008); LBP-08-20, 68 NRC 549 (2008); LBP-08-24, 68 NRC 691 (2008); LBP-08-26, 68 NRC 905 (2008)

contentions that fall outside the scope of the proceeding must be rejected; LBP-08-16, 68 NRC 361 (2008); LBP-08-26, 68 NRC 905 (2008); LBP-09-26, 70 NRC 939 (2009)

contentions that inappropriately focus on Staff's review of the application rather than on the errors and omissions in the application itself are inadmissible; CLI-10-27, 72 NRC 481 (2010)

contentions that question the Staff's review are improper; CLI-09-14, 69 NRC 580 (2009)

contentions that raise issues of law as well as contentions that raise issues of fact are permitted; LBP-10-17, 72 NRC 501 (2010)

contentions that seek compliance with the National Environmental Policy Act must be based on applicant's environmental report; CLI-10-2, 71 NRC 27 (2010)

contentions that simply state petitioner's views about what regulatory policy should be do not present a litigable issue; LBP-10-7, 71 NRC 391 (2010); LBP-10-21, 72 NRC 616 (2010)

contentions will be ruled inadmissible if petitioner has offered no tangible information, no experts, no substantive affidavits, but instead only bare assertions and speculation; LBP-08-17, 68 NRC 431 (2008); LBP-08-26, 68 NRC 905 (2008)

contentions will be screened out when petitioners have no particular expertise or expert assistance and no particularized grievance; LBP-06-10, 63 NRC 314 (2006)

contested issues must be within the scope of the proceeding; CLI-10-2, 71 NRC 27 (2010)

controls other countries may impose on mining and milling, and the impacts of such activities, are outside the scope of a combined license proceeding; LBP-09-17, 70 NRC 311 (2009)

cost-risk calculations that intervenors propose in in their contention as they relate to the existing reactors are not material to the findings that the NRC must make to license the proposed reactors; LBP-10-14, 72 NRC 101 (2010)

defect in an application can give rise to a valid contention of omission and cannot therefore be rejected as unripe; LBP-08-24, 68 NRC 691 (2008)

detailed pleadings help to ensure that full adjudicatory hearings are triggered only by those able to proffer at least some minimal factual and legal foundation in support of their contentions; LBP-06-23, 64 NRC 257 (2006)

detailed pleadings put other parties in the proceeding on notice of the petitioner's specific grievances and thereby give them a good idea of the claims they will be either supporting or opposing; LBP-06-23, 64 NRC 257 (2006)

determination of admissibility of "areas of concern" based upon a standard of "germaneness" is no longer applicable in NRC proceedings; LBP-06-12, 63 NRC 403 (2006)

## SUBJECT INDEX

determining whether a contention is adequately supported by a concise allegation of the facts or expert opinion is not a hearing on the merits; LBP-07-16, 66 NRC 277 (2007); LBP-08-26, 68 NRC 905 (2008); LBP-09-26, 70 NRC 939 (2009)

discharge of chlorine or other biocides is a Category 1, out-of-scope issue in a license renewal proceeding; LBP-07-4, 65 NRC 281 (2007)

dismissal of one contention on mootness grounds would not terminate a case where the board had expressly retained jurisdiction to decide whether to admit another contention; LBP-09-27, 70 NRC 992 (2009)

docketing decisions are not challengeable in an adjudicatory proceeding; CLI-08-15, 68 NRC 1 (2008)

DOE's management integrity to operate a high-level waste geologic repository is an impermissible challenge to the Nuclear Waste Policy Act and is therefore beyond the scope of the proceeding; CLI-09-14, 69 NRC 580 (2009)

drought and climate change issues are within the scope of a materials license amendment proceeding; LBP-08-6, 67 NRC 241 (2008)

each contention must assert an issue of law or fact that is within the scope of the proceeding and is material to the outcome of the licensing proceeding; CLI-09-15, 70 NRC 1 (2009)

each factual environmental contention must be accompanied by one or more affidavits, but a purely legal-issue contention cannot logically require affidavit support, as by definition such a contention alleges no facts that require support; LBP-09-6, 69 NRC 367 (2009)

economic impact of a proposed action on ratepayers is outside the scope of a NEPA analysis; LBP-10-14, 72 NRC 101 (2010)

embrittlement of the reactor pressure vessel is within the scope of a license renewal proceeding; LBP-06-10, 63 NRC 314 (2006)

emergency planning concerns are not within the scope of a license renewal proceeding; LBP-06-20, 64 NRC 131 (2006); LBP-06-23, 64 NRC 257 (2006)

emergency planning is excluded from license renewal proceedings because the issue is not germane to age-related degradation or unique to the period of time covered by the license renewal; LBP-07-4, 65 NRC 281 (2007)

enforcement orders limit adjudication to whether the facts as stated in the order are true and whether the proposed sanction is supported by those facts; CLI-06-16, 63 NRC 708 (2006)

environmental impacts of spent fuel storage are inadmissible in a combined license proceeding; LBP-09-18, 70 NRC 385 (2009)

environmental issues identified as "Category 1," or "generic," issues in 10 C.F.R. Part 51, Subpart A, Appendix B, are not within the scope of a license renewal proceeding; LBP-07-11, 66 NRC 41 (2007)

environmental issues that might otherwise be relevant to license renewal shall be resolved generically for all plants and thus are beyond the scope of a license renewal hearing; LBP-06-7, 63 NRC 188 (2006)

environmental justice contentions must be based on the specific characteristics of a particular minority community; LBP-07-3, 65 NRC 237 (2007)

environmental justice issues are inadmissible when no sufficiently specific disproportionate effects with a nexus to the physical environment are alleged or shown to fall on low-income and minority communities; LBP-06-10, 63 NRC 314 (2006)

error-related challenges to license applications must be supported by reasons why the analysis is deficient; LBP-08-9, 67 NRC 421 (2008)

even if a petitioner is unable to show that the NRC Staff's NEPA document differs significantly from the environmental report, it may still be able to meet the late-filed contention requirements; LBP-10-24, 72 NRC 720 (2010)

even if late-filed contention criteria are satisfied, proposed contentions still must meet the threshold admissibility standards contained in 10 C.F.R. 2.309(f)(1); CLI-08-1, 67 NRC 1 (2008); CLI-09-7, 69 NRC 235 (2009)

expert opinion that merely states a conclusion that the application is deficient, inadequate, or wrong without providing a reasoned basis or explanation for that conclusion is inadequate because it deprives the board of the ability to make the necessary, reflective assessment of the opinion; CLI-10-2, 71 NRC 27 (2010); LBP-10-6, 71 NRC 350 (2010); LBP-10-10, 71 NRC 529 (2010)

expert support is not required at the admission stage; LBP-08-6, 67 NRC 241 (2008)

## SUBJECT INDEX

expert support is not required for admission of a contention because a fact-based argument may be sufficient on its own; LBP-08-27, 68 NRC 951 (2008)

factors (v) and (vi) of 10 C.F.R. 2.309(c) generally are given less weight than factors (vii) and (viii); LBP-10-1, 71 NRC 165 (2010)

facts relied on in support of a contention of omission need not show that applicant's facility cannot be safely operated, but rather that the application is incomplete under the governing regulations; LBP-08-15, 68 NRC 294 (2008)

failure of a contention to meet any of the requirements of 10 C.F.R. 2.309(f)(1) is grounds for its dismissal; CLI-09-5, 69 NRC 115 (2009); CLI-09-7, 69 NRC 235 (2009); CLI-09-15, 70 NRC 1 (2009); LBP-06-10, 63 NRC 314 (2006); LBP-06-23, 64 NRC 257 (2006); LBP-07-3, 65 NRC 237 (2007); LBP-07-4, 65 NRC 281 (2007); LBP-07-7, 65 NRC 507 (2007); LBP-07-10, 66 NRC 1 (2007); LBP-07-11, 66 NRC 41 (2007); LBP-07-16, 66 NRC 277 (2007); LBP-08-6, 67 NRC 241 (2008); LBP-08-16, 68 NRC 361 (2008); LBP-09-3, 69 NRC 139 (2009); LBP-09-10, 70 NRC 51 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-21, 70 NRC 581 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-10-4, 71 NRC 216 (2010); LBP-10-7, 71 NRC 391 (2010); LBP-10-15, 72 NRC 257 (2010); LBP-10-16, 72 NRC 361 (2010); LBP-10-21, 72 NRC 616 (2010)

failure of an applicant to include new and significant information concerning a Category 1 issue relating to the dangers of high-density racking of spent fuel in its environmental report does not give rise to an admissible contention; LBP-06-20, 64 NRC 131 (2006)

failure of petitioner to reference any portion of the combined license application with which it takes issue is grounds for dismissal of its contention; CLI-10-9, 71 NRC 245 (2010)

failure to directly controvert the application or mistakenly asserting that the application does not address a relevant issue will result in dismissal; LBP-07-10, 66 NRC 1 (2007)

failure to frame a safety concern arising from the interaction of the proposed design certification document amendment with the existing certified standard design and/or a facility-specific provision of the COLA leaves the contention as an inadmissible challenge to the Part 52 regulatory framework; LBP-09-3, 69 NRC 139 (2009)

failure to point to a regulation that requires the inclusion of omitted information in an application is fatal and thus precludes the admission of the contention; LBP-10-16, 72 NRC 361 (2010)

failure to present the factual information or expert opinions necessary to support a contention adequately requires that the contention be rejected; LBP-06-27, 64 NRC 438 (2006); LBP-08-26, 68 NRC 905 (2008)

failure to provide facts or expert opinion sufficient to show that the environmental report disregarded a feasible alternative based on either wind power, solar power, or some combination of the two renders the contention inadmissible; LBP-09-16, 70 NRC 227 (2009)

failure to provide sufficient information to show that a genuine dispute exists with the applicant on a material issue of law or fact is grounds for dismissal of a contention; CLI-10-9, 71 NRC 245 (2010); LBP-10-6, 71 NRC 350 (2010)

failure to set forth the significance of an online article makes it inadequate to support the admission of the contention; LBP-08-24, 68 NRC 691 (2008)

failure to specify the language of a contention and distinguish it from the discussion that might otherwise be considered the basis for the issue statement might be grounds for dismissing the contention; LBP-08-16, 68 NRC 361 (2008); LBP-10-7, 71 NRC 391 (2010)

filing of a new contention on the basis of the draft or final environmental impact statement where that document contains information that differs significantly from the information that was previously available is allowed; CLI-09-12, 69 NRC 535 (2009)

fire safety issues do not come within the NRC's safety review of a license renewal application because they are already the focus of ongoing regulatory processes; LBP-07-11, 66 NRC 41 (2007)

five factors must be balanced under pre-2004 rules before a petition to admit a late-filed contention can be granted; CLI-08-8, 67 NRC 193 (2008)

fluctuations in demand that may occur over a period of several years, such as changes brought about by an economic recession, are not a legally sufficient ground for challenging the need-for-power analysis; LBP-10-24, 72 NRC 720 (2010)

for a contention of omission, petitioner may satisfy the requirement to provide a specific statement of the legal or factual issue sought to be raised by providing an adequate description of the information it

## SUBJECT INDEX

contends should have been included in the application; LBP-08-15, 68 NRC 294 (2008); LBP-09-3, 69 NRC 139 (2009); LBP-09-16, 70 NRC 227 (2009)

for a contention regarding environmental impacts of spent fuel storage to be within the scope of an operating license renewal proceeding, petitioner must obtain a waiver under 10 C.F.R. 2.335(d); LBP-10-15, 72 NRC 257 (2010)

for a contention to be admissible, it must satisfy eight pleading requirements; LBP-10-13, 71 NRC 673 (2010)

for a contention to be held in abeyance, it must otherwise be admissible; LBP-09-18, 70 NRC 385 (2009)

for a contention to pass the materiality test, there must be some significant link between a claimed deficiency and either the health and safety of the public, or the environment; LBP-07-16, 66 NRC 277 (2007)

for a request for hearing and petition to intervene to be granted, petitioner must establish that it has standing and propose at least one admissible contention; LBP-10-15, 72 NRC 257 (2010)

for an intervention petition to be granted, it also must proffer a contention that meets the general admissibility requirements; LBP-10-1, 71 NRC 165 (2010)

for contentions to be admissible, the subject matter of the contention must impact the grant or denial of a pending license application; LBP-09-3, 69 NRC 139 (2009)

for each contention, a petitioner must provide sufficient information to show that a genuine dispute exists with the applicant/licensee on a material issue of law or fact; CLI-10-20, 72 NRC 185 (2010); LBP-06-10, 63 NRC 314 (2006)

for factual disputes, petitioner need not proffer facts in formal affidavit or evidentiary form, sufficient to withstand a summary disposition motion, but must present sufficient information to show a genuine dispute and reasonably indicating that a further inquiry is appropriate; LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-27, 70 NRC 992 (2009); LBP-10-24, 72 NRC 720 (2010)

for systems, structures, and components subject to aging management review, discussion of proposed inspection and monitoring details will come before a board only as they are needed to demonstrate that the intended function of relevant SSCs will be maintained for the license renewal period; LBP-08-13, 68 NRC 43 (2008)

for timely new or amended contentions, the pleading shall include a motion for leave to file the contention showing that it satisfies 10 C.F.R. 2.309(f)(1); LBP-09-22, 70 NRC 640 (2009)

further inquiry is warranted into the safety-related matter of whether the Final Safety Analysis Report has failed to include necessary information concerning applicant's plans for onsite management of Class B and C waste; LBP-08-16, 68 NRC 361 (2008)

general allegations covering the overall adequacy of structures, systems, and components, with no mention of potential errors or deficiencies in an applicant's license renewal application, do not support the admission of a contention; LBP-08-13, 68 NRC 43 (2008)

general assertions, unsupported by specific facts or expert opinion, that personnel reductions may adversely affect health and safety are inadmissible in a license transfer proceeding; CLI-06-21, 64 NRC 30 (2006)

general assertions, without some effort to show why the assertions undercut findings or analyses in the environmental report, fail to satisfy the requirements of 10 C.F.R. 2.309(f)(1)(vi); LBP-10-6, 71 NRC 350 (2010)

generalized challenge to the impartiality of the NRC regulatory process associated with hearings is inadmissible; LBP-08-16, 68 NRC 361 (2008)

generalized claims that are vague and insufficiently supported and do not tend to establish any connection with the proposed license or potential harm to petitioner are insufficient to support a contention; CLI-10-20, 72 NRC 185 (2010)

generic NRC policies and standards and the nature of the NRC Staff's licensing review are not subject to challenge in an adjudicatory proceeding; CLI-08-17, 68 NRC 231 (2008)

given that consideration of terrorist attacks is part of the NRC's NEPA obligations in the Ninth Circuit, the issue of whether terrorist attacks have been fully considered in the NEPA analysis for a power plant in that jurisdiction is plainly material to the decision the NRC must make; LBP-10-15, 72 NRC 257 (2010)

## SUBJECT INDEX

- given that the *Federal Register* notice defines the scope of the issues that may properly be raised in a request for a hearing, it also defines the scope of the issues that could reasonably be deemed resolved during an ESP proceeding; LBP-08-15, 68 NRC 294 (2008)
- given the significant effort involved in identifying new information, assembling the required expertise, and then drafting a contention that satisfies section 2.309(f)(1), it would be inappropriate to impose the very short 10-day rule on the filing of new contentions; LBP-06-14, 63 NRC 568 (2006)
- good cause is the most significant of the late-filing factors set out in 10 C.F.R. 2.309(c); CLI-10-17, 72 NRC 1 (2010); LBP-10-24, 72 NRC 720 (2010)
- health effects of arsenic contamination of drinking water from mining operations are litigable in a materials license amendment proceeding; LBP-09-1, 69 NRC 11 (2009)
- historical actions by an applicant are not relevant to its current fitness unless there is some direct and obvious relationship between the asserted character issues and the licensing action in dispute; CLI-09-14, 69 NRC 580 (2009); CLI-10-20, 72 NRC 185 (2010)
- how applicant intends to handle low-level radioactive waste in the absence of an offsite disposal facility is material to the findings the agency must make on a combined license; LBP-09-3, 69 NRC 139 (2009)
- if a board misapprehends the intended meaning of a contention, the petitioner bears the responsibility for that misunderstanding; LBP-06-12, 63 NRC 403 (2006)
- if a board on remand were to rule in petitioners' favor regarding the admissibility of one contention, then the board should also reconsider its prior ruling that related contentions were admissible; CLI-10-21, 72 NRC 197 (2010)
- if a combined license application references a design certification, then the presiding officer shall not admit contentions concerning severe accident design mitigation alternatives unless the contention demonstrates that the site characteristics fall outside of the site parameters in the standard design certification; LBP-09-10, 70 NRC 51 (2009)
- if a contention challenges the legal sufficiency of the application that is the subject of the Notice of Hearing and Opportunity to Petition for Leave to Intervene, the contention is within the scope of the proceeding; LBP-08-15, 68 NRC 294 (2008)
- if a contention concerning a certification application that has been docketed but not granted is otherwise admissible under 10 C.F.R. 2.309(f)(1), it might be held in abeyance and referred to the Staff; LBP-09-17, 70 NRC 311 (2009)
- if a contention header uses a particular phrase, but the statement of the contention does not refer to the phrase or regulation, then the board may interpret the contention in accordance with the express statement of the contention; LBP-10-15, 72 NRC 257 (2010)
- if a contention makes a prima facie allegation that the application omits information required by law, it necessarily presents a genuine dispute with applicant on a material issue; LBP-09-16, 70 NRC 227 (2009)
- if a contention meets the 10 C.F.R. 2.309(f)(2) criteria, it is timely and the intervenor proffering the contention need not also make a showing under 10 C.F.R. 2.309(c); LBP-10-14, 72 NRC 101 (2010)
- if a contention satisfies the timeliness requirement of 10 C.F.R. 2.309(f)(2)(iii), then, by definition, it is not subject to section 2.309(c) which specifically applies to nontimely filings; LBP-09-27, 70 NRC 992 (2009); LBP-10-9, 71 NRC 493 (2010)
- if a matter as presented is devoid of safety significance, there is no likelihood whatsoever that a materially different result would have been likely had the newly proffered evidence been considered initially; LBP-08-12, 68 NRC 5 (2008)
- if a NEPA contention alleges that impacts or alternatives that are patently outside the realm of reason must be considered, then the contention should be denied for failure to demonstrate that the issue raised is within the legitimate scope of NEPA; LBP-09-10, 70 NRC 51 (2009)
- if a new contention is not timely, then its admissibility is evaluated under the eight-factor balancing test of 10 C.F.R. 2.309(c)(i)-(viii); LBP-09-10, 70 NRC 51 (2009)
- if a party files a new contention within 30 days of the availability of the new information, the contention will generally be considered timely; LBP-09-17, 70 NRC 311 (2009)
- if a petitioner neglects to provide the requisite support for its contentions, it is not within the Board's power to make assumptions of fact that favor the petitioner, nor may the Board supply information that is lacking; LBP-07-3, 65 NRC 237 (2007)

## SUBJECT INDEX

- if a question arises over the scope of an admitted contention, the board or Commission will refer back to the bases set forth in support of the contention; CLI-10-15, 71 NRC 479 (2010)
- if a structure or component is already required to be replaced at mandated, specified time periods, it would fall outside the scope of license renewal review; LBP-07-4, 65 NRC 281 (2007)
- if admitted contentions are resolved before the FEIS is issued so as to conclude the contested portion of a proceeding, an intervenor could timely seek to litigate contentions regarding FEIS data or conclusions that differ significantly from the ER or the DEIS; LBP-07-3, 65 NRC 237 (2007)
- if applicant cures the omission, the contention of omission will become moot, and then intervenor must timely file a new or amended contention if it intends to challenge the sufficiency of the new information supplied by applicant; LBP-08-12, 68 NRC 5 (2008); LBP-08-15, 68 NRC 294 (2008); LBP-10-16, 72 NRC 361 (2010)
- if applicant proceeds with a site-specific reactor design instead of a certified design, any admissible issues would have to be addressed in the licensing adjudication; CLI-08-15, 68 NRC 1 (2008)
- if good cause for a late filing is not shown, the board may still permit the late filing, but petitioner must make a strong showing on the other factors; CLI-08-8, 67 NRC 193 (2008); LBP-10-24, 72 NRC 720 (2010)
- if intervenors provide no facts or expert opinion explaining why a conclusion in applicant's environmental report is incorrect, or fail to identify any SAMDAs that should be adopted if some unspecified new analysis were performed or any cost-beneficial SAMAs, their contention should be dismissed; LBP-10-10, 71 NRC 529 (2010)
- if new and materially different information becomes available during the processing of the application, and a petitioner promptly files a new contention based on this new information, the contention is admissible if it also satisfies the general contention pleading standards; LBP-06-14, 63 NRC 568 (2006)
- if no expert opinion or supporting relevant documents are submitted with a contention, any fact-based argument that is provided must be reasonably specific, coherent, and logical, sufficient to show such a dispute and indicate the appropriateness of further inquiry; LBP-09-17, 70 NRC 311 (2009)
- if petitioner believes that current NRC regulations are inadequate, the venue for raising such a concern is a section 2.802 petition to institute a rulemaking action; LBP-08-13, 68 NRC 43 (2008)
- if petitioner fails to offer alleged facts or expert opinion and a reasoned statement explaining any alleged inadequacy in the application, then petitioner has not demonstrated a genuine dispute; LBP-10-6, 71 NRC 350 (2010)
- if petitioner fails to provide the requisite support for its contentions, the board may not make assumptions of fact that favor the petitioner or supply information that is lacking; LBP-07-10, 66 NRC 1 (2007); LBP-08-9, 67 NRC 421 (2008); LBP-08-16, 68 NRC 361 (2008); LBP-08-17, 68 NRC 431 (2008); LBP-08-26, 68 NRC 905 (2008); LBP-09-3, 69 NRC 139 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-10-6, 71 NRC 350 (2010); LBP-10-7, 71 NRC 391 (2010)
- if petitioner files a new contention within the 20-day time limit set by the board, and if it satisfies the remaining factors in section 2.309(f)(2), petitioner need not address the requirements under section 2.309(c), which apply to nontimely filings; LBP-06-16, 63 NRC 737 (2006)
- if petitioner has proffered an admissible contention asserting an environmentally preferable alternative to the proposed reactors, this also would trigger the requirement that the environmental report contain cost estimates; CLI-10-9, 71 NRC 245 (2010)
- if petitioner identifies specific omissions in the combined license application, those omissions should be addressed in a contention to the board which, in turn, should refer such a contention to Staff for consideration in the design certification rulemaking, and hold that contention in abeyance, if it is otherwise admissible; LBP-08-21, 68 NRC 554 (2008)
- if petitioner makes a prima facie allegation that the application omits information required by law, it necessarily presents a genuine dispute with applicant on a material issue and raises an issue plainly material to an essential finding of regulatory compliance needed for license issuance; LBP-10-16, 72 NRC 361 (2010)
- if petitioner requests additional time to file before the 30-day period expires, new or amended contentions in the high-level waste repository proceeding may be considered timely upon a board finding that there has been an adequate showing of need for the additional time requested; LBP-08-10, 67 NRC 450 (2008)

## SUBJECT INDEX

- if petitioners are dissatisfied with the Commission's generic approach to problems, their remedy lies in the rulemaking process, not in adjudication; LBP-09-16, 70 NRC 227 (2009)
- if petitioners cannot show that their new or revised contentions could not have been submitted without the requested access to the redacted information in the license transfer application, then they will have to meet not only the contention pleading requirements, but also the late-filing requirements; CLI-07-18, 65 NRC 399 (2007)
- if safety contentions filed before construction begins would be considered premature and/or speculative, NRC hearing opportunities could soon come to be viewed as chimerical; LBP-07-14, 66 NRC 169 (2007)
- if the Commission were to permit fundamentally routine inspection findings and regulatory determinations to form the basis for safety culture contentions, this could lead to a never-ending stream of minitrials on operational issues, in which the applicant would be required to demonstrate how each issue was satisfactorily resolved; CLI-10-27, 72 NRC 481 (2010)
- if the environmental impact of mining activities is potentially significant, then the failure of the environmental report for a combined license application to disclose the location of the offsite mine does not immunize it from being the subject of a legitimate contention; LBP-09-10, 70 NRC 51 (2009)
- if the presiding officer determines that any of the admitted contentions constitute pure issues of law, those contentions must be decided on the basis of briefs or oral argument according to a schedule determined by the presiding officer; LBP-09-6, 69 NRC 367 (2009)
- if the problem raised in a late-filed contention presents a sufficiently grave threat to public safety, a board should reopen the record to consider it even if it is not newly discovered and could have been raised in timely fashion; LBP-08-12, 68 NRC 5 (2008)
- if there is reason to believe that a departure from the NRC's license renewal generic environmental impact statement and related regulations is warranted, then the remedy is a petition for rulemaking to modify the rules or a petition for a waiver of the rules based on special circumstances, not an adjudicatory contention; CLI-07-8, 65 NRC 124 (2007)
- if, within 60 days after pertinent information that would support the framing of a contention first becomes available, intervenors submit a particularized and otherwise admissible contention regarding the construction of the facility, then the contention will be deemed timely without the need to satisfy the balancing test for late-filing requirements; CLI-09-2, 69 NRC 55 (2009)
- in a contention of omission, intervenors must show that what is allegedly omitted is required by law; LBP-10-10, 71 NRC 529 (2010)
- in a license renewal proceeding, safety contentions must focus on topics related to the detrimental effects of aging and related time-limited issues; LBP-07-15, 66 NRC 261 (2007)
- in a summary disposition context, the question about the need to amend or file a new contention becomes relevant when there is a dispute about whether an admitted issue statement is a contention of omission or a contention of inadequacy; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)
- in addition to general contention admissibility requirements, amended or new contentions filed after an intervenor's initial filing will be admitted only upon leave of the presiding officer and a demonstration that information upon which the contention is based was not previously available and is materially different than information previously available and has been submitted in a timely fashion based on the availability of the subsequent information; LBP-10-13, 71 NRC 673 (2010)
- in addition to meeting NRC's regular contention admissibility requirements in 10 C.F.R. 2.309(f), environmental contentions addressing any DOE environmental impact statement or supplement in the high-level waste proceeding must also conform to the requirements and address the applicable factors outlined in 10 C.F.R. 51.109; CLI-08-25, 68 NRC 497 (2008)
- in addressing the section 2.309(e)(1) factors, failure to provide any specific discussion of most of these items or the weight they should be given in the balance is a potentially fatal omission; LBP-10-21, 72 NRC 616 (2010)
- in adjudicatory proceedings it is the license application, not the NRC Staff review, that is at issue; CLI-08-15, 68 NRC 1 (2008)
- in an abundance of caution and in order to give petitioners every benefit of the doubt, the board considers whether any of the material at issue in a reply brief that would not constitute legitimate amplification might be admissible under the criteria of 10 C.F.R. 2.309(e) or (f)(2); LBP-09-17, 70 NRC 311 (2009)

## SUBJECT INDEX

- in ASLBP proceedings, collateral estoppel may bar a party from relitigating the admissibility of a contention when an earlier board refused to admit the same contention in an earlier proceeding involving the same facility; LBP-08-23, 68 NRC 679 (2008)
- in deciding the ripeness question, it is important to look to whether delayed resolution of issues would foreclose any relief from the present injury suffered by appellees; LBP-09-1, 69 NRC 11 (2009)
- in determining ripeness, boards are to consider both the fitness of the issue for judicial decision and the hardship to the parties of withholding court consideration; LBP-08-24, 68 NRC 691 (2008)
- in determining whether a petitioner has established standing, the board must construe the petition in favor of the petitioner; LBP-09-6, 69 NRC 367 (2009)
- in evaluating petitions to intervene, licensing boards are not free to ignore the contention admissibility requirements of 10 C.F.R. 2.309(f)(1); CLI-09-8, 69 NRC 317 (2009)
- in five-factor analysis for admission of a late-filed contention, factors three and five are to be given more weight than factors two and four; CLI-08-8, 67 NRC 193 (2008)
- in making the findings required for issuance of a combined license, the Commission shall treat as resolved those matters resolved in connection with the issuance or renewal of a design certification rule; LBP-10-21, 72 NRC 616 (2010)
- in order to raise a timely contention, a party must piece together disparate shreds of information that, standing alone, have little apparent significance; CLI-10-27, 72 NRC 481 (2010)
- in passing upon whether an intervention petition should be granted, it is not the function of a licensing board to reach the merits of any contention contained therein; LBP-06-22, 64 NRC 229 (2006)
- in proffering contentions for admission, petitioner need not make the full investigation and present both sides of the case; LBP-09-6, 69 NRC 367 (2009)
- in proffering contentions that challenge an application, petitioner or intervenor must provide support, including references to sources and documents on which it intends to rely, and a guidance document could be one of those sources; CLI-10-24, 72 NRC 451 (2010)
- in revising its contention admissibility requirements, the Commission sought to preclude a contention from being admitted where an intervenor has no facts to support its positions, but rather hopes to use discovery or cross-examination as a fishing expedition; LBP-09-6, 69 NRC 367 (2009)
- in ruling on contention admissibility a board is not to look to the merits of the contention; LBP-09-17, 70 NRC 311 (2009)
- in the absence of a 10 C.F.R. 2.335 waiver petition, any challenge brought to aspects of a referenced certified reactor design is outside the scope of a combined license proceeding; CLI-08-15, 68 NRC 1 (2008); LBP-08-16, 68 NRC 361 (2008)
- in the absence of documentary or expert support, reliance on a guidance document to form the basis of a proposed contention does not, by itself, demonstrate a dispute with applicant; LBP-10-5, 71 NRC 329 (2010)
- in the interest of economical use of NRC resources, a board postpones examination of the balance of petitioner's claims to determine whether they are in conformity with the requirements of the Rules of Practice; LBP-06-6, 63 NRC 167 (2006)
- in the overall COLA/DCD process, petitioners will have an opportunity to file new contentions related to material new information regarding site-specific plant design issues; LBP-09-8, 69 NRC 736 (2009)
- inadequacy of environmental report's reliance on Table S-3 regarding radioactive effluents from the uranium fuel cycle is not litigable in a combined license proceeding; LBP-08-16, 68 NRC 361 (2008)
- incorporation by reference is contrary to Commission case law and will result in denial of contentions on the basis on the dearth of information; LBP-10-16, 72 NRC 361 (2010)
- information, alleged facts, and expert opinions provided by a petitioner will be examined by the board to confirm that the petitioner does indeed supply adequate support for its contention; LBP-09-26, 70 NRC 939 (2009); LBP-10-6, 71 NRC 350 (2010)
- information must include references to specific portions of the application, including the applicant's environmental report and safety report, that the petitioner disputes and the supporting reasons for each dispute; LBP-06-10, 63 NRC 314 (2006)
- insofar as a contention concerns the feasibility of developing wind and compressed air energy storage together, land use relating to compressed air energy storage, and multiple, overlapping uses of land, it is admissible; LBP-10-10, 71 NRC 529 (2010)

## SUBJECT INDEX

integration, consolidation, restatement, or collection of previously available information into a new document does not convert it into information that was not previously available within the meaning of 10 C.F.R. 2.309(f)(2)(i); LBP-09-10, 70 NRC 51 (2009)

interest in the promotion of economic use of energy falls outside the zone of interests protected by either the Atomic Energy Act or the National Environmental Policy Act; CLI-07-18, 65 NRC 399 (2007)

intervenor is not required to make its case at the contention stage of the proceeding, but rather to indicate what facts or expert opinions of which it is aware at that point in time that provide the basis for its contention; LBP-06-10, 63 NRC 314 (2006); LBP-09-1, 69 NRC 11 (2009)

intervenor may not attack regulatory limits for effluent releases; LBP-10-9, 71 NRC 493 (2010)

intervenor may petition the Commission for permission to challenge a rule, but must make a showing of special circumstances; LBP-10-9, 71 NRC 493 (2010)

intervenor must comply with procedural requirements for the filing of new or amended contentions, including the requirement that the contentions be submitted in a timely fashion based on the availability of the subsequent information; LBP-10-17, 72 NRC 501 (2010)

intervenor need not provide all supporting facts for a contention in the original submission or prove its case to have the contention admitted; LBP-10-9, 71 NRC 493 (2010)

intervenor should not be held to a prima facie burden at the contention admissibility stage of a proceeding, but its showing should be sufficient to require reasonable minds to inquire further; LBP-10-10, 71 NRC 529 (2010)

intervenor and their experts need to provide at the contention admission stage only a reasoned presentation sufficient to warrant further inquiry; LBP-10-10, 71 NRC 529 (2010)

intervenor are not entitled to litigate common defense and security considerations under 10 C.F.R. 40.32(d) unless the specific common defense and security risk asserted is reasonably related to, and would arise as a direct result of, the specific license amendments that the Commission is asked to approve; LBP-09-1, 69 NRC 11 (2009)

intervenor are precluded from challenging ASME inspection requirements in a combined license proceeding because NRC regulations directly incorporate ASME inspection requirements by reference; LBP-10-21, 72 NRC 616 (2010)

intervenor have a regulatory burden to present facts or expert opinion to support their contention; CLI-09-2, 69 NRC 55 (2009)

intervenor may not act as private attorneys-general and raise issues that are of concern to them but do not affect them directly; CLI-07-18, 65 NRC 399 (2007)

intervenor may not challenge a licensee's current licensing basis; LBP-07-17, 66 NRC 327 (2007)

intervenor must provide sufficient information to show that a genuine dispute exists in regard to a material issue of law or fact, including references to specific portions of the application that intervenors dispute, or, in the case when the application is alleged to be deficient, the identification of such deficiencies and supporting reasons for this belief; LBP-10-9, 71 NRC 493 (2010)

intervenor must timely file a new or amended contention that addresses the factors in section 2.714(b) in order to raise specific challenges regarding new information; LBP-10-10, 71 NRC 529 (2010)

intervenor with contentions rooted in new material information need not make the same showing as intervenors who have simply delayed filing their contentions until after expiration of the regulatory deadline; LBP-10-9, 71 NRC 493 (2010)

intervenor's comments must be significant enough to step over a threshold requirement of materiality, not merely state that a particular mistake was made, but show why the mistake was of possible significance; LBP-10-10, 71 NRC 529 (2010)

intervenor's concise statement of alleged facts that support the contention and reliance on various parts of the application itself satisfy the requirement that mandates references to specific portions of the application; LBP-09-1, 69 NRC 11 (2009)

intervenor's nuclear proliferation concern is premised upon future third-party activities that are unrelated to the specific activities authorized by license amendments and is not litigable because it is not a direct consequence of the proposed license amendments or the Commission's approval thereof; LBP-09-1, 69 NRC 11 (2009)

intervention petitioners must provide a concise statement of the alleged facts or expert opinions that support their position together with references to the specific sources and documents on which they intend to rely; LBP-06-22, 64 NRC 229 (2006)

## SUBJECT INDEX

intervention petitioners must show deficiencies or errors in the license renewal application and must establish a significant link between such claimed deficiencies and either the health and safety of the public or the environment; LBP-08-24, 68 NRC 691 (2008)

introduction of issues that are not unique to any given reactor are inappropriate in an individual reactor licensing proceeding absent evidence that the generic issue applies to that particular proceeding; LBP-06-11, 63 NRC 391 (2006)

ISL mining does not involve fuel rod waste and to the extent such waste is indirectly relevant, the Waste Confidence rule would prohibit its consideration in a license amendment proceeding; LBP-08-6, 67 NRC 241 (2008)

issuance of a proposed rulemaking and request for comments does not, in itself, constitute information not previously available that entitles a party to file a new contention; LBP-09-10, 70 NRC 51 (2009)

issuance of requests for additional information does not alone establish deficiencies in the application; LBP-09-16, 70 NRC 227 (2009)

issues concerning a reactor design certification application should be resolved in the design certification rulemaking; CLI-08-15, 68 NRC 1 (2008)

issues concerning alleged violations of state law or regulations are outside the scope of, and not material to, an NRC power uprate proceeding; CLI-07-25, 66 NRC 101 (2007)

issues dealing with the current operating license, including the updated Final Safety Analysis Report, are not within the scope of license renewal review; LBP-08-13, 68 NRC 43 (2008)

“issues” in license transfer proceedings constitute “contentions” under 10 C.F.R. 2.309(f) and must therefore meet the standards for admissibility set forth in that regulation; CLI-07-18, 65 NRC 399 (2007)

issues must be germane to the application pending before the board, and are not cognizable unless they are material to matters that fall within the scope of the proceeding as set forth in the Commission’s notice of opportunity for hearing; LBP-06-10, 63 NRC 314 (2006)

issues raised by a contention must be material to the licensing decision; LBP-10-9, 71 NRC 493 (2010)

issues raised in contentions must be both within the scope of the proceeding and material to the findings the NRC must make to support the action that is involved in the proceeding; LBP-07-3, 65 NRC 237 (2007)

issues related to a plant’s current licensing basis are ordinarily beyond the scope of a license renewal review because those issues already are monitored, reviewed, and commonly resolved as needed by ongoing regulatory oversight; LBP-06-7, 63 NRC 188 (2006); LBP-06-22, 64 NRC 229 (2006)

issues related to costs only become relevant if an intervenor identifies an environmentally preferable, reasonable alternative; LBP-10-10, 71 NRC 529 (2010)

issues related to the environmental impact of onsite spent fuel storage after the license renewal term are covered by NRC’s Waste Confidence Rule and are outside the scope of a license renewal proceeding because contentions may not challenge a regulation; LBP-06-20, 64 NRC 131 (2006)

issues relating to threats to public health and safety and potential impacts on the environment arising out of water quality issues are within the scope of a license amendment proceeding; LBP-08-6, 67 NRC 241 (2008)

issues resolved in the ESP proceeding are treated as resolved in a subsequent construction permit or COL proceeding that references the ESP, unless a contention is admitted under narrowly specified conditions; CLI-07-12, 65 NRC 203 (2007)

it is a contention’s proponent, not the licensing board, that is responsible for formulating the contention and providing the necessary information to satisfy the basis requirement for the admission of contentions; LBP-10-24, 72 NRC 720 (2010)

it is a settled rule of practice that contentions ought to be interpreted in light of the required specificity, so that adjudicators and parties need not search out broader meanings than were clearly intended; LBP-10-16, 72 NRC 361 (2010)

it is appropriate to assess both the fitness of the issue for judicial decision and the hardship to the parties of withholding court consideration; LBP-09-1, 69 NRC 11 (2009)

it is insufficient for petitioner to point to an Internet Web site or article and expect the board on its own to discern what particular issue a petitioner is raising and why; CLI-10-15, 71 NRC 479 (2010); LBP-08-21, 68 NRC 554 (2008)

## SUBJECT INDEX

it is not necessary for petitioners to allege facts under section 2.309(f)(1)(v) or to provide an affidavit that sets out the factual and/or technical bases under section 51.109(a)(2) to support a purely legal contention; CLI-09-14, 69 NRC 580 (2009)

it is not the board's duty to forage through a petition in order to find statements or other support that may be located in various portions of the petition but not referenced in the contention; LBP-10-16, 72 NRC 361 (2010)

it is not the responsibility of the licensing board to supply the basis information necessary to sustain a contention; LBP-08-24, 68 NRC 691 (2008)

it is petitioner's responsibility to provide the necessary information to satisfy the basis requirement for the admission of its contentions and demonstrate that a genuine dispute exists within the scope of the proceeding; LBP-10-6, 71 NRC 350 (2010)

it is the admissibility of the contention, not the basis, that must be determined; LBP-08-17, 68 NRC 431 (2008)

it is the petitioner's obligation to present factual information and/or expert opinion necessary to support its contention; LBP-07-3, 65 NRC 237 (2007)

late-filed environmental contentions must meet not only the usual contention pleading requirements applicable to all proceedings, but also the additional requirements for new contentions; LBP-08-11, 67 NRC 460 (2008)

legal issue contentions do not require any supporting facts; LBP-10-11, 71 NRC 609 (2010)

license amendment proceedings are not a forum to address past violations or accidents that have no direct bearing on the proposed amendment; CLI-09-12, 69 NRC 535 (2009)

license renewal is an appropriate occasion for appraising the entire past performance of the licensee; CLI-09-9, 69 NRC 331 (2009)

license renewal should not include a new, broad-scoped inquiry into compliance that is separate from and parallel to NRC ongoing compliance oversight activity; CLI-10-27, 72 NRC 481 (2010)

licensing boards and the Commission have considered the late-filing criteria even in cases where the factors were not fully addressed by petitioners and/or the NRC Staff or were not addressed at all; LBP-10-24, 72 NRC 720 (2010)

licensing boards are expected to examine cited materials to verify that they support a contention, but are not expected to search through pleadings or other materials to uncover arguments and support never advanced by the petitioners themselves; CLI-06-10, 63 NRC 451 (2006)

licensing boards are not authorized to admit conditionally, for any reason, contentions that fall short of meeting the specificity requirements set forth in NRC procedural rules; CLI-09-2, 69 NRC 55 (2009)

licensing boards do not consider any information found in a reply to an answer to an intervention petition that was not in petitioner's original contentions, unless it constitutes legitimate amplification of original contentions or properly late-filed material; LBP-06-10, 63 NRC 314 (2006)

licensing boards, in determining whether proffered contentions are premature, must apply norms in a manner that fits the circumstances and must consider whether to condition rejection of such contentions so as to preserve the opportunity for them to be re-presented later; LBP-07-14, 66 NRC 169 (2007)

licensing boards may appropriately view a petitioner's supporting information in a light favorable to the petitioner, but failure to provide such information regarding a proffered contention requires that the contention be rejected; LBP-07-10, 66 NRC 1 (2007)

licensing boards may not add material not raised by a petitioner in order to render a contention admissible; CLI-09-12, 69 NRC 535 (2009)

licensing boards may not admit a contention that directly or indirectly challenges Table S-3 of 10 C.F.R. 51.51; LBP-09-16, 70 NRC 227 (2009); LBP-09-18, 70 NRC 385 (2009)

licensing boards may not make factual inferences on a petitioner's behalf; LBP-06-10, 63 NRC 314 (2006)

licensing boards may reformulate contentions to eliminate extraneous issues or to consolidate issues for a more efficient proceeding; CLI-10-2, 71 NRC 27 (2010)

licensing boards should not accept in individual license proceedings contentions that are, or are about to become, the subject of general rulemaking by the Commission; LBP-06-7, 63 NRC 188 (2006)

licensing boards should refer contention challenging a reactor design certification to the Staff for consideration in the design certification rulemaking, and hold that contention in abeyance, if it is otherwise admissible; CLI-08-15, 68 NRC 1 (2008)

## SUBJECT INDEX

listing of issues with which petitioners disagree with the application is a form of notice pleading that the Commission has long held is insufficient; LBP-10-16, 72 NRC 361 (2010)

litigant opposing a licensing action is entitled to challenge the sufficiency of any guidance document on which a licensee or applicant relies, but it must do so with substantive support; CLI-10-17, 72 NRC 1 (2010)

low probability is the key to applying NEPA's rule-of-reason test to contentions that allege that specified accident scenario presents a significant environmental impact that must be evaluated; LBP-10-10, 71 NRC 529 (2010)

low-level radioactive waste contentions were not admissible because of technical defects in the pleadings such as failure to satisfy 10 C.F.R. 2.309(f)(1)(vi), (i), or (ii); LBP-10-20, 72 NRC 571 (2010)

low-level radioactive waste disposal contentions have been admitted when that issue was not sufficiently discussed in the applications and there was no mention of the closure of the Barnwell facility; LBP-09-18, 70 NRC 385 (2009)

low-level radioactive waste disposal contentions may not challenge Table S-3, consistent with NRC policy that regulations may not be the subject of collateral attack in an adjudication; CLI-10-2, 71 NRC 27 (2010)

material provided in support of a contention will be carefully examined by the board to confirm that on its face it does supply an adequate basis for the contention; LBP-07-10, 66 NRC 1 (2007); LBP-08-16, 68 NRC 361 (2008); LBP-08-17, 68 NRC 431 (2008); LBP-09-3, 69 NRC 139 (2009)

materiality requires a showing that the alleged error or omission is of possible significance to the result of the proceeding; LBP-08-9, 67 NRC 421 (2008); LBP-09-26, 70 NRC 939 (2009); LBP-09-27, 70 NRC 992 (2009); LBP-10-6, 71 NRC 350 (2010); LBP-10-7, 71 NRC 391 (2010)

materiality to the proceeding is required; CLI-10-2, 71 NRC 27 (2010)

materials cited as the basis for a contention are subject to scrutiny by the board to determine whether they actually support the facts alleged; LBP-10-24, 72 NRC 720 (2010)

matters resolved in an early site permit proceeding are considered resolved in a subsequent combined license proceeding when the COL application references the ESP, subject to certain exceptions; LBP-08-15, 68 NRC 294 (2008)

mere issuance of Staff requests for additional information does not mean an application is incomplete for docketing; CLI-08-17, 68 NRC 231 (2008)

mere mention of a document without providing its contents or an explanation of its significance cannot support admissibility of a contention; LBP-09-21, 70 NRC 581 (2009)

mere notice pleading is insufficient for contention admission; LBP-08-9, 67 NRC 421 (2008); LBP-08-26, 68 NRC 905 (2008); LBP-10-6, 71 NRC 350 (2010)

mere recitation of unrelated adverse findings in reports of inspections and audits performed by the Staff and applicant does not supply information on what specifically would be litigated; LBP-10-9, 71 NRC 493 (2010)

mere statements of government officials are insufficient to overturn 10 C.F.R. 51.23; LBP-09-21, 70 NRC 581 (2009)

merely quoting or citing documents as the basis for a contention is not enough to demonstrate a genuine dispute with the application on a material issue of law or fact; LBP-10-9, 71 NRC 493 (2010)

mootness occurs when a justiciable controversy no longer exists; LBP-10-10, 71 NRC 529 (2010)

motion to reopen the record to admit new contention regarding adequacy of applicant's containment/coating inspection program for two new proposed units is denied; LBP-10-21, 72 NRC 616 (2010)

motion to reopen to introduce a new contention asserting issues related to aging management of effects of moist or wet environments on buried, below-grade, underground, or hard-to-access safety-related electrical cables is denied; LBP-10-19, 72 NRC 529 (2010)

motions to reopen a proceeding to introduce an entirely new contention must successfully navigate at least nineteen different regulatory factors under 10 C.F.R. 2.326, 2.309(c), and 2.309(f)(1); LBP-10-19, 72 NRC 529 (2010)

movant must show that a balancing of eight factors of 10 C.F.R. 2.309(c)(1), to the extent they are relevant to the particular filing, weighs in favor of reopening; LBP-08-12, 68 NRC 5 (2008)

## SUBJECT INDEX

movant's assertion that a new contention presents a significant safety issue must be supported by affidavits that set forth the factual and/or technical bases for the allegation; LBP-08-12, 68 NRC 5 (2008)

need-for-power contention that calls for a more detailed analysis than NRC requires is inadmissible; LBP-10-24, 72 NRC 720 (2010)

need-for-power contentions are barred in operating license proceedings partly because at the time the OL application is submitted, most of the environmental disruption would have already occurred and an electric utility would use the new nuclear plant to meet increased energy demand or replace older, less economical generation capacity; LBP-10-12, 71 NRC 656 (2010)

neither mere speculation nor bare or conclusory assertions, even by an expert, alleging that a matter should be considered will suffice to allow the admission of a proffered contention; LBP-07-3, 65 NRC 237 (2007); LBP-07-10, 66 NRC 1 (2007); LBP-08-16, 68 NRC 361 (2008); LBP-09-3, 69 NRC 139 (2009); LBP-10-7, 71 NRC 391 (2010)

neither NRC regulations nor agency policy mandates that the oral argument be conducted in person near the site; LBP-08-23, 68 NRC 679 (2008)

neither the Rules of Practice nor Commission precedent mandates the consideration at the threshold of every basis assigned for every contention advanced by the hearing requestor; LBP-06-27, 64 NRC 438 (2006)

NEPA imposes no legal duty on NRC to consider intentional malevolent acts on a case-by-case basis in conjunction with commercial power reactor license renewal applications; LBP-08-13, 68 NRC 43 (2008)

NEPA is the only legal grounds for an admissible contention relating to environmental justice issues; LBP-08-13, 68 NRC 43 (2008); LBP-09-18, 70 NRC 385 (2009)

new and significant information about a Category 1 issue is not a proper subject for a contention, absent a waiver of section 51.53(c)(3)(i); LBP-07-4, 65 NRC 281 (2007)

new and significant information that would normally fall within a Category 1 issue is not a proper subject for a contention, absent a waiver of the rule that Category 1 issues need not be addressed in a license renewal proceeding; LBP-07-11, 66 NRC 41 (2007)

new bases for a contention cannot be introduced in a reply brief or at any other time after the date the original contentions are due, unless the petitioner meets the late-filing criteria set forth in 10 C.F.R. 2.309(c), (f)(2); CLI-09-7, 69 NRC 235 (2009); CLI-06-17, 63 NRC 727 (2006); CLI-09-12, 69 NRC 535 (2009)

new contention on the adequacy of consideration of the dissolved oxygen factor in the cumulative usage factor environmental analysis and use of inappropriate heat transfer equations was previously litigated and resolved and thus is not admissible; LBP-09-9, 70 NRC 41 (2009)

new contentions based on assumptions that cannot be considered information that was not previously available or materially different than information previously available do not meet admissibility requirements; CLI-10-17, 72 NRC 1 (2010)

new contentions filed by an intervenor must comply with timeliness standards; LBP-10-2, 71 NRC 190 (2010)

new information concerning safety may be new evidence, but not necessarily raise a new issue; CLI-09-7, 69 NRC 235 (2009)

new information not part of the original contention may not be introduced for the first time on appeal; CLI-07-8, 65 NRC 124 (2007)

new information proffered by petitioners must show a distinct new harm or threat apart from the activities already licensed; LBP-08-6, 67 NRC 241 (2008)

new or amended contentions filed after the initial deadline may be admitted with leave of the presiding officer upon a showing that information on which the contention is based was not previously available and is materially different than information previously available and the contention has been submitted in a timely fashion; LBP-10-14, 72 NRC 101 (2010)

new or amended contentions in the high-level waste repository proceeding should be presumed timely if they are filed within 30 days after the availability of new or materially different information; LBP-08-10, 67 NRC 450 (2008)

new or amended environmental contentions can be freely filed if new data or conclusions appear in new documents; LBP-07-14, 66 NRC 169 (2007)

## SUBJECT INDEX

no contention will be admitted for litigation in any NRC adjudicatory proceeding unless the pleading requirements are met; CLI-06-10, 63 NRC 451 (2006)

no petition on, or other request for review of, the Staff's significant hazards consideration determination will be entertained by the Commission; LBP-07-10, 66 NRC 1 (2007)

no rule or regulation of the Commission concerning the licensing of production and utilization facilities is subject to attack by way of discovery, proof, argument, or other means in any adjudicatory proceeding; LBP-10-14, 72 NRC 101 (2010)

no specific number of days whereby a board can measure or determine whether a contention is "timely" is specified by RC regulations; LBP-06-14, 63 NRC 568 (2006)

nontimely new contentions are subject to the more stringent eight-factor balancing test; LBP-07-15, 66 NRC 261 (2007)

nontimely petitions to intervene and contentions, amended petitions, and supplemental petitions will not be entertained absent a determination by the Commission, the licensing board, or a presiding officer that the petition should be granted and/or the contentions should be admitted based upon a balancing of eight factors; CLI-09-15, 70 NRC 1 (2009)

not all of the contention admissibility requirements of 10 C.F.R. 2.309(f)(1) necessarily apply to legal-issue contentions; LBP-09-6, 69 NRC 367 (2009)

nothing in the NRC case law or regulations requires, at the contention admissibility stage, that a contention be supported by an expert opinion, substantive affidavits, or evidence; LBP-09-10, 70 NRC 51 (2009)

notice pleading is expressly prohibited by the rules of practice; CLI-09-5, 69 NRC 115 (2009)

novel issues that the Commission may wish to address generically at the earliest opportunity are appropriately referred to the Commission; LBP-08-16, 68 NRC 361 (2008); LBP-08-17, 68 NRC 431 (2008)

NRC has no legal duty to consider the environmental impacts of terrorism at NRC-licensed facilities; LBP-08-6, 67 NRC 241 (2008)

NRC may exclude a later intervenor if another party has fully presented a material issue identical to the one the excluded party seeks to raise or if the later intervenor's proposed new contention is based on a later filed safety evaluation report or environmental impact statement where the issues were apparent at the time of the application; LBP-06-14, 63 NRC 568 (2006)

NRC pleading requirements are deliberately strict, and any contention that does not satisfy them will be rejected; CLI-10-21, 72 NRC 197 (2010); LBP-10-15, 72 NRC 257 (2010); LBP-10-16, 72 NRC 361 (2010)

NRC proceedings are to be based on the application as it exists at a given time and not on any potential future amendments; LBP-08-11, 67 NRC 460 (2008)

NRC regulations are not subject to attack in adjudications; CLI-10-1, 71 NRC 1 (2010); LBP-10-9, 71 NRC 493 (2010)

NRC regulations establish what the agency has found to be adequately protective radiological dose limits, and petitioners may not use an adjudicatory proceeding to challenge this generic regulatory framework; CLI-08-17, 68 NRC 231 (2008)

NRC regulations may not be attacked in individual NRC adjudicatory proceedings, unless the Commission waives the rule at issue for a particular proceeding, or the rule is changed or suspended due to a rulemaking review; CLI-09-10, 69 NRC 521 (2009)

NRC regulations require petitioner to raise contentions related to NEPA as challenges to the applicant's environmental report, which acts as a surrogate for the environmental impact statement during the early stages of a relicensing proceeding; LBP-08-26, 68 NRC 905 (2008)

NRC rules call for a clear statement of the basis for the contentions and the submission of supporting information and references to specific documents and sources that establish the validity of the contention; CLI-06-9, 63 NRC 433 (2006)

NRC rules do not call for a dispositive standard of proof for a contention or its bases; CLI-10-1, 71 NRC 1 (2010)

NRC Staff issuance of a request for additional information does not alone establish deficiencies in an application, and intervention petitioner must do more than merely quote an RAI to justify admission of a contention; CLI-09-16, 70 NRC 33 (2009); LBP-09-10, 70 NRC 51 (2009)

## SUBJECT INDEX

NRC Staff issuance of a request for additional information does not immunize the combined license application from challenge; LBP-09-10, 70 NRC 51 (2009)

NRC Staff's mere interest in an issue, its solicitation of public input on an issue, or its proposed revision to a generic guidance document will not, standing alone and lacking an articulated plant-specific safety concern, suffice as a contention's cornerstone; LBP-06-11, 63 NRC 391 (2006)

NRC Staff's revision of the Final Safety Evaluation Report to account for applicant's confirmatory analysis would not, standing alone, be a materially different result that justifies reopening the record, because it would neither change the outcome of the renewal proceeding nor impose a different licensing condition on an applicant; LBP-08-12, 68 NRC 5 (2008)

NRC standards require petitioners to plead specific grievances, not simply to provide general notice pleadings; CLI-10-15, 71 NRC 479 (2010)

NRC would not accept incorporation by reference of another petitioner's issues in an instance where the petitioner has not submitted at least one admissible issue of its own; LBP-10-11, 71 NRC 609 (2010)

NRC's adjudicatory process is not a forum for litigating matters that are primarily the responsibility of other federal or state/local regulatory agencies; LBP-07-10, 66 NRC 1 (2007)

NRC's adjudicatory process is not the proper venue for the evaluation of a petitioner's own view regarding the direction that regulatory policy should take; LBP-09-26, 70 NRC 939 (2009)

NRC's contention pleading standards, while strict, are not so strict as to require a board to abandon a commonsense approach to consideration of contentions; LBP-10-10, 71 NRC 529 (2010)

offsite health and safety impacts caused by onsite activities can support the admissibility of a contention; LBP-09-6, 69 NRC 367 (2009)

omission-related challenges to license applications must be supported by specific reasons why alleged omissions are relevant and material; LBP-08-9, 67 NRC 421 (2008)

on appeal, the Commission found fault with the board's failure to identify clearly which of the diffuse and, in some cases, unsupported claims were admitted for hearing; CLI-10-2, 71 NRC 27 (2010)

once a party demonstrates that it has standing to intervene, that party may raise any contention that, if proved, will afford the party relief from the injury it relies upon for standing; CLI-09-9, 69 NRC 331 (2009)

once the deadline for filing an initial intervention petition has passed, a party wishing to submit new or amended contentions on matters not associated with issuance of the Staff's draft or final environmental impact statement must satisfy the requirements of 10 C.F.R. 2.309(f)(2); LBP-10-21, 72 NRC 616 (2010)

one way to challenge a generic finding, or Category 1 issue, in a license renewal proceeding is to apply for a waiver where special circumstances are such that the application of the rule or regulation would not serve the purposes for which the rule or regulation was adopted; CLI-07-3, 65 NRC 13 (2007)

only the management of Class B and Class C wastes is properly the subject of a contention in a combined license proceeding; LBP-09-16, 70 NRC 227 (2009)

oral argument is not a right; CLI-08-7, 67 NRC 187 (2008)

organizations seeking to challenge regulations of a government agency failed to demonstrate standing where they did not demonstrate a concrete application of the regulations that threatened imminent harm to their interests; CLI-09-20, 70 NRC 911 (2009)

"otherwise admissible" has been interpreted to mean a contention that meets the contention admissibility requirements of 10 C.F.R. 2.309(f)(1) but for the fact that it challenges a yet-to-be-certified reactor design; LBP-10-9, 71 NRC 493 (2010)

parties and licensing boards must be on notice of the issues being litigated, so that parties and boards may prepare for summary disposition or for hearing; CLI-10-15, 71 NRC 479 (2010)

petitioner cannot base standing or a contention on the possibility that the licensee will violate the terms of its license; CLI-10-20, 72 NRC 185 (2010)

petitioner cannot include a reference as support without showing why the reference provides a basis to support its contention; LBP-10-10, 71 NRC 529 (2010)

petitioner demonstrates a genuine dispute with the applicant on the adequacy of the water quality analysis; LBP-09-16, 70 NRC 227 (2009)

petitioner did not properly challenge applicant's conclusion that no environmentally preferable alternative existed where the only alternative that petitioner mentions on appeal is the no-reactor option, and

## SUBJECT INDEX

petitioner neither raised that option before the board nor supported its argument that it would always be environmentally preferable; LBP-10-6, 71 NRC 350 (2010)

petitioner does not become entitled to an evidentiary hearing merely on request, or on a bald or conclusory allegation that a dispute exists, but must make a minimal showing that material facts are in dispute, thereby demonstrating that an inquiry in depth is appropriate; LBP-09-17, 70 NRC 311 (2009)

petitioner does not have to prove its contention at the admissibility stage; LBP-07-16, 66 NRC 277 (2007); LBP-08-26, 68 NRC 905 (2008); LBP-09-6, 69 NRC 367 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-10-6, 71 NRC 350 (2010)

petitioner does not need to provide expert opinion or a substantive affidavit in order to satisfy 10 C.F.R. 2.309(f)(1)(v); LBP-10-15, 72 NRC 257 (2010)

petitioner, especially one represented by counsel, bears the burden of going forward and specifically addressing each of the six elements in 10 C.F.R. 2.309(f)(1); LBP-10-16, 72 NRC 361 (2010)

petitioner failed to establish materiality of its contention related to management of low-level radioactive waste by referring to 10 C.F.R. Part 61 because applicant was not seeking a license under Part 61, and it was speculative whether such a license would ever be necessary; LBP-08-15, 68 NRC 294 (2008)

petitioner failed to identify any statute or NRC regulation to support its theory that applicant may not revise its application to include a different reactor design; LBP-10-17, 72 NRC 501 (2010)

petitioner failed to provide any evidence to challenge NRC's conclusion that the environmental effects of a hypothetical terrorist attack on a nuclear plant would be no worse than those caused by a severe accident; LBP-10-10, 71 NRC 529 (2010)

petitioner has an obligation to explain why cited testimony provides a basis for its contention; LBP-10-17, 72 NRC 501 (2010)

petitioner has not met the pleading requirements because it has not demonstrated any link between the purported violations at an existing unit and any future noncompliance or resulting safety risk affecting proposed units; CLI-10-9, 71 NRC 245 (2010)

petitioner has presented a prima facie showing for waiver of the NRC regulation covering the environmental impacts of spent fuel pool accidents generically, and has shown that its contention concerning earthquake-induced spent fuel pool accidents is otherwise admissible; LBP-10-15, 72 NRC 257 (2010)

petitioner is limited to the contention as initially filed and may not rectify its deficiencies through a reply brief or on appeal; CLI-09-14, 69 NRC 580 (2009)

petitioner is not required to prove its case at the contention stage and need not proffer facts in formal affidavit or evidentiary form sufficient to withstand a summary disposition motion; LBP-08-6, 67 NRC 241 (2008); LBP-08-9, 67 NRC 421 (2008); LBP-10-24, 72 NRC 720 (2010)

petitioner is not required to provide an exhaustive discussion in its proffered contention, as long as it meets the Commission's admissibility requirements; LBP-06-4, 63 NRC 99 (2006)

petitioner is not required to provide expert testimony in support of his plausible scenario for injury; CLI-09-12, 69 NRC 535 (2009)

petitioner is not required to redo SAMA analyses in order to raise a material issue; LBP-08-13, 68 NRC 43 (2008)

petitioner is obligated to read the pertinent portions of the license application, state the applicant's position and the petitioner's opposing view, and explain why it disagrees with the applicant; LBP-09-17, 70 NRC 311 (2009); LBP-09-25, 70 NRC 867 (2009)

petitioner is obliged to present the factual information and expert opinions necessary to support its contention adequately; CLI-08-7, 67 NRC 187 (2008); LBP-07-10, 66 NRC 1 (2007); LBP-07-16, 66 NRC 277 (2007); LBP-08-6, 67 NRC 241 (2008); LBP-08-9, 67 NRC 421 (2008); LBP-09-3, 69 NRC 139 (2009); LBP-10-6, 71 NRC 350 (2010); LBP-10-7, 71 NRC 391 (2010)

petitioner is required merely to provide a simple nexus between the contention and the referenced factual or legal support; LBP-09-21, 70 NRC 581 (2009); LBP-09-25, 70 NRC 867 (2009)

petitioner may amend contentions or file new contentions on issues arising under NEPA if there are data or conclusions in the NRC draft or final environmental impact statement, environmental assessment, or any supplements relating thereto, that differ significantly from the data or conclusions in the applicant's documents; LBP-10-1, 71 NRC 165 (2010)

petitioner may not challenge applicable statutory requirements as part of an administrative adjudication; CLI-09-14, 69 NRC 580 (2009); LBP-08-17, 68 NRC 431 (2008)

## SUBJECT INDEX

- petitioner may not demand an adjudicatory hearing to attack generic NRC requirements or regulations or to express generalized grievances about NRC policies; LBP-07-11, 66 NRC 41 (2007)
- petitioner may not simply incorporate massive documents by reference as the basis for a statement of his contentions; LBP-08-21, 68 NRC 554 (2008)
- petitioner may not simply wait for the Staff to identify missing information and then ground a new contention on a request for additional information; CLI-09-12, 69 NRC 535 (2009)
- petitioner must demonstrate that the issue raised in the contention is within the scope of the proceeding and material to the findings the NRC must make to support the action that is involved; CLI-08-23, 68 NRC 461 (2008); LBP-06-10, 63 NRC 314 (2006); LBP-07-10, 66 NRC 1 (2007); LBP-08-16, 68 NRC 361 (2008); LBP-08-17, 68 NRC 431 (2008); LBP-08-21, 68 NRC 554 (2008); LBP-08-26, 68 NRC 905 (2008); LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-21, 70 NRC 581 (2009); LBP-10-16, 72 NRC 361 (2010)
- petitioner must establish standing and proffer at least one admissible contention that meets the requirements of 10 C.F.R. 2.309(f)(1); LBP-10-16, 72 NRC 361 (2010)
- petitioner must file contentions based on the applicant's environmental report, but may amend those contentions or file new contentions if the NRC draft or final environmental impact statement, environmental assessment, or any supplements relating thereto differs significantly from the data or conclusions in the applicant's documents; CLI-06-9, 63 NRC 433 (2006)
- petitioner must include references to specific portions of the application (including the applicant's environmental report and safety report) that the petitioner disputes and the supporting reasons for each dispute, or, if the petitioner believes that the application fails to contain information on a relevant matter as required by law, the identification of each failure and the supporting reasons for the petitioner's belief; LBP-09-21, 70 NRC 581 (2009)
- petitioner must include sufficient information to show that a genuine dispute exists with the applicant/licensee on a material issue of fact; LBP-09-10, 70 NRC 51 (2009); LBP-09-21, 70 NRC 581 (2009); LBP-09-27, 70 NRC 992 (2009)
- petitioner must present a clear statement of the basis for the contention and submit supporting information and references to specific documents and sources that establish the validity of the contention; CLI-10-1, 71 NRC 1 (2010)
- petitioner must present sufficient information to show a genuine dispute reasonably indicating that a further inquiry is appropriate; LBP-08-6, 67 NRC 241 (2008); LBP-10-24, 72 NRC 720 (2010)
- petitioner must provide a brief explanation of the basis for the contention; LBP-09-21, 70 NRC 581 (2009); LBP-10-13, 71 NRC 673 (2010)
- petitioner must provide a concise statement of the alleged facts or expert opinions that support its position on the issue and on which petitioner intends to rely at hearing, together with references to the specific sources and documents on which petitioner intends to rely to support its position on the issue; LBP-08-16, 68 NRC 361 (2008); LBP-08-26, 68 NRC 905 (2008); LBP-09-10, 70 NRC 51 (2009); LBP-09-16, 70 NRC 227 (2009); LBP-09-21, 70 NRC 581 (2009); LBP-09-27, 70 NRC 992 (2009); LBP-10-16, 72 NRC 361 (2010)
- petitioner must provide a specific statement of the issue of law or fact to be raised or controverted, and a brief explanation of the basis for the contention; LBP-06-10, 63 NRC 314 (2006); LBP-09-21, 70 NRC 581 (2009)
- petitioner must provide documents or other factual information or expert opinion that set forth the necessary technical analysis to show why the proffered bases support its contention; LBP-06-10, 63 NRC 314 (2006)
- petitioner must read the pertinent portions of a license application, including the safety analysis report and the environmental report, state the applicant's position and the petitioner's opposing view, and explain why it disagrees with the applicant; LBP-06-10, 63 NRC 314 (2006); LBP-07-4, 65 NRC 281 (2007); LBP-08-6, 67 NRC 241 (2008)
- petitioner must show that a genuine dispute exists on a material issue of law or fact with regard to the license application in question, challenge and identify either specific portions of, or alleged omissions from, the application, and provide the supporting reasons for each dispute; LBP-10-6, 71 NRC 350 (2010)
- petitioner must show that he, she, or it would be adversely affected by the enforcement order as it exists, not that they are harmed by the failure of the Commission to impose a hypothetical order the petitioner

## SUBJECT INDEX

asserts would be an improvement; LBP-07-11, 66 NRC 41 (2007); LBP-07-16, 66 NRC 277 (2007)

petitioner must show that information missing from a license application is required by the Commission's regulations; LBP-09-18, 70 NRC 385 (2009)

petitioner must show that the information on which its new contention is based was not reasonably available to the public previously and that it filed its intervention petition promptly after learning of such new information; LBP-10-11, 71 NRC 609 (2010)

petitioner must show that the subject matter of a contention would impact the grant or denial of a pending license application; LBP-09-26, 70 NRC 939 (2009); LBP-10-6, 71 NRC 350 (2010)

petitioner must show why an alleged error or omission is of significance to the result of the proceeding; LBP-08-26, 68 NRC 905 (2008)

petitioner need not submit a sensitivity analysis in order to establish that a SAMA-related contention is material; LBP-10-15, 72 NRC 257 (2010)

petitioner raises a genuine dispute with the application with respect to the adequacy of information needed to characterize the site and offsite hydrogeology to ensure confinement of the extraction fluids; LBP-10-16, 72 NRC 361 (2010)

petitioner requesting a hearing on a confirmatory order must show that the request is within the scope of the proceeding by demonstrating that the petitioner will be adversely affected by the existing terms of the enforcement order; LBP-08-14, 68 NRC 279 (2008)

petitioner's argument regarding rejection of its contention satisfies the prejudicial procedural error standard for review; CLI-10-17, 72 NRC 1 (2010)

petitioner's argument that high-explosive munitions could fall onto depleted uranium, pulverizing and igniting the DU and generating aerosols that might travel through the air, providing an inhalation pathway for offsite exposure was contradicted by the Army's statement that it does not use high-impact explosives in the area where DU is present; CLI-10-20, 72 NRC 185 (2010)

petitioner's assertion that terrorist-act-originated SAMA analysis is required by Ninth Circuit law satisfies the requirements of 10 C.F.R. 2.309(f)(1)(iii) that the issue be within the scope of a license renewal proceeding; LBP-10-15, 72 NRC 257 (2010)

petitioner's assertions regarding the historical fire protection situation at the existing unit outside the scope of the combined license proceeding; LBP-08-21, 68 NRC 554 (2008)

petitioner's assumption that, because it cannot check all SAMA analysis details, the analysis is incomplete or incorrect is mere speculation and is insufficient to support the admissibility of its contention; LBP-08-13, 68 NRC 43 (2008)

petitioner's challenge to the one-fire assumption in the AP1000 design constitutes an impermissible challenge to Commission regulations; CLI-10-9, 71 NRC 245 (2010)

petitioner's dispute with the combined license application concerning completeness of the AP1000 Design Certification Document is referred to Staff for resolution during the rulemaking on the certification of the AP1000 design and any hearing on the merits is held in abeyance pending the outcome of the rulemaking; LBP-08-21, 68 NRC 554 (2008)

petitioner's failure to cite any document that, read as a whole, supports its theory that uranium supplies will be insufficient to support operation of a reactor unit during its licensed period renders it inadmissible; LBP-08-16, 68 NRC 361 (2008)

petitioner's inaccurate reading and presentation of applicant's spent fuel storage plan cannot serve as a litigable basis for a contention; LBP-09-27, 70 NRC 992 (2009)

petitioner's issue will be ruled inadmissible if petitioner has offered no tangible information, no experts, no substantive affidavits, but instead only 'bare assertions and speculation; LBP-09-15, 70 NRC 198 (2009); LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-10-15, 72 NRC 257 (2010)

petitioners are obliged to set forth their claims at the earliest possible moment; CLI-07-18, 65 NRC 399 (2007)

petitioners cannot raise new contentions for the first time on appeal to the Commission; CLI-06-24, 64 NRC 111 (2006)

petitioners cannot submit only generalized suspicions in hopes of substantiating them later; LBP-06-10, 63 NRC 314 (2006)

petitioners fail to explain how alleged impacts would arise from the proposed activities as opposed to past activities not in issue; LBP-10-11, 71 NRC 609 (2010)

## SUBJECT INDEX

petitioners have an ironclad obligation to search the public record for information supporting their contentions; CLI-09-7, 69 NRC 235 (2009); LBP-08-6, 67 NRC 241 (2008)

petitioners may not seek to enhance the measures outlined in an enforcement order; LBP-08-14, 68 NRC 279 (2008)

petitioners may not seek to skirt contention rules by initially filing unsupported contentions, and later recasting or modifying their contentions on appeal with new arguments never raised before the board; CLI-08-17, 68 NRC 231 (2008); CLI-09-5, 69 NRC 115 (2009)

petitioners must do more than rest on the mere existence of Staff requests for additional information as a basis for their contention; LBP-08-6, 67 NRC 241 (2008)

petitioners must offer specific contentions on material issues, supported by alleged facts or expert opinion; CLI-09-8, 69 NRC 317 (2009)

petitioners must provide a clear statement as to the basis for the contentions and the submission of supporting information and references to specific documents and sources that establish the validity of the contention; CLI-09-8, 69 NRC 317 (2009)

petitioners must provide factual support for their claim that an enforcement-related injury could be redressed by a favorable board ruling; CLI-10-3, 71 NRC 49 (2010)

petitioners must set forth their contentions with particularity; CLI-10-15, 71 NRC 479 (2010)

petitioners question the underlying analysis of fish kills in the environmental report as being outdated, but they fail to provide any information to show that the results of the study are no longer representative; LBP-09-16, 70 NRC 227 (2009)

petitioners seeking to introduce new contentions after the board has denied their initial petition to intervene need to address the reopening standards; LBP-10-21, 72 NRC 616 (2010)

petitioners waived their right to pursue the NEPA-terrorism issue in this adjudication by not filing the contention on the basis of the environmental report; CLI-07-10, 65 NRC 144 (2007)

petitioners who base their contentions on requests for additional information must provide analysis, discussion, or information of their own on the issues raised; LBP-09-16, 70 NRC 227 (2009)

petitioners who seek to introduce a new or amended contention based on allegedly new information that was previously unavailable must show that such information was not previously available and is materially different than information previously available and the amended or new contention has been submitted in a timely fashion based on the availability of the subsequent information; LBP-06-22, 64 NRC 229 (2006)

petitioners' allegation that applicant's environmental report fails to provide reasonably current and accurate information regarding the costs of nuclear power, costs of alternative energy sources, and financial risks posed by using nuclear power as an energy source is admissible; LBP-08-16, 68 NRC 361 (2008)

petitioners' allegation that NRC regulations are insufficient to protect the constitutional right of due process under the law by allowing citizens to be exposed to impermissible levels of radiation is inadmissible; LBP-08-16, 68 NRC 361 (2008)

petitioners' assertion that applicant's environmental report fails to include an analysis of the impacts of a governmental entity managing long-term storage of high-level waste onsite and cost quantifications of such management fails to create a genuine dispute; LBP-09-21, 70 NRC 581 (2009)

petitioners' assertion that no exposure levels are safe is an impermissible challenge to the exposure limits set forth in the NRC's regulations; LBP-09-16, 70 NRC 227 (2009)

petitioners' claim that a foreign-owned company would be more likely than a U.S.-owned company to export its product overseas falls outside the scope of a materials license amendment proceeding, where the applicant had not applied for a license to export recovered uranium; CLI-09-12, 69 NRC 535 (2009)

petitioners' claim that applicant must pursue the prepayment method for decommissioning conflicts with NRC guidance and rules and so is outside the permissible scope of the COL proceeding; LBP-09-21, 70 NRC 581 (2009)

petitioners' concerns regarding the applicant's commitments to relax conservatisms in its laboratory testing and groundwater release analysis are in regard to the revised analysis to be submitted in response to the Staff request for additional information and therefore are dismissed as outside the scope of the proceeding; LBP-09-16, 70 NRC 227 (2009)

petitioners' contention that NRC Staff has not consulted with an affected Indian tribe is premature if it is filed prior to the time for the Staff to act; CLI-09-9, 69 NRC 331 (2009)

## SUBJECT INDEX

petitioners' pleadings must contain more systematic support for contention admissibility than a passing reference to new information; LBP-07-14, 66 NRC 169 (2007)

pleading requirements are deliberately strict, and any contention that does not satisfy the requirements will be rejected; CLI-06-9, 63 NRC 433 (2006); CLI-06-24, 64 NRC 111 (2006); CLI-10-1, 71 NRC 1 (2010); LBP-06-22, 64 NRC 229 (2006)

pleading requirements calling for a recitation of facts or expert opinion supporting the issue raised are inapplicable to a contention of omission beyond identifying the legally required missing information; LBP-09-16, 70 NRC 227 (2009); LBP-10-16, 72 NRC 361 (2010)

pleading requirements for a hearing on a confirmatory order are addressed; LBP-08-14, 68 NRC 279 (2008)

pleading requirements for admissible contentions are described; LBP-07-10, 66 NRC 1 (2007); LBP-08-16, 68 NRC 361 (2008)

pleading requirements for contentions are strict by design; CLI-08-17, 68 NRC 231 (2008); LBP-08-14, 68 NRC 279 (2008)

portions of a contention that allege that the environmental report failed to adequately address the zone of environmental impact, impact on listed species, and appropriate mitigation are admissible; LBP-09-10, 70 NRC 51 (2009)

possibility of undetected existence of caves and sinkholes on the proposed reactor site is not a litigable issue in a COL proceeding; LBP-08-16, 68 NRC 361 (2008)

post-contention admission events, such as issuance of a Staff draft environmental impact statement, can render a previously admitted contention of omission subject to dismissal as moot; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)

potential for a terrorist attack upon a proposed nuclear facility is not a litigable issue; LBP-08-16, 68 NRC 361 (2008)

presentation of an alternative analysis is, without more, insufficient to support a contention alleging that the original analysis failed to meet applicable requirements; LBP-08-13, 68 NRC 43 (2008)

presentation of excerpts from combined license application without further explanation does not provide sufficient support for a contention; LBP-09-16, 70 NRC 227 (2009)

prior to 2004, in addition to meeting the substantive admissibility criteria found in 10 C.F.R. 2.714(b)(2), the issue statement was based on environmental impact statement or environmental assessment information that differed significantly from the data or conclusions in the applicant's environmental report; LBP-10-1, 71 NRC 165 (2010)

pro se petitioners are not held to those standards of clarity and precision to which a lawyer might reasonably be expected to adhere; LBP-08-11, 67 NRC 460 (2008)

properly formulated contentions must focus on the license application in question, challenging either specific portions of or alleged omissions from the application, including the safety analysis report and the environmental report, so as to establish that a genuine dispute exists with the applicant on a material issue of law or fact; LBP-07-10, 66 NRC 1 (2007); LBP-09-3, 69 NRC 139 (2009); LBP-09-8, 69 NRC 736 (2009); LBP-10-7, 71 NRC 391 (2010)

proponent of a motion to reopen must do more than simply raise a safety issue, but rather must show that the safety issue it raises is significant; LBP-10-19, 72 NRC 529 (2010)

providing any material or document as a basis for a contention, without setting forth an explanation of its significance, is inadequate to support the admission of the contention; LBP-06-27, 64 NRC 438 (2006); LBP-07-3, 65 NRC 237 (2007); LBP-09-26, 70 NRC 939 (2009); LBP-10-6, 71 NRC 350 (2010)

questions on the safety and environmental impacts of onsite low-level waste storage are largely site- and design-specific and appropriately decided in an individual licensing proceeding, provided that litigants proffer properly framed and supported contentions; LBP-09-10, 70 NRC 51 (2009); LBP-09-16, 70 NRC 227 (2009)

radiological monitoring is an operational program that is beyond the scope of license renewal; LBP-07-4, 65 NRC 281 (2007)

ratepayer impacts are outside the scope of a combined license proceeding because the state, not NRC, is charged with protecting ratepayers' interests; LBP-09-10, 70 NRC 51 (2009)

reasonably specific factual and legal allegations are required at the outset to ensure that matters admitted for hearing have at least some minimal foundation, are material to the proceeding, and provide notice to opposing parties of the issues they will need to defend against; CLI-10-11, 71 NRC 287 (2010)

## SUBJECT INDEX

regarding consideration of specific combination alternatives, the burden rests on petitioner to propose a particular alternative, and bare generalizations will not support an admissible contention; LBP-10-6, 71 NRC 350 (2010)

rejection or admission of a contention, where petitioner has been admitted as a party and has other contentions pending, neither constitutes serious and irreparable impact, nor affects the basic structure of the proceeding in a pervasive and unusual manner; CLI-10-16, 71 NRC 486 (2010)

releases from the nuclear fuel cycle in general, incidences of childhood cancers near nuclear power plants, and a request for the NRC to address radioactive releases from the burning of coal at fossil fuel plants are outside the scope of a combined license proceeding; LBP-09-16, 70 NRC 227 (2009)

replies may provide only legitimate amplifications of the original contentions or a logical/legal response to the answers of the Staff and applicant; LBP-09-17, 70 NRC 311 (2009)

reply pleadings are an improper place to attempt to introduce a new argument to establish a contention's admissibility; LBP-07-10, 66 NRC 1 (2007)

reports before a board are subject to scrutiny both as to those portions that support an intervenor's assertion and those that do not; LBP-09-21, 70 NRC 581 (2009)

request for waiver is required for contentions that challenge the Commission's regulations; LBP-08-21, 68 NRC 554 (2008)

requests for hearing or petitions for leave to intervene must set forth with particularity the contentions sought to be raised, addressing six pleading requirements; CLI-10-1, 71 NRC 1 (2010)

requirements are strict by design to ensure that hearings cover only genuine and pertinent issues of concern and that the issues are framed and supported concisely enough at the outset to ensure that the proceedings are effective and focused on real, concrete issues; LBP-08-24, 68 NRC 691 (2008)

requirements for filing both new and nontimely contentions are stringent; LBP-09-27, 70 NRC 992 (2009)

requiring a petitioner to allege facts under section 2.309(f)(1)(v) or to provide an affidavit that sets out the factual and/or technical bases under section 51.109(a)(2) in support of a legal contention as opposed to a factual contention is not necessary; LBP-10-17, 72 NRC 501 (2010)

revenue decoupling is a state regulatory matter that is outside the scope of, and not material to, the NRC licensing process; LBP-09-10, 70 NRC 51 (2009)

routine rulings are usually not occasions for the Commission to exercise its authority to step into ongoing licensing board proceedings and undertake interlocutory review; CLI-09-3, 69 NRC 68 (2009)

rules of practice require a concise statement of the alleged facts or expert opinions that support petitioner's position, but does not require the submission of an expert opinion or require that an expert opinion be submitted in the form of admissible evidence; LBP-06-7, 63 NRC 188 (2006)

rules on contention admissibility are strict by design; LBP-08-9, 67 NRC 421 (2008)

rulings may be deferred in the interest of the most economical use of board resources; LBP-07-8, 65 NRC 531 (2007)

safety issues that were reviewed for the initial license and that have been closely monitored by NRC inspection during the license term need not be reviewed again in the context of a license renewal application; LBP-08-13, 68 NRC 43 (2008)

SAMA contentions will be admitted in license renewal proceedings only if it looks genuinely plausible that inclusion of an additional factor or use of other assumptions or models may change the cost-benefit conclusions for the SAMA candidates evaluated; LBP-10-13, 71 NRC 673 (2010)

scope of a license renewal proceeding is limited to review of plant structures and components requiring an aging management review for the period of extended operation and to the plant's systems, structures, and components that are subject to an evaluation of time-limited aging analyses; LBP-10-21, 72 NRC 616 (2010)

scope of an adjudicatory proceeding is specified by the notice of hearing, and contentions that raise matters outside that defined scope must be rejected; LBP-09-18, 70 NRC 385 (2009)

scope of the proceeding is defined by the Commission in its initial hearing notice and order referring the proceeding to the licensing board; LBP-10-17, 72 NRC 501 (2010)

section 2.309(f)(1)(vi) is not a second hurdle of materiality that an intervenor must meet, but rather requires that intervenor identify the specific parts of the combined license application that it disputes and show that resolution of those disputes is material to the licensing decision; LBP-09-27, 70 NRC 992 (2009)

## SUBJECT INDEX

severe accident mitigation alternatives are a Category 2 issue that demands a site-specific analysis for license renewal; LBP-10-13, 71 NRC 673 (2010)

significant inaccuracies and omissions from the environmental report are proper subjects of contentions but details or nuances are not, nor are boards to flyspeck environmental documents; LBP-10-10, 71 NRC 529 (2010)

simply attaching material or documents as a basis for a contention, without setting forth an explanation of that information's significance, is inadequate to support the admission of the contention; LBP-07-10, 66 NRC 1 (2007); LBP-08-16, 68 NRC 361 (2008); LBP-08-17, 68 NRC 431 (2008); LBP-08-26, 68 NRC 905 (2008); LBP-09-3, 69 NRC 139 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-10-7, 71 NRC 391 (2010)

since a license amendment involves a facility with ongoing operations, a petitioner's challenge must show that the amendment will cause a distinct new harm or threat apart from the activities already licensed; LBP-06-22, 64 NRC 229 (2006)

site characterization and environmental impact statement approval process are discussed in the context of the scope of admissible issues in the high-level waste repository proceeding; LBP-09-6, 69 NRC 367 (2009)

site-specific claims relating to the safe ongoing operations of a nuclear reactor are not matters peculiar to plant aging or to the license extension period; CLI-07-8, 65 NRC 124 (2007)

six basic pleading standards must be satisfied whether contentions are filed at the outset of the proceeding, are filed in a timely fashion when material new information arises, or are untimely filings; LBP-06-14, 63 NRC 568 (2006)

six basic requirements for an admissible contention can be summarized as specificity, brief explanation, within scope, materiality, concise statement of alleged facts or expert opinion, and genuine dispute; LBP-10-15, 72 NRC 257 (2010)

someone living adjacent to the site for proposed construction of a federally licensed facility has standing to challenge the licensing agency's failure to prepare an environmental impact statement, even though he cannot establish with any certainty that the statement will cause the license to be withheld or altered, and even though the facility will not be completed for many years; LBP-10-24, 72 NRC 720 (2010)

speculation or bare assertions that a matter should be considered are not sufficient to allow admission of a contention; LBP-08-6, 67 NRC 241 (2008)

spent fuel pool fires are Category 1 issues and therefore are addressed generically in the generic environmental impact statement for license renewals; LBP-08-13, 68 NRC 43 (2008)

spent fuel storage issues are outside the scope of a license renewal proceeding; LBP-06-10, 63 NRC 314 (2006)

Staff's propositions at the contention admission stage regarding what would effectively cure an omission from a license renewal application are matters for a merits decision, not for a determination of whether a contention of omission is admissible; LBP-10-15, 72 NRC 257 (2010)

Staff's significant hazards consideration determination is final, subject only to the Commission's discretion, on its own initiative, to review the determination; LBP-08-18, 68 NRC 533 (2008)

standards do not require dispositive proof of the contention or its bases, but they do require a clear statement as to the bases for the contention and supporting information and references to documents and sources that establish the validity of the contention; LBP-10-6, 71 NRC 350 (2010)

standards for the admissibility of contentions originally came into being in 1989, when the Commission amended its rules to raise the threshold for the admission of contentions; LBP-09-17, 70 NRC 311 (2009)

statements of petitioner's views about what regulatory policy should be do not present litigable issues; LBP-07-10, 66 NRC 1 (2007)

stating that an allegation that some aspect of a license application is inadequate or unacceptable does not give rise to a genuine dispute unless it is supported by facts and a reasoned statement of why the application is unacceptable in some material respect; LBP-09-18, 70 NRC 385 (2009)

strict contention standards ensure that those admitted to NRC hearings bring actual knowledge of safety and environmental issues that bear on the licensing decision, and therefore can litigate issues meaningfully; CLI-08-17, 68 NRC 231 (2008)

## SUBJECT INDEX

strict pleading requirements under 10 C.F.R. 2.309(f)(1) must be satisfied; LBP-08-21, 68 NRC 554 (2008)

subject matter of a contention must impact the grant or denial of the pending license application; LBP-10-17, 72 NRC 501 (2010)

submission of a new contention within 30 days of the event giving rise to that contention is timely; LBP-10-17, 72 NRC 501 (2010)

submittal of the information by applicant is the basis for the finding of mootness of a contention, but the adequacy of the information submitted may be the subject of a new or amended contention; LBP-09-21, 70 NRC 581 (2009)

substantive admissibility standards for contentions and the case law interpreting the requirements are discussed; LBP-06-23, 64 NRC 257 (2006)

sufficiency of an application is not a matter committed solely to the NRC Staff's discretion and thus is within the scope of an adjudicatory proceeding; LBP-10-17, 72 NRC 501 (2010)

support for a contention as reflected in its stated bases and any accompanying affidavits or documentary information should be set forth with reasonable specificity; LBP-08-2, 67 NRC 54 (2008)

support for a contention generally is fulfilled when the sponsor of an otherwise acceptable contention provides a brief recitation of the factors underlying the contention or references to documents and texts that provide such reasons; LBP-09-6, 69 NRC 367 (2009)

support for a contention that consisted of brief quotes from the petitioners' correspondence with a physicist were found to be bare conclusory remarks with respect to which the petitioner offered no explanation or analysis; CLI-10-2, 71 NRC 27 (2010)

supporting information is to be provided at the time the contention is filed, not at a later date or on appeal; CLI-07-20, 65 NRC 499 (2007)

Table S-3 does not include health effects from the effluents described in the table, and that issue may be the subject of litigation in the individual licensing proceedings; LBP-09-16, 70 NRC 227 (2009)

technical perfection is not an essential element of contention pleading; LBP-06-10, 63 NRC 314 (2006); LBP-08-6, 67 NRC 241 (2008)

technical perfection is not an essential element of contention pleading, but the rules have nonetheless been held to bar contentions where petitioners have only what amounts to generalized suspicions, hoping to substantiate them later; LBP-09-17, 70 NRC 311 (2009)

terrorism contentions are directly related to security and are therefore, under NRC license renewal rules, unrelated to the detrimental effects of aging, and consequently are beyond the scope of, not material to, and inadmissible in, a license renewal proceeding; CLI-07-8, 65 NRC 124 (2007); CLI-07-9, 65 NRC 139 (2007)

terrorism issues are outside the scope of agency NEPA review and are inadmissible; LBP-06-4, 63 NRC 99 (2006)

terrorism-related issues are outside the scope of NRC adjudications; LBP-09-17, 70 NRC 311 (2009)

the adequacy of the applicant's license application, not the NRC Staff's safety evaluation, is the safety issue in any licensing proceeding, and contentions on the adequacy of the [content of the Safety Evaluation Report are not cognizable in a proceeding; LBP-06-27, 64 NRC 438 (2006)

the adjudicatory process is not the proper venue to hear any contention that merely addresses petitioner's own views on regulatory policy; LBP-08-9, 67 NRC 421 (2008); LBP-08-26, 68 NRC 905 (2008)

the admissibility decision sometimes turns on a determination about when, as a cumulative matter, separate pieces of the information puzzle were sufficiently in place to make the particular concerns reasonably apparent; LBP-09-10, 70 NRC 51 (2009)

the admissibility of proposed contentions may be determined after the Staff has issued the materials license amendment; CLI-07-20, 65 NRC 499 (2007)

the affidavit supporting a motion to reopen a license renewal proceeding must provide sufficient information to support a prima facie showing that a deficiency exists in the application and the deficiency presents a significant safety issue; LBP-08-12, 68 NRC 5 (2008)

the amended late-filed contentions rule, 10 C.F.R. 2.309(f)(2), is not intended to alter the standards in section 2.714(a) of its rules of practice as interpreted by NRC case law; LBP-10-17, 72 NRC 501 (2010)

## SUBJECT INDEX

- the appropriate path for any petitioner's challenges to proposed reactor design revisions is through participation in those rulemaking proceedings, not through a combined license proceeding; LBP-09-2, 69 NRC 87 (2009)
- the assertion that applicant might need to obtain a Part 72 license is irrelevant because a grant of the combined license could be accompanied by grant of a Part 72 general license if applicant complies with certain conditions; LBP-09-21, 70 NRC 581 (2009)
- the basis of the contention must relate directly to the proposed licensing action and not be based on allegations of improprieties of only historical interest; LBP-08-24, 68 NRC 691 (2008)
- the board erred in admitting a contention concerning the economic value of wetlands without requiring petitioners to demonstrate that the proposed licensing action or no-action alternative would have any effect on wetlands; CLI-09-9, 69 NRC 331 (2009)
- the brief explanation of the basis that is required by section 2.309(f)(1)(ii) helps define the scope of a contention, but it is the contention, not bases, whose admissibility must be determined; LBP-08-6, 67 NRC 241 (2008)
- the brief explanation of the logical underpinnings of a contention does not require a petitioner to provide an exhaustive list of possible bases, but simply to provide sufficient alleged factual or legal bases to support the contention; LBP-08-26, 68 NRC 905 (2008)
- the burden that the contention admissibility rules impose on petitioners to put forth a sufficient factual basis does not shift the ultimate burden of proof from the applicant to the petitioner; LBP-06-10, 63 NRC 314 (2006)
- the character or integrity of an applicant is a proper consideration in a licensing proceeding; LBP-09-6, 69 NRC 367 (2009)
- the Commission addresses a certified question by a licensing board on the admissibility of proposed contentions involving the Waste Confidence Rule; CLI-10-19, 72 NRC 98 (2010)
- the Commission declined to review licensing board referred rulings because the contentions were rejected by the board due to legal insufficiency; CLI-09-21, 70 NRC 927 (2009)
- the Commission defers to a board's rulings on standing and contention admissibility in the absence of clear error or abuse of discretion; CLI-06-24, 64 NRC 111 (2006); CLI-07-20, 65 NRC 499 (2007); CLI-09-7, 69 NRC 235 (2009); CLI-09-8, 69 NRC 317 (2009); CLI-09-9, 69 NRC 331 (2009); CLI-09-12, 69 NRC 535 (2009); CLI-09-14, 69 NRC 580 (2009); CLI-09-16, 70 NRC 33 (2009); CLI-09-20, 70 NRC 911 (2009); CLI-10-1, 71 NRC 1 (2010); CLI-10-2, 71 NRC 27 (2010); CLI-10-7, 71 NRC 133 (2010); CLI-10-21, 72 NRC 197 (2010)
- the Commission dispensed with all but the good cause factor for late-filed contentions; LBP-09-29, 70 NRC 1028 (2009)
- the Commission does not endorse deferring the consideration of proposed contentions because prompt consideration of contentions promotes the efficient and complete development of the record while conserving resources; CLI-07-20, 65 NRC 499 (2007)
- the Commission does not entertain on appeal arguments not raised before a licensing board; CLI-09-12, 69 NRC 535 (2009)
- the Commission does not grant waivers where the circumstances on which the waiver's proponent relies are common to a large class of applicants or facilities; CLI-09-3, 69 NRC 68 (2009)
- the Commission expects parties to bear their burden and to clearly identify the matters on which they intend to rely with reference to a specific point; LBP-08-24, 68 NRC 691 (2008)
- the Commission generally refuses to modify, rescind, or impose new requirements on reactor design certification information, except through rulemaking; LBP-10-21, 72 NRC 616 (2010)
- the Commission has previously rejected claims that NRC regulations require discharge permits of their licensees; LBP-09-25, 70 NRC 867 (2009)
- the Commission rather than petitioner holds the authority to define the scope of a proceeding; LBP-09-20, 70 NRC 565 (2009)
- the Commission reverses the board's admission of two contentions; CLI-09-3, 69 NRC 68 (2009)
- the Commission will not accept the filing of a vague, unparticularized contention, unsupported by alleged fact or expert opinion and documentary support; CLI-07-18, 65 NRC 399 (2007); LBP-07-5, 65 NRC 341 (2007)
- the Commission will not consider information that is introduced for the first time on appeal in an attempt to cure deficient contentions; CLI-10-1, 71 NRC 1 (2010)

## SUBJECT INDEX

the Commission will review referred rulings only if the referral raises significant and novel legal or policy issues, and resolution of the issues would materially advance the orderly disposition of the proceeding; CLI-09-3, 69 NRC 68 (2009)

the Commission's decision not to entertain a state's integrity and competence contentions in the high-level waste repository proceeding is consistent with its practice of extending comity to other governmental entities; CLI-09-14, 69 NRC 580 (2009)

the contention admissibility rule does not require a petitioner to prove its case at the contention stage; LBP-09-27, 70 NRC 992 (2009)

the contention admissibility threshold is less than is required at the summary disposition stage; LBP-07-16, 66 NRC 277 (2007); LBP-09-26, 70 NRC 939 (2009)

the contention requirements were never intended to be turned into a fortress to deny intervention; LBP-09-21, 70 NRC 581 (2009)

the contention rule is strict by design, having been toughened in 1989 because in prior years licensing boards had admitted and litigated numerous contentions that appeared to be based on little more than speculation; LBP-08-6, 67 NRC 241 (2008); LBP-09-10, 70 NRC 51 (2009); LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009)

the contention that applicant cannot pass a financial test because the parent company is already committed to providing funding for the decommissioning of another site is an impermissible challenge to NRC regulations; LBP-09-18, 70 NRC 385 (2009)

the current version of contention admissibility rules no longer incorporates provisions that permitted the supplementation of petitions and the filing of contentions after the original filing of petitions; LBP-07-4, 65 NRC 281 (2007)

the decision as to whether an alleged environmental impact or alternative is significant or reasonable is the merits of a NEPA contention and should not be adjudicated at the contention admissibility stage under the guise of materiality or scope; LBP-09-10, 70 NRC 51 (2009)

the degree of support necessary for an irradiator siting contention will depend on how obvious a threat the asserted risk is, given the irradiator facility's design and protective features; CLI-08-3, 67 NRC 151 (2008)

the design certification rulemaking and individual COL adjudicatory proceedings may proceed simultaneously, and issues raised in an adjudicatory proceeding that are appropriately addressed in the generic design certification rulemaking are to be referred to the rulemaking for resolution; LBP-10-17, 72 NRC 501 (2010)

the environmental baseline reflects the effects of all currently existing pollution sources in the relevant watershed, including contributions of all nuclear power plants, and petitioners failed to provide information indicating that this aggregate analysis was insufficient under NEPA; LBP-09-16, 70 NRC 227 (2009)

the environmental impacts related to storage of spent fuel under Part 72 have been generically evaluated under two previous rulemakings and the Commission's waste confidence proceedings, and thus need not be reassessed; LBP-09-21, 70 NRC 581 (2009)

the fact that a combined license application is subject to, or even expected to, change does not make it legally deficient, because NRC follows a dynamic licensing process; LBP-09-10, 70 NRC 51 (2009)

the fact that a given guidance document upon which an applicant relied was withdrawn does not suffice to support a contention; LBP-07-14, 66 NRC 169 (2007)

the fact that an issue was mentioned in agency documents is insufficient to show that it was resolved; LBP-08-15, 68 NRC 294 (2008)

the fact that disposal of dredged or fill material in wetlands is regulated by the Environmental Protection Agency and the U.S. Army Corps of Engineers does not render a contention inadmissible; LBP-09-10, 70 NRC 51 (2009)

the fact that NRC Staff consultation with interested Indian tribes had not yet taken place at the time a materials license amendment application was filed did not reflect a deficiency in the application and thus a contention alleging such a deficiency is inadmissible; CLI-09-12, 69 NRC 535 (2009)

the fact that there are a number of requests for additional information outstanding does not give rise to an evidentiary hearing; LBP-08-9, 67 NRC 421 (2008)

## SUBJECT INDEX

the February 2004 revision of the rules no longer incorporates provisions that permitted the amendment and supplementation of petitions and filing of contentions after the original filing of petitions; LBP-08-6, 67 NRC 241 (2008)

the filing in a reply brief of new arguments or new legal theories that opposing parties have not had the opportunity to address is not permitted; CLI-06-9, 63 NRC 433 (2006)

the financial test for a parent company guarantee is a material issue because the Staff must decide whether the test is satisfied in order to grant the combined license; LBP-09-15, 70 NRC 198 (2009)

the first step in assessing the admissibility of a new contention is to determine if it is timely under 10 C.F.R. 2.309(f)(2)(iii) or nontimely under section 2.309(c); LBP-09-10, 70 NRC 51 (2009)

the good cause factor favors petitioners who have filed their petition within 30 days of the availability of the document they contend contains new and significant information so as to form the basis for their contention; LBP-10-1, 71 NRC 165 (2010)

the issue that generally arises under 10 C.F.R. 2.309(f)(1)(i) is whether a contention is stated with sufficient specificity; LBP-09-17, 70 NRC 311 (2009)

the lateness of petitioner's filing is justifiable because a relevant document was not revealed in a search of NRC's public database because of deficiencies in tagging; LBP-08-6, 67 NRC 241 (2008)

the licensing board did not commit reversible error by admitting a contention based on low-level radioactive waste storage duration because the NRC Staff itself had issued a request for additional information on this very issue and thus this conflicted with Staff's argument that the issue is immaterial to the findings that must be made on the application; LBP-09-27, 70 NRC 992 (2009)

the mandatory disclosure requirements are not an opportunity to relitigate the admissibility of a contention; LBP-09-30, 70 NRC 1039 (2009)

the manner in which the Staff conducts its review is outside the scope of a proceeding; LBP-10-17, 72 NRC 501 (2010)

the materiality requirement for contention admission often dictates that any contention alleging deficiencies or errors in an application also indicate some significant link between the claimed deficiency and either the health and safety of the public or the environment; LBP-10-7, 71 NRC 391 (2010)

the mere posing of questions does not provide sufficient support to admit a contention; LBP-07-4, 65 NRC 281 (2007)

the mere potential for legal error in a contention admissibility decision is not a ground for interlocutory review; CLI-10-30, 72 NRC 564 (2010)

the National Environmental Policy Act is not an appropriate vehicle for exploring questions about the potential for a terrorist attack on a proposed nuclear facility; LBP-09-2, 69 NRC 87 (2009)

the need for design features to guard against design basis threats is outside the scope of a combined license proceeding because it is the subject of an ongoing rulemaking; LBP-09-2, 69 NRC 87 (2009)

the only relevant test for a claim that it is not practicable to adopt the DOE environmental impact statement is whether the supporting affidavit presents significant and substantial new information or new considerations sufficient to render such EIS inadequate; LBP-09-6, 69 NRC 367 (2009)

the organization or format of an application is not germane to license issuance because the objection to the application's organization is not an objection to the licensing action at issue in the proceeding; LBP-10-16, 72 NRC 361 (2010)

the plausible-chain-of-causation standard requires not that the potential harm to petitioner flow directly from the proposed action, but that the petitioner show that the chain of causation is plausible; CLI-09-12, 69 NRC 535 (2009)

the presiding officer in the high-level waste proceeding shall resolve disputes concerning adoption of the DOE environmental impact statement by using, to the extent possible, the criteria and procedures that are followed in ruling on motions to reopen; LBP-09-6, 69 NRC 367 (2009)

the presiding officer should treat as a cognizable "new consideration" an attack on the Yucca Mountain environmental impact statements based on significant and substantial information that, if true, would render the statements inadequate; CLI-08-25, 68 NRC 497 (2008)

the proper purpose of a reply is to discuss alleged deficiencies in a petition, not to try to fix them; LBP-08-17, 68 NRC 431 (2008)

the proper scope of an irradiation licensing proceeding and whether it requires or otherwise encompasses analyses of endemic site-related risks are questioned; CLI-07-26, 66 NRC 109 (2007)

## SUBJECT INDEX

the public will have a new opportunity to file environmental contentions when the NRC Staff issues the environmental impact statement or environmental analysis; LBP-09-10, 70 NRC 51 (2009); LBP-09-25, 70 NRC 867 (2009)

the purpose of an appeal is to point out errors made in the board's decision, not to attempt to cure deficient contentions by presenting arguments and evidence never provided to the board; CLI-07-20, 65 NRC 499 (2007)

the purpose of contention pleading requirements is to focus litigation on concrete issues and result in a clearer and more focused record for decision; LBP-08-14, 68 NRC 279 (2008); LBP-09-26, 70 NRC 939 (2009); LBP-10-15, 72 NRC 257 (2010); LBP-10-16, 72 NRC 361 (2010)

the quality of the evidentiary support at the contention filing stage need not be of the quality necessary to withstand a summary disposition motion; CLI-08-3, 67 NRC 151 (2008)

the question as to whether an NPDES permit that will expire before the proposed 20-year NRC license renewal would even take effect raises an admissible and material issue of law and fact; LBP-06-20, 64 NRC 131 (2006)

the questions of the safety and environmental impacts of onsite low-level waste storage are, in the Commission's view, largely site- and design-specific, and appropriately decided in an individual licensing proceeding, provided that litigants proffer properly framed and supported contentions; CLI-09-3, 69 NRC 68 (2009)

the reach of a contention necessarily hinges upon its terms coupled with its stated bases; CLI-10-11, 71 NRC 287 (2010)

the requirement of 10 C.F.R. 2.309(f)(1)(ii) that the petition include a brief explanation of the basis for the contention requires an explanation of the rationale or theory of the contention; LBP-09-10, 70 NRC 51 (2009)

the requirement of factual support is not intended to prevent intervention when material and concrete issues exist; LBP-08-27, 68 NRC 951 (2008)

the requirement of materiality often dictates that any contention alleging deficiencies or errors in an application also indicate some significant link between the claimed deficiency and either the health and safety of the public or the environment; LBP-09-3, 69 NRC 139 (2009)

the requirement that contentions be supported by alleged facts or expert opinion generally is fulfilled when the sponsor of an otherwise acceptable contention provides a brief recitation of the factors underlying the contention or references to documents and text that provide such reasons; LBP-10-14, 72 NRC 101 (2010)

the requirement that the issue raised in a contention must be within the scope of the proceeding is of particular relevance given the two-stage jurisdictional procedure established prior to the first mixed oxide fuel fabrication facility proceeding; LBP-07-14, 66 NRC 169 (2007)

the SAMDA analysis is part of the design certification application and thus intervenor's contention constitutes an impermissible challenge to a future rulemaking; LBP-10-10, 71 NRC 529 (2010)

the scope of a contention is limited to issues of law or fact pleaded with particularity in the intervention petition, including its stated bases, unless the contention is satisfactorily amended in accordance with NRC rules; CLI-10-5, 71 NRC 90 (2010); CLI-10-15, 71 NRC 479 (2010)

the scope of a license renewal proceeding is addressed, with regard to safety-related issues, in 10 C.F.R. Part 54, and, with regard to environmental issues, in 10 C.F.R. Part 51; LBP-07-11, 66 NRC 41 (2007)

the scope of a license renewal proceeding is limited to a review of the plant structures and components that will require an aging management review for the period of extended operation and the plant's systems, structures, and components that are subject to an evaluation of time-limited aging analyses; LBP-06-22, 64 NRC 229 (2006)

the scope of a proceeding is defined by the Commission in its initial hearing notice and order referring the proceeding to the licensing board; LBP-06-12, 63 NRC 403 (2006); LBP-07-16, 66 NRC 277 (2007); LBP-08-9, 67 NRC 421 (2008); LBP-08-26, 68 NRC 905 (2008); LBP-09-25, 70 NRC 867 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-10-9, 71 NRC 493 (2010)

the scope of an enforcement adjudication is limited to the question of whether the order should be sustained; CLI-10-3, 71 NRC 49 (2010); LBP-07-16, 66 NRC 277 (2007)

the scope of license renewal proceedings is limited to the potential detrimental effects of aging that are not routinely addressed by ongoing regulatory oversight programs; LBP-07-17, 66 NRC 327 (2007)

the six criteria that govern the admissibility of contentions are discussed; LBP-09-21, 70 NRC 581 (2009)

## SUBJECT INDEX

the six-factor test in 10 C.F.R. 2.309(f)(1) applies regardless of whether a contention is submitted at the beginning of a proceeding, as a timely new contention under section 2.309(f)(2), or as a nontimely new contention under section 2.309(c); LBP-07-15, 66 NRC 261 (2007)

the specificity requirement for contentions puts the other parties on notice as to what issues they will have to defend against or oppose; LBP-08-2, 67 NRC 54 (2008)

the standing requirement for showing injury in fact has always been significantly less than for demonstrating an acceptable contention; LBP-08-6, 67 NRC 241 (2008)

the strict contention rule serves multiple interests; LBP-08-6, 67 NRC 241 (2008); LBP-09-17, 70 NRC 311 (2009)

the strict contention rule serves to focus the hearing process on real disputes susceptible of resolution in an adjudication, to put other parties on notice of petitioners' specific grievances, to ensure that full adjudicatory hearings are triggered only by those able to proffer at least some minimal factual and legal foundation in support of their contentions; LBP-06-10, 63 NRC 314 (2006); LBP-06-23, 64 NRC 257 (2006)

the subject matter of a contention must impact the grant or denial of a pending license application; CLI-09-15, 70 NRC 1 (2009); LBP-07-3, 65 NRC 237 (2007); LBP-07-10, 66 NRC 1 (2007); LBP-08-26, 68 NRC 905 (2008); LBP-09-27, 70 NRC 992 (2009)

the underlying purpose of NEPA as an information-gathering and disclosure mechanism requires a different view of the concept of "materiality" under 10 C.F.R. 2.309(f)(1)(iv) than might be applied to a contention seeking to establish a health and safety issue; LBP-08-16, 68 NRC 361 (2008)

the universe of potential contentions in a combined license proceeding includes site-specific contentions that do not implicate issues appropriately considered in a design certification rulemaking; CLI-09-8, 69 NRC 317 (2009)

the Waste Confidence Rule is applicable to all new reactor proceedings; LBP-08-16, 68 NRC 361 (2008)

the Waste Confidence Rule is applicable to all new reactor proceedings and contentions challenging the rule or seeking its reconsideration are inadmissible; LBP-09-18, 70 NRC 385 (2009)

there is a difference between contentions that allege that a license application suffers from an improper omission and contentions that raise a specific substantive challenge to how particular information or issues have been discussed in a license application; LBP-08-12, 68 NRC 5 (2008)

there is a difference between what NRC must look at in order to evaluate cumulative impacts under the National Environmental Policy Act and the scope of a particular cumulative impacts contention, which may be a subset of the total array of cumulative impacts required to be examined; CLI-10-5, 71 NRC 90 (2010)

there is no need for a review of emergency planning issues in the context of license renewal; LBP-08-13, 68 NRC 43 (2008)

there is no NEPA requirement that NRC consider the environmental consequences of hypothetical terrorist attacks on NRC-licensed facilities; CLI-07-8, 65 NRC 124 (2007); CLI-07-10, 65 NRC 144 (2007)

there may be mistakes in the draft environmental impact statement, but in an NRC adjudication, it is intervenors' burden to show their significance and materiality; LBP-07-3, 65 NRC 237 (2007)

there must be some link between the deficiency claimed in a contention and the agency's ultimate determination regarding whether the license applicant will adequately protect the health and safety of the public and the environment; LBP-08-26, 68 NRC 905 (2008); LBP-09-27, 70 NRC 992 (2009)

threat of terrorist attack at spent fuel pools has been evaluated generically by NRC and special circumstances for rule waiver have not been shown; LBP-10-15, 72 NRC 257 (2010)

three regulations govern the admissibility of contentions added after an adjudicatory hearing has commenced; LBP-06-14, 63 NRC 568 (2006)

threshold admissibility requirements for contentions should not be turned into a fortress to deny intervention; CLI-07-18, 65 NRC 399 (2007)

threshold contention standards are imposed to avoid admission of contentions based on little more than speculation and intervenors who have negligible knowledge of nuclear power issues; CLI-08-17, 68 NRC 231 (2008)

threshold pleading standards require petitioners to review application materials and set forth their contentions with particularity; CLI-10-11, 71 NRC 287 (2010)

## SUBJECT INDEX

timeliness of a motion to reopen in which a new contention is proffered depends primarily on an assessment as to when the proponent of the motion first knew, or should have known, enough information to raise the issues presented in the new contention; LBP-10-19, 72 NRC 529 (2010)

timeliness of a new or amended contention based on material new information is based on the timing of the availability of the information on which the contention is based, not the timing of the NRC Staff NEPA document; LBP-10-24, 72 NRC 720 (2010)

timely new non-NEPA contentions are subject to a three-factor test; LBP-07-15, 66 NRC 261 (2007)

to be admissible, a contention must assert an issue of law or fact that is material to the findings NRC must make to support the action that is involved in the proceeding; LBP-09-26, 70 NRC 939 (2009); LBP-10-6, 71 NRC 350 (2010); LBP-10-9, 71 NRC 493 (2010)

to be admissible, a contention must satisfy, without exception, each of the criteria set out in 10 C.F.R. 2.309(f)(1)(i)-(vi); LBP-10-2, 71 NRC 190 (2010); LBP-10-6, 71 NRC 350 (2010)

to be admissible, a contention must show that some significant link exists between the claimed deficiency and either the health and safety of the public or the environment; LBP-10-6, 71 NRC 350 (2010)

to be admitted in a proceeding, a new contention must meet the new or amended contention requirements as well as the general contention admissibility requirements; LBP-09-9, 70 NRC 41 (2009)

to challenge a regulation, petitioner must submit a supporting affidavit setting forth with particularity the special circumstances that justify the waiver or exception requested; LBP-09-18, 70 NRC 385 (2009)

to challenge a rule or regulation in the adjudicatory context, petitioner must submit a request for waiver of the rule under 10 C.F.R. 2.335; LBP-07-11, 66 NRC 41 (2007)

to force intervenors to file contentions before the results of an ongoing NRC investigation are announced to the public would effectively force intervenors to speculate about the results of such investigations and the conclusions the Staff might reach; LBP-10-9, 71 NRC 493 (2010)

to implicate environmental justice scrutiny, support must be presented regarding the alleged existence of adverse impacts or harm on the physical or human environment, and a supported case must be made that these purported adverse impacts could disproportionately affect poor or minority communities in the vicinity of the facility at issue; LBP-07-3, 65 NRC 237 (2007)

to intervene in an NRC proceeding, a petitioner must, in addition to demonstrating standing, submit at least one contention meeting specific pleading requirements; LBP-07-4, 65 NRC 281 (2007)

to justify reopening the record to admit a new contention, the moving papers must be strong enough, in the light of any opposing filings, to avoid summary disposition, and the new information must be significant and plausible enough to require reasonable minds to inquire further; LBP-10-21, 72 NRC 616 (2010)

to qualify as an environmental justice contention, the contention must show that the affected local population qualifies as a minority or low-income population; LBP-09-18, 70 NRC 385 (2009)

to raise a timely contention, a party is not expected to piece together disparate shreds of information that, standing alone, have little apparent significance; LBP-10-9, 71 NRC 493 (2010)

to raise an admissible contention with respect to a Staff finding of no significant impact, petitioner need not demonstrate that there will be a significant environmental impact as a consequence of the proposed action, but it must allege facts that, if true, show that the proposed project may significantly degrade some human environmental factor; LBP-06-27, 64 NRC 438 (2006)

to reopen a closed record to introduce a new issue, movant has the burden of showing that the new information will likely trigger a different result; LBP-08-12, 68 NRC 5 (2008)

to require petitioners to rerun a model themselves, in order to demonstrate the individual or collective effects of the defects they allege, would improperly require boards to adjudicate the merits of contentions before admitting them; LBP-09-6, 69 NRC 367 (2009)

to satisfy the basis requirement for a contention of omission, petitioner must briefly and adequately explain why it believes that the application omits information necessary to satisfy the governing NRC regulations; LBP-08-15, 68 NRC 294 (2008)

to support a contention challenging a Commission rule, petitioner must request, and demonstrate any supporting reasons for, a waiver of the rule; CLI-10-9, 71 NRC 245 (2010)

to the degree that the general precept that a rule, including a design certification, cannot be challenged in an adjudication might be seen as placing such matters outside the scope of the proceeding; LBP-10-21, 72 NRC 616 (2010)

## SUBJECT INDEX

to the extent a new contention will cause delay, it is the price for affording the public the opportunity to litigate questions arising from an applicant's failure to comply with quality assurance requirements; LBP-10-9, 71 NRC 493 (2010)

to the extent petitioner challenges the SAMDA analysis, it is an impermissible challenge to the AP1000 certified design in 10 C.F.R. Part 52, Appendix D; CLI-10-9, 71 NRC 245 (2010)

to the extent that licensee's response focuses on the merits of petitioner's contention at the admissibility stage, and not on whether it is admissible, the response is beyond consideration; LBP-06-6, 63 NRC 167 (2006)

to the extent that petitioner's request for release of information seeks to enhance the enforcement measures already outlined by the Staff in the confirmatory order, this is also outside the scope of an enforcement proceeding; LBP-07-16, 66 NRC 277 (2007)

to the extent that petitioners argue that the provisions of 10 C.F.R. 50.54(hh) should be applied to dry cask storage, they may file a rulemaking petition with the Commission; LBP-09-17, 70 NRC 311 (2009)

under Commission precedent on contentions of omission, once information asserted to have been omitted is supplied, the original contention is moot, and intervenors must timely file a new or amended contention in order to raise specific challenges regarding the new information; LBP-10-5, 71 NRC 329 (2010)

under longstanding NRC policy, licensing boards should not accept in individual license proceedings contentions that are or are about to become the subject of general rulemaking by the Commission; CLI-10-19, 72 NRC 98 (2010)

under pre-2004 rules, the fact that a petition or new/amended contention was filed after the hearing opportunity notice deadline because the document or other item relied upon as the submission trigger was not available was considered good cause for the late filing; LBP-10-1, 71 NRC 165 (2010)

unless a deadline has been specified in the scheduling order for the proceeding, the determination of timeliness is subject to a reasonableness standard that depends on the facts and circumstances of each situation; LBP-10-24, 72 NRC 720 (2010)

unlike federal court practice, the Commission does not accept mere notice pleading in support of an admissible contention; LBP-08-24, 68 NRC 691 (2008)

waiver of a rule can be granted only in unusual and compelling circumstances; LBP-08-17, 68 NRC 431 (2008)

water use issues that are under the jurisdiction of another agency, and which are not affected by any NRC regulation, are outside the scope of an NRC proceeding; CLI-07-25, 66 NRC 101 (2007)

were the Commission to permit litigants to successfully invoke interlocutory review based merely on an assertion that the licensing board erred in admitting or excluding a contention, then the Commission would be opening the floodgates to a potential deluge of interlocutory appeals from any number of participants who lose admissibility rulings; CLI-09-6, 69 NRC 128 (2009)

when a Commission regulation permits the use of a particular analysis, a contention asserting that a different analysis or technique should be utilized is inadmissible because it indirectly attacks the Commission's regulations; LBP-09-16, 70 NRC 227 (2009)

when a contention alleges the omission of particular information or an issue from an application, and the information is later supplied by the applicant or considered by the NRC Staff in an environmental impact statement, the contention is moot; LBP-07-2, 65 NRC 153 (2007); LBP-08-6, 67 NRC 241 (2008)

when a contention is based on a factual underpinning in a document that has been essentially repudiated by the source of that document, the contention may be dismissed unless the intervenor offers another independent source; LBP-10-9, 71 NRC 493 (2010)

when a contention of omission has been rendered moot, and the intervenor wishes to raise specific challenges regarding the new information, it may timely file a new contention that addresses the admissibility factors of 10 C.F.R. 2.309(f)(1); LBP-06-16, 63 NRC 737 (2006)

when a new contention is filed challenging new data or conclusions in NRC's environmental documents, the timeliness of the new contention is based on whether it was filed promptly after the NRC's NEPA document became publicly available, not whether it was filed promptly after the information on which the intervenor bases its challenge became publicly available; LBP-10-24, 72 NRC 720 (2010)

## SUBJECT INDEX

- when an issue is no longer live, such that a party no longer has a legal interest in the issue, then it is moot; LBP-10-10, 71 NRC 529 (2010)
- when character or integrity issues are raised, they are expected to be directly germane to the challenged licensing action; CLI-10-9, 71 NRC 245 (2010)
- when critical information has been submitted to the NRC under a claim of confidentiality and was not available to petitioners when framing their issues, it is appropriate to defer ruling on the admissibility of an issue until the petitioner has had an opportunity to review this information and submit a properly documented issue; CLI-07-18, 65 NRC 399 (2007)
- when denial of a license would alleviate a petitioner's asserted potential injury, any admissible contention with such a result can be prosecuted by a petitioner, regardless of whether that contention is directly related to that petitioner's articulated injury; LBP-09-16, 70 NRC 227 (2009)
- when DOE is before the Commission, a heightened standard applies for the admissibility of integrity contentions beyond what is imposed by 10 C.F.R. 2.309(f)(1); LBP-09-6, 69 NRC 367 (2009)
- when environmental issues are dealt with in a separate proceeding, environmental contentions are beyond the scope of the safety proceeding unless they meet requirements beyond the ordinary contention admissibility tests; LBP-07-14, 66 NRC 169 (2007)
- when information becomes available piecemeal over time, and the foundation for a new contention does not become reasonably apparent until the last piece of information becomes available and falls into place, the test for good cause for late filing may be met; LBP-09-10, 70 NRC 51 (2009)
- when new contentions are based on breaking developments or information, they are to be treated as new or amended, not as nontimely; LBP-07-14, 66 NRC 169 (2007)
- when petitioner has filed an expert declaration with its petition, indicating that it can assist, through expert opinion, in the development of a sound record, this weighs in favor of admission; LBP-10-1, 71 NRC 165 (2010)
- when the draft or final environmental impact statement for a combined license application has not been issued so as to provide petitioner with a basis for framing its contention, the licensing board must look to the three other factors specified in 10 C.F.R. 2.309(f)(2) in assessing the admissibility of a new NEPA-related issue statement; LBP-10-1, 71 NRC 165 (2010)
- where a contention alleges the omission of particular information or an issue from an application, and the information is later supplied by the applicant or considered by the Staff in a draft EIS, the contention is moot; LBP-09-27, 70 NRC 992 (2009); LBP-10-10, 71 NRC 529 (2010)
- where a contention challenges applicant's compliance with the Commission's rules implementing the National Environmental Policy Act, materiality relates not only to the Commission's determination regarding denial, issuance, or conditioning of the requested combined license, but also to the Commission's fulfillment of its obligations under NEPA; LBP-10-6, 71 NRC 350 (2010)
- where a document relevant to the licensing proceeding was available on the agency public document management system, but not indexed by license number, the board did not act unreasonably in finding that late-filing factors weighed in favor of the party seeking to introduce the document as late support for an otherwise timely contention; CLI-09-12, 69 NRC 535 (2009)
- where a motion to reopen a proceeding to introduce a new contention founders on several of the initial criteria, the board found it unnecessary to prolong the ruling by analyzing all of the other factors; LBP-10-19, 72 NRC 529 (2010)
- where any issue arises over the proper scope of a contention, NRC opinions have long referred back to the bases set forth in support of the contention; CLI-10-11, 71 NRC 287 (2010)
- where new and material information is revealed in a piecemeal fashion, and where the foundation for a contention is not reasonably available until the later pieces fall into place, the admissibility decision turns on a determination about when, as a cumulative matter, the separate pieces of the information puzzle were sufficiently in place to make the particular concerns reasonably apparent; LBP-06-14, 63 NRC 568 (2006)
- where petitioner has not shown a reasonably close causal relationship between an aircraft attack and the relicensing proceeding at issue, such an attack does not warrant NEPA evaluation; CLI-10-9, 71 NRC 245 (2010)
- where petitioner was admitted to the case as a party at the time it filed an amended contention, consideration of the contention's admissibility is governed by the provisions of this section as well as the general contention admissibility requirements of section 2.309(f)(1); CLI-10-18, 72 NRC 56 (2010)

## SUBJECT INDEX

- whether applicant has a valid NPDES permit is outside the scope of a power uprate proceeding; LBP-08-9, 67 NRC 421 (2008)
  - whether applicant might someday require a permit under 10 C.F.R. Part 61 for a disposal facility is too speculative and therefore not material to the findings the NRC must make to support the action that is involved; LBP-08-16, 68 NRC 361 (2008)
  - whether applicant will improve the general welfare, increase the standard of living, or strengthen free competition in private enterprise is not a litigable issue in a COL proceeding; LBP-08-16, 68 NRC 361 (2008)
  - whether excessive safety design could lead to licensing uncertainty, unnecessary costs, or delays are not issues material to the high-level waste repository construction authorization proceeding; CLI-09-14, 69 NRC 580 (2009)
  - whether good cause exists to excuse the late-filing of a contention is the most important factor; CLI-08-8, 67 NRC 193 (2008); LBP-06-14, 63 NRC 568 (2006)
  - whether other permits may be required from other agencies is outside the scope of NRC proceedings, and those concerns are properly raised before those respective permitting authorities; LBP-09-21, 70 NRC 581 (2009)
  - whether the consultation process conducted by applicant with a Native American tribe complies with relevant requirements of law is an admissible issue; LBP-08-6, 67 NRC 241 (2008)
  - with limited exceptions, no rule or regulation of the Commission is subject to attack in any adjudicatory proceeding; LBP-07-16, 66 NRC 277 (2007); LBP-09-26, 70 NRC 939 (2009)
  - with respect to 10 C.F.R. 2.309(c)(1)(vi), the presence of another party admitted to the proceeding, particularly when that party previously raised the issue that is the subject of the new contention, weighs against a petitioner; LBP-10-1, 71 NRC 165 (2010)
  - with respect to orders modifying a license, petitioner must always request a remedy that falls within the scope of the proceeding, as articulated in the notice of hearing; LBP-09-20, 70 NRC 565 (2009)
  - would-be intervenors must file contentions at the outset of the proceeding, on the basis of the applicant's environmental report; CLI-07-9, 65 NRC 139 (2007)
- CONTENTIONS, LATE-FILED**
- a change in the controlling law in a different Circuit does not constitute previously unavailable information to excuse late filing; CLI-07-9, 65 NRC 139 (2007); CLI-07-10, 65 NRC 144 (2007)
  - a claim not raised in the hearing petition, but added as a new claim in petitioners' reply brief is considered impermissibly late; CLI-08-17, 68 NRC 231 (2008)
  - a contention is timely to the extent it challenges the adequacy of the new low-level radioactive waste storage plan, but untimely as to those aspects of the contention that merely reargue issues already decided by the board, without identifying any new information relevant to those issues; LBP-09-27, 70 NRC 992 (2009)
  - a late-filed contention can be admitted only when the information on which the amended or new contention is based was previously unavailable; CLI-07-10, 65 NRC 144 (2007)
  - a late-filed document that supports or provides a basis for a proposed contention should be considered using the late-filing factors of 10 C.F.R. 2.309(c) and 2.309(f)(2); CLI-09-12, 69 NRC 535 (2009)
  - a late-filed environmental contention may be admitted only where petitioner relies upon newly available, significant information, meets the nontimely filing requirements, or successfully argues for supplementing the EIS; LBP-08-11, 67 NRC 460 (2008)
  - a matter raised for the first time in a prehearing conference would only be admissible if the petitioner could satisfy the test for admitting late-filed contentions; CLI-07-25, 66 NRC 101 (2007)
  - a motion and proposed contention filed later than 30 days after the date when the new and material information on which it is based first becomes available shall be deemed untimely; LBP-09-22, 70 NRC 640 (2009)
  - a motion and proposed new contention may address the selection of the appropriate hearing procedure for the proposed new contention; LBP-09-22, 70 NRC 640 (2009)
  - a motion for leave to file a new contention, accompanied by the proposed contention, shall be deemed timely if filed within 30 days of the date when the new and material information on which it is based first became available; LBP-09-29, 70 NRC 1028 (2009)

## SUBJECT INDEX

- a new contention filed after the 60-day notice period has expired and based on information well known to petitioner for approximately 5 months prior to its filing is not timely; LBP-06-14, 63 NRC 568 (2006)
- a new contention is usually considered timely if filed within 30 days of publication of the draft environmental impact statement; CLI-09-9, 69 NRC 331 (2009); LBP-10-16, 72 NRC 361 (2010)
- a new contention may be filed after the initial docketing with leave of the presiding officer upon a showing that the information upon which it is based was not previously available, is materially different than information previously available, and has been submitted in a timely fashion based on the availability of the subsequent information; LBP-09-26, 70 NRC 939 (2009); LBP-09-27, 70 NRC 992 (2009); LBP-09-29, 70 NRC 1028 (2009); LBP-10-9, 71 NRC 493 (2010); LBP-10-17, 72 NRC 501 (2010)
- a new issue is raised only when the argument itself (as distinct from its chances of success) was not apparent at the time of the application; CLI-09-7, 69 NRC 235 (2009)
- a newly proffered contention submitted after the close of the record must meet timeliness standards as well as the requirements of 10 C.F.R. 2.309(c); LBP-08-12, 68 NRC 5 (2008)
- a nonparty seeking late intervention after the record has closed must address both the standard for late intervention and the standard for reopening a closed record; CLI-09-5, 69 NRC 115 (2009)
- a nontimely petition or contention will not be entertained in the high-level waste proceeding unless the Commission, an Atomic Safety and Licensing Board, or a presiding officer designated to rule on the petition determines that the late petition or contention meets the late-filing requirements; CLI-08-25, 68 NRC 497 (2008)
- a party cannot satisfy the "not previously available" standard of 10 C.F.R. 2.309(f)(2)(i) by showing that, as a subjective matter, he or she only recently became aware of, or realized the significance of, public information that was previously available to all; LBP-09-10, 70 NRC 51 (2009)
- a petitioner who without reason fails to argue that a nontimely contention satisfies the eight-factor balancing test in 10 C.F.R. 2.309(c) may be deemed as having waived that argument; LBP-06-22, 64 NRC 229 (2006)
- a reply cannot expand the scope of the arguments set forth in the original pleading; CLI-06-17, 63 NRC 727 (2006)
- a tribe is free to file a contention later on in the proceeding if, after Staff releases its environmental documents, the tribe believes that the Staff has failed to satisfy its obligations under NEPA and the National Historic Preservation Act; LBP-10-16, 72 NRC 361 (2010)
- absent good cause, a compelling showing must be made on the other section 2.309(c) factors if a nontimely petition is to be granted or a nontimely contention is to be admitted; LBP-09-26, 70 NRC 939 (2009); LBP-10-1, 71 NRC 165 (2010)
- after the initial filing, permission of the board must be sought to file new or amended contentions; LBP-07-14, 66 NRC 169 (2007)
- although a motion to reopen must be timely, an exceptionally grave issue may be considered even if the motion is not timely; CLI-09-5, 69 NRC 115 (2009); LBP-10-19, 72 NRC 529 (2010); LBP-10-21, 72 NRC 616 (2010)
- although admitting the new contention would broaden the issues in dispute, in the early stage of the proceeding this does not weigh heavily against a petitioner; LBP-10-1, 71 NRC 165 (2010)
- although an intervenor may have fewer resources and less ability than other participants, all share the same burden of uncovering relevant information that is publicly available; LBP-08-12, 68 NRC 5 (2008)
- although petitioner could participate in another federal agency's comment process relating to a proposed environmental assessment that is the focus of a new contention and thus does have some alternative means for protecting its interests, for the purpose of 10 C.F.R. 2.309(c)(1)(v), that process is not analogous to participation in an NRC adjudicatory proceeding and therefore does not weigh heavily against petitioner's intervention in the NRC proceeding; LBP-10-1, 71 NRC 165 (2010)
- amendment of a combined license application to comply with an amended aircraft impacts rule during the pendency of the COL application could form the basis for a late-filed contention; CLI-10-1, 71 NRC 1 (2010)
- an amended or new contention must be submitted in a timely fashion based on the availability of the subsequent information; LBP-09-27, 70 NRC 992 (2009)

## SUBJECT INDEX

an environmental contention that is not based on new information can only be admitted upon a favorable balancing of the factors in 10 C.F.R. 2.309(c); LBP-06-20, 64 NRC 131 (2006)

any new contentions filed by petitioners, whose original petition was timely and who have demonstrated their standing, that are attributable to the applicant's construction activity or change of plans or design, are governed by the basic provisions of 10 C.F.R. 2.309(f)(2) rather than by the more restrictive elements applicable to nontimely filings; LBP-07-14, 66 NRC 169 (2007)

applicant is not required to "request" a completion finding, or call for a single action, such as an inspection, on the part of the Staff that would serve as a discrete starting point for revising a contention; CLI-09-2, 69 NRC 55 (2009)

applying the standards for late-filed contentions, a board concluded that an e-mail citing only sources that had been published, in some cases years earlier, contained no new information; CLI-09-12, 69 NRC 535 (2009)

before a petition to admit a late-filed contention can be granted, five factors must be balanced; CLI-08-1, 67 NRC 1 (2008)

boards are obliged to evaluate the timeliness of a proposed contention even if no party raises the issue; LBP-10-17, 72 NRC 501 (2010)

boards must balance eight factors in evaluating nontimely intervention petitions, hearing requests, and contentions; LBP-10-24, 72 NRC 720 (2010)

by defining significantly different information in the draft EIS as a permissible basis for filing a new contention, the Commission has in effect concluded that such new information is good cause for filing a new contention; LBP-10-24, 72 NRC 720 (2010)

challenges to board rulings on late-filed contentions normally fall under the rules for interlocutory review; CLI-09-18, 70 NRC 859 (2009)

contentions based on the safety evaluation report and any necessary National Environmental Policy Act document should be filed within 30 days of the issuance of those documents; LBP-09-27, 70 NRC 992 (2009)

contentions may be amended or new contentions filed, with permission from the presiding officer, if petitioner shows that information on which the contention is based was not previously available and is materially different than information previously available and the contention has been submitted in a timely fashion based on the availability of the subsequent information; CLI-10-18, 72 NRC 56 (2010)

contentions must be based on documents or other information available at the time the petition is to be filed; LBP-08-27, 68 NRC 951 (2008)

contentions will not be entertained absent a determination by the Commission, the licensing board, or a presiding officer that a balancing of the factors specified in 10 C.F.R. 2.309(c)(1)(i)-(viii) favors admission; CLI-10-4, 71 NRC 56 (2010); LBP-10-9, 71 NRC 493 (2010)

decisions on nontimely filings require a balancing of the eight factors set forth in 10 C.F.R. 2.309(c)(1), the first of which, good cause for failure to file on time, is the most important; CLI-09-7, 69 NRC 235 (2009)

each proposed new contention must satisfy the requirements of 10 C.F.R. 2.309(f)(1)(i)-(vi); CLI-09-5, 69 NRC 115 (2009)

environmental contentions must meet not only the usual contention pleading requirements applicable to all proceedings, but also the additional requirements for new contentions; LBP-08-11, 67 NRC 460 (2008)

even if late-filing criteria are satisfied, proposed contentions still must meet the threshold admissibility standards of 10 C.F.R. 2.309(f)(1); CLI-08-1, 67 NRC 1 (2008); CLI-09-7, 69 NRC 235 (2009)

even if petitioner is unable to show that NRC Staff's NEPA document differs significantly from the environmental report, it may still be able to meet the late-filed contention requirements; LBP-10-24, 72 NRC 720 (2010)

factors that must be addressed for nontimely intervention petitions, hearing requests, and contentions are set forth; LBP-09-20, 70 NRC 565 (2009)

factors (v) and (vi) of 10 C.F.R. 2.309(c) generally are given less weight than factors (vii) and (viii); LBP-10-1, 71 NRC 165 (2010)

factors (vii) and (viii) of 10 C.F.R. 2.309(c)(1) are generally considered to have the most significance in the balancing process in instances in which there are no other parties or ongoing related proceedings; LBP-10-21, 72 NRC 616 (2010)

## SUBJECT INDEX

- failure to comply with any of the requirements of 10 C.F.R. 2.309(f)(1)(i)-(vi) is grounds for dismissing a contention; LBP-10-21, 72 NRC 616 (2010)
- failure to comply with pleading requirements for late filings constitutes sufficient grounds for rejecting intervention and hearing requests; CLI-09-7, 69 NRC 235 (2009)
- filing of a new contention on the basis of the draft or final environmental impact statement where that document contains information that differs significantly from the information that was previously available is allowed; CLI-09-12, 69 NRC 535 (2009)
- filings that are nearly 3 months late must satisfy not only the requirements to demonstrate standing and submit at least one admissible contention, but also must satisfy the stringent requirements for untimely filings and late-filed contentions; CLI-06-21, 64 NRC 30 (2006)
- five factors must be balanced under pre-2004 rules before a petition to admit a late-filed contention can be granted; CLI-08-8, 67 NRC 193 (2008)
- for filing new contentions, boards have generally established a deadline of 30 days to be timely after the receipt of new information; LBP-08-12, 68 NRC 5 (2008)
- for untimely new or amended contentions, the pleading shall include a motion for leave to file the contention and the support for the proposed new or amended contention showing that it satisfies 10 C.F.R. 2.309(f)(1); LBP-09-22, 70 NRC 640 (2009)
- good cause has long been interpreted to mean that the information on which the proposed new contention is based was not previously available; CLI-09-5, 69 NRC 115 (2009)
- good cause is the factor given the greatest weight when ruling on motions for leave to submit late-filed contentions; CLI-09-5, 69 NRC 115 (2009); CLI-09-12, 69 NRC 535 (2009); CLI-10-17, 72 NRC 1 (2010); LBP-09-6, 69 NRC 367 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-10-1, 71 NRC 165 (2010); LBP-10-9, 71 NRC 493 (2010); LBP-10-24, 72 NRC 720 (2010)
- if a combined license application is amended or material new information subsequently becomes available, petitioners must be given a fair opportunity to file new or amended contentions challenging these changes; LBP-09-10, 70 NRC 51 (2009)
- if a contention based on new information fails to satisfy the three-part test of 10 C.F.R. 2.309(f)(2)(i)-(iii), it may be evaluated under section 2.309(c); LBP-10-24, 72 NRC 720 (2010)
- if a contention satisfies the timeliness requirement of 10 C.F.R. 2.309(f)(2)(iii), then, by definition, it is not subject to 10 C.F.R. 2.309(c) which specifically applies to nontimely filings; LBP-09-27, 70 NRC 992 (2009); LBP-10-9, 71 NRC 493 (2010)
- if a motion to reopen and the proposed new contention are based on material information that was not previously available, then it qualifies as timely; LBP-10-19, 72 NRC 529 (2010)
- if a motion to reopen relates to a contention not previously in controversy among the parties, movant must meet the late-filing requirements of section 2.309(c); LBP-10-21, 72 NRC 616 (2010)
- if a new contention is not timely, then its admissibility is evaluated under the eight-factor balancing test of 10 C.F.R. 2.309(c)(i)-(viii); LBP-09-10, 70 NRC 51 (2009); LBP-09-26, 70 NRC 939 (2009)
- if a new contention is timely, then its admissibility is evaluated under the three-factor test of 10 C.F.R. 2.309(f)(2)(i)-(iii); LBP-09-10, 70 NRC 51 (2009)
- if a party seeks to reopen a closed record and, in the process, raises an issue that was not an admitted contention in the initial proceeding, it must also satisfy the section 2.326(d) requirements; CLI-06-4, 63 NRC 32 (2006)
- if good cause is not shown for the late filing of a contention, petitioner must make a compelling showing on the four remaining factors; CLI-08-1, 67 NRC 1 (2008); CLI-08-8, 67 NRC 193 (2008); LBP-10-24, 72 NRC 720 (2010)
- if new information becomes available in the course of Waste Confidence Rulemaking proceedings that contravenes a combined license application, petitioner may file a motion to admit a new or amended contention; LBP-09-18, 70 NRC 385 (2009)
- if petitioner files a new contention within the 20-day time limit set by the board, and if it satisfies the remaining factors in section 2.309(f)(2), petitioner need not address the requirements under section 2.309(c), which apply to nontimely filings; LBP-06-16, 63 NRC 737 (2006)
- if petitioners cannot show that their new or revised contentions could not have been submitted without the requested access to redacted information in the license transfer application, then they will have to meet not only the contention pleading requirements, but also the late-filing requirements; CLI-07-18, 65 NRC 399 (2007)

## SUBJECT INDEX

if the problem raised in a late-filed contention presents a sufficiently grave threat to public safety, a board should reopen the record to consider it even if it is not newly discovered and could have been raised in timely fashion; LBP-08-12, 68 NRC 5 (2008)

if, within 60 days after pertinent information that would support the framing of a contention first becomes available, intervenors submit a particularized and otherwise admissible contention regarding the construction of the facility, then the contention will be deemed timely without the need to satisfy the balancing test for late-filing requirements; CLI-09-2, 69 NRC 55 (2009)

in addition to demonstrating compliance with other applicable requirements set forth in 10 C.F.R. 2.309, nontimely contentions in the high-level waste repository proceeding shall follow the prescribed format for initial petitions and contentions; LBP-08-10, 67 NRC 450 (2008)

in addressing the section 2.309(c)(1) factors, failure to provide any specific discussion of most of these items or the weight they should be given in the balance is a potentially fatal omission; LBP-10-21, 72 NRC 616 (2010)

in light of the requirements that any new contention be based on material information that was not previously available, the timeliness determination required under 10 C.F.R. 2.309(f)(2) and the section 2.326(a) reopening standard can be closely equated; LBP-10-21, 72 NRC 616 (2010)

in the case of the yet-to-issue NRC rules for the high-level waste proceeding, the Commission is dispensing in advance with all late-filing factors except the "good cause" factor; CLI-08-25, 68 NRC 497 (2008)

in the five-factor analysis for admission of late-filed contentions, the extent to which the petitioner's participation may reasonably be expected to assist in developing a sound record and the extent to which this participation will broaden the issues or delay the proceeding are to be given more weight than the availability of other means for protecting the petitioner's interest and the extent to which this interest will be represented by existing parties; CLI-08-1, 67 NRC 1 (2008); CLI-08-8, 67 NRC 193 (2008)

information in the public domain for 6 months does not establish good cause for late filing; CLI-09-5, 69 NRC 115 (2009)

intervenor cannot establish good cause for filing a late contention when the information on which the contention is based was publicly available for some time prior to the filing of the contention; CLI-10-27, 72 NRC 481 (2010)

intervenor is entitled to submit a new safety contention, with leave of the board, upon three showings; CLI-10-17, 72 NRC 1 (2010)

intervenor that has sufficient information to file a NEPA contention but delays that filing until publication of the environmental impact statement does so at its peril; LBP-10-24, 72 NRC 720 (2010)

intervenors must move for leave to file a timely new or amended contention under 10 C.F.R. 2.309(c), (f)(2); LBP-10-14, 72 NRC 101 (2010)

intervenors with contentions rooted in new material information need not make the same showing as intervenors who have simply delayed filing their contentions until after expiration of the regulatory deadline; LBP-10-9, 71 NRC 493 (2010)

issuance of a proposed rulemaking and request for comments do not constitute information not previously available that entitles a party to file a new contention; LBP-09-10, 70 NRC 51 (2009)

licensing boards and the Commission have considered the late-filing criteria even in cases where the factors were not fully addressed by petitioners and/or the NRC Staff or were not addressed at all; LBP-10-24, 72 NRC 720 (2010)

movant must show that it is more probable than not that it would have prevailed on the merits of the proposed new contention; LBP-10-19, 72 NRC 529 (2010)

movant's assertion that a new contention presents a significant safety issue must be supported by affidavits that set forth the factual and/or technical bases for the allegation; LBP-08-12, 68 NRC 5 (2008)

new bases for a contention cannot be introduced in a reply brief or at any other time after the date the original contentions are due, unless the petitioner meets the late-filing criteria set forth in 10 C.F.R. 2.309(c), (f)(2); CLI-06-17, 63 NRC 727 (2006); CLI-09-7, 69 NRC 235 (2009)

new contention is untimely if information on which it is based has been available since submission of applicant's environmental report; LBP-10-13, 71 NRC 673 (2010)

new information concerning safety may be new evidence, but not necessarily raise a new issue; CLI-09-7, 69 NRC 235 (2009)

## SUBJECT INDEX

new or amended contentions can be filed with leave of the board if the information upon which the amended or new contention is based was not previously available, the information is materially different from information previously available, and the contention has been submitted in a timely fashion based on the availability of the subsequent information; LBP-08-27, 68 NRC 951 (2008)

new or amended contentions in the high-level waste repository proceeding should be presumed timely if they are filed within 30 days after the availability of new or materially different information; LBP-08-10, 67 NRC 450 (2008)

new or amended contentions may be filed only with leave of the presiding officer upon a showing that satisfies the three criteria set out in 10 C.F.R. 2.309(f)(2); CLI-09-7, 69 NRC 235 (2009)

newly filed contentions must meet the requirements of 10 C.F.R. 2.309(f)(2) as well as the six basic contention admissibility standards set forth in section 2.309(f)(1)(i)-(vi); LBP-08-27, 68 NRC 951 (2008)

non-NEPA-related contentions may be amended or new contentions filed after the initial filing only with leave of the presiding officer; LBP-10-1, 71 NRC 165 (2010)

nontimely contentions may be accepted only upon a showing of good cause for failure to file in a timely manner and a weighing of a number of factors; LBP-08-27, 68 NRC 951 (2008)

nontimely hearing requests and/or petitions and contentions will not be entertained absent a determination by the Commission or the licensing board that the petition and/or request should be granted and/or the contentions should be admitted based on a balancing of the factors specified in 10 C.F.R. 2.309(c)(1)(i)-(viii); LBP-10-4, 71 NRC 216 (2010)

nontimely new contentions are subject to the more stringent eight-factor balancing test; LBP-07-15, 66 NRC 261 (2007)

nontimely petitions to intervene and contentions, amended petitions, and supplemental petitions will not be entertained absent a determination by the Commission, the licensing board, or a presiding officer that the petition should be granted and/or the contentions should be admitted based upon a balancing of eight factors; CLI-09-15, 70 NRC 1 (2009)

NRC regulations do not provide a specific deadline for determining whether a new contention is timely; LBP-07-15, 66 NRC 261 (2007)

NRC regulations preserve the right to a hearing when an application is amended by allowing new or amended contentions to be filed in response to material new information; LBP-10-17, 72 NRC 501 (2010)

once a petition to intervene and request for hearing have been granted and contentions are admitted for hearing, appeals of board rulings on new or amended contentions are treated under section 2.341(f)(2), regardless of the subject matter of those contentions; CLI-10-16, 71 NRC 486 (2010)

once the deadline for filing an initial intervention petition has passed, a party wishing to submit new or amended contentions on matters not associated with issuance of the Staff's draft or final environmental impact statement must satisfy the requirements of 10 C.F.R. 2.309(f)(2); LBP-10-21, 72 NRC 616 (2010)

opportunities are provided to file new or amended contentions to address new developments when they arise; CLI-09-4, 69 NRC 80 (2009)

pendency of a petition for Commission review does not absolve petitioner of its duty to file a motion to reopen in a timely fashion; LBP-10-19, 72 NRC 529 (2010)

petitioner has an iron-clad obligation to examine the publicly available documentary material with sufficient care to enable it to uncover any information that could serve as the foundation for a specific contention; CLI-10-27, 72 NRC 481 (2010)

petitioner may amend contentions or file new contentions on issues arising under NEPA if there are data or conclusions in the NRC environmental documents that differ significantly from the data or conclusions in the applicant's documents; LBP-10-1, 71 NRC 165 (2010)

petitioner may not simply wait for the Staff to identify missing information and then ground a new contention on a request for additional information; CLI-09-12, 69 NRC 535 (2009)

petitioner must satisfy the eight-factor balancing test in 10 C.F.R. 2.309(c); LBP-06-22, 64 NRC 229 (2006)

petitioner must show that the information upon which the contention is based was not previously available or is materially different than information previously available, and the amended or new contention has been submitted in a timely fashion based on the availability of the subsequent information; LBP-06-11, 63 NRC 391 (2006); LBP-06-22, 64 NRC 229 (2006)

## SUBJECT INDEX

petitioners are to file their NEPA contentions based on the applicant's environmental report, and, later, if the NRC Staff's draft or final EIS contains data or conclusions that differ significantly from the data or conclusions in the applicant's documents, then petitioners may file new or amended contentions; CLI-06-15, 63 NRC 687 (2006)

petitioners must examine the publicly available material and set forth their claims and the support for their claims at the outset; CLI-09-7, 69 NRC 235 (2009)

petitioners seeking admission of new or amended contentions under 10 C.F.R. 2.309(f)(2) must also satisfy the standard admissibility requirements in 10 C.F.R. 2.309(f)(1); LBP-06-11, 63 NRC 391 (2006)

pleadings submitted by a petitioner acting pro se are not always expected to meet the same standards as pleadings drafted by lawyers, but late filing of documents is not condoned; LBP-06-14, 63 NRC 568 (2006)

reply briefs that raise new issues must address the late filing and new-contention factors in 10 C.F.R. 2.309(c) or (f)(2); LBP-09-17, 70 NRC 311 (2009)

requirements for filing both new and nontimely contentions are stringent; LBP-09-27, 70 NRC 992 (2009)

the admissibility decision sometimes turns on a determination about when, as a cumulative matter, separate pieces of the information puzzle were sufficiently in place to make the particular concerns reasonably apparent; LBP-09-10, 70 NRC 51 (2009)

the amended late-filed contentions rule, 10 C.F.R. 2.309(f)(2), is not intended to alter the standards in section 2.714(a) of its rules of practice as interpreted by NRC case law; LBP-10-17, 72 NRC 501 (2010)

the Commission dispensed with all but the good cause factor for late-filed contentions; LBP-09-29, 70 NRC 1028 (2009)

the filing of new or amended contentions based on new information is permitted if sufficient justification is provided; LBP-09-15, 70 NRC 198 (2009)

the good cause factor favors petitioners who have filed their petition within 30 days of the availability of the document they contend contains new and significant information so as to form the basis for their contention; LBP-10-1, 71 NRC 165 (2010)

the Secretary's referral of petitioner's motion to admit a late-filed contention effectively returns jurisdiction to the licensing board to rule on the motion; CLI-09-5, 69 NRC 115 (2009)

the significance of the issue being raised by a new contention would be a relevant "good cause" consideration; LBP-10-21, 72 NRC 616 (2010)

the standard for admitting a new contention after the record is closed is higher than for an ordinary late-filed contention; CLI-08-28, 68 NRC 658 (2008)

the test for good cause for late filing is when the information became available, when petitioners reasonably should have become aware of that information, and whether petitioners acted promptly after learning of the new information; LBP-08-6, 67 NRC 241 (2008)

the timeliness of a motion to reopen depends on what/when was the trigger that provided the footing for the new contention and was the motion seeking record reopening/contention admission filed timely after that trigger event; LBP-10-21, 72 NRC 616 (2010)

the unavailability of documents does not constitute a showing of good cause for admitting a late-filed contention when the factual predicate for that contention is available from other sources in a timely manner; CLI-10-27, 72 NRC 481 (2010)

there simply would be no end to NRC licensing proceedings if petitioners could disregard timeliness requirements and add new contentions at their convenience during the course of a proceeding based on information that could have formed the basis for a timely contention at the outset of the proceeding; CLI-09-7, 69 NRC 235 (2009); CLI-10-27, 72 NRC 481 (2010)

thirty days is a reasonable limit for fulfilling the timing requirement of 10 C.F.R. 2.309(f)(2)(iii) because of the significant effort involved in identifying new information, assembling the required expertise, and then drafting a contention that satisfies 10 C.F.R. 2.309(f)(1); LBP-09-27, 70 NRC 992 (2009)

three regulations govern the admissibility of contentions added after an adjudicatory hearing has commenced; LBP-06-14, 63 NRC 568 (2006)

timeliness as measured under NRC regulations is from the point at which new information is discovered relevant to the question; LBP-08-12, 68 NRC 5 (2008)

## SUBJECT INDEX

timeliness of a motion to reopen in which a new contention is proffered depends primarily on an assessment as to when the proponent of the motion first knew, or should have known, enough information to raise the issues presented in the new contention; LBP-10-19, 72 NRC 529 (2010)

timeliness of a new or amended contention based on material new information is based on the timing of the availability of the information on which the contention is based, not the timing of the NRC Staff NEPA document; LBP-10-24, 72 NRC 720 (2010)

to be admitted, a new contention must meet the new or amended contention requirements as well as the general contention admissibility requirements; LBP-09-9, 70 NRC 41 (2009)

to force intervenors to file contentions before the results of an ongoing NRC investigation are announced to the public would effectively force intervenors to speculate about the results of such investigations and the conclusions the Staff might reach; LBP-10-9, 71 NRC 493 (2010)

to show good cause for the late filing of a contention, petitioner must show that the information on which the new contention is based was not reasonably available to the public, not merely that the petitioner recently found out about it; CLI-10-27, 72 NRC 481 (2010)

to the extent that the draft or final supplemental environmental impact statement contains data or conclusions that differ significantly from the data or conclusions in the applicant's environmental report or in the generic environmental impact statement, a petitioner is entitled to use 10 C.F.R. 2.309(f)(2) as the grounds to file a new or amended contention; LBP-06-20, 64 NRC 131 (2006)

under appropriate circumstances, petitions to intervene, requests for hearing, and new and amended contentions may be filed after the initial 30-day deadline; LBP-08-1, 67 NRC 37 (2008)

unless a deadline has been specified in the scheduling order for the proceeding, the determination of timeliness is subject to a reasonableness standard that depends on the facts and circumstances of each situation; LBP-10-24, 72 NRC 720 (2010)

when a contention of omission has been rendered moot, and the intervenor wishes to raise specific challenges regarding the new information, it may timely file a new contention that addresses the admissibility factors of 10 C.F.R. 2.309(f)(1); LBP-06-16, 63 NRC 737 (2006)

when a new contention is filed challenging new data or conclusions in NRC's environmental documents, the timeliness of the new contention is based on whether it was filed promptly after NRC's NEPA document became publicly available, not whether it was filed promptly after the information on which the intervenor bases its challenge became publicly available; LBP-10-24, 72 NRC 720 (2010)

when a reopening motion is untimely, the section 3.326(a)(1) "exceptionally grave circumstances" test supplants the "significant issue" standard under section 2.326(a)(2); LBP-10-21, 72 NRC 616 (2010)

when information becomes available piecemeal over time, and the foundation for a new contention does not become reasonably apparent until the last piece of information becomes available and falls into place, the test for good cause for late filing may be met; LBP-09-10, 70 NRC 51 (2009)

when new contentions are based on breaking developments of information, they are to be treated as new or amended, not as nontimely; LBP-07-14, 66 NRC 169 (2007); LBP-08-27, 68 NRC 951 (2008)

when petitioner has filed an expert declaration with its petition, indicating that it can assist, through expert opinion, in the development of a sound record, this weighs in favor of admission; LBP-10-1, 71 NRC 165 (2010)

when the draft or final environmental impact statement for a combined license application has not been issued so as to provide petitioner with a basis for framing its contention, the licensing board must look to the three other factors specified in 10 C.F.R. 2.309(f)(2) in assessing the admissibility of a new NEPA-related issue statement; LBP-10-1, 71 NRC 165 (2010)

where a document relevant to the licensing proceeding was available on the agency public document management system, but not indexed by license number, the board did not act unreasonably in finding that late-filing factors weighed in favor of the party seeking to introduce the document as late support for an otherwise timely contention; CLI-09-12, 69 NRC 535 (2009)

where a motion to reopen the record seeks to admit a new contention that has not previously been in controversy among the parties, movant must show that a balancing of the factors of 10 C.F.R. 2.309(c)(1) weighs in favor of reopening; CLI-08-28, 68 NRC 658 (2008); LBP-08-12, 68 NRC 5 (2008)

where new and material information is revealed in a piecemeal fashion, and where the foundation for a contention is not reasonably available until the later pieces fall into place, the admissibility decision turns on a determination about when, as a cumulative matter, the separate pieces of the information

## SUBJECT INDEX

- puzzle were sufficiently in place to make the particular concerns reasonably apparent; LBP-06-14, 63 NRC 568 (2006)
- where petitioners failed to file on time or seek an extension because they had not yet decided whether to seek to intervene, such indecision does not constitute good cause; LBP-09-26, 70 NRC 939 (2009)
- whether good cause exists to excuse the late-filing of the contention is the most important of the five factors; CLI-08-1, 67 NRC 1 (2008); CLI-08-8, 67 NRC 193 (2008); LBP-06-14, 63 NRC 568 (2006)
- with respect to 10 C.F.R. 2.309(c)(1)(vi), the presence of another party admitted to the proceeding, particularly when that party previously raised the issue that is the subject of the new contention, weighs against a petitioner; LBP-10-1, 71 NRC 165 (2010)
- CONTESTED LICENSE APPLICATIONS**
- a decision dismissing the contested adjudication relating to a combined license has no impact on the subsequent need to conduct a mandatory hearing relating to combined license application, over which the Commission would preside; LBP-09-23, 70 NRC 659 (2009)
- for a uranium enrichment facility, the licensing board shall make findings of fact and conclusions of law on admitted contentions; CLI-09-15, 70 NRC 1 (2009); CLI-10-4, 71 NRC 56 (2010)
- in uranium enrichment facility proceedings, a licensing board must determine in its initial decision whether the requirements of section 102(2)(A), (C), and (E) of the National Environmental Policy Act have been complied with in the proceeding; CLI-09-15, 70 NRC 1 (2009)
- NRC Staff, as a matter of policy, seeks Commission approval to issue the license, even though issuance of the license is not stayed by the petition for review; CLI-09-7, 69 NRC 235 (2009)
- CONTINUANCE**
- if it appears from the affidavits of a party opposing a motion for summary disposition or other dispositive motion that the opposing party cannot, for reasons stated, present by affidavit facts essential to justify the party's opposition, the board may refuse the application for summary disposition or may order a continuance as may be necessary or just; LBP-09-22, 70 NRC 640 (2009)
- CONTRA PROFERENTEM**
- any ambiguity relative to the filing date for hearing requests arising from the language of the agency's hearing opportunity notice should be construed in favor of a participant who was seeking to comply with the notice; LBP-08-16, 68 NRC 361 (2008)
- CONTRACTORS**
- a senior plant supervisor's deliberate failure to contact the appropriate site security manager in order to initiate an assessment of the trustworthiness and reliability of the two contract technicians who falsified a maintenance report is a violation; LBP-08-14, 68 NRC 279 (2008)
- if a document or study is prepared by a nonfederal party, the agency official is responsible for ensuring that its content meets applicable standards and guidelines; LBP-08-24, 68 NRC 691 (2008)
- Staff is ultimately responsible for the work undertaken, or not undertaken, by its contractors; LBP-06-8, 63 NRC 241 (2006)
- CONTROL ROOM**
- adequacy of applicant's design for radiological protections, in light of the fact that the reactor is proposed to be located within the EPZ of an existing reactor, is an issue that is appropriate in a combined license or standard design certification proceeding; LBP-09-10, 70 NRC 51 (2009)
- CONTROLLED ACCESS**
- petitioner alleges failure to conduct safety review of the modification of the controlled access area by the addition of an undocumented roof access for a siphon breaker experiment; DD-10-3, 72 NRC 171 (2010)
- petitioner alleges that routine unprotected handling of an unshielded neutron source by licensed operators and uncontrolled access by untrained and unlicensed facility visitors to this neutron source violated ALARA requirements; DD-10-3, 72 NRC 171 (2010)
- See also Access Authorization
- COOLING SYSTEMS**
- adequacy of the final environmental impact statement discussion and analysis of direct, indirect, and cumulative impingement/entrainment and thermal effluent discharge impacts of the proposed cooling system intake and discharge structures on aquatic resources is decided; LBP-09-7, 69 NRC 613 (2009)
- adequacy of the final environmental impact statement discussion and analysis of the alternative of implementing a dry cooling system for the proposed units is decided; LBP-09-7, 69 NRC 613 (2009)

## SUBJECT INDEX

after applicant's amendment to its ER, whereby it changed its cooling method for the proposed reactor to a no-discharge cooling system that uses a combination of wet and dry cooling towers, there remains no genuine dispute about discharge of heated water; LBP-06-24, 64 NRC 360 (2006)

analysis of entrainment and impingement of fish, and heat shock, is required only for plants with once-through cooling or cooling ponds, because it has been determined generically that such impacts are small for plants that use cooling towers; LBP-07-4, 65 NRC 281 (2007)

applicant is required to provide in its environmental report a site-specific analysis of entrainment, impingement, and heat shock/thermal discharge impacts from its once-through cooling systems; LBP-08-13, 68 NRC 43 (2008)

as Class I components, the feedwater, reactor recirculation, and core spray outlet nozzles on a boiling water reactor must be designed, fabricated, erected, and tested to the highest quality standards practical as specified in Part 50, Appendix A, GDC 30; LBP-08-25, 68 NRC 763 (2008)

components that are part of the reactor coolant pressure boundary must meet the requirements of Class 1 components in Section III of the ASME Boiler and Pressure Vessel Code; LBP-08-25, 68 NRC 763 (2008)

EPA's alternative thermal effluent limitations do not apply to a plant that employs closed-cycle cooling; CLI-07-25, 66 NRC 101 (2007)

if applicant's plant utilizes a once-through cooling system, applicant shall provide a copy of a Clean Water Act § 316a variance or equivalent state permit and supporting documentation; CLI-07-16, 65 NRC 371 (2007)

the permitting agency determines what cooling system a nuclear power facility may use, and NRC factors the impacts resulting from use of that system into the NEPA cost-benefit analysis; CLI-07-16, 65 NRC 371 (2007)

See also Reactor Cooling Systems

**COOLING TOWERS**

request for an enforcement-type action where the underlying concern is the partial collapse of a cooling tower is credible and sufficient to warrant further inquiry; DD-08-1, 67 NRC 347 (2008)

**CORRECTIVE ACTION PROGRAM**

operating reactor licensees are not required to implement an employee concerns program, but are required to establish and implement an effective corrective action program; DD-10-1, 72 NRC 149 (2010)

**CORROSION**

contention that the high-level waste application inadequately addresses generalized corrosion because it relies on flawed experimental data raises a genuine, material dispute with the application by pointing to specific sections that allegedly fail to comply with the NRC's requirements for conducting a post-closure performance assessment; LBP-09-29, 70 NRC 1028 (2009)

**COST-BENEFIT ANALYSES**

See Benefit-Cost Analyses

**COSTS**

accuracy of an applicant's estimate is not material to the findings the NRC must make under the National Environmental Policy Act; LBP-09-16, 70 NRC 227 (2009)

accuracy of project cost estimates only becomes relevant if an environmentally preferable alternative has been identified; LBP-09-2, 69 NRC 87 (2009)

disclosure is not required if the burden or expense of the proposed discovery outweighs its likely benefit; LBP-10-23, 72 NRC 692 (2010)

if petitioner has proffered an admissible contention asserting an environmentally preferable alternative to the proposed reactors, this also would trigger the requirement that the environmental report contain cost estimates; CLI-10-9, 71 NRC 245 (2010)

it is inappropriate for the agency to consider economic costs when no environmentally preferable alternative has been identified; CLI-10-1, 71 NRC 1 (2010); CLI-10-9, 71 NRC 245 (2010)

parties need not provide discovery of electronically stored information from sources that the party identifies as not reasonably accessible because of undue burden or cost; LBP-09-22, 70 NRC 640 (2009)

recoverability of spent nuclear fuel storage expenses is equally applicable to greater-than-Class-C waste, which is stored onsite in the same manner as spent nuclear fuel; CLI-10-2, 71 NRC 27 (2010)

## SUBJECT INDEX

whether excessive safety design could lead to licensing uncertainty, unnecessary costs, or delays are not issues material to the high-level waste repository construction authorization proceeding; CLI-09-14, 69 NRC 580 (2009)

See also Decommissioning Costs

### COUNCIL ON ENVIRONMENTAL QUALITY

a conclusion that something is a “connected action” under CEQ regulation 40 C.F.R. 1508.25 does not necessarily inform the type of impact analysis that is performed, whether direct, indirect, or cumulative; LBP-09-7, 69 NRC 613 (2009)

although NRC does not consider CEQ pronouncements to be binding, they are entitled to substantial deference; LBP-06-8, 63 NRC 241 (2006); LBP-06-19, 64 NRC 53 (2006); LBP-09-10, 70 NRC 51 (2009); LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009)

an environmental impact statement must address both direct and indirect effects of an action; LBP-09-7, 69 NRC 613 (2009)

CEQ regulations are not binding on NRC when the agency has not expressly adopted them, but are entitled to considerable deference; LBP-09-7, 69 NRC 613 (2009)

CEQ regulations define “direct and indirect” impacts and “cumulative” impacts and require that they be considered in the environmental impact statement; LBP-09-10, 70 NRC 51 (2009)

CEQ regulations receive substantial deference from federal courts in interpreting the requirements of NEPA; LBP-10-16, 72 NRC 361 (2010); LBP-10-24, 72 NRC 720 (2010)

even when an early site permit does not authorize any construction activity, the NRC Staff is required by CEQ regulations to consider actions that are related to other actions that could lead to a significant impact on the environment; LBP-07-1, 65 NRC 27 (2007)

in implementing NEPA, the NRC uses certain of the definitions provided in CEQ regulations; LBP-09-7, 69 NRC 613 (2009); LBP-09-19, 70 NRC 433 (2009)

it is NRC’s stated policy to take into account CEQ regulations voluntarily, subject to some conditions; CLI-10-2, 71 NRC 27 (2010); CLI-10-18, 72 NRC 56 (2010); LBP-10-15, 72 NRC 257 (2010); LBP-10-24, 72 NRC 720 (2010)

regulations require that an agency environmental impact statement address both direct and indirect, or secondary, effects of an action; LBP-06-8, 63 NRC 241 (2006)

### COUNCIL ON ENVIRONMENTAL QUALITY GUIDELINES

although CEQ guidance is not binding on NRC, it is given substantial deference; CLI-07-27, 66 NRC 215 (2007)

in its conclusions regarding the environmental impacts of a proposed action or alternative actions, the Staff uses as guidance a standard scheme to categorize or quantify the impacts; LBP-09-7, 69 NRC 613 (2009)

### COUNSEL

general counsel for an Indian tribe is not required to submit a declaration stating the basis of his or her authority to represent the tribe; LBP-08-26, 68 NRC 905 (2008)

officers of the court have an ethical duty to alert NRC adjudicatory bodies to information relevant to the matters being adjudicated; LBP-08-6, 67 NRC 241 (2008)

petitioners represented by counsel are held to higher standard of specificity in pleading; CLI-10-20, 72 NRC 185 (2010)

See also Attorney

### CRACKING

damage to a nonsafety-related steam dryer could cause a release of loose parts that could have an adverse impact on safety-related equipment and thus it is within the scope of aging management review in a license renewal proceeding; LBP-08-25, 68 NRC 763 (2008)

in evaluating metal fatigue, a component’s cumulative usage factor is the fundamental parameter used to determine whether it will likely develop cracks during the license renewal period and thus is subject to an aging management plan; LBP-08-13, 68 NRC 43 (2008)

### CREDIBILITY

a board’s findings regarding a particular witness’s knowledge or state of mind depend, as a general rule, largely on that witness’s credibility; CLI-10-23, 72 NRC 210 (2010)

credibility of a witness testifying based on technical expertise is not the same as the credibility of an eyewitness to a past event; CLI-09-7, 69 NRC 235 (2009)

## SUBJECT INDEX

licensing board findings of fact that turn on witness credibility receive the Commission's highest deference on appeal; CLI-10-23, 72 NRC 210 (2010)

Subpart G procedures focus on issues where the credibility of an eyewitness may reasonably be expected to be at issue, and/or issues of motive or intent of the party or eyewitness; LBP-09-22, 70 NRC 640 (2009)

### CRIMINAL GUILT

a defendant can be convicted if he was aware that a high probability existed of the fact or circumstances that would make his conduct criminal, but ignored that probability so he could disclaim knowledge later; CLI-10-23, 72 NRC 210 (2010)

knowledge may suffice for criminal culpability if extensive enough to attribute to the knower a guilty mind, or knowledge that he or she is performing a wrongful act; CLI-10-23, 72 NRC 210 (2010)

the words "knowledge" and "knowingly" are normally associated with awareness, understanding, or consciousness; CLI-10-23, 72 NRC 210 (2010)

### CRIMINAL PROCEEDING

although the civil discovery process could lead to the tainting of evidence in a criminal case and to the defendant's obtaining access to evidence that would provide him an unfair advantage over the government, the moving party must provide some practical applicability to the particular circumstances of the case in order for it to obtain the delay sought; LBP-06-13, 63 NRC 523 (2006)

although the subject of an NRC enforcement proceeding may attempt to take advantage of his discovery rights in the civil proceeding to obtain information also useful in his criminal proceeding, that is no reason to deny him that discovery because he asserted his Fifth Amendment right not to respond to discovery requests directed to him, even if other procedural consequences might flow from that action; LBP-06-25, 64 NRC 367 (2006)

conviction of a crime that is identical to a charge in an enforcement order provides substantial assurance that the enforcement order was not baseless or unwarranted; LBP-09-24, 70 NRC 676 (2009)

"deliberate ignorance" or "willful blindness" instruction has its place and sees frequent usage in drug possession cases where the defendant purports not to know, for example, what is in the package someone asked him to deliver in secretive fashion; LBP-09-24, 70 NRC 676 (2009)

juries may be asked to provide a special verdict indicating in some fashion the legal theory it applied to reach any findings of guilt; LBP-09-24, 70 NRC 676 (2009)

NRC is loath to permit a criminal defendant to use its procedures to do an end run around rules prescribed by the Supreme Court and implicitly approved by Congress; CLI-07-6, 65 NRC 112 (2007) the Commission does not lightly second-guess DOJ's views on whether, and how, premature disclosure might affect its criminal prosecutions; CLI-06-19, 64 NRC 9 (2006)

the Commission is generally inclined to accommodate an abeyance request from DOJ as long as it provides at least some showing of potential detrimental effect on its parallel criminal case; CLI-07-6, 65 NRC 112 (2007)

the conclusion that a finding of deliberate ignorance is a proxy for a finding of knowledge is supported by the definition of knowledge in the Model Penal Code, which has guided the Supreme Court in determining the intended scope of the word "knowing" in the criminal context; LBP-09-24, 70 NRC 676 (2009)

the party supporting abeyance of an enforcement proceeding based on the pendency of a criminal case involving the same facts carries the burden of proof and must make at least some showing of potential detrimental effect on the criminal case; CLI-06-12, 63 NRC 495 (2006)

the question whether to hold an NRC enforcement proceeding in abeyance pending a related criminal prosecution is generally suitable for interlocutory Commission review because the abeyance issue cannot await the end of the proceeding; CLI-07-6, 65 NRC 112 (2007)

the warning to jurors that the added instruction on deliberate ignorance or willful blindness is not intended to allow them to base guilt on negligence or carelessness is sufficient to legitimize the instruction; LBP-09-24, 70 NRC 676 (2009)

whether continuation of an NRC enforcement adjudication could at least arguably jeopardize a related criminal proceeding is a key factor in any abeyance ruling in an NRC enforcement proceeding; CLI-06-19, 64 NRC 9 (2006)

## SUBJECT INDEX

### CRIMINAL PROSECUTION

an accused person is to be informed of the nature and cause of the accusation; LBP-09-24, 70 NRC 676 (2009)

with respect to a prosecutor's role, government lawyers should understand and follow the venerable maxim that the government wins when justice is done; LBP-09-24, 70 NRC 676 (2009)

### CRITICALITY

in theory, a facility operator could have an inadvertent criticality, but still be in compliance with the dose limits; LBP-06-17, 63 NRC 747 (2006)

### CRITICALITY CONTROL

although not legally binding, Staff guidance documents provide further information about the content of the integrated safety analysis summary and how an applicant can comply with criticality safety regulations; LBP-06-17, 63 NRC 747 (2006)

applicant must limit, through application of engineered and/or administrative controls, the risk of credible high-consequence and intermediate-consequence events so as to make them highly unlikely, or to make their consequences less severe than certain established dose and exposure limits; LBP-06-17, 63 NRC 747 (2006)

applicant must provide documentation of its compliance with the performance requirements of section 70.61 in its integrated safety analysis summary; LBP-06-17, 63 NRC 747 (2006)

design of new facilities must adhere to the double contingency principle; LBP-06-17, 63 NRC 747 (2006)  
each engineered or administrative criticality control/control system must be designated an item relied on for safety; LBP-06-17, 63 NRC 747 (2006)

under the double contingency principle, process designs should incorporate sufficient factors of safety to require at least two unlikely, independent, and concurrent changes in process conditions before a criticality accident is possible; LBP-06-17, 63 NRC 747 (2006)

uranium enrichment facility applicants must identify and assess all credible accident sequences and identify appropriate mitigation measures, commonly referred to as items relied on for safety, to prevent or mitigate the consequences of such accidents; LBP-06-17, 63 NRC 747 (2006)

### CROSS-EXAMINATION

a board has discretion to allow parties to cross-examine witnesses in Subpart L proceedings if the board deems this practice necessary to establish an adequate record; LBP-08-24, 68 NRC 691 (2008)

a party seeking to conduct cross-examination must file a written motion and obtain leave of the board; LBP-10-15, 72 NRC 257 (2010)

a party to NRC proceedings is entitled to conduct such cross-examination as may be required for a full and true disclosure of the facts; LBP-09-10, 70 NRC 51 (2009); LBP-09-22, 70 NRC 640 (2009)

APA § 556(d) is a liberal standard, but does not provide an absolute right to conduct cross-examination; LBP-10-15, 72 NRC 257 (2010)

boards may allow parties to conduct cross-examination in Subpart L proceedings; LBP-09-22, 70 NRC 640 (2009)

cross-examination occurs virtually automatically in Subpart G hearings, subject to normal judicial management and the requirement to file a cross-examination plan; LBP-09-10, 70 NRC 51 (2009); LBP-10-15, 72 NRC 257 (2010)

no later than 30 days after service of materials, all parties shall file any motions or requests to permit that party to conduct cross-examination of a specified witness or witnesses, together with the associated cross-examination plans; LBP-09-22, 70 NRC 640 (2009)

the Atomic Energy Act does not give a state an absolute right of cross-examination, but requires only that the Commission shall afford reasonable opportunity for state representatives to interrogate witnesses; LBP-06-20, 64 NRC 131 (2006)

the opportunity for cross-examination under Subpart L is equivalent to the opportunity for cross-examination under the Administrative Procedure Act; LBP-07-4, 65 NRC 281 (2007); LBP-08-6, 67 NRC 241 (2008)

the substantive standard for allowing parties to conduct cross-examination is the same under 10 C.F.R. Part 2, Subparts G and L; LBP-09-10, 70 NRC 51 (2009); LBP-10-15, 72 NRC 257 (2010)

this procedure is allowed in Subpart L proceedings only when the presiding officer decides that it is necessary to ensure an adequate record for decision; CLI-09-7, 69 NRC 235 (2009)

## SUBJECT INDEX

under Subpart L, a party seeking to conduct cross-examination must file a written motion and obtain leave from the board; LBP-09-10, 70 NRC 51 (2009)

### CULTURAL RESOURCES

a federal agency, prior to the issuance of any license, is required to take into account the effect of the federal action on any area eligible for inclusion in the National Register of Historic Places; LBP-08-6, 67 NRC 241 (2008); LBP-08-24, 68 NRC 691 (2008)

a license renewal applicant must assess whether any historic or archaeological properties will be affected by the proposed project; LBP-08-26, 68 NRC 905 (2008)

a party claiming violations of their procedural right to protect their interests in cultural resources is to be accorded a special status when it comes to standing without meeting all the normal standards for redressability and immediacy; LBP-10-16, 72 NRC 361 (2010)

a tribe may become a consulting party where its property, potentially affected by a federal undertaking, has religious or cultural significance; LBP-08-24, 68 NRC 691 (2008)

an Indian Tribe claims a procedural interest in identifying, evaluating, and establishing protections for historic and cultural resources; LBP-10-16, 72 NRC 361 (2010)

criteria and procedures pursuant to which a federal land manager may issue excavation permits for federal lands are provided as well as notification to Indian tribes if permits may result in harm to cultural or religious sites; LBP-10-16, 72 NRC 361 (2010)

cultural and historical resources are to be considered as part of the environmental impact assessment that must be completed; LBP-10-16, 72 NRC 361 (2010)

federal agencies are to consult with a tribe if that tribe ascribes cultural or religious significance to properties not on tribal lands; LBP-08-24, 68 NRC 691 (2008)

it is not the duty of applicant to consult with a tribe regarding cultural resources at a proposed site, but instead is the duty of the agency to initiate and follow through with the consultation process; LBP-10-16, 72 NRC 361 (2010)

notification and inventory procedures are provided so that Indian cultural objects and burial remains found on federal lands will be repatriated to the appropriate tribe; LBP-08-24, 68 NRC 691 (2008); LBP-10-16, 72 NRC 361 (2010)

NRC must make a reasonable and good-faith effort to identify any Indian tribes that might attach religious and cultural significance to historic properties in the area of potential effects and invite them to be consulting parties; CLI-09-12, 69 NRC 535 (2009)

only Indian tribes that appear on the Department of the Interior's list of recognized tribes have consultation rights under the National Historic Preservation Act; LBP-09-13, 70 NRC 168 (2009)

preservation of cultural traditions is a protected interest under federal law, and its endangerment or harm qualifies as an injury for the purposes of establishing standing; LBP-08-24, 68 NRC 691 (2008); LBP-10-16, 72 NRC 361 (2010)

standing is granted to an Indian tribe based on its interest in cultural artifacts onsite that could be affected by a proposed licensing action; CLI-09-9, 69 NRC 331 (2009)

to establish an injury in fact, a party merely has to show some threatened concrete interest personal to the party that the National Historic Preservation Act was designed to protect; LBP-08-24, 68 NRC 691 (2008)

without consultation with a tribe, culturally significant resources will go unidentified and unprotected, resulting in development or use of the land that might cause damage to these cultural resources, thereby injuring the protected interests of the tribe; LBP-08-24, 68 NRC 691 (2008)

### CULTURAL SENSITIVITY

federal agencies should be sensitive to the special concerns of Indian tribes in historic preservation issues, which often extend beyond Indian lands to other historic properties, and should invite the governing body of the responsible tribe to be a consulting party and to concur in any agreement; LBP-08-6, 67 NRC 241 (2008); LBP-08-24, 68 NRC 691 (2008); LBP-10-16, 72 NRC 361 (2010)

### CUMULATIVE IMPACTS ANALYSIS

agencies must consider cumulative impacts of a proposed action as defined in Council on Environmental Quality regulations; LBP-09-7, 69 NRC 613 (2009)

although applicant's description of existing water quality conditions did not separately evaluate the contributions of specific sources, it nonetheless formed an environmental baseline against which to measure the cumulative impact of the proposed new reactor; LBP-09-16, 70 NRC 227 (2009)

## SUBJECT INDEX

an agency environmental impact statement must consider direct, indirect, and cumulative impacts of an action; LBP-09-19, 70 NRC 433 (2009)

“cumulative impact” is defined as the impact on the environment that results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions; LBP-09-16, 70 NRC 227 (2009)

cumulative impacts can result from individually minor but collectively significant actions taking place over a period of time; CLI-10-5, 71 NRC 90 (2010)

even when an early site permit does not authorize any construction activity, the NRC Staff is required by Council on Environmental Quality regulations to consider actions that are related to other actions that could lead to a significant impact on the environment; LBP-07-1, 65 NRC 27 (2007)

in its environmental justice analysis, NRC makes nearby nuclear facility-related harm an appropriate issue to consider cumulatively with any impacts from proposed reactors; LBP-07-3, 65 NRC 237 (2007)

it would be inconsistent with NEPA’s rule of reason to require that the cumulative impacts analysis individually analyze the effects of remote facilities absent a demonstration that such additional effort would lead to a different conclusion; LBP-09-4, 69 NRC 170 (2009)

synergistic effects of a proposed action are examined when several proposals for actions in a region are pending concurrently before an agency; LBP-06-19, 64 NRC 53 (2006)

the environmental baseline reflects the effects of all currently existing pollution sources in the relevant watershed, including contributions of all nuclear power plants, and petitioners failed to provide information indicating that this aggregate analysis was insufficient under the National Environmental Policy Act; LBP-09-16, 70 NRC 227 (2009)

there is a difference between what NRC must look at in order to evaluate cumulative impacts under the National Environmental Policy Act and the scope of a particular cumulative impacts contention, which may be a subset of the total array of cumulative impacts required to be examined; CLI-10-5, 71 NRC 90 (2010)

whether the proposed action’s impacts will be significantly enhanced by already existing environmental effects from prior actions is examined as well as whether there will be interregional synergistic effects; LBP-06-19, 64 NRC 53 (2006); LBP-09-16, 70 NRC 227 (2009)

**CUMULATIVE USAGE FACTOR**

a license renewal applicant who addresses the CUF issue via an aging management program may reference Chapter X of the Generic Aging Lessons Learned Report; CLI-10-17, 72 NRC 1 (2010)

an aging management program is intended to manage the effects of aging on a particular component by, e.g., ensuring that the fatigue usage factor for the component does not exceed the design code limit; CLI-10-17, 72 NRC 1 (2010)

analysis of metal fatigue that ignores the known and substantial effects of the light-water reactor environment is insufficient, both as a technical and a legal matter; LBP-08-25, 68 NRC 763 (2008)

applicant may demonstrate compliance with 10 C.F.R. 54.21(c)(1)(ii) by showing that the CUF calculations have been reevaluated based on an increased number of assumed transients to bound the period of extended operation and that the resulting CUF remains less than or equal to 1.0 for the period of extended operation; CLI-10-17, 72 NRC 1 (2010)

applicant’s commitment to repair or replace affected locations before exceeding a CUF of 1.0 does not meet the “demonstration” requirement of the regulations; LBP-08-13, 68 NRC 43 (2008)

applicant’s use of a conservative number of transients in the calculations of the environmentally adjusted CUF is adequate to provide the degree of assurance required by 10 C.F.R. 54.29(a); LBP-08-25, 68 NRC 763 (2008)

because applicant’s change in cumulative usage factor is already endorsed by 10 C.F.R. 50.55a(g), the approval requirements of subsection 50.55a(a)(3) do not apply; CLI-06-24, 64 NRC 111 (2006)

because environmentally adjusted CUFs are not contained in licensee’s current licensing basis, they cannot be time-limited aging analyses and thereby a prerequisite to license renewal; CLI-10-17, 72 NRC 1 (2010)

conservatism in use of Green’s function to determine CUF related to metal fatigue in the recirculation nozzle is discussed; LBP-08-12, 68 NRC 5 (2008)

if applicant’s metal fatigue analyses on Class I components do not comply with the ASME Code and do not provide reasonable assurance as required by 10 C.F.R. 54.21(c)(1) and 54.29(a), then a license renewal cannot be issued; LBP-08-25, 68 NRC 763 (2008)

## SUBJECT INDEX

- if CUF environmental metal fatigue analysis produces a value of greater than unity, then the analysis indicates that the component would be likely to develop metal fatigue cracks that might affect their function during the 20-year license renewal period of extended operation, and thus requires an aging management program; LBP-09-9, 70 NRC 41 (2009)
- in evaluating metal fatigue, a component's CUF is the fundamental parameter used to determine whether it will likely develop cracks during the license renewal period and thus is subject to an aging management plan; LBP-08-13, 68 NRC 43 (2008)
- license renewal applicant who chooses to rely upon an existing time-limited aging analysis may demonstrate compliance with 10 C.F.R. 54.21(c)(1)(i) by showing that the existing CUF calculations remain valid because the number of assumed transients would not be exceeded during the period of extended operation; CLI-10-17, 72 NRC 1 (2010)
- metal fatigue that a particular component experiences during plant operation is quantified using this method; CLI-10-17, 72 NRC 1 (2010)
- new contention on the adequacy of consideration of the dissolved oxygen factor in the cumulative usage factor environmental analysis and use of inappropriate heat transfer equations was previously litigated and resolved and thus is not admissible; LBP-09-9, 70 NRC 41 (2009)
- the standard review plan presents one acceptable methodology for calculating the environmentally adjusted cumulative usage factor; CLI-10-17, 72 NRC 1 (2010)
- use of a simplified Green's function methodology for the environmentally adjusted CUF metal fatigue analyses for the core spray and reactor recirculation outlet nozzles is inconsistent with the ASME Code and thus cannot serve as the analysis-of-record and does not satisfy the requirements of 10 C.F.R. 54.21(c)(1) or 54.29(a); LBP-08-25, 68 NRC 763 (2008)
- CURRENT LICENSING BASIS**
- a license renewal applicant seeking to satisfy aging management requirements by reliance upon existing time-limited aging analyses in its CLB would rely on 10 C.F.R. 54.21(c)(1)(i) or (ii); CLI-10-17, 72 NRC 1 (2010)
- any challenge to an NRC Staff decision to grant an exemption from a 1-hour barrier to a 24/30-minute barrier is a direct challenge to the current licensing basis and unrelated to the effects of plant aging and the license renewal application; LBP-08-13, 68 NRC 43 (2008)
- because environmentally adjusted cumulative usage factors are not contained in licensee's CLB, they cannot be time-limited aging analyses and thereby a prerequisite to license renewal; CLI-10-17, 72 NRC 1 (2010)
- challenges to a licensee's current compliance with its CLB or other operational requirements may be raised via a section 2.206 petition; LBP-07-17, 66 NRC 327 (2007)
- challenges to the CLB are outside the scope of a license renewal proceeding; LBP-10-15, 72 NRC 257 (2010)
- CLB represents an evolving set of requirements and commitments for a specific plant that are modified as necessary over the life of a plant to ensure continuation of an adequate level of safety; LBP-08-25, 68 NRC 763 (2008)
- compliance with the CLB is mandatory unless the licensing basis is properly changed or the licensee is formally excused by the NRC from compliance; LBP-06-16, 63 NRC 737 (2006)
- contentions pertaining to issues dealing with the current operating license, including the Updated Final Safety Analysis Report, are not within the scope of license renewal review; LBP-08-13, 68 NRC 43 (2008)
- during the license renewal term, the current licensing basis incorporates the CLB for the current license, including all licensee commitments, plus any new commitments to monitor, manage, and correct age-related degradation unique to license renewal; LBP-08-25, 68 NRC 763 (2008)
- each nuclear power plant has a plant-specific licensing basis that must be maintained during the renewal term in the same manner and to the same extent as during the original licensing term; CLI-10-14, 71 NRC 449 (2010)
- intervenor may not challenge a licensee's CLB in a license renewal proceeding; LBP-07-17, 66 NRC 327 (2007)
- issues relating to a plant's CLB are ordinarily beyond the scope of a license renewal review because those issues already are monitored, reviewed, and commonly resolved as needed by ongoing regulatory oversight; CLI-06-24, 64 NRC 111 (2006); LBP-06-22, 64 NRC 229 (2006)

## SUBJECT INDEX

it is unnecessary or inappropriate to throw open the full gamut of provisions in a plant's current licensing basis to re-analysis during the license renewal review; LBP-07-4, 65 NRC 281 (2007)

licensee's discretionary use of testing and assessment criteria that are more conservative than those in the CLB does not transform the former criteria into part of the CLB; LBP-07-17, 66 NRC 327 (2007)

licensee's written commitments that are docketed and in effect constitute part of the CLB, which is the set of NRC requirements applicable to a specific plant; LBP-06-16, 63 NRC 737 (2006); LBP-07-17, 66 NRC 327 (2007)

NRC has the authority and responsibility to supplement or to amend conditions to the current licensing basis of an existing operating license at the time of license renewal if deemed necessary to protect the environment; LBP-10-13, 71 NRC 673 (2010)

the Commission's ongoing regulatory process, which includes inspection and enforcement activities, seeks to ensure a licensee's current compliance with the CLB; LBP-07-17, 66 NRC 327 (2007)

the licensing basis for a nuclear power plant during the renewal term consists of the CLB together with new commitments to monitor, manage, and correct age-related degradation unique to license renewal; LBP-08-25, 68 NRC 763 (2008)

the portion of the CLB that can be affected by the detrimental effects of aging is limited to the design bases aspects of the CLB; LBP-10-15, 72 NRC 257 (2010)

this set of NRC requirements includes regulations, orders, technical specifications, and license conditions applicable to a specific plant as well as licensee's written, docketed commitments for ensuring compliance with applicable NRC requirements and the plant-specific design basis; CLI-10-14, 71 NRC 449 (2010); LBP-10-13, 71 NRC 673 (2010)

### DAMAGES

See Compensatory Damages

### DEADLINES

a 10-day deadline from the date of the hearing notice is reasonable for filing requests for access to safeguards information or sensitive, unclassified, nonsafeguards information; CLI-09-4, 69 NRC 80 (2009)

a contention based on new information will be considered timely if it is filed within 30 days of the availability of the new information; CLI-10-18, 72 NRC 56 (2010); LBP-09-22, 70 NRC 640 (2009); LBP-09-29, 70 NRC 1028 (2009); LBP-10-14, 72 NRC 101 (2010)

a filing that was 3 days late, which the board characterized as not excessively late, was accepted based on findings that intervenor offered a reasonable explanation for the delay and the delay did not prejudice any of the other parties; LBP-10-21, 72 NRC 616 (2010)

a party at risk of filing out of time can request an extension, doing so well before the time specified expires; LBP-10-21, 72 NRC 616 (2010)

a specific rule may be established by a licensing board in the initial scheduling order for filing new contentions; LBP-07-15, 66 NRC 261 (2007)

agency notices must provide at least 15 days before the opportunity for a hearing is forfeited unless a shorter period is reasonable; LBP-09-20, 70 NRC 565 (2009)

all parties, except NRC Staff, shall make mandatory disclosures within 45 days of the issuance of the licensing board order admitting contentions; CLI-10-4, 71 NRC 56 (2010)

although NRC's rules of practice regarding motions do not provide for reply pleadings, the board presumes that for a reply to be timely it would have to be filed within 7 days of the date of service of the response it is intended to address; LBP-09-22, 70 NRC 640 (2009)

although participants generally must comply with the schedule established by the presiding officer, they might sometimes be unable to meet established deadlines; LBP-10-21, 72 NRC 616 (2010)

amicus briefs must be filed by the same deadline as the brief of the party whose side the amicus brief supports, unless the Commission provides otherwise; CLI-08-22, 68 NRC 355 (2008)

an answer supporting or opposing a motion for summary disposition or other dispositive motion shall be filed within 20 days after service of the motion; LBP-09-22, 70 NRC 640 (2009)

arguments on a separate matter, which petitioner adopts in a motion for reconsideration but could have made earlier, do not reset the clock for purposes of calculating timeliness; CLI-09-8, 69 NRC 317 (2009)

because of apparent electronic complications and the lack of a challenge to intervenors' reply document as late, the board treats a late filing as a valid reply; LBP-10-9, 71 NRC 493 (2010)

## SUBJECT INDEX

COL applicants must submit a decommissioning report containing a certification that the funding assurance will be provided no later than 30 days after the NRC publishes notice in the *Federal Register* of its scheduled date for initial fuel loading; LBP-09-21, 70 NRC 581 (2009)

Commission rules in 10 C.F.R. 2.311(d) set a 10-day limit for appealing the selection of a particular hearing procedure because an appeal cannot wait until a board issues a decision on the merits of a contention; CLI-09-7, 69 NRC 235 (2009)

contentions must be filed with the original petition within 60 days of notice of the proceeding in the *Federal Register*, unless a longer period is therein specified, an extension is granted, or the contentions meet certain criteria for late-filed or new contentions based on information that is available only at a later time; LBP-07-4, 65 NRC 281 (2007); LBP-09-17, 70 NRC 311 (2009)

counsel's alleged unfamiliarity with the agency's rules of practice or counsel's asserted busy schedule are not satisfactory explanations for late filings; LBP-10-21, 72 NRC 616 (2010)

decommissioning plans are not required until the applicant files a post-shutdown decommissioning activities report, which is not due until 2 years before permanent cessation of operation; LBP-09-21, 70 NRC 581 (2009)

decommissioning plans must be submitted to the NRC within 12 months of notifying the NRC that the license has expired, licensee has decided to permanently cease principal activities at the site, or no principal activities under the license have been conducted for 24 months at the site or in any separate building or outdoor area that contains residual radioactivity; LBP-06-6, 63 NRC 167 (2006)

difficulties in coordinating action among volunteers and large public interest organizations and the challenge of simultaneously preparing for an environmental scoping meeting while drafting contentions does not constitute good cause necessary to justify an extension of the deadline to file hearing requests or petitions to intervene; CLI-09-4, 69 NRC 80 (2009)

dispositive motions may be filed 20 days after the occurrence or circumstance from which the motion arises, rather than the 10-day time frame, provided that the moving party commences sincere efforts to contact and consult all other parties within 10 days of the occurrence or circumstance, and the accompanying certification so states; LBP-09-22, 70 NRC 640 (2009)

final decommissioning financial assurance documents must be submitted to the NRC 30 days after the notification in the *Federal Register* pursuant to section 52.103(a) that licensee has set a date to load fuel; LBP-09-15, 70 NRC 198 (2009)

for an order issued under 10 C.F.R. 2.202, the time for filing a hearing request runs from the date of the order, not the date of publication of the order in the *Federal Register*; LBP-09-20, 70 NRC 565 (2009)

for filing new contentions, boards have generally established a deadline of 30 days to be timely after the receipt of new information; LBP-08-12, 68 NRC 5 (2008); LBP-09-17, 70 NRC 311 (2009); LBP-10-17, 72 NRC 501 (2010)

given the significant effort involved in identifying new information, assembling the required expertise, and then drafting a contention that satisfies section 2.309(f)(1), it would be inappropriate to impose the very short 10-day rule on the filing of new contentions; LBP-06-14, 63 NRC 568 (2006)

if, within 60 days after pertinent information that would support the framing of a contention first becomes available, intervenors submit a particularized and otherwise admissible contention regarding the construction of the facility, then the contention will be deemed timely without the need to satisfy the balancing test for late-filing requirements; CLI-09-2, 69 NRC 55 (2009)

in the event of some 11th-hour unforeseen development, a party may tender a document belatedly, but the tender must be accompanied by a motion for leave to file out-of-time which satisfactorily explains not only the reason for the lateness, but also why a motion for an extension of time could not have been seasonably submitted; CLI-10-26, 72 NRC 474 (2010)

in the interest of efficient case management and prompt resolution of adjudications, the Commission has generally enforced the 10-day deadline for appeals strictly, excusing it only in unavoidable and extreme circumstances; CLI-10-26, 72 NRC 474 (2010)

in uncontested cases, boards are expected to issue their final initial decisions generally within 4 to 6 months of the Staff's safety evaluation report and final environmental impact statement issuances; CLI-06-20, 64 NRC 15 (2006)

initial disclosures must be made within 30 days of the order granting a request for hearing, which is typically at least 18-24 months before the evidentiary hearing begins; LBP-09-30, 70 NRC 1039 (2009)

## SUBJECT INDEX

late-filed contentions based on the safety evaluation report and any necessary National Environmental Policy Act document should be filed within 30 days of the issuance of those documents; LBP-09-27, 70 NRC 992 (2009)

licensee must submit a decommissioning plan within 12 months of permanent cessation of its authorized activity; LBP-08-4, 67 NRC 105 (2008)

motions are to be filed within 10 days of the event or circumstance from which they arise; CLI-06-2, 63 NRC 9 (2006); LBP-10-23, 72 NRC 692 (2010)

motions for reconsideration must be filed within 10 days of the action for which reconsideration is requested; CLI-10-9, 71 NRC 245 (2010)

motions to compel or challenges regarding the adequacy of any mandatory disclosure or hearing file, redactions, or the validity of any claim that a document is privileged or protected shall be filed within 10 days after the occurrence or circumstance from which the motion arises; LBP-09-22, 70 NRC 640 (2009)

no later than 20 days after service of materials, the parties and the NRC Staff shall file their written responses, rebuttal testimony with supporting affidavits, and rebuttal exhibits, on a contention-by-contention basis; LBP-09-22, 70 NRC 640 (2009)

no later than 30 days after service of materials, all parties and NRC Staff shall file proposed questions for the board to consider propounding to the direct or rebuttal witnesses; LBP-09-22, 70 NRC 640 (2009)

no later than 30 days after service of materials, all parties shall file any motions or requests to permit that party to conduct cross-examination of a specified witness or witnesses, together with the associated cross-examination plans; LBP-09-22, 70 NRC 640 (2009)

no later than 30 days before the commencement of the hearing at which an issue is to be presented, all parties other than the NRC Staff shall make the required pretrial disclosures; CLI-10-4, 71 NRC 56 (2010)

participant filing out of time must offer a satisfactory explanation for its lateness, including, if necessary, an account as to why a request for extension could not have been filed beforehand; LBP-10-21, 72 NRC 616 (2010)

parties are expected to file motions for extensions of time so that they are received by NRC well before the time specified expires; CLI-10-26, 72 NRC 474 (2010)

requests for an extension of time should generally be in writing and should be received by the board well before the time specified expires; LBP-10-21, 72 NRC 616 (2010)

strict enforcement of deadlines furthers the dual interests of efficient case management and prompt resolution of adjudications; LBP-10-21, 72 NRC 616 (2010)

the 30-day hearing petition and contention-filing deadlines set forth in this section have been modified for the high-level waste proceeding; CLI-08-25, 68 NRC 497 (2008)

the Commission or presiding officer may extend a time limit upon a showing of good cause; CLI-09-4, 69 NRC 80 (2009)

the fact that a party may have other obligations does not relieve that party of its hearing obligations; CLI-10-26, 72 NRC 474 (2010)

the newness of a deadline, along with petitioners' companion requests for additional resources to support their requests for such safeguards information justify a 10-day extension to request access to the information; CLI-09-4, 69 NRC 80 (2009)

thirty days is a reasonable limit for fulfilling the timing requirement of 10 C.F.R. 2.309(f)(2)(iii) because of the significant effort involved in identifying new information, assembling the required expertise, and then drafting a contention that satisfies 10 C.F.R. 2.309(f)(1); LBP-09-27, 70 NRC 992 (2009)

to be considered timely, a document must be submitted to the E-Filing system for docketing and service by 11:59 p.m. Eastern Time; LBP-08-16, 68 NRC 361 (2008)

twenty days in which to request a hearing is the minimum required by the agency's regulations for orders issued under 10 C.F.R. 2.202(a); LBP-09-20, 70 NRC 565 (2009)

unfamiliarity with NRC's Rules of Practice is not sufficient excuse for late filings, particularly where the order that is being challenged expressly advised petitioner of his appellate rights and of the time within which those rights had to be exercised; CLI-10-26, 72 NRC 474 (2010)

## SUBJECT INDEX

unless a deadline has been specified in the scheduling order for the proceeding, the determination of timeliness is subject to a reasonableness standard that depends on the facts and circumstances of each situation; LBP-10-24, 72 NRC 720 (2010)

when issuing an order modifying a license, the agency is required to inform the licensee or any other person adversely affected by the order of his or her right, within 20 days of the date of the order, or such other time as may be specified in the order, to demand a hearing; LBP-09-20, 70 NRC 565 (2009)

within 25 days after service of a motion and proposed contention, any other party may file an answer responding to all elements of the motion and contention, and within 7 days of service of the answer, the movant may file a reply; LBP-09-22, 70 NRC 640 (2009)

within 30 days of the board's ruling admitting contentions, the parties must automatically make certain mandatory disclosures; LBP-09-22, 70 NRC 640 (2009)

See also Extension of Time; Time Limits

### DECISION ON THE MERITS

the board did not make an impermissible merits ruling by observing that a contention was supported by the affidavit of an expert; CLI-10-2, 71 NRC 27 (2010)

### DECISIONS

although the Atomic Safety and Licensing Appeal Board was disbanded in 1991, its decisions still carry precedential value; CLI-09-2, 69 NRC 55 (2009)

an agency or commission must articulate with clarity and precision its findings and the reasons for its decisions; LBP-08-22, 68 NRC 590 (2008)

appeals of an initial decision or partial initial decision of the presiding officer are permitted in the high-level waste repository proceeding; CLI-10-10, 71 NRC 281 (2010)

See also Initial Decisions; Licensing Board Decisions; Partial Initial Decisions; Record of Decision

### DECOMMISSIONING

a memorandum of understanding is adequate to demonstrate the plausibility of applicant's deconversion strategy; LBP-06-15, 63 NRC 591 (2006)

a plausible strategy for private conversion of depleted uranium tails does not mean a definite or certain strategy, to include completion of all necessary contractual arrangements, but it must represent more than mere speculation; LBP-06-15, 63 NRC 591 (2006)

a preclosure safety analysis must be performed for the high-level waste repository and it must demonstrate, among other things, that the requirements of 10 C.F.R. 63.111(a) are met; CLI-09-14, 69 NRC 580 (2009)

after completion of decommissioning, neither licensee nor the NRC retains any continuing obligation or jurisdiction, respectively, with respect to a site, unless new information shows that the Part 20 criteria were not met and the residual radioactivity remaining on the site could result in a significant threat to public health and safety; CLI-09-1, 69 NRC 1 (2009)

an operating license cannot be terminated, in effect, until all spent fuel and high-level waste has been removed from the site; LBP-09-17, 70 NRC 311 (2009)

approval of an alternate schedule for submission of a decommissioning plan hinges upon a demonstration that prosecution of the alternative schedule as proposed by the licensee is necessary to the effective conduct of decommissioning operations; LBP-08-4, 67 NRC 105 (2008)

claims related to the decommissioning of the facility are not currently ripe for review and are outside the scope of a combined license proceeding; LBP-09-16, 70 NRC 227 (2009)

"decommission" means to remove a facility or site safely from service and reduce residual radioactivity to a level that permits release of the property for unrestricted use and termination of the license or release of the property under restricted conditions and termination of the license; LBP-09-15, 70 NRC 198 (2009)

if after public notice and review the NRC approves the decommissioning plan, licensee has 60 years to complete decommissioning; LBP-09-17, 70 NRC 311 (2009)

leach rate testing protocol for slag and baghouse dust piles is discussed; CLI-09-1, 69 NRC 1 (2009)

section 40.42(d) of 10 C.F.R. is written in terms of releasing buildings or areas in accordance with NRC criteria; CLI-09-1, 69 NRC 1 (2009)

transfer of depleted uranium from enrichment operations to DOE for deconversion and disposal constitutes a plausible strategy for dispositioning; LBP-06-15, 63 NRC 591 (2006)

## SUBJECT INDEX

until decommissioning is completed, licensee must limit actions to those related to decommissioning and control access to restricted areas until they are suitable for release; CLI-09-1, 69 NRC 1 (2009)

utilities must dispose of greater-than-Class-C waste before they can decommission reactor sites; CLI-10-2, 71 NRC 27 (2010)

when a nuclear power plant ceases operations, the owner must apply for a license to terminate, which cannot be granted until the NRC is satisfied that the plant has been properly dismantled and decommissioned so that residual radiation meets established rules and that no spent fuel or high-level wastes remains onsite; LBP-09-21, 70 NRC 581 (2009)

whether a site is suitable for unrestricted or restricted release, the license is terminated upon the completion of decommissioning; CLI-09-1, 69 NRC 1 (2009)

with respect to possession, a Part 40 license continues in effect after expiration until decommissioning is completed; CLI-09-1, 69 NRC 1 (2009)

### DECOMMISSIONING COSTS

a finding that a particular strategy is plausible is a necessary precursor to a finding that a cost estimate is documented and reasonable; LBP-06-15, 63 NRC 591 (2006)

a provision for ALARA determinations allows the use of cost as a factor for determining what level of remediation is cost-effective below the standards, but is not allowed by the New Jersey Agreement State program; CLI-10-8, 71 NRC 142 (2010)

applicant is not required, as a basis for its initial decommissioning funding cost estimate, to make projections or otherwise speculate about what events may or may not occur in the distant future; LBP-06-15, 63 NRC 591 (2006)

applicant may provide estimates for each of the elements of its decommissioning funding plan by obtaining estimates of the actual cost of providing a service from experienced third parties; LBP-06-15, 63 NRC 591 (2006)

applicant must demonstrate a "plausible strategy" for dispositioning depleted uranium waste to provide a foundation upon which to build reasonable cost estimates for various elements related to ultimate decommissioning of the proposed facility; LBP-06-15, 63 NRC 591 (2006)

contention disputing the cost estimate for decommissioning is an indirect challenge to 10 C.F.R. 50.75(c) and therefore inadmissible; LBP-09-16, 70 NRC 227 (2009)

contentions that concern greater-than-Class-C waste, seek to require a change to the decommissioning cost estimate, or constitute a challenge to Table S-3 of 10 C.F.R. 51.51 are inadmissible; LBP-09-16, 70 NRC 227 (2009)

cost of constructing and operating a deconversion facility may be based on prior experience with a similar facility, but such estimates must include the entirety of expected costs to the applicant or a third party by, for example, providing a thorough analysis such as would typically be developed and used for any new project; LBP-06-15, 63 NRC 591 (2006)

cost of implementation of a particular strategy has no bearing upon whether any particular strategy is technically feasible; LBP-06-15, 63 NRC 591 (2006)

DOE cost estimates represent an arm's-length, third-party estimate of the cost of doing business, albeit in an instance when the party offering the estimate is statutorily bound to provide that service; LBP-06-15, 63 NRC 591 (2006)

in estimating labor costs for its financial assurance plan relative to its proposed uranium mining operation, applicant is entitled to draw upon its prior experience in that field as a basis for its cost estimates; LBP-06-15, 63 NRC 591 (2006)

neither an intervenor nor an applicant/licensee nor the NRC has the authority to challenge or direct DOE's estimates of the fees it will charge to a uranium enrichment facility that requests DOE to disposition its depleted uranium waste; LBP-06-15, 63 NRC 591 (2006)

NUREG-1757 sets forth the minimum criteria that a cost estimate must meet before the Staff can find it acceptable; LBP-06-15, 63 NRC 591 (2006)

Staff reviews the financial assurance mechanisms specified in an applicant's decommissioning funding plan to determine whether the proposed mechanisms are acceptable and to ensure that the certification specifies the correct amount of financial assurance and attests compliance with the appropriate regulatory requirements; LBP-06-15, 63 NRC 591 (2006)

to provide a reliable estimate of the costs of deconverting depleted uranium from enrichment operations, applicant can follow one of two paths; LBP-06-15, 63 NRC 591 (2006)

## SUBJECT INDEX

- triennial adjustments are intended to account for changes in a licensee's cost estimates regardless of the cause, and to ensure that adequate financial assurance is provided by the licensee at any given time; LBP-06-15, 63 NRC 591 (2006)
- whether an applicant has presented a plausible strategy, although related to disposition costs, is an inquiry distinct from and precedent to the question of the adequacy of an applicant's dispositioning cost estimates; LBP-06-15, 63 NRC 591 (2006)
- DECOMMISSIONING FUNDING**
- a board can only decide whether or not a current funding proposal fulfills NRC requirements; LBP-09-18, 70 NRC 385 (2009)
  - a board's analysis of decommissioning cost estimates should be tailored to the specifics of the proceeding; CLI-06-22, 64 NRC 37 (2006)
  - a board's examination of licensee's decommissioning cost estimates for reliability is consistent with its obligation to verify whether the estimates provided reasonable assurance for decommissioning funding; CLI-06-22, 64 NRC 37 (2006)
  - a combined license applicant must obtain the financial instrument and submit a copy to the Commission as provided in 10 C.F.R. 50.75(e)(3); LBP-09-15, 70 NRC 198 (2009)
  - a combined license application must provide the information required by 10 C.F.R. 50.75(e)(1)(iii)(B) if applicant plans to use a parent company guarantee; LBP-09-15, 70 NRC 198 (2009); LBP-09-18, 70 NRC 385 (2009)
  - a decommissioning plan must address economic considerations, and a contention that seeks to raise issues in that sphere must include references to specific portions of the plan that the petitioner disputes; LBP-07-5, 65 NRC 341 (2007)
  - a parent-company guarantee of funds for decommissioning costs based on a financial test may be used if the guarantee and test are as contained in 10 C.F.R. Part 30, Appendix A; LBP-09-15, 70 NRC 198 (2009)
  - a surety bond must be funded in an amount greater than or equal to the decommissioning cost estimate set forth in the licensee's decommissioning funding plan; LBP-06-17, 63 NRC 747 (2006)
  - acceptable methods include a sinking fund, prepayment of the entire decommissioning amount, and a surety method, insurance, or other guarantee method; LBP-09-15, 70 NRC 198 (2009)
  - applicant is permitted to choose a single method or a combination of methods to demonstrate financial assurance; LBP-09-4, 69 NRC 170 (2009)
  - applicant is required to establish a surety arrangement that ensures sufficient funds will be available for decommissioning and decontamination of an NRC-licensed source materials site; LBP-08-24, 68 NRC 691 (2008)
  - applicant may choose one or more of the funding methods provided in 10 C.F.R. 50.75(e); LBP-09-18, 70 NRC 385 (2009)
  - applicant may provide financial assurance by prepayment of funds into a segregated account prior to the start of facility operations, a surety method, insurance, or other guarantee method, or annual deposits into a segregated account coupled with a surety method or insurance, whereby the surety value decreases over time by the amount accrued in the segregated account; LBP-06-17, 63 NRC 747 (2006)
  - applicant, 2 years before and 1 year before the scheduled date for the initial fuel loading, shall submit a report to NRC containing a certification updating the financial information, including a copy of the financial instrument to be used; LBP-09-18, 70 NRC 385 (2009)
  - at the time the combined license application is submitted, it must identify the method of decommissioning funding assurance that the applicant proposes to use and to show that the method complies with any applicable financial test; LBP-09-15, 70 NRC 198 (2009); LBP-09-18, 70 NRC 385 (2009)
  - because the requirement of 10 C.F.R. 50.75(b)(3) applies to the amount of financial assurance specified in the decommissioning report, it is readily apparent that the report must explain how that requirement will be fulfilled; LBP-09-15, 70 NRC 198 (2009)
  - calculations for surety bonds are to be estimated to the extent possible, and based on the applicant's experience with generally accepted industry practices including research and development at the site or previous operating experience in the case of a license renewal; LBP-08-24, 68 NRC 691 (2008)
  - combined license applicants must submit a decommissioning report containing a certification that the funding assurance will be provided no later than 30 days after the NRC publishes notice in the *Federal*

## SUBJECT INDEX

*Register* of its scheduled date for initial fuel loading; LBP-09-15, 70 NRC 198 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-09-21, 70 NRC 581 (2009)

cost estimates provided relative to the DOE "plausible strategy" are sufficiently reliable to provide the basis for an initial estimate of the portion of decommissioning funding associated with disposition of depleted uranium waste; LBP-06-15, 63 NRC 591 (2006)

decommissioning rules are designed to minimize the administrative effort of licensees and the Commission and to provide reasonable assurance that funds will be available to carry out decommissioning in a manner that protects public health and safety; LBP-09-21, 70 NRC 581 (2009)

holder of a combined license must begin filing biannual reports on the status of decommissioning funding once the Commission has made a finding that all acceptance criteria in the license have been met; LBP-09-15, 70 NRC 198 (2009)

if licensee changes its method of decommissioning funding assurance, the new method will also have to pass any applicable financial test; LBP-09-15, 70 NRC 198 (2009)

it is beyond licensing board authority to require applicant to choose a particular method of decommissioning funding; LBP-09-4, 69 NRC 170 (2009); LBP-09-15, 70 NRC 198 (2009)

neither market capitalization nor share price are variables to be used in the financial test for decommissioning funding assurance; LBP-09-15, 70 NRC 198 (2009)

NRC will defer to state economic regulators where decommissioning funding is assured by the fact that any shortfall in decommissioning funds will be provided by ratepayers pursuant to state law; LBP-09-21, 70 NRC 581 (2009)

obtaining an estimate from an experienced third-party vendor is not the only way for an applicant to demonstrate that its cost estimate is documented and reasonable; CLI-06-22, 64 NRC 37 (2006)

petitioners' claim that applicant must pursue the prepayment method for decommissioning conflicts with the NRC guidance and rules and so is outside the permissible scope of a combined license proceeding; LBP-09-21, 70 NRC 581 (2009)

regulations and guidance documents fail to state when proof of applicant's financial assurance for decommissioning funding is required; LBP-09-4, 69 NRC 170 (2009)

surety bonds must be directly payable to an acceptable standby trust that will be used to fund decommissioning if the licensee defaults on its decommissioning obligation; LBP-06-17, 63 NRC 747 (2006)

surety bonds must either be open-ended or written for a specified term subject to automatic renewal, and must specify that the full face value will be automatically paid to the NRC prior to expiration if the licensee does not provide an acceptable mechanism within a specified period of time; LBP-06-17, 63 NRC 747 (2006)

surety bonds must remain in effect until license termination; LBP-06-17, 63 NRC 747 (2006)

the amount of financial assurance must be adjusted annually, using a rate calculated pursuant to 10 C.F.R. 50.75(c)(2); LBP-09-15, 70 NRC 198 (2009)

the contention that applicant cannot pass a financial test because the parent company is already committed to providing funding for the decommissioning of another site is an impermissible challenge to NRC regulations; LBP-09-18, 70 NRC 385 (2009)

the fact that the Commission included language deferring the obligation that would otherwise apply to combined license applicants in 10 C.F.R. 50.75(b)(4), but included no equivalent provision in section 50.75(b)(3), confirms that the Commission did not intend to defer the requirement of section 50.75(b)(3) until after the license is issued; LBP-09-15, 70 NRC 198 (2009)

the financial test for a parent company guarantee is a material issue because the Staff must decide whether the test is satisfied in order to grant the combined license; LBP-09-15, 70 NRC 198 (2009)

the requirement that the designated amount of financial assurance be covered by an acceptable method arises concurrently with the requirement that the applicant submit a decommissioning report to NRC; LBP-09-15, 70 NRC 198 (2009)

the requirements of 10 C.F.R. 50.75 are intended to ensure that entities who construct and operate a nuclear power plant will have sufficient funds at the end of the operational life of the plant to complete the decommissioning of the plant; LBP-09-15, 70 NRC 198 (2009)

the unavailability of funding for decommissioning adequate to achieve unrestricted release of a site is not one of the conditions specified in 10 C.F.R. 20.1403(a); CLI-09-1, 69 NRC 1 (2009)

## SUBJECT INDEX

there is no provision that requires an applicant or licensee to choose one form of decommissioning assurance over another; LBP-09-4, 69 NRC 170 (2009)  
without an exemption, a uranium enrichment facility applicant is required to fully fund all of its estimated decommissioning costs at the time of licensing; LBP-07-6, 65 NRC 429 (2007)

### DECOMMISSIONING FUNDING PLANS

a DFP ensures that an applicant has considered the decommissioning activities that may be required at the proposed facility over time, has presented a credible, site-specific cost estimate for conducting those activities, and has provided the NRC with financial assurance to cover those estimated costs should a third party have to take responsibility for facility decommissioning; LBP-06-15, 63 NRC 591 (2006)  
a DFP must contain a cost estimate for decommissioning and a description of the method of assuring funds for decommissioning, including means for adjusting cost estimates and associated funding levels periodically over the life of the facility, at least triennially; LBP-06-15, 63 NRC 591 (2006)  
a surety arrangement is necessary as a prerequisite to operating, not as a prerequisite to licensing; LBP-10-16, 72 NRC 361 (2010)  
an applicant seeking a license to construct and operate a uranium enrichment facility must submit a proposed DFP with its license application; LBP-06-15, 63 NRC 591 (2006)  
applicant can rely on public statements of market participants regarding plans to close old enrichment facilities or open new ones; LBP-06-15, 63 NRC 591 (2006)  
applicant for a uranium enrichment facility is required to provide NRC Staff with a site-specific estimate of the costs for decommissioning the facility, and a description and certification of the means by which funds for decommissioning will be assured; LBP-06-17, 63 NRC 747 (2006)  
applicant must adjust its cost estimates and associated financial assurance levels at least once every 3 years; LBP-06-17, 63 NRC 747 (2006)  
applicant must establish a surety arrangement that ensures sufficient funds will be available for decommissioning and decontamination of an NRC-licensed source materials site; LBP-10-16, 72 NRC 361 (2010)  
applicant must submit a certification that financial assurance for decommissioning the facility has been provided in an amount equal to the decommissioning cost estimate, as well as a signed original or appropriate duplicate of the funding instrument whereby the applicant will provide financial assurance; LBP-06-15, 63 NRC 591 (2006)  
decommissioning funding assurance is the process through which a combined license applicant assures the NRC that funds will be available to decommission a site or facility; LBP-09-15, 70 NRC 198 (2009)  
financial assurance may be provided for decommissioning in the case of a private applicant by prepayment into a segregated account prior to start of facility operations, a surety or other guarantee method, or by annual deposits into an external sinking fund coupled with a surety method whereby the surety value decreases over time by the amount accrued in the sinking fund; LBP-06-15, 63 NRC 591 (2006)  
funding for financial assurance for decommissioning must be covered by prepayment, an external sinking fund, or a surety method, insurance, or other guarantee including a parent company guarantee; LBP-09-18, 70 NRC 385 (2009)  
initial cost estimates must encompass foreseeable activities associated with decommissioning, including radioactive waste disposal, and must present a reasonably accurate estimate of the direct and indirect costs involved in decommissioning under routine facility conditions; LBP-06-15, 63 NRC 591 (2006)  
licensing boards are not to be involved simply in "formalistic" redrafting of plans; LBP-06-15, 63 NRC 591 (2006)  
surety arrangements are matters appropriately addressed after issuance of the license, and even after completion of a hearing; LBP-10-16, 72 NRC 361 (2010)  
the decommissioning funding required for the most costly component, disposition of depleted uranium tails, is predicated on transferring DU to DOE, which is a plausible strategy allowed by statute; LBP-07-6, 65 NRC 429 (2007)  
the parent company guarantee is based on a financial test and may only be used if the guarantee and test are as contained in Appendix A to 10 C.F.R. Part 30; LBP-09-18, 70 NRC 385 (2009)  
the purpose of the financial assurance requirement is to provide reasonable assurance that adequate funds will be available, through appropriate mechanisms, for facility decommissioning should a licensee be unable or unwilling to complete decommissioning; LBP-06-17, 63 NRC 747 (2006)

## SUBJECT INDEX

the purpose of the triennial adjustment of cost estimates is to help ensure funding for decommissioning will not become inadequate as a result of changing disposal prices or other factors; LBP-06-17, 63 NRC 747 (2006)

### DECOMMISSIONING PLANS

a DP must include an updated, detailed cost estimate for decommissioning, a comparison of that estimate with the amount of funds presently set aside for decommissioning, and a plan for assuring the availability of adequate funds to complete decommissioning activities; LBP-06-15, 63 NRC 591 (2006)

a site characterization must include sufficient information so that it can effectively track pathways for significant offsite contamination and estimate the quantity of those pathways; LBP-08-4, 67 NRC 105 (2008)

a site characterization plan should provide sufficient information to allow the NRC to determine the extent and range of expected radioactive contamination; LBP-08-4, 67 NRC 105 (2008)

an adequate site characterization must be included; LBP-08-4, 67 NRC 105 (2008)

an alternate schedule for the submittal of a decommissioning plan should be approved if it is necessary to the effective conduct of decommissioning operations, presents no undue risk from radiation, and is otherwise in the public interest; LBP-08-4, 67 NRC 105 (2008)

application for approval of an alternate schedule for the submission of a decommissioning plan for a site containing expended depleted uranium munitions is approved; LBP-08-4, 67 NRC 105 (2008)

at least one financial assurance mechanism, including supporting documentation, must be specified, and the Staff will again review it for adequacy; LBP-06-15, 63 NRC 591 (2006)

because the requirement of 10 C.F.R. 50.75(b)(3) applies to the amount of financial assurance specified in the decommissioning report, it is readily apparent that the report must explain how that requirement will be fulfilled; LBP-09-15, 70 NRC 198 (2009)

description of the conditions of the site or separate building or outdoor area must be sufficient to evaluate the acceptability of the plan; LBP-08-4, 67 NRC 105 (2008)

despite lack of compliance with various agency NUREGs, a decommissioning plan is lawful because it acknowledges the fiscal realities of the licensee's bankruptcy and is consistent with the mandate that the plan be completed as soon as practicable and adequately protect the health and safety of workers and the public; LBP-08-4, 67 NRC 105 (2008)

filing of a petition for alternative soil remediation standards is permitted as long as the resulting dose would not exceed 15 mrem per year; CLI-10-8, 71 NRC 142 (2010)

if licensee perceives a difficulty in meeting the deadline for submission of a revised decommissioning plan, it may request an extension of time from the Agreement State; CLI-10-8, 71 NRC 142 (2010)

licensee must provide written notification to NRC Staff within 60 days and either begin decommissioning of the site or submit a decommissioning plan to the Staff within 12 months of the notification; LBP-08-4, 67 NRC 105 (2008); LBP-08-8, 67 NRC 409 (2008)

licensee's plan would have to show that the maximum annual dose to any person is as low as is reasonably achievable below 15 mrem; CLI-10-8, 71 NRC 142 (2010)

licensees are required to submit plans to the NRC if required by license condition or if the procedures and activities necessary to carry out decommissioning have not been previously approved by the Commission and these procedures could increase potential health and safety impacts to workers or to the public; LBP-06-6, 63 NRC 167 (2006)

plans are not required until the applicant files a post-shutdown decommissioning activities report, which is not due until 2 years before permanent cessation of operation; LBP-09-21, 70 NRC 581 (2009)

plans must be submitted to the NRC within 12 months of notifying the NRC that the license has expired, licensee has decided to permanently cease principal activities at the site, or no principal activities under the license have been conducted for 24 months at the site or in any separate building or outdoor area that contains residual radioactivity; LBP-06-6, 63 NRC 167 (2006)

substantial delay in both the submittal and approval of a plan might involve a violation of 10 C.F.R. 40.42; LBP-08-8, 67 NRC 409 (2008)

the board finds that the biota sampling component of the field sampling plan is sufficient to meet the criteria for a 5-year alternate schedule for submission of a decommissioning plan; LBP-08-4, 67 NRC 105 (2008)

the fact that the Commission included language deferring the obligation that would otherwise apply to combined license applicants in 10 C.F.R. 50.75(b)(4), but included no equivalent provision in section

## SUBJECT INDEX

- 50.75(b)(3), confirms that the Commission did not intend to defer the requirement of section 50.75(b)(3) until after the license is issued; LBP-09-15, 70 NRC 198 (2009)
- there are no requirements regarding chemical toxicity, the general harm that unexploded ordnance might pose, or even ecological contamination, except as these issues affect radioactivity levels and exposure to humans; LBP-08-4, 67 NRC 105 (2008)
- there is no requirement that the field sampling plan describe the collection of information needed for the decommissioning plan's environmental assessment or environmental impact statement; LBP-08-4, 67 NRC 105 (2008)
- to be granted, an alternate schedule for submission of a decommissioning plan must be necessary to the effective conduct of decommissioning operations; LBP-07-7, 65 NRC 507 (2007)
- under certain conditions, the Commission may approve an alternative schedule for the submittal of a plan; LBP-06-6, 63 NRC 167 (2006)
- when licensee permanently ceases site activities, it must notify NRC in writing of that development and, within 12 months thereof, submit a decommissioning plan; LBP-08-4, 67 NRC 105 (2008)
- with respect to an adequate site characterization, it is reasonable to interpret the regulations as requiring decommissioning plan submissions to contain the type of information discussed in the NUREG-1700 acceptance criteria; LBP-08-4, 67 NRC 105 (2008)
- DECOMMISSIONING PROCEEDINGS**
- standing was found for an organization representing three members living in close proximity to a decommissioning site, who expressed concern that depleted uranium materials could affect a waterway abutting the property of two members; CLI-10-20, 72 NRC 185 (2010)
- where the proximity presumption did not apply, petitioner who commuted past the entrance of a plant once or twice a week was found to have standing; CLI-10-7, 71 NRC 133 (2010)
- DEFENSE-IN-DEPTH POLICY**
- protection against a highly unlikely loss-of-coolant accident has long been an essential part of the defense-in-depth concept used by the nuclear power industry and the AEC to ensure the safety of nuclear power plants; LBP-08-12, 68 NRC 5 (2008)
- DEFERRAL OF HEARING**
- given the extended history of a proceeding and the nature of the license amendment sought, it can scarcely be thought that the deferral of a hearing to await the completion of the technical review might of itself adversely impact the public interest; LBP-06-6, 63 NRC 167 (2006)
- it is appropriate to defer issues concerning the effects of short-term damage to the environment and the irretrievable commitment of resources to the construction permit or combined license stage; CLI-07-14, 65 NRC 216 (2007)
- the fact that petitioner's motion to defer a hearing to abide the completion of the Staff's technical review is unopposed can be taken as reflecting an implicit unanimous recognition that the fruits of the technical review might have a significant impact upon what issues might require exploration at a hearing; LBP-06-6, 63 NRC 167 (2006)
- See also Abeyance of Proceeding
- DEFERRAL OF RULING**
- because deferral of the consideration of the balance of petitioner's contentions might prejudice parties' legitimate interests, they will be subject to the filing of a timely motion for reconsideration; LBP-07-5, 65 NRC 341 (2007)
- contention admissibility rulings may be deferred in the interest of the most economical use of board resources; LBP-07-8, 65 NRC 531 (2007)
- the Commission does not endorse deferring the consideration of proposed contentions because prompt consideration of contentions promotes the efficient and complete development of the record while conserving resources; CLI-07-20, 65 NRC 499 (2007)
- when critical information has been submitted to the NRC under a claim of confidentiality and was not available to petitioners when framing their issues, it is appropriate to defer ruling on the admissibility of an issue until the petitioner has had an opportunity to review this information and submit a properly documented issue; CLI-07-18, 65 NRC 399 (2007)

## SUBJECT INDEX

### DEFERRED STATUS

- a facility can be reactivated from deferred status so that construction can begin again, which includes providing 120 days' notice to the Staff before restarting construction activities; LBP-10-7, 71 NRC 391 (2010)
- if a construction permit holder wishes to discontinue construction activities at a facility but continue to have its 10 C.F.R. Part 50 construction authorization remain effective, it can do so under the terms of the 1987 Commission Policy Statement on Deferred Plants; LBP-10-7, 71 NRC 391 (2010)
- the 1987 Commission Policy Statement on Deferred Plants sets forth the process under which a plant could be placed in a terminated status pending withdrawal of the CP, as well as procedures and requirements for reactivating the facility from terminated status; LBP-10-7, 71 NRC 391 (2010)

### DEFINITIONS

- a "claim" is an assertion, statement, or implication; LBP-09-30, 70 NRC 1039 (2009)
- a "contention" is simply a point or argument asserted or advanced by any party; LBP-09-30, 70 NRC 1039 (2009)
- a "contention of omission" is one that claims the application fails to contain information on a relevant matter as required by law and the supporting reasons for the petitioner's belief; LBP-09-16, 70 NRC 227 (2009); LBP-09-27, 70 NRC 992 (2009)
- a "deliberately ignorant defendant" is one who was aware of the high probability of a critical fact, but deliberately ignored that probability; LBP-09-24, 70 NRC 676 (2009)
- a "federally recognized Indian tribe" is one that is included on the Bureau of Indian Affairs' list of federally recognized Indian tribes published in the *Federal Register*; LBP-09-13, 70 NRC 168 (2009)
- a "negligent defendant" is one who should have had similar suspicions but, in fact, did not; LBP-09-24, 70 NRC 676 (2009)
- a "reckless defendant" is one who merely knew of a substantial and unjustifiable risk that his conduct was criminal; LBP-09-24, 70 NRC 676 (2009)
- a "land disposal facility" includes any land, building, and structures, and equipment that are intended to be used for the disposal of radioactive wastes, but does not include a geologic repository; LBP-06-8, 63 NRC 241 (2006)
- a "material issue" is one in which resolution of the dispute would make a difference in the outcome of the licensing proceeding; LBP-06-10, 63 NRC 314 (2006)
- a "near-surface disposal facility" is a land disposal facility in which radioactive waste is disposed of in or within the upper 30 meters of the earth's surface; LBP-06-8, 63 NRC 241 (2006)
- "ALARA" is defined as every reasonable effort to maintain exposures to radiation as far below the dose limits in Part 20 as is practical consistent with the purpose for which the licensed activity is undertaken; CLI-10-8, 71 NRC 142 (2010)
- "amplify" as in reply briefs means to enlarge, expand, or extend (a statement or other expression of idea in words) by addition of detail or illustration or by logical development; LBP-08-6, 67 NRC 241 (2008)
- an alternative is "reasonable" if it is both feasible (possible, viable) and nonspeculative; LBP-10-10, 71 NRC 529 (2010)
- an early site permit focuses on the suitability of a proposed site, and is defined as Commission approval for a site or sites for one or more nuclear power facilities; LBP-08-15, 68 NRC 294 (2008)
- an early site permit is a partial construction permit, whose issuance does not authorize an applicant to construct nuclear power reactors; LBP-08-15, 68 NRC 294 (2008)
- an organization, like an individual, is considered a "person"; CLI-07-18, 65 NRC 399 (2007)
- "authority" is defined as a legal writing taken as definitive or decisive, especially a judicial or administrative decision cited as a precedent, or a source, such as a statute, case, or treatise, cited in support of a legal argument; LBP-10-21, 72 NRC 616 (2010)
- "background radiation" is defined as naturally occurring radioactive material, including radon (except as a decay product of source or special nuclear material); LBP-06-1, 63 NRC 41 (2006)
- "categorical exclusion" encompasses actions that do not individually or cumulatively have a significant effect on the human environment and therefore neither an environmental assessment nor an environmental impact statement is required; CLI-10-18, 72 NRC 56 (2010)
- "collateral estoppel" is a form of issue preclusion that prevents the relitigation of issues of law or fact that have been finally adjudicated by a tribunal of competent jurisdiction in a proceeding involving the same parties or their privies; LBP-09-24, 70 NRC 676 (2009)

## SUBJECT INDEX

- “construction” does not include site exploration, clearing, grading, or installation of environmental mitigation measures, erection of fences and other access control measures, excavation, erection of support buildings for use in connection with construction, building of service facilities, and procurement or offsite fabrication of facility components; LBP-09-19, 70 NRC 433 (2009)
- “constructive knowledge” is knowledge of facts sufficient to prompt an inquiry that would have uncovered misrepresentations and is not actual knowledge; LBP-09-24, 70 NRC 676 (2009)
- “coordination” refers to the electric power utilities’ practice of interchanging power and sharing responsibility for building new generating facilities to achieve economic benefits unattainable by an individual utility acting alone; CLI-06-2, 63 NRC 9 (2006)
- “coordination services markets” are for the exchange of surplus electric power between utilities on a nonfirm basis and the joint and coordinated operation by utilities of their systems of generation and distribution, all with the purpose of achieving maximum efficiency and economies in their overall power supply operations; CLI-06-2, 63 NRC 9 (2006)
- “cumulative impact” is the effect on the environment that results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions; LBP-09-7, 69 NRC 613 (2009); LBP-09-16, 70 NRC 227 (2009)
- “current licensing basis” is the set of NRC requirements that includes regulations, orders, technical specifications, and license conditions applicable to a specific plant as well as licensee’s written, docketed commitments for ensuring compliance with applicable NRC requirements and the plant-specific design basis; CLI-10-14, 71 NRC 449 (2010); LBP-08-25, 68 NRC 763 (2008)
- “decommission” means to remove a facility or site safely from service and reduce residual radioactivity to a level that permits release of the property for unrestricted use and termination of the license or release of the property under restricted conditions and termination of the license; LBP-09-15, 70 NRC 198 (2009)
- “deliberate misconduct” refers to an intentional act or omission that the person knows would cause a licensee to be in violation of any rule; LBP-09-24, 70 NRC 676 (2009)
- “design basis events” are those conditions of normal operation, including anticipated operational occurrences, design basis accidents, external events, and natural phenomena for which the plant must be designed; LBP-09-26, 70 NRC 939 (2009)
- “details” has a pejorative connotation, i.e., that intervenors or the board are asking for minutiae or matters that relate to minute points, small and subordinate parts, or minor parts; LBP-10-20, 72 NRC 571 (2010)
- “direct environmental impacts” are those caused by the federal action, and occurring at the same time and place as that action; LBP-09-7, 69 NRC 613 (2009); LBP-09-19, 70 NRC 433 (2009)
- “direct transfers” entail a change to operating and/or possession authority; CLI-08-19, 68 NRC 251 (2008)
- “distribution” refers generally to the transport of electricity by local distribution companies to the end users of the electricity (e.g., homes, shops, office buildings, factories); CLI-06-2, 63 NRC 9 (2006)
- “document” as used in 10 C.F.R. 2.336 includes computer models and associated electronic inputs, outputs, data, and software; LBP-10-23, 72 NRC 692 (2010)
- “document” as used in 10 C.F.R. 2.336 is not limited to paper documents and it refers to information stored on any medium or form, including electronically stored information; LBP-10-23, 72 NRC 692 (2010)
- “documentary material” includes any information upon which a party, potential party, or interested governmental participant intends to rely; LBP-08-1, 67 NRC 37 (2008)
- “emergency action levels” are the criteria used to determine the notifications that need to be made to federal, state, and local authorities and to determine the appropriate protective responses to a particular set of emergency conditions; LBP-09-19, 70 NRC 433 (2009)
- “exhibits” is a term that is reserved for evidentiary exhibits at later stages in an adjudication process; LBP-08-10, 67 NRC 450 (2008)
- “extended power uprate” usually requires significant modifications to major plant equipment, and may be for power level increases as high as 20%; CLI-08-17, 68 NRC 231 (2008)
- federal “undertakings” are defined as any project, activity, or program funded in whole or in part under the direct or indirect jurisdiction of a federal agency, including those requiring a federal permit, license, or approval; CLI-09-12, 69 NRC 535 (2009)

## SUBJECT INDEX

for purposes of NPDES permits, effluent is defined as liquid waste that is discharged into a river, lake, or other body of water, and it includes heat; CLI-07-16, 65 NRC 371 (2007)

“forfeit” means something surrendered as punishment for a crime, offense, error, or breach of contract; CLI-10-6, 71 NRC 113 (2010)

in implementing the National Environmental Policy Act, NRC uses the definitions provided in Council on Environmental Quality regulations; LBP-09-7, 69 NRC 613 (2009)

in the absence of a statutory definition, courts normally define a term by its ordinary meaning; LBP-10-24, 72 NRC 720 (2010)

in the context of appropriately defining terms and reconciling concepts such as “reasonable,” “feasible,” and “reasonably available,” a problem for agencies is that even the term “alternatives” is not self-defining; LBP-10-10, 71 NRC 529 (2010)

in the high-level waste repository proceeding, “potential party,” means DOE, the NRC Staff, the State of Nevada, and any person or entity that meets the definition of “party,” “potential party,” or “interested governmental participant” LBP-08-10, 67 NRC 450 (2008)

“Indian tribe” is an Indian or Alaska Native tribe, band, nation, pueblo, village, or community that the Secretary of the Interior acknowledges to exist as an Indian tribe pursuant to the Federally Recognized Indian Tribe List Act of 1994; LBP-09-13, 70 NRC 168 (2009)

“indirect environmental impacts” are caused by the action at a later time or more distant place, yet are still reasonably foreseeable; LBP-09-7, 69 NRC 613 (2009); LBP-09-19, 70 NRC 433 (2009)

“indirect transfers” involve corporate restructuring or reorganizations which leave the licensee itself intact as a corporate entity and therefore involve no application for a new operating license; CLI-08-19, 68 NRC 251 (2008)

“injury in fact” is defined as an invasion of a legally protected interest that is concrete and particularized and actual or imminent rather than conjectural or hypothetical; LBP-09-13, 70 NRC 168 (2009); LBP-10-16, 72 NRC 361 (2010)

irradiator types are described; CLI-08-3, 67 NRC 151 (2008)

“justiciable controversy” is defined; LBP-08-6, 67 NRC 241 (2008)

“means” is defined; LBP-10-20, 72 NRC 571 (2010)

“measurement uncertainty recapture power uprate” typically involves a power level increase of less than 2%, achieved by enhanced techniques for calculating reactor power; CLI-08-17, 68 NRC 231 (2008)

“member of the public” is any individual except when that individual is receiving an occupational dose; LBP-10-22, 72 NRC 661 (2010)

“naturally occurring radioactive material” consists of materials that contain primordial radioisotopes (e.g., uranium and its progeny) that are present naturally in rocks, soils, water, and minerals, and which are not regulated by the Commission; LBP-06-1, 63 NRC 41 (2006)

“notice pleading” is a broad standard requiring only a short and plain statement of the claim; LBP-08-26, 68 NRC 905 (2008)

NRC was reasonable in not providing a quantifiable definition for the key regulatory phrase “conservative manner,” given that relevant judgment calls did not lend themselves to rigid statistical definitions; CLI-10-14, 71 NRC 449 (2010)

“performance assessment” is defined as a systematic analysis that quantitatively estimates radiological exposures; LBP-09-6, 69 NRC 367 (2009)

“person” is defined to include government agencies other than the Commission, as well as state and foreign governments; LBP-09-6, 69 NRC 367 (2009)

“potential party” is any person who intends, or may intend, to participate as a party in the proceeding by demonstrating standing and by filing an admissible contention; CLI-09-15, 70 NRC 1 (2009); LBP-09-5, 69 NRC 303 (2009)

“potential party” is defined as any person who has requested, or who may intend to request, a hearing or petition to intervene in a hearing under 10 C.F.R. Part 2, other than hearings conducted under Subparts J and M of 10 C.F.R. Part 2; CLI-10-24, 72 NRC 451 (2010); CLI-10-25, 72 NRC 469 (20); LBP-10-5, 71 NRC 329 (2010)

“prima facie” case is defined as establishment of a legally required rebuttable presumption or a party’s production of enough evidence to allow the fact-trier to infer the fact at issue and rule in the party’s favor; LBP-10-15, 72 NRC 257 (2010)

## SUBJECT INDEX

- “prima facie showing” merely requires the presentation of enough information to allow a board to infer (absent disproof) that special circumstances exist to support a rule waiver; LBP-10-15, 72 NRC 257 (2010)
- “prima facie showing” means that the affidavits supporting a petition for rule waiver must present each element of the case for waiver in a persuasive manner with adequate supporting facts; LBP-10-12, 71 NRC 656 (2010)
- “relevant evidence” means evidence having any tendency to make the existence of any fact that is of consequence to the determination of the action more probable or less probable than it would be without the evidence; LBP-10-23, 72 NRC 692 (2010)
- “repository” is defined as any system licensed by the Commission that is intended to be used for, or may be used for the permanent deep geologic disposal of high-level radioactive waste and spent nuclear fuel; LBP-09-6, 69 NRC 367 (2009)
- “severe accident” is a reactor accident more severe than a design basis accident, and it results in substantial damage to the reactor core, whether or not there are serious offsite consequences; LBP-09-10, 70 NRC 51 (2009); LBP-09-19, 70 NRC 433 (2009)
- “significant” is ordinarily defined “having meaning,” “full of import,” “indicative,” “having or likely to have influence or effect,” “deserving to be considered; LBP-10-24, 72 NRC 720 (2010)
- “standing to sue doctrine” is defined; LBP-08-6, 67 NRC 241 (2008)
- “stretch power uprate” typically results in power level increases up to 7% and generally does not involve major plant modifications; CLI-08-17, 68 NRC 231 (2008)
- “tailings” are the remaining portion of a metal-bearing ore after some or all of such metal, such as uranium, has been extracted; LBP-06-1, 63 NRC 41 (2006)
- “technologically enhanced naturally occurring radioactive material” is any naturally occurring material not subject to regulation under the Atomic Energy Act whose radionuclide concentrations or potential for human exposure have been increased above levels encountered in the natural state by human activities; LBP-06-1, 63 NRC 41 (2006)
- “total effective dose equivalent” is defined as the sum of the deep-dose equivalent (for external exposures) and the committed effective dose equivalent (for internal exposures); LBP-08-4, 67 NRC 105 (2008)
- transients can be, and often are, anticipated operational occurrences which are conditions of normal operation; LBP-07-2, 65 NRC 153 (2007)
- “transmission services” refers to the transport of electricity on the wholesale market to local distribution companies; CLI-06-2, 63 NRC 9 (2006)
- See also Construction of Meaning; Regulations, Interpretation

### DELAY

- an unexplained lapse of several years between the Staff’s completion of a thorough investigation and its initiation of an immediately effective enforcement order may jeopardize both public confidence in government decisionmaking and public protection from asserted safety threats, and may require an explanation if the immediate effectiveness of the order were to be challenged; LBP-06-26, 64 NRC 431 (2006)
- in deciding the ripeness question, it is important to look to whether delayed resolution of issues would foreclose any relief from the present injury suffered by appellees; LBP-09-1, 69 NRC 11 (2009)
- substantial delay in both the submittal and approval of a decommissioning plan might involve a violation of 10 C.F.R. 40.42; LBP-08-8, 67 NRC 409 (2008)
- whether excessive safety design could lead to licensing uncertainty, unnecessary costs, or delays are not issues material to the high-level waste repository construction authorization proceeding; CLI-09-14, 69 NRC 580 (2009)

### DELAY OF PROCEEDING

- an indictment and failure to challenge the immediate effectiveness of an enforcement order count in favor of the government’s stay request because they reduce the likelihood of erroneous deprivation; LBP-06-13, 63 NRC 523 (2006)
- an unsupported and unparticularized assertion that an enforcement proceeding should be delayed to protect DOJ’s pending criminal prosecution does not justify holding NRC’s parallel administrative proceeding in abeyance; LBP-06-13, 63 NRC 523 (2006)

## SUBJECT INDEX

five factors that need to be balanced when deciding whether to delay an enforcement proceeding are length of delay, reason for delay, prejudice to the recipient of the enforcement order, risk of erroneous deprivation, and recipient's assertion of a right to a hearing; CLI-06-12, 63 NRC 495 (2006)

in witness-intensive cases, a proceeding can be held in abeyance only if the Staff can demonstrate an important government interest coupled with factors minimizing the risk of an erroneous deprivation; CLI-06-12, 63 NRC 495 (2006)

indeterminate length of the requested delay weighs against granting an abeyance because of potentially adverse effect on testimony; CLI-06-12, 63 NRC 495 (2006)

it is important to consider which party initiated the civil action and which party is seeking relief from its going forward; LBP-06-13, 63 NRC 523 (2006)

proponent must provide detailed and specific reasons demonstrating some type of cognizable harm would result absent that relief; LBP-06-13, 63 NRC 523 (2006)

the Commission seeks wherever possible to avoid the delays, such as an additional round of pleadings, caused by a petitioner's attempt to backstop elemental deficiencies in its original petition to intervene; CLI-08-19, 68 NRC 251 (2008)

to the extent a new contention will cause delay, it is the price for affording the public the opportunity to litigate questions arising from an applicant's failure to comply with quality assurance requirements; LBP-10-9, 71 NRC 493 (2010)

under the erroneous deprivation factor, a defendant's rejection of a prosecution offer that would have guaranteed him no prison time if he would admit to the acts alleged demonstrates that the defendant has some belief in his innocence; LBP-06-13, 63 NRC 523 (2006)

where the impact of delay is a concern, the desirability of avoiding any further delay in reaching a final merits determination can be a key discretionary factor counseling nonreliance on the collateral estoppel principle even if that doctrine otherwise appeared applicable; LBP-09-24, 70 NRC 676 (2009)

See also Abeyance of Proceeding

### DELIBERATE MISCONDUCT

a conviction based on deliberate ignorance requires a finding that a defendant's action is intentional, premeditated, and fully considered; LBP-09-24, 70 NRC 676 (2009)

a deliberately ignorant defendant is one who was aware of the high probability of a critical fact, but deliberately ignored that probability; LBP-09-24, 70 NRC 676 (2009)

an intentional act or omission that the person knows would cause a licensee to be in violation of any rule is considered deliberate misconduct; LBP-09-24, 70 NRC 676 (2009)

careless disregard in the execution of one's duties does not amount to deliberate misconduct or a violation; LBP-09-24, 70 NRC 676 (2009)

causing inaccurate and incomplete information to be provided to the NRC concerning conditions at a reactor resulted in debarment from licensed activities for 5 years; LBP-09-11, 70 NRC 151 (2009)

constructive knowledge is knowledge of facts sufficient to prompt an inquiry that would have uncovered misrepresentations and is not actual knowledge; LBP-09-24, 70 NRC 676 (2009)

courts have been careful to strictly limit the exercise of summary contempt power to cases in which it was clear that all of the elements of misconduct were personally observed by the judge; LBP-09-24, 70 NRC 676 (2009)

establishing a party's actual knowledge requires showing more than that a party had a suspicion that something was awry; LBP-09-24, 70 NRC 676 (2009)

inquiry into an individual's actual knowledge is entirely factual, requiring examination of the record; LBP-09-24, 70 NRC 676 (2009)

the conclusion that a finding of deliberate ignorance is a proxy for a finding of knowledge is supported by the definition of knowledge in the Model Penal Code, which has guided the Supreme Court in determining the intended scope of the word "knowing" in the criminal context; LBP-09-24, 70 NRC 676 (2009)

the danger of instruction to juries on deliberate ignorance or willful blindness in an inappropriate case is that juries will convict on a basis akin to a standard of negligence; LBP-09-24, 70 NRC 676 (2009)

the "deliberate ignorance" theory is not embraced within the "deliberate misconduct" standard that governs NRC proceedings; LBP-09-24, 70 NRC 676 (2009)

the element of "actual knowledge" must be present to sustain a charge of deliberate misconduct under the NRC's regulations; LBP-09-24, 70 NRC 676 (2009)

## SUBJECT INDEX

- the knowledge component of the deliberate ignorance theory is slightly less than knowledge to a 100% certainty where the prosecutor's case is based on circumstantial evidence that precludes establishing defendant's knowledge to a 100% certainty; LBP-09-24, 70 NRC 676 (2009)
- to prevail in establishing that the accused's actions constituted a violation, Staff must demonstrate by a preponderance of the evidence that the accused had actual knowledge of the information associated with his actions and that he deliberately acted contrary to that knowledge; LBP-09-24, 70 NRC 676 (2009)
- when knowledge of the existence of a particular fact is an element of an offense, such knowledge is established if a person is aware of a high probability of its existence, unless he actually believes that it does not exist; LBP-09-24, 70 NRC 676 (2009)
- where the record in an enforcement proceeding may be devoid of direct evidence to establish knowledge, the Staff may have to build its case upon circumstantial evidence alone; LBP-09-24, 70 NRC 676 (2009)
- with the jury in a parallel criminal case not having been asked to render a special verdict, the general verdict provides the board insufficient guidance from which to determine whether the jury conviction was premised on actual knowledge or on deliberate ignorance; LBP-09-24, 70 NRC 676 (2009)
- DELIBERATIVE PROCESS PRIVILEGE**
- a board has discretion to compel production of a document upon a finding that the need for the evidence outweighs the interests that support the privilege; LBP-06-3, 63 NRC 85 (2006)
- a showing of relevance alone is not sufficient for a party seeking a deliberative process privilege document to demonstrate that its need for the document outweighs the need to protect the document; LBP-06-3, 63 NRC 85 (2006)
- a sufficiently high-ranking person must sign the affidavit asserting the privilege; LBP-06-25, 64 NRC 367 (2006)
- documents that contain the analysis, opinions, and recommendations of NRC Staff members regarding an applicant's response to prior requests for additional information or the formulation of new RALs are deliberative and thus may qualify for the privilege; LBP-06-3, 63 NRC 85 (2006)
- in a proceeding involving the safety of a proposed 20% increase in the power of a nuclear power reactor, the seriousness of the litigation and the issues involved weigh in favor of disclosing deliberative process documents; LBP-06-3, 63 NRC 85 (2006)
- in ruling on the qualified nature of deliberative process privilege, five factors are relevant in balancing the need for the documents against the government's interest in nondisclosure; LBP-06-3, 63 NRC 85 (2006)
- information must be both predecisional and deliberative; LBP-06-3, 63 NRC 85 (2006)
- intra-agency memoranda developed during the decisionmaking process are protected under the Freedom of Information Act; CLI-08-23, 68 NRC 461 (2008)
- NRC Staff communications are factual in nature and are not protected by the deliberative process privilege when the communications summarize the procedural aspects of Staff projects or report on the status of Staff work; LBP-06-3, 63 NRC 85 (2006)
- NRC Staff communications concerning the appropriate wording and scope of a potential license condition are deliberative and thus may qualify for the privilege; LBP-06-3, 63 NRC 85 (2006)
- NRC Staff communications concerning whether a potential license condition should be imposed are deliberative and thus may qualify for the privilege; LBP-06-3, 63 NRC 85 (2006)
- purely factual material is not generally protected, except factual materials too intertwined with deliberative discussions and summaries of factual materials compiled to assist in agency decisionmaking; LBP-06-25, 64 NRC 367 (2006)
- the affidavit asserting the privilege should provide the basis for the withholding and a statement of specific harm, applicable to the circumstances of the case, that would result from disclosure; LBP-06-25, 64 NRC 367 (2006)
- the chilling effect upon frank government discussions can be just as great when the release is limited only to those involved in particular litigation as when the documents are released publicly; LBP-06-25, 64 NRC 367 (2006)
- the fact that deliberative process privilege documents contain important new analyses that are relevant to admitted contentions weighs in favor of their disclosure; LBP-06-3, 63 NRC 85 (2006)
- the general purpose of the privilege is to protect frank agency deliberations from public scrutiny and thus to prevent injury to the quality of agency decisions; LBP-06-25, 64 NRC 367 (2006)

## SUBJECT INDEX

the imminent availability of Staff's authoritative position on a subject that is discussed in deliberative process documents constitutes "other evidence" such that the immediate need for the documents does not outweigh the privilege; LBP-06-3, 63 NRC 85 (2006)

the privilege applies to summaries of information gathered to assist the agency in reaching a "complex" and "significant" policy decision, where the summaries reflect the judgment or opinion of their compiler; CLI-08-23, 68 NRC 461 (2008)

the protected interests are so strong that federal courts and NRC adjudicators are generally unwilling to compel discovery of deliberative materials unless there is a particular and compelling reason for the privilege to be suspended; LBP-06-25, 64 NRC 367 (2006)

to overcome privilege, petitioners have to show that their need for the information outweighs potential harm to the agency from that disclosure; CLI-08-23, 68 NRC 461 (2008)

when NRC Staff is a party in a proceeding and not merely an indifferent bystander to private-party litigation, the role of the government in the litigation weighs in favor of disclosure; LBP-06-3, 63 NRC 85 (2006)

### DEMAND FOR INFORMATION

a DFI is a significant action that should be used only when it is likely that an inadequate response will result in an order or other enforcement action; DD-07-1, 65 NRC 195 (2007)

NRC may issue DFIs to NRC licensees for the purpose of determining whether an order under section 2.202 should be issued, or whether other actions should be taken; DD-07-1, 65 NRC 195 (2007)

petitioner's request that NRC issue a demand for information to licensee regarding vibration levels prior to restart is denied; DD-09-2, 70 NRC 899 (2009)

### DEMAND-SIDE MANAGEMENT

applicant is not required to evaluate energy conservation as an alternative because it is not an alternative to the proposal to build new baseload power generation; LBP-09-10, 70 NRC 51 (2009); LBP-09-21, 70 NRC 581 (2009)

because DSM reduces by a small portion applicant's demand for power, it should be analyzed in this instance as a surrogate for need for power; LBP-10-6, 71 NRC 350 (2010)

impact of proposed energy conservation alternatives regarding demand for energy must be susceptible to a reasonable degree of proof; LBP-10-10, 71 NRC 529 (2010)

the National Environmental Policy Act's rule of reason excludes consideration of demand-side management if the proposed new plant is intended to be a merchant plant, selling power on the open market, because it is not feasible for licensee to engage in demand-side management; CLI-10-21, 72 NRC 197 (2010)

### DEPARTMENT OF ENERGY

at the time it made its initial certification, DOE was required to place on the Licensing Support Network only extant material on which it intended to rely; CLI-08-12, 67 NRC 386 (2008)

contentions that DOE lacks management integrity to operate a high-level waste geologic repository are impermissible challenges to the Nuclear Waste Policy Act and are therefore beyond the scope of the proceeding; CLI-09-14, 69 NRC 580 (2009)

DOE cost estimates represent an arm's-length, third-party estimate of the cost of doing business, albeit in an instance when the party offering the estimate is statutorily bound to provide that service; LBP-06-15, 63 NRC 591 (2006)

DOE is authorized to make, promulgate, issue, rescind, and amend such rules and regulations as may be necessary to carry out the purposes of the Atomic Energy Act; LBP-10-11, 71 NRC 609 (2010)

DOE is not a "person" for purposes of AEA § 11s; CLI-09-14, 69 NRC 580 (2009)

DOE is prohibited from characterizing a second repository site unless Congress has specifically authorized and appropriated funds for such activities; LBP-10-11, 71 NRC 609 (2010)

DOE must accept for disposition depleted uranium from a private uranium enrichment facility upon request of the facility operator or appropriate third party; LBP-06-15, 63 NRC 591 (2006)

DOE must make all of its documentary material available on the Licensing Support Network, and to so certify to the PAPO Board, at least 6 months before it files its application to construct the HLW geologic repository at Yucca Mountain; LBP-08-1, 67 NRC 37 (2008)

DOE will indemnify a uranium enrichment facility licensee against claims arising from nuclear incidents to the extent that licensee cannot obtain commercial insurance at reasonable rates; LBP-07-6, 65 NRC 429 (2007)

## SUBJECT INDEX

DOE's environmental impact statement is not to consider the need for the high-level waste repository, the time of initial availability of a repository, alternative sites to the Yucca Mountain site, or nongeologic alternatives to such site; LBP-10-11, 71 NRC 609 (2010)

during site characterization, DOE may determine that the Yucca Mountain site is unsuitable for development as a repository; LBP-10-11, 71 NRC 609 (2010)

neither an intervenor nor an applicant/licensee (nor seemingly the NRC) has the authority to challenge or direct DOE's estimates of the fees it will charge to a uranium enrichment facility that requests DOE to disposition its depleted uranium waste; CLI-06-22, 64 NRC 37 (2006); LBP-06-15, 63 NRC 591 (2006)

NRC does not owe deference to DOE where DOE's interpretation of NRC's own responsibilities is reflected in nothing more formal than a motion before the board and not, for example, in a formal agency adjudication or notice-and-comment rulemaking; LBP-10-11, 71 NRC 609 (2010)

NRC proceedings are not an appropriate forum to challenge DOE's procurement process, which fall under the jurisdiction of the Government Accountability Office or Court of Federal Claims; CLI-08-11, 67 NRC 379 (2008)

that Congress may have authorized NRC to regulate DOE's disposal of radioactive waste before it enacted the Nuclear Waste Policy Act hardly negates the fact that in the NWSA, Congress specifically directed NRC to issue requirements and criteria for evaluating repository-related applications and, not insignificantly, how to do so; LBP-10-11, 71 NRC 609 (2010)

the Secretary of DOE does not have the discretion to substitute his policy for the one established by Congress that mandates progress toward a merits decision by NRC on a construction permit for the high-level waste repository; LBP-10-11, 71 NRC 609 (2010)

when DOE is before the Commission, a heightened standard applies for the admissibility of integrity contentions beyond what is imposed by 10 C.F.R. 2.309(f)(1); LBP-09-6, 69 NRC 367 (2009)

willful violations of 10 C.F.R. 63.11 and 63.73, among others, are subject to criminal penalties; CLI-08-11, 67 NRC 379 (2008)

**DEPARTMENT OF JUSTICE**

NRC generally defers to DOJ when it seeks a delay in NRC enforcement proceedings pending the conclusion of DOJ's own criminal investigations or proceedings; CLI-06-12, 63 NRC 495 (2006)

the Commission does not lightly second-guess DOJ's views on whether, and how, premature disclosure might affect its criminal prosecutions; CLI-06-19, 64 NRC 9 (2006)

the Commission is generally inclined to accommodate an abeyance request from DOJ as long as it provides at least some showing of potential detrimental effect on its parallel criminal case; CLI-07-6, 65 NRC 112 (2007)

**DEPLETED URANIUM**

a literal reading of 10 C.F.R. 61.55(a)(6) renders DU a Class A waste, but the Part 61 rulemaking did not analyze the uranium enrichment waste stream; CLI-06-15, 63 NRC 687 (2006)

a plausible strategy for private conversion of DU tails does not mean a definite or certain strategy, to include completion of all necessary contractual arrangements, but it must represent more than mere speculation; LBP-06-15, 63 NRC 591 (2006)

although the Army has the burden to protect the public from depleted uranium, that issue is not relevant to a standing inquiry; LBP-10-4, 71 NRC 216 (2010)

an approach for disposition of depleted tails that is consistent with the USEC Privatization Act, such as transfer to DOE for disposal, constitutes a plausible strategy; CLI-10-4, 71 NRC 56 (2010)

an approach that is consistent with the USEC Privatization Act, such as transfer to DOE for disposal, constitutes a plausible strategy for disposition of depleted tails; CLI-09-15, 70 NRC 1 (2009)

application for approval of an alternative schedule for the submission of a decommissioning plan for a site containing expended depleted uranium munitions is approved; LBP-08-4, 67 NRC 105 (2008)

contention alleging that depleted uranium-contaminated bombing plume dust causes health issues in the community is inadmissible because it lacks a supporting statement of the alleged facts or expert opinions; LBP-10-4, 71 NRC 216 (2010)

contention alleging that the Army employs trucks to remove depleted uranium-contaminated soil from its site and dump it in the community is inadmissible; LBP-10-4, 71 NRC 216 (2010)

DOE must accept for dispositioning, DU from a private uranium enrichment facility upon request of the facility operator or appropriate third party; LBP-06-15, 63 NRC 591 (2006)

## SUBJECT INDEX

DU from an enrichment facility is appropriately classified as low-level radioactive waste; CLI-10-4, 71 NRC 56 (2010)

DU is classified as a low-level waste; LBP-07-6, 65 NRC 429 (2007)

DU is classified as Class A waste under current agency regulations; LBP-08-16, 68 NRC 361 (2008)

neither an intervenor nor an applicant/licensee nor the NRC has the authority to challenge or direct

DOE's estimates of the fees it will charge to a uranium enrichment facility that requests DOE to disposition its DU waste; LBP-06-15, 63 NRC 591 (2006)

petitioner's argument that high-explosive munitions could fall onto DU, pulverizing and igniting the DU and generating aerosols that might travel through the air, providing an inhalation pathway for offsite exposure was contradicted by the Army's statement that it does not use high-impact explosives in the area where DU is present; CLI-10-20, 72 NRC 185 (2010)

some near-surface disposal facilities may not be capable of accepting large quantities of depleted uranium from enrichment operations, and dose pathway analyses should be performed on a site-specific basis to ensure compliance with Part 61, Subpart C; LBP-06-8, 63 NRC 241 (2006)

tails from an enrichment facility are appropriately classified as a low-level radioactive waste; CLI-09-15, 70 NRC 1 (2009)

the appropriate state or federal regulatory authority, such as an Agreement State, will conduct any necessary site-specific evaluation to confirm that applicable radiological dose limits and standards for disposal of DU can be met at a particular site; CLI-06-15, 63 NRC 687 (2006)

### DEPOSITIONS

opposing trial or litigation counsel may be deposed only if no other means exist to obtain the information, and the information sought is relevant and nonprivileged, and crucial to the preparation of the case; LBP-06-10, 63 NRC 314 (2006)

### DESIGN

a nuclear power plant must be designed against accidents that are anticipated during the life of the facility; CLI-10-9, 71 NRC 245 (2010)

adequacy of applicant's control room and equipment design for radiological protections, in light of the fact that the reactor is proposed to be located within the EPZ of an existing reactor, is an issue that is appropriate in a combined license or standard design certification proceeding; LBP-09-10, 70 NRC 51 (2009)

before any waste may be received at the high-level waste repository, DOE must update its application with additional information, including, specifically, additional design data obtained during construction; LBP-10-22, 72 NRC 661 (2010)

new facilities must provide for criticality control, including adherence to the double contingency principle; LBP-06-17, 63 NRC 747 (2006)

NRC is given flexibility in determining how best to provide for the use of a system of multiple barriers in the design of the repository; LBP-10-22, 72 NRC 661 (2010)

NRC's licensing regulations must provide for the use of a system of multiple barriers in the design of the high-level waste repository; LBP-10-22, 72 NRC 661 (2010)

section 121 of the Nuclear Waste Policy Act does not require that each barrier provide either wholly independent protection or a specifically quantified amount of protection in the high-level waste repository; LBP-10-22, 72 NRC 661 (2010)

special attention must be given to those items that may significantly influence the final design of the high-level waste repository; LBP-10-22, 72 NRC 661 (2010)

the reactor core and associated coolant, control, and protection systems must be designed with appropriate margin to assure that specified acceptable fuel design limits are not exceeded during any condition of normal operation, including the effects of anticipated operational occurrences; LBP-07-2, 65 NRC 153 (2007)

under the double contingency principle, process designs should incorporate sufficient factors of safety to require at least two unlikely, independent, and concurrent changes in process conditions before a criticality accident is possible; LBP-06-17, 63 NRC 747 (2006)

when reviewing a license application filed by a private applicant, NRC may appropriately accord substantial weight to the preferences of the applicant and/or sponsor and should take into account the needs and goals of the parties involved in the application; CLI-06-10, 63 NRC 451 (2006); LBP-09-7, 69 NRC 613 (2009)

## SUBJECT INDEX

whether excessive safety design could lead to licensing uncertainty, unnecessary costs, or delays are not issues material to the high-level waste repository construction authorization proceeding; CLI-09-14, 69 NRC 580 (2009)

See also Containment Design; Reactor Design

### DESIGN BASIS ACCIDENT

impacts of design basis accidents at spent fuel storage are characterized as small, and so, no site-specific NEPA review is required; CLI-07-8, 65 NRC 124 (2007)

nuclear reactors are required to be designed to withstand certain postulated events or accidents, which result in negligible offsite consequences because the reactor is designed to handle such events; LBP-09-10, 70 NRC 51 (2009)

### DESIGN BASIS EARTHQUAKE

the stability of ISFSI concrete pads holding dry spent fuel storage casks during earthquakes is addressed; DD-07-2, 65 NRC 365 (2007)

### DESIGN BASIS EVENTS

construction permit applications must consider the consequences of design basis events; CLI-10-1, 71 NRC 1 (2010)

design basis event is distinguished from design basis threat; CLI-10-1, 71 NRC 1 (2010); CLI-10-9, 71 NRC 245 (2010)

events that could cause radioactive releases, including aircraft impact events, are required to be analyzed and designed against only if the probability of such events is above one in one million per year; LBP-09-2, 69 NRC 87 (2009)

the agency uses a threshold probability for design basis events of 1 in 10 million for nuclear power plants; LBP-09-26, 70 NRC 939 (2009)

the design basis flood is the magnitude of the flood event that is used to evaluate safety structures, systems, and components important to safety during facility design; LBP-09-25, 70 NRC 867 (2009)

the threshold probability for DBEs should be set at one in a million; LBP-09-17, 70 NRC 311 (2009)

these are defined as those conditions of normal operation, including anticipated operational occurrences, design basis accidents, external events, and natural phenomena for which the plant must be designed; LBP-09-26, 70 NRC 939 (2009)

### DESIGN BASIS THREAT

design basis event is distinguished from design basis threat; CLI-10-1, 71 NRC 1 (2010); CLI-10-9, 71 NRC 245 (2010)

the agency decided not to include the threat of air attacks in the 2007 revision to the design basis threat rule, a decision upheld by the Ninth Circuit; CLI-10-9, 71 NRC 245 (2010)

the DBT rule describes general adversary characteristics that designated NRC licensees, including nuclear power plant licensees, are required to defend against with high assurance; CLI-07-8, 65 NRC 124 (2007)

the need for design features to guard against DBTs is outside the scope of a combined license proceeding because it is the subject of an ongoing rulemaking; LBP-09-2, 69 NRC 87 (2009)

with respect to aircraft crash as an element of the design basis threat, adequate protection against an air threat is assured by the active defenses provided by other federal agencies, together with what reasonably could be expected of licensees; CLI-10-1, 71 NRC 1 (2010)

### DESIGN CERTIFICATION

a board could refer a contention relating to a certified design to the Staff for consideration in the design certification rulemaking and hold that contention in abeyance if the contention is otherwise admissible; LBP-10-21, 72 NRC 616 (2010)

a board erred in referring a contention to the Staff for consideration in conjunction with the design certification rulemaking without first assessing its admissibility; CLI-10-1, 71 NRC 1 (2010)

a contention asserting that a combined license application is incomplete because it incorporates by reference a standard design certification and a pending application for a revision to that certified design is inadmissible; LBP-09-10, 70 NRC 51 (2009)

a license application will not be held in abeyance until the design certification rulemaking is completed; LBP-09-16, 70 NRC 227 (2009); LBP-09-18, 70 NRC 385 (2009)

adequacy of applicant's control room and equipment design for radiological protections, in light of the fact that the reactor is proposed to be located within the EPZ of an existing reactor, is an issue that is

## SUBJECT INDEX

- appropriate in a combined license or standard design certification proceeding; LBP-09-10, 70 NRC 51 (2009)
- all environmental issues concerning severe accident mitigation design alternatives associated with the information in the NRC's environmental assessment for a certified design are considered resolved; LBP-09-19, 70 NRC 433 (2009)
- all nuclear safety and environmental issues concerning severe accident mitigation design alternatives associated with NRC's environmental assessment for the AP1000 design and Appendix 1B of the generic Design Control Document are considered resolved by the Commission; LBP-09-2, 69 NRC 87 (2009)
- an otherwise admissible contention raised in combined license hearing that challenges information in a design certification rulemaking should be referred to the Staff for resolution in the rulemaking and held in abeyance by the licensing board pending the outcome of the rulemaking; CLI-09-4, 69 NRC 80 (2009); CLI-09-8, 69 NRC 317 (2009); LBP-09-3, 69 NRC 139 (2009)
- any contention directed at a design undergoing rulemaking review fails on its face to satisfy the admission requirements because all matters subject of a rulemaking are outside the scope of licensing proceedings; LBP-09-8, 69 NRC 736 (2009)
- applicant for a combined license may, at its own risk, reference in its application a design for which a design certification application has been docketed but not granted; LBP-09-10, 70 NRC 51 (2009); LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-10-9, 71 NRC 493 (2010)
- applicant may, at its own risk, submit a combined license application that does not reference a certified design; CLI-10-1, 71 NRC 1 (2010); LBP-10-17, 72 NRC 501 (2010); LBP-10-20, 72 NRC 571 (2010)
- applicants are required to address severe accident mitigation design alternatives; LBP-09-19, 70 NRC 433 (2009)
- at the combined license stage, applicant may reference both an early site permit and a standard design certification in its application; LBP-09-16, 70 NRC 227 (2009); LBP-09-19, 70 NRC 433 (2009)
- challenge to the SAMDA analysis performed for the AP1000 certified design constitutes an impermissible challenge to NRC regulations; CLI-10-1, 71 NRC 1 (2010)
- challenges to an issue already addressed in the Final Safety Evaluation Report for the ABWR Design Control Document are closed to licensing boards as an impermissible attack on the ABWR certified design; LBP-10-14, 72 NRC 101 (2010)
- challenges to the Commission regulations regarding the design certification process are inadmissible; LBP-09-18, 70 NRC 385 (2009)
- combined license applicants will also have to demonstrate that the site-specific parameters are bounded by the parameters developed for the certified design; LBP-09-2, 69 NRC 87 (2009)
- Commission policy of permitting the conduct of an adjudicatory proceeding on a combined license that references a design certification that the Commission has not approved does not violate the Atomic Energy Act of 1954, 10 C.F.R. Part 52, or judicial decisions; CLI-09-4, 69 NRC 80 (2009)
- design certification rulemaking and individual combined license adjudicatory proceedings may proceed simultaneously, and issues raised in an adjudicatory proceeding that are appropriately addressed in the generic design certification rulemaking are to be referred to the rulemaking for resolution; CLI-09-8, 69 NRC 317 (2009)
- each combined license applicant will have to determine whether it will adopt *in toto* the certified design, or whether it will take exemptions thereto and/or departures therefrom; LBP-09-2, 69 NRC 87 (2009)
- failure to frame a safety concern arising from the interaction of the proposed design certification document amendment with the existing certified standard design and/or a facility-specific provision of the COLA leaves the contention as an inadmissible challenge to the Part 52 regulatory framework; LBP-09-3, 69 NRC 139 (2009)
- generic issues are to be resolved as part of the design certification rulemaking process, and any concerns related to those issues must be addressed in the rulemaking and not within the scope of a combined license proceeding; LBP-09-8, 69 NRC 736 (2009)
- if a contention concerning a certification application that has been docketed but not granted is otherwise admissible under 10 C.F.R. 2.309(f)(1), it might be held in abeyance and referred to the Staff; LBP-09-17, 70 NRC 311 (2009)

## SUBJECT INDEX

- if the combined license application references an early site permit, applicant must demonstrate that the chosen design falls within the parameters specified in the ESP or, on the safety side, request a variance; LBP-09-19, 70 NRC 433 (2009)
- in making the findings required for issuance of a combined license, the Commission shall treat as resolved those matters resolved in connection with the issuance or renewal of a design certification rule; LBP-10-21, 72 NRC 616 (2010)
- incorporation by reference in the combined license application is consistent with NRC rules when an applicant chooses to reference a standard design; CLI-09-8, 69 NRC 317 (2009); LBP-09-2, 69 NRC 87 (2009); LBP-09-8, 69 NRC 736 (2009)
- NRC rules permit the filing of a combined license application during the pendency of a design certification rulemaking; CLI-10-9, 71 NRC 245 (2010)
- “otherwise admissible” has been interpreted to mean a contention that meets the admissibility requirements of 10 C.F.R. 2.309(f)(1) but for the fact that it challenges a yet-to-be-certified reactor design; LBP-10-9, 71 NRC 493 (2010)
- petitioner’s challenge to the one-fire assumption in the AP1000 design constitutes an impermissible challenge to Commission regulations; CLI-10-9, 71 NRC 245 (2010)
- severe accident mitigation design alternative issues are resolved for an application referencing a design control document if the specific site parameters are covered by the site parameters assumed in the DCD SAMDA analysis; LBP-09-19, 70 NRC 433 (2009)
- the appropriate path for any petitioner’s challenges to proposed reactor design revisions is through participation in those rulemaking proceedings, not through a combined license proceeding; LBP-09-2, 69 NRC 87 (2009)
- the Commission generally refuses to modify, rescind, or impose new requirements on reactor design certification information, except through rulemaking; LBP-10-21, 72 NRC 616 (2010)
- the design certification rulemaking and individual COL adjudicatory proceedings may proceed simultaneously, and issues raised in an adjudicatory proceeding that are appropriately addressed in the generic design certification rulemaking are to be referred to the rulemaking for resolution; LBP-10-17, 72 NRC 501 (2010)
- the environmental report associated with each application for a standard design certification must address the costs and benefits of severe accident design mitigation alternatives; LBP-09-10, 70 NRC 51 (2009)
- the process for taking exemptions and departures from a certified design is set forth in 10 C.F.R. Part 52, App. D, § VIII; LBP-09-2, 69 NRC 87 (2009)
- the safety analysis report component of an application for a standard design certification must analyze and address the problem of extremely low probability for accidents that could result in the release of significant quantities of radioactive fission products; LBP-09-10, 70 NRC 51 (2009)
- the SAMDA analysis is part of the design certification application and thus intervenor’s contention constitutes an impermissible challenge to a future rulemaking; CLI-10-9, 71 NRC 245 (2010); LBP-10-10, 71 NRC 529 (2010)
- the universe of potential contentions in a combined license proceeding includes site-specific contentions that do not implicate issues appropriately considered in a design certification rulemaking; CLI-09-8, 69 NRC 317 (2009)
- to the degree that the general precept that a rule, including a design certification, cannot be challenged in an adjudication might be seen as placing such matters outside the scope of the proceeding; LBP-10-21, 72 NRC 616 (2010)
- until the reactor design is certified and the rulemaking proceeding concluded, the design continues to change, creating potentially new safety and environmental concerns; LBP-09-18, 70 NRC 385 (2009)
- DICTA**
- a board’s decision on one of the admission elements does not necessarily render any discussion of the other superfluous because a decision addressing only one of the two items creates the potential for significant delay if that single determination is later overturned on appeal; LBP-07-10, 66 NRC 1 (2007)
- a ruling on standing does not constitute dicta simply because the board also concluded that the petitioner had failed to proffer an admissible contention; LBP-07-10, 66 NRC 1 (2007)

## SUBJECT INDEX

### DIRECTED CERTIFICATION

licensing boards must promptly certify to the Commission all novel legal or policy issues that would benefit from early Commission consideration should such issues arise in this proceeding; CLI-10-4, 71 NRC 56 (2010)

### DISCLOSURE

a board may impose sanctions including dismissal of the specific contentions, dismissal of the adjudication, or dismissal of the application for any continuing unexcused failure to make the required mandatory disclosures; LBP-09-30, 70 NRC 1039 (2009)

a board's determination on a request for access to sensitive unclassified nonsafeguards information is reviewed de novo; CLI-10-24, 72 NRC 451 (2010)

a dispute over the Commission's authority to direct the Department of Energy to disclose classified information to cleared state representatives over DOE's objection as the originating agency is deferred until there is an actual controversy over a specific document request; CLI-08-21, 68 NRC 351 (2008)

a party is excused from producing a document if the document is publicly available and if the party specifies where the document may be found; LBP-10-23, 72 NRC 692 (2010)

a party may comply by merely providing a description by category and location of all documents subject to mandatory disclosure; LBP-10-23, 72 NRC 692 (2010)

all parties, except NRC Staff, shall make mandatory disclosures within 45 days of the issuance of the licensing board order admitting contentions; CLI-09-15, 70 NRC 1 (2009); CLI-10-4, 71 NRC 56 (2010)

although the NRC public website states that SUNSI encompasses a wide variety of categories (e.g., personnel privacy, attorney-client privilege, confidential source), there is no legal basis for sweeping aside the well-established and long-recognized privileges such as the Privacy Act, 5 U.S.C. § 552(a), and the attorney-client privilege; LBP-10-2, 71 NRC 190 (2010)

although the phrase "possession, custody, or control" appears in 10 C.F.R. 2.336(a)(2)(i), 2.704(a)(2), and 2.707(a)(1)), no NRC decision has ever provided guidance as to what constitutes "control"; LBP-10-23, 72 NRC 692 (2010)

an appeal as of right by the NRC Staff is permitted on the question of whether a request for access to sensitive unclassified nonsafeguards information should have been denied in whole or in part; CLI-10-24, 72 NRC 451 (2010)

analysis of a motion to compel the mandatory disclosure of information under 10 C.F.R. 2.336(a) is contingent on six issues; LBP-10-23, 72 NRC 692 (2010)

Anglo-American jurisprudence has long ensured that judicial proceedings will be open to the public; LBP-10-2, 71 NRC 190 (2010)

applicant's claim that computer models should be excused from the mandatory disclosure requirements because they entail proprietary information is rejected; LBP-10-23, 72 NRC 692 (2010)

applicant's "control" of computer models prepared by and in possession of a contractor is illustrated by the fact that if NRC Staff requested these documents, applicant could obtain and provide them; LBP-10-23, 72 NRC 692 (2010)

availability, not possession, custody, or control, is the criterion for the NRC Staff's mandatory disclosure responsibilities; LBP-10-23, 72 NRC 692 (2010)

because of the security-related SUNSI categorization of a Staff guidance document used to assess an application's compliance with NRC rules, the Staff would not have to produce the document but would be required to identify the document as part of its continuing duty of disclosure; CLI-10-24, 72 NRC 451 (2010)

classified information is exempt; LBP-10-2, 71 NRC 190 (2010)

content of a statement that explains an individual's "need to know" safeguards information is described; CLI-09-15, 70 NRC 1 (2009)

contention alleging foreign ownership of applicant, failure to disclose, and various ramifications of such ownership, is found to be admissible; LBP-09-1, 69 NRC 11 (2009)

disclosure of documents under the National Environmental Policy Act is expressly governed by the Freedom of Information Act; CLI-08-5, 67 NRC 174 (2008); CLI-08-8, 67 NRC 193 (2008)

documents are deemed to be within the control of a party if the party has the right to obtain the documents on demand or if it is held by the party's attorney, expert, insurance company, accountant, or agent; LBP-10-23, 72 NRC 692 (2010)

## SUBJECT INDEX

documents containing classified information or safeguards information must be evaluated paragraph by paragraph and those paragraphs containing classified information or SGI are to be redacted and the remaining paragraphs (not containing such sensitive material) are to be made available for disclosure to the public; LBP-10-2, 71 NRC 190 (2010)

documents that qualify as exempt from FOIA disclosure as sensitive unclassified nonsafeguards information are described; LBP-10-2, 71 NRC 190 (2010)

each party to a proceeding must automatically disclose and provide all documents and data compilations in their possession, custody, or control that are relevant to the admitted contentions, without waiting for a party to file a discovery request; LBP-10-23, 72 NRC 692 (2010)

even if a document contains information that is exempt from disclosure, FOIA mandates that any reasonably segregable portion of the record shall be provided to any person requesting such record after deletion of the portions that are exempt; LBP-10-2, 71 NRC 190 (2010)

hearings on alternative terrorist scenario claims could not be conducted in a meaningful way without substantial disclosure of classified and safeguards information on threat assessments and security arrangements and without substantial litigation over their significance; CLI-08-1, 67 NRC 1 (2008); CLI-08-26, 68 NRC 509 (2008)

if a requested document or data compilation is publicly available, then a citation to the document and a description of where it may be publicly obtained are sufficient; LBP-10-23, 72 NRC 692 (2010)

if an expert witness is subsequently selected, or any analysis or other authority is subsequently amended or newly developed, then this information must be promptly disclosed; LBP-09-30, 70 NRC 1039 (2009)

if the burden or expense of the proposed discovery outweighs its likely benefit, disclosure is not required; LBP-10-23, 72 NRC 692 (2010)

in its supervisory capacity, the Commission provides guidance on the "need for SUNSI" analysis, for use in those instances when an access order applies; CLI-10-24, 72 NRC 451 (2010)

interlocutory appeal to the Commission of certain rulings relating to sensitive unclassified nonsafeguards information is authorized; LBP-10-2, 71 NRC 190 (2010)

mandatory disclosure is the only form of discovery allowed in Subpart L proceedings, and all other forms are expressly prohibited; LBP-10-23, 72 NRC 692 (2010)

mandatory disclosures by parties include the disclosure of the name of any person, including any expert, upon whose opinion the party bases its claims and contentions and may rely upon as a witness, and a copy of the analysis or other authority upon which that person bases his or her opinion; LBP-09-22, 70 NRC 640 (2009)

neither legal ownership nor title is required in order for a party to have "possession, custody, or control" of a document; LBP-10-23, 72 NRC 692 (2010)

no later than 30 days before the commencement of the hearing at which an issue is to be presented, all parties other than the NRC Staff shall make the required pretrial disclosures; CLI-10-4, 71 NRC 56 (2010)

NRC need not disclose information if it falls within one of the nine exemptions in the Freedom of Information Act; LBP-08-7, 67 NRC 361 (2008)

NRC records are protected from disclosure under FOIA Exemption 2 to the extent they contain internal analytical guidance, operating rules, or practices, the disclosure of which would aid terrorists or saboteurs seeking to circumvent security measures designed to protect nuclear materials; LBP-08-7, 67 NRC 361 (2008)

once a petition to intervene has been granted, issues involving access to documents for use in the proceeding are governed by NRC discovery rules; CLI-10-24, 72 NRC 451 (2010)

once the requesting party meets its burden of demonstrating a need for a document, the burden is upon the claimant of executive privilege to demonstrate a proper entitlement to exemption from disclosure; LBP-10-2, 71 NRC 190 (2010)

parties and NRC Staff must provide a list of documents otherwise required to be disclosed for which a claim of privilege or protected status is being made, together with sufficient information for assessing the claim of privilege or protected status of the documents; LBP-09-22, 70 NRC 640 (2009)

parties and the NRC Staff have a continuing duty to update their mandatory disclosures; LBP-09-22, 70 NRC 640 (2009)

## SUBJECT INDEX

petitioners or intervenors may request and, where appropriate, obtain, under protective order or other measures, information withheld from the general public for proprietary or security reasons; CLI-10-24, 72 NRC 451 (2010)

petitioners will not be given NEPA-based access to documents exempt from disclosure under FOIA, even under protective measures; CLI-08-5, 67 NRC 174 (2008)

petitioners' request for additional information on redacted portions of the combined license application is denied because the public record indicates the nature of the redacted information; CLI-09-4, 69 NRC 80 (2009)

proposed questions, submitted by the parties, for the board, that were originally filed under seal with the board, will be made public in a separate issuance; LBP-08-4, 67 NRC 105 (2008)

protective orders and in camera proceedings are the customary and favored means of handling disputes that arise in which one party to a proceeding seeks purportedly proprietary information from another; CLI-10-24, 72 NRC 451 (2010)

regarding public disclosure of an agency's NEPA analysis, Congress has established that the environmental impact statement shall be made available to the public as provided by FOIA; LBP-08-7, 67 NRC 361 (2008)

"relevant evidence" means evidence having any tendency to make the existence of any fact that is of consequence to the determination of the action more probable or less probable than it would be without the evidence; LBP-10-23, 72 NRC 692 (2010)

safeguards information qualifies for the exemption from disclosure; LBP-10-2, 71 NRC 190 (2010)

scheduling orders are to include provisions for disclosure of electronically stored information; LBP-09-22, 70 NRC 640 (2009)

Staff's designation of its own material as SUNSI is inconsistent with SUNSI's purported objective of protecting licensee or applicant data; LBP-10-2, 71 NRC 190 (2010)

Staff's disclosure obligations are not tied to the admitted contentions, but rather, it must make available documents that relate to the application and its review as a whole; CLI-10-24, 72 NRC 451 (2010); CLI-10-25, 72 NRC 469 (2010)

the board grants intervenors' motion to compel disclosure of certain groundwater modeling information associated with a combined license application; LBP-10-23, 72 NRC 692 (2010)

the Commission may withhold from public disclosure any information that is exempt under the Freedom of Information Act; CLI-08-26, 68 NRC 509 (2008)

the concept of control extends to situations in which the party has the practical ability to obtain materials in the possession of another, even if the party does not have the legal right to compel the other person or entity to produce the requested materials; LBP-10-23, 72 NRC 692 (2010)

the disclosing party can either provide the other parties with an actual copy of the document or data compilation or can simply describe it and provide it if the other party requests it; LBP-10-23, 72 NRC 692 (2010)

the duty to make all documents available does not apply to records specifically exempted from disclosure by statute; LBP-10-2, 71 NRC 190 (2010)

the relevance standard of 10 C.F.R. 2.336 is more flexible than the relevance standard of Fed. R. Evid. 401; LBP-10-23, 72 NRC 692 (2010)

the scope of the mandatory disclosure obligations under 10 C.F.R. 2.336, which apply to Subpart L proceedings, are wide-reaching; LBP-10-23, 72 NRC 692 (2010)

the Secretary is authorized to establish procedures for obtaining access to sensitive unclassified nonsafeguards information prior to granting intervention in a licensing proceeding; LBP-10-2, 71 NRC 190 (2010)

the Secretary of the Commission will assess initially whether the proposed recipient has shown a need for sensitive unclassified nonsafeguards information or safeguards information; LBP-10-2, 71 NRC 190 (2010)

the showing required for "need" for SUNSI could include, but does not require (nor is it limited to), an explanation that the information will be used as support for a contention; CLI-10-24, 72 NRC 451 (2010)

the term "document" as used in 10 C.F.R. 2.336 includes computer models and associated electronic inputs, outputs, data, and software; LBP-10-23, 72 NRC 692 (2010)

## SUBJECT INDEX

the use of any proprietary information that is produced is strictly limited to the proceeding for which it is produced, and such information must be promptly returned at the close of this proceeding; LBP-10-23, 72 NRC 692 (2010)

to demonstrate a need for SUNSI, intervenors must discuss the basis for a proffered contention and describe why the information available to the intervenors is not sufficient to provide the basis and specificity for a proffered contention; LBP-10-5, 71 NRC 329 (2010)

to overcome deliberative process privilege, petitioners have to show that their need for the information outweighs potential harm to the agency from that disclosure; CLI-08-23, 68 NRC 461 (2008)

to rule that disclosure under 10 C.F.R. 2.336(a)(2)(i) is limited to formal contractual deliverables would encourage applicants to draft consulting contracts to insulate themselves from the obligation to disclose critical computer modeling information; LBP-10-23, 72 NRC 692 (2010)

upon a showing of need, petitioners' request to obtain access to an unredacted application was granted; CLI-10-24, 72 NRC 451 (2010)

when access to documents is disputed in FOIA litigation, the government must submit detailed public affidavits identifying the documents withheld, the FOIA exemptions claimed, and a particularized explanation of why each document falls within the claimed exemption; LBP-08-7, 67 NRC 361 (2008)

withholding from public access an entire document just because it may contain some SUNSI information is not only a misuse of the SUNSI designator, but fails the logic test by excluding the public from access to information that is not security-related; LBP-10-2, 71 NRC 190 (2010)

within 30 days of the board's ruling admitting contentions, the parties must automatically make certain mandatory disclosures; LBP-09-22, 70 NRC 640 (2009)

### DISCOVERY

a board does not need to reach the question of the extent of discovery permissible if no request for any discovery has been made; LBP-08-5, 67 NRC 205 (2008)

a board is to decide the motion to reopen on the information before it and has no authority to engage in discovery in order to supplement the pleadings before it; CLI-08-28, 68 NRC 658 (2008)

a board may impose sanctions including dismissal of the specific contentions, dismissal of the adjudication, or dismissal of the application for any continuing unexcused failure to make the required mandatory disclosures; LBP-09-30, 70 NRC 1039 (2009)

a non-expert witness who was identified as the source of information but who had been removed from applicant's witness list could have been subjected to discovery and compelled to provide testimony before the board; LBP-06-15, 63 NRC 591 (2006)

a privilege that is not claimed is waived; LBP-06-25, 64 NRC 367 (2006)

a showing of relevance alone is not sufficient for a party seeking a deliberative process privilege document to demonstrate that its need for the document outweighs the need to protect the document; LBP-06-3, 63 NRC 85 (2006)

all parties, except NRC Staff, shall make the mandatory disclosures required within 45 days of the issuance of the licensing board order admitting contentions; CLI-09-15, 70 NRC 1 (2009)

allowing discovery or an evidentiary hearing with respect to safety-related issues to proceed before the final safety evaluation report is issued will serve to further the Commission's objective to ensure a fair, prompt, and efficient resolution of contested issues; CLI-09-15, 70 NRC 1 (2009)

although the subject of an NRC enforcement proceeding may attempt to take advantage of his discovery rights in the civil proceeding to obtain information also useful in his criminal proceeding, that is no reason to deny him that discovery because he asserted his Fifth Amendment right not to respond to discovery requests directed to him, even if other procedural consequences might flow from that action; LBP-06-25, 64 NRC 367 (2006)

an assertion that material can be withheld must expressly state the specific privilege being claimed; LBP-06-25, 64 NRC 367 (2006)

analysis of a motion to compel the mandatory disclosure of information under 10 C.F.R. 2.336(a) is contingent on six issues; LBP-10-23, 72 NRC 692 (2010)

applicant may challenge an expert opinion in the disclosure stage, via a motion for summary disposition, if it can show that there is no genuine issue as to any material fact and that it is entitled to a decision as a matter of law; LBP-09-30, 70 NRC 1039 (2009)

## SUBJECT INDEX

civil discovery can lead to perjury in the criminal case, by enabling a defendant to tailor his testimony, and that of his confederates, to jibe with, or to work around, what he learns about the state of the government's knowledge; LBP-06-13, 63 NRC 523 (2006)

Commission's rules and longstanding precedent bar discovery in connection with the preparation of proposed contentions; CLI-08-28, 68 NRC 658 (2008)

deliberative process privilege is a qualified privilege; LBP-06-3, 63 NRC 85 (2006)

deliberative process privilege requires that the information be both predecisional and deliberative; LBP-06-3, 63 NRC 85 (2006)

disclosure of a nonwitness (e.g., an expert that the party consulted, but does not intend to use as a witness) is not required; LBP-09-30, 70 NRC 1039 (2009)

disclosure of documents under the National Environmental Policy Act is expressly governed by the Freedom of Information Act; CLI-08-5, 67 NRC 174 (2008)

disclosure of the name and telephone number of an expert witness, if this information is not known to the party, is not required; LBP-09-30, 70 NRC 1039 (2009)

documents and information exchanged in the mandatory disclosures enter the adjudicatory record only if and when a party proffers the document or information as evidence for the evidentiary hearing; LBP-09-30, 70 NRC 1039 (2009)

each party to a proceeding must automatically disclose and provide all documents and data compilations in their possession, custody, or control that are relevant to the admitted contentions, without waiting for a party to file a discovery request; LBP-10-23, 72 NRC 692 (2010)

for the purpose of developing a motion to reopen the record or to assist a petitioner in the framing of contentions, discovery is not permitted; LBP-08-12, 68 NRC 5 (2008)

Freedom of Information Act litigation is ordinarily resolved on summary disposition without discovery and without evidentiary trials or hearings, and discovery is sparingly used; CLI-08-8, 67 NRC 193 (2008)

if a requested document or data compilation is publicly available, then a citation to the document and a description of where it may be publicly obtained are sufficient; LBP-10-23, 72 NRC 692 (2010)

if, after the initial disclosure, a party subsequently develops or obtains additional information or documents that meet the requirements of this section, then that party must promptly file a supplemental mandatory disclosure; LBP-09-30, 70 NRC 1039 (2009)

if an expert witness has a copy of the analysis or other authority upon which his or her opinion is based, and it is extant and reasonably available to that witness and/or the party, then the mandatory disclosure should include that analysis or other authority; LBP-09-30, 70 NRC 1039 (2009)

if any party attempts to include exhibits that were not disclosed in the mandatory disclosures, thus making it impossible for the other parties to examine the reliability of that information, then the board may prohibit the admission of this new evidence into the record; LBP-09-30, 70 NRC 1039 (2009)

if litigation over a contention brings into play financial or other information that has been designated as nonpublic, petitioners must request that the board issue a protective order that permits access; LBP-08-16, 68 NRC 361 (2008)

if the duty to make disclosures applied only to parties who have claims and contentions, it would create an unintended and invidious asymmetry in mandatory disclosures, which are the only form of discovery available in Subpart L proceedings; LBP-09-30, 70 NRC 1039 (2009)

in a proceeding involving the safety of a proposed 20% increase in the power of a nuclear power reactor, the seriousness of the litigation and the issues involved weigh in favor of disclosing deliberative process documents; LBP-06-3, 63 NRC 85 (2006)

in ruling on the qualified nature of deliberative process privilege, five factors are relevant in balancing the need for the documents against the government's interest in nondisclosure; LBP-06-3, 63 NRC 85 (2006)

initial disclosures must be made within 30 days of the order granting a request for hearing, which is typically at least 18-24 months before the evidentiary hearing begins; LBP-09-30, 70 NRC 1039 (2009)

intervenor's expert is not required to create a written analysis, but only disclose the written analysis or other documentary authority, if any, that exists and is reasonably available at the time of the disclosure; LBP-09-30, 70 NRC 1039 (2009)

it is an abuse of the adjudicatory process to use a motion for summary disposition as a subterfuge for the filing of interrogatories, requests for admission, or other discovery; LBP-06-5, 63 NRC 116 (2006)

## SUBJECT INDEX

it is not a ground for objection to discovery that the information sought will be inadmissible at the hearing if the information sought appears reasonably calculated to lead to the discovery of admissible evidence; LBP-09-30, 70 NRC 1039 (2009); LBP-10-23, 72 NRC 692 (2010)

limited discovery may be allowed in a Freedom of Information Act dispute, but only if absolutely necessary to ensure a complete record and a fair decision; CLI-08-5, 67 NRC 174 (2008)

mandatory disclosure is the only form of discovery allowed in Subpart L proceedings, and all other forms are expressly prohibited; LBP-10-23, 72 NRC 692 (2010)

mandatory disclosures are updated every month; LBP-10-23, 72 NRC 692 (2010)

mandatory disclosures, like all discovery exchanges, cover a vast array of information and documents that are not evidence and need not meet the requirements of admissible evidence; LBP-09-30, 70 NRC 1039 (2009)

mandatory disclosures required by 10 C.F.R. 2.336 consist of an exchange of prescribed information and documents between the litigants, and do not need to be submitted to the board; LBP-09-30, 70 NRC 1039 (2009)

motions to compel or challenges regarding the adequacy of any mandatory disclosure or hearing file, redactions, or the validity of any claim that a document is privileged or protected shall be filed within 10 days after the occurrence or circumstance from which the motion arises; LBP-09-22, 70 NRC 640 (2009)

natural predeposition unease is distinguished from particularized, forceful intimidation involving threats of extra-deposition retaliation that could be communicated as part of the run-up to, or conduct of, the deposition; LBP-06-13, 63 NRC 523 (2006)

parties in NRC adjudications are generally entitled to obtain, through discovery and other pretrial activities, the fullest possible knowledge of the issues and facts before trial; LBP-06-25, 64 NRC 367 (2006)

parties may obtain discovery regarding any nonprivileged matter that is relevant to any party's claim or defense; LBP-10-2, 71 NRC 190 (2010)

parties need not provide discovery of electronically stored information from sources that the party identifies as not reasonably accessible because of undue burden or cost; LBP-09-22, 70 NRC 640 (2009)

privacy interests are defined using FOIA's language but their weight is tempered by the capability in the discovery process of making limited disclosure to a litigant under a protective order instead of public disclosure; LBP-06-25, 64 NRC 367 (2006)

qualified privilege materials may be excluded, depending on the particular circumstances presented; LBP-06-25, 64 NRC 367 (2006)

relevant information need not be admissible at a trial if the discovery appears reasonably calculated to lead to the discovery of admissible evidence; LBP-10-2, 71 NRC 190 (2010)

serious concern about evidence tampering stems from the possibility that the defendant, after learning in a civil proceeding about the nature of government's evidence of his possible crime, would be able to alter evidence in his possession or control to provide a defense to the charges, or to undercut the evidence against him; LBP-06-13, 63 NRC 523 (2006)

sufficient information for assessing the claim of privilege or protected status of documents withheld from discovery must be provided to the requesting party; LBP-06-25, 64 NRC 367 (2006)

tampering is not a concern when the defendant has not been employed at the relevant organization for several years and the government has given no indication as to how the defendant might employ knowledge gained through civil discovery to alter paper documents or electronic files that he has no control over whatsoever and which the government has long-since obtained through its several-years-long investigation; LBP-06-13, 63 NRC 523 (2006)

the disclosing party can either provide the other parties with an actual copy of the document or data compilation or can simply describe it and provide it if the other party requests it; LBP-10-23, 72 NRC 692 (2010)

the Federal Rules of Civil Procedure were amended in 2006 to expressly include electronically stored information; LBP-10-23, 72 NRC 692 (2010)

the greater the interest protected by the privilege, the more compelling the need and the other circumstances must be to overcome it; LBP-06-25, 64 NRC 367 (2006)

## SUBJECT INDEX

the Licensing Support Network functions as a mechanism for early collection of all extant documents that normally would be collected later through traditional discovery; CLI-08-22, 68 NRC 355 (2008)

the mandatory disclosure requirements are not an opportunity to relitigate the admissibility of a contention; LBP-09-30, 70 NRC 1039 (2009)

the "need for SUNSI" inquiry is essentially a relevance inquiry just as a federal court litigant must show that information sought in discovery is relevant to its claims or defenses; CLI-10-24, 72 NRC 451 (2010)

the scope of discovery is broader than the scope of admissible evidence; LBP-10-23, 72 NRC 692 (2010)

the scope of the mandatory disclosure obligations under 10 C.F.R. 2.336, which apply to Subpart L proceedings, is wide-reaching; LBP-10-23, 72 NRC 692 (2010)

the subject of an enforcement order may benefit from more knowledge and perspective about others' roles in an incident because it might help him put his actions in a transactional context that would lessen or eliminate his responsibility for any missteps; LBP-06-25, 64 NRC 367 (2006)

the universal understanding of relevance, applicable to the NRC Staff and others, includes matters that appear reasonably calculated to lead to the discovery of admissible evidence; LBP-06-25, 64 NRC 367 (2006)

to demonstrate a need for SUNSI, intervenors must discuss the basis for a proffered contention and describe why the information available to the intervenors is not sufficient to provide the basis and specificity for a proffered contention; LBP-10-5, 71 NRC 329 (2010)

to the extent applicant may be subject to unreasonable or burdensome discovery requests in the future, it is free to seek relief from the board, which has ample authority to prevent or modify unreasonable discovery demands; CLI-09-6, 69 NRC 128 (2009)

when determining relevance of documents for discovery purposes in NRC proceedings, boards may look to the Federal Rules of Evidence for useful guidance; LBP-10-23, 72 NRC 692 (2010)

where a protective order precludes public disclosure, the strength of the privacy interest diminishes because any threatened harm in releasing the information can be virtually eliminated; LBP-06-25, 64 NRC 367 (2006)

where the privilege and the need may be equally weak, but the privilege can be protected by other means, adjudicators return to the norms of full and open discovery, so that relevancy, not need, becomes the determinative standard; LBP-06-25, 64 NRC 367 (2006)

with a confidential protection order in place, weighing the privacy invasion from public disclosure against a party's need for the materials is no longer appropriate; LBP-06-25, 64 NRC 367 (2006)

**DISCOVERY AGAINST NRC STAFF**

a party seeking to challenge NRC Staff's claim of privilege or protected status may file a motion to compel production of the document; CLI-10-24, 72 NRC 451 (2010)

availability, not possession, custody, or control, is the criterion for the NRC Staff's mandatory disclosure responsibilities; LBP-10-23, 72 NRC 692 (2010)

depositions of opposing trial or litigation counsel are permitted only if no other means exist to obtain the information, and the information sought is relevant and nonprivileged, and crucial to the preparation of the case; LBP-06-10, 63 NRC 314 (2006)

documents that contain the analysis, opinions, and recommendations of NRC Staff members regarding an applicant's response to prior requests for additional information or the formulation of new RAIs are deliberative and thus may qualify for deliberative process privilege; LBP-06-3, 63 NRC 85 (2006)

for documents that are otherwise discoverable, but for which there is a claim of privilege or protected status, NRC Staff must list them and provide sufficient information for assessing their privilege or protected status; CLI-10-24, 72 NRC 451 (2010); CLI-10-25, 72 NRC 469 (2010)

if and when NRC Staff relies on a document, then the Staff itself is also obliged to disclose the document, to the extent it is available; LBP-10-23, 72 NRC 692 (2010)

NRC Staff communications are factual in nature and are not protected by the deliberative process privilege when the communications summarize the procedural aspects of Staff projects or report on the status of Staff work; LBP-06-3, 63 NRC 85 (2006)

NRC Staff communications concerning the appropriate wording and scope of a potential license condition are deliberative and thus may qualify for the deliberative process privilege; LBP-06-3, 63 NRC 85 (2006)

## SUBJECT INDEX

NRC Staff communications concerning whether a potential license condition should be imposed are deliberative and thus may qualify for the deliberative process privilege; LBP-06-3, 63 NRC 85 (2006)

NRC Staff shall comply with discovery requests no later than 30 days after the licensing board order admitting contentions and shall update the information at the same time as the issuance of the safety evaluation report or final environmental impact statement, and, subsequent to the publication of the SER and FEIS, as otherwise required by the Commission's regulations; CLI-09-15, 70 NRC 1 (2009)

parties shall not commence discovery under 10 C.F.R. 2.709 until issuance of the safety evaluation report or environmental impact statement unless the licensing board, in its discretion, finds that commencing discovery before these documents are issued will expedite the hearing without adversely affecting the Staff's ability to complete its evaluation in a timely manner; CLI-07-17, 65 NRC 392 (2007); CLI-10-4, 71 NRC 56 (2010)

Staff's designation of its own material as SUNSI is inconsistent with SUNSI's purported objective of protecting licensee or applicant data; LBP-10-2, 71 NRC 190 (2010)

Staff's disclosure obligations are not tied to the admitted contentions, but rather, it must make available documents that relate to the application and its review as a whole; CLI-10-24, 72 NRC 451 (2010); CLI-10-25, 72 NRC 469 (2010)

the fact that deliberative process privilege documents contain important new analyses that are relevant to admitted contentions weighs in favor of their disclosure; LBP-06-3, 63 NRC 85 (2006)

the imminent availability of Staff's authoritative position on a subject that is discussed in deliberative process documents constitutes "other evidence" such that the immediate need for the documents does not outweigh the deliberative process privilege; LBP-06-3, 63 NRC 85 (2006)

when NRC Staff is a party in a proceeding and not merely an indifferent bystander to private-party litigation, the role of the government in the litigation weighs in favor of disclosure; LBP-06-3, 63 NRC 85 (2006)

**DISMISSAL OF PARTIES**

dismissal due to counsel's malfeasance is a logical extension of the board's disciplinary authority to reprimand, censure, or suspend from a proceeding any party or representative who refuses to comply with its directions; CLI-08-29, 68 NRC 899 (2008)

this sanction falls within the spectrum of sanctions available to the boards to assist in the management of proceedings, although dismissal should be reserved for severe cases; CLI-08-29, 68 NRC 899 (2008)

**DISMISSAL OF PROCEEDING**

it is highly unusual to dispose of a proceeding on the merits, i.e., with prejudice, when in fact the health, safety, and environmental merits of an application have not been reached; LBP-10-11, 71 NRC 609 (2010)

the prospect of a second lawsuit with its expenses and uncertainties or another application does not provide the requisite quantum of legal harm to warrant dismissal of an application with prejudice; LBP-10-11, 71 NRC 609 (2010)

**DISPUTE RESOLUTION**

if the attorney or representative of a party is contacted pursuant to the consultation requirement, then that person (or his or her alternate) must make a sincere effort to make himself or herself available to listen and to respond to the moving party's explanation, and to resolve the factual and legal issues raised in the motion; LBP-09-22, 70 NRC 640 (2009)

it is inconsistent with the dispute avoidance/resolution purposes of NRC regulations, and thus insufficient, for the contacted attorney or representative to fail or refuse to consider the substance of the consultation attempt, or for the party to respond that it takes no position on the motion (or issues) and that it reserves the right to file a response to the motion when it is filed; LBP-09-22, 70 NRC 640 (2009)

motions will be rejected if they do not include certification by the attorney or representative of the moving party that they have made a sincere effort to contact the other parties in this proceeding, to explain to them the factual and legal issues raised in the motion, and to resolve those issues; LBP-09-22, 70 NRC 640 (2009)

to be sincere, movant should contact other parties sufficiently in advance to provide enough time for the possible resolution of the matter or issues in question; LBP-09-22, 70 NRC 640 (2009)

See Administrative Dispute Resolution

## SUBJECT INDEX

### DISQUALIFICATION

- a judge should disqualify himself if he has personal knowledge of disputed evidentiary facts concerning the proceeding; CLI-10-22, 72 NRC 202 (2010)
- an agency official should be disqualified only where a disinterested observer may conclude that the official has in some measure adjudged the facts as well as the law of a particular case in advance of hearing it; CLI-10-17, 72 NRC 1 (2010)
- if a licensing board member declines to grant a party's recusal motion, the motion is referred to the Commission to determine the sufficiency of the grounds alleged; CLI-10-22, 72 NRC 202 (2010)
- that an unreasonable person, focusing on only one aspect of the story, might perceive a risk of bias is irrelevant; CLI-10-22, 72 NRC 202 (2010)
- the Commission could disqualify a party's counsel from participating in an NRC proceeding upon a concrete showing that a conflict of interest or other ethics concern would obstruct its obtaining a full range of necessary safety or environmental information, or would otherwise threaten the integrity of its regulatory process; CLI-08-11, 67 NRC 379 (2008)
- the Commission does not use procedural technicalities to avoid addressing disqualification motions; CLI-10-17, 72 NRC 1 (2010)
- the disqualification standard under 28 U.S.C. § 455 is not directed to administrative judges, but the Commission and its adjudicatory boards have applied it in assessing a motion for disqualification under 10 C.F.R. 2.313, and it provides a helpful framework for such an assessment; CLI-10-22, 72 NRC 202 (2010)
- the mere fact of adverse findings and rulings on the merits does not imply a biased attitude on the board's part; CLI-10-17, 72 NRC 1 (2010)
- the standard for disqualification of a judge under 28 U.S.C. § 455 is whether the reasonable person who knows all the circumstances, would harbor doubts about the judge's impartiality; CLI-10-22, 72 NRC 202 (2010)
- to prevail in a disqualification motion, petitioner first must demonstrate that the purported instances of bias had a substantial impact on the outcome of the proceeding; CLI-10-17, 72 NRC 1 (2010)
- to prevail on a disqualification motion, petitioner must show either a bias against petitioner or its counsel based on matters outside the record or a pervasive bias against petitioner based upon matters in the record; CLI-10-17, 72 NRC 1 (2010)

### DOCKETING

- the decision to docket, and the subsequent handling of an application, is within the discretion of the Staff; LBP-10-17, 72 NRC 501 (2010)
- the Director of the Office of Nuclear Material Safety and Safeguards must determine whether the tendered application is complete and acceptable; CLI-08-20, 68 NRC 272 (2008)

### DOCUMENT PRODUCTION

- a document's availability on the Internet does not authorize its exclusion from the Licensing Support Network; LBP-09-6, 69 NRC 367 (2009)
- a party is excused from producing a document if the document is publicly available and if the party specifies where the document may be found; LBP-10-23, 72 NRC 692 (2010)
- an affirmative demonstration of compliance with the Licensing Support Network requirements is not required in an intervention petition; LBP-09-6, 69 NRC 367 (2009)
- applicant has a duty to continue to supplement documentary material after the initial certification; LBP-08-1, 67 NRC 37 (2008)
- applicant's claim that computer models should be excused from the mandatory disclosure requirements because they entail proprietary information is rejected; LBP-10-23, 72 NRC 692 (2010)
- applicant's "control" of computer models prepared by and in possession of a contractor is illustrated by the fact that if NRC Staff requested these documents, applicant could obtain and provide them; LBP-10-23, 72 NRC 692 (2010)
- documents are deemed to be within the control of a party if the party has the right to obtain the documents on demand or if it is held by the party's attorney, expert, insurance company, accountant, or agent; LBP-10-23, 72 NRC 692 (2010)
- DOE must make all of its documentary material available on the Licensing Support Network, and to so certify to the PAPO Board, at least 6 months before it files its application to construct the HLW geologic repository at Yucca Mountain; LBP-08-1, 67 NRC 37 (2008)

## SUBJECT INDEX

DOE's production of documentary material and certification triggers the duty of other potential parties to make their documentary material available 90 days thereafter; LBP-08-1, 67 NRC 37 (2008); LBP-08-5, 67 NRC 205 (2008)

each party or potential party to the high-level waste proceeding must continue to supplement the production of its documentary material on the Licensing Support Network; LBP-09-6, 69 NRC 367 (2009)

each witness is not required to generate an analysis, but rather must disclose the analysis or other authority upon which the witness bases his or her opinion; LBP-09-30, 70 NRC 1039 (2009)

exclusions to the duty to produce documentary material in the high-level waste proceeding include preliminary drafts, basic licensing documents generated by DOE, and any additional material created after the time of initial certification; LBP-08-1, 67 NRC 37 (2008)

for Subpart G proceedings, each expert witness is required to create, sign, and submit a written expert report; LBP-09-30, 70 NRC 1039 (2009)

if, after the initial disclosure, a party subsequently develops or obtains additional information or documents that meet the requirements of this section, then that party must promptly file a supplemental mandatory disclosure; LBP-09-30, 70 NRC 1039 (2009)

if an expert witness has a copy of the analysis or other authority upon which his or her opinion is based, and it is extant and reasonably available to that witness and/or the party, then the mandatory disclosure should include that analysis or other authority; LBP-09-30, 70 NRC 1039 (2009)

if and when NRC Staff relies on a document, then the Staff itself is also obliged to disclose the document, to the extent it is available; LBP-10-23, 72 NRC 692 (2010)

if petitioner is found not to be in substantial and timely compliance with the LSN requirements, that petitioner may request party status upon a subsequent showing of compliance, but any grant of a request is conditioned on accepting the status of the proceeding at the time of admission; LBP-09-6, 69 NRC 367 (2009)

intervenors' expert is not required to create a written analysis, but only disclose the written analysis or other documentary authority, if any, that exists and is reasonably available at the time of the disclosure; LBP-09-30, 70 NRC 1039 (2009)

it is not a ground for objection that the information sought will be inadmissible at the hearing if the information sought appears reasonably calculated to lead to the discovery of admissible evidence; LBP-09-30, 70 NRC 1039 (2009)

mandatory disclosures, like all discovery exchanges, cover a vast array of information and documents that are not evidence and need not meet the requirements of admissible evidence; LBP-09-30, 70 NRC 1039 (2009)

mandatory disclosures required by 10 C.F.R. 2.336 consist of an exchange of prescribed information and documents between the litigants, and do not need to be submitted to the board; LBP-09-30, 70 NRC 1039 (2009)

neither legal ownership nor title is required in order for a party to have "possession, custody, or control" of a document; LBP-10-23, 72 NRC 692 (2010)

NRC's production-of-documents regulation, 10 C.F.R. 2.707(a)(1) is essentially the same as Fed. R. Civ. P. 34(a)(1); LBP-10-23, 72 NRC 692 (2010)

perfection is not required and any production is bound to have some human mistakes; LBP-09-6, 69 NRC 367 (2009)

petitioner may not be granted party status in the high-level waste proceeding if it cannot demonstrate substantial and timely compliance with the requirements in 10 C.F.R. 2.1003 concerning the availability of documentary material on the Licensing Support Network; LBP-09-6, 69 NRC 367 (2009)

section 2.1009(b) requires certification to the Pre-License Application Presiding Officer that the party or potential party has complied with the implementation procedures of section 2.1009(a)(2) and that to the best of his or her knowledge, the documentary material specified in section 2.1003 has been identified and made electronically available; LBP-09-6, 69 NRC 367 (2009)

the concept of control extends to situations in which the party has the practical ability to obtain materials in the possession of another, even if the party does not have the legal right to compel the other person or entity to produce the requested materials; LBP-10-23, 72 NRC 692 (2010)

the duty to produce all documentary material generated by, or at the direction of, or acquired by, a potential party pursuant to 10 C.F.R. 2.1003(a)(1) applies to extant documentary material and does not

## SUBJECT INDEX

require that the potential party delay its initial certification until all documentary material that it intends to rely on is finished and complete; LBP-08-1, 67 NRC 37 (2008)

the duty to produce graphic-oriented material under 10 C.F.R. 2.1003(a)(2) is stated in the past tense, and thus applies only to documents in existence at the date of certification; LBP-08-1, 67 NRC 37 (2008)

the Federal Rules of Civil Procedure were amended in 2006 to expressly include electronically stored information; LBP-10-23, 72 NRC 692 (2010)

the mandatory disclosure requirements are not an opportunity to relitigate the admissibility of a contention; LBP-09-30, 70 NRC 1039 (2009)

the phrase “possession, custody, or control” as found in the Federal Rules of Civil Procedure and 10 C.F.R. 2.336(a) is in the disjunctive, and thus only one of the enumerated requirements needs to be met; LBP-10-23, 72 NRC 692 (2010)

the regulations are unclear as to whether header searchability is a prerequisite of certification; LBP-08-1, 67 NRC 37 (2008)

the term “document” as used in 10 C.F.R. 2.336 includes computer models and associated electronic inputs, outputs, data, and software; LBP-10-23, 72 NRC 692 (2010)

the term “document” as used in 10 C.F.R. 2.336, is not limited to paper documents and it refers to information stored on any medium or form, including electronically stored information; LBP-10-23, 72 NRC 692 (2010)

to rule that disclosure under 10 C.F.R. 2.336(a)(2)(i) is limited to formal contractual deliverables would encourage applicants to draft consulting contracts to insulate themselves from the obligation to disclose critical computer modeling information; LBP-10-23, 72 NRC 692 (2010)

when determining relevance of documents for discovery purposes in NRC proceedings, boards may look to the Federal Rules of Evidence for useful guidance; LBP-10-23, 72 NRC 692 (2010)

whether a call memo was required to address the retention for LSN inclusion purposes of documentary material that does not support a party’s position is decided; LBP-08-5, 67 NRC 205 (2008)

whether NRC Staff should be required to produce four paper copies of relevant documents is a matter best left to a board’s discretion; CLI-06-20, 64 NRC 15 (2006)

**DOCUMENTARY MATERIAL**

an agency employee’s working file constitutes an “agency record” if it both contains unique information that underlies an agency decision and it was also made available to other agency employees for purposes of helping to reach or support that decision; CLI-08-23, 68 NRC 461 (2008)

any material supporting petitioner’s contention, including those portions of the material that are not relied upon, is subject to licensing board scrutiny; LBP-07-3, 65 NRC 237 (2007)

at the time it made its initial certification, DOE was required to place on the Licensing Support Network only extant material on which it intended to rely; CLI-08-12, 67 NRC 386 (2008)

Class 1 covers information a party intends to rely upon in support of its position; CLI-06-5, 63 NRC 143 (2006)

Class 2 material is material that the party in possession knows does not support its position; CLI-06-5, 63 NRC 143 (2006)

Class 3 documentary materials are “reports and studies” prepared on behalf of potential parties to the proceeding that are relevant to the issues listed in the Topical Guidelines contained in Regulatory Guide 3.69 and must be relevant to the license application; CLI-06-5, 63 NRC 143 (2006)

DOE’s certification that it had made all of its then extant documentary material available on the NRC’s Licensing Support Network triggered the obligation of other potential parties to make their documentary material available on the LSN within 90 days; LBP-08-5, 67 NRC 205 (2008)

drafts of the license application are not Class 1, Class 2, or Class 3 material under Subpart J, so the regulations do not require making draft license applications available on the Licensing Support Network; CLI-06-5, 63 NRC 143 (2006)

federal agencies have some discretion in determining which documentary materials are appropriate for preservation as an agency “record”; CLI-08-23, 68 NRC 461 (2008)

intra-agency memoranda developed during the decisionmaking process are protected under the deliberative process privilege; CLI-08-23, 68 NRC 461 (2008)

material that falls within Class 1 or Class 2 is the underlying independent documentary material used (or not used if nonsupporting) by the Department of Energy in formulating its license application; CLI-06-5, 63 NRC 143 (2006)

## SUBJECT INDEX

materials created by an employee for the individual's own use in performing his or her job, and which are not circulated and are not otherwise required by NRC policy to be maintained, may be discarded at the employee's discretion; CLI-08-23, 68 NRC 461 (2008)

providing any material or document as a basis for a contention, without setting forth an explanation of its significance, is inadequate to support the admission of the contention; LBP-07-3, 65 NRC 237 (2007)

section 2.1003's reference to "all documentary material (including circulated drafts but excluding preliminary drafts) generated by, or at the direction of, or acquired by" clearly conveys that possession or control of the documentary material is a prerequisite to the duty to produce it; CLI-08-12, 67 NRC 386 (2008)

the distinction between "preliminary" and "circulated" drafts is a significant one in the Commission's Subpart J regulations; CLI-06-5, 63 NRC 143 (2006)

the duty to produce all documentary material generated by, or at the direction of, or acquired by, a potential party pursuant to 10 C.F.R. 2.1003(a)(1) applies to extant documentary material and does not require that the potential party delay its initial certification until all documentary material that it intends to rely on is finished and complete; LBP-08-1, 67 NRC 37 (2008)

the Licensing Support Network functions as a mechanism for early collection of all extant documents that normally would be collected later through traditional discovery; CLI-08-22, 68 NRC 355 (2008)

the material provided in support of a contention will be carefully examined by a licensing board to confirm that it does indeed supply an adequate basis for the contention as asserted by the petitioner; LBP-07-3, 65 NRC 237 (2007)

the purpose of 10 C.F.R. 2.1003 is to define the availability of material, not to provide definitions of types of materials; CLI-06-5, 63 NRC 143 (2006)

the threshold question in determining if certain items must be made available on the High-Level Waste Repository Licensing Support Network is whether the particular items fall within any of the three classes of documentary material; CLI-06-5, 63 NRC 143 (2006)

to be considered "documentary material," a "basic licensing document" must still meet the definition of Class 3 documentary material; CLI-06-5, 63 NRC 143 (2006)

### DOCUMENTATION

applicant must provide documentation of its compliance with the performance requirements of section 70.61 in its integrated safety analysis summary; LBP-06-17, 63 NRC 747 (2006)

licensee is not required to submit docketed information on the resolution of each fire protection noncompliance during its transition to a risk-informed and performance-based fire protection program, but it is required to implement and maintain compensatory measures for remaining noncompliances; DD-07-3, 65 NRC 643 (2007)

licensees must maintain condition reports, survey records, radiological liquid effluent and environmental monitoring reports, records of historical spills and leaks; DD-08-2, 68 NRC 339 (2008)

See also Recordkeeping

### DOSE LIMITS

a combined license application must explain the kinds and quantities of radioactive materials expected to be produced in the operation and the means for controlling and limiting radioactive effluents and radiation exposures within the limits set forth in 10 C.F.R. Part 20; LBP-09-27, 70 NRC 992 (2009)

a cost-benefit analysis is employed to determine a practicable dose limit; CLI-10-8, 71 NRC 142 (2010)

a "member of the public" is any individual except when that individual is receiving an occupational dose; LBP-10-22, 72 NRC 661 (2010)

ALARA is defined as every reasonable effort to maintain exposures to radiation as far below the dose limits in Part 20 as is practical consistent with the purpose for which the licensed activity is undertaken; CLI-10-8, 71 NRC 142 (2010)

applicant shall conduct operations so that the total effective dose equivalent to individual members of the public does not exceed 100 millirems per year; LBP-10-20, 72 NRC 571 (2010)

applicant shall provide reasonable assurance that the annual dose equivalent to members of the public from planned discharges not exceed 25 millirems to the whole body; LBP-10-20, 72 NRC 571 (2010)

compliance with applicable radiation standards is deferred at the early site permit stage, and can only be determined in a COL or CP proceeding; CLI-07-27, 66 NRC 215 (2007)

compliance with limits on radiological exposures, over necessarily long time periods, requires a performance assessment; LBP-09-6, 69 NRC 367 (2009)

## SUBJECT INDEX

contentions challenging NRC regulations are not admissible; LBP-08-6, 67 NRC 241 (2008)

DOE need not weigh ALARA considerations outside the geologic repository operations area for which it is responsible; LBP-10-22, 72 NRC 661 (2010)

filing of a petition for alternative soil remediation standards is permitted as long as the resulting dose would not exceed 15 mrem per year; CLI-10-8, 71 NRC 142 (2010)

if applicant pursues a new reactor design before the Commission has set specific standards applicable to that type of reactor, then applicant will be subject to the existing requirement of 10 C.F.R. 20.1301(a)(1), and will further be required to demonstrate that its emissions will be ALARA pursuant to 10 C.F.R. 50.34a, 50.36a, and 20.1101; CLI-07-27, 66 NRC 215 (2007)

in theory, a facility operator could have an inadvertent criticality, but still be in compliance with the dose limits; LBP-06-17, 63 NRC 747 (2006)

individuals located at the boundary of the exclusion area cannot be exposed to more than 25 rem total effective dose equivalent in any 2-hour period, and any individual located at the outer boundary of the low population zone cannot be exposed to more than 25 rem TEDE during the entire period of any radioactive release; LBP-09-19, 70 NRC 433 (2009)

ionizing radiation to treat fresh fruits is safe if the radiation dose does not exceed 1 kGy (100 krad); CLI-08-16, 68 NRC 221 (2008)

licensee's decommissioning plan would have to show that the maximum annual dose to any person is as low as is reasonably achievable below 15 mrem; CLI-10-8, 71 NRC 142 (2010)

licensee's efforts to maintain compliance with dose limits for individual members of the public in light of radiological effluent release from cracked spent fuel pool are described; DD-08-2, 68 NRC 339 (2008)

licensees, including Part 63 licensees, are required to use, to the extent practical, procedures and engineering controls based upon sound radiation protection principles to achieve occupational doses and doses to members of the public that are as low as is reasonably achievable; LBP-10-22, 72 NRC 661 (2010)

licensees subject to the provisions of EPA's generally applicable environmental radiation standards in 40 C.F.R. Part 190 shall comply with those standards; LBP-09-19, 70 NRC 433 (2009)

limits for individual members of the public are specified in 10 C.F.R. 20.1301-20.1302; CLI-09-16, 70 NRC 33 (2009)

New Jersey's restricted release criteria are compatible with NRC rules; CLI-10-8, 71 NRC 142 (2010)

NRC includes the EPA drinking water standard in the technical specifications that a licensee must meet; LBP-07-9, 65 NRC 539 (2007)

NRC regulations establish what the agency has found to be adequately protective radiological dose limits, and petitioners may not use an adjudicatory proceeding to challenge this generic regulatory framework; CLI-08-17, 68 NRC 231 (2008)

NRC's radiation doses and standards for members of the public may apply on a per-reactor basis, a per-license basis, or a per-site basis; LBP-07-9, 65 NRC 539 (2007)

numerical limits for radiation exposure, including occupational dose limits and radiation dose limits for members of the public, are provided; LBP-09-19, 70 NRC 433 (2009)

performance objectives for a near-surface disposal facility require that the relevant licensing entity examine whether, at any particular time after active institutional controls are removed, the section 61.41 dose limitations will be met for an inadvertent intruder; LBP-06-8, 63 NRC 241 (2006)

petitioners' assertion that no exposure levels are safe is an impermissible challenge to the exposure limits set forth in the NRC's regulations; LBP-09-16, 70 NRC 227 (2009)

the Commission has acknowledged applicability of EPA radiation exposure standards under 40 C.F.R. Part 190; LBP-09-19, 70 NRC 433 (2009)

the EPA standard of 25 mrem only applies to the uranium fuel cycle, which only includes the generation of electricity by a light-water-cooled nuclear power plant; LBP-07-9, 65 NRC 539 (2007)

the preclosure safety analysis for the high-level waste repository must demonstrate that in the event of Category 1 or Category 2 event sequences, prescribed dose limits will be met; CLI-09-14, 69 NRC 580 (2009)

unless and until specific numerical guidelines for maintaining effluent releases ALARA for non-LWRs are implemented, compliance with ALARA requirements will be determined on a case-by-case basis in the context of a future COL or CP application referencing the early site permit; CLI-07-27, 66 NRC 215 (2007)

## SUBJECT INDEX

upper limitations on occupational doses are specified in 10 C.F.R. 20.1201-20.1208; CLI-09-16, 70 NRC 33 (2009)

### DOSE, RADIOLOGICAL

if chelating agents are to be comingled in radioactive waste liquids or used to mitigate an accidental release, then they have to be specifically accounted for in the dose analyses; LBP-09-19, 70 NRC 433 (2009)

licensee must use procedures and controls to reduce occupational doses and doses to members of the public to levels that are as low as reasonably achievable; CLI-09-16, 70 NRC 33 (2009)

showing that estimated dose consequences associated with operation under extended power uprate conditions can be expected to increase by the 20% power level change establishes that the proposed EPU creates an obvious potential for offsite consequences; LBP-07-10, 66 NRC 1 (2007)

the limiting standard for light-water-cooled reactors is 10 C.F.R. 20.1301(e), because a licensee within the uranium fuel cycle could not release the 100-mrem limit permitted by section 20.1301(a) without necessarily violating the 25-mrem limit of section 20.1301(e) that applies to the entire site; CLI-07-27, 66 NRC 215 (2007)

See also Total Effective Dose Equivalent

### DOUBLE CONTINGENCY PRINCIPLE

process designs should incorporate sufficient factors of safety to require at least two unlikely, independent, and concurrent changes in process conditions before a criticality accident is possible; LBP-06-17, 63 NRC 747 (2006)

### DRAFT ENVIRONMENTAL IMPACT STATEMENT

a board may consider environmental contentions contesting applicant's environmental report as challenges to NRC's subsequent DEIS so long as the DEIS analysis or discussion at issue is essentially *in para materia* with the ER analysis or discussion that is the focus of the contention; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)

a new contention is usually considered timely if filed within 30 days of publication of the DEIS; LBP-10-16, 72 NRC 361 (2010)

although the DEIS may rely in part on applicant's environmental report, Staff must independently evaluate and be responsible for the reliability of all information used in the DEIS; LBP-09-19, 70 NRC 433 (2009)

content of Staff's DEIS is discussed; LBP-09-19, 70 NRC 433 (2009)

for an early site permit, NRC Staff must address the matters specified in 10 C.F.R. 51.45; LBP-09-7, 69 NRC 613 (2009)

if admitted contentions are resolved before the FEIS is issued so as to conclude the contested portion of a proceeding, an intervenor could timely seek to litigate contentions regarding FEIS data or conclusions that differ significantly from the ER or the DEIS; LBP-07-3, 65 NRC 237 (2007)

petitioners must raise NEPA contentions in response to the environmental report, rather than await the agency's DEIS; LBP-09-4, 69 NRC 170 (2009)

Staff is required to independently evaluate and be responsible for the reliability of all information used in the DEIS; LBP-09-7, 69 NRC 613 (2009)

there may be mistakes in the DEIS, but in an NRC adjudication, it is intervenors' burden to show their significance and materiality; LBP-07-3, 65 NRC 237 (2007)

when filed with an intervention petition, an environmental contention and its associated bases quite properly address an applicant's ER, rather than the then still-being-developed Staff DEIS; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)

### DREDGING

adequacy of the final environmental impact statement discussion and analysis of the extent and duration of any dredging, the impacts on water quality, the disposal of any dredged material, and the impacts on aquatic biota as a result of any dredging is decided; LBP-09-7, 69 NRC 613 (2009)

the fact that disposal of dredged or fill material in wetlands is regulated by the Environmental Protection Agency and the U.S. Army Corps of Engineers does not render a contention inadmissible; LBP-09-10, 70 NRC 51 (2009)

where there is no proposal for major federal action within the meaning of National Environmental Policy Act § 102(C), there is no requirement for a NEPA analysis of dredging; CLI-10-5, 71 NRC 90 (2010)

## SUBJECT INDEX

### DROUGHT

this issue clearly falls within any reasonable consideration of the concepts expressed in 10 C.F.R. 51.45; LBP-08-6, 67 NRC 241 (2008)

### DRY CASK STORAGE

the stability of ISFSI concrete pads holding dry spent fuel storage casks during earthquakes is addressed; DD-07-2, 65 NRC 365 (2007)

to the extent that petitioners argue that the provisions of 10 C.F.R. 50.54(hh) should be applied to dry cask storage, they may file a rulemaking petition with the Commission; LBP-09-17, 70 NRC 311 (2009)

### DRYWELL

the Commission asks the parties to address the whether the structural analysis that applicant has committed to perform on its primary containment drywell shell matches or bounds the sensitivity analyses that one of the ALSBP judges would impose; CLI-08-10, 67 NRC 357 (2008)

### DUE PROCESS

an NRC Staff decision to grant a power uprate license amendment does not leave intervenors without effective redress because the license amendment can be revoked or conditioned after a full hearing if the board determines that the license amendment should not have been granted; CLI-06-8, 63 NRC 235 (2006)

granting a license amendment prior to a board decision does not circumvent intervenors' right to a hearing; CLI-06-8, 63 NRC 235 (2006)

in ASLBP proceedings, collateral estoppel may bar a party from relitigating the admissibility of a contention when an earlier board refused to admit the same contention in an earlier proceeding involving the same facility; LBP-08-23, 68 NRC 679 (2008)

petitioners' allegation that NRC regulations are insufficient to protect the constitutional right of due process under the law by allowing citizens to be exposed to impermissible levels of radiation is inadmissible; LBP-08-16, 68 NRC 361 (2008)

the right to hold specific private employment and to follow a chosen profession free from unreasonable governmental interference comes within the liberty and property concepts of the Fifth Amendment; LBP-06-13, 63 NRC 523 (2006)

the subject of an enforcement action has a property interest in his employment-related license sufficient to invoke the procedural protections of the Due Process Clause, the vindication of which invokes a public interest; LBP-06-25, 64 NRC 367 (2006)

### EARLY SITE PERMIT APPLICATION

a description and safety assessment of the site must include an analysis and evaluation of the major structures, systems, and components of the facility that bear significantly on the acceptability of the site under radiological consequence evaluation factors; LBP-09-19, 70 NRC 433 (2009)

all reasonable alternatives to the site proposed for the early site permit are to be identified; LBP-09-19, 70 NRC 433 (2009)

an applicant may make a number of choices regarding the scope, and therefore the content, of its application; LBP-06-28, 64 NRC 460 (2006)

any gaps and questions concerning groundwater transport and hydrology safety issues are acceptable and deferred until the construction permit or combined license stage; LBP-07-9, 65 NRC 539 (2007)

any power level selected at the COL stage other than the target value used in the environmental impact statement's alternative energy analysis for the early site permit would constitute new information that, if found to be significant, would have to be evaluated at the construction permit or combined license application stage; CLI-07-14, 65 NRC 216 (2007)

applicant is excused from examination, in its environmental report, of the benefits of the proposed project or analysis regarding energy alternatives, and relevant regulations may not be construed to require that the draft or final environmental impact statement include an assessment of the benefits of the proposed action; LBP-06-28, 64 NRC 460 (2006)

applicant may propose for review and approval by the NRC major features of its emergency plan or a complete and integrated emergency plan; LBP-06-28, 64 NRC 460 (2006)

applicant may request that a limited work authorization be issued in conjunction with the ESP; LBP-09-19, 70 NRC 433 (2009)

## SUBJECT INDEX

applicant may submit a plan for redress of the site, which if accepted as part of an approved ESP would allow an applicant to perform certain preconstruction activities without additional authorization; LBP-06-28, 64 NRC 460 (2006)

applicant must describe equipment to be installed to maintain control over radioactive materials in gaseous and liquid effluents produced during normal reactor operations, including expected operational occurrences; LBP-09-19, 70 NRC 433 (2009)

applicant must file an environmental report, addressing the five factors of 10 C.F.R. 51.45(b)(1)-(5); LBP-09-19, 70 NRC 433 (2009)

applicant must submit a safety assessment that includes an analysis of a fission product release from an accident, using the expected demonstrable containment leak rate and any fission product cleanup systems intended to mitigate the consequences of the accidents; LBP-09-19, 70 NRC 433 (2009)

applicant's environmental report must include an analysis of alternatives available for reducing or avoiding adverse environmental effects; LBP-09-19, 70 NRC 433 (2009)

as partial construction permit applications, ESP applications are subject to the Atomic Energy Act hearing requirement, as well as all procedural requirements in 10 C.F.R. Part 2; LBP-09-19, 70 NRC 433 (2009)

for applications filed after January 2, 1971, applicant must identify design objectives and means to maintain levels of radioactive effluents as low as is reasonably achievable; LBP-09-19, 70 NRC 433 (2009)

if applicant determines that there are physical characteristics that could pose a significant impediment to the development of emergency plans, the application must identify mitigation measures; LBP-09-19, 70 NRC 433 (2009)

in its review, Staff must consider physical characteristics of the site, specifically noting that factors important to hydrological radionuclide transport must be obtained from onsite measurements; LBP-09-19, 70 NRC 433 (2009)

it is appropriate to defer issues concerning the effects of short-term damage to the environment and the irretrievable commitment of resources to the construction permit or combined license stage; CLI-07-14, 65 NRC 216 (2007)

NRC provides detailed guidance for Staff personnel reviewing the safety aspects of applications; LBP-09-19, 70 NRC 433 (2009)

NRC Staff is required to prepare an environmental impact statement in connection with issuance of an ESP; LBP-09-19, 70 NRC 433 (2009)

NRC Staff's environmental impact statement prepared during review of an early site permit application must include an evaluation of alternative sites to determine whether there is any obviously superior alternative to the site proposed; LBP-09-19, 70 NRC 433 (2009)

severe accident mitigation design alternative issues are resolved for an application referencing a design control document if the specific site parameters are covered by the site parameters assumed in the DCD SAMDA analysis; LBP-09-19, 70 NRC 433 (2009)

Staff is to review ESP applications according to the applicable standards set out in 10 C.F.R. Part 50 and its appendices and 10 C.F.R. Part 100; LBP-09-19, 70 NRC 433 (2009)

the Commission may defer resolution of severe accident mitigation alternatives until the construction permit or combined license stage; LBP-09-19, 70 NRC 433 (2009)

the environmental report for an ESP application may evaluate the environmental impacts of a reactor or reactors falling within the site characteristics and design parameters for the ESP application; LBP-09-19, 70 NRC 433 (2009)

the required content of applicant's environment report is described; LBP-09-7, 69 NRC 613 (2009)

the site safety analysis report filed with an early site permit application must include information that identifies physical characteristics of the proposed site, such as egress limitations from the area surrounding the site, that could pose a significant impediment to the development of emergency plans; LBP-09-19, 70 NRC 433 (2009)

the site safety analysis report submitted with an early site permit application must contain the seismic, meteorological, hydrologic, and geologic characteristics of the proposed site; LBP-09-19, 70 NRC 433 (2009)

## SUBJECT INDEX

where applicant's amended license application has eliminated the dispute, there remains no genuine dispute of material fact and applicant is entitled to summary disposition as a matter of law; LBP-06-24, 64 NRC 360 (2006)

with regard to alternative sites for an early site permit, NRC Staff must evaluate both the process (i.e., methodology) used by the applicant and the reasonableness of the product (e.g., potential sites) identified by that process; LBP-09-19, 70 NRC 433 (2009)

### EARLY SITE PERMIT PROCEEDING

a baseline NEPA issue that a board must make in a mandatory hearing on an ESP application is whether the requirements of NEPA § 102(2)(A), (C), and (E) and 10 C.F.R. Part 51 have been met; LBP-07-9, 65 NRC 539 (2007)

a baseline NEPA issue that a board must make in a mandatory hearing is to independently consider the final balance among conflicting factors contained in the record of the proceeding with a view to determining the appropriate action to be taken; LBP-07-9, 65 NRC 539 (2007)

a baseline NEPA issue that a board must make in a mandatory proceeding is whether a construction permit should be issued, denied, or appropriately conditioned to protect environmental values; LBP-07-9, 65 NRC 539 (2007)

a board must determine whether the application and the record of the proceeding contain sufficient information, and the review of the application by the NRC Staff has been adequate, to support a negative finding on the question of whether the issuance of an early site permit will be inimical to the common defense and security or to the health and safety of the public; LBP-07-9, 65 NRC 539 (2007)

a board's initial decision is not effective until the Commission reviews it and takes final agency action; LBP-07-9, 65 NRC 539 (2007)

because an early site permit is a type of construction permit, a mandatory hearing is required by the Atomic Energy Act and thus the case will continue as an uncontested proceeding; LBP-06-24, 64 NRC 360 (2006)

benefit-cost analysis can be postponed until the reactor licensing stage; LBP-07-9, 65 NRC 539 (2007)

boards should conduct a simple sufficiency review of uncontested issues; LBP-06-28, 64 NRC 460 (2006)

boards should not second-guess underlying technical or factual findings by the NRC Staff; LBP-06-28, 64 NRC 460 (2006)

in an uncontested proceeding, the board must narrow its inquiry to those topics or sections in NRC Staff documents that it deems most important and should concentrate on portions of the documents that do not on their face adequately explain the logic, underlying facts, and applicable regulations and guidance; LBP-07-1, 65 NRC 27 (2007)

in complying with the mandate of the Atomic Energy Act, the board must independently evaluate the record and the adequacy of the Staff's review and then to decide six fundamental issues that are specified by the law and regulations; LBP-07-9, 65 NRC 539 (2007)

in the mandatory proceeding, the board must review the sufficiency of the record and the sufficiency of the NRC Staff's review, and decide if they are adequate to support the Staff's proposed findings; LBP-07-9, 65 NRC 539 (2007)

issues resolved in the ESP proceeding are treated as resolved in a subsequent construction permit or COL proceeding that references the ESP, unless a contention is admitted under narrowly specified conditions; CLI-07-12, 65 NRC 203 (2007)

licensing boards must perform two types of inquiries with respect to safety matters in uncontested proceedings; LBP-06-28, 64 NRC 460 (2006)

on NEPA baseline issues in the mandatory hearing, the Board must reach its own independent determination; LBP-07-9, 65 NRC 539 (2007)

on uncontested safety and environmental issues, the board's role is analogous to that of an appellate court applying the substantial evidence test; LBP-07-9, 65 NRC 539 (2007)

Staff's underlying technical and factual findings are not open to board reconsideration unless, after a review of the record, the board finds the NRC Staff review inadequate or its findings insufficient; LBP-06-28, 64 NRC 460 (2006)

the board must decide whether, taking into consideration the site criteria contained in 10 C.F.R. Part 100, a reactor or reactors, having the characteristics that fall within the parameters for the site, can be constructed without undue risk to the health and safety of the public; LBP-07-9, 65 NRC 539 (2007)

## SUBJECT INDEX

- the NRC Staff's underlying technical and factual findings on an ESP application are not open to board reconsideration unless, after a review of the record, the board finds the NRC Staff review inadequate or its findings insufficient; LBP-07-9, 65 NRC 539 (2007)
- the overriding NEPA issue that a board must determine in a mandatory proceeding on an ESP application is whether the NEPA review conducted by the NRC Staff has been adequate; LBP-07-9, 65 NRC 539 (2007)
- the scope of the licensing board's environmental review in an uncontested proceeding is discussed; LBP-07-1, 65 NRC 27 (2007)
- the scope of the licensing board's safety review in an uncontested early site permit proceeding is described; LBP-07-1, 65 NRC 27 (2007)
- the three NEPA-related factors that the board is required to address are discussed; LBP-06-28, 64 NRC 460 (2006)
- uncontested ESP proceedings are still subject to a mandatory hearing; CLI-07-12, 65 NRC 203 (2007)
- where the Standard Review Plan had not been followed, no specific Regulatory Guide was applicable, a Regulatory Guide required adaptation, or the Staff's logic was incomplete or unclear, the Board sought a thorough explanation of the Staff's rationale for the process it ultimately adopted along with its conclusions, and examined that process and those conclusions to ensure they were well founded in fact and logic; LBP-06-28, 64 NRC 460 (2006)
- EARLY SITE PERMIT PROCEEDINGS**
- a matter need not be actually litigated in order to be "resolved" in an ESP proceeding; LBP-08-15, 68 NRC 294 (2008)
- all environmental issues concerning severe accident mitigation design alternatives associated with the information in the NRC's environmental assessment for a certified design are considered resolved; LBP-09-19, 70 NRC 433 (2009)
- an environmental contention is not litigable in a combined license proceeding if it has already been resolved in an ESP proceeding; CLI-09-3, 69 NRC 68 (2009)
- board authority to make findings on limited work authorizations is discussed; LBP-09-19, 70 NRC 433 (2009)
- compliance with applicable radiation standards is deferred at the ESP stage, and can only be determined in a COL or CP proceeding; CLI-07-27, 66 NRC 215 (2007)
- environmental findings that a board must make to authorize issuance of an ESP are described; LBP-09-19, 70 NRC 433 (2009)
- for purposes of the mandatory/uncontested portion of an ESP proceeding, the board takes official notice of publicly available documents associated with the Staff's safety and environmental reviews; LBP-09-19, 70 NRC 433 (2009)
- given that the *Federal Register* notice defines the scope of the issues that may properly be raised in a request for a hearing, it also defines the scope of the issues that could reasonably be deemed resolved during an ESP proceeding; LBP-08-15, 68 NRC 294 (2008)
- in a mandatory ESP hearing, NRC must address six issues; CLI-07-27, 66 NRC 215 (2007)
- in a mandatory hearing, a licensing board must narrow its inquiry to those topics or sections in Staff documents that it deems most important and should concentrate on portions of the documents that do not on their face adequately explain the logic, underlying facts, and applicable regulations and guidance; LBP-09-19, 70 NRC 433 (2009)
- items for which sufficient information is lacking at the ESP stage of the licensing process may be subject to deferral for consideration at the combined license stage of the process; LBP-09-19, 70 NRC 433 (2009)
- matters resolved in an ESP proceeding are considered resolved in a subsequent combined license proceeding when the COL application references the ESP, subject to certain exceptions; LBP-08-15, 68 NRC 294 (2008); LBP-08-23, 68 NRC 679 (2008)
- on baseline NEPA issues in early site permit cases, boards must reach their own independent determination, but should do so without second-guessing underlying technical or factual findings by the NRC Staff; LBP-09-19, 70 NRC 433 (2009)
- prior to issuance of an ESP, the findings required by 10 C.F.R. Part 51, Subpart A must be made; LBP-09-19, 70 NRC 433 (2009)

## SUBJECT INDEX

- safety findings that a board must make for issuance of an ESP are clarified; LBP-09-19, 70 NRC 433 (2009)
- the mandatory hearing board is required to answer six questions for uncontested proceedings; LBP-08-15, 68 NRC 294 (2008)
- when an ESP is issued with an associated limited work authorization, the board must find relative to the LWA that any significant adverse environmental impact resulting from activities requested under 10 C.F.R. 52.17(c) can be redressed; LBP-09-19, 70 NRC 433 (2009)
- when reviewing an ESP application in an uncontested proceeding, licensing boards are to conduct a simple sufficiency review rather than a de novo review on both Atomic Energy Act and National Environmental Policy Act issues; LBP-09-19, 70 NRC 433 (2009)
- with respect to certain NEPA findings, boards in ESP proceedings are to make independent environmental judgments, though they need not rethink or redo every aspect of the NRC Staff's environmental findings or undertake their own fact-finding activities; LBP-09-19, 70 NRC 433 (2009)
- EARLY SITE PERMITS**
- a board shall determine whether, taking into consideration the site criteria contained in 10 C.F.R. Part 100, a reactor having characteristics that fall within the parameters for the site, and which meets the terms and conditions proposed by the Staff in the Safety Evaluation Report, can be constructed and operated without undue risk to the health and safety of the public; LBP-06-28, 64 NRC 460 (2006)
- a combined license application reference to an ESP must include a safety analysis report that either includes or incorporates by reference the ESP site safety analysis report and that contains additional information and analyses sufficient to demonstrate that the design of the facility falls within the site characteristics and design parameters specified in the ESP; LBP-09-19, 70 NRC 433 (2009)
- a contention arising from a matter resolved in an early site permit proceeding is within the scope of a combined license proceeding that references the ESP if it concerns whether emergency planning matters resolved in the ESP should be revisited; LBP-08-15, 68 NRC 294 (2008)
- a future applicant for a construction permit, an operating license, or a combined license may seek early NRC review and approval of some siting and environmental issues, and therefore, "bank" a site for up to 20 years in anticipation of its future reference in an application for a CP or COL; LBP-06-28, 64 NRC 460 (2006)
- a safety contention arising from a matter resolved in an early site permit proceeding is within the scope of a combined license proceeding that references the ESP if it concerns whether a term or condition in the ESP has been met; LBP-08-15, 68 NRC 294 (2008)
- a safety contention arising from a matter resolved in an early site permit proceeding is within the scope of a combined license proceeding that references the ESP if it concerns whether a variance from the ESP requested by the COL applicant is unwarranted or should be modified; LBP-08-15, 68 NRC 294 (2008)
- a site redress plan remains in effect for an EST applicant even if the ESP with which the LWA is issued is not referenced in a construction permit or COL application during the period that the ESP remains valid; LBP-09-19, 70 NRC 433 (2009)
- agencies are required to use a systematic, interdisciplinary approach that will ensure the integrated use of the natural and social sciences and the environmental design arts in planning and in decisionmaking that may have an impact on man's environment; LBP-07-1, 65 NRC 27 (2007)
- agencies must include a detailed statement on the environmental impact of the proposed action, any unavoidable adverse environmental effects, alternatives to the proposed action, the relationship between local short-term uses of man's environment and the maintenance and enhancement of long-term productivity, and irreversible and irretrievable commitments of resources which would be involved in the proposed action should it be implemented; LBP-07-1, 65 NRC 27 (2007)
- although a presiding officer should issue a separate partial initial decision regarding a limited work authorization request, the board finds no practical or logical basis for separating its consideration of the adequacy of the LWA request from its determination regarding the early site permit with which it is associated; LBP-09-19, 70 NRC 433 (2009)
- an applicant who may apply for a construction permit under Part 50, or a combined license under Part 52, may apply for an ESP; LBP-09-19, 70 NRC 433 (2009)

## SUBJECT INDEX

an ESP focuses on the suitability of a proposed site, and is defined as Commission approval for a site or sites for one or more nuclear power facilities; LBP-08-15, 68 NRC 294 (2008); LBP-09-19, 70 NRC 433 (2009)

an ESP is a partial construction permit, whose issuance does not authorize an applicant to construct nuclear power reactors; CLI-07-27, 66 NRC 215 (2007); LBP-08-15, 68 NRC 294 (2008)

an ESP is considered a partial construction permit, and thus requires action by the Commission even in the absence of any appeal from the board's initial decision; CLI-07-12, 65 NRC 203 (2007)

an ESP specifies design parameters for the site; LBP-09-19, 70 NRC 433 (2009)

an initial decision directing the issuance or amendment of a limited work authorization or an early site permit is immediately effective upon issuance unless the presiding officer finds that good cause has been shown by a party why the initial decision should not become immediately effective; LBP-09-19, 70 NRC 433 (2009)

any permit conditions imposed that are not met before a combined license referencing the ESP is issued will attach to the combined license; LBP-09-19, 70 NRC 433 (2009)

applicant has the option of either proposing a complete and integrated emergency plan or proposing major features of the emergency plan for review and approval by NRC, in consultation with the Department of Homeland Security; LBP-09-19, 70 NRC 433 (2009)

applicant is authorized to perform certain site preparation activities that would otherwise only be permitted following the issuance of a Part 50 construction permit or a Part 52 combined license; LBP-09-19, 70 NRC 433 (2009)

applicant is not required to provide detailed design information concerning each of the types of reactor designs covered by the application and may provide a plant parameter envelope instead; LBP-07-9, 65 NRC 539 (2007)

applicant may request that a limited work authorization be issued in conjunction with the ESP; LBP-09-19, 70 NRC 433 (2009)

applicant must perform an evaluation and analysis of the postulated fission product release to evaluate the offsite radiological consequences; LBP-09-19, 70 NRC 433 (2009)

applicant's environmental report must include an evaluation of alternative sites to determine whether there is any obviously superior alternative to the site proposed; LBP-09-19, 70 NRC 433 (2009)

applicant's initial consideration of DOE's Portsmouth, Ohio, and SRS sites as alternative sites was reasonable as part of its alternative site analysis; LBP-09-19, 70 NRC 433 (2009)

at the combined license stage, applicant may reference both an ESP and a standard design certification in its application; LBP-09-19, 70 NRC 433 (2009)

before an early site permit can be made effective, the Commission must review and approve the Atomic Safety and Licensing Board's initial decision authorizing its issuance; CLI-07-4, 65 NRC 24 (2007); CLI-07-7, 65 NRC 122 (2007)

before an early site permit can be made effective, the Commission must review and approve the licensing board's initial decision authorizing its issuance; CLI-07-23, 66 NRC 35 (2007)

brownfield sites owned by companies other than applicant may reasonably be excluded as alternative sites; LBP-09-19, 70 NRC 433 (2009)

ESPs are partial construction permits and, as such, are subject to the mandatory hearing requirements under AEA § 189a; LBP-07-1, 65 NRC 27 (2007)

even when an ESP does not authorize any construction activity, the NRC Staff is required by Council on Environmental Quality regulations to consider actions that are related to other actions that could lead to a significant impact on the environment; LBP-07-1, 65 NRC 27 (2007)

factors to be considered when evaluating a proposed site include population density and use characteristics, the nature and proximity of man-related hazards such as airports, and the physical characteristics of the site including seismology, meteorology, geology, and hydrology; LBP-07-9, 65 NRC 539 (2007)

for purposes of the environmental impact statement, the potential construction and operation of the plant or plants for which the early site permit is being obtained is the proposed action that must be the focus of the board's NEPA review; LBP-07-1, 65 NRC 27 (2007)

for uncontested applications, section 52.21, the notice requirements of section 2.104(b)(2), and the Notice of Hearing itself outline a board's review obligation; LBP-06-28, 64 NRC 460 (2006)

## SUBJECT INDEX

- if a combined operating license or construction permit is never issued or ultimately denied, the ESP permit holder would be required to redress even limited site preparation activities and restore the site; LBP-07-9, 65 NRC 539 (2007)
- if applicant chooses to submit a complete and integrated emergency plan, applicant also is required to make a good-faith effort to obtain a certification from federal, state, and local governmental agencies with emergency planning responsibilities; LBP-09-19, 70 NRC 433 (2009)
- if applicant submits a complete and integrated emergency plan in conjunction with an ESP application, NRC Staff must find that the emergency plans provide reasonable assurance that adequate protective measures can and will be taken in the event of a radiological emergency; LBP-09-19, 70 NRC 433 (2009)
- if granted, an ESP evidences Commission approval of a site for one or more nuclear power facilities; LBP-09-19, 70 NRC 433 (2009)
- if limited work authorization activities are approved by NRC in conjunction with an ESP, the ESP as issued shall specify those authorized activities; LBP-09-19, 70 NRC 433 (2009)
- if the combined license application references an ESP, applicant must demonstrate that the chosen design falls within the parameters specified in the ESP or, on the safety side, request a variance; LBP-09-19, 70 NRC 433 (2009)
- if the Commission decides to authorize issuance of an ESP, the issued ESP must specify the site characteristics, design parameters, and terms and conditions of the ESP that the Commission deems appropriate; LBP-09-19, 70 NRC 433 (2009)
- if the proposed siting of a plant slated for an ESP involves unresolved conflicts concerning alternative uses of available resources, then this discussion must be sufficiently complete to allow the Staff to develop and explore appropriate alternatives to the ESP pursuant to NEPA § 102(2)(E); LBP-09-19, 70 NRC 433 (2009)
- in reaching its determinations on the baseline National Environmental Policy Act issues, the board will not second-guess the underlying technical or factual findings of the NRC Staff, but if it finds that the Staff review is incomplete or that the Staff findings lack sufficient explanation, it will make its own determination of technical and factual findings; LBP-07-1, 65 NRC 27 (2007)
- it is not reasonable or necessary to consider, as a system design alternative to the application for an ESP for Units 3 and 4, the imposition of water conservation measures on preexisting Units 1 and 2; LBP-07-9, 65 NRC 539 (2007)
- noninclusion of DOE sites in alternative site analysis that are far outside applicant's region of interest is reasonable; LBP-09-19, 70 NRC 433 (2009)
- NRC Staff is required to prepare an environmental impact statement in connection with the issuance of an ESP; LBP-07-1, 65 NRC 27 (2007); LBP-09-7, 69 NRC 613 (2009)
- NRC Staff must first prepare a draft environmental impact statement; LBP-09-7, 69 NRC 613 (2009)
- preconstruction activities that do not require NRC approval are discussed; LBP-09-19, 70 NRC 433 (2009)
- representations, assumptions, and unresolved issues discussed in the final environmental impact statement neither place limitations on the ESP or the ESP holder, nor bind a CP or COL applicant in the preparation of future applications referencing the ESP; CLI-07-27, 66 NRC 215 (2007)
- seismic siting factors are part of the safety determination a board must make; LBP-07-9, 65 NRC 539 (2007)
- Staff's environmental impact statement for an ESP need not include an assessment of the benefits such as need for power; LBP-07-1, 65 NRC 27 (2007)
- the Commission may appropriately condition the license approved by the board; CLI-07-12, 65 NRC 203 (2007)
- the Commission must hold a hearing on each application for a construction permit for a facility; LBP-07-1, 65 NRC 27 (2007)
- the environmental impact statement must focus on the environmental effects of construction and operation of reactors that have the characteristics of the postulated site parameters, and must include an evaluation of alternatives to determine whether there are any obviously superior options to the proposed action; LBP-07-1, 65 NRC 27 (2007)

## SUBJECT INDEX

- the inspections, tests, analyses, and acceptance criteria associated with emergency planning reflect those aspects of the emergency plan that cannot be described or completed until the plant is further along in the licensing and construction process; LBP-09-19, 70 NRC 433 (2009)
- the main differences between an early partial decision and an early site permit are that the early partial decision lasts only 5 years and resolves only those site suitability issues that the applicant specifically asks to resolve, whereas the early site permit lasts for 20 years and once it is issued it covers the site; LBP-07-9, 65 NRC 539 (2007)
- the potential for tritium contamination of water is primarily a NEPA issue because it involves the environmental impacts of the proposed early site permit and possible mitigation measures, but also has a safety element because safety regulations require that exposure to radiation be as low as reasonably achievable; LBP-07-9, 65 NRC 539 (2007)
- the proposed site for the nuclear reactors is “banked” or approved and the regulations applicable to the site are frozen as of the date that the ESP is issued; LBP-07-9, 65 NRC 539 (2007)
- the Staff is required to provide an environmental justice analysis in greater detail when the low-income or minority population thresholds are met; LBP-07-9, 65 NRC 539 (2007)
- to grant an ESP, the Commission must find that the proposed inspections, tests, analyses, and acceptance criteria, including any on emergency planning, are necessary and sufficient, within the scope of the ESP, to provide reasonable assurance that the facility has been constructed and will be operated in conformity with the license, the provisions of the Act, and the Commission’s regulations; LBP-09-19, 70 NRC 433 (2009)
- when a combined license application references an ESP, neither applicant nor Staff needs to address environmental issues resolved in the ESP proceeding unless new and significant information arises on those issues; LBP-10-1, 71 NRC 165 (2010)
- when a proceeding involving an application for a construction permit is uncontested, the Board will not conduct a de novo review, but rather will conduct a simple sufficiency review of the uncontested issues; LBP-07-1, 65 NRC 27 (2007)
- when one or more particular environmental impacts cannot be meaningfully assessed at the ESP stage, those matters may be designated as “unresolved,” provided they do not interfere with the Staff’s ability to determine whether there is any obviously superior alternative to the proposed site; CLI-07-27, 66 NRC 215 (2007)
- EARTHQUAKE MOTION**
- the stability of ISFSI concrete pads holding dry spent fuel storage casks during earthquakes is addressed; DD-07-2, 65 NRC 365 (2007)
- EARTHQUAKES**
- contention alleging a failure to evaluate the impact of a severe accident at one unit on other units when the initiating event is an external event such as an earthquake is found inadmissible; LBP-10-10, 71 NRC 529 (2010)
- contention that the environmental report is based on incomplete information because a new earthquake fault has been discovered within 600 meters of nuclear reactors and the results of studies concerning the new fault will be available in the near term is admissible; LBP-10-15, 72 NRC 257 (2010)
- ECONOMIC EFFECTS**
- assertions that building two new nuclear reactors in a troubled economy is fiscally irresponsible is outside the scope of a combined license proceeding; LBP-09-10, 70 NRC 51 (2009)
- if petitioner has proffered an admissible contention asserting an environmentally preferable alternative to the proposed reactors, this also would trigger the requirement that the environmental report contain cost estimates; CLI-10-9, 71 NRC 245 (2010)
- impact of a proposed action on ratepayers is outside the scope of a NEPA analysis; LBP-10-14, 72 NRC 101 (2010)
- it is inappropriate for the agency to consider economic costs when no environmentally preferable alternative has been identified; CLI-10-9, 71 NRC 245 (2010)
- motion for summary disposition of contention questioning applicant’s handling of its severe accident mitigation alternatives analysis; LBP-07-13, 66 NRC 131 (2007)
- new evidence that potentially alters the financial cost-benefit analysis, but which does not significantly affect the physical environment, does not warrant supplementing the environmental impact statement; CLI-06-19, 63 NRC 19 (2006)

## SUBJECT INDEX

the board erred in admitting a contention concerning the economic value of wetlands without requiring petitioners to demonstrate that the proposed licensing action or no-action alternative would have any effect on wetlands; CLI-09-9, 69 NRC 331 (2009)

whether applicant will improve the general welfare, increase the standard of living, or strengthen free competition in private enterprise is not a litigable issue; LBP-08-16, 68 NRC 361 (2008)

### ECONOMIC INJURY

economic harm has been held sufficient to establish standing under the Nuclear Waste Policy Act; LBP-10-11, 71 NRC 609 (2010)

economic interests of an organization representing nuclear utility members confer standing upon the organization; LBP-09-6, 69 NRC 367 (2009)

litigation inevitably results in the parties' loss of both time and money; CLI-06-18, 64 NRC 1 (2006)

ratepayer impacts are outside the scope of a combined license proceeding because the state, not the NRC, is charged with protecting ratepayers' interests; LBP-09-10, 70 NRC 51 (2009)

### ECONOMIC INTERESTS

delaying the opening of the Yucca Mountain repository would inflict concrete harm on members of an organization who expend substantial sums to operate their own storage facilities; LBP-09-6, 69 NRC 367 (2009)

promotion of economic use of energy falls outside the zone of interests protected by either the Atomic Energy Act or the National Environmental Policy Act; CLI-07-18, 65 NRC 399 (2007)

to establish standing, economic interests must be linked to potential radiological or environmental risks; LBP-09-6, 69 NRC 367 (2009)

### ECONOMIC ISSUES

accuracy of project cost estimates only becomes relevant if an environmentally preferable alternative has been identified; LBP-09-2, 69 NRC 87 (2009)

an agency cannot redefine the applicant's goals, and the EIS alternatives analysis should be based around the applicant's goals, including its economic goals; LBP-09-17, 70 NRC 311 (2009)

it is inappropriate for the agency to consider economic costs when no environmentally preferable alternative has been identified; CLI-10-1, 71 NRC 1 (2010)

NRC is not in the business of regulating the market strategies of licensees and leaves to them the ongoing business decisions that relate to costs and profit; LBP-09-2, 69 NRC 87 (2009)

petitioners' allegation that applicant's environmental report fails to provide reasonably current and accurate information regarding the costs of nuclear power, costs of alternative energy sources, and financial risks posed by using nuclear power as an energy source is admissible; LBP-08-16, 68 NRC 361 (2008)

quibbling over the details of an economic analysis amounts to standing NEPA on its head by asking that the license be rejected not due to environmental costs, but because the economic benefits are not as great as estimated; LBP-09-2, 69 NRC 87 (2009)

revenue decoupling is a state regulatory matter that is outside of the scope of, and not material to, the NRC licensing process; LBP-09-10, 70 NRC 51 (2009)

See also Costs; Decommissioning Funding; Financial Assurance; Financial Qualifications; Financial Resources

### EFFECTIVENESS

a board's initial decision on an early site permit is not effective until the Commission reviews it and takes final agency action; LBP-07-9, 65 NRC 539 (2007); LBP-09-19, 70 NRC 433 (2009)

a renewed license takes effect immediately, with a term of up to 20 years plus the number of years remaining on the initial operating license; CLI-08-23, 68 NRC 461 (2008)

before an early site permit can be made effective, the Commission must review and approve the licensing board's initial decision authorizing its issuance; CLI-07-23, 66 NRC 35 (2007)

if a construction permit holder wishes to discontinue construction activities at a facility but continue to have its 10 C.F.R. Part 50 construction authorization remain effective, it can do so under the terms of the 1987 Commission Policy Statement on Deferred Plants; LBP-10-7, 71 NRC 391 (2010)

See also Immediate Effectiveness

### ELECTRICAL EQUIPMENT

motion to reopen to introduce a new contention asserting issues related to aging management of effects of moist or wet environments on buried, below-grade, underground, or hard-to-access safety-related electrical cables is denied; LBP-10-19, 72 NRC 529 (2010)

## SUBJECT INDEX

### ELECTRONIC FILING

all participants in NRC proceedings must submit and serve all adjudicatory documents over the Internet or, in some cases, mail copies on electronic storage media; CLI-09-15, 70 NRC 1 (2009)

an electronic signature on a document serves as the signer's representation that the document has been subscribed in the capacity specified with full authority, that he or she has read it and knows the contents, that to the best of his or her knowledge, information, and belief the statements made in it are true, and that it is not interposed for delay; LBP-09-6, 69 NRC 367 (2009)

for good cause shown, the board grants the requests of petitioners for exemptions from compliance with the Commission's E-filing requirement; LBP-10-4, 71 NRC 216 (2010)

participants may not submit paper copies of their filings unless they seek a waiver; CLI-09-15, 70 NRC 1 (2009)

participants who believe that they have a good cause for not submitting documents electronically must file an exemption request with their initial paper filing, requesting authorization to continue to submit documents in paper format; CLI-10-4, 71 NRC 56 (2010)

petitioners will not be denied the opportunity to participate in a proceeding because of an error that can easily be corrected and that has caused no prejudice to any other participant; LBP-09-4, 69 NRC 170 (2009)

procedures for electronic filing and for obtaining waivers from e-filing requirements are described; CLI-09-15, 70 NRC 1 (2009)

requirements for high-level waste repository proceeding are specified; LBP-08-10, 67 NRC 450 (2008)

### ELECTRONICALLY STORED INFORMATION

the Federal Rules of Civil Procedure were amended in 2006 to expressly include ESI; LBP-10-23, 72 NRC 692 (2010)

the term "document" as used in 10 C.F.R. 2.336, is not limited to paper documents and it refers to information stored on any medium or in any form, including ESI; LBP-10-23, 72 NRC 692 (2010)

### EMBRITTLMENT

reactor pressure vessel integrity is within the scope of a license renewal proceeding; LBP-06-10, 63 NRC 314 (2006)

whether a plan is necessary to manage the cumulative effects of embrittlement of the reactor pressure vessels and associated internals is within the scope of a license renewal proceeding; LBP-08-13, 68 NRC 43 (2008)

### EMERGENCY ACTION LEVELS

EALs are the criteria used to determine the notifications that need to be made to federal, state, and local authorities and to determine the appropriate protective responses to a particular set of emergency conditions; LBP-09-19, 70 NRC 433 (2009)

### EMERGENCY BACKUP POWER

in situ leach mining facilities are not required to maintain backup power because if such a facility were to experience a power failure, uranium recovery operations would simply cease; LBP-08-24, 68 NRC 691 (2008)

licensees of plants located where there is a permanent population in excess of 15,000,000 within a 50-mile radius of the power plant are required to have backup power for the emergency notification system, including the emergency siren warning system; DD-09-1, 69 NRC 501 (2009)

system requirements for the backup power supply for the public alerting system are discussed; DD-09-1, 69 NRC 501 (2009)

### EMERGENCY NOTIFICATION SYSTEM

licensees of plants located where there is a permanent population in excess of 15,000,000 within a 50-mile radius of the power plant are required to have backup power for the emergency notification system, including the emergency siren warning system; DD-09-1, 69 NRC 501 (2009)

petitioner's concerns regarding licensee's failure to implement the new emergency notification siren system in a timely manner are addressed; DD-08-2, 68 NRC 339 (2008)

petitioner's request under 10 C.F.R. 2.206 for suspension of operations and imposition of civil penalty for deficiencies in licensee's siren system is denied; DD-09-1, 69 NRC 501 (2009)

procedures must be established to provide for early notification and clear instructions to the populace within the plume exposure pathway emergency planning zone; LBP-09-16, 70 NRC 227 (2009)

## SUBJECT INDEX

system requirements for the backup power supply for the public alerting system are discussed; DD-09-1, 69 NRC 501 (2009)

### EMERGENCY OPERATIONS FACILITY

construction activities associated with onsite emergency facilities necessary to comply with section 50.47 and 10 C.F.R. Part 50, Appendix E require a limited work authorization; LBP-09-19, 70 NRC 433 (2009)

### EMERGENCY PLANNING

a combined license application must include emergency planning information for the emergency planning zone, generally consisting of an area with a 10-mile radius from the proposed reactor; LBP-09-10, 70 NRC 51 (2009)

a combined license application must include the proposed inspections, tests, and analyses, including those applicable to emergency planning, to be performed and the acceptance criteria that are necessary and sufficient to support the Commission's finding that a COL can be granted; LBP-09-19, 70 NRC 433 (2009)

a contention arising from a matter resolved in an early site permit proceeding is within the scope of a combined license proceeding that references the ESP if it concerns whether emergency planning matters resolved in the ESP should be revisited; LBP-08-15, 68 NRC 294 (2008)

a contention that a plant's evacuation plan does not adequately protect the health and safety of public and plant workers must be denied because emergency planning is not within the scope of license renewal as a safety issue; LBP-07-11, 66 NRC 41 (2007)

adequacy of emergency planning is outside the scope of license renewal proceedings; LBP-10-13, 71 NRC 673 (2010)

an emergency evacuation issue was admitted in a license renewal proceeding because it was in the context of three of the specific input data for the severe accident mitigation alternatives analysis that license renewal applicants are required to perform; LBP-07-4, 65 NRC 281 (2007)

challenge to specific input data to the severe accident mitigation alternatives analysis could bring a contention on adequacy of an evacuation plan within the scope of license renewal; LBP-07-11, 66 NRC 41 (2007)

existence of another independent nuclear power plant within the 10-mile-radius emergency planning zone of a proposed new nuclear power plant is a significant factor for purposes of emergency planning for the new reactor; LBP-09-10, 70 NRC 51 (2009)

if an early site permit applicant determines that there are physical characteristics that could pose a significant impediment to the development of emergency plans, the application must identify measures that would mitigate or eliminate the significant impediment; LBP-09-19, 70 NRC 433 (2009)

procedures must be established to provide for early notification and clear instructions to the populace within the plume exposure pathway emergency planning zone; LBP-09-16, 70 NRC 227 (2009)

such issues are beyond the scope of license renewal proceedings; LBP-06-20, 64 NRC 131 (2006)

the site safety analysis report filed with an early site permit application must include information that identifies physical characteristics of the proposed site, such as egress limitations from the area surrounding the site, that could pose a significant impediment to the development of emergency plans; LBP-09-19, 70 NRC 433 (2009)

there is no need for a review of these issues in the context of license renewal; LBP-08-13, 68 NRC 43 (2008)

there is no requirement that such concerns must be raised in the environmental report; LBP-10-10, 71 NRC 529 (2010)

this issue is excluded from license renewal proceedings because the issue is not germane to age-related degradation or unique to the period of time covered by the license renewal; LBP-07-4, 65 NRC 281 (2007)

### EMERGENCY PLANNING ZONES

existence of another independent nuclear power plant within the 10-mile-radius emergency planning zone of a proposed new nuclear power plant is a significant factor for purposes of emergency planning for the new reactor; LBP-09-10, 70 NRC 51 (2009)

potassium iodide distribution beyond the 10-mile EPZ is not necessary; LBP-09-16, 70 NRC 227 (2009)

procedures must be established to provide for early notification and clear instructions to the populace within the plume exposure pathway EPZ; LBP-09-16, 70 NRC 227 (2009)

## SUBJECT INDEX

the EPZ is established based on safety considerations and is not intended for use as a boundary for assessing environmental impacts; LBP-09-16, 70 NRC 227 (2009)  
the plume exposure pathway EPZ shall generally consist of an area covering a radius of about 10 miles; LBP-09-16, 70 NRC 227 (2009)

### EMERGENCY PLANS

a contention questioning whether particular bits of information taken from an emergency plan are sufficiently accurate for use in computing the health and safety consequences of a severe accident, as an environmental issue, is admissible; LBP-06-23, 64 NRC 257 (2006)  
an early site permit applicant has the option of either proposing a complete and integrated emergency plan or proposing major features of the emergency plan for review and approval by NRC, in consultation with the Department of Homeland Security; LBP-09-19, 70 NRC 433 (2009)  
an ESP applicant may propose for review and approval by the NRC major features of its plan or a complete and integrated plan; LBP-06-28, 64 NRC 460 (2006)  
challenges to the implementing procedures for a reactor emergency plan are not material in a materials license proceeding; LBP-06-12, 63 NRC 403 (2006)  
content of a complete and integrated emergency plan is discussed; LBP-09-19, 70 NRC 433 (2009)  
FEMA's finding on emergency plans constitutes a rebuttable presumption on questions of adequacy and implementation capability in NRC licensing proceedings; LBP-09-19, 70 NRC 433 (2009)  
if applicant chooses to submit a complete and integrated emergency plan at the early site permit stage, applicant also is required to make a good-faith effort to obtain a certification from federal, state, and local governmental agencies with emergency planning responsibilities; LBP-09-19, 70 NRC 433 (2009)  
if applicant submits a complete and integrated emergency plan in conjunction with an early site permit application, NRC Staff must find that the emergency plans provide reasonable assurance that adequate protective measures can and will be taken in the event of a radiological emergency; LBP-09-19, 70 NRC 433 (2009)  
if applicant submits a complete and integrated emergency plan under section 52.17(b)(2)(ii), it must include in the ESP application the proposed inspections, tests, and analyses that will be performed, and the acceptance criteria that are necessary and sufficient for the Commission's required findings for issuance of the ESP; LBP-09-19, 70 NRC 433 (2009)  
in its review of emergency plans, NRC Staff must take into account FEMA's findings; LBP-09-19, 70 NRC 433 (2009)  
licensees must have and follow emergency or abnormal event procedures, appropriate for the irradiation type, for a prolonged loss of electrical power; LBP-06-12, 63 NRC 403 (2006)  
licensees must have and follow emergency procedures for natural phenomena as appropriate for the geographical location of the facility; LBP-06-12, 63 NRC 403 (2006)  
NRC Staff's review of an integrated emergency plan focuses primarily on the applicant-prepared onsite provisions of the plans, which include the evacuation time estimate provided by applicant, and the inspections, tests, analyses, and acceptance criteria; LBP-09-19, 70 NRC 433 (2009)  
the inspections, tests, analyses, and acceptance criteria associated with emergency planning reflect those aspects of the emergency plan that cannot be described or completed until the plant is further along in the licensing and construction process; LBP-09-19, 70 NRC 433 (2009)

### EMERGENCY RESPONSE

emergency action levels are the criteria used to determine the notifications that need to be made to federal, state, and local authorities and to determine the appropriate protective responses to a particular set of emergency conditions; LBP-09-19, 70 NRC 433 (2009)  
shutting down or derating of a nuclear power plant during flooding is not warranted because emergency response organizations can implement protective actions if necessary, regardless of local severe weather conditions or other natural disasters coincident with an emergency; DD-06-2, 63 NRC 425 (2006)

### EMPLOYEE PROTECTION

operating reactor licensees are not required to implement an employee concerns program, but are required to establish and implement an effective corrective action program; DD-10-1, 72 NRC 149 (2010)  
petitioner's request for action concerning deficiencies in licensee's employee concerns program is denied; DD-10-1, 72 NRC 149 (2010)

## SUBJECT INDEX

the purpose of 10 C.F.R. 50.7(f) is to ensure that licensees do not enter into employment agreements that would prohibit, restrict, or otherwise discourage an employee or former employee from providing the NRC with information of regulatory significance; DD-10-1, 72 NRC 149 (2010)

### EMPLOYMENT

the right to follow any of the common occupations of life is an inalienable right that was formulated as such under the phrase "pursuit of happiness" in the Declaration of Independence and it is a large ingredient in the civil liberty of the citizen; LBP-09-24, 70 NRC 676 (2009)

the right to hold specific private employment and to follow a chosen profession free from unreasonable governmental interference comes within the liberty and property concepts of the Fifth Amendment; LBP-06-13, 63 NRC 523 (2006)

the subject of an enforcement action has a property interest in his employment-related license sufficient to invoke the procedural protections of the Due Process Clause, the vindication of which invokes a public interest; LBP-06-25, 64 NRC 367 (2006)

where the government has deprived an individual of a property interest without a hearing, the government must be prepared to show an important government interest, accompanied by a substantial assurance that the deprivation is not baseless or unwarranted; LBP-09-24, 70 NRC 676 (2009)

### ENDANGERED SPECIES

contention alleging that the threatened eastern fox snake inhabits the nuclear plant site and that construction activities for the new reactor will kill snakes, destroy their habitat, and might eliminate them from the area is within the scope of a combined license proceeding; LBP-09-16, 70 NRC 227 (2009)

direct, indirect, and cumulative impingement/entrainment and thermal effluent discharge impacts of the proposed cooling system intake and discharge structures on aquatic resources are discussed; LBP-09-7, 69 NRC 613 (2009)

licensing boards lack the authority to require applicant to adopt additional mitigation measures for the protection of endangered or threatened species; LBP-09-16, 70 NRC 227 (2009)

portions of a contention that allege that the environmental report failed to adequately address the zone of environmental impact, impact on listed species, and appropriate mitigation are admissible; LBP-09-10, 70 NRC 51 (2009)

the impact of extended operation on endangered or threatened species varies from one location to another, and is thus included within Category 2; LBP-07-4, 65 NRC 281 (2007)

### ENERGY

NRC proceedings are not an open forums for discussing the country's need for energy and spent fuel storage; CLI-10-10, 71 NRC 281 (2010)

### ENERGY AND WATER DEVELOPMENT APPROPRIATIONS ACT

NRC appropriations shall not be used to pay the expenses of, or otherwise compensate, parties intervening in regulatory or adjudicatory proceedings; LBP-09-1, 69 NRC 11 (2009)

### ENERGY CONSERVATION

the generic environmental impact statement addresses the need to consider energy conservation for the no-action alternative; LBP-08-13, 68 NRC 43 (2008)

### ENERGY EFFICIENCY

applicant is not obliged to examine general efficiency or conservation proposals that would do nothing to satisfy the particular project's goals of producing baseload power; LBP-09-17, 70 NRC 311 (2009)

impact of proposed energy conservation alternatives regarding demand for energy must be susceptible to a reasonable degree of proof; LBP-10-10, 71 NRC 529 (2010)

neither NRC nor applicant has the mission or authority to implement a general societal interest in energy efficiency; LBP-08-13, 68 NRC 43 (2008)

NEPA's rule of reason does not demand an analysis of energy efficiency because conservation measures are beyond the ability of an applicant to implement, and are therefore outside the scope required by a NEPA review of reasonable alternatives; LBP-08-13, 68 NRC 43 (2008)

the National Environmental Policy Act's rule of reason excludes consideration of demand-side management if the proposed new plant is intended to be a merchant plant, selling power on the open market, because it is not feasible for licensee to engage in demand-side management; CLI-10-21, 72 NRC 197 (2010)

## SUBJECT INDEX

the NEPA rule of reason does not require applicant to consider energy efficiency in its NEPA analysis, because energy efficiency is not a reasonable alternative for a merchant power producer; CLI-10-1, 71 NRC 1 (2010)

See also Demand-Side Management

### ENERGY POLICY ACT

licensees of plants located where there is a permanent population in excess of 15,000,000 within a 50-mile radius of the power plant are required to have backup power for the emergency notification system, including the emergency siren warning system; DD-09-1, 69 NRC 501 (2009)

### ENERGY POLICY ACT OF 1992

NRC must modify its technical requirements and criteria for the high-level waste repository as necessary to be consistent with final EPA standards; CLI-08-20, 68 NRC 272 (2008)

### ENERGY REORGANIZATION ACT

action of the Commission is determined by a majority vote of the members present; CLI-09-1, 69 NRC 1 (2009)

### ENFORCEMENT ACTIONS

a board did not commit clear error in finding that an enforcement action target did not know certain facts despite Staff's showing that the target was on the recipient list of documents and e-mails that included those facts; CLI-10-23, 72 NRC 210 (2010)

a government motion for an indefinite enforcement hearing delay must be denied when the government fails to show that the prompt conduct of the NRC hearing process would interfere with the government's prosecution of the criminal charges and when the subject of the order has shown that the delay would continue to deprive him of his chosen livelihood and its anticipated income; LBP-06-13, 63 NRC 523 (2006)

a request that the Commission require licensees to return spent fuel pools to their original low-density storage configuration and to use dry storage for any excess fuel is not appropriate for litigation in a license renewal hearing; CLI-06-26, 64 NRC 225 (2006)

although the subject of an NRC enforcement proceeding may attempt to take advantage of his discovery rights in the civil proceeding to obtain information also useful in his criminal proceeding, that is no reason to deny him that discovery because he asserted his Fifth Amendment right not to respond to discovery requests directed to him, even if other procedural consequences might flow from that action; LBP-06-25, 64 NRC 367 (2006)

based on results of its problem identification and resolution biennial team inspections with annual followup of selected issues at licensed facilities, NRC takes any appropriate enforcement action to ensure compliance with 10 C.F.R. Part 50, Appendix B, Criterion XVI; DD-10-1, 72 NRC 149 (2010)

deliberately submitting to NRC inaccurate or incomplete information on Yucca Mountain is misconduct suitable for enforcement action; CLI-08-11, 67 NRC 379 (2008)

engaging in deliberate misconduct that caused inaccurate and incomplete information to be provided to the NRC concerning conditions at a reactor resulted in debarment from licensed activities for 5 years; LBP-09-11, 70 NRC 151 (2009)

exercise of the power of compulsory process must be carefully circumscribed when the investigative process tends to impinge upon such highly sensitive areas as freedom of speech or press, freedom of political association, and freedom of communication of ideas; LBP-09-24, 70 NRC 676 (2009)

failure of a licensee to fulfill responsibilities associated with a license amendment issued by the Staff gives rise to an enforcement issue that does not come within the purview of a license amendment adjudication; LBP-07-7, 65 NRC 507 (2007)

hydrofluoric acid exposure to licensee operators is assessed a civil monetary penalty in the amount of \$32,500 on the basis of a determined Severity Level III violation; LBP-10-18, 72 NRC 519 (2010)

if petitioners wish to propose security measures in addition to those laid out in a Staff enforcement order, their remedy is to petition NRC under 10 C.F.R. 2.206 for further enforcement action or to ask NRC to institute a rulemaking to impose broader security measures; CLI-10-3, 71 NRC 49 (2010)

in determining whether there is good cause to delay a proceeding challenging an immediately effective license suspension order, NRC evaluates five factors; LBP-06-13, 63 NRC 523 (2006)

NRC initiates the civil penalty process by issuing a notice of violation and proposed imposition of a civil penalty; DD-07-3, 65 NRC 643 (2007)

## SUBJECT INDEX

NRC normally will not take enforcement action for a violation involving a problem related to engineering, design, implementing procedures, or installation, if the violation is documented in an inspection report and it meets certain criteria including the licensee's voluntary initiative to adopt the risk-informed performance-based fire protection program; DD-07-3, 65 NRC 643 (2007)

outside the adjudicatory context, a petitioner's concerns may be addressed through a request that the NRC Staff take enforcement action under section 2.206; CLI-07-8, 65 NRC 124 (2007); LBP-07-4, 65 NRC 281 (2007)

pendency of a criminal trial does not automatically toll the time for instituting a civil proceeding; LBP-06-13, 63 NRC 523 (2006)

request for an enforcement-type action where the underlying concern is the partial collapse of a cooling tower is credible and sufficient to warrant further inquiry; DD-08-1, 67 NRC 347 (2008)

requests for diagnostic evaluation team examination, safety culture assessment, and the NRC investigation at other licensee facilities are rejected for review because they are not requests for enforcement-type actions; DD-08-1, 67 NRC 347 (2008)

the subject of an enforcement action has a property interest in his employment-related license sufficient to invoke the procedural protections of the Due Process Clause, the vindication of which invokes a public interest; LBP-06-25, 64 NRC 367 (2006)

the subject of an enforcement order may benefit from more knowledge and perspective about others' roles in an incident because it might help him put his actions in a transactional context that would lessen or eliminate his responsibility for any missteps; LBP-06-25, 64 NRC 367 (2006)

to the extent that petitioners have any basis for claiming that there are current, ongoing excessive radiological releases from a facility, petitioners may seek NRC action under 10 C.F.R. 2.206; CLI-08-17, 68 NRC 231 (2008)

when the NRC Staff can, consistent with its duty to protect public health and safety, accord some form of predeprivation hearing, such a course of action is advisable in light of the important private interest in retaining employment and the fact that such a proceeding provides some opportunity for the employee to present his side of the case; LBP-09-24, 70 NRC 676 (2009)

willful violations of 10 C.F.R. 63.11 and 63.73, among others, are subject to criminal penalties; CLI-08-11, 67 NRC 379 (2008)

### ENFORCEMENT ORDERS

a challenge to an enforcement order in which the petitioner contends that the order needs strengthening is prohibited; LBP-06-12, 63 NRC 403 (2006)

a challenge to immediate effectiveness must state with particularity the reasons why the enforcement order is unsound; LBP-09-24, 70 NRC 676 (2009)

a hearing challenging an immediately effective enforcement order will be conducted expeditiously, giving due consideration to the rights of the parties; LBP-09-24, 70 NRC 676 (2009)

a Staff order that neither repudiates nor rescinds any NRC safety and security requirements, but rather imposes new, more stringent security requirements that supplement those already found in NRC regulations does not amount to unlawfully promulgated regulations; CLI-10-3, 71 NRC 49 (2010)

an unexplained lapse of several years between the Staff's completion of a thorough investigation and its initiation of an immediately effective enforcement order may jeopardize both public confidence in government decisionmaking and public protection from asserted safety threats, and may require an explanation if the immediate effectiveness of the order were to be challenged; LBP-06-26, 64 NRC 431 (2006)

conviction of a crime that is identical to a charge in an enforcement order provides substantial assurance that the enforcement order was not baseless or unwarranted; LBP-09-24, 70 NRC 676 (2009)

in a challenge to an NRC Staff immediately effective enforcement order prohibiting a former licensee employee from working in NRC-licensed activities for 5 years, the licensing board finds a proposed settlement to be in the public interest, so that no adjudication is required; LBP-06-21, 64 NRC 219 (2006)

Staff may make an enforcement order immediately effective on the basis of public health and safety or a willful violation; LBP-06-26, 64 NRC 431 (2006)

the subject of an enforcement order has the right to challenge, on limited grounds, the immediate effectiveness of the order; LBP-09-24, 70 NRC 676 (2009)

## SUBJECT INDEX

upon submitting for approval to work under a reciprocity agreement licensee will send a copy of the board order confirming the settlement agreement to the regulator processing the reciprocity application at least 2 weeks prior to engaging in activity authorized by the reciprocity agreement; LBP-09-12, 70 NRC 159 (2009)

### ENFORCEMENT POLICY

NRC may exercise enforcement discretion for certain violations of the fire protection requirements; DD-07-3, 65 NRC 643 (2007)

NRC normally will not take enforcement action for a violation involving a problem related to engineering, design, implementing procedures, or installation, if the violation is documented in an inspection report and it meets certain criteria including the licensee's voluntary initiative to adopt the risk-informed performance-based fire protection program; DD-07-3, 65 NRC 643 (2007)

when a licensee is applying to extend its operating license, the NRC cannot address requests for enforcement action; DD-07-3, 65 NRC 643 (2007)

### ENFORCEMENT PROCEEDINGS

a hearing challenging an immediately effective enforcement order will be conducted expeditiously, giving due consideration to the rights of the parties; LBP-09-24, 70 NRC 676 (2009)

a stipulation or compromise is subject to approval by the designated presiding officer, who may order such adjudication of the issues as he may deem to be required in the public interest; LBP-06-18, 63 NRC 830 (2006)

although a proximity presumption has been invoked when resolving issues of standing for cases involving reactor licensing, in a case involving an enforcement order, the standing requirement is also based on the confirmatory order itself and the adverse effect of the confirmatory order; LBP-07-16, 66 NRC 277 (2007)

although the civil discovery process could lead to the tainting of evidence in a criminal case and to the defendant's obtaining access to evidence that would provide him an unfair advantage over the government, the moving party must provide some practical applicability to the particular circumstances of the case in order for it to obtain the delay sought; LBP-06-13, 63 NRC 523 (2006)

assertion of hearing right and risk of erroneous deprivation generally are given less weight in deciding an abeyance motion unless the assertion was dilatory or perfunctory or the risk can be shown to be either quite high or vanishingly low; LBP-06-13, 63 NRC 523 (2006)

board's finding that "knowledge" does not necessarily follow simply from previous exposure to individual facts, but rather an individual must have a current appreciation of those facts and their meaning in the circumstances presented is a finding of fact, not of law; CLI-10-23, 72 NRC 210 (2010)

boards are not to consider whether enforcement orders need strengthening; LBP-07-16, 66 NRC 277 (2007)

boards should not be in the position of upholding Staff enforcement orders on legal theories that the Staff did not and does not embrace and in any event do not fit the circumstances of the case before them; LBP-09-24, 70 NRC 676 (2009)

challenges to NRC's authority to engage in administrative dispute resolution is beyond the scope of enforcement proceedings; LBP-08-14, 68 NRC 279 (2008)

claims by a nonlicensee to the effect that the root causes or facts underpinning a confirmatory order are inaccurate are not valid claims in an enforcement proceeding; LBP-08-14, 68 NRC 279 (2008)

delay of a proceeding is allowed only if the Staff can demonstrate an important government interest coupled with factors minimizing the risk of an erroneous deprivation; CLI-06-12, 63 NRC 495 (2006)

enforcement orders limit adjudication to whether the facts as stated in the order are true and whether the proposed sanction is supported by those facts; CLI-06-16, 63 NRC 708 (2006)

five factors that need to be balanced when deciding whether to delay a proceeding are length of delay, reason for delay, prejudice to the recipient of the enforcement order, risk of erroneous deprivation, and recipient's assertion of a right to a hearing; CLI-06-12, 63 NRC 495 (2006)

for purpose of interlocutory review, a board decision is "pervasive" and "unusual" when it stops the entire proceeding in its tracks for an indeterminate length of time; CLI-06-12, 63 NRC 495 (2006)

hearings regarding immediately effective enforcement orders must be held expeditiously; CLI-06-19, 64 NRC 9 (2006); CLI-07-6, 65 NRC 112 (2007)

if petitioner requests a remedy that is beyond the scope of the hearing, then the hearing request must be denied because redressability is an element of standing; LBP-08-14, 68 NRC 279 (2008)

## SUBJECT INDEX

in addition to having the burden on immediate effectiveness, the target is apparently expected to address the merits at that point as well; LBP-09-24, 70 NRC 676 (2009)

in considering the reason for a requested delay, it is important to consider which party initiated the civil action and which party is seeking relief from its going forward; LBP-06-13, 63 NRC 523 (2006)

inquiry into an individual's actual knowledge is entirely factual, requiring examination of the record; LBP-09-24, 70 NRC 676 (2009)

it is unlikely that petitioners will often obtain hearings on confirmatory enforcement orders; LBP-08-14, 68 NRC 279 (2008)

knowledge of a fact requires not only an awareness of that fact but also an understanding or recognition of its significance; CLI-10-23, 72 NRC 210 (2010)

licensing boards must be satisfied that the terms of a proposed agreement reflect a fair and reasonable resolution of the matter at hand and is in keeping with the objectives of NRC's enforcement policy and satisfies the requirements of 10 C.F.R. 2.338(g) and (h); LBP-09-11, 70 NRC 151 (2009)

licensing boards review NRC Staff's enforcement orders de novo to determine on the basis of the hearing record whether the charges are sustained and the sanction imposed is warranted; LBP-09-24, 70 NRC 676 (2009)

NRC Staff brings the charges that frame the board's review of enforcement orders; LBP-09-24, 70 NRC 676 (2009)

NRC Staff's role in an enforcement proceeding is akin to that of a prosecutor, and it has the burden to prove its allegations by a preponderance of the reliable, probative, and substantial evidence; LBP-09-24, 70 NRC 676 (2009)

once a licensing proceeding has been closed, petitioners will still have the opportunity to raise issues by filing a request for action under 10 C.F.R. 2.206; CLI-10-17, 72 NRC 1 (2010)

petitioners may not seek to enhance the measures outlined in an enforcement order; LBP-08-14, 68 NRC 279 (2008)

petitioners must provide factual support for their claim that an enforcement-related injury could be redressed by a favorable board ruling; CLI-10-3, 71 NRC 49 (2010)

providing predeprivation notice and informal hearing permits the employee to give his version of the events and provides a meaningful hedge against erroneous action; LBP-09-24, 70 NRC 676 (2009)

standing is determined by reviewing the alleged injury stemming from the regulatory action, not that asserted to arise generally from operation of the facility or the actions of the licensee involved in the proceeding; LBP-07-16, 66 NRC 277 (2007)

tampering is not a concern when the defendant has not been employed at the relevant organization for several years and the government has given no indication as to how the defendant might employ knowledge gained through civil discovery to alter paper documents or electronic files that he has no control over whatsoever and which the government has long-since obtained through its several-years-long investigation; LBP-06-13, 63 NRC 523 (2006)

the Commission does not lightly second-guess DOJ's views on whether, and how, premature disclosure might affect its criminal prosecutions; CLI-06-19, 64 NRC 9 (2006)

the Commission is generally inclined to accommodate an abeyance request from DOJ as long as it provides at least some showing of potential detrimental effect on its parallel criminal case; CLI-07-6, 65 NRC 112 (2007)

the critical issues to be determined when deciding a motion for delay involve "relative harm," that is, whether and to what extent movant has shown that not granting a delay will harm it versus whether and to what extent granting that same delay will harm the movant's opponent; LBP-06-13, 63 NRC 523 (2006)

the party requesting a delay must provide detailed and specific reasons demonstrating some type of cognizable harm would result absent that relief; LBP-06-13, 63 NRC 523 (2006)

the question whether to hold an NRC enforcement proceeding in abeyance pending a related criminal prosecution is generally suitable for interlocutory Commission review because the abeyance issue cannot await the end of the proceeding; CLI-06-19, 64 NRC 9 (2006); CLI-07-6, 65 NRC 112 (2007)

the scope of an enforcement adjudication is limited to the question of whether the order should be sustained; CLI-10-3, 71 NRC 49 (2010); LBP-07-16, 66 NRC 277 (2007)

## SUBJECT INDEX

- the scope of early review of an enforcement order is severely limited and the order's immediate effectiveness depriving the accused of the freedom to work pending trial is presumptively valid, placing the burden on the accused to demonstrate its invalidity; LBP-09-24, 70 NRC 676 (2009)
- the scope of the proceeding is defined by the Commission in its initial hearing notice and order referring the proceeding to the licensing board; LBP-07-16, 66 NRC 277 (2007)
- the weight to be given the Staff's reason for seeking an abeyance turns on the quality of the factual record; CLI-06-19, 64 NRC 9 (2006)
- to prevail in establishing that the accused's actions constituted a violation, Staff must demonstrate by a preponderance of the evidence that the accused had actual knowledge of the information associated with his actions and that he deliberately acted contrary to that knowledge; LBP-09-24, 70 NRC 676 (2009)
- to successfully challenge an enforcement order, the target must show that the order, including the need for immediate effectiveness, is not based on adequate evidence but on mere suspicion, unfounded allegations, or error; LBP-09-24, 70 NRC 676 (2009)
- to the extent that petitioner's request for release of information seeks to enhance the enforcement measures already outlined by the Staff in the confirmatory order, this is outside the scope of the proceeding; LBP-07-16, 66 NRC 277 (2007)
- when evaluating whether a settlement is in the public interest, four factors are considered; LBP-06-18, 63 NRC 830 (2006)
- when the party opposing a stay motion does not express undue concern that delay will diminish the quality of the evidence, that possibility may be put aside as nonspecific and not credited as prejudicing the subject of the order; LBP-06-13, 63 NRC 523 (2006)
- where the record in an enforcement proceeding may be devoid of direct evidence to establish knowledge, the Staff may have to build its case upon circumstantial evidence alone; LBP-09-24, 70 NRC 676 (2009)
- whether continuation of an NRC enforcement adjudication could at least arguably jeopardize a related criminal proceeding is a key factor in any abeyance ruling in an NRC enforcement proceeding; CLI-06-19, 64 NRC 9 (2006)
- ENTRAINMENT**
- adequacy of the final environmental impact statement discussion and analysis of direct, indirect, and cumulative impingement/entrainment and thermal effluent discharge impacts of the proposed cooling system intake and discharge structures on aquatic resources is decided; LBP-09-7, 69 NRC 613 (2009)
- ENTRAINMENT AND IMPINGEMENT**
- applicant is required to provide in its environmental report a site-specific analysis of entrainment, impingement, and heat shock/thermal discharge impacts from its once-through cooling systems; LBP-08-13, 68 NRC 43 (2008)
- ENVIRONMENTAL ANALYSIS**
- a conclusion that something is a "connected action" does not necessarily inform the type of impact analysis that is performed, whether direct, indirect, or cumulative; LBP-09-7, 69 NRC 613 (2009)
- a contention based on another agency's draft EA that does not apply to the time period in which proposed reactor units would be operational is not material to the findings the licensing board must make in the proceeding; LBP-10-1, 71 NRC 165 (2010)
- a federal agency must study, develop, and describe appropriate alternatives to the recommended courses of action in any proposal that involves unresolved conflicts concerning alternative uses of available resources; LBP-06-28, 64 NRC 460 (2006)
- a NEPA analysis of the potential impacts of deliberate attacks on a spent fuel pool and analysis of alternatives to mitigate spent fuel pool accidents are beyond the scope of a license renewal proceeding and therefore inadmissible; CLI-09-10, 69 NRC 521 (2009)
- a reasonably close causal relationship between federal agency action and environmental consequences is necessary to trigger NEPA; CLI-07-8, 65 NRC 124 (2007)
- a Staff determination that certain scenarios, such as Part 61 intruder scenarios, are so unlikely as to fall outside the scope of the Staff's NEPA review is a proper exercise of NEPA's rule of reason; LBP-06-8, 63 NRC 241 (2006)
- absent particular circumstances for excluding intruder scenarios in evaluating compliance with the Part 61 regulations, they must be considered by the licensing entity at the time of initial licensing or any subsequent license amendment; LBP-06-8, 63 NRC 241 (2006)

## SUBJECT INDEX

agencies are given broad discretion in determining how thoroughly to analyze a particular subject, and may decline to examine issues that an agency in good faith considers remote and speculative or inconsequentially small; LBP-06-8, 63 NRC 241 (2006); LBP-09-7, 69 NRC 613 (2009)

agencies are required to use a systematic, interdisciplinary approach that will insure the integrated use of the natural and social sciences and the environmental design arts in planning and in decisionmaking that may have an impact on man's environment; LBP-06-28, 64 NRC 460 (2006); LBP-07-1, 65 NRC 27 (2007)

agencies must include a detailed statement on the environmental impact of the proposed action, any unavoidable adverse environmental effects, alternatives to the proposed action, the relationship between local short-term uses of man's environment and the maintenance and enhancement of long-term productivity, and irreversible and irretrievable commitments of resources which would be involved in the proposed action should it be implemented; LBP-07-1, 65 NRC 27 (2007)

although the Commission has complied with the Ninth Circuit's ruling for facilities within the Ninth Circuit, that experience is very limited and does not demonstrate that conducting environmental analyses of terrorist scenarios for the licensing of all major facilities would be practicable or lead to meaningful additional information; CLI-10-9, 71 NRC 245 (2010)

although the primary duties of NEPA fall on the NRC Staff in NRC proceedings, the initial requirement to analyze the environmental impacts of an action, including license renewal, is directed to applicants; LBP-07-4, 65 NRC 281 (2007)

an agency environmental impact statement must address both direct and indirect, or secondary, effects of an action; LBP-06-8, 63 NRC 241 (2006)

an agency must affirmatively provide a reasoned explanation of the applicability of a categorical exclusion when special circumstances are alleged; LBP-06-4, 63 NRC 99 (2006)

an agency must consult with and obtain the comments of any federal agency that has jurisdiction by law or special expertise with respect to any environmental impact involved; LBP-06-28, 64 NRC 460 (2006)

an EA must include a Reference Document List that identifies the sources used; LBP-08-7, 67 NRC 361 (2008)

analysis of entrainment and impingement of fish, and heat shock, is required only for plants with once-through cooling or cooling ponds, because it has been determined generically that such impacts are small for plants that use cooling towers; LBP-07-4, 65 NRC 281 (2007)

applicant must provide enough information and in sufficient detail to allow for an evaluation of important impacts; LBP-07-3, 65 NRC 237 (2007)

asserted deficiencies in the environmental report intake/discharge impact discussion as it is associated with the baseline discussion of aquatic resources, if properly supported, can be admitted for further litigation; LBP-08-16, 68 NRC 361 (2008)

boards do not sit to flyspeck environmental documents or to add details or nuances; LBP-07-3, 65 NRC 237 (2007)

consideration of environmental impacts need not address every impact that could possibly result, but rather only those that are reasonably foreseeable or have some likelihood of occurring; LBP-09-7, 69 NRC 613 (2009)

cumulative impacts analysis looks to whether the proposed action's impacts will be significantly enhanced by already existing environmental effects from prior actions; LBP-06-1, 63 NRC 41 (2006); LBP-06-19, 64 NRC 53 (2006)

federal agencies must take a hard look at the environmental impacts of a proposed action, as well as reasonable alternatives to that action; LBP-09-7, 69 NRC 613 (2009)

for impacts that are reasonably foreseeable, but for which the agency lacks complete information in its analysis, the agency must indicate that such information is lacking; LBP-09-7, 69 NRC 613 (2009)

if the accident sought to be considered is sufficiently unlikely, such that it can be characterized fairly as remote and speculative, then consideration under NEPA is not required as a matter of law; LBP-09-4, 69 NRC 170 (2009)

in accord with the environmental justice executive order, NRC has obligated itself to address only the disproportionate distribution of high and adverse effects on minority and low-income populations in its NEPA analysis; LBP-07-3, 65 NRC 237 (2007)

## SUBJECT INDEX

in its conclusions regarding the environmental impacts of a proposed action or alternative actions, the Staff uses as guidance a standard scheme to categorize or quantify the impacts; LBP-09-7, 69 NRC 613 (2009)

in its environmental justice analysis, NRC makes nearby nuclear facility-related harm an appropriate issue to consider cumulatively with any impacts from proposed reactors; LBP-07-3, 65 NRC 237 (2007)

in reviewing environmental justice claims, adverse impacts that fall heavily on minority and impoverished citizens call for particularly close scrutiny; LBP-07-3, 65 NRC 237 (2007)

irradiators are categorically excluded from the requirement to prepare an EA; CLI-08-16, 68 NRC 221 (2008)

it is the NRC, not applicant, that has the legal duty to perform a NEPA analysis and to issue appropriate NEPA documents; CLI-06-18, 64 NRC 1 (2006)

location of an irradiator may be a circumstance in which the categorical exclusions in 10 C.F.R. 51.22(b) might not apply; LBP-06-4, 63 NRC 99 (2006)

NEPA analyses are subject to a rule of reason, but it is necessary to have a criterion upon which reasonableness may be determined; LBP-09-4, 69 NRC 170 (2009)

NEPA does not require a decision whether an environmental impact report is based on the best scientific methodology available, nor does NEPA require resolution of disagreements among various scientists as to methodology; CLI-08-26, 68 NRC 509 (2008)

NEPA imposes procedural restraints on agencies, requiring that they take a "hard look" at the environmental impacts of a proposed action and reasonable alternatives to that action; LBP-06-8, 63 NRC 241 (2006)

NRC can presume that increases in emissions that still fall within statutory limits will be insignificant; CLI-08-16, 68 NRC 221 (2008)

NRC Staff may adopt the underlying scientific data and inferences from another agency's analysis without independent review, as long as it exercises independent judgment with respect to conclusions about the environmental impacts of the current proposed agency action; LBP-09-7, 69 NRC 613 (2009)

NRC's analysis in connection with licensing nuclear facilities should extend to related offsite construction projects such as connecting roads and railroad spurs; LBP-09-6, 69 NRC 367 (2009)

once the adverse environmental effects of a proposed action are adequately identified and evaluated, the agency is not constrained from deciding that other values outweigh the environmental costs; LBP-09-7, 69 NRC 613 (2009)

secondary or indirect consequences of disposal of the waste generated by a facility cannot, and need not for the purposes of satisfying the agency's NEPA obligation, be examined with particularity when a specific disposal site has not yet been identified; LBP-06-8, 63 NRC 241 (2006)

Staff is ultimately responsible for the work undertaken, or not undertaken, by its contractors; LBP-06-8, 63 NRC 241 (2006)

the appropriate state or federal regulatory authority, such as an Agreement State, will conduct any necessary site-specific evaluation to confirm that applicable radiological dose limits and standards for disposal of depleted uranium can be met at a particular site; CLI-06-15, 63 NRC 687 (2006)

the Commission to reveal sensitive government security information regarding the agency's; CLI-08-26, 68 NRC 509 (2008)

the National Environmental Policy Act does not require the analysis of potential terrorist attacks on a proposed nuclear facility; LBP-08-21, 68 NRC 554 (2008)

the National Environmental Policy Act is not an appropriate vehicle for exploring questions about the potential for a terrorist attack on a proposed nuclear facility; LBP-09-2, 69 NRC 87 (2009)

the National Infrastructure Protection Plan is concerned with security issues, not environmental quality standards and requirements, and it is environmental quality standards and requirements that the environmental analysis is obliged to address, not security issues; CLI-08-1, 67 NRC 1 (2008)

the three levels of impacts adopted by NRC are described; LBP-09-7, 69 NRC 613 (2009)

the unavailability of information does not halt all government action, particularly when information may become available at a later time and can still be used to influence the agency's decision; LBP-09-7, 69 NRC 613 (2009)

when reviewing a license application filed by a private applicant, as opposed to a federally sponsored project, an agency may give substantial weight to the stated preferences of the applicant with regard to issues such as site selection and facility design; LBP-09-7, 69 NRC 613 (2009)

## SUBJECT INDEX

where quantification is not possible, the Commission expects license applicants and NRC Staff to assess pertinent factors in qualitative terms; CLI-08-26, 68 NRC 509 (2008)

where there is no proposal for major federal action within the meaning of National Environmental Policy Act § 102(C), there is no requirement for a NEPA analysis of dredging; CLI-10-5, 71 NRC 90 (2010)

ENVIRONMENTAL ASSESSMENT

a more detailed environmental impact statement is not required unless the contemplated action is a major federal action significantly affecting the quality of the human environment; CLI-08-26, 68 NRC 509 (2008)

all environmental issues concerning severe accident mitigation design alternatives associated with the information in the NRC's EA for a certified design are considered resolved; LBP-09-19, 70 NRC 433 (2009)

although NRC will consider the fact that an applicant is subject to, and compliant with, other environmental laws and permits, it must still perform an EA prior to any major federal action significantly affecting the environment; LBP-06-20, 64 NRC 131 (2006)

although the discussion of alternatives in the environmental assessment need only be brief, it must be sufficient to fully comply with the requirement to study, develop, and describe appropriate alternatives; CLI-10-18, 72 NRC 56 (2010)

an environmental assessment, with its accompanying finding of no significant impact, constitutes an agency's evaluation of the environmental effects of a proposed action unless a more detailed statement is required; CLI-08-26, 68 NRC 509 (2008)

any member of the public who wishes to comment on the draft environmental assessment outside of the adjudicatory process, pursuant to NRC's normal environmental process, must do so within 30 days after it is made available (or within 45 days) of the publication of a draft environmental impact statement; CLI-07-11, 65 NRC 148 (2007)

as long as all reasonable alternatives have been considered and an appropriate explanation is provided as to why an alternative was eliminated, the regulatory requirement is satisfied; CLI-10-18, 72 NRC 56 (2010)

certain actions are designated as categorically excluded from the requirement to prepare an environmental assessment or an environmental impact statement; CLI-10-18, 72 NRC 56 (2010)

content of an EA for proposed actions is described; CLI-10-18, 72 NRC 56 (2010)

contentions asserting that the risks associated with terrorist attacks require that the agency prepare an environmental assessment or an environmental impact statement are outside the scope of agency NEPA review and are inadmissible; LBP-06-4, 63 NRC 99 (2006)

cultural and historic resources are to be considered as part of the environmental impacts assessment that must be completed; LBP-10-16, 72 NRC 361 (2010)

federal agencies are required, to the fullest extent possible, to include in every recommendation or report on proposals for major federal actions significantly affecting the quality of the human environment a detailed statement on the environmental impact of the proposed action; CLI-10-18, 72 NRC 56 (2010)

general statements about possible effects and some risk do not constitute a hard look absent a justification regarding why more definitive information could not be provided; CLI-10-18, 72 NRC 56 (2010)

in assessing impacts, an agency may rely on other specialized agencies with jurisdiction to enforce related permits and measures; CLI-08-16, 68 NRC 221 (2008)

in determining whether to prepare an environmental impact statement, the federal agency shall prepare an EA, which will briefly provide sufficient evidence and analysis for determining whether to prepare an environmental impact statement or a finding of no significant impact; LBP-06-27, 64 NRC 438 (2006)

it is not enough to consider only the proposed action and the no-action alternative in an EA; CLI-10-18, 72 NRC 56 (2010)

licensing boards do not sit to flyspeck environmental documents or to add details or nuances; LBP-10-14, 72 NRC 101 (2010)

NEPA does not require the NRC to assess the potential health effects of consuming irradiated food; CLI-10-18, 72 NRC 56 (2010)

NRC must provide the public with sufficient environmental information, considered in the totality of circumstances, to permit members of the public to weigh in with their views and thus inform the agency decisionmaking process; CLI-10-18, 72 NRC 56 (2010)

## SUBJECT INDEX

one purpose of an EA is to facilitate preparation of an environmental impact statement when one is necessary; CLI-10-18, 72 NRC 56 (2010)

Staff's failure to disclose data underlying its terrorism analysis in the final environmental assessment failed to meet the NEPA-mandated hard-look standard; CLI-10-18, 72 NRC 56 (2010)

Staff's obligations for preparation of an EA are discussed; CLI-10-18, 72 NRC 56 (2010)

the alternatives provision of NEPA § 102(2)(E) applies both when an agency prepares an environmental impact statement and when it prepares an environmental assessment; CLI-10-18, 72 NRC 56 (2010)

the obligation of agencies to consider alternatives is a lesser one under an environmental assessment than under an environmental impact statement; CLI-10-18, 72 NRC 56 (2010)

the range of alternatives that must be considered need not extend beyond those reasonably related to the purposes of the project and a rule of reason necessarily informs that choice; CLI-10-18, 72 NRC 56 (2010)

there is no per se regulatory bar that precludes the Staff from using the hearing process to clarify the administrative record supporting its final EA, and that record, along with any adjudicatory decision, becomes, in effect, part of the final environmental document; CLI-10-18, 72 NRC 56 (2010)

there is no requirement that the field sampling plan describe the collection of information needed for the decommissioning plan's environmental assessment or environmental impact statement; LBP-08-4, 67 NRC 105 (2008)

to raise an admissible contention with respect to a Staff finding of no significant impact, petitioner need not demonstrate that there will be a significant environmental impact as a consequence of the proposed action, but it must allege facts that, if true, show that the proposed project may significantly degrade some human environmental factor; LBP-06-27, 64 NRC 438 (2006)

### ENVIRONMENTAL EFFECTS

agencies need not elevate environmental concerns over other appropriate considerations, but rather must only take a hard look at the environmental consequences before taking a major action; LBP-06-19, 64 NRC 53 (2006)

all federal agencies must apply a systematic, interdisciplinary approach that will ensure the integrated use of the natural and social sciences and the environmental design arts in planning and in decisionmaking that may have an impact on the human environment; LBP-06-17, 63 NRC 747 (2006)

all significant environmental impacts and all reasonable alternatives should be considered for a combined license, but these are governed by the rule of reason; LBP-09-10, 70 NRC 51 (2009)

although applicant's description of existing water quality conditions did not separately evaluate the contributions of specific sources, it nonetheless formed an environmental baseline against which to measure the cumulative impact of the proposed new reactor; LBP-09-16, 70 NRC 227 (2009)

Council on Environmental Quality regulations state that an environmental impact statement must address both direct and indirect effects of an action; LBP-09-7, 69 NRC 613 (2009)

"cumulative impact" is defined as the impact on the environment that results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions; LBP-09-16, 70 NRC 227 (2009)

cumulative impacts analysis looks to whether a new impact is significantly enhanced by already existing effects; LBP-06-1, 63 NRC 41 (2006)

cumulative impacts can result from individually minor but collectively significant actions taking place over a period of time; LBP-09-19, 70 NRC 433 (2009)

direct effects are those caused by the federal action, and occurring at the same time and place as that action, while indirect effects are those caused by the action at a later time or more distant place, yet are still reasonably foreseeable; LBP-06-8, 63 NRC 241 (2006); LBP-09-7, 69 NRC 613 (2009)

direct environmental impacts are those caused by the federal action, and occurring at the same time and place as that action; LBP-09-19, 70 NRC 433 (2009)

even if offsite construction does not appear to be part of the plan, it does not follow that offsite consequences need not be considered; CLI-10-18, 72 NRC 56 (2010)

experience with and information about past direct and indirect effects of individual past actions may be useful in illuminating or predicting the direct and indirect effects of a proposed action; LBP-09-16, 70 NRC 227 (2009)

failure to receive a benefit from a project is not an environmental impact; LBP-08-6, 67 NRC 241 (2008)

## SUBJECT INDEX

if a NEPA contention alleges that impacts or alternatives that are patently outside the realm of reason must be considered, then the contention should be denied for failure to demonstrate that the issue raised is within the legitimate scope of NEPA; LBP-09-10, 70 NRC 51 (2009)

if federal agencies were free to ignore related environmental effects that they do not directly regulate, the National Environmental Policy Act would be meaningless; LBP-09-6, 69 NRC 367 (2009)

if the adverse environmental effects of the proposed action are adequately identified and evaluated, the agency is not constrained by NEPA from deciding that other values outweigh the environmental costs; LBP-07-4, 65 NRC 281 (2007)

impacts of design basis accidents at spent fuel storage installations are characterized as small, and so, no site-specific NEPA review is required; CLI-07-8, 65 NRC 124 (2007)

impacts that are reasonably foreseeable under NEPA must be analyzed publicly, even if their probability of occurrence is low; CLI-10-18, 72 NRC 56 (2010)

impacts that are remote and speculative or inconsequentially small need not be examined; LBP-10-14, 72 NRC 101 (2010)

in a supplemental environmental impact statement, Staff must address the adverse environmental effects that cannot be avoided; LBP-07-4, 65 NRC 281 (2007)

in an environmental analysis, agencies are required to consider both the context and intensity of impacts; LBP-09-7, 69 NRC 613 (2009)

in the context of NEPA, NRC is obligated to study matters that may be far afield of its primary mission, including the environmental impacts related to the permits and licenses issued by other governmental agencies; LBP-09-21, 70 NRC 581 (2009)

indirect effects are distinguished from connected actions under 40 C.F.R. 1508.25(a)(1); CLI-10-18, 72 NRC 56 (2010)

indirect environmental impacts are caused by the action at a later time or more distant place, yet are still reasonably foreseeable; LBP-09-19, 70 NRC 433 (2009)

it would be inconsistent with NEPA's rule of reason to require that the cumulative impacts analysis individually analyze the effects of remote facilities absent a demonstration that such additional effort would lead to a different conclusion; LBP-09-4, 69 NRC 170 (2009)

NEPA requires that only reasonably foreseeable indirect environmental effects of a proposed licensing action be considered; CLI-06-15, 63 NRC 687 (2006)

portions of a contention that allege that the environmental report failed to adequately address the zone of environmental impact, impact on listed species, and appropriate mitigation are admissible; LBP-09-10, 70 NRC 51 (2009)

prior NRC precedent is consistent with Supreme Court NEPA doctrine, which requires a reasonably close causal relationship between federal agency action and environmental consequences before NEPA is triggered, a relationship similar to that of proximate cause in tort law; LBP-07-14, 66 NRC 169 (2007)

severe accident mitigation alternatives analysis must be site specific and given careful consideration in order to comply with the National Environmental Policy Act; LBP-09-10, 70 NRC 51 (2009)

the central purpose of Part 51 rules is to allow NRC to comply with NEPA by identifying and evaluating environmental impacts that are generic to reactor license renewal proceedings and then allowing applicant and NRC to dispense with site-specific evaluations of such environmental impacts in situations covered by the generic analysis; LBP-10-15, 72 NRC 257 (2010)

the decision as to whether an alleged environmental impact or alternative is significant or reasonable is the merits of a NEPA contention and should not be adjudicated at the contention admissibility stage under the guise of materiality or scope; LBP-09-10, 70 NRC 51 (2009)

the duty under NEPA to consider the environmental impacts of a proposed action incorporates, at least implicitly, considerations of the probability of a particular consequence occurring; LBP-10-15, 72 NRC 257 (2010)

the effects that must be considered in an environmental impact statement are those that are caused by the action, and there must be a reasonably close causal relationship between the proposed action and an alleged environmental effect or impact, similar to proximate cause in tort law, before that effect need be considered; LBP-07-4, 65 NRC 281 (2007)

the emergency planning zone is established based on safety considerations and is not intended for use as a boundary for assessing environmental impacts; LBP-09-16, 70 NRC 227 (2009)

## SUBJECT INDEX

- the environmental baseline reflects the effects of all currently existing pollution sources in the relevant watershed, including contributions of all nuclear power plants, and petitioners failed to provide information indicating that this aggregate analysis was insufficient under NEPA; LBP-09-16, 70 NRC 227 (2009)
- the environmental consequences of proposals being considered by an agency within a region must be considered together to determine the synergistic and cumulative environmental effects; LBP-09-16, 70 NRC 227 (2009)
- the environmental report shall discuss the impacts of the proposed action on the environment in proportion to their significance; LBP-09-25, 70 NRC 867 (2009)
- the plain language of 10 C.F.R. 63.305 does not say anything about analyzing future climate based upon the historical geological record; LBP-10-22, 72 NRC 661 (2010)
- the questions of the safety and environmental impacts of onsite low-level waste storage are, in the Commission's view, largely site- and design-specific, and appropriately decided in an individual licensing proceeding, provided that litigants proffer properly framed and supported contentions; CLI-09-3, 69 NRC 68 (2009)
- when an early site permit is issued with an associated limited work authorization, the board must find relative to the LWA that any significant adverse environmental impact resulting from activities requested under section 52.17(c) can be redressed; LBP-09-19, 70 NRC 433 (2009)
- when one or more particular environmental impacts cannot be meaningfully assessed at the ESP stage, those matters may be designated as "unresolved," provided they do not interfere with the Staff's ability to determine whether there is any obviously superior alternative to the proposed site; CLI-07-27, 66 NRC 215 (2007)
- where, in weighing the balance of harms, injury to the environment is not at all probable, an injunction is not appropriate; LBP-06-27, 64 NRC 399 (2006)
- See also Aquatic Impacts; Endangered Species
- ENVIRONMENTAL IMPACT STATEMENT**
- a contention challenging the failure to include in the EIS for license renewal any consideration of the effects of an aircraft attack is inadmissible; LBP-10-10, 71 NRC 529 (2010)
- a contention may challenge a draft EIS even though its ultimate conclusion on a particular issue is the same as that in the ER, as long as the DEIS relies on significantly different data than the environmental report to support the determination; LBP-10-24, 72 NRC 720 (2010)
- a detailed statement concerning the environmental impact of the proposed action, any adverse environmental effects that cannot be avoided should the proposal be implemented, and any irreversible and irretrievable commitments of resources that would be involved in the proposed action should it be implemented must be provided; LBP-09-16, 70 NRC 227 (2009)
- a detailed statement of reasonable alternatives to a proposed action must be included; LBP-10-24, 72 NRC 720 (2010)
- a draft or final EIS is not considered deficient per se simply because its various NEPA findings do not include an explanation that is sufficient on its face to enable independent verification of any scientific results that underlie those findings; LBP-06-9, 63 NRC 289 (2006)
- a more detailed EIS is not required unless the contemplated action is a major federal action significantly affecting the quality of the human environment; CLI-08-26, 68 NRC 509 (2008)
- a supplement is needed where new information raises new concerns of sufficient gravity such that another, formal in-depth look at the environmental consequences of the proposed action is necessary; CLI-06-19, 63 NRC 19 (2006)
- a tribe is free to file a contention later on in the proceeding if, after Staff releases its environmental documents, the tribe believes that the Staff has failed to satisfy its obligations under NEPA and the National Historic Preservation Act; LBP-10-16, 72 NRC 361 (2010)
- affidavits supporting environmental contentions in the high-level waste proceeding must set forth significant and substantial grounds for the claim that it is not practicable to adopt the environmental impact statement for the proposed repository prepared by DOE; LBP-09-6, 69 NRC 367 (2009)
- agencies are required to consider both the context and intensity of impacts; LBP-09-7, 69 NRC 613 (2009)
- agencies are required to study, develop, and describe appropriate alternatives to recommended courses of action in any proposal that involves unresolved conflicts concerning alternative uses of available

## SUBJECT INDEX

resources and include a detailed statement of the alternatives to the proposed action; LBP-09-10, 70 NRC 51 (2009)

agencies are to exercise a degree of skepticism in dealing with the self-serving statements from the prime beneficiary of a project and to look at the general goal of the project, rather than only those alternatives by which a particular applicant can reach its own specific goals; LBP-09-10, 70 NRC 51 (2009)

agencies may defer certain issues in an EIS for a multistage project when detailed useful information on a given topic is not meaningfully possible to obtain, and the unavailable information is not essential to determination at the earlier stage; CLI-07-27, 66 NRC 215 (2007)

agencies must consult with and obtain the comments of any federal agency that has jurisdiction by law or special expertise with respect to any environmental impact involved; LBP-06-17, 63 NRC 747 (2006)

agencies need only discuss those alternatives that are reasonable and will bring about the ends of the proposed action; LBP-10-6, 71 NRC 350 (2010)

all federal agencies are to use a systematic and interdisciplinary approach in considering environmental issues and, before taking any major federal action significantly affecting the quality of the human environment; LBP-07-9, 65 NRC 539 (2007)

all reasonable alternatives must be identified and discussed; LBP-09-17, 70 NRC 311 (2009); LBP-09-19, 70 NRC 433 (2009)

alternative energy sources that will be dependent on future environmental safeguards and technological developments need not be considered in an environmental impact statement; LBP-09-7, 69 NRC 613 (2009)

alternatives analysis is the heart of the EIS; LBP-10-24, 72 NRC 720 (2010)

alternatives that are remote and speculative do not require detailed discussion; LBP-10-10, 71 NRC 529 (2010)

although all environmental contentions may, in a general sense, ultimately be challenges to the NRC's compliance with NEPA, factual disputes of particular issues can be raised before the draft environmental impact statement is prepared; CLI-10-2, 71 NRC 27 (2010)

although NEPA requires that the environmental impact statement identify and address all reasonable alternatives, this does not mean that every conceivable alternative must be included; LBP-10-10, 71 NRC 529 (2010)

although the primary duties of NEPA fall on the NRC Staff in NRC proceedings, the initial requirement to analyze the environmental impacts of an action is directed to applicants; LBP-07-11, 66 NRC 41 (2007)

although there will always be more data that could be gathered, agencies must have some discretion to draw the line and move forward with decisionmaking; CLI-10-11, 71 NRC 287 (2010)

an agency cannot redefine the applicant's goals, and the alternatives analysis should be based around the applicant's goals, including its economic goals; LBP-09-10, 70 NRC 51 (2009); LBP-09-17, 70 NRC 311 (2009)

an agency is not required to discuss indirect effects it considers remote or speculative; LBP-06-8, 63 NRC 241 (2006)

an agency is to include in every recommendation or report on major federal actions significantly affecting the quality of the human environment, a detailed statement by the responsible official on the environmental impact of the proposed action; LBP-08-6, 67 NRC 241 (2008)

an agency may rely on an EIS prepared by another federal agency if such reliance will aid in the presentation of issues, eliminate repetition, or reduce the length of an EIS; LBP-09-7, 69 NRC 613 (2009)

an agency must address both direct and indirect, or secondary, effects of an action; LBP-06-8, 63 NRC 241 (2006)

an agency must consider all reasonable alternatives but is not required to choose the most environmentally benign site; LBP-07-9, 65 NRC 539 (2007)

an agency must consider direct, indirect, and cumulative impacts of an action; LBP-09-19, 70 NRC 433 (2009)

an agency's consideration of alternatives is sufficient if it considers an appropriate range of alternatives, even if it does not consider every available alternative; LBP-10-24, 72 NRC 720 (2010)

## SUBJECT INDEX

an assessment of all environmental impacts and alternatives must be included, even though NRC has no jurisdiction to regulate such impacts or jurisdiction to impose such alternatives; LBP-09-10, 70 NRC 51 (2009)

an EIS ensures that an agency, in reaching its decision, will have available, and will carefully consider, detailed information concerning significant environmental impacts; LBP-07-11, 66 NRC 41 (2007)

an EIS for a materials license must include a statement on the alternatives to the proposed action, including a discussion of the no-action alternative; CLI-09-15, 70 NRC 1 (2009)

an EIS for an early site permit application must include an evaluation of alternative sites to determine whether there is any obviously superior alternative to the site proposed; LBP-09-19, 70 NRC 433 (2009)

an EIS guarantees that the relevant information will be made available to the larger audience that may also play a role in both the decisionmaking process and the implementation of that decision; LBP-07-11, 66 NRC 41 (2007)

an EIS is not intended to be a research document, reflecting the frontiers of scientific methodology, studies, and data; CLI-10-11, 71 NRC 287 (2010); CLI-10-22, 72 NRC 202 (2010)

an EIS is not required when the proposed federal action will effect no change in the status quo; LBP-07-4, 65 NRC 281 (2007)

an EIS must disclose measures that will mitigate potential adverse environmental impacts; LBP-09-4, 69 NRC 170 (2009)

an EIS must rigorously explore and objectively evaluate all reasonable alternatives, and for alternatives that were eliminated from detailed study, briefly discuss the reasons for their having been eliminated; LBP-10-10, 71 NRC 529 (2010)

an otherwise reasonable alternative will not be excluded from discussion in an EIS solely on the ground that it is not within the jurisdiction of the NRC; LBP-09-10, 70 NRC 51 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-10-10, 71 NRC 529 (2010)

any EIS prepared in connection with a repository proposed to be constructed by DOE shall, to the extent practicable, be adopted by the NRC in connection with the issuance by the NRC of a construction authorization and license for such repository; LBP-09-6, 69 NRC 367 (2009)

any power level selected at the COL stage other than the target value used in the environmental impact statement's alternative energy analysis for the early site permit would constitute new information that, if found to be significant, would have to be evaluated at the construction permit or combined license application stage; CLI-07-14, 65 NRC 216 (2007)

applicant may not define the objectives of its action in terms so unreasonably narrow that only one alternative would accomplish the applicant's goals because this would make the agency's alternatives analysis a foreordained formality; LBP-09-10, 70 NRC 51 (2009)

applicant's environmental report is not the same as the NRC's EIS; LBP-09-10, 70 NRC 51 (2009)

at the early site permit stage, relevant regulations may not be construed to require that the draft or final EIS include an assessment of the benefits of the proposed action; LBP-06-28, 64 NRC 460 (2006)

because of the questions of law and policy about the environmental impacts of terrorist attacks, the Commission decides to consider this issue itself; LBP-06-28, 64 NRC 404 (2006)

because the environmental report is the only environmental document available when NRC issues its notice of opportunity to request a hearing, all initial contentions necessarily focus on the adequacy of the applicant's ER, but the public will have a new opportunity to file environmental contentions when the NRC Staff issues the EIS; LBP-09-10, 70 NRC 51 (2009); LBP-09-25, 70 NRC 867 (2009)

before taking any action significantly affecting the quality of the human environment, the agency must prepare a detailed statement, which must be made available to the public, discussing the environmental impact of the proposed action and possible alternatives; LBP-06-19, 64 NRC 53 (2006)

benefit-cost analysis can be postponed until the reactor licensing stage; LBP-07-9, 65 NRC 539 (2007)

boards do not sit to flyspeck environmental documents or to add details or nuances; LBP-10-10, 71 NRC 529 (2010); LBP-10-14, 72 NRC 101 (2010)

certain actions are designated as categorically excluded from the requirement to prepare an environmental assessment or an environmental impact statement; CLI-10-18, 72 NRC 56 (2010)

compliance with NEPA requires that, if new and significant information arises after the date of the issuance of the EIS and before the agency decision, then the agency must supplement or revise its EIS and consider such information; LBP-10-15, 72 NRC 257 (2010)

## SUBJECT INDEX

consideration of alternatives need not discuss every possible alternative, but rather every reasonable alternative; LBP-09-7, 69 NRC 613 (2009)

contentions asserting that the risks associated with terrorist attacks require that the agency prepare an environmental assessment or an environmental impact statement are outside the scope of agency NEPA review and are inadmissible; LBP-06-4, 63 NRC 99 (2006)

Council on Environmental Quality regulations define direct, indirect, and cumulative impacts and require that they be considered in the EIS; LBP-09-10, 70 NRC 51 (2009)

Council on Environmental Quality regulations state that an EIS must address both direct and indirect effects of an action; LBP-09-7, 69 NRC 613 (2009)

documents must be written in plain language so that decisionmakers and the public can readily understand them; LBP-10-16, 72 NRC 361 (2010)

DOE's EIS is not to consider the need for the high-level waste repository, the time of initial availability of a repository, alternative sites to the Yucca Mountain site, or nongeologic alternatives to such site; LBP-10-11, 71 NRC 609 (2010)

environmental issues common to all (or to a certain category of) reactors, designated Category 1 issues, which include such matters as onsite land use, noise, bird collisions with cooling towers, and onsite spent fuel storage, have already been considered generically by NRC and need not be considered again for license renewal; CLI-06-24, 64 NRC 111 (2006)

even when an early site permit does not authorize any construction activity, the NRC Staff is required by Council on Environmental Quality regulations to consider actions that are related to other actions that could lead to a significant impact on the environment; LBP-07-1, 65 NRC 27 (2007)

existence of reasonable but unexamined alternatives renders an EIS inadequate; LBP-10-24, 72 NRC 720 (2010)

federal agencies are required, to the fullest extent possible, to include in every recommendation or report on proposals for major federal actions significantly affecting the quality of the human environment a detailed statement on the environmental impact of the proposed action; CLI-10-18, 72 NRC 56 (2010)

federal agencies must address the environmental impact of the proposed action, any adverse environmental effects that cannot be avoided, alternatives to the proposed action, the relationship between local short-term uses of the environment and the maintenance and enhancement of long-term productivity, and any irreversible and irretrievable commitments of resources that would be involved in the proposed action; LBP-06-17, 63 NRC 747 (2006); LBP-06-28, 64 NRC 460 (2006)

federal agencies must include in every recommendation or report on major federal actions significantly affecting the quality of the human environment, a detailed statement by the responsible official on the environmental impact of the proposed action; LBP-06-23, 64 NRC 257 (2006); LBP-07-4, 65 NRC 281 (2007); LBP-07-11, 66 NRC 41 (2007)

federal agencies must study, develop, and describe appropriate alternatives to the recommended courses of action in any proposal that involves unresolved conflicts concerning alternative uses of available resources; LBP-06-17, 63 NRC 747 (2006)

federal courts and the NRC use a rule of reason in identifying alternatives and do not require that unreasonable alternatives be examined; LBP-07-9, 65 NRC 539 (2007)

for a combined license, Staff must discuss the reasonably foreseeable environmental impacts of the proposed project; CLI-10-2, 71 NRC 27 (2010)

for NEPA purposes, the "major federal action" triggering the EIS is issuance of the license, not adjudication of the license; CLI-06-19, 63 NRC 19 (2006)

for purposes of the mandatory/uncontested portion of an ESP proceeding, the board takes official notice of publicly available documents associated with the Staff's safety and environmental reviews; LBP-09-19, 70 NRC 433 (2009)

if a harm does not have a sufficiently close connection to the physical environment, NEPA does not apply, regardless of the gravity of the harm; CLI-08-16, 68 NRC 221 (2008)

if a major federal action significantly affects the quality of the human environment, an environmental impact statement must be prepared; CLI-08-8, 67 NRC 193 (2008)

if NRC Staff has not previously considered severe accident mitigation alternatives for the applicant's plant in an environmental impact statement or related supplement or in an environmental assessment, a consideration of alternatives to mitigate severe accidents must be provided; LBP-07-13, 66 NRC 131 (2007)

## SUBJECT INDEX

- if significant new information becomes available, NRC Staff must explain how it took the new information into account in determining whether the additional generating capacity is required; LBP-10-24, 72 NRC 720 (2010)
- if the adverse environmental effects of the proposed action are adequately identified and evaluated, the agency is not constrained by NEPA from deciding that other values outweigh the environmental costs; LBP-06-19, 64 NRC 53 (2006)
- in determining whether to prepare an EIS, the federal agency shall prepare an environmental assessment, which will briefly provide sufficient evidence and analysis for determining whether to prepare an EIS or a finding of no significant impact; LBP-06-27, 64 NRC 438 (2006)
- in performing NEPA evaluations, agencies must consider three types of actions, three types of alternatives, and three types of impacts; CLI-10-5, 71 NRC 90 (2010); LBP-09-7, 69 NRC 613 (2009)
- in preparing an EIS, Staff can rely upon the environmental analyses in another agency's EIS regarding environmental impacts; LBP-06-9, 63 NRC 289 (2006)
- in the context of NEPA, one must examine underlying policies or legislative intent to draw a manageable line between those causal changes that make an agency responsible for an effect and those that do not; CLI-08-16, 68 NRC 221 (2008)
- inaccurate, incomplete, or misleading information in an EIS concerning the comparison of alternatives is itself sufficient to render the EIS unlawful and to compel its revision; LBP-10-24, 72 NRC 720 (2010)
- information underlying EISs or environmental assessments shall be made available to the President, the Council on Environmental Quality, and to the public, but information that must be considered as part of the NEPA decisionmaking process may be withheld from public disclosure pursuant to FOIA exemptions; CLI-08-1, 67 NRC 1 (2008)
- it is not reasonable or necessary to consider, as a system design alternative to the application for an early site permit for Units 3 and 4, the imposition of water conservation measures on preexisting Units 1 and 2; LBP-07-9, 65 NRC 539 (2007)
- it is the NRC Staff, not the intervenors, that has the burden of complying with NEPA; LBP-10-24, 72 NRC 720 (2010)
- low probability is the key to applying NEPA's rule-of-reason test to contentions that allege that specified accident scenarios present a significant environmental impact that must be evaluated; LBP-10-10, 71 NRC 529 (2010)
- NEPA § 102(2)(C)(ii) implicitly requires that the EIS disclose mitigation measures; LBP-09-16, 70 NRC 227 (2009)
- NEPA does not call for examination of every conceivable aspect of federally licensed projects; LBP-07-3, 65 NRC 237 (2007)
- NEPA requires an analysis of all impacts of connected actions, including direct, indirect, and cumulative impacts; CLI-10-5, 71 NRC 90 (2010)
- NEPA requires federal agencies to consider the likely environmental impacts of the preferred course of action as well as reasonable alternatives; LBP-10-24, 72 NRC 720 (2010)
- new evidence that potentially alters the financial cost-benefit analysis, but which does not significantly affect the physical environment, does not warrant supplementing the EIS; CLI-06-19, 63 NRC 19 (2006)
- no discussion of environmental impacts of spent fuel storage for the specified period is required in an environmental report or an environmental impact statement prepared in connection with the requested action; LBP-09-18, 70 NRC 385 (2009)
- NRC adjudicatory hearings are not EIS editing sessions; CLI-09-11, 69 NRC 529 (2009)
- NRC cannot either fail to perform an adequate evaluation or evade a NEPA responsibility by deferring to another agency; CLI-10-5, 71 NRC 90 (2010)
- NRC is not required to assess every impact or effect of its proposed action, only effects on the environment; CLI-08-16, 68 NRC 221 (2008)
- NRC is required to evaluate and balance both the claimed benefits and the environmental costs of a proposed new reactor; LBP-09-16, 70 NRC 227 (2009)
- NRC must analyze the need for additional power when it relies upon a benefit in performing the balancing of benefits and costs; LBP-09-16, 70 NRC 227 (2009)

## SUBJECT INDEX

NRC regulations require petitioner to raise contentions related to NEPA as challenges to the applicant's environmental report, which acts as a surrogate for the EIS during the early stages of a relicensing proceeding; LBP-08-26, 68 NRC 905 (2008)

NRC Staff is required to prepare an EIS in connection with issuance of an early site permit; LBP-07-1, 65 NRC 27 (2007); LBP-09-7, 69 NRC 613 (2009); LBP-09-19, 70 NRC 433 (2009)

NRC Staff is required to present its position on whether it is practicable to adopt DOE's environmental impact statement for Yucca Mountain without supplementation; LBP-09-6, 69 NRC 367 (2009)

NRC Staff must discuss alternatives to the proposed action, and this discussion must incorporate a hard look at alternatives; LBP-10-10, 71 NRC 529 (2010)

NRC Staff must first prepare a draft environmental impact statement for an early site permit; LBP-09-7, 69 NRC 613 (2009)

NRC Staff's issuance of its draft and final EISs may lead to the filing of additional contentions if the data or conclusions contained in them are significantly different from the data or conclusions found in the applicant's documents; LBP-10-10, 71 NRC 529 (2010)

NRC's adoption of any EIS prepared in connection with a repository shall be deemed to also satisfy the responsibilities of NRC under NEPA and no further consideration shall be required except any independent responsibilities of NRC to protect public health under the Atomic Energy Act; LBP-09-6, 69 NRC 367 (2009)

NRC's alternatives analysis should be based around the applicant's goals, including the applicant's economic goals; LBP-07-9, 65 NRC 539 (2007)

NRC's NEPA process for preparation of an EIS mandates openness and clarity; CLI-07-27, 66 NRC 215 (2007)

petitioner may amend contentions based on the applicant's environmental report or file new contentions if there are data or conclusions in the NRC draft or final EIS, environmental assessment, or any supplements relating thereto, that differ significantly from the data or conclusions in the applicant's documents; LBP-10-24, 72 NRC 720 (2010)

potential environmental impacts of a proposed action and any reasonable alternatives must be discussed; LBP-10-10, 71 NRC 529 (2010)

preparation of an EIS is required for all major federal actions significantly affecting the quality of the human environment; LBP-06-27, 64 NRC 438 (2006)

presentation of alternatives in an applicant's environmental report and in an NRC EIS must be in comparative form; LBP-09-19, 70 NRC 433 (2009)

purpose of the cost-benefit analysis called for by NEPA is to identify each significant environmental cost and to determine whether, all other factors considered, on balance the incurring of that cost is warranted; LBP-10-24, 72 NRC 720 (2010)

reasonable alternatives do not include alternatives that are impractical, that present unique problems, or that cause extraordinary costs; LBP-09-7, 69 NRC 613 (2009)

"reasonably foreseeable" impacts include those that have catastrophic consequences, even if their probability of occurrence is low, provided that the analysis of the impacts is supported by credible scientific evidence, is not based on pure conjecture, and is within the rule of reason; CLI-08-8, 67 NRC 193 (2008)

regarding public disclosure of an agency's NEPA analysis, Congress has established that the EIS shall be made available to the public as provided by FOIA; LBP-08-7, 67 NRC 361 (2008)

rejection of even viable and reasonable alternatives, after an appropriate evaluation, is not arbitrary and capricious; LBP-10-10, 71 NRC 529 (2010)

remote or speculative environmental effects need not be discussed; LBP-09-7, 69 NRC 613 (2009)

someone living adjacent to the site for proposed construction of a federally licensed facility has standing to challenge the licensing agency's failure to prepare an EIS, even though he cannot establish with any certainty that the statement will cause the license to be withheld or altered, and even though the facility will not be completed for many years; LBP-10-24, 72 NRC 720 (2010)

Staff must address matters such as the environmental impacts of unregulated seepage into adjacent groundwater; LBP-09-25, 70 NRC 867 (2009)

Staff must evaluate alternatives to determine whether there are any obviously superior options to the proposed action; LBP-07-6, 65 NRC 429 (2007)

## SUBJECT INDEX

Staff will use information from applicant's environmental report in preparing its EIS; CLI-10-2, 71 NRC 27 (2010)

Staff's draft and final EISs are to include a statement that will briefly describe and specify the need for the proposed action; LBP-06-17, 63 NRC 747 (2006)

Staff's EIS for an early site permit need not include an assessment of the benefits such as need for power; LBP-07-1, 65 NRC 27 (2007)

technologically unproven alternatives need not be considered; LBP-09-7, 69 NRC 613 (2009)

the alternatives provision of NEPA § 102(2)(E) applies both when an agency prepares an EIS and when it prepares an environmental assessment; CLI-10-18, 72 NRC 56 (2010)

the analysis of reasonably foreseeable significant adverse impacts regarding those events with potential catastrophic consequences must be supported by credible scientific evidence, must not be based on pure conjecture, and must be within the rule of reason; LBP-09-26, 70 NRC 939 (2009)

the cost-benefit analysis involves the scrutiny of many factors, among them, offsetting benefits, available alternatives, and the possible means (and attendant costs) of reducing the environmental harm; LBP-10-24, 72 NRC 720 (2010)

the draft EIS is distributed for public comment and, based on the comments received, a review of information provided by the applicant, and supplemental independent information and analysis, the Staff prepares and issues a final EIS; LBP-09-7, 69 NRC 613 (2009)

the effects that must be considered are those that are caused by the action and there must be a reasonably close causal relationship between the proposed action and an alleged environmental effect or impact, similar to proximate cause in tort law, before that effect need be considered; LBP-07-4, 65 NRC 281 (2007)

the EIS for an early site permit must focus on the environmental effects of construction and operation of reactors that have the characteristics of the postulated site parameters, and must include an evaluation of alternatives to determine whether there are any obviously superior options to the proposed action; LBP-07-1, 65 NRC 27 (2007)

the environmental costs of a uranium enrichment facility must be compared to the Staff's assessment of the benefits derived from the additional domestic supply of enriched uranium and the presence of upgraded enrichment technology in the United States; LBP-07-6, 65 NRC 429 (2007)

the environmental effect of terrorism caused by third-party miscreants is simply too far removed from the natural or expected consequences of agency action to require a study under NEPA; CLI-07-10, 65 NRC 144 (2007)

the environmental report impact analysis must include sufficient data and the alternatives analysis must be sufficiently complete to aid the Commission in preparing the EIS; LBP-09-10, 70 NRC 51 (2009)

the environmental report is required to address a list of environmental considerations that correspond to the environmental considerations that NEPA § 102(2)(C)(i)-(v) requires the agency to address in the EIS; LBP-09-16, 70 NRC 227 (2009)

the fact that an environmental impact is regulated by another federal agency or by a state does not justify the exclusion of the analysis in NRC's EIS; LBP-09-16, 70 NRC 227 (2009)

the hard look required by NEPA is subject to a rule of reason, such that it is not necessary to look at every conceivable alternative to the proposed licensing action, but only those that are feasible and reasonably related to the scope and goals of the proposed action; LBP-10-10, 71 NRC 529 (2010)

the National Environmental Policy Act allows agencies to select their own methodology as long as that methodology is reasonable; CLI-10-11, 71 NRC 287 (2010)

the National Environmental Policy Act does not require agencies to use technologies and methodologies that are still emerging and under development, or to study phenomena for which there are not yet standard methods of measurement or analysis; CLI-10-11, 71 NRC 287 (2010)

the National Environmental Policy Act requires an EIS for any agency action that is a major action significantly affecting the environment; LBP-10-7, 71 NRC 391 (2010)

the NEPA alternatives analysis to the proposed action is the heart of an EIS; LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009)

the NEPA requirement to prepare an EIS is a procedural mechanism designed to ensure that agencies give proper consideration to the environmental consequences of their actions; LBP-10-24, 72 NRC 720 (2010)

## SUBJECT INDEX

- the Nuclear Waste Policy Act's mandate that the EIS be adopted by NRC to the extent practicable is intended to avoid duplication of the environmental review process but does not permit NRC to premise a construction-authorization or licensing decision upon an EIS that does not meet the substantive requirements of NEPA or the Council on Environmental Quality's regulations; LBP-09-6, 69 NRC 367 (2009)
- the obligation of agencies to consider alternatives is a lesser one under an environmental assessment than under an environmental impact statement; CLI-10-18, 72 NRC 56 (2010)
- the only relevant test for a claim that it is not practicable to adopt the DOE environmental impact statement is whether the supporting affidavit presents significant and substantial new information or new considerations sufficient to render such EIS inadequate; LBP-09-6, 69 NRC 367 (2009)
- the potential construction and operation of the plant or plants for which the early site permit is being obtained is the proposed action that must be the focus of the Board's review; LBP-07-1, 65 NRC 27 (2007)
- the presiding officer should treat as a cognizable "new consideration" an attack on the Yucca Mountain environmental impact statements based on significant and substantial information that, if true, would render the statements inadequate; CLI-08-25, 68 NRC 497 (2008)
- the requirement to discuss alternatives in the environmental report parallels NEPA's requirement that an EIS provide a detailed statement of reasonable alternatives to a proposed action; LBP-09-16, 70 NRC 227 (2009)
- the scope of admissible issues in the high-level waste repository proceeding is discussed; LBP-09-6, 69 NRC 367 (2009)
- the Staff is required to provide an environmental justice analysis in greater detail when the low-income or minority population thresholds are met; LBP-07-9, 65 NRC 539 (2007)
- the statutory language of the National Environmental Policy Act requires an EIS only in the event of a proposed action, and thus in the absence of a proposal there is nothing that could be the subject of the analysis envisioned by the statute for an EIS; CLI-10-5, 71 NRC 90 (2010)
- the statutory requirement that a federal agency contemplating a major action prepare an EIS serves NEPA's action-forcing purpose in two important respects; LBP-06-23, 64 NRC 257 (2006)
- there is no requirement that the field sampling plan describe the collection of information needed for the decommissioning plan's environmental assessment or EIS; LBP-08-4, 67 NRC 105 (2008)
- there is no requirement to use the best scientific methodology, and NEPA should be construed in the light of reason if it is not to demand virtually infinite study and resources; CLI-10-11, 71 NRC 287 (2010)
- to be encompassed by NEPA, there needs to be a reasonably close causal relationship between a change in the physical environment and the effect at issue; CLI-08-16, 68 NRC 221 (2008)
- to the fullest extent possible, all federal agencies shall include in every recommendation or report on proposals for legislation and other major federal actions significantly affecting the quality of the human environment, a detailed statement discussing the environmental impact of the proposed action and possible alternatives; CLI-08-26, 68 NRC 509 (2008)
- under NEPA the Commission looks to the reasonably foreseeable impacts of simply licensing the facility, not the reasonably foreseeable effects of a successful terrorist attack; LBP-09-26, 70 NRC 939 (2009)
- under NEPA, the NRC must balance the benefits of the project against its environmental costs; LBP-10-24, 72 NRC 720 (2010)
- under the rule of reason, the EIS need not consider an infinite range of alternatives, only reasonable or feasible ones; LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-21, 70 NRC 581 (2009)
- use of the disjunctive phrase "data *or* conclusions" means that it is sufficient that either data or conclusions in the draft EIS differ significantly from those in the environmental report; LBP-10-24, 72 NRC 720 (2010)
- when Staff has prepared a DEIS or FEIS by the time environmental contentions come before a licensing board on the merits, such contentions are appropriately treated as challenges to the EIS; LBP-09-7, 69 NRC 613 (2009)
- where the agency's action is to approve or deny a proposal by a private party, the agency should ordinarily accord substantial weight to the preferences of the applicant and/or sponsor in the siting and design of the project; LBP-10-6, 71 NRC 350 (2010)

## SUBJECT INDEX

whether and how the Staff fulfills its National Historic Preservation Act and NEPA obligations are issues that could form the basis of a new contention; LBP-10-16, 72 NRC 361 (2010)

See also Draft Environmental Impact Statement; Final Environmental Impact Statement; Generic Environmental Impact Statement; Supplemental Environmental Impact Statement

### ENVIRONMENTAL ISSUES

a baseline NEPA issue that a board must make in a mandatory hearing on an early site permit application is whether the requirements of NEPA § 102(2)(A), (C), and (E) and 10 C.F.R. Part 51 have been met; LBP-07-9, 65 NRC 539 (2007)

a baseline NEPA issue that a board must make in a mandatory hearing on an early site permit application is to independently consider the final balance among conflicting factors contained in the record of the proceeding with a view to determining the appropriate action to be taken; LBP-07-9, 65 NRC 539 (2007)

a baseline NEPA issue that a board must make in a mandatory proceeding on an early site permit application is whether a construction permit should be issued, denied, or appropriately conditioned to protect environmental values; LBP-07-9, 65 NRC 539 (2007)

a board may consider environmental contentions contesting applicant's environmental report as challenges to NRC's subsequent draft environmental impact statement so long as the DEIS analysis or discussion at issue is essentially *in para materia* with the ER analysis or discussion that is the focus of the contention; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)

a late-filed environmental contention may be admitted only where petitioner relies upon newly available, significant information, meets the late filing requirements, or successfully argues for supplementing the EIS; LBP-08-11, 67 NRC 460 (2008)

a presiding officer considering environmental contentions in the high-level waste proceeding should apply NRC reopening procedures and standards in 10 C.F.R. 2.326 to the extent possible; CLI-08-25, 68 NRC 497 (2008)

absent a waiver pursuant to 10 C.F.R. 2.335, Category 1 issues are not subject to challenge in a relicensing proceeding because they involve environmental effects that are essentially similar for all plants and need not be assessed repeatedly on a site-specific basis; LBP-08-13, 68 NRC 43 (2008)

affidavits supporting environmental contentions in the high-level waste proceeding must set forth significant and substantial grounds for the claim that it is not practicable to adopt the environmental impact statement for the proposed repository prepared by DOE; LBP-09-6, 69 NRC 367 (2009)

although all environmental contentions may, in a general sense, ultimately be challenges to the NRC's compliance with NEPA, factual disputes of particular issues can be raised before the draft environmental impact statement is prepared; CLI-10-2, 71 NRC 27 (2010)

although the primary duties of NEPA fall on the NRC Staff in NRC proceedings, the initial requirement to analyze the environmental impacts of an action is directed to applicants; LBP-07-11, 66 NRC 41 (2007)

an environmental contention is not litigable in a combined license proceeding if it has already been resolved in an early site permit proceeding; CLI-09-3, 69 NRC 68 (2009)

an environmental contention may be admitted during a COL proceeding if it concerns a significant issue that was not resolved in the early site permit proceeding or if it involves the impacts of construction and operation of the facility and significant new information has been identified; LBP-08-15, 68 NRC 294 (2008)

applicant is required to address new and significant information for either Category 1 or Category 2 issues in its environmental report for a license renewal application; LBP-08-13, 68 NRC 43 (2008)

applicant is required to provide in its environmental report a site-specific analysis of entrainment, impingement, and heat shock/thermal discharge impacts from its once-through cooling systems; LBP-08-13, 68 NRC 43 (2008)

because a contention focuses on the safety-related aspects of a COL application, it is not apparent that the issue resolved in the board's admissibility ruling has any particular implications for a contention challenging the environmental impacts of long-term onsite low-level radioactive waste storage admitted and pending in another proceeding; LBP-10-8, 71 NRC 433 (2010)

because applicant did not apply for an early site permit, petitioners thus are not precluded from raising an issue relative to failure of applicant's environmental report to assess the onsite impacts of potential long-term storage of low-level waste; LBP-08-16, 68 NRC 361 (2008)

## SUBJECT INDEX

Category 2 issues are not essentially similar for all plants because they must be reviewed on a site-specific basis and thus challenges relating to these issues are properly part of a license renewal proceeding; LBP-08-13, 68 NRC 43 (2008)

Category 2 issues involve environmental impact severity levels that could differ significantly from plant to plant, or involve impacts for which additional plant-specific mitigation measures should be considered; LBP-06-10, 63 NRC 314 (2006); LBP-06-23, 64 NRC 257 (2006); LBP-07-4, 65 NRC 281 (2007); LBP-07-11, 66 NRC 41 (2007)

Category 2, or plant specific, issues are within the scope of license renewal, and applicants must provide a plant-specific review of them; LBP-06-23, 64 NRC 257 (2006)

commencement of evidentiary hearings on environmental issues is prohibited until after the final environmental impact statement is issued; LBP-09-22, 70 NRC 640 (2009)

contentions must be based on documents or information available when the hearing petition is to be filed; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)

contested proceedings litigate particular contentions that may include arguable NEPA-analysis shortfalls, whereas the Staff's NEPA analysis encompasses the full range of NEPA issues whether or not a contested proceeding even takes place; CLI-10-5, 71 NRC 90 (2010)

environmental issues identified as "Category 1," or "generic," issues in 10 C.F.R. Part 51, Subpart A, Appendix B, are not within the scope of a license renewal proceeding; LBP-07-11, 66 NRC 41 (2007)

federal agencies must include in every recommendation or report on major federal actions significantly affecting the quality of the human environment, a detailed statement by the responsible official on the environmental impact of the proposed action; LBP-07-11, 66 NRC 41 (2007)

for an early site permit, NRC is required to provide a detailed statement on alternatives to the proposed action; CLI-07-27, 66 NRC 215 (2007)

in a license renewal proceeding, petitioners must demonstrate that an issue focuses on the potential impacts of an additional 20 years of nuclear power plant operation, not on everyday operational issues; CLI-06-4, 63 NRC 32 (2006)

in addition to meeting NRC's regular contention admissibility requirements in 10 C.F.R. 2.309(f), environmental contentions addressing any DOE environmental impact statement or supplement in the high-level waste proceeding must also conform to the requirements and address the applicable factors outlined in 10 C.F.R. 51.109; CLI-08-25, 68 NRC 497 (2008)

in an uncontested uranium enrichment proceeding, a licensing board, without conducting a de novo evaluation of the application, will determine whether the application and record of the proceeding contain sufficient information to support licensing and whether the Staff's review of the application has been adequate; LBP-06-17, 63 NRC 747 (2006)

in conducting its analysis of the impact of the license renewal on land use, applicant should consider the impact on real estate values that would be caused by license renewal or nonrenewal; LBP-08-13, 68 NRC 43 (2008)

in the mandatory early site permit proceeding, NRC must address whether the requirements of section 102(2)(A), (C), and (E) of the National Environmental Policy Act and the regulations in 10 C.F.R. Part 51, Subpart A have been complied with; CLI-07-27, 66 NRC 215 (2007)

in the mandatory early site permit proceeding, NRC must address whether the review conducted by the Commission pursuant to the National Environmental Policy Act has been adequate; CLI-07-27, 66 NRC 215 (2007)

in the mandatory early site permit proceeding, NRC must determine, after considering reasonable alternatives, whether the construction permit should be issued, denied, or appropriately conditioned to protect environmental values; CLI-07-27, 66 NRC 215 (2007)

in the mandatory early site permit proceeding, NRC must independently consider the final balance among the conflicting factors contained in the record of the proceeding with a view to determining the appropriate action to be taken; CLI-07-27, 66 NRC 215 (2007)

intervenors are required to file contentions in the first instance based on the applicant's environmental report; LBP-09-7, 69 NRC 613 (2009)

new or amended environmental contentions can be freely filed if new data or conclusions appear in new documents; LBP-07-14, 66 NRC 169 (2007)

## SUBJECT INDEX

NRC hearings on safety issues concern the adequacy of the license application, not the NRC Staff's work, but NRC hearings on NEPA issues focus entirely on the adequacy of the NRC Staff's work; CLI-07-17, 65 NRC 392 (2007)

on NEPA baseline issues in the mandatory hearing on an early site permit application, the board must reach its own independent determination; LBP-07-9, 65 NRC 539 (2007)

petitioners are to file their NEPA contentions based on the applicant's environmental report, and, later, if the NRC Staff's draft or final environmental impact statement contains data or conclusions that differ significantly from the data or conclusions in the applicant's documents, petitioners may file new or amended contentions; CLI-06-15, 63 NRC 687 (2006)

presentation of an alternative analysis is, without more, insufficient to support a contention alleging that the original analysis failed to meet applicable requirements; LBP-08-13, 68 NRC 43 (2008)

prior to 2004, in addition to meeting the substantive admissibility criteria found in 10 C.F.R. 2.714(b)(2), the issue statement was based on environmental impact statement or environmental assessment information that differed significantly from the data or conclusions in the applicant's environmental report; LBP-10-1, 71 NRC 165 (2010)

regardless of whether a uranium enrichment facility proceeding is contested or uncontested, a licensing board must consider three baseline NEPA issues; LBP-06-17, 63 NRC 747 (2006)

spent fuel pool fires are Category 1 issues and therefore are addressed generically in the generic environmental impact statement for license renewals; LBP-08-13, 68 NRC 43 (2008)

the impact of extended operation on endangered or threatened species varies from one location to another, and is thus included within Category 2; LBP-07-4, 65 NRC 281 (2007)

the licensing board's standard of review in a mandatory uncontested proceeding on a uranium enrichment facility application is discussed; LBP-07-6, 65 NRC 429 (2007)

the overriding NEPA issue that a board must determine in a mandatory proceeding on an early site permit application is whether the NEPA review conducted by the NRC Staff has been adequate; LBP-07-9, 65 NRC 539 (2007)

the potential for tritium contamination of water is primarily a NEPA issue because it involves the environmental impacts of the proposed early site permit and possible mitigation measures, but also has a safety element because safety regulations require that exposure to radiation be as low as reasonably achievable; LBP-07-9, 65 NRC 539 (2007)

the presiding officer or licensing board has discretion to accelerate the merits hearing on safety issues, but not on environmental issues; CLI-07-17, 65 NRC 392 (2007)

the presiding officer should treat as a cognizable "new consideration" an attack on the Yucca Mountain environmental impact statements based on significant and substantial information that, if true, would render the statements inadequate; CLI-08-25, 68 NRC 497 (2008)

the underlying purpose of NEPA as an information-gathering and disclosure mechanism requires a different view of the concept of "materiality" under 10 C.F.R. 2.309(f)(1)(iv) than might be applied to a contention seeking to establish a health and safety issue; LBP-08-16, 68 NRC 361 (2008)

threshold environmental legal and policy issues need not await issuance of the final environmental impact statement; CLI-07-17, 65 NRC 392 (2007)

to challenge a SAMA analysis, petitioner must, at a minimum, address the approximate relative cost and benefit of the SAMA; LBP-08-13, 68 NRC 43 (2008)

when a combined license application references an early site permit, neither applicant nor Staff needs to address environmental issues resolved in the ESP proceeding unless new and significant information arises on those issues; LBP-10-1, 71 NRC 165 (2010)

when Staff has prepared a DEIS or FEIS by the time environmental contentions come before a licensing board on the merits, such contentions are appropriately treated as challenges to the EIS; LBP-09-7, 69 NRC 613 (2009)

See also Aquatic Impacts

ENVIRONMENTAL JUSTICE

although Staff's explanation of how it reached its conclusions regarding environmental justice is cursory, the Commission believes that the review was sufficient; CLI-07-27, 66 NRC 215 (2007)

an admissible contention must allege sufficiently specific disproportionate effects with a nexus to the physical environment, falling on low-income and minority communities; LBP-06-10, 63 NRC 314 (2006)

## SUBJECT INDEX

- contentions must be based on the specific characteristics of a particular minority community; LBP-07-3, 65 NRC 237 (2007)
- contentions must present support regarding the alleged existence of adverse impacts or harm on the physical or human environment, and must make a supported case that these purported adverse impacts could disproportionately affect poor or minority communities in the vicinity of the facility at issue; LBP-07-3, 65 NRC 237 (2007)
- contentions must show that the affected local population qualifies as a minority or low-income population; LBP-09-18, 70 NRC 385 (2009)
- each agency should identify and address, as appropriate, any disproportionately high and adverse human health or environmental effects of its programs, policies, and activities on minority or low-income populations; LBP-06-19, 64 NRC 53 (2006)
- Executive Order 12898 itself does not establish new substantive or procedural requirements applicable to NRC regulatory or licensing activities; CLI-07-27, 66 NRC 215 (2007)
- given the fact-specific nature of environmental justice issues and inquiries, the methods and form of Staff review, including any decision whether to hold discussions with knowledgeable community and governmental representatives, is best left to the informed discretion of the Staff; CLI-07-27, 66 NRC 215 (2007)
- in accord with the environmental justice executive order, NRC has obligated itself to address only the disproportionate distribution of high and adverse effects in its NEPA analysis; LBP-07-3, 65 NRC 237 (2007)
- in its environmental analysis, NRC makes nearby nuclear facility-related harm an appropriate issue to consider cumulatively with any impacts from proposed reactors; LBP-07-3, 65 NRC 237 (2007)
- in reviewing environmental justice claims, adverse impacts that fall heavily on minority and impoverished citizens call for particularly close scrutiny; LBP-07-3, 65 NRC 237 (2007)
- NEPA is the only legal grounds for an admissible contention relating to environmental justice issues; LBP-09-18, 70 NRC 385 (2009)
- the essence of an environmental justice claim, in NRC practice, is disparate environmental harm; LBP-08-6, 67 NRC 241 (2008)
- the purpose of this review is to ensure that the Commission considers and publicly discloses environmental factors peculiar to minority or low-income populations that may cause them to suffer harm disproportionate to that suffered by the general population; LBP-08-13, 68 NRC 43 (2008)
- the Staff is required to provide an environmental justice analysis in greater detail when the low-income or minority population thresholds are met; LBP-07-9, 65 NRC 539 (2007)
- under NEPA, the Commission is ultimately responsible for analyzing environmental justice issues, but license renewal applicants are required to assist the Commission with that evaluation; LBP-08-26, 68 NRC 905 (2008)
- ENVIRONMENTAL PROTECTION AGENCY**
- alternative thermal effluent limitations do not apply to a plant that employs closed-cycle cooling; CLI-07-25, 66 NRC 101 (2007)
- carbon dioxide falls within the Clean Air Act's definition of air pollutants subject to EPA's regulatory authority; LBP-09-17, 70 NRC 311 (2009)
- EPA is responsible for promulgating standards for environmental protection, and NRC is tasked with promulgating the criteria it will apply in the licensing proceeding; LBP-09-6, 69 NRC 367 (2009)
- except for its overall NEPA balancing, the NRC can limit its analysis of aquatic impacts to those determined by the EPA, when EPA has analyzed an alternative technology extensively and made conclusions as to its suitability; LBP-07-3, 65 NRC 237 (2007)
- licensees subject to the provisions of EPA's generally applicable environmental radiation standards in 40 C.F.R. Part 190 shall comply with those standards; LBP-09-19, 70 NRC 433 (2009)
- nothing in the National Environmental Policy Act shall be deemed to authorize any federal agency to review any effluent limitation or other requirement established pursuant to the Clean Water Act or to authorize any such agency to impose any effluent limitation other than those set by EPA or a state agency that has been delegated such authority; LBP-09-25, 70 NRC 867 (2009)
- NRC must modify its technical requirements and criteria for the high-level waste repository as necessary to be consistent with final EPA standards; CLI-08-20, 68 NRC 272 (2008)

## SUBJECT INDEX

- NRC's criteria must not be inconsistent with EPA's environmental protection standards; LBP-09-6, 69 NRC 367 (2009)
- the Commission has acknowledged applicability of EPA radiation exposure standards under 40 C.F.R. Part 190; LBP-09-19, 70 NRC 433 (2009)
- when water quality decisions have been made by a state pursuant to the Clean Water Act and these decisions are raised in NRC licensing proceedings, the NRC is bound to take EPA's considered decisions at face value; LBP-09-25, 70 NRC 867 (2009)
- ENVIRONMENTAL QUALIFICATION OF ELECTRICAL EQUIPMENT
- all structures, systems, and components relied on in safety analyses or plant evaluations to perform a function that demonstrates compliance with the NRC's regulations are subject to aging management review for license renewal; CLI-10-14, 71 NRC 449 (2010)
- ENVIRONMENTAL REPORT
- a board may consider environmental contentions contesting applicant's ER as challenges to NRC's subsequent draft environmental impact statement so long as the DEIS analysis or discussion at issue is essentially *in para materia* with the ER analysis or discussion that is the focus of the contention; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008);
- a contention challenging the absence in the ER of consideration of impacts from a severe radiological accident at one unit on other collocated units, supported by fact-based argument demonstrating a genuine dispute on a material issue and identifying supporting reasons for petitioners' belief, is admitted; LBP-09-17, 70 NRC 311 (2009)
- a contention may challenge a draft environmental impact statement even though its ultimate conclusion on a particular issue is the same as that in the ER, as long as the DEIS relies on significantly different data than the ER to support the determination; LBP-10-24, 72 NRC 720 (2010)
- a contention that impacts from a severe radiological accident at any one unit on operation of other units at the site had not been, and should be, considered in the application's environmental report is found to be moot; LBP-10-10, 71 NRC 529 (2010)
- a license renewal applicant has no obligation to discuss in its ER the impacts of a potential expansion of the independent spent fuel storage installation; LBP-08-26, 68 NRC 905 (2008)
- a license renewal applicant must submit with its application an environmental report, which must describe the proposed action, including the applicant's plans to modify the facility or its administrative control procedures, and the modifications directly affecting the environment or affecting plant effluents that affect the environment; LBP-07-4, 65 NRC 281 (2007)
- a reviewing agency determines whether an alternative is appropriate by looking at the objectives (i.e., purpose and need) of a project sponsor; LBP-09-2, 69 NRC 87 (2009)
- a solely wind- or solar-powered facility could not satisfy a project's purpose of providing baseload power; LBP-09-17, 70 NRC 311 (2009)
- a waiver of 10 C.F.R. 2.335 is necessary to litigate an applicant's failure to include new and significant information concerning a Category 1 issue; LBP-06-20, 64 NRC 131 (2006)
- accuracy of project cost estimates only becomes relevant if an environmentally preferable alternative has been identified; LBP-09-2, 69 NRC 87 (2009)
- after applicant's amendment to its ER, whereby it changed its cooling method for the proposed reactor to a no-discharge cooling system that uses a combination of wet and dry cooling towers, there remains no genuine dispute about discharge of heated water; LBP-06-24, 64 NRC 360 (2006)
- agencies must consider alternatives that are appropriate to recommended courses of action; LBP-09-2, 69 NRC 87 (2009)
- all reasonable alternatives must be identified; LBP-10-10, 71 NRC 529 (2010)
- allegation that the ER's analysis of cancer deaths and illnesses relative to natural radiation source exposures is inadequate is inadmissible; LBP-08-16, 68 NRC 361 (2008)
- although construction of the provisions of 10 C.F.R. Part 51 mandating the contents of applicant's ER may be informed by consideration of general National Environmental Policy Act principles, the Commission must look to the wording of the Part 51 regulations to determine if an ER is satisfactory or deficient; LBP-09-10, 70 NRC 51 (2009)
- although the draft environmental impact statement may rely in part on applicant's ER, Staff must independently evaluate and be responsible for the reliability of all information used in the DEIS; LBP-09-19, 70 NRC 433 (2009)

## SUBJECT INDEX

although the obligations under NEPA fall to the agency and therefore the NRC Staff, petitioners are required to raise environmental objections based on the applicant's ER; LBP-10-15, 72 NRC 257 (2010)

although the requirements of NEPA are directed to federal agencies and the primary duties of NEPA accordingly fall on the NRC Staff in NRC proceedings, the initial requirement to analyze the environmental impacts of an action is directed to applicants; LBP-10-10, 71 NRC 529 (2010)

an assessment of all environmental impacts and alternatives must be included, even though NRC has no jurisdiction to regulate such impacts or jurisdiction to impose such alternatives; LBP-09-10, 70 NRC 51 (2009)

an ER for a materials license must include a statement on the alternatives to the proposed action, including a discussion of the no-action alternative; CLI-09-15, 70 NRC 1 (2009)

analysis must consider and balance the environmental effects of the proposed action, the environmental impacts of alternatives to the proposed action, and alternatives available for reducing or avoiding adverse environmental effects; LBP-10-16, 72 NRC 361 (2010)

analysis of economic, technical, and other benefits must be included; LBP-08-16, 68 NRC 361 (2008)

any new and significant information regarding the environmental impacts of license renewal of which the applicant is aware must be included, even if this concerns a category 1 issue; LBP-07-11, 66 NRC 41 (2007)

applicant for an early site permit may evaluate the environmental impacts of a reactor or reactors falling within the site characteristics and design parameters for the ESP application; LBP-09-19, 70 NRC 433 (2009)

applicant for an early site permit must file an ER, addressing the five factors of 10 C.F.R. 51.45(b)(1)-(5); LBP-09-19, 70 NRC 433 (2009)

applicant for an early site permit must submit an environmental report containing a description of the proposed action, a statement of its purposes, and a description of the environment affected; LBP-09-7, 69 NRC 613 (2009)

applicant is not obliged to examine general efficiency or conservation proposals that would do nothing to satisfy the particular project's goals of producing baseload power; LBP-09-17, 70 NRC 311 (2009); LBP-09-21, 70 NRC 581 (2009)

applicant is required to address a list of environmental considerations that correspond to the environmental considerations that NEPA § 102(2)(C)(i)-(v) requires the agency to address in the environmental impact statement; LBP-09-16, 70 NRC 227 (2009)

applicant is required to address new and significant information for either Category 1 or Category 2 issues in its license renewal application; LBP-08-13, 68 NRC 43 (2008)

applicant is required to analyze the alternatives available for reducing or avoiding adverse environmental effects; LBP-09-10, 70 NRC 51 (2009); LBP-09-19, 70 NRC 433 (2009)

applicant is required to evaluate only alternatives that support the purpose of the project; LBP-09-21, 70 NRC 581 (2009)

applicant is required to present a cost-benefit analysis (and therefore provide cost estimates) for nuclear power plants and facilities only where the applicant's alternatives analysis indicates that there is an environmentally preferable alternative; LBP-08-21, 68 NRC 554 (2008)

applicant is required to provide a site-specific analysis of entrainment, impingement, and heat shock/thermal discharge impacts from its once-through cooling systems; LBP-08-13, 68 NRC 43 (2008)

applicant is required to take Table S-3 as the basis for evaluating the contribution of the environmental effects of management of high-level wastes related to uranium fuel cycle activities; LBP-09-21, 70 NRC 581 (2009)

applicant must address matters such as the environmental impacts of unregulated seepage into adjacent groundwater; LBP-09-25, 70 NRC 867 (2009)

applicant must include a description of the proposed action, a statement of its purposes, and a discussion of the impacts, adverse environmental effects, and alternatives to the proposed action; LBP-09-10, 70 NRC 51 (2009); LBP-09-17, 70 NRC 311 (2009)

applicant must include an evaluation of alternative sites to determine whether there is any obviously superior alternative to the site proposed; LBP-09-19, 70 NRC 433 (2009)

applicant must provide additional analysis of even a Category 1 issue if new and significant information has surfaced; LBP-06-20, 64 NRC 131 (2006); LBP-06-23, 64 NRC 257 (2006)

## SUBJECT INDEX

- applicant must provide enough information and in sufficient detail to allow for an evaluation of important impacts; LBP-08-16, 68 NRC 361 (2008)
- applicant must submit a supplement to its ER at the operating license stage that discusses the same matters described in 10 C.F.R. 51.45, 51.51, and 51.52, which would have been initially discussed in the ER at the construction permit stage, but only to the extent that those matters differ from those discussed or reflect new information; LBP-09-26, 70 NRC 939 (2009)
- applicant shall discuss the impacts of the proposed action on the environment in proportion to their significance; LBP-09-25, 70 NRC 867 (2009)
- applicant's comparison of the environmental impacts of nuclear and wind/compressed air energy storage is insufficient to adequately inform decisionmakers about the competing choices; LBP-10-10, 71 NRC 529 (2010)
- applicant's ER for license renewal must contain a description of the proposed action, including plans to modify the facility or its administrative control procedures, and must describe in detail the modifications directly affecting the environment or affecting plant effluents that affect the environment; LBP-06-23, 64 NRC 257 (2006)
- applicant's ER is not required to contain analyses of environmental impacts identified as Category 1, or generic, issues; CLI-07-3, 65 NRC 13 (2007); LBP-07-4, 65 NRC 281 (2007)
- applicant's ER is not the same as the NRC's environmental impact statement; LBP-09-10, 70 NRC 51 (2009)
- applicant's ER must describe the proposed action, state its purposes, describe the environment affected, and discuss the project's environmental impacts in proportion to their significance and alternatives to the proposal; CLI-10-2, 71 NRC 27 (2010)
- applicant's ER must, in relevant part, contain a discussion of alternatives sufficiently complete to aid the Commission in developing and exploring, pursuant to section 102(2)(E) of NEPA, appropriate alternatives to recommended courses of action; LBP-10-6, 71 NRC 350 (2010)
- applicant's license renewal application must include a severe accident mitigation alternatives analysis, outlining the costs and benefits of potential mitigation measures to reduce severe accident risk or consequences; CLI-10-30, 72 NRC 564 (2010)
- applicants must provide a plant-specific analysis of all Category 2 issues; CLI-09-10, 69 NRC 521 (2009)
- applicants' assertion that low-level radioactive waste could be transferred to another licensee or that some other arrangement might be established in the future is not sufficient to erase the requirement that reasonably foreseeable environmental impacts be assessed in an environmental report; CLI-09-20, 70 NRC 911 (2009)
- as long as applicant has not set forth an unreasonably narrow objective of its project, NRC adheres to the principle that when the purpose is to accomplish one thing, it makes no sense to consider alternative ways by which another thing might be accomplished; LBP-09-2, 69 NRC 87 (2009)
- asserted deficiencies in the ER intake/discharge impact discussion as it is associated with the baseline discussion of aquatic resources, if properly supported, can be admitted for further litigation; LBP-08-16, 68 NRC 361 (2008)
- assertion that some analysis, calculation, or survey must be included in an ER or environmental impact statement is not necessarily sufficient, in and of itself, to require consideration of whether that additional information-gathering and disclosure mechanism should be included; LBP-08-16, 68 NRC 361 (2008)
- at the early site permit stage, applicant is excused from examination of the benefits of the proposed project or analysis regarding energy alternatives, and relevant regulations may not be construed to require that the draft or final environmental impact statement include an assessment of the benefits of the proposed action; LBP-06-28, 64 NRC 460 (2006)
- because applicant did not apply for an early site permit, petitioners thus are not precluded from raising an environmental issue relative to failure of applicant's ER to assess the onsite impacts of potential long-term storage of low-level waste; LBP-08-16, 68 NRC 361 (2008)
- because Category 1 issues already have been reviewed on a generic basis for all plants, an applicant's environmental report need not provide a site-specific analysis of these issues; CLI-09-10, 69 NRC 521 (2009)

## SUBJECT INDEX

because petitioners fail to create a genuine issue, the board need not resolve whether applicant's purpose is unreasonably narrow or whether a proposed alternative is so far beyond the realm of reason that it must be rejected out of hand; LBP-09-21, 70 NRC 581 (2009)

because the environmental report is the only environmental document available when NRC issues its notice of opportunity to request a hearing, initial contentions necessarily focus on the adequacy of the applicant's ER under Part 51; LBP-09-10, 70 NRC 51 (2009); LBP-09-25, 70 NRC 867 (2009)

carbon dioxide emissions from the uranium fuel cycle are to be listed as zero; LBP-09-21, 70 NRC 581 (2009)

Category 1, or generic, issues need not be repeatedly assessed on a plant-by-plant basis, and license renewal applicants may refer to and adopt the generic environmental impact findings in 10 C.F.R. Part 51, Subpart A, Appendix B, Table B-1; LBP-06-23, 64 NRC 257 (2006)

Category 2, or plant-specific, issues are within the scope of license renewal, and applicants must provide a plant-specific review of them; LBP-07-11, 66 NRC 41 (2007)

Category 2, or plant-specific, issues involve environmental impact severity levels that might differ significantly from one plant to another, or impacts for which additional plant-specific mitigation measures should be considered; LBP-07-4, 65 NRC 281 (2007)

challenge to the technical adequacy of baseline water quality data and adequate confinement of the host aquifer in applicant's ER is admissible; LBP-10-16, 72 NRC 361 (2010)

contention that applicant's failure to address externally initiated accident scenarios is a material omission from the environmental report is inadmissible; LBP-10-10, 71 NRC 529 (2010)

contention that the ER is based on incomplete information because a new earthquake fault has been discovered within 600 meters of nuclear reactors and the results of studies concerning the new fault will be available in the near term is admissible; LBP-10-15, 72 NRC 257 (2010)

contentions that seek compliance with NEPA must be based on applicant's ER; CLI-10-2, 71 NRC 27 (2010)

discussion of unaffected areas or sites is not required by 10 C.F.R. 51.45(b); CLI-06-9, 63 NRC 433 (2006)

documents must be written in plain language so that decisionmakers and the public can readily understand them; LBP-10-16, 72 NRC 361 (2010)

each application for a standard design certification must address the costs and benefits of severe accident design mitigation alternatives; LBP-09-10, 70 NRC 51 (2009)

each of the five subelements covered by NEPA § 102(2)(C) must be discussed; LBP-09-16, 70 NRC 227 (2009)

environmental costs of management of low-level wastes and high-level wastes related to uranium fuel cycle activities must be included; LBP-08-15, 68 NRC 294 (2008)

even though a matter may normally fall within a Category 1 issue, ERs are also required to contain any new and significant information regarding the environmental impacts of license renewal of which the applicant is aware; LBP-07-4, 65 NRC 281 (2007)

failure of an applicant to include new and significant information concerning a Category 1 issue relating to dangers of high-density racking of spent fuel in its environmental report does not give rise to an admissible contention; LBP-06-20, 64 NRC 131 (2006)

failure to provide facts or expert opinion sufficient to show that the environmental report disregarded a feasible alternative based on either wind power, solar power, or some combination of the two renders the contention inadmissible; LBP-09-16, 70 NRC 227 (2009)

for license renewal, the ER must describe the proposed action, including the applicant's plans to modify the facility or its administrative control procedures, and provide detail on the modifications directly affecting the environment or affecting plant effluents that affect the environment; LBP-07-11, 66 NRC 41 (2007)

general assertions, without some effort to show why the assertions undercut findings or analyses in applicant's ER, fail to satisfy the contention admissibility requirements of 10 C.F.R. 2.309(f)(1)(vi); LBP-10-6, 71 NRC 350 (2010)

if applicant's plant utilizes a once-through cooling system, applicant shall provide a copy of a Clean Water Act § 316a variance or equivalent state permit and supporting documentation or shall assess the impact of the proposed action on fish and shellfish resources resulting from heat shock; CLI-07-16, 65 NRC 371 (2007)

## SUBJECT INDEX

if intervenors provide no facts or expert opinion explaining why a conclusion in applicant's ER is incorrect, or fail to identify any SAMDAs that should be adopted if some unspecified new analysis were performed or any cost-beneficial SAMAs, their contention should be dismissed; LBP-10-10, 71 NRC 529 (2010)

if petitioner has proffered an admissible contention asserting an environmentally preferable alternative to the proposed reactors, this also would trigger the requirement that the ER contain cost estimates; CLI-10-9, 71 NRC 245 (2010)

if the environmental impact of mining activities is potentially significant, then the failure of the ER to disclose the location of the offsite mine does not immunize it from being the subject of a legitimate contention; LBP-09-10, 70 NRC 51 (2009)

information submitted in the ER should not be confined to information supporting the proposed action but should also include adverse information; LBP-09-16, 70 NRC 227 (2009)

information that the ER provides must be accurate and up-to-date in order to support an agency's determination that a project will have no significant impact on the environment; LBP-09-16, 70 NRC 227 (2009)

intervenors are required to file environmental contentions in the first instance based on the applicant's ER; LBP-09-7, 69 NRC 613 (2009)

license renewal applicants are required to consider severe accident mitigation alternatives in the ER prepared in connection with the application; CLI-10-11, 71 NRC 287 (2010)

license renewal applicants may refer to and adopt the generic environmental impact findings found in 10 C.F.R. Part 51, Subpart A, Appendix B, Table B-1, for all Category 1 issues; LBP-07-11, 66 NRC 41 (2007); LBP-06-10, 63 NRC 314 (2006)

license renewal applications must include a severe accident mitigation alternatives analysis if not previously considered by NRC Staff; LBP-10-15, 72 NRC 257 (2010)

license renewal ERs need not discuss economic or technical benefits and costs of the proposed action or alternatives except as they are either essential for determining whether an alternative should be included or relevant to mitigation; LBP-08-13, 68 NRC 43 (2008)

licensing boards do not sit to flyspeck environmental documents or to add details or nuances; LBP-10-10, 71 NRC 529 (2010); LBP-10-14, 72 NRC 101 (2010)

NEPA charges federal agencies with weighing the environmental effects and impacts of the proposed project and its alternatives against each other and balancing those effects against the benefits of each such project; LBP-09-2, 69 NRC 87 (2009)

NEPA does not require applicants or licensees to consider terrorist attacks as part of their environmental reviews; LBP-09-26, 70 NRC 939 (2009)

NEPA has only a limited role to play in interpreting Part 51's requirements for the ER; LBP-09-16, 70 NRC 227 (2009)

NEPA-related contentions are to be filed based on an applicant's ER; LBP-10-10, 71 NRC 529 (2010)

no discussion of any environmental impact of spent fuel storage for the period following the term of the reactor combined license is required; LBP-09-17, 70 NRC 311 (2009); LBP-09-18, 70 NRC 385 (2009)

no discussion of need for power or alternative energy sources is required in a supplemental environmental report at the operating license stage; LBP-09-26, 70 NRC 939 (2009)

no-action alternative discussions can be brief and can incorporate by reference other sections of an ER discussing the project's adverse consequences; LBP-07-3, 65 NRC 237 (2007)

nothing in the agency's Part 51 NEPA regulations or the Staff's ER preparation guidance in regard to providing a description of the local environment, indicates exactly how, as a general matter, a baseline for NEPA analysis is to be established; LBP-07-3, 65 NRC 237 (2007)

NRC may comply with NEPA without requiring that applicant submit an ER, but NEPA and Council on Environmental Quality regulations permit agencies to request information from an applicant for a license or permit that will require a NEPA analysis; CLI-10-2, 71 NRC 27 (2010)

NRC regulations require petitioner to raise contentions related to NEPA as challenges to the applicant's ER, which acts as a surrogate for the environmental impact statement during the early stages of a relicensing proceeding; LBP-08-26, 68 NRC 905 (2008)

NRC's NEPA responsibilities and, by extension, the applicant's responsibilities under 10 C.F.R. Part 51, are subject to a rule of reason; LBP-10-6, 71 NRC 350 (2010)

## SUBJECT INDEX

NRC's obligations under the National Environmental Policy Act focus on the adjective "environmental," and NEPA does not require the agency to assess every impact or effect, but only the impact or effect on the environment; LBP-09-2, 69 NRC 87 (2009)

omitting consideration of accident scenarios anticipated under 10 C.F.R. 50.150 and 50.54(hh) is contrary to the requirements of 42 U.S.C. § 2133(d); LBP-10-10, 71 NRC 529 (2010)

on issues arising under the National Environmental Policy Act, petitioner shall file contentions based on the applicant's ER; LBP-10-24, 72 NRC 720 (2010)

only Category 2 environmental issues must be addressed in an environmental report and may therefore be litigated at an adjudicatory hearing; CLI-07-16, 65 NRC 371 (2007)

petitioner may amend contentions based on the applicant's environmental report or file new contentions if there are data or conclusions in the NRC draft or final environmental impact statement, environmental assessment, or any supplements relating thereto, that differ significantly from the data or conclusions in the applicant's documents; LBP-10-24, 72 NRC 720 (2010)

petitioners must raise NEPA contentions in response to the ER, rather than await the agency's draft environmental impact statement; LBP-09-4, 69 NRC 170 (2009)

petitioners question the underlying analysis of fish kills in the environmental report as being outdated, but they fail to provide any information to show that the results of the study are no longer representative; LBP-09-16, 70 NRC 227 (2009)

petitioners' allegation that applicant's ER fails to provide reasonably current and accurate information regarding the costs of nuclear power, costs of alternative energy sources, and financial risks posed by using nuclear power as an energy source is admissible; LBP-08-16, 68 NRC 361 (2008)

petitioners' assertion that applicant's ER fails to include an analysis of the impacts of a governmental entity managing long-term storage of high-level waste onsite and cost quantifications of such management fails to create a genuine dispute; LBP-09-21, 70 NRC 581 (2009)

presentation of alternatives in an applicant's ER and in an NRC environment impact statement must be in comparative form; LBP-09-19, 70 NRC 433 (2009)

quibbling over the details of an economic analysis amounts to standing NEPA on its head by asking that the license be rejected not due to environmental costs, but because the economic benefits are not as great as estimated; LBP-09-2, 69 NRC 87 (2009)

reasonable alternatives under NEPA for license renewal proceedings are limited to discrete electric generation sources that are feasible technically and available commercially; LBP-08-13, 68 NRC 43 (2008)

significant inaccuracies and omissions from the ER are proper subjects of contentions but details or nuances are not, nor are boards to flyspeck environmental documents; LBP-10-10, 71 NRC 529 (2010)

Staff review must ensure that the analysis of the need for power and alternatives is reasonable and meets high quality standards; LBP-08-16, 68 NRC 361 (2008)

Staff will use information from applicant's ER in preparing its environmental impact statement; CLI-10-2, 71 NRC 27 (2010)

sufficient data should be included to aid the Commission in its development of an independent analysis of whether any historic or archaeological properties will be affected by the proposed project; LBP-08-26, 68 NRC 905 (2008)

the alternatives discussion in the ER or environmental impact statement need not include every possible alternative, but every reasonable alternative; LBP-09-16, 70 NRC 227 (2009)

the Clean Water Act does not authorize regulation of discharges to groundwater and so applicant's ER must address those discharges to groundwater; LBP-10-14, 72 NRC 101 (2010)

the draft environmental impact statement may rely in part on the ER, but agency regulations require the Staff to independently evaluate and be responsible for the reliability of all information used in the DEIS; LBP-09-7, 69 NRC 613 (2009)

the ER prepared for the combined license stage must take Table S-3 as the basis for evaluating the contribution of the environmental effects of the fuel cycle to the environmental costs of licensing the reactor; CLI-09-21, 70 NRC 927 (2009)

the fact that an environmental impact is regulated by another federal agency or by a state does not justify the exclusion of the analysis from applicant's ER; LBP-09-16, 70 NRC 227 (2009)

the impact analysis must include sufficient data and the alternatives analysis must be sufficiently complete to aid the Commission in preparing the environmental impact statement; LBP-09-10, 70 NRC 51 (2009)

## SUBJECT INDEX

the requirement of Part 51 that the ER cover all significant environmental impacts associated with a project includes offsite as well as onsite impacts; LBP-09-10, 70 NRC 51 (2009)

the requirement to discuss alternatives in the ER parallels NEPA's requirement that an environmental impact statement provide a detailed statement of reasonable alternatives to a proposed action; LBP-09-16, 70 NRC 227 (2009)

there is no requirement that safety and emergency planning concerns must be raised; LBP-10-10, 71 NRC 529 (2010)

under NEPA, the Commission is ultimately responsible for analyzing environmental justice issues, but license renewal applicants are required to assist the Commission with that evaluation; LBP-08-26, 68 NRC 905 (2008)

use of the disjunctive phrase "data *or* conclusions" means that it is sufficient that either data or conclusions in the draft environmental impact statement differ significantly from those in the ER; LBP-10-24, 72 NRC 720 (2010)

when filed with an intervention petition, an environmental contention and its associated bases quite properly address an applicant's ER, rather than the then still-being-developed Staff draft environmental impact statement; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)

whether a SAMA must be analyzed in an ER hinges on whether it could be cost-beneficial; LBP-08-13, 68 NRC 43 (2008)

### ENVIRONMENTAL REVIEW

a Part 51 license renewal environmental review has both a generic component and a plant-specific component and is focused on renewal-specific issues, rather than duplicating the review required for an initial license; CLI-06-24, 64 NRC 111 (2006)

a reasonably close causal relationship must exist between a federal agency action and any environmental consequences of that action in order to trigger a NEPA review, and such a relationship does not exist with terrorism; LBP-08-6, 67 NRC 241 (2008)

agencies must reconsider their environmental review of proposed actions when new and significant information arises; LBP-08-11, 67 NRC 460 (2008)

an agency has discretion to rely on data, analyses, or reports prepared by persons or entities other than agency staff, including competent and responsible state authorities; LBP-06-8, 63 NRC 241 (2006)

an agency only needs to account for those impacts that have some likelihood of occurring or are reasonably foreseeable; LBP-06-8, 63 NRC 241 (2006)

an environmental assessment, with its accompanying finding of no significant impact, constitutes an agency's evaluation of the environmental effects of a proposed action unless a more detailed statement is required; CLI-08-26, 68 NRC 509 (2008)

an issue cannot be identified as Category 1 if NRC has not made a generic determination that additional mitigation measures are unlikely to be warranted, given mitigation practices already in place; CLI-10-14, 71 NRC 449 (2010)

applicants and NRC Staff must assess certain site-specific, Category 2 environmental issues for license renewal; CLI-06-24, 64 NRC 111 (2006)

applicants need not provide site-specific analyses of environmental impacts of subjects identified as Category 1 issues in Appendix B to 10 C.F.R. Part 51, Subpart A; CLI-10-14, 71 NRC 449 (2010)

Category 2 issues, for which an applicant must make a plant-specific analysis of environmental impacts in its environmental report and the NRC Staff must prepare a supplemental environmental impact statement, ordinarily are deemed to be within the scope of license renewal proceedings; LBP-06-7, 63 NRC 188 (2006)

environmental impacts from the spent fuel pool, including potential beyond-design-basis accidents and the need for mitigation measures, are addressed in NRC's generic environmental impact statement for license renewal and do not require a site-specific analysis as part of an individual license renewal environmental review; CLI-10-14, 71 NRC 449 (2010)

environmental issues that might otherwise be relevant to license renewal shall be resolved generically for all plants and thus are beyond the scope of a license renewal hearing; LBP-06-7, 63 NRC 188 (2006)

findings that a board must make to authorize issuance of an early site permit are described; LBP-09-19, 70 NRC 433 (2009)

in reaching its determinations on the baseline National Environmental Policy Act issues, the board will not second-guess the underlying technical or factual findings of the NRC Staff, but if it finds that the

## SUBJECT INDEX

- Staff review is incomplete or that the Staff findings lack sufficient explanation, it will make its own determination of technical and factual findings; LBP-07-1, 65 NRC 27 (2007)
- merely contemplating a certain action, even if accompanied by research or study, does not necessarily constitute a proposal for a major federal action requiring NEPA review; CLI-09-14, 69 NRC 580 (2009)
- neither the number nor location of public meetings required to satisfy an agency's public review process for its environmental document is specified; LBP-09-6, 69 NRC 367 (2009)
- NEPA does not call for certainty or precision, but an estimate of anticipated (not unduly speculative) impacts; LBP-06-8, 63 NRC 241 (2006)
- NEPA review in the license renewal process is unlike the Commission's Part 54 review because the NEPA review covers all environmental impacts associated with license renewal and is not limited to aging-related issues; LBP-10-15, 72 NRC 257 (2010)
- NRC is prohibited from reviewing any effluent limitation or other requirement established pursuant to the Clean Water Act; CLI-07-16, 65 NRC 371 (2007)
- Part 51 was amended to establish environmental requirements for license renewals that are both efficient and more effectively focused; LBP-07-11, 66 NRC 41 (2007)
- Part 54 compliance is not dependent on complete fulfillment of Part 51 requirements, given that the Commission has explicitly excluded SAMA analysis from Part 54 and distinguished the safety requirements of Part 54 from the environmental evaluation commanded by Part 51; LBP-10-13, 71 NRC 673 (2010)
- pending resolution of a rulemaking petition, NRC Staff may, where appropriate, seek the Commission's permission to suspend the generic determination of a Category 1 issue and include a new analysis in the plant-specific environmental impact statements; CLI-07-3, 65 NRC 13 (2007)
- the agency's environmental review need only account for those impacts that have some likelihood of occurring or are reasonably foreseeable; LBP-09-26, 70 NRC 939 (2009); LBP-10-10, 71 NRC 529 (2010)
- the Commission has declined to require the agency (outside of the Ninth Circuit) to consider terrorist threats as part of the NEPA review process; LBP-09-10, 70 NRC 51 (2009)
- the primary duties of NEPA fall on the NRC Staff in NRC proceedings, but the initial requirement to analyze the environmental impacts of an action, including license renewal, is directed to applicants; LBP-06-23, 64 NRC 257 (2006)
- the scope of the licensing board's review in an uncontested early site permit proceeding is discussed; LBP-07-1, 65 NRC 27 (2007)
- EQUIPMENT, SAFETY-RELATED**
- applicant is to describe equipment to be installed to maintain control over radioactive materials in gaseous and liquid effluents produced during normal reactor operations, including expected operational occurrences; LBP-09-19, 70 NRC 433 (2009)
- EROSION**
- the board may not consider that long-term erosion might entirely eliminate the proposed repository's upper geologic barrier unless the erosion is also shown to be a safety concern in the relatively near term; LBP-10-22, 72 NRC 661 (2010)
- ERROR**
- a board did not commit clear error in finding that an enforcement action target did not know certain facts despite Staff's showing that the target was the recipient on a list of documents and e-mails that included those facts; CLI-10-23, 72 NRC 210 (2010)
- a board did not err in reformulating a contention to state that the application failed to comply with 10 C.F.R. Part 51, rather than with the National Environmental Policy Act; CLI-10-2, 71 NRC 27 (2010)
- a board erred in admitting a contention on adverse health effects of exposure to arsenic, where petitioners had not laid a foundation and their arguments were speculative; CLI-09-9, 69 NRC 331 (2009)
- a board erred in referring a contention to the Staff for consideration in conjunction with the design certification rulemaking without first assessing the contention's admissibility; CLI-10-1, 71 NRC 1 (2010); CLI-10-9, 71 NRC 245 (2010)
- a board erred when it disregarded the rule that a reply cannot expand the scope of the arguments set forth in the original hearing request; CLI-09-12, 69 NRC 535 (2009)

## SUBJECT INDEX

- a licensing board erred in holding that it lacked authority to consider contentions based on recent revisions to a license application, but the error was harmless because the intervenor had never submitted any contentions on the revisions; CLI-10-23, 72 NRC 210 (2010)
- because appellant submitted no offer of proof, its case could be so weak that the denial of a right to reply by the licensing board would have been harmless error; CLI-10-23, 72 NRC 210 (2010)
- contentions involving possible errors in Table S-3 have been referred to the Commission; LBP-09-21, 70 NRC 581 (2009)
- if a board erroneously rejected petitioner's motions, but the record does not suggest that petitioner suffered any prejudicial error, Commission review is not warranted; CLI-10-14, 71 NRC 449 (2010)
- if leave to file a motion for reconsideration is granted, the motion must show compelling circumstances, such as the existence of an unanticipated, clear, and material error, which could not have been anticipated, that renders the decision invalid; CLI-10-9, 71 NRC 245 (2010)
- mere demonstration that a board erred is not sufficient to warrant appellate relief, but rather the complaining party must demonstrate actual prejudice, i.e., that the ruling had a substantial effect on the outcome of the proceeding; CLI-10-23, 72 NRC 210 (2010)
- parties taking appeals on purely procedural points are expected to explain precisely what injury to them was occasioned by the asserted error; CLI-10-23, 72 NRC 210 (2010)
- petitioner's argument regarding rejection of its contention satisfies the prejudicial procedural error standard for review; CLI-10-17, 72 NRC 1 (2010)
- petitioners' contention that NRC Staff has not consulted with an affected Indian tribe is premature because it was filed prior to the time for the Staff to act, and the board erred in admitting it; CLI-09-9, 69 NRC 331 (2009)
- Staff's petition for review is granted on the grounds that Staff has demonstrated substantial questions as to the Board's correct application of NEPA jurisprudence, and as to whether certain actions taken by the board constituted prejudicial procedural error; CLI-10-18, 72 NRC 56 (2010)
- the board erred in admitting a contention concerning the economic value of wetlands without requiring petitioners to demonstrate that the proposed licensing action or no-action alternative would have any effect on wetlands; CLI-09-9, 69 NRC 331 (2009)
- the Commission cannot find clear error in a board's failing to acknowledge an argument that was not brought to its attention and to which the petitioners had no opportunity to respond; CLI-09-12, 69 NRC 535 (2009)
- the Commission defers to a board's factual findings and generally steps in only to correct clearly erroneous findings, that is, findings not even plausible in light of the record viewed in its entirety; CLI-10-5, 71 NRC 90 (2010)
- the Commission defers to a board's rulings on standing and contention admissibility unless the appeal points to an error of law or abuse of discretion; CLI-09-14, 69 NRC 580 (2009); CLI-09-20, 70 NRC 911 (2009); CLI-10-1, 71 NRC 1 (2010); CLI-10-2, 71 NRC 27 (2010); CLI-10-9, 71 NRC 245 (2010); CLI-10-12, 71 NRC 319 (2010); CLI-10-20, 72 NRC 185 (2010); CLI-10-21, 72 NRC 197 (2010)
- the fact that the board accorded greater weight to one party's evidence than to the other's is not a basis for overturning the initial decision; CLI-10-23, 72 NRC 210 (2010)
- the licensing board did not commit reversible error by admitting a contention based on low-level radioactive waste storage duration because the NRC Staff itself had issued a request for additional information on this very issue and thus this conflicted with Staff's argument that the issue is immaterial to the findings that must be made on the application; LBP-09-27, 70 NRC 992 (2009)
- the mere potential for legal error in a contention admissibility decision is not a ground for interlocutory review; CLI-10-30, 72 NRC 564 (2010)
- the standard of clear error for overturning a board's factual findings is quite high; CLI-10-5, 71 NRC 90 (2010); CLI-10-18, 72 NRC 56 (2010)
- to show clear error, appellant must demonstrate that the board's findings are not even plausible in light of the record viewed in its entirety; CLI-10-23, 72 NRC 210 (2010)
- when the Commission reviews board rulings on contention admissibility, it employs the clear error and abuse of discretion standards of review; CLI-10-17, 72 NRC 1 (2010)
- ETHICAL ISSUES**
- absent written consent of the party and the prior appearance of another attorney, many courts require that an attorney file a motion to withdraw; LBP-10-21, 72 NRC 616 (2010)

## SUBJECT INDEX

counsel, as officers of the court, have an ethical duty to alert NRC adjudicatory bodies to information relevant to the matters being adjudicated; LBP-08-6, 67 NRC 241 (2008)  
most jurisdictions require, and the board expects, that counsel will promptly correct statements of material fact that are no longer true; LBP-09-28, 70 NRC 1019 (2009)

### EVACUATION

shutting down or derating of a nuclear power plant is not warranted during flooding because the state has established and coordinated potential alternative evacuation routes in the unlikely event of an emergency at the nuclear power plant; DD-06-2, 63 NRC 425 (2006)

### EVACUATION PLANS

a contention that a plant's evacuation plan does not adequately protect the health and safety of public and plant workers must be denied because emergency planning is not within the scope of license renewal as a safety issue; LBP-07-11, 66 NRC 41 (2007)

### EVACUATION TIME ESTIMATES

motion for summary disposition of contention questioning applicant's handling of its severe accident mitigation alternatives analysis; LBP-07-13, 66 NRC 131 (2007)  
where it is shown that even with no evacuation a severe accident mitigation alternative is still not cost-effective, any errors in assumptions regarding the evacuation time or pattern cannot reasonably be expected to rise to a level necessary to cause implementation of any SAMA to become cost-effective; LBP-07-13, 66 NRC 131 (2007)

### EVIDENCE

a jury may infer that a taxpayer read his return and knew its contents from the bare fact that he signed it under penalty of perjury; LBP-09-24, 70 NRC 676 (2009)  
a new issue is raised only when the argument itself, as distinct from its chances of success, was not apparent at the time of the application; CLI-09-7, 69 NRC 235 (2009)  
an individual's later recall of the contents of any document will turn on the effort that the worker put into its creation or application, the need for the worker to have responded to the document, and the significance of the information in the document to those tasks assigned to the worker that are viewed as having higher priority or greater significance than others; LBP-09-24, 70 NRC 676 (2009)  
at the admissibility stage, petitioner is not required to prove its contention or to provide all the evidence for its contention that may be required later in the proceeding; LBP-06-20, 64 NRC 131 (2006)  
boards are authorized to restrict irrelevant, immaterial, unreliable, duplicative, or cumulative evidence; LBP-09-30, 70 NRC 1039 (2009)  
compliance or noncompliance with regulatory guidance, even if proven, is simply evidence and does not relieve the board of the duty to determine whether an applicant has satisfied the relevant legal and regulatory requirements; LBP-08-25, 68 NRC 763 (2008)  
contention admissibility rules require a concise statement of the alleged facts or expert opinions that support petitioner's position, but does not require the submission of an expert opinion or require that an expert opinion be submitted in the form of admissible evidence; LBP-06-7, 63 NRC 188 (2006)  
documents and information exchanged in the mandatory disclosures enter the adjudicatory record only if and when a party proffers the document or information as evidence for the evidentiary hearing; LBP-09-30, 70 NRC 1039 (2009)  
if any party attempts to include exhibits that were not disclosed in the mandatory disclosures, thus making it impossible for the other parties to examine the reliability of that information, then the board may prohibit the admission of this new evidence into the record; LBP-09-30, 70 NRC 1039 (2009)  
if appellant had submitted an offer of proof, indicating what rebuttal evidence it would have offered to the board, then the Commission might have some basis for determining whether that evidence would be substantial enough to justify a remand to the board; CLI-10-23, 72 NRC 210 (2010)  
in ruling on summary disposition motions, the evidence of the nonmovant is to be believed, and all justifiable inferences are to be drawn in his favor; CLI-10-11, 71 NRC 287 (2010)  
in the case of any motion resting on assertions of fact, it is reasonable to expect that the movant will buttress it with some concrete evidence; LBP-08-5, 67 NRC 205 (2008)  
individual pieces of evidence, insufficient in themselves to prove a point, may in cumulation prove it; LBP-09-24, 70 NRC 676 (2009)  
it is not for any court to examine the strength of the evidence upon which Congress based its judgment to approve the Yucca Mountain site; LBP-10-11, 71 NRC 609 (2010)

## SUBJECT INDEX

mandatory disclosures, like all discovery exchanges, cover a vast array of information and documents that are not evidence and need not meet the requirements of admissible evidence; LBP-09-30, 70 NRC 1039 (2009)

new information concerning safety may be new evidence, but not necessarily raise a new issue; CLI-09-7, 69 NRC 235 (2009)

not every document processed by an individual gets the same level of attention, but the degree of attention paid to a document initially can later be a strong determinant of the extent to which a person can later recall the contents of, and therefore can be said to have "knowledge" of, that particular document; LBP-09-24, 70 NRC 676 (2009)

plaintiff may prove his case by direct or circumstantial evidence; CLI-10-23, 72 NRC 210 (2010)

reliability of scientific evidence is verified by assessing whether the reasoning or methodology underlying the evidence is scientifically valid; LBP-08-24, 68 NRC 691 (2008)

saying the government needs to demonstrate the potential for the tainting of evidence is not the equivalent of insisting that the government establish that perjury or intimidation would necessarily take place; LBP-06-13, 63 NRC 523 (2006)

tampering is not a concern when the defendant has not been employed at the relevant organization for several years and the government has given no indication as to how the defendant might employ knowledge gained through civil discovery to alter paper documents or electronic files that he has no control over whatsoever and which the government has long-since obtained through its several-years-long investigation; LBP-06-13, 63 NRC 523 (2006)

the court draws no distinction between the probative value of direct and circumstantial evidence; CLI-10-23, 72 NRC 210 (2010)

the overly simplistic view that "he saw it, so he knew it" is an analytical conundrum that cannot be the rule; LBP-09-24, 70 NRC 676 (2009)

the scope of discovery is broader than the scope of admissible evidence; LBP-10-23, 72 NRC 692 (2010)

there is a presumption that governmental officials, acting in their official capacities, have properly discharged their duties, and clear evidence is usually required to rebut this presumption; CLI-06-22, 64 NRC 37 (2006)

unless and until a document or information is proffered into evidence, there is no basis for a party to object that the information it received in a mandatory disclosure was unreliable or otherwise not admissible as evidence; LBP-09-30, 70 NRC 1039 (2009)

where the nonmoving party declines to oppose a motion for summary disposition, the moving party is not perforce entitled to a favorable judgment, but has the burden to show that he is entitled to judgment under established principles; LBP-08-7, 67 NRC 361 (2008)

where the record in an enforcement proceeding may be devoid of direct evidence to establish knowledge, the Staff may have to build its case upon circumstantial evidence alone; LBP-09-24, 70 NRC 676 (2009)

**EVIDENCE, HEARSAY**

a non-expert's testimony based on what he was told by an anonymous expert may be stricken as unreliable hearsay; LBP-06-15, 63 NRC 591 (2006)

**EVIDENTIARY HEARINGS**

a party is entitled to conduct such cross-examination as may be required for a full and true disclosure of the facts; LBP-09-22, 70 NRC 640 (2009)

commencement of hearings on environmental issues is prohibited until after the final environmental impact statement is issued; LBP-09-22, 70 NRC 640 (2009)

decisions on evidentiary questions fall within boards' authority to regulate hearing procedure; CLI-10-5, 71 NRC 90 (2010)

documents and information exchanged in the mandatory disclosures enter the adjudicatory record only if and when a party proffers the document or information as evidence for the evidentiary hearing; LBP-09-30, 70 NRC 1039 (2009)

if the board concludes that it has no questions for any witness concerning a particular contention, it will so advise the parties and will resolve that contention; LBP-09-22, 70 NRC 640 (2009)

licensing boards normally have considerable discretion in making evidentiary rulings; CLI-10-5, 71 NRC 90 (2010)

## SUBJECT INDEX

the Commission will review decisions on evidentiary questions under an abuse of discretion standard;  
CLI-10-5, 71 NRC 90 (2010)

### EXAMINATION

See Reactor Operator Examinations

### EXECUTIVE ORDER 12898

this order does not establish new substantive or procedural requirements applicable to NRC regulatory or  
licensing activities; CLI-07-27, 66 NRC 215 (2007)

### EXECUTIVE PRIVILEGE

once the requesting party meets its burden of demonstrating a need for a document, the burden is upon  
the claimant of executive privilege to demonstrate a proper entitlement to exemption from disclosure;  
LBP-10-2, 71 NRC 190 (2010)

### EXEMPTIONS

a request for an exemption from a particular regulatory provision does not render a license application  
deficient; CLI-06-10, 63 NRC 451 (2006)

an agency must affirmatively provide a reasoned explanation of the applicability of a categorical exclusion  
when special circumstances are alleged; LBP-06-4, 63 NRC 99 (2006)

an exemption can be granted if it is authorized by law and will not endanger life or property or the  
common defense and security, and is otherwise in the public interest; CLI-06-10, 63 NRC 451 (2006);  
LBP-07-6, 65 NRC 429 (2007)

applicant seeks an exemption from the disposal site requirements of 10 C.F.R. 30.3 and 70.3 to allow  
disposal of low-activity radioactive waste from the Hematite facility at a site near Grand View, Idaho,  
that is not licensed by the NRC; LBP-09-28, 70 NRC 1019 (2009)

because a petitioner's military service in Iraq interrupted his operator license testing, he is exempted from  
the 6-month waiting period required for a third application for a reactor operator license, contingent  
upon participation in licensed operator requalification training program; LBP-06-2, 63 NRC 80 (2006)

because DOE has legal authority to indemnify a uranium enrichment facility licensee against claims  
arising from nuclear incidents, an exemption from the regulatory requirement for liability insurance is  
authorized by law; LBP-07-6, 65 NRC 429 (2007)

combined license applicants will also have to demonstrate that the site-specific parameters are bounded by  
the parameters developed for the certified design; LBP-09-2, 69 NRC 87 (2009)

containers are exempted from labeling requirements if they are attended by an individual who takes the  
precautions necessary to prevent the exposure of individuals in excess of the established limits;  
LBP-07-6, 65 NRC 429 (2007)

each combined license applicant will have to determine whether it will adopt in toto the certified design,  
or whether it will take exemptions thereto and/or departures therefrom; LBP-09-2, 69 NRC 87 (2009)

FOIA Exemption 2 authorizes an agency to withhold matters that are related solely to the internal  
personnel rules and practices of an agency; LBP-08-7, 67 NRC 361 (2008)

for good cause shown, the board grants the requests of petitioners for exemptions from compliance with  
the Commission's E-filing requirement; LBP-10-4, 71 NRC 216 (2010)

if it seeks to withhold a document from a party or the public, or to bar a party or member of the public  
from attending any adjudicatory proceeding before a licensing board, NRC Staff must carry the burden  
of proving that the document or situation fits one of FOIA's specifically enumerated exceptions;  
LBP-10-2, 71 NRC 190 (2010)

in evaluating the validity of a claimed FOIA exemption, the experience and expertise of an affiant,  
coupled with a detailed and specific affidavit, lends special weight to the affiant's statements and  
conclusions; LBP-08-7, 67 NRC 361 (2008)

individuals requesting access to safeguards information who believe that they belong to one or more of  
the categories of individuals that are exempt from the criminal history records check and background  
check requirements should specifically state which exemption the requestor is invoking and explain the  
requestor's basis for believing that the exemption is applicable; CLI-09-15, 70 NRC 1 (2009); CLI-10-4,  
71 NRC 56 (2010)

it is not necessary for licensee to perform large transient testing in order to satisfy the relevant legal  
requirement for an extended power uprate; LBP-07-2, 65 NRC 153 (2007)

## SUBJECT INDEX

- it may be inferred that an exemption is implicitly authorized by law if all of the conditions for granting the exemption are met and no other provision prohibits, or otherwise restricts, its application; LBP-07-6, 65 NRC 429 (2007)
- location of an irradiator may be a circumstance in which the categorical exclusions in 10 C.F.R. 51.22(b) might not apply; LBP-06-4, 63 NRC 99 (2006)
- NRC has traditionally read the language "authorized by law" to be the functional equivalent of "not prohibited by law"; LBP-07-6, 65 NRC 429 (2007)
- NRC need not disclose information if it falls within one of the nine exemptions in the Freedom of Information Act; LBP-08-7, 67 NRC 361 (2008)
- NRC records are protected from disclosure under FOIA Exemption 2 to the extent they contain internal analytical guidance, operating rules, or practices, the disclosure of which would aid terrorists or saboteurs seeking to circumvent security measures designed to protect nuclear materials; LBP-08-7, 67 NRC 361 (2008)
- once the requesting party meets its burden of demonstrating a need for a document, the burden is upon the claimant of executive privilege to demonstrate a proper entitlement to exemption from disclosure; LBP-10-2, 71 NRC 190 (2010)
- participants who believe that they have a good cause for not submitting documents electronically must file an exemption request with their initial paper filing requesting authorization to continue to submit documents in paper format; CLI-10-4, 71 NRC 56 (2010)
- states may provide exemptions from their rules upon application and a showing of hardship or compelling need, with the approval of the Commission on Radiation Protection; CLI-10-8, 71 NRC 142 (2010)
- the duty to make all documents available does not apply to records specifically exempted from disclosure by statute; LBP-10-2, 71 NRC 190 (2010)
- the process for taking exemptions and departures from a certified design is set forth in 10 C.F.R. Part 52, App. D, § VIII; LBP-09-2, 69 NRC 87 (2009)
- use of conspicuously posted signs, in conjunction with the applicant's radiation work permit program, is an acceptable alternative to section 20.1601(a) requirements; LBP-07-6, 65 NRC 429 (2007)
- when access to documents is disputed in FOIA litigation, the government must submit detailed public affidavits identifying the documents withheld, the FOIA exemptions claimed, and a particularized explanation of why each document falls within the claimed exemption; LBP-08-7, 67 NRC 361 (2008)
- EXPERT WITNESSES**
- credibility of a witness testifying based on technical expertise is not the same as the credibility of an eyewitness to a past event; CLI-09-7, 69 NRC 235 (2009)
- the rule for Subpart G procedures explicitly applies to eyewitnesses, not expert witnesses; CLI-09-7, 69 NRC 235 (2009)
- EXPORT LICENSE PROCEEDINGS**
- standing as of right is not available but the Commission has exercised its discretion to hold an open legislative-type hearing; LBP-09-1, 69 NRC 11 (2009)
- there appear to be special considerations, including interaction with the Executive Branch and other agencies and time limits on decisions, that may distinguish these proceedings from other NRC adjudicatory proceedings; LBP-09-1, 69 NRC 11 (2009)
- EXPORT LICENSES**
- application for a license that would authorize the export back to Italy of any low-level radioactive waste that cannot be disposed of in Utah following processing is held in abeyance; CLI-08-24, 68 NRC 491 (2008)
- petitioners' claim that a foreign-owned company would be more likely than a U.S.-owned company to export its product overseas falls outside the scope of a materials license amendment proceeding, where the applicant had not applied for a license to export recovered uranium; CLI-09-12, 69 NRC 535 (2009)
- EXPOSURE**
- See Radiological Exposure
- EXTENSION OF TIME**
- a motion to file late should generally be denied, except under extraordinary conditions; LBP-10-21, 72 NRC 616 (2010)

## SUBJECT INDEX

- a party at risk of filing out of time can request an extension, doing so well before the time specified expires; LBP-10-21, 72 NRC 616 (2010)
- a petitioner may in instances of exigent or unavoidable circumstances file a request for an extension of time to file an original hearing petition and contentions; LBP-07-4, 65 NRC 281 (2007); LBP-09-17, 70 NRC 311 (2009)
- counsel's alleged unfamiliarity with the agency's rules of practice or counsel's asserted busy schedule are not satisfactory explanations for late filings; LBP-10-21, 72 NRC 616 (2010)
- difficulties in coordinating action among volunteers and large public interest organizations and the challenge of simultaneously preparing for an environmental scoping meeting while drafting contentions does not constitute good cause necessary to justify an extension of the deadline to file hearing requests or petitions to intervene; CLI-09-4, 69 NRC 80 (2009)
- if licensee perceives a difficulty in meeting the deadline for submission of a revised decommissioning plan, it may request an extension of time from the Agreement State; CLI-10-8, 71 NRC 142 (2010)
- if petitioner requests additional time to file before the 30-day period expires, new or amended contentions in the high-level waste repository proceeding may be considered timely upon a board finding that there has been an adequate showing of need for the additional time requested; LBP-08-10, 67 NRC 450 (2008)
- if there are problems with meeting a filing date, participants should seek an extension of time or, if the time for filing has passed, submit a motion for leave to file out of time; LBP-08-16, 68 NRC 361 (2008)
- in the event of some 11th-hour unforeseen development, a party may tender a document belatedly, but the tender must be accompanied by a motion for leave to file out-of-time which satisfactorily explains not only the reason for the lateness, but also why a motion for an extension of time could not have been seasonably submitted; CLI-10-26, 72 NRC 474 (2010)
- open-ended extension requests should not be granted because hearing requests must be based on documents or other information available at the time the petition is to be filed; LBP-10-4, 71 NRC 216 (2010)
- participant filing out of time must offer a satisfactory explanation for its lateness, including, if necessary, an account as to why a request for extension could not have been filed beforehand; LBP-10-21, 72 NRC 616 (2010)
- parties are expected to file motions for extensions of time so that they are received by NRC well before the time specified expires; CLI-10-26, 72 NRC 474 (2010); LBP-10-21, 72 NRC 616 (2010)
- requests for extension of time to file a petition for review are to be determined by the relevant appellate body, and accordingly, must be directed to that body; LBP-07-17, 66 NRC 327 (2007)
- the Commission or presiding officer may extend a time limit upon a showing of good cause; CLI-09-4, 69 NRC 80 (2009)
- the newness of a deadline, along with petitioners' companion requests for additional resources to support their requests for safeguards information justify a 10-day extension to request access to the information; CLI-09-4, 69 NRC 80 (2009)
- the presiding officer may grant extensions of time for individual milestones for the participants' filings, and may delay its own issuances for up to 30 days beyond the date of the milestone set in the hearing schedule; CLI-08-18, 68 NRC 246 (2008)
- to avoid unnecessary delays in a uranium enrichment facility proceeding, the licensing board should not routinely grant requests for extensions of time and should manage the schedule such that the overall hearing process is completed within 28-1/2 months; CLI-09-15, 70 NRC 1 (2009)
- See also Deadlines
- EYEWITNESSES**
- credibility of a witness testifying based on technical expertise is not the same as the credibility of an eyewitness to a past event; CLI-09-7, 69 NRC 235 (2009)
- the rule for Subpart G procedures explicitly applies to eyewitnesses, not expert witnesses; CLI-09-7, 69 NRC 235 (2009)
- FAIRNESS**
- in establishing and enforcing schedule deadlines, boards must take care not to compromise the Commission's fundamental commitment to a fair and thorough hearing process; LBP-10-21, 72 NRC 616 (2010)

## SUBJECT INDEX

the Commission has long endorsed a balanced approach to hearings that both expedites the hearing process and ensures fairness in order to produce a record that leads to high-quality decisions that adequately protect the public health and safety, the common defense and security, and the environment; LBP-10-21, 72 NRC 616 (2010)

when the unique circumstances of a case could result in the compromise of a participant's hearing rights, the Commission has taken action to ensure that hearings are fair and accommodate the rights of participants; CLI-09-13, 69 NRC 575 (2009)

### FAULTS

contention that the environmental report is based on incomplete information because a new earthquake fault has been discovered within 600 meters of nuclear reactors and the results of studies concerning the new fault will be available in the near term is admissible; LBP-10-15, 72 NRC 257 (2010)

### FEDERAL COURTS

a conflict in the Circuits is a key criterion informing the exercise of the Supreme Court's certiorari jurisdiction; CLI-07-8, 65 NRC 124 (2007)

NRC is not obligated to adhere, in all of its proceedings, to the first court of appeals decision to address a controversial question; CLI-07-8, 65 NRC 124 (2007)

under preclusion doctrines, a court of appeals decision may prevent the government from relitigating the same issue with the same party, but it still leaves the government free to litigate the same issue in the future with other litigants; CLI-07-8, 65 NRC 124 (2007)

### FEDERAL EMERGENCY MANAGEMENT AGENCY

findings on emergency plans constitute a rebuttable presumption on questions of adequacy and implementation capability in NRC licensing proceedings; LBP-09-19, 70 NRC 433 (2009)

in its review of emergency plans, NRC Staff must take into account FEMA's findings; LBP-09-19, 70 NRC 433 (2009)

### FEDERAL FOOD, DRUG, AND COSMETIC ACT

irradiation sources, including radioactive isotopes, particle accelerators, and X-ray machines, intended for use in processing food are included in the term "food additives"; CLI-08-16, 68 NRC 221 (2008)

### FEDERAL RECORDS ACT

federal agencies have some discretion in determining which documentary materials are appropriate for preservation as an agency "record"; CLI-08-23, 68 NRC 461 (2008)

### FEDERAL REGISTER

prior to operation under a combined license, a notice of intended operation will be published not less than 180 days before the date scheduled for initial loading of fuel; LBP-09-19, 70 NRC 433 (2009)

publication in the *Federal Register* is legally sufficient notice to all interested or affected persons regardless of actual knowledge or hardship resulting from ignorance, except those who are legally entitled to personal notice; LBP-09-20, 70 NRC 565 (2009)

### FEDERAL RULES OF CIVIL PROCEDURE

neither legal ownership nor title is required in order for a party to have "possession, custody, or control" of a document; LBP-10-23, 72 NRC 692 (2010)

NRC generally applies the same standard for summary disposition that federal courts apply when ruling on motions for summary judgment under Fed. R. Civ. P. 56; CLI-10-11, 71 NRC 287 (2010); LBP-10-20, 72 NRC 571 (2010)

NRC's production-of-documents regulation, 10 C.F.R. 2.707(a)(1) is essentially the same as Fed. R. Civ. P. 34(a)(1); LBP-10-23, 72 NRC 692 (2010)

the phrase "possession, custody, or control" as found in the Federal Rules of Civil Procedure and 10 C.F.R. 2.336(a) is in the disjunctive, and thus only one of the enumerated requirements needs to be met; LBP-10-23, 72 NRC 692 (2010)

the rules were amended in 2006 to expressly include electronically stored information; LBP-10-23, 72 NRC 692 (2010)

### FEDERAL RULES OF CRIMINAL PROCEDURE

the disclosures necessary for a fair balance between criminal defendants' and prosecutors' interests relative to delay of a civil proceeding pending completion of the criminal proceeding are described; CLI-06-12, 63 NRC 495 (2006)

## SUBJECT INDEX

### FEDERAL RULES OF EVIDENCE

“relevant evidence” means evidence having any tendency to make the existence of any fact that is of consequence to the determination of the action more probable or less probable than it would be without the evidence; LBP-10-23, 72 NRC 692 (2010)

the relevance standard of 10 C.F.R. 2.336 is more flexible than the relevance standard of Fed. R. Evid. 401; LBP-10-23, 72 NRC 692 (2010)

when determining relevance of documents for discovery purposes in NRC proceedings, boards may look to the FRE for useful guidance; LBP-10-23, 72 NRC 692 (2010)

when the Commission endorsed the use of the Federal Rules of Evidence as guidance for the boards, it did so with the express proviso that boards must apply the Part 2 rules with *greater flexibility* than the FRE; LBP-10-23, 72 NRC 692 (2010)

### FEDERAL WATER POLLUTION CONTROL ACT

alternative thermal effluent limitations do not apply to a plant that employs closed-cycle cooling; CLI-07-25, 66 NRC 101 (2007)

nothing in the National Environmental Policy Act shall be deemed to authorize any federal agency to review any effluent limitation or other requirement established pursuant to the Clean Water Act or to authorize any such agency to impose any effluent limitation other than those set by the Environmental Protection Agency or a state agency that has been delegated such authority; LBP-09-25, 70 NRC 867 (2009)

NRC is barred from imposing or second-guessing effluent limitations or water quality certification requirements imposed by EPA or an authorized state, but it may address water quality matters in its assessment of the environmental impact of a license renewal; LBP-06-20, 64 NRC 131 (2006)

the reach of 33 U.S.C. § 1371(c)(2) is confined to navigable waters, which do not even encompass all surface waters; LBP-09-25, 70 NRC 867 (2009)

when water quality decisions have been made by a state pursuant to the Clean Water Act and these decisions are raised in NRC licensing proceedings, the NRC is bound to take the Environmental Protection Agency’s considered decisions at face value; LBP-09-25, 70 NRC 867 (2009)

### FEEDWATER SYSTEMS

components that are part of the reactor coolant pressure boundary must meet the requirements of Class 1 components in Section III of the ASME Boiler and Pressure Vessel Code; LBP-08-25, 68 NRC 763 (2008)

### FEES

even if the Commission could waive the application fee for access to safeguards information, the mere fact that petitioners are public interest organizations provides no special reason for departing from well-established NRC practice; CLI-09-4, 69 NRC 80 (2009)

NRC is explicitly prohibited by law from paying the expenses of or otherwise compensating intervenors, and thus cannot grant petitioners funds to prepare requests for access to safeguards information or sensitive unclassified nonsafeguards information; CLI-09-4, 69 NRC 80 (2009)

the fee for access to safeguards information is used by NRC to pay the costs it incurs in determining whether the individual should be granted access to SGI; CLI-09-4, 69 NRC 80 (2009)

### FIELD SAMPLING PLAN

a site characterization must include sufficient information so that it can effectively track pathways for significant offsite contamination and estimate the quantity of those pathways; LBP-08-4, 67 NRC 105 (2008)

analysis of waterways is intended to identify groundwater, possible cave, and surface water paths and to assess the contents of those waters to determine if depleted uranium is leaching or will leach off the site in quantities significant enough that humans might receive more than 25 mrems of total radioactive exposure from all of the site’s pathways; LBP-08-4, 67 NRC 105 (2008)

the board finds that the biota sampling component of the field sampling plan is sufficient to meet the criteria for a 5-year alternate schedule for submission of a decommissioning plan; LBP-08-4, 67 NRC 105 (2008)

there is no requirement that the licensee describe the collection of information needed for the decommissioning plan’s environmental assessment or environmental impact statement; LBP-08-4, 67 NRC 105 (2008)

## SUBJECT INDEX

### FIFTH AMENDMENT

although the subject of an NRC enforcement proceeding may attempt to take advantage of his discovery rights in the civil proceeding to obtain information also useful in his criminal proceeding, that is no reason to deny him that discovery because he asserted his Fifth Amendment right not to respond to discovery requests directed to him, even if other procedural consequences might flow from that action; LBP-06-25, 64 NRC 367 (2006)

carefully crafted restraints in the Constitution preserve freedom by curbing the exercise of power; LBP-09-24, 70 NRC 676 (2009)

exercise of the power of compulsory process must be carefully circumscribed when the investigative process tends to impinge upon such highly sensitive areas as freedom of speech or press, freedom of political association, and freedom of communication of ideas; LBP-09-24, 70 NRC 676 (2009)

states can be required to tailor carefully the means of satisfying a legitimate state interest when fundamental liberties and rights are threatened; LBP-09-24, 70 NRC 676 (2009)

### FILINGS

a filing will be considered complete by electronic transmission when the filer performs the last act that it must perform to transmit a document, in its entirety, electronically; LBP-08-16, 68 NRC 361 (2008)

petitioner may in instances of exigent or unavoidable circumstances file a request for an extension of time to file an original hearing petition and contentions; LBP-09-17, 70 NRC 311 (2009)

petitioners must raise NEPA contentions in response to the environmental report, rather than await the agency's draft environmental impact statement; LBP-09-4, 69 NRC 170 (2009)

petitioners will not be denied the opportunity to participate in a proceeding because of an error that can easily be corrected and that has caused no prejudice to any other participant; LBP-09-4, 69 NRC 170 (2009)

the time an E-Filing submission is received by the system server is not necessarily controlling relative to the timeliness of the filing; LBP-08-16, 68 NRC 361 (2008)

to be considered timely, a document must be submitted to the E-Filing system for docketing and service by 11:59 p.m. Eastern Time; LBP-08-16, 68 NRC 361 (2008)

See also Electronic Filing

### FINAL ENVIRONMENTAL IMPACT STATEMENT

a cost-benefit analysis among alternatives must consider and weigh the environmental effects of the proposed action and the alternatives available for reducing or avoiding adverse environmental effects; LBP-06-19, 64 NRC 53 (2006)

a description of the underlying purpose and need of a proposed project is required by NEPA; LBP-06-19, 64 NRC 53 (2006)

a mitigation plan need not be legally enforceable, funded, or even in final form to comply with NEPA's procedural requirements; CLI-06-29, 64 NRC 417 (2006)

a record of decision must accompany any Commission decision on any action for which an FEIS has been prepared; LBP-06-8, 63 NRC 241 (2006)

adequacy of discussion and analysis of direct, indirect, and cumulative impingement/entrainment and thermal effluent discharge impacts of the proposed cooling system intake and discharge structures on aquatic resources is decided; LBP-09-7, 69 NRC 613 (2009)

adequacy of the discussion and analysis of the alternative of implementing a dry cooling system for the proposed units is decided; LBP-09-7, 69 NRC 613 (2009)

adequacy of the discussion and analysis of the extent and duration of any dredging, the impacts on water quality, the disposal of any dredged material, and the impacts on aquatic biota as a result of any dredging is decided; LBP-09-7, 69 NRC 613 (2009)

although federal permits and exemptions must be mentioned in the FEIS, the absence of such mention does not render the FEIS invalid; LBP-06-19, 64 NRC 53 (2006)

although Staff inadvertently omitted information about background radiation from the final environmental impact statement, but the information was made available to the public in the draft environmental impact statement and was taken into account by Staff in its NEPA analysis in the FEIS, intervenors were not prejudiced nor was the correctness of the Staff's analysis undermined; LBP-06-19, 64 NRC 53 (2006)

## SUBJECT INDEX

an FEIS can overcome unavoidably incomplete or unavailable information if it states that fact, explains how the missing information is relevant, sets forth the existing information, and evaluates the environmental impacts to the best of the agency's ability; CLI-07-27, 66 NRC 215 (2007)

any licensing board merits litigation-based findings have the effect of amending or supplementing the FEIS; LBP-07-3, 65 NRC 237 (2007)

because blending down highly enriched uranium for reactor fuel would not promote applicant's primary purpose of maintaining the viability of a dwindling domestic uranium industry, it is outside the scope of reasonable alternatives that must be considered under NEPA; LBP-06-19, 64 NRC 53 (2006)

benefits described by the project's purpose and need are among the factors that are weighed against the project's costs in striking the cost-benefit balance required by NEPA; LBP-06-19, 64 NRC 53 (2006)

boards must decide whether the alternatives discussion is sufficiently complete to aid the Commission in developing and exploring appropriate alternatives to recommended courses of action in any proposal that involves unresolved conflicts concerning alternative uses of available resources; LBP-09-7, 69 NRC 613 (2009)

commencement of evidentiary hearings on environmental issues is prohibited until after the FEIS is issued; LBP-09-22, 70 NRC 640 (2009)

discussion need not be elaborate or lengthy, but a conclusory statement on some negative impact on property values, without explanation or analysis, is plainly deficient; CLI-07-27, 66 NRC 215 (2007)

discussion of the no-action alternative is governed by a rule of reason and need not be exhaustive or inordinately detailed; LBP-06-19, 64 NRC 53 (2006)

even if an EIS prepared by the Staff is found to be inadequate in certain respects, the board's findings, as well as the adjudicatory record, become, in effect, part of the FEIS; LBP-09-7, 69 NRC 613 (2009)

except for its overall NEPA balancing, the NRC can limit its analysis of aquatic impacts to those determined by the Environmental Protection Agency, when EPA has analyzed an alternative technology extensively and made conclusions as to its suitability; LBP-07-3, 65 NRC 237 (2007)

if admitted contentions are resolved before the FEIS is issued so as to conclude the contested portion of a proceeding, an intervenor could timely seek to litigate contentions regarding FEIS data or conclusions that differ significantly from the ER or the DEIS; LBP-07-3, 65 NRC 237 (2007)

if NRC Staff concludes that the legal threshold for new and significant information has been met, it is authorized to supplement the FEIS; CLI-10-29, 72 NRC 556 (2010)

in conducting its environmental review, an agency has discretion to rely on data, analyses, or reports prepared by persons or entities other than agency staff, including competent and responsible state authorities; LBP-06-8, 63 NRC 241 (2006)

in its environmental review of a private applicant's proposed project, the agency may accord appropriate deference to the applicant's proposed siting and design plans; LBP-06-19, 64 NRC 53 (2006)

in response to comments received, the FEIS may supplement, refine, or otherwise adapted the project alternatives; LBP-06-19, 64 NRC 53 (2006)

in the environmental context, the contents of the FEIS bound the reach of both issue preclusion and Staff inquiry into new and significant information in a future CP or COL proceeding referencing an ESP granted for the ESP site; CLI-07-27, 66 NRC 215 (2007)

intervenors' preference that the FEIS contain additional details on any particular issue is not, standing alone, probative of the FEIS's adequacy; LBP-06-19, 64 NRC 53 (2006)

mitigation measures must be discussed in sufficient detail to ensure that environmental consequences have been fairly evaluated, but the EIS need not contain a complete mitigation plan; CLI-06-29, 64 NRC 417 (2006)

NEPA imposes no obligation to select the most environmentally benign alternative; LBP-06-19, 64 NRC 53 (2006)

no-action alternative discussions can be brief and can incorporate by reference other sections of an environmental report discussing the project's adverse consequences; LBP-07-3, 65 NRC 237 (2007)

NRC Staff may not offer the FEIS in evidence or present the Staff's position on matters within the scope of NEPA until the FEIS is filed with the Environmental Protection Agency, furnished to commenting agencies, and made available to the public; CLI-07-17, 65 NRC 392 (2007)

NRC Staff's final environmental impact statement need not include a discussion of the need for power or alternative energy sources; LBP-10-12, 71 NRC 656 (2010)

## SUBJECT INDEX

representations and assumptions help to form the basis for the Staff's finality determinations in the environmental arena during any subsequent CP or COL proceeding; CLI-07-27, 66 NRC 215 (2007)

Staff must consider measures to mitigate environmental impacts by examining alternatives available for reducing or avoiding adverse effects and must discuss the mitigation measures in sufficient detail to ensure that environmental consequences have been fairly evaluated; LBP-06-19, 64 NRC 53 (2006)

the adjudicatory record and board decision and any Commission appellate decisions become, in effect, part of the FEIS; CLI-08-26, 68 NRC 509 (2008); LBP-06-19, 64 NRC 53 (2006)

the board may decide to proceed to an early hearing on the merits of safety issues before the NRC Staff finishes its safety evaluation but the board may not commence a hearing on environmental issues before the FEIS has been issued; CLI-07-17, 65 NRC 392 (2007)

the Commission's discussion of the Staff's underlying review adds necessary additional details and constitutes a supplement to the FEIS's alternative site review; CLI-07-27, 66 NRC 215 (2007)

the discussion of alternatives shall identify reasonable alternatives, present the environmental impacts of the proposal and the alternatives in comparative form, and include a final recommendation on the action to be taken; LBP-06-19, 64 NRC 53 (2006)

the draft environmental impact statement is distributed for public comment and, based on the comments received, a review of information provided by the applicant, and supplemental independent information and analysis, the Staff prepares and issues a final EIS; LBP-09-19, 70 NRC 433 (2009)

the proper inquiry for determining the sufficiency of the purpose and need statement is whether the FEIS, read as a whole, includes a correct and adequate description of the purpose of and need for the proposed action; LBP-06-19, 64 NRC 53 (2006)

the purpose of addressing possible mitigation measures is to ensure that the agency has taken a hard look at the potential environmental impacts of a proposed action; CLI-06-29, 64 NRC 417 (2006)

the statement of purpose and need in the FEIS is independent of any specific project area, and thus a prior decision of the Commission adjudicating an intervenor's challenge to the statement of purpose and need applies with equal force to all areas of a proposed project; LBP-06-19, 64 NRC 53 (2006)

threshold environmental legal and policy issues need not await issuance of the FEIS; CLI-07-17, 65 NRC 392 (2007)

when a board decision supplements or differs from the findings of the Staff as set forth in its FEIS, the FEIS is deemed modified by the board's decision to that extent; LBP-06-8, 63 NRC 241 (2006)

when the purpose of a proposed action is to accomplish one thing, it makes no sense to consider the alternative ways by which another thing might be achieved; LBP-06-19, 64 NRC 53 (2006)

where the discussion of alternative sites was insufficient, the board independently reviewed the record on greenfield, competitors' brownfield, noncompetitors' brownfield, and applicant's other nuclear sites to conclude that the Staff's underlying alternative site review was adequate; LBP-09-19, 70 NRC 433 (2009)

**FINAL SAFETY ANALYSIS REPORT**

adequacy of the seismic analysis for the site found in the FSAR is not a litigable issue; LBP-08-16, 68 NRC 361 (2008)

an amended contention challenging applicant's final safety analysis report on its low-level radioactive waste storage plan was admitted based on intervenor's adequately supported challenge to the plan's provisions regarding waste volume reduction; LBP-10-8, 71 NRC 433 (2010)

analysis of a severe accident involving a fission product release from the core into the containment including any fission product cleanup systems intended to mitigate the consequences of the accidents must be included; LBP-09-10, 70 NRC 51 (2009)

applicant's contingent long-term onsite low-level radioactive waste storage facility and the contents of its FSAR with regard to that facility are not governed by 10 C.F.R. 52.79(a)(4) as a part of the reactor facilities to be constructed under the requested combined licenses; LBP-10-8, 71 NRC 433 (2010)

each applicant for a license to operate a power plant must submit an FSAR that includes the managerial and administrative controls to be used to assure safe operation; LBP-07-2, 65 NRC 153 (2007)

further inquiry is warranted into the safety-related matter of whether the FSAR has failed to include necessary information concerning applicant's plans for onsite management of Class B and C waste; LBP-08-16, 68 NRC 361 (2008)

information to be included is described; CLI-09-16, 70 NRC 33 (2009)

## SUBJECT INDEX

- purported failures to provide detailed information regarding design, location, and worker health impacts do not identify a deficiency in low-level radioactive waste information that is required to be provided in the COL application; LBP-10-8, 71 NRC 433 (2010)
- the final safety analysis report shall include a level of information sufficient to enable the Commission to reach a final conclusion on all safety matters that must be resolved by the Commission before issuance of a combined license; LBP-10-20, 72 NRC 571 (2010)
- the fission product release is based on a major accident assumed to result in substantial meltdown of the core with subsequent release into the containment of appreciable quantities of fission products; LBP-09-10, 70 NRC 51 (2009)
- the FSAR must include the applicant's plans for preoperational testing and initial operations; LBP-07-2, 65 NRC 153 (2007)
- the FSAR must include the kinds and quantities of radioactive materials expected to be produced by low-level radioactive waste in the operation and the means for controlling and limiting radioactive effluents and radiation exposures within the limits set forth in 10 C.F.R. Part 20; LBP-10-20, 72 NRC 571 (2010)
- the FSAR was configured to accommodate at least 10 years of onsite storage; LBP-10-20, 72 NRC 571 (2010)
- the function of 10 C.F.R. 50.59 is to deal with changes to a nuclear power plant, and it requires, as a prerequisite to any such change, that the licensee perform safety analyses in addition to those contained in the FSAR; LBP-10-20, 72 NRC 571 (2010)
- there is no requirement in section 52.79(a)(3) for applicant's FSAR to include details regarding building materials and high-integrity containers, exact location, or health impacts on employees for the contingent onsite long-term LLRW storage facility; LBP-10-20, 72 NRC 571 (2010)
- topics that must be covered in the FSAR and the level of information that is sufficient for each topic are specified in 10 C.F.R. 52.79; LBP-10-20, 72 NRC 571 (2010)
- FINAL SAFETY EVALUATION REPORT**
- NRC Staff's revision of the FSER to account for applicant's confirmatory analysis would not, standing alone, be a materially different result that justifies reopening the record, because it would neither change the outcome of the renewal proceeding nor impose a different licensing condition on an applicant; LBP-08-12, 68 NRC 5 (2008)
- See also Updated Final Safety Analysis Report
- FINALITY**
- a licensing board order is final for appellate purposes when it either disposes of at least a major segment of the case or terminates a party's right to participate, and rulings that do neither are interlocutory; CLI-06-18, 64 NRC 1 (2006)
- if Staff approves a license transfer application prior to the Commission completing its adjudication, the application will lack the agency's final approval until and unless the Commission concludes the adjudication in the applicant's favor; CLI-08-19, 68 NRC 251 (2008)
- once a board has admitted original contentions, conducted the evidentiary hearing, and issued its ruling on the merits, and after the parties have appealed that decision, and the Commission has rendered its decision on the merits of the matter, the adjudicatory proceeding should be over, absent some extenuating circumstances; LBP-10-19, 72 NRC 529 (2010)
- the mere potential that an issue may become moot in the future due to a rulemaking does not affect the finality of a decision resting on current law; CLI-07-13, 65 NRC 211 (2007)
- the pendency of an appeal has no effect on the finality or binding effect of a trial court's holding; LBP-09-24, 70 NRC 676 (2009)
- when intervenor has no claim remaining in either adjudication, a request for judicial review must be brought immediately if at all; CLI-07-13, 65 NRC 211 (2007)
- FINANCIAL ASSURANCE**
- a combined license applicant must obtain the financial instrument and submit a copy to the Commission as provided in 10 C.F.R. 50.75(e)(3); LBP-09-15, 70 NRC 198 (2009)
- a finding that a particular strategy is plausible is a necessary precursor to a finding that a cost estimate is documented and reasonable; LBP-06-15, 63 NRC 591 (2006)

## SUBJECT INDEX

- a parent-company guarantee of funds for decommissioning costs based on a financial test may be used if the guarantee and test are as contained in 10 C.F.R. Part 30, Appendix A; LBP-09-15, 70 NRC 198 (2009)
- a plausible strategy for private conversion of depleted uranium tails does not mean a definite or certain strategy, to include completion of all necessary contractual arrangements, but it must represent more than mere speculation; LBP-06-15, 63 NRC 591 (2006)
- a surety bond must be funded in an amount greater than or equal to the decommissioning cost estimate set forth in the licensee's decommissioning funding plan; LBP-06-17, 63 NRC 747 (2006)
- acceptable methods of decommissioning funding include a sinking fund, prepayment of the entire decommissioning amount, and a surety method, insurance, or other guarantee method; LBP-09-15, 70 NRC 198 (2009)
- an applicant must demonstrate a "plausible strategy" for dispositioning depleted uranium waste to provide a foundation upon which to build reasonable cost estimates for various elements related to ultimate decommissioning of the proposed facility; LBP-06-15, 63 NRC 591 (2006)
- an applicant seeking a license to construct and operate a uranium enrichment facility must submit a proposed decommissioning funding plan with its license application; LBP-06-15, 63 NRC 591 (2006); LBP-06-17, 63 NRC 747 (2006)
- applicant is permitted to choose a single method or a combination of methods to demonstrate financial assurance; LBP-09-4, 69 NRC 170 (2009)
- applicant may provide estimates for each of the elements of its decommissioning funding plan by obtaining estimates of the actual cost of providing a service from experienced third parties; LBP-06-15, 63 NRC 591 (2006)
- applicant must adjust its cost estimates and associated financial assurance levels at least once every 3 years; LBP-06-17, 63 NRC 747 (2006)
- applicant must submit a certification with its decommissioning funding plan that financial assurance for decommissioning the facility has been provided in an amount equal to the decommissioning cost estimate, as well as a signed original or appropriate duplicate of the funding instrument whereby the applicant will provide financial assurance; LBP-06-15, 63 NRC 591 (2006)
- cost of constructing and operating a deconversion facility may be based on prior experience with a similar facility, but such estimates must include the entirety of expected costs to the applicant or a third party by, for example, providing a thorough analysis such as would typically be developed and used for any new project; LBP-06-15, 63 NRC 591 (2006)
- creditor regulations in 10 C.F.R. 50.81 apply to the creation of creditor interests in equipment, devices, or important parts thereof, capable of separating the isotopes of uranium or enriching uranium in the isotope U-235; CLI-10-4, 71 NRC 56 (2010)
- creditor regulations in 10 C.F.R. 70.44 apply to the creation of creditor interests in special nuclear material; CLI-10-4, 71 NRC 56 (2010)
- decommissioning funding plans must contain a cost estimate for decommissioning and a description of the method of assuring funds for decommissioning, including means for adjusting cost estimates and associated funding levels periodically over the life of the facility, at least triennially; LBP-06-15, 63 NRC 591 (2006)
- financial criteria of 10 C.F.R. 70.22(a)(8) and 70.23(a)(5) can be met by conditioning the license to require funding commitments to be in place prior to construction and operation; CLI-10-4, 71 NRC 56 (2010)
- for decommissioning funding, a private applicant may use prepayment into a segregated account prior to start of facility operations, a surety or other guarantee method, or annual deposits into an external sinking fund coupled with a surety method whereby the surety value decreases over time by the amount accrued in the sinking fund; LBP-06-15, 63 NRC 591 (2006); LBP-06-17, 63 NRC 747 (2006)
- holder of a combined license must begin filing biannual reports on the status of decommissioning funding once the Commission has made a finding that all acceptance criteria in the license have been met; LBP-09-15, 70 NRC 198 (2009)
- if licensee changes its method of decommissioning funding assurance, the new method will also have to pass any applicable financial test; LBP-09-15, 70 NRC 198 (2009)
- in estimating labor costs for its proposed uranium mining operation, an applicant is entitled to draw upon its prior experience in that field as a basis for its cost estimates; LBP-06-15, 63 NRC 591 (2006)

## SUBJECT INDEX

- NRC will defer to state economic regulators where decommissioning funding is assured by the fact that any shortfall in decommissioning funds will be provided by ratepayers pursuant to state law; LBP-09-21, 70 NRC 581 (2009)
- Part 70 financial criteria can be met by conditioning the materials license to require funding commitments to be in place prior to construction and operation; CLI-09-15, 70 NRC 1 (2009)
- regulations and guidance documents fail to state when proof of applicant's financial assurance for decommissioning funding is required; LBP-09-4, 69 NRC 170 (2009)
- Staff reviews the mechanisms specified in an applicant's decommissioning funding plan to determine whether the proposed mechanisms are acceptable and to ensure that the certification specifies the correct amount of financial assurance and attests compliance with the appropriate regulatory requirements; LBP-06-15, 63 NRC 591 (2006)
- surety bonds must be directly payable to an acceptable standby trust that will be used to fund decommissioning if the licensee defaults on its decommissioning obligation; LBP-06-17, 63 NRC 747 (2006)
- surety bonds must either be open-ended or written for a specified term subject to automatic renewal, and must specify that the full face value will be automatically paid to the NRC prior to expiration if the licensee does not provide an acceptable mechanism within a specified period of time; LBP-06-17, 63 NRC 747 (2006)
- surety bonds must remain in effect until license termination; LBP-06-17, 63 NRC 747 (2006)
- the amount for decommissioning funding must be adjusted annually, using a rate calculated pursuant to 10 C.F.R. 50.75(c)(2); LBP-09-15, 70 NRC 198 (2009)
- the purpose of the triennial adjustment of cost estimates for decommissioning funding is to help ensure that funding for decommissioning will not become inadequate as a result of changing disposal prices or other factors; LBP-06-17, 63 NRC 747 (2006)
- the requirements of 10 C.F.R. 50.75 are intended to ensure that entities who construct and operate a nuclear power plant will have sufficient funds at the end of the operational life of the plant to complete the decommissioning of the plant; LBP-09-15, 70 NRC 198 (2009)
- there is no provision that requires an applicant or licensee to choose one form of decommissioning assurance over another; LBP-09-4, 69 NRC 170 (2009)
- transfer of depleted uranium from enrichment operations to DOE for deconversion and disposal constitutes a plausible strategy for dispositioning; LBP-06-15, 63 NRC 591 (2006)
- whether an applicant has presented a plausible strategy, although related to disposition costs, is an inquiry distinct from and precedent to the question of the adequacy of an applicant's dispositioning cost estimates; LBP-06-15, 63 NRC 591 (2006)
- FINANCIAL ASSURANCE PLAN**
- a board can only decide whether or not a current funding proposal fulfills NRC requirements; LBP-09-18, 70 NRC 385 (2009)
- at the time the combined license application is submitted, it must identify the method of decommissioning funding assurance that the applicant proposes to use and to show that the method complies with any applicable financial test; LBP-09-15, 70 NRC 198 (2009); LBP-09-18, 70 NRC 385 (2009)
- applicant, 2 years before and 1 year before the scheduled date for the initial fuel loading, shall submit a report to NRC containing a certification updating the financial information, including a copy of the financial instrument to be used; LBP-09-18, 70 NRC 385 (2009)
- applicant may choose one or more of the funding methods provided in 10 C.F.R. 50.75(e); LBP-09-18, 70 NRC 385 (2009)
- final decommissioning financial assurance documents must be submitted to the NRC 30 days after the notification in the *Federal Register* pursuant to section 52.103(a) that licensee has set a date to load fuel; LBP-09-15, 70 NRC 198 (2009); LBP-09-21, 70 NRC 581 (2009)
- for combined license applications, the report must contain a certification that financial assurance for decommissioning will be provided no later than 30 days after the Commission publishes notice in the *Federal Register* of the initial fuel load; LBP-09-18, 70 NRC 385 (2009)
- if applicant plans to use a parent company guarantee for financial assurance of decommissioning funding, the assurance must provide the information required by 10 C.F.R. 50.75(e)(1)(iii)(B); LBP-09-15, 70 NRC 198 (2009)

## SUBJECT INDEX

petitioners' claim that applicant must pursue the prepayment method for decommissioning conflicts with the NRC guidance and rules and so is outside the permissible scope of a combined license proceeding; LBP-09-21, 70 NRC 581 (2009)

the parent company guarantee is based on a financial test and may only be used if the guarantee and test are as contained in Appendix A to 10 C.F.R. Part 30; LBP-09-18, 70 NRC 385 (2009)

### FINANCIAL QUALIFICATIONS

a licensee need not be an electric utility, but a non-electric utility license applicant must meet heightened financial qualifications; CLI-07-18, 65 NRC 399 (2007); LBP-07-4, 65 NRC 281 (2007)

an applicant seeking to renew or extend the term of an operating license for a power reactor need not submit the financial information that is required in an application for an initial license; LBP-07-4, 65 NRC 281 (2007)

applicant for a combined license must show that it possesses funds or has reasonable assurance of obtaining funds necessary to cover estimated construction and fuel cycle costs; LBP-09-10, 70 NRC 51 (2009)

electric utilities are presumed to be financially qualified to operate nuclear power plants and thus the Commission has exempted them from NRC review of their financial qualifications to cover operational costs; LBP-08-17, 68 NRC 431 (2008)

electric utilities need not include operating and maintenance costs in their demonstration of financial qualifications in a combined license application; LBP-09-10, 70 NRC 51 (2009)

in a license transfer case, a petitioner cannot successfully claim injury based on the financial qualifications and assurances of the transferor; CLI-07-22, 65 NRC 525 (2007)

it is beyond licensing board authority to require applicant to choose a particular method of decommissioning funding; LBP-09-15, 70 NRC 198 (2009)

neither market capitalization nor share price are variables to be used in the financial test for decommissioning funding assurance; LBP-09-15, 70 NRC 198 (2009)

the financial test for a parent company guarantee is a material issue because the Staff must decide whether the test is satisfied in order to grant the combined license; LBP-09-15, 70 NRC 198 (2009)

the purpose of the requirements of 10 C.F.R. 50.33(f) is to ensure the protection of public health and safety and the common defense and security, not to evaluate the financial wisdom of the proposed project; LBP-09-10, 70 NRC 51 (2009)

### FINANCIAL RESOURCES

creditor interests are created in equipment, devices, or important parts thereof, capable of separating the isotopes of uranium or enriching uranium in the isotope U-235; CLI-09-15, 70 NRC 1 (2009)

### FINDING OF NO SIGNIFICANT IMPACT

to raise an admissible contention with respect to a Staff finding of no significant impact, petitioner need not demonstrate that there will be a significant environmental impact as a consequence of the proposed action, but it must allege facts that, if true, show that the proposed project may significantly degrade some human environmental factor; LBP-06-27, 64 NRC 438 (2006)

### FINDINGS OF FACT

a board rested its findings regarding a contention, in part, on certain facts that it officially noticed; CLI-10-17, 72 NRC 1 (2010)

a board's analysis of decommissioning cost estimates should be tailored to the specifics of the proceeding; CLI-06-22, 64 NRC 37 (2006)

a board's examination of licensee's decommissioning cost estimates for reliability is consistent with its obligation to verify whether the estimates provided reasonable assurance for decommissioning funding; CLI-06-22, 64 NRC 37 (2006)

a board's findings regarding a particular witness's knowledge or state of mind depend, as a general rule, largely on that witness's credibility; CLI-10-23, 72 NRC 210 (2010)

a party's failure to raise a matter in its proposed findings of fact and conclusions of law seemingly waives these items as grounds for its challenge to the final environmental impact statement; LBP-09-7, 69 NRC 613 (2009)

any licensing board merits litigation-based findings have the effect of amending or supplementing the final environmental impact statement; LBP-07-3, 65 NRC 237 (2007)

## SUBJECT INDEX

- board's finding that "knowledge" does not necessarily follow simply from previous exposure to individual facts, but rather an individual must have a current appreciation of those facts and their meaning in the circumstances presented is a finding of fact, not of law; CLI-10-23, 72 NRC 210 (2010)
- compliance or noncompliance with regulatory guidance, even if proven, is simply evidence and does not relieve the board of the duty to determine whether an applicant has satisfied the relevant legal and regulatory requirements; LBP-08-25, 68 NRC 763 (2008)
- environmental findings that a board must make to authorize issuance of an early site permit are described; LBP-09-19, 70 NRC 433 (2009)
- if a board does not explain how it had arrived at its findings of fact, it would fail to comply with its responsibilities under the Administrative Procedure Act to issue a reasoned decision; CLI-10-23, 72 NRC 210 (2010)
- licensing board findings of fact that turn on witness credibility receive the Commission's highest deference on appeal; CLI-10-23, 72 NRC 210 (2010)
- the Commission does not exercise its authority to make de novo findings of fact where a licensing board has issued a plausible decision that rests on carefully rendered findings of fact; CLI-06-22, 64 NRC 37 (2006); CLI-09-7, 69 NRC 235 (2009); CLI-10-5, 71 NRC 90 (2010); CLI-10-18, 72 NRC 56 (2010)
- the Commission will not overturn a hearing judge's findings simply because the Commission might have reached a different result; CLI-10-23, 72 NRC 210 (2010)
- the Commission's standard of clear error for overturning a board's factual finding is quite high, and the Commission defers to its boards' findings unless clearly erroneous, i.e., not even plausible in light of the record viewed in its entirety; CLI-09-7, 69 NRC 235 (2009); CLI-10-5, 71 NRC 90 (2010)
- the licensing board's principal role in the adjudicatory process is to carefully review all of the evidence, including testimony and exhibits, and to resolve any factual disputes; CLI-10-5, 71 NRC 90 (2010)
- to grant an early site permit, the Commission must find that the proposed inspections, tests, analyses, and acceptance criteria, including any on emergency planning, are necessary and sufficient, within the scope of the ESP, to provide reasonable assurance that the facility has been constructed and will be operated in conformity with the license, the provisions of the Act, and the Commission's regulations; LBP-09-19, 70 NRC 433 (2009)
- to show clear error, appellant must demonstrate that the board's findings are not even plausible in light of the record viewed in its entirety; CLI-10-23, 72 NRC 210 (2010)
- unless there is a strong reason to believe that in a particular case a board has overlooked or misunderstood important evidence, the Commission will defer to its findings of fact; CLI-09-7, 69 NRC 235 (2009)
- when a presiding officer has reviewed an extensive record in detail, with the assistance of a technical advisor, the Commission is generally disinclined to upset his findings and conclusions, particularly on matters involving fact-specific issues or where the affidavits or submissions of experts must be weighed; CLI-06-1, 63 NRC 1 (2006)
- when an early site permit is issued with an associated limited work authorization, the board must find relative to the LWA that any significant adverse environmental impact resulting from activities requested under 10 C.F.R. 52.17(c) can be redressed; LBP-09-19, 70 NRC 433 (2009)
- where a party merely complains that the board improperly weighed the evidence and identifies no clear board factual or legal error requiring further Commission consideration on appellate review, the Commission is disinclined to second-guess the board's assessment of the party's affidavits; CLI-08-28, 68 NRC 658 (2008)
- FIRE BARRIERS**
- any challenge to an NRC Staff decision to grant an exemption from a 1-hour barrier to a 24/30-minute barrier is a direct challenge to the current licensing basis and unrelated to the effects of plant aging and the license renewal application; LBP-08-13, 68 NRC 43 (2008)
- evaluation of the fire protection properties of Thermo-Lag, Hemyc, and Kaowool materials and licensees' responses to those findings are discussed; DD-06-1, 63 NRC 133 (2006)
- FIRE PROTECTION**
- a contention that challenges compliance with fire protection regulations at an existing unit is outside the scope of a combined license proceeding; CLI-10-9, 71 NRC 245 (2010)
- petitioner's assertions regarding the historical fire protection situation at the existing unit outside the scope of the combined license proceeding; LBP-08-21, 68 NRC 554 (2008)

## SUBJECT INDEX

petitioner's challenge to the one-fire assumption in the AP1000 design constitutes an impermissible challenge to Commission regulations; CLI-10-9, 71 NRC 245 (2010)

### FIRE PROTECTION SYSTEMS

all structures, systems, and components relied on in safety analyses or plant evaluations to perform a function that demonstrates compliance with the NRC's regulations are subject to aging management review for license renewal; CLI-10-14, 71 NRC 449 (2010)

condensate storage system buried pipes are outside the scope of a license renewal proceeding with respect to their safety functionality, but that does not eliminate the need for consideration of potential leaks from those buried pipes because of their role in fire protection; LBP-08-22, 68 NRC 590 (2008)

evaluation of the fire protection properties of Thermo-Lag, Hemyc, and Kaowool fire barrier materials and licensees' responses to those findings are discussed; DD-06-1, 63 NRC 133 (2006)

licensee is not required to submit docketed information on the resolution of each fire protection noncompliance during its transition to a risk-informed and performance-based fire protection program, but it is required to implement and maintain compensatory measures for remaining noncompliances; DD-07-3, 65 NRC 643 (2007)

licensees may voluntarily adopt a risk-informed and performance-based fire protection program; DD-07-3, 65 NRC 643 (2007)

licensees of plants licensed to operate before January 1, 1979, must comply with fire protection requirements specified in 10 C.F.R. Part 50, Appendix R, and licensees of plants licensed to operate after January 1, 1979, must comply with the approved fire protection program incorporated into their operating license; DD-06-1, 63 NRC 133 (2006)

NRC normally will not take enforcement action for a violation involving a problem related to engineering, design, implementing procedures, or installation, if the violation is documented in an inspection report and it meets certain criteria including the licensee's voluntary initiative to adopt the risk-informed performance-based fire protection program; DD-07-3, 65 NRC 643 (2007)

### FIRE SAFETY

issues already the focus of ongoing regulatory processes do not come within the NRC's safety review of a license renewal application; LBP-07-11, 66 NRC 41 (2007)

the manner in which residual heat from an electrical cabinet fire is dissipated, and the potential for reignition of an electrical cabinet fire after it is extinguished with an inert gas and the cabinet is opened before the residual heat has dissipated, is discussed; LBP-06-17, 63 NRC 747 (2006)

### FIRES

a contention on spent fuel pool fires is rejected as an impermissible challenge to NRC regulations and the license renewal generic environmental impact statement; CLI-10-11, 71 NRC 287 (2010)

combined license applications must describe plans for implementing guidance and strategies intended to maintain or restore core cooling, containment, and spent fuel pool cooling capabilities if large areas of the plant are lost due to explosions or fire; LBP-10-5, 71 NRC 329 (2010)

spent fuel pool fires are Category 1 issues and therefore are addressed generically in the generic environmental impact statement for license renewals; LBP-08-13, 68 NRC 43 (2008)

the licensing board rules on issues that concern guidance and strategies for addressing certain circumstances that might arise from potential beyond-design-basis explosions and fires; LBP-10-5, 71 NRC 329 (2010)

### FIRST AMENDMENT

public access to courts is grounded in the First Amendment and free speech carries with it some freedom to listen; LBP-10-2, 71 NRC 190 (2010)

### FISH AND SHELLFISH

applicant is required to provide in its environmental report a site-specific analysis of entrainment, impingement, and heat shock/thermal discharge impacts from its once-through cooling systems; LBP-08-13, 68 NRC 43 (2008)

### FITNESS-FOR-DUTY PROGRAM

a person may be denied access at a licensee facility based on NRC requirements such as falsification of information, trustworthiness or reliability issues, and issues related to fitness for duty; DD-10-2, 72 NRC 163 (2010)

## SUBJECT INDEX

an individual requiring clarification or resolution of an access authorization concern must resolve the issue with the licensee where unescorted access was last held or otherwise denied; DD-10-2, 72 NRC 163 (2010)

each licensee must evaluate access denial status on a case-by-case basis and make a determination of trustworthiness and reliability; DD-10-2, 72 NRC 163 (2010)

nuclear industry was required to develop, implement, and maintain an industry database accessible by NRC-licensed facilities to share information, including determination of whether an individual is denied access at any other NRC-licensed facility; DD-10-2, 72 NRC 163 (2010)

potentially disqualifying information for unescorted access authorization may include unfavorable information from an employer, developed or disclosed criminal history, credit history, judgments, unfavorable reference information, evidence of drug or alcohol abuse, discrepancies between information disclosed and developed; DD-10-2, 72 NRC 163 (2010)

### FLOOD PROTECTION

the design basis flood is the magnitude of the flood event that is used to evaluate safety structures, systems, and components important to safety during facility design; LBP-09-25, 70 NRC 867 (2009)

### FLOODS

shutting down or derating of a nuclear power plant is not warranted because the state has established and coordinated potential alternative evacuation routes in the unlikely event of an emergency at the nuclear power plant; DD-06-2, 63 NRC 425 (2006)

### FLOW ACCELERATED CORROSION

applicant must establish an aging management program that is adequate to provide reasonable assurance that the intended function of the piping subject to FAC will be maintained in accordance with the current licensing basis for the period of extended operation; LBP-08-25, 68 NRC 763 (2008)

### FOOD ADDITIVES

a food additive is presumed to be unsafe until demonstrated otherwise; CLI-08-16, 68 NRC 221 (2008)

for the FDA to determine that a food additive is safe, it must find, after a fair evaluation of the data, that there is a reasonable certainty in the minds of competent scientists that the substance is not harmful under all intended conditions of use; CLI-08-16, 68 NRC 221 (2008)

irradiation sources, including radioactive isotopes, particle accelerators, and X-ray machines, intended for use in processing food are included in this term; CLI-08-16, 68 NRC 221 (2008)

### FOODS

See Irradiated Foods

### FOREIGN OWNERSHIP

a domestic corporation in which a foreign entity has an ownership interest is considered controlled or dominated if its will is subjugated to the will of the foreign entity on primary safety matters or access policies that may be inimical to the national defense and security of the United States; LBP-09-4, 69 NRC 170 (2009)

a facility is foreign-owned when a foreign interest has the power, direct or indirect, whether or not exercised, to direct or decide matters affecting the management or operations of the applicant; LBP-08-6, 67 NRC 241 (2008)

a license will not be prohibited if the foreign entity's influence is on other licensing activities not of primary concern to the NRC, or if the corporation follows NRC-implemented conditions to isolate safety matters from foreign control; LBP-09-4, 69 NRC 170 (2009)

an affirmative finding by the Commission that issuance of a license for a uranium enrichment facility will not be inimical to the common defense and security is required; CLI-09-15, 70 NRC 1 (2009)

analysis of compliance with section 103d of the Atomic Energy Act is a function performed by the NRC Staff as part of its evaluation of the combined license application; CLI-09-20, 70 NRC 911 (2009)

applicant's failure to disclose ownership by a foreign corporation in its license renewal application constitutes a contention of omission; LBP-08-24, 68 NRC 691 (2008)

citizenship of an applicant may be considered in the context of a license application; CLI-09-9, 69 NRC 331 (2009)

concerns related to an applicant's ownership are potentially material to the safety and environmental requirements of 10 C.F.R. Part 40; LBP-08-6, 67 NRC 241 (2008); LBP-08-24, 68 NRC 691 (2008)

congressional intent for the phrase "common defense and security," is analyzed in the context of foreign ownership prohibitions; LBP-08-6, 67 NRC 241 (2008)

## SUBJECT INDEX

contention alleging foreign ownership of applicant, failure to disclose, and various ramifications of such ownership is found to be admissible; LBP-09-1, 69 NRC 11 (2009)

creditor regulations may be augmented by license conditions as necessary to allow ownership arrangements, such as sale and leaseback, provided it can be found that such arrangements are not inimical to the common defense and security of the United States; CLI-09-15, 70 NRC 1 (2009); CLI-10-4, 71 NRC 56 (2010)

issuance of a materials license to a licensee wholly owned by a foreign parent is not prohibited; CLI-09-12, 69 NRC 535 (2009)

neither a uranium enrichment facility nor a nuclear power plant may be owned, controlled, or dominated by a foreign entity; CLI-09-9, 69 NRC 331 (2009)

no license may be issued to an alien or any corporation or other entity if the Commission knows or has reason to believe it is owned, controlled, or dominated by an alien, a foreign corporation, or a foreign government; CLI-09-20, 70 NRC 911 (2009)

NRC case law and precedent do not prohibit considering the percentage of foreign ownership as one element in NRC's overall analysis and finding of whether the foreign entity is a threat to the national defense and security of the United States; LBP-09-4, 69 NRC 170 (2009)

petitioners' claim that a foreign-owned company would be more likely than a U.S.-owned company to export its product overseas falls outside the scope of a materials license amendment proceeding, where the applicant had not applied for a license to export recovered uranium; CLI-09-12, 69 NRC 535 (2009)

the Atomic Energy Act restriction focuses on safeguarding access to nuclear materials, a security issue, and not on other licensing matters; LBP-09-4, 69 NRC 170 (2009)

the Commission has not determined a specific threshold above which it would be conclusive that an applicant is controlled by foreign interests through ownership of a percentage of the applicant's stock; CLI-09-20, 70 NRC 911 (2009); LBP-09-4, 69 NRC 170 (2009)

the common defense and security standard refers principally to the safeguarding of special nuclear material, the absence of foreign control over the applicant, the protection of restricted data, and the availability of special nuclear material for defense needs; CLI-09-9, 69 NRC 331 (2009)

the decision of whether to grant a license to a corporation hinges on whether the applicant is being controlled or dominated by the foreign entity; LBP-09-4, 69 NRC 170 (2009)

the requirement that materials licenses not be inimical to the common defense and security has been interpreted as referring to the absence of foreign control over the applicant; LBP-09-1, 69 NRC 11 (2009)

there is no statutory or regulatory bar, per se, on a foreign-owned or -controlled company holding a source materials license, whether as a licensee or as a parent entity; CLI-09-9, 69 NRC 331 (2009)

**FREEDOM OF INFORMATION ACT**

a participant in administrative litigation, having an even greater interest in obtaining access to SUNSI than does the general public, is entitled to obtain documents under standards no more restrictive than would be accorded the general public under FOIA; LBP-10-2, 71 NRC 190 (2010)

challenges in FOIA cases routinely are resolved on the basis of summary judgment pleadings; LBP-08-7, 67 NRC 361 (2008)

classified information is exempt from disclosure; LBP-10-2, 71 NRC 190 (2010)

copies of environmental impact statements shall be made available to the President, the Council on Environmental Quality, and the public; CLI-08-1, 67 NRC 1 (2008)

disclosure of documents under the National Environmental Policy Act is expressly governed by the Freedom of Information Act; CLI-08-5, 67 NRC 174 (2008); CLI-08-8, 67 NRC 193 (2008)

documents that qualify as exempt from FOIA disclosure as sensitive unclassified nonsafeguards information are described; LBP-10-2, 71 NRC 190 (2010)

even if a document contains information that is exempt from disclosure, FOIA mandates that any reasonably segregable portion of the record shall be provided to any person requesting such record after deletion of the portions that are exempt; LBP-10-2, 71 NRC 190 (2010)

Exemption 2 authorizes an agency to withhold matters that are related solely to the internal personnel rules and practices of an agency; LBP-08-7, 67 NRC 361 (2008)

if it seeks to withhold a document from a party or the public, or to bar a party or member of the public from attending an adjudicatory proceeding before a licensing board, NRC Staff must carry the burden

## SUBJECT INDEX

of proving that the document or situation fits one of FOIA's specifically enumerated exceptions; LBP-10-2, 71 NRC 190 (2010)

in evaluating the validity of a claimed FOIA exemption, the experience and expertise of an affiant, coupled with a detailed and specific affidavit, lends special weight to the affiant's statements and conclusions; LBP-08-7, 67 NRC 361 (2008)

information in an environment impact statement or environmental assessment that must be considered as part of the NEPA decisionmaking process may be withheld from public disclosure pursuant to FOIA exemptions; CLI-08-1, 67 NRC 1 (2008)

intra-agency memoranda developed during the decisionmaking process are protected under the deliberative process privilege; CLI-08-23, 68 NRC 461 (2008)

limited discovery may be allowed in a FOIA dispute, but only if absolutely necessary to ensure a complete record and a fair decision; CLI-08-5, 67 NRC 174 (2008)

litigation is ordinarily resolved on summary disposition without discovery and without evidentiary trials or hearings, and discovery is sparingly used; CLI-08-5, 67 NRC 174 (2008); CLI-08-8, 67 NRC 193 (2008)

NEPA does not contemplate adjudications resulting in the disclosure of matters under law considered secret or confidential; CLI-08-8, 67 NRC 193 (2008)

NRC implements and repeats the FOIA obligation that, with nine enumerated exceptions, each agency make copies of all records available to the public; LBP-10-2, 71 NRC 190 (2010)

NRC need not disclose information if it falls within one of the nine exemptions in the Freedom of Information Act; LBP-08-7, 67 NRC 361 (2008)

NRC records are protected from disclosure under FOIA Exemption 2 to the extent they contain internal analytic guidance, operating rules, or practices, the disclosure of which would aid terrorists or saboteurs seeking to circumvent security measures designed to protect nuclear materials; LBP-08-7, 67 NRC 361 (2008)

regarding public disclosure of an agency's NEPA analysis, Congress has established that the environmental impact statement shall be made available to the public as provided by FOIA; LBP-08-7, 67 NRC 361 (2008)

safeguards information qualifies for the exemption from disclosure; LBP-10-2, 71 NRC 190 (2010)

the duty to make all documents available does not apply to records specifically exempted from disclosure by statute; LBP-10-2, 71 NRC 190 (2010)

the public is entitled to copies of the transcripts of all hearings; LBP-10-2, 71 NRC 190 (2010)

under the National Environmental Policy Act, the Commission may withhold from public disclosure any information that is exempt under FOIA; CLI-08-26, 68 NRC 509 (2008)

when access to documents is disputed in FOIA litigation, the government must submit detailed public affidavits identifying the documents withheld, the FOIA exemptions claimed, and a particularized explanation of why each document falls within the claimed exemption; LBP-08-7, 67 NRC 361 (2008)

when the agency has submitted detailed public affidavits that permit resolution of FOIA issues, in camera review of redacted information or sealed documents is not necessary; LBP-08-7, 67 NRC 361 (2008)

**FUEL FABRICATION FACILITY LICENSING**

applicant is not required to "request" a completion finding, or call for a single action, such as an inspection, on the part of the Staff that would serve as a discrete starting point for revising a contention; CLI-09-2, 69 NRC 55 (2009)

because Intervenor's inability to satisfy the contention admissibility rules is due to factors beyond their control, the Commission declines to require them to meet both the strict late-filing requirements and the even stricter reopening standards if they identify safety issues during the upcoming years of ongoing construction; CLI-09-2, 69 NRC 55 (2009)

the requirement that the issue raised in a contention must be within the scope of the proceeding is of particular relevance given the two-stage jurisdictional procedure established prior to the first mixed oxide fuel fabrication facility proceeding; LBP-07-14, 66 NRC 169 (2007)

when environmental issues are dealt with in a separate proceeding, environmental contentions are beyond the scope of the safety proceeding unless they meet requirements beyond the ordinary contention admissibility tests; LBP-07-14, 66 NRC 169 (2007)

## SUBJECT INDEX

### FUEL LOADING

prior to operation under a combined license, a notice of intended operation will be published in the *Federal Register* not less than 180 days before the date scheduled for initial loading of fuel; LBP-09-19, 70 NRC 433 (2009)

### GENERAL DESIGN CRITERIA

the criteria are not applicable to nuclear power plants with construction permits issued prior to May 21, 1971; LBP-08-13, 68 NRC 43 (2008)

### GENERAL LICENSES

the assertion that applicant might need to obtain a Part 72 license is irrelevant because a grant of a combined license could be accompanied by grant of a Part 72 general license if applicant complies with certain conditions; LBP-09-21, 70 NRC 581 (2009)

the Commission has issued a general license for the storage of spent fuel at an onsite independent spent fuel storage installation to all persons authorized to possess or operate nuclear power reactors under 10 C.F.R. Part 50 or Part 52; LBP-09-20, 70 NRC 565 (2009)

### GENERIC ENVIRONMENTAL IMPACT STATEMENT

a contention on spent fuel pool fires is rejected as an impermissible challenge to NRC regulations and the license renewal GEIS; CLI-10-11, 71 NRC 287 (2010)

environmental effects of storing spent fuel for an additional 20 years at the site of nuclear reactors would be not significant; CLI-07-3, 65 NRC 13 (2007)

generic environmental impacts analyzed in the GEIS for license renewal are designated "Category 1" issues, and the license renewal applicant is generally excused from discussing them; CLI-07-3, 65 NRC 13 (2007)

Staff's GEIS for license renewal has already performed a discretionary analysis of terrorist acts in connection with license renewal and concluded that the core damage and radiological release from such acts would be no worse than the damage and release to be expected from internally initiated events; CLI-07-8, 65 NRC 124 (2007)

the GEIS addresses the need to consider energy conservation for the no-action alternative; LBP-08-13, 68 NRC 43 (2008)

the GEIS for license renewal provides data supporting the table of Category 1 and 2 issues in 10 C.F.R. Part 51, Subpart A, Appendix B; LBP-06-23, 64 NRC 257 (2006)

the GEIS for license renewal was part of an amendment of the requirements of Part 51 undertaken by the Commission to establish environmental review requirements for license renewals that were both efficient and more effectively focused; LBP-07-4, 65 NRC 281 (2007)

the GEIS must be updated if new and significant information or changed circumstances would change the outcome of the environmental analysis; LBP-10-15, 72 NRC 257 (2010)

when a petitioner argues that new information contradicts assumptions underlying the entire generic analysis for all facilities or a whole class of facilities, the appropriate remedy is a rulemaking petition; CLI-07-3, 65 NRC 13 (2007)

### GENERIC ISSUES

a license renewal applicant need not discuss severe accident mitigation alternatives for Category 1 issues; CLI-07-3, 65 NRC 13 (2007)

absent a waiver pursuant to 10 C.F.R. 2.335, Category 1 issues are not subject to challenge in a relicensing proceeding because they involve environmental effects that are essentially similar for all plants and need not be assessed repeatedly on a site-specific basis; LBP-08-13, 68 NRC 43 (2008)

adjudicating Category 1 issues site by site based merely on a claim of new and significant information would defeat the purpose of resolving generic issues in a GEIS; CLI-07-3, 65 NRC 13 (2007)

any new and significant information regarding the environmental impacts of license renewal of which the applicant is aware must be included in the environmental report even if this concerns a Category 1 issue; LBP-06-23, 64 NRC 257 (2006)

because Category 1 issues already have been reviewed on a generic basis for all plants, an applicant's environmental report need not provide a site-specific analysis of these issues; LBP-07-4, 65 NRC 281 (2007); CLI-09-10, 69 NRC 521 (2009)

Category 1 issues need not be repeatedly assessed on a plant-by-plant basis, and license renewal applicants may in their ERs refer to and adopt the generic environmental impact findings found in 10 C.F.R. Part 51, Subpart A, Appendix B, Table B-1; LBP-06-23, 64 NRC 257 (2006)

## SUBJECT INDEX

environmental effects of storing spent fuel for an additional 20 years at the site of nuclear reactors would be not significant; CLI-07-3, 65 NRC 13 (2007)

environmental impacts from the spent fuel pool, including potential beyond-design-basis accidents and the need for mitigation measures, are addressed generically in the NRC's generic environmental impact statement for license renewal, and do not require a site-specific analysis as part of an individual license renewal environmental review; CLI-10-14, 71 NRC 449 (2010)

environmental issues identified as "Category 1," or "generic," issues in 10 C.F.R. Part 51, Subpart A, Appendix B, are not within the scope of a license renewal proceeding; LBP-07-11, 66 NRC 41 (2007) even though a matter may normally fall within a Category 1 issue, ERs are also required to contain any new and significant information regarding the environmental impacts of license renewal of which the applicant is aware; LBP-07-4, 65 NRC 281 (2007)

for all issues designated as Category 1 the Commission has concluded (generally) that additional site-specific mitigation alternatives are unlikely to be beneficial; CLI-07-3, 65 NRC 13 (2007)

generic analysis is an appropriate method of meeting the agency's statutory obligations under NEPA; CLI-07-3, 65 NRC 13 (2007)

generic NRC policies and standards and the nature of the NRC Staff's licensing review are not subject to challenge in an adjudicatory proceeding; CLI-08-17, 68 NRC 231 (2008)

if a rule is suspended for analysis, each supplemental EIS would reflect the corrected analysis until such time as the rule is amended; CLI-07-3, 65 NRC 13 (2007)

if petitioners are dissatisfied with NRC's generic approach to a problem, their remedy lies in the rulemaking process, not in adjudication; LBP-09-18, 70 NRC 385 (2009)

in conducting its analysis of the impact of the license renewal on land use, applicant should consider the impact on real estate values that would be caused by license renewal or nonrenewal; LBP-08-13, 68 NRC 43 (2008)

intervention petitioners may not demand an adjudicatory hearing to attack generic NRC requirements or regulations or to express generalized grievances about NRC policies; LBP-07-11, 66 NRC 41 (2007)

introduction of issues that are not unique to any given reactor are inappropriate in an individual reactor licensing proceeding absent evidence that the generic issue applies to that particular proceeding; LBP-06-11, 63 NRC 391 (2006)

issue of whether location of a nuclear plant in a densely populated area allowed adoption of generic risk factors and a severe accident mitigation design alternatives decision supported by a policy statement rather than a rulemaking was confronted; LBP-10-10, 71 NRC 529 (2010)

issues on which the Commission can draw generic conclusions applicable to all existing nuclear power plants, or to a specific subgroup of plants are identified as "Category 1" issues; LBP-07-4, 65 NRC 281 (2007)

issues resolved as part of the design certification rulemaking process and any concerns related to those issues are not within the scope of a combined license proceeding; LBP-09-8, 69 NRC 736 (2009)

it makes more sense for NRC to study whether, as a technical matter, the agency should modify its requirements for all plants across the board than to litigate in particular adjudications whether generic findings in the GEIS are impeached by a claim of new information; CLI-07-3, 65 NRC 13 (2007)

NRC cannot generically dispense with the consideration of SAMAs, under NEPA, through a policy statement issued pursuant to its Atomic Energy Act authority; LBP-10-13, 71 NRC 673 (2010)

NRC rules recognize the possibility of new and significant information calling into question prior generic findings, and a petition for rulemaking is one means to alert the Commission to new information that may render a GEIS finding incorrect; CLI-09-10, 69 NRC 521 (2009)

one way to challenge a generic finding, or Category 1 issue, in a license renewal proceeding is to apply for a waiver where special circumstances are such that the application of the rule or regulation would not serve the purposes for which the rule or regulation was adopted; CLI-07-3, 65 NRC 13 (2007)

pending resolution of a rulemaking petition, NRC Staff may, where appropriate, seek the Commission's permission to suspend the generic determination of a Category 1 issue and include a new analysis in the plant-specific environmental impact statements; CLI-07-3, 65 NRC 13 (2007)

spent fuel from an additional 20 years of operation can be stored safely, with small environmental effects, at all plants, and such impacts are classified as Category 1 issues that are not within the scope of individual license renewal proceedings; LBP-10-15, 72 NRC 257 (2010)

## SUBJECT INDEX

spent fuel pool fires are Category 1 issues and therefore are addressed generically in the generic environmental impact statement for license renewals; LBP-08-13, 68 NRC 43 (2008)

the central purpose of Part 51 rules is to allow NRC to comply with NEPA by identifying and evaluating environmental impacts that are generic to reactor license renewal proceedings and then allowing applicant and NRC to dispense with site-specific evaluations of such environmental impacts in situations covered by the generic analysis; LBP-10-15, 72 NRC 257 (2010)

threat of terrorist attack at spent fuel pools has been evaluated generically by NRC and special circumstances for rule waiver have not been shown; LBP-10-15, 72 NRC 257 (2010)

where a petitioner argues that new information contradicts assumptions underlying the entire generic analysis for all facilities or a whole class of facilities, the appropriate remedy is a rulemaking petition; CLI-07-3, 65 NRC 13 (2007)

### GENERIC SAFETY ISSUES

Category 1 issues in Appendix B to Subpart A of Part 51 are not within the scope of a license renewal proceeding; LBP-06-10, 63 NRC 314 (2006)

### GEOLOGIC CONDITIONS

applicant's site safety analysis report must include seismic and geologic characteristics of the proposed site with appropriate consideration of the most severe historical natural phenomena that have been reported for the site; LBP-09-19, 70 NRC 433 (2009)

in providing information on seismic and geologic characteristics of a proposed site, applicants must conform to the requirements of 10 C.F.R. 100.23; LBP-09-19, 70 NRC 433 (2009)

possibility of existence of undetected caves and sinkholes on the proposed reactor site and the adequacy of the seismic analysis are not litigable issues; LBP-08-16, 68 NRC 361 (2008)

the plain language of 10 C.F.R. 63.305 does not say anything about analyzing future climate based upon the historical geological record; LBP-10-22, 72 NRC 661 (2010)

the site safety analysis report submitted with an early site permit application must contain the seismic, meteorological, hydrologic, and geologic characteristics of the proposed site; LBP-09-19, 70 NRC 433 (2009)

### GEOLOGIC REPOSITORIES

the board may not consider that long-term erosion might entirely eliminate the proposed repository's upper geologic barrier unless the erosion is also shown to be a safety concern in the relatively near term; LBP-10-22, 72 NRC 661 (2010)

### GLOBAL WARMING

See Climate Change

### GOVERNMENT PARTIES

a state that wishes to be a party in a proceeding for a facility located within its boundaries need not address the standing requirements; LBP-06-23, 64 NRC 257 (2006)

the Commission's decision not to entertain a state intervenor's integrity and competence contentions in the high-level waste repository proceeding is consistent with its practice of extending comity to other governmental entities; CLI-09-14, 69 NRC 580 (2009)

the definition of "party" under the Nuclear Waste Policy Act implies that local governments enjoy standing as of right; LBP-08-10, 67 NRC 450 (2008)

### GREENHOUSE GAS EMISSIONS

allegation of failure to include in the combined license application any information regarding the project's greenhouse gas emissions or carbon footprint is inadmissible; LBP-08-16, 68 NRC 361 (2008)

carbon dioxide emissions from the uranium fuel cycle are to be listed as zero; LBP-09-21, 70 NRC 581 (2009)

carbon dioxide falls within the Clean Air Act's definition of air pollutants subject to the Environmental Protection Agency's regulatory authority; LBP-09-17, 70 NRC 311 (2009)

contention alleging that the environmental report failed to address the alleged greenhouse gas and global climate disruption impacts resulting from prematurely killing trees is inadmissible; LBP-09-10, 70 NRC 51 (2009)

each environmental report prepared for the combined license stage must take Table S-3 as the basis for evaluating the contribution of the environmental effects of the fuel cycle to the environmental costs of licensing the reactor; CLI-09-21, 70 NRC 927 (2009)

## SUBJECT INDEX

the Commission may have more to offer regarding the need for a NEPA carbon footprint analysis in new reactor licensing proceedings; LBP-09-19, 70 NRC 433 (2009)

### GREEN'S FUNCTION METHOD

conservatism in use of Green's function to determine cumulative usage factor related to metal fatigue in the recirculation nozzle is discussed; LBP-08-12, 68 NRC 5 (2008)

use of a simplified Green's function methodology for the environmentally adjusted cumulative usage factor metal fatigue analyses for the core spray and reactor recirculation outlet nozzles is inconsistent with the ASME Code and thus cannot serve as the analysis-of-record and does not satisfy the requirements of 10 C.F.R. 54.21(c)(1) or 54.29(a); LBP-08-25, 68 NRC 763 (2008)

### GROUNDWATER CONTAMINATION

a challenge to applicant's site-specific measurements of adsorption and retention coefficients relative to hydrological radionuclide transport is an admissible contention; LBP-09-16, 70 NRC 227 (2009)

a request for action regarding leaks or potential leaks of radioactively contaminated water into the ground is granted in part regarding power reactors and denied regarding research and test reactors; DD-06-3, 64 NRC 407 (2006)

challenges to the adequacy of the NRC's groundwater restoration standards are impermissible; LBP-08-6, 67 NRC 241 (2008)

contention based on a recent study suggesting a link between low levels of arsenic in drinking water and diabetes is rejected; CLI-09-12, 69 NRC 535 (2009)

contentions relating to the conclusions that the NRC Staff reaches in its NEPA analysis with regard to the environmental impacts from radiological releases to groundwater must await future publication of its supplemental environmental impact statement; LBP-08-13, 68 NRC 43 (2008)

health effects of arsenic contamination of drinking water from mining operations is an admissible issue in a materials license amendment proceeding; LBP-09-1, 69 NRC 11 (2009)

in its review of early site permit applications, Staff must consider physical characteristics of the site, specifically noting that factors important to hydrological radionuclide transport must be obtained from onsite measurements; LBP-09-19, 70 NRC 433 (2009)

it is enough that petitioner has demonstrated a realistic threat of sustaining a direct injury as a result of contaminated groundwater flowing from the site to his property; LBP-10-16, 72 NRC 361 (2010)

petitioner's concerns regarding underground leakage of contaminated water at Indian Point are addressed; DD-08-2, 68 NRC 339 (2008)

petitioners' concerns regarding applicant's commitments to relax conservatisms in its laboratory testing and groundwater release analysis are in regard to the revised analysis to be submitted in response to the Staff request for additional information and therefore are dismissed as outside the scope of the proceeding; LBP-09-16, 70 NRC 227 (2009)

Staff and applicant must address matters such as the environmental impacts of unregulated seepage into adjacent groundwater in their environmental impact statement and environmental report; LBP-09-25, 70 NRC 867 (2009)

the Clean Water Act does not authorize regulation of discharges to groundwater and so applicant's environmental report must address those discharges; LBP-10-14, 72 NRC 101 (2010)

the field sampling plan's analysis of waterways is intended to identify groundwater, possible cave, and surface water paths and to assess the contents of those waters to determine if depleted uranium is leaching or will leach off the site in quantities significant enough that humans might receive more than 25 mrems of total radioactive exposure from all of the site's pathways; LBP-08-4, 67 NRC 105 (2008)

to the extent contaminants can plausibly migrate from leach mining operations to the aquifer from which a petitioner obtains his or her water, a petitioner would have a claim of a cognizable injury and could be accorded standing; LBP-08-24, 68 NRC 691 (2008)

### HAZARDOUS MATERIALS

hydrofluoric acid exposure to licensee operators is assessed a civil monetary penalty in the amount of \$32,500 on the basis of a determined Severity Level III violation; LBP-10-18, 72 NRC 519 (2010)

### HEALTH AND SAFETY

a board must determine whether an ESP application and the record of the proceeding contain sufficient information, and the review of the application by the NRC Staff has been adequate, to support a negative finding on the question of whether the issuance of an early site permit will be inimical to the common defense and security or to the health and safety of the public; LBP-07-9, 65 NRC 539 (2007)

## SUBJECT INDEX

- after completion of decommissioning, neither licensee nor the NRC retains any continuing obligation or jurisdiction, respectively, with respect to a site, unless new information shows that the Part 20 criteria were not met and the residual radioactivity remaining on the site could result in a significant threat to public health and safety; CLI-09-1, 69 NRC 1 (2009)
- allegations that mining activities may cause harm to public health and safety are within the scope of a materials license renewal proceeding and material to the findings the NRC must make; LBP-08-27, 68 NRC 951 (2008)
- an application to renew the operating license of a commercial nuclear power plant may be granted only if the Commission finds that the continued operation of the facility will be in accord with the common defense and security and will provide adequate protection to the health and safety of the public; LBP-08-25, 68 NRC 763 (2008)
- for early site permits, section 52.21, the notice requirements of section 2.104(b)(2), and the Notice of Hearing itself outline a board's review obligation; LBP-06-28, 64 NRC 460 (2006)
- interim protective measures to prevent contamination from slag and baghouse dust piles until final decommissioning is completed are discussed; CLI-09-1, 69 NRC 1 (2009)
- offsite health and safety impacts caused by onsite activities can support the admissibility of a contention; LBP-09-6, 69 NRC 367 (2009)
- renewal applicants must demonstrate that they will adequately manage the detrimental effects of aging for all important components and structures, with attention, for example, to metal fatigue, erosion, corrosion, thermal and radiation embrittlement, microbiologically induced effects, creep, and shrinkage; CLI-06-24, 64 NRC 111 (2006)
- review of a license renewal application does not reopen issues relating to a plant's current licensing basis, or any other issues that are subject to routine and ongoing regulatory oversight and enforcement; CLI-06-24, 64 NRC 111 (2006)
- the Part 54 safety review is limited to those potential detrimental effects of aging that are not routinely addressed by ongoing regulatory oversight programs; CLI-06-24, 64 NRC 111 (2006)
- the phrase "reasonable assurance" specified in 10 C.F.R. 54.29 is not defined, but requires, at a minimum, that an applicant demonstrate compliance with all of NRC's safety regulations; LBP-08-25, 68 NRC 763 (2008)
- to the extent that any analyses performed during the initial licensing process were limited to the initial 40-year license period, a license renewal applicant must show that it has reassessed these time-limited aging analyses and that these analyses remain valid for the period of extended operation; CLI-06-24, 64 NRC 111 (2006)
- ### HEALTH EFFECTS
- a board erred in admitting a contention on adverse health effects of exposure to arsenic, where petitioners had not laid a foundation and their arguments were speculative; CLI-09-9, 69 NRC 331 (2009)
- allegation that NRC has inadequately characterized human health impacts of radiation exposure from the high-level waste repository is inadmissible in a combined license proceeding; LBP-08-16, 68 NRC 361 (2008)
- contention alleging that depleted uranium-contaminated bombing plume dust causes health issues in the community is inadmissible because it lacks a supporting statement of the alleged facts or expert opinions; LBP-10-4, 71 NRC 216 (2010)
- contention based on a recent study suggesting a link between low levels of arsenic in drinking water and diabetes is rejected; CLI-09-12, 69 NRC 535 (2009)
- potential for diabetes and pancreatic cancer from arsenic contamination of drinking water from mining operations is an admissible issue in a materials license amendment proceeding; LBP-09-1, 69 NRC 11 (2009)
- Table S-3 does not include health effects from the effluents described in the table, and that issue may be the subject of litigation in individual licensing proceedings; LBP-09-16, 70 NRC 227 (2009)
- ### HEARING FILE
- in Subpart L proceedings, NRC Staff must produce a hearing file and make it available to all parties; LBP-09-22, 70 NRC 640 (2009)
- NRC Staff has a continuing duty to update the hearing file; LBP-09-22, 70 NRC 640 (2009)

## SUBJECT INDEX

### HEARING PROCEDURES

- a board, in its sound discretion, must determine the type of hearing procedures most appropriate for the specific contentions before it; LBP-06-20, 64 NRC 131 (2006); LBP-08-24, 68 NRC 691 (2008); LBP-09-10, 70 NRC 51 (2009)
- a motion and proposed new contention may address the selection of the appropriate hearing procedure for the proposed new contention; LBP-09-22, 70 NRC 640 (2009)
- a party is entitled to conduct such cross-examination as may be required for a full and true disclosure of the facts; LBP-09-10, 70 NRC 51 (2009); LBP-09-22, 70 NRC 640 (2009)
- an immediate right to appeal a board ruling selecting a hearing procedure is provided; CLI-09-12, 69 NRC 535 (2009)
- circumstances where a particular hearing procedure is required are specified in 10 C.F.R. 2.310(b)-(k); LBP-09-10, 70 NRC 51 (2009)
- cross-examination occurs virtually automatically in Subpart G hearings, subject to normal judicial management and the requirement to file a cross-examination plan; LBP-09-10, 70 NRC 51 (2009)
- determination of specific hearing procedures to be used for a proceeding is made on a contention-by-contention basis, and selection of the hearing procedure is dependent on what is most appropriate for the specific contentions before it; LBP-08-24, 68 NRC 691 (2008)
- if a contention does not fall within one of the categories of 10 C.F.R. 2.310(b)-(h), then proceedings may be conducted under Subpart L; LBP-10-15, 72 NRC 257 (2010)
- if a hearing on a contention is expected to take no more than 2 days to complete, the board can impose the Subpart N procedures for expedited proceedings with oral hearings specified by 10 C.F.R. 2.1400-1407; LBP-10-16, 72 NRC 361 (2010)
- if no particular procedure is compelled, the board must exercise its discretion and select the hearing procedure most appropriate for the newly admitted contentions; LBP-10-15, 72 NRC 257 (2010)
- if no particular procedure is required, then the board may conduct the proceeding for a particular contention under Subpart L; LBP-09-10, 70 NRC 51 (2009)
- in a license renewal proceeding, the board determines the hearing procedure on a contention-by-contention basis, selecting the most appropriate procedure for each contention; LBP-07-15, 66 NRC 261 (2007)
- in an evidentiary hearing, the board may weigh competing evidence and expert opinion and may resolve/decide factual disputes, whereas this is not possible when ruling on motions for summary disposition, which are restricted to situations where there is no genuine issue as to any material fact; LBP-09-22, 70 NRC 640 (2009)
- requirements for applying Subpart G to a particular proceeding are set out in 10 C.F.R. 2.700; CLI-09-7, 69 NRC 235 (2009)
- selection of appropriate procedures in a license renewal proceeding is a contention-by-contention matter, dependent on the nature of the specific issues involved in the contention; LBP-06-20, 64 NRC 131 (2006)
- selection of hearing procedures for contentions at the outset of a proceeding is not immutable because the availability of Subpart G procedures depends critically on whether the credibility of eyewitnesses is important in resolving a contention, and witnesses relevant to each contention are not identified until after contentions are admitted; LBP-09-10, 70 NRC 51 (2009); LBP-10-16, 72 NRC 361 (2010)
- the Atomic Energy Act does not give a state an absolute right of cross-examination, but requires only that the Commission shall afford reasonable opportunity for state representatives to interrogate witnesses; LBP-06-20, 64 NRC 131 (2006)
- the Commission has long endorsed a balanced approach to hearings that both expedites the hearing process and ensures fairness in order to produce a record that leads to high-quality decisions that adequately protect the public health and safety, the common defense and security, and the environment; LBP-10-21, 72 NRC 616 (2010)
- the Commission regards good sense, judgment, and managerial skills as the proper guideposts for conducting an efficient hearing; LBP-10-21, 72 NRC 616 (2010)
- the Commission will endeavor to identify efficiencies, and provide pertinent resources, to further reduce the time the agency needs to complete reviews and reach decisions in licensing uranium enrichment facilities; CLI-07-17, 65 NRC 392 (2007)
- the substantive standard for allowing parties to conduct cross-examination is the same under 10 C.F.R. Part 2, Subparts G and L; LBP-09-10, 70 NRC 51 (2009)

## SUBJECT INDEX

under 10 C.F.R. 2.309(g) and 2.310, the board determines which hearing procedure will be used (Subpart G or L) on a contention-by-contention basis; LBP-09-10, 70 NRC 51 (2009); LBP-10-15, 72 NRC 257 (2010)

under Subpart L, a party seeking to conduct cross-examination must file a written motion and obtain leave from the board; LBP-09-10, 70 NRC 51 (2009)

upon admission of a contention, the board must identify the specific hearing procedures to be used; LBP-10-15, 72 NRC 257 (2010); LBP-10-16, 72 NRC 361 (2010)

### HEARING REQUESTS

a hearing request is timely when the petitioner lacks both actual and constructive notice of its opportunity to request a hearing as of the deadline specified by the agency, and the petitioner files the hearing request promptly upon receipt of actual notice; LBP-09-20, 70 NRC 565 (2009)

a hearing request must state the name, address, and telephone number of the requestor, the nature of the requestor's right under the governing statutes to be made a party to the proceeding, the nature and extent of the requestor's property, financial, or other interest in the proceeding, and the possible effect of any decision or order that may be issued in the proceeding on the requestor's interest; LBP-09-28, 70 NRC 1019 (2009)

a licensing board will grant a request for a hearing if it determines that the requestor has standing under the provisions of this section and has proposed at least one admissible contention; LBP-10-4, 71 NRC 216 (2010)

anyone who wishes to request a hearing concerning a proposed licensing action must establish standing and proffer at least one admissible contention; LBP-09-28, 70 NRC 1019 (2009)

difficulties in coordinating action among volunteers and large public interest organizations and the challenge of simultaneously preparing for an environmental scoping meeting while drafting contentions does not constitute good cause necessary to justify an extension of the deadline to file hearing requests or petitions to intervene; CLI-09-4, 69 NRC 80 (2009)

in ruling on a request for a hearing, a licensing board is to consider the nature of petitioner's right under the Atomic Energy Act or the National Environmental Policy Act to be made a party to the proceeding, the nature and extent of petitioner's property, financial, or other interest in the proceeding, and the possible effect of any decision or order that may be issued in the proceeding on petitioner's interest; LBP-08-24, 68 NRC 691 (2008)

intervention petitions must set forth with particularity the contentions sought to be raised; CLI-10-9, 71 NRC 245 (2010)

licensing boards will determine whether petitioner has an interest affected by the proceeding; LBP-09-23, 70 NRC 659 (2009)

open-ended extension requests should not be granted because hearing requests must be based on documents or other information available at the time the petition is to be filed; LBP-10-4, 71 NRC 216 (2010)

petitioners have 60 days to file intervention petitions and hearing requests in NRC proceedings other than those for license transfer requests and a construction authorization application for a high-level waste repository; CLI-08-18, 68 NRC 246 (2008)

sanctions have been imposed against a party seeking to file a written request for hearing only when that party has not followed established Commission procedures; LBP-08-19, 68 NRC 545 (2008); LBP-08-20, 68 NRC 549 (2008)

twenty days in which to request a hearing is the minimum required by the agency's regulations; LBP-09-20, 70 NRC 565 (2009)

See also Amendment of Hearing Requests

### HEARING REQUESTS, LATE-FILED

a request is timely when petitioner lacks both actual and constructive notice of its opportunity to request a hearing as of the deadline specified by the agency, and the petitioner files the hearing request promptly upon receipt of actual notice; LBP-09-20, 70 NRC 565 (2009)

boards must balance eight factors in evaluating nontimely intervention petitions, hearing requests, and contentions; LBP-10-24, 72 NRC 720 (2010)

eight factors of 10 C.F.R. 2.309(c)(1) apply to nontimely intervention petitions, hearing requests, and contentions; LBP-10-9, 71 NRC 493 (2010)

## SUBJECT INDEX

factors that must be addressed for nontimely intervention petitions, hearing requests, and contentions are set forth; LBP-09-20, 70 NRC 565 (2009)

nontimely hearing requests and/or petitions and contentions will not be entertained absent a determination by the Commission or the licensing board that the petition and/or request should be granted and/or the contentions should be admitted based on a balancing of the factors specified in 10 C.F.R. 2.309(c)(1)(i)-(viii); LBP-10-4, 71 NRC 216 (2010)

under appropriate circumstances, petitions to intervene, requests for hearing, and new and amended contentions may be filed after the initial 30-day deadline; LBP-08-1, 67 NRC 37 (2008)

### HEARING RIGHTS

a hearing challenging an immediately effective enforcement order will be conducted expeditiously, giving due consideration to the rights of the parties; LBP-09-24, 70 NRC 676 (2009)

allowing applicant to postpone the performance of an analysis-of-record time-limited aging analysis until after the license renewal is issued would violate the intervenor's hearing rights; LBP-08-25, 68 NRC 763 (2008)

assertion of a hearing right weighs against granting abeyance of a proceeding, but this factor is, by its nature, merely procedural, and consequently is of little importance when balancing real-life equities; CLI-06-12, 63 NRC 495 (2006)

even in the absence of constructive notice, the possibility remains that a petitioner had actual notice of the right to request a hearing; LBP-09-20, 70 NRC 565 (2009)

granting a license amendment prior to a board decision does not circumvent intervenors' right to a hearing; CLI-06-8, 63 NRC 235 (2006)

intervenors do not have a right to an adjudicatory hearing on future determinations that may be made under license conditions; CLI-06-1, 63 NRC 1 (2006)

NRC must provide a hearing upon the request of any person whose interest may be affected by the proceeding; CLI-09-20, 70 NRC 911 (2009); LBP-06-10, 63 NRC 314 (2006); LBP-06-23, 64 NRC 257 (2006); LBP-07-4, 65 NRC 281 (2007); LBP-07-11, 66 NRC 41 (2007); LBP-08-24, 68 NRC 691 (2008); LBP-09-1, 69 NRC 11 (2009); LBP-09-13, 70 NRC 168 (2009); LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-20, 70 NRC 565 (2009); LBP-09-21, 70 NRC 581 (2009); LBP-10-4, 71 NRC 216 (2010); LBP-10-17, 72 NRC 501 (2010)

NRC regulations preserve the right to a hearing when an application is amended by allowing new or amended contentions to be filed in response to material new information; LBP-10-17, 72 NRC 501 (2010)

NRC Staff verification that a licensee complies with preapproved design or testing criteria is a highly technical inquiry not particularly suitable for hearing; CLI-06-1, 63 NRC 1 (2006)

petitioner may not demand a hearing to challenge a federal statute; LBP-08-17, 68 NRC 431 (2008)

petitioners who rely on water supplies adjacent to a mining site have a right to a hearing; LBP-08-24, 68 NRC 691 (2008)

section 189(a)'s hearing requirement does not unduly limit the Commission's wide discretion to structure its licensing hearings in the interests of speed and efficiency; CLI-08-28, 68 NRC 658 (2008)

standing as of right is not available in export license proceedings but the Commission has exercised its discretion to hold an open legislative-type hearing; LBP-09-1, 69 NRC 11 (2009)

the "direct participation of local citizens in nuclear reactor licensing" is not a right to have all legal arguments on contention admissibility take place near the facility at issue, but rather the right of persons with standing to file contentions in licensing proceedings and litigate admissible contentions; LBP-08-23, 68 NRC 679 (2008)

the proximity presumption does not permit persons with no actual or imminent claim of injury to obtain a hearing; LBP-09-4, 69 NRC 170 (2009)

the right to a hearing embraces not only the right to present evidence, but also a reasonable opportunity to know the claims of the opposing party and to meet them; LBP-09-24, 70 NRC 676 (2009)

the subject of an enforcement order has the right to challenge, on limited grounds, the immediate effectiveness of the order and the promise of an expedited hearing; LBP-09-24, 70 NRC 676 (2009)

there is no inherent right under the Atomic Energy Act, based on U.S. citizenship or otherwise, to participate as a party in a proceeding; LBP-08-18, 68 NRC 533 (2008)

when the NRC Staff can, consistent with its duty to protect public health and safety, accord some form of predeprivation hearing, such a course of action is advisable in light of the important private interest

## SUBJECT INDEX

in retaining employment and the fact that such a proceeding provides some opportunity for the employee to present his side of the case; LBP-09-24, 70 NRC 676 (2009)

when the unique circumstances of a case could result in the compromise of a participant's hearing rights, the Commission has taken action to ensure that hearings are fair and accommodate the rights of participants; CLI-09-13, 69 NRC 575 (2009)

with respect to combined licenses, interested persons may request a hearing as to the adequacy of construction after issuance of a combined license; CLI-09-2, 69 NRC 55 (2009)

### HEARINGS

"close of the hearing" in 10 C.F.R. 2.1209 refers to the closing of the evidentiary record; CLI-08-9, 67 NRC 353 (2008)

in cases where a federal agency is a party, a request for rehearing may be made within 45 days after entry of judgment; CLI-08-9, 67 NRC 353 (2008)

the presiding officer or licensing board has discretion to accelerate the merits hearing on safety issues, but not on environmental issues; CLI-07-17, 65 NRC 392 (2007)

See also Deferral of Hearing

### HEAT SHOCK

effects of heat shock on the protection and propagation of fish and shellfish is a Category 2 environmental issue and must be addressed on a case-by-case basis; CLI-07-16, 65 NRC 371 (2007)

NPDES permits may address thermal discharges into bodies of water; CLI-07-16, 65 NRC 371 (2007)

### HIGH-ENRICHED URANIUM

because blending down HEU for reactor fuel would not promote applicant's primary purpose of maintaining the viability of a dwindling domestic uranium industry, it is outside the scope of reasonable alternatives that must be considered under NEPA; LBP-06-19, 64 NRC 53 (2006)

### HIGH-LEVEL WASTE REPOSITORY

a detailed, specific procedure for site selection and review by the Secretary of Energy, the President, and the Congress, followed by submission of the application for a construction permit, review, and final decision thereon by NRC was set out; LBP-10-11, 71 NRC 609 (2010)

a preclosure safety analysis must be performed and it must demonstrate, among other things, that the requirements of 10 C.F.R. 63.111(a) are met; CLI-09-14, 69 NRC 580 (2009)

a quality assurance program is required to provide adequate confidence that the geologic repository and its structures, systems, or components will perform satisfactorily in service; LBP-10-22, 72 NRC 661 (2010)

adequate confidence in the performance assessment is derived from sufficient analyses, data, and the technical basis offered to demonstrate compliance with postclosure performance objectives; LBP-10-22, 72 NRC 661 (2010)

allegation that NRC has inadequately characterized human health impacts of radiation exposure from the high-level waste repository is inadmissible in a combined license proceeding; LBP-08-16, 68 NRC 361 (2008)

analysis is required of only those features, events, and processes that cannot be excluded on the basis of low probability of occurrence and whose exclusion would result in a significant change in the results of the performance assessment in the first 10,000-year period; LBP-10-22, 72 NRC 661 (2010)

any performance assessment used to demonstrate compliance with 10 C.F.R. 63.113 must consider alternative conceptual models; LBP-09-6, 69 NRC 367 (2009)

applicant may perform its climate change analysis using a specified percolation rate; LBP-10-22, 72 NRC 661 (2010)

applicant's climate change analysis for the 990,000-year period may be limited to the effects of increased water flow through the repository as a result of climate change; LBP-10-22, 72 NRC 661 (2010)

because there is no requirement to demonstrate quantitatively the independent contribution of the drip shields, DOE need not perform a barrier neutralization analysis to ascertain each individual barrier's contribution to the repository's multiple barrier system; LBP-10-22, 72 NRC 661 (2010)

before authorizing construction of the proposed repository, the Commission must determine that there is reasonable expectation that the materials can be disposed of without unreasonable risk to the health and safety of the public; LBP-10-22, 72 NRC 661 (2010)

## SUBJECT INDEX

before issuing a license to receive and possess high-level waste at the repository, the Commission must find that construction of any underground storage space required for initial operation has been substantially completed; LBP-10-22, 72 NRC 661 (2010)

climate projections should be based on cautious, but reasonable assumptions; LBP-10-22, 72 NRC 661 (2010)

Congress did not intend that its explicit mandate to NRC to consider and decide the merits of the high-level waste repository application might be nullified by a nonspecific reference to an obscure NRC procedural regulation as being among the laws to be applied; LBP-10-11, 71 NRC 609 (2010)

DOE is prohibited from characterizing a second repository site unless Congress has specifically authorized and appropriated funds for such activities; LBP-10-11, 71 NRC 609 (2010)

DOE may elect to use the method specified in 10 C.F.R. 63.342(c)(2) to analyze the effects of climate change during the post-10,000-year period, regardless of whether it is required to analyze the effects of climate change during the initial 10,000-year period; LBP-10-22, 72 NRC 661 (2010)

DOE must assess the effects of climate change during the 990,000-year period regardless of whether it necessarily must assess climate change during the initial 10,000-year period under the criteria set forth in sections 63.342(a) and (b); LBP-10-22, 72 NRC 661 (2010)

DOE must make all of its documentary material available on the Licensing Support Network, and to so certify to the PAPO Board, at least 6 months before it files its application to construct the HLW geologic repository at Yucca Mountain; LBP-08-1, 67 NRC 37 (2008)

DOE need not weigh ALARA considerations outside the geologic repository operations area for which it is responsible; LBP-10-22, 72 NRC 661 (2010)

DOE was directed to limit its site selection efforts to Yucca Mountain and to provide for an orderly phase-out of site-specific activities at all other candidate sites; LBP-10-11, 71 NRC 609 (2010)

DOE's environmental impact statement is not to consider the need for the repository, the time of initial availability of a repository, alternative sites to the Yucca Mountain site, or nongeologic alternatives; LBP-10-11, 71 NRC 609 (2010)

DOE's production of documentary material and certification triggers the duty of other potential parties to make their documentary material available 90 days thereafter; LBP-08-1, 67 NRC 37 (2008)

during site characterization, DOE may determine that the Yucca Mountain site is unsuitable for development as a repository; LBP-10-11, 71 NRC 609 (2010)

each potential party shall continue to supplement its documentary material made available to other participants via the Licensing Support Network with any additional material created after the time of its initial certification; LBP-08-1, 67 NRC 37 (2008)

if the performance margins analysis is needed to establish adequate confidence in the total system performance assessment, then it is subject to the quality assurance requirements of 10 C.F.R. 63.142; LBP-10-22, 72 NRC 661 (2010)

it is not for any court to examine the strength of the evidence upon which Congress based its judgment to approve the Yucca Mountain site; LBP-10-11, 71 NRC 609 (2010)

licensees, including Part 63 licensees, are required to use, to the extent practical, procedures and engineering controls based upon sound radiation protection principles to achieve occupational doses and doses to members of the public that are as low as is reasonably achievable; LBP-10-22, 72 NRC 661 (2010)

no requirement for a quantitative evaluation of an individual barrier's capabilities appears in the statutory language of the Nuclear Waste Policy Act; LBP-10-22, 72 NRC 661 (2010)

NRC is given flexibility in determining how best to provide for the use of a system of multiple barriers in the design of the repository; LBP-10-22, 72 NRC 661 (2010)

NRC's licensing regulations must provide for the use of a system of multiple barriers in the design of the repository; LBP-10-22, 72 NRC 661 (2010)

only features, events, and processes that produce significant changes in releases or doses within the first 10,000 years after disposal must be included in performance assessments; LBP-10-22, 72 NRC 661 (2010)

"repository" is defined as any system licensed by the Commission that is intended to be used for, or may be used for the permanent deep geologic disposal of high-level radioactive waste and spent nuclear fuel; LBP-09-6, 69 NRC 367 (2009)

## SUBJECT INDEX

- section 121 of the Nuclear Waste Policy Act does not require that each barrier provide either wholly independent protection or a specifically quantified amount of protection; LBP-10-22, 72 NRC 661 (2010)
- submission of the application to construct a high-level waste geologic repository at Yucca Mountain triggered a duty on NRC's part to consider and to render a decision on the application; LBP-10-11, 71 NRC 609 (2010)
- that Congress may have authorized NRC to regulate DOE's disposal of radioactive waste before it enacted the Nuclear Waste Policy Act hardly negates the fact that in the NWPA, Congress specifically directed NRC to issue requirements and criteria for evaluating repository-related applications and, not insignificantly, how to do so; LBP-10-11, 71 NRC 609 (2010)
- the Commission may authorize construction if the application provides a reasonable assurance of preclosure safety and a reasonable expectation of postclosure safety; LBP-09-6, 69 NRC 367 (2009)
- the court deferred to NRC's interpretation of the Nuclear Waste Policy Act in promulgating regulations to be applied in administering the licensing stage for the high-level waste repository; LBP-10-11, 71 NRC 609 (2010)
- the Director of the Office of Nuclear Material Safety and Safeguards must determine whether the tendered high-level waste repository construction authorization application is complete and acceptable for docketing; CLI-08-20, 68 NRC 272 (2008)
- the duty to produce all documentary material generated by, or at the direction of, or acquired by, a potential party pursuant to 10 C.F.R. 2.1003(a)(1) applies to extant documentary material and does not require that the potential party delay its initial certification until all documentary material that it intends to rely on is finished and complete; LBP-08-1, 67 NRC 37 (2008)
- the effects of the quality assurance program can be taken into account in determining the probability and consequences of a feature, event, or process; LBP-10-22, 72 NRC 661 (2010)
- the geologic repository operations area must meet the requirements of 10 C.F.R. Part 20; CLI-09-14, 69 NRC 580 (2009)
- the law on withdrawal of an application does not require a determination of whether applicant's decision to withdraw is sound where the applicant's filing was wholly voluntary in the first place; LBP-10-11, 71 NRC 609 (2010)
- the performance assessment must meet a number of very specific requirements; LBP-09-6, 69 NRC 367 (2009)
- the performance margins analysis cannot be used to validate or provide confidence in the total systems performance assessment if its data and models are not qualified under DOE's quality assurance program; LBP-10-22, 72 NRC 661 (2010)
- the plain language of 10 C.F.R. 63.305 does not say anything about analyzing future climate based upon the historical geological record; LBP-10-22, 72 NRC 661 (2010)
- the preclosure safety analysis must demonstrate that in the event of Category 1 or Category 2 event sequences, prescribed dose limits will be met; CLI-09-14, 69 NRC 580 (2009)
- the public interest would best be served by leaving the option open to the applicant should changed conditions warrant pursuit of a withdrawn application; LBP-10-11, 71 NRC 609 (2010)
- the quality assurance program must be applied to all structures, systems, and components that are important to waste isolation and to related activities, defined as including analyses of samples and data; LBP-10-22, 72 NRC 661 (2010)
- the Secretary of the Department of Energy does not have the discretion to substitute his policy for the one established by Congress that mandates progress toward a merits decision by NRC on a construction permit for the high-level waste repository; LBP-10-11, 71 NRC 609 (2010)
- three phases of operations are recognized; LBP-10-22, 72 NRC 661 (2010)
- throughout the repository development program, the Secretary and other agencies must meet the general requirements and the spirit of NEPA; LBP-09-6, 69 NRC 367 (2009)
- HIGH-LEVEL WASTE REPOSITORY APPLICATION**
- a board may grant party status only to a single representative for each affected federally recognized Indian tribe; LBP-09-6, 69 NRC 367 (2009)
- a genuine dispute exists despite the fact that character or integrity is not required by regulation to be addressed in the license application; LBP-09-6, 69 NRC 367 (2009)

## SUBJECT INDEX

a legal issue contention raises a genuine dispute with the application, because it challenges DOE's performance assessment for the post-10,000-year period; LBP-09-29, 70 NRC 1028 (2009)

a state can meet the requirements for standing as a matter of right, based on the threat posed by transportation of radioactive waste through that state; LBP-09-6, 69 NRC 367 (2009)

affidavits supporting NEPA contentions must set forth factual and/or technical bases for the claim that it is not practicable to adopt the DOE environmental impact statement; LBP-09-6, 69 NRC 367 (2009)

an affected federally recognized Indian tribe is automatically entitled to participate in the proceeding; LBP-09-6, 69 NRC 367 (2009)

an affirmative demonstration of compliance with the Licensing Support Network requirements is not required in an intervention petition; LBP-09-6, 69 NRC 367 (2009)

an evaluation of the natural features of the geologic setting and design features of the engineered barrier system that are considered barriers important to waste isolation must be set forth; CLI-08-20, 68 NRC 272 (2008)

an organization seeking to intervene in a representational capacity must demonstrate that the licensing action will affect at least one of its members, identify that member by name and address, and show that it is authorized by that member to request a hearing on his or her behalf; LBP-09-6, 69 NRC 367 (2009)

any affected unit of local government need not address standing in the high-level waste proceeding, but rather shall be considered a party provided that it files at least one admissible contention in accordance with 10 C.F.R. 2.309(f); LBP-09-6, 69 NRC 367 (2009)

any environmental impact statement prepared in connection with a repository proposed to be constructed by DOE shall, to the extent practicable, be adopted by the NRC in connection with the issuance by the NRC of a construction authorization and license for such repository; LBP-09-6, 69 NRC 367 (2009)

assessment of the ability of the proposed geologic repository to limit radiological exposures to the reasonably maximally exposed individual for the period after permanent closure must be included; CLI-08-20, 68 NRC 272 (2008)

assessment of the anticipated response of the geomechanical, hydrogeologic, and geochemical systems to the range of design thermal loadings under consideration must be included; CLI-08-20, 68 NRC 272 (2008)

because the significance of the current capacity limitation for the deep waste repository is unclear, a contention is admitted as a legal issue; LBP-09-6, 69 NRC 367 (2009)

before any waste may be received at the high-level waste repository, DOE must update its application with additional information, including, specifically, additional design data obtained during construction; LBP-10-22, 72 NRC 661 (2010)

contention asserting that DOE's description of its expert elicitation relating to a probabilistic volcanic hazard analysis update fails to comply with NRC regulations or the guidance document that DOE formally committed to follow is admissible; LBP-09-29, 70 NRC 1028 (2009)

contention that the application inadequately addresses generalized corrosion because it relies on flawed experimental data raises a genuine, material dispute with the application by pointing to specific sections that allegedly fail to comply with the NRC's requirements for conducting a post-closure performance assessment; LBP-09-29, 70 NRC 1028 (2009)

contentions that DOE lacks management integrity to operate a high-level waste geologic repository are impermissible challenges to the Nuclear Waste Policy Act and are therefore beyond the scope of the proceeding; CLI-09-14, 69 NRC 580 (2009)

criteria and procedures of 10 C.F.R. 2.326 are either irrelevant or redundant; LBP-09-6, 69 NRC 367 (2009)

DOE is precluded from the need to consider alternatives to geologic disposal, or alternative to the Yucca Mountain site; LBP-09-6, 69 NRC 367 (2009)

each factual NEPA contention must be accompanied by one or more affidavits, but a purely legal-issue contention cannot logically require affidavit support, as by definition such a contention alleges no facts that require support; LBP-09-6, 69 NRC 367 (2009)

each party or potential party must continue to supplement the production of its documentary material on the Licensing Support Network; LBP-09-6, 69 NRC 367 (2009)

explanation of measures used to support the models used to provide the information required must be provided; CLI-08-20, 68 NRC 272 (2008)

## SUBJECT INDEX

if petitioner is found not to be in substantial and timely compliance with the LSN requirements, that petitioner may request party status upon a subsequent showing of compliance, but any grant of a request is conditioned on accepting the status of the proceeding at the time of admission; LBP-09-6, 69 NRC 367 (2009)

in determining whether an individual or organization should be granted party status as of right, NRC applies judicial standing concepts; LBP-09-6, 69 NRC 367 (2009)

in ruling on petitions to intervene, boards must consider any failure of the petitioner to participate as a potential party in the pre-license application phase under 10 C.F.R. Part 2, Subpart J; LBP-09-6, 69 NRC 367 (2009)

intervention is permitted by the state and local governmental body in which the geologic repository operations area is located, and by any affected federally recognized Indian tribe; LBP-09-6, 69 NRC 367 (2009)

intervention petitioner must establish that it has standing, be able to demonstrate substantial and timely Licensing Support Network compliance, and proffer at least one admissible contention; LBP-09-6, 69 NRC 367 (2009)

NRC must undertake its own assessment of DOE's environmental documents to determine whether it is practicable to adopt them; LBP-09-6, 69 NRC 367 (2009)

NRC Staff is required to present its position on whether it is practicable to adopt DOE's environmental impact statement for Yucca Mountain without supplementation; LBP-09-6, 69 NRC 367 (2009)

NRC's adoption of any environmental impact statement prepared in connection with a repository shall be deemed to also satisfy the responsibilities of NRC under NEPA and no further consideration shall be required except any independent responsibilities of NRC to protect public health under the Atomic Energy Act; LBP-09-6, 69 NRC 367 (2009)

once petitioner's LSN compliance has been raised in an answer to an intervention petition, petitioner then has the opportunity to respond to the challenges in its reply; LBP-09-6, 69 NRC 367 (2009)

petitioner may not be granted party status if it cannot demonstrate substantial and timely compliance with the requirements in 10 C.F.R. 2.1003 concerning the availability of documentary material on the Licensing Support Network; LBP-09-6, 69 NRC 367 (2009)

petitioner organizations have established standing based on their members' proximity to transportation routes, even where it was not possible to predict with accuracy which of its members were most likely to be harmed or the extent of the damage; LBP-09-6, 69 NRC 367 (2009)

section 2.1009(b) requires certification to the Pre-License Application Presiding Officer that the party or potential party has complied with the implementation procedures of section 2.1009(a)(2) and that, to the best of his or her knowledge, the documentary material specified in section 2.1003 has been identified and made electronically available; LBP-09-6, 69 NRC 367 (2009)

section 63.21(a) requires only that the application must be as complete as possible in light of the information that is reasonably available at the time of docketing; LBP-10-22, 72 NRC 661 (2010)

section 63.21(c)(7) requires that the license application include a description of plans for retrieval and alternate storage of the radioactive wastes, should retrieval be necessary; LBP-10-22, 72 NRC 661 (2010)

site characterization and environmental impact statement approval process are discussed in context of the scope of admissible issues; LBP-09-6, 69 NRC 367 (2009)

special attention must be given to those items that may significantly influence the final design; LBP-10-22, 72 NRC 661 (2010)

the board may not consider that long-term erosion might entirely eliminate the proposed repository's upper geologic barrier unless the erosion is also shown to be a safety concern in the relatively near term; LBP-10-22, 72 NRC 661 (2010)

the Commission conferred standing as of right on certain parties; LBP-09-6, 69 NRC 367 (2009)

the engineered barrier system, including the design criteria used and their relationships to the post-closure performance objectives specified in NRC regulations, must be described; CLI-08-20, 68 NRC 272 (2008)

the member of an organization that seeks standing must qualify for standing in his or her own right, and the interests that the organization seeks to protect must be germane to its own purpose; LBP-09-6, 69 NRC 367 (2009)

## SUBJECT INDEX

- the Nuclear Waste Policy Act's mandate that the environmental impact statement be adopted by NRC to the extent practicable is intended to avoid duplication of the environmental review process but does not permit NRC to premise a construction-authorization or licensing decision upon an EIS that does not meet the substantive requirements of the NEPA or the Council on Environmental Quality's NEPA regulations; LBP-09-6, 69 NRC 367 (2009)
- the only relevant test for a claim that it is not practicable to adopt the DOE environmental impact statement is whether the supporting affidavit presents significant and substantial new information or new considerations sufficient to render such EIS inadequate; LBP-09-6, 69 NRC 367 (2009)
- the presiding officer in the high-level waste proceeding shall resolve disputes concerning adoption of the DOE environmental impact statement by using, to the extent possible, the criteria and procedures that are followed in ruling on motions to reopen; LBP-09-6, 69 NRC 367 (2009)
- the prospect of a second lawsuit with its expenses and uncertainties or another application does not provide the requisite quantum of legal harm to warrant dismissal of an application with prejudice; LBP-10-11, 71 NRC 609 (2010)
- there is no legal requirement that the Staff find that the proposed design is not too conservative or that the associated costs are not excessive as part of its safety review of the construction authorization application; CLI-09-14, 69 NRC 580 (2009)
- when an organization takes formal corporate action to initiate litigation not only germane but integral to its purpose, that action can constitute the requisite, if implicit, proof of authorization; LBP-09-6, 69 NRC 367 (2009)
- when its Licensing Support Network compliance is challenged, petitioner need only make a straightforward statement in its reply that it has complied with the LSN requirements; LBP-09-6, 69 NRC 367 (2009)
- where a petitioner is not conferred automatic standing, a petition to intervene must provide information supporting petitioner's claim to standing, including the nature of petitioner's right under the governing statutes to be made a party, the nature of petitioner's interest in the proceeding, and the possible effect of any decision or order on petitioner's interest; LBP-09-6, 69 NRC 367 (2009)
- whether excessive safety design could lead to licensing uncertainty, unnecessary costs, or delays are not material issues; CLI-09-14, 69 NRC 580 (2009)
- withdrawal of an application after the issuance of a notice of hearing shall be on such terms as the presiding officer may prescribe; CLI-10-13, 71 NRC 387 (2010)
- HIGH-LEVEL WASTE REPOSITORY PROCEEDING**
- a nontimely petition or contention will not be entertained in the high-level waste proceeding unless the Commission, an Atomic Safety and Licensing Board, or a presiding officer designated to rule on the petition determines that the late petition or contention meets the late-filing requirements; CLI-08-25, 68 NRC 497 (2008)
- a party who files a motion must certify that he or she has made a reasonable effort to consult with counsel for the other parties in an effort to resolve the matter in advance of filing the motion; CLI-08-25, 68 NRC 497 (2008)
- a person denied party or interested governmental participant status may request such status upon a showing of subsequent compliance with the requirements of 10 C.F.R. 2.1003; CLI-08-25, 68 NRC 497 (2008)
- a presiding officer considering environmental contentions should apply NRC reopening procedures and standards in 10 C.F.R. 2.326 to the extent possible; CLI-08-25, 68 NRC 497 (2008)
- any person whose interest may be affected by the high-level waste proceeding and who desires to participate as a party must file a written petition for leave to intervene; CLI-08-25, 68 NRC 497 (2008)
- appeals may be taken from certain specified decisions of the pre-license application presiding officer and the presiding officer; CLI-10-10, 71 NRC 281 (2010)
- appeals of an initial decision or partial initial decision of the presiding officer are permitted; CLI-10-10, 71 NRC 281 (2010)
- as part of compliance with the LSN requirements, each petitioner must identify all its documentary material required by 10 C.F.R. 2.1003 and designate a responsible LSN official, who can certify that to the best of his or her knowledge all such material has been made electronically available; LBP-10-11, 71 NRC 609 (2010)

## SUBJECT INDEX

before petitioner can be granted party status in the high-level waste proceeding, it must be able to demonstrate substantial and timely compliance with the Licensing Support Network requirements; LBP-10-11, 71 NRC 609 (2010)

binding case management requirements and related recommendations pertaining to petitions to intervene, contentions, responses and replies, standing arguments, and referencing or attaching supporting materials are provided; LBP-08-10, 67 NRC 450 (2008)

conditions are proposed that would ensure that DOE's documentary material is appropriately preserved and archived should its request to withdraw its application be granted; LBP-10-11, 71 NRC 609 (2010)

DOE's certification that it had made all of its then extant documentary material available on the NRC's Licensing Support Network triggered the obligation of other potential parties to make their documentary material available on the LSN within 90 days; LBP-08-5, 67 NRC 205 (2008)

electronic production, filing, and service of all documents are required in the high-level waste proceeding; CLI-08-25, 68 NRC 497 (2008)

hearing schedule milestones have been modified for the high-level-waste proceeding; CLI-08-25, 68 NRC 497 (2008)

if petitioner fails to demonstrate substantial and timely compliance with the Licensing Support Network requirements, it may later request party status upon a showing of subsequent compliance; LBP-10-11, 71 NRC 609 (2010)

in addition to meeting NRC's regular contention admissibility requirements in 10 C.F.R. 2.309(f), environmental contentions addressing any DOE environmental impact statement or supplement must also conform to the requirements and address the applicable factors outlined in 10 C.F.R. 51.109; CLI-08-25, 68 NRC 497 (2008)

in ruling on a petition to intervene in high-level waste proceeding, the presiding officer shall consider any failure of the petitioner to participate as a potential party in the pre-license application phase; CLI-08-25, 68 NRC 497 (2008)

in ruling on a petition to intervene in high-level waste proceeding, the presiding officer shall consider the factors in 10 C.F.R. 2.309 on standing to intervene; CLI-08-25, 68 NRC 497 (2008)

in the case of the yet-to-issue NRC rules, the Commission is dispensing in advance with all late-filing factors except the "good cause" factor; CLI-08-25, 68 NRC 497 (2008)

in the pre-license application phase, the board denies the Department of Energy's motion to strike the State of Nevada's certification that it has made all its documentary material available on the Licensing Support Network; LBP-08-5, 67 NRC 205 (2008)

no appeals may be taken from any presiding officer order or decision, except as otherwise permitted by 10 C.F.R. 2.1015(a); CLI-10-10, 71 NRC 281 (2010)

NRC rules governing the high-level waste proceeding do not provide for interlocutory review; CLI-10-13, 71 NRC 387 (2010)

participants must make a good-faith effort to have made available all documentary material on the Licensing Support Network by the date specified for initial compliance; CLI-08-22, 68 NRC 355 (2008)

petitioner may not be granted party or interested governmental participant status if petitioner cannot demonstrate substantial and timely compliance with the requirements in 10 C.F.R. 2.1003 at the time of the request for participation in the high-level waste proceeding; CLI-08-25, 68 NRC 497 (2008)

state and local governmental bodies in which the geologic repository operations area is located and any affected federally recognized Indian tribe need not address the standing requirements; CLI-08-25, 68 NRC 497 (2008)

the 30-day hearing petition and contention-filing deadlines set forth in this section have been modified for the high-level waste proceeding; CLI-08-25, 68 NRC 497 (2008)

the Commission dispensed with all but the good cause factor for late-filed contentions; LBP-09-29, 70 NRC 1028 (2009)

the Commission shall permit intervention by the state and local governmental body in which the geologic repository operations area is located, and by any affected federally recognized Indian tribe if the contention requirements in 10 C.F.R. 2.309(f) are satisfied with respect to at least one contention; CLI-08-25, 68 NRC 497 (2008)

the presiding officer has no authority or duty to resolve uncontested issues; CLI-08-25, 68 NRC 497 (2008)

## SUBJECT INDEX

the presiding officer should treat as a cognizable "new consideration" an attack on the Yucca Mountain environmental impact statements based on significant and substantial information that, if true, would render the statements inadequate; CLI-08-25, 68 NRC 497 (2008)

under appropriate circumstances, petitions to intervene, requests for hearing, and new and amended contentions may be filed after the initial 30-day deadline; LBP-08-1, 67 NRC 37 (2008)

whether a call memo was required to address the retention for LSN inclusion purposes of documentary material that does not support a party's position is decided; LBP-08-5, 67 NRC 205 (2008)

### HISTORIC SITES

cultural and historic resources are to be considered as part of the environmental impact assessment that must be completed; LBP-10-16, 72 NRC 361 (2010)

federal agencies must follow notification and consultation procedures prior to a federal undertaking to consider the undertaking's effect on historic properties; LBP-10-16, 72 NRC 361 (2010)

federal agencies should be sensitive to the special concerns of Indian tribes in historic preservation issues, which often extend beyond Indian lands to other historic properties, and should invite the governing body of the responsible tribe to be a consulting party and to concur in any agreement; LBP-10-16, 72 NRC 361 (2010)

prior to issuance of any license, federal agencies must take into account the effect of the federal action on any area eligible for inclusion in the National Register of Historic Places; LBP-10-16, 72 NRC 361 (2010)

### HURRICANES

licensees must have and follow emergency procedures for natural phenomena as appropriate for the geographical location of the facility; LBP-06-12, 63 NRC 403 (2006)

### HYDRAULIC ZONE OF INFLUENCE

direct, indirect, and cumulative impingement/entrainment and thermal effluent discharge impacts of a proposed cooling system intake and discharge structures on aquatic resources are discussed; LBP-09-7, 69 NRC 613 (2009)

### HYDROFLUORIC ACID

chemical exposure to licensee operators is assessed a civil monetary penalty in the amount of \$32,500 on the basis of a determined Severity Level III violation; LBP-10-18, 72 NRC 519 (2010)

### HYDROGEN FLUORIDE

interaction of hot hydrofluoric acid with the aluminum fluoride layer on aluminum storage tubes in the case of significant water vapor intrusion is discussed; LBP-06-17, 63 NRC 747 (2006)

### HYDROGEOLOGY

petitioner raises a genuine dispute with the application with respect to the adequacy of information needed to characterize the site and offsite hydrogeology to ensure confinement of the extraction fluids; LBP-10-16, 72 NRC 361 (2010)

### IMMEDIATE EFFECTIVENESS

a hearing challenging an immediately effective enforcement order will be conducted expeditiously, giving due consideration to the rights of the parties; CLI-07-6, 65 NRC 112 (2007); LBP-09-24, 70 NRC 676 (2009)

an initial decision directing the issuance or amendment of a limited work authorization or an early site permit is immediately effective upon issuance unless the presiding officer finds that good cause has otherwise been shown by a party; LBP-09-19, 70 NRC 433 (2009)

an NRC Staff decision to grant a power uprate license amendment does not leave intervenors without effective redress because the license amendment can be revoked or conditioned after a full hearing if the board determines the license amendment should not have been granted; CLI-06-8, 63 NRC 235 (2006)

an unexplained lapse of several years between the Staff's completion of a thorough investigation and its initiation of an immediately effective enforcement order may jeopardize both public confidence in government decisionmaking and public protection from asserted safety threats, and may require an explanation if the immediate effectiveness of the order were to be challenged; LBP-06-26, 64 NRC 431 (2006)

immediately effective deprivation of the legally acknowledged right to pursue one's livelihood should not be imposed without the Staff having substantial reason to do so and explaining its reasons in advance and in some detail; LBP-09-24, 70 NRC 676 (2009)

## SUBJECT INDEX

- Staff is to issue its approval or denial of an application promptly once it completes its own review of the application, notwithstanding the pendency of any hearing; CLI-06-8, 63 NRC 235 (2006)
- Staff may make an enforcement order immediately effect on the basis of public health and safety or a willful violation; LBP-06-26, 64 NRC 431 (2006)
- the subject of an immediately effective enforcement order has the right to challenge the immediate effectiveness and the promise of an expedited hearing; LBP-09-24, 70 NRC 676 (2009)
- to succeed in imposing pretrial detention because the accused is a danger to the community, the government must, among other things, prove in an adversary hearing by clear and convincing evidence that no conditions of release can reasonably assure the community's safety; LBP-09-24, 70 NRC 676 (2009)
- IMMEDIATE EFFECTIVENESS REVIEW**
- before an early site permit can be made effective, the Commission must review and approve the licensing board's initial decision authorizing its issuance; CLI-07-7, 65 NRC 122 (2007)
- to successfully challenge an enforcement order, the target must show that the order, including the need for immediate effectiveness, is not based on adequate evidence but on mere suspicion, unfounded allegations, or error; LBP-09-24, 70 NRC 676 (2009)
- IMPARTIALITY**
- generalized challenge to the impartiality of the NRC regulatory process associated with hearings is inadmissible; LBP-08-16, 68 NRC 361 (2008)
- the standard for disqualification of a judge under 28 U.S.C. §455 is whether a reasonable person who knows all the circumstances would harbor doubts about the judge's impartiality; CLI-10-22, 72 NRC 202 (2010)
- IMPINGEMENT**
- adequacy of the final environmental impact statement discussion and analysis of direct, indirect, and cumulative impingement/entrainment and thermal effluent discharge impacts of a proposed cooling system intake and discharge structures on aquatic resources is decided; LBP-09-7, 69 NRC 613 (2009)
- IMPORT LICENSES**
- application for license to import low-level radioactive waste from Italy for processing and ultimate disposal in Utah is held in abeyance; CLI-08-24, 68 NRC 491 (2008)
- criteria for NRC issuance of a low-level radioactive waste import license are described; CLI-08-24, 68 NRC 491 (2008)
- NRC will not grant an import license for waste intended for disposal unless it is clear that a disposal facility, host state, and compact (where applicable) will accept the waste; CLI-08-24, 68 NRC 491 (2008)
- IN CAMERA PROCEEDINGS**
- review ought to occur only in the exceptional case after the government has submitted as detailed public affidavits as possible; LBP-08-7, 67 NRC 361 (2008)
- when the agency has submitted detailed public affidavits that permit resolution of FOIA issues, in camera review of redacted information or sealed documents is not necessary; LBP-08-7, 67 NRC 361 (2008)
- IN SITU LEACH MINING**
- a showing that anyone who uses a substantial quantity of water personally or for livestock from a source that is reasonably contiguous to either an injection or processing site is sufficient to demonstrate an injury in fact for standing; LBP-08-6, 67 NRC 241 (2008)
- although further analysis may show that there is no way for the radioactive materials and byproducts from ISL mining operations to cause harm to persons living nearby, a board cannot decide, when making a standing determination, that there is no reasonable possibility that such harm could occur; LBP-08-6, 67 NRC 241 (2008)
- although Part 40 generally applies to in situ leach mining, Appendix A to Part 40, including Criterion 1, was designed to address the problems related to mill tailings and not problems related to injection mining; LBP-10-16, 72 NRC 361 (2010)
- applicant must establish a surety arrangement that ensures sufficient funds will be available for decommissioning and decontamination of an NRC-licensed source materials site; LBP-10-16, 72 NRC 361 (2010)
- application of the proximity presumption to determinations of standing are largely dependent on the size and other characteristics of underground aquifers; LBP-08-6, 67 NRC 241 (2008)

## SUBJECT INDEX

burden is on petitioner to allege a specific and plausible means by which contaminants from mining activities may adversely affect him or her; LBP-10-16, 72 NRC 361 (2010)

byproduct material from in situ extraction operations must be disposed of at existing large mill tailings disposal sites; LBP-10-16, 72 NRC 361 (2010)

contention is rejected as lacking support for the premise that ongoing mining operations will drain or contaminate wetlands, such that their economic benefits will be decreased; LBP-10-16, 72 NRC 361 (2010)

facilities are not required to maintain backup power because if such a facility were to experience a power failure, uranium recovery operations would simply cease; LBP-08-24, 68 NRC 691 (2008)

in cases involving ISL uranium mining and other source materials licensing, petitioner must demonstrate injury, causation, and redressability because proximity to the proposed facility alone is not adequate to demonstrate standing; LBP-10-16, 72 NRC 361 (2010)

ISL mining does not involve fuel rod waste and to the extent such waste is indirectly relevant, the Waste Confidence rule would prohibit its consideration in a license amendment proceeding; LBP-08-6, 67 NRC 241 (2008)

proximity alone is not sufficient to establish standing for a petitioner's proximity to a source materials activity; LBP-08-24, 68 NRC 691 (2008)

the principal regulatory standards for in situ leach applications are 10 C.F.R. 40.32(c) and (d), which mandate protection of public health and safety; LBP-10-16, 72 NRC 361 (2010)

### INCORPORATION BY REFERENCE

a board is not to permit incorporation by reference where the effect would be to circumvent NRC-prescribed contention specificity requirements; LBP-08-24, 68 NRC 691 (2008)

a contention asserting that a combined license application is incomplete because it incorporates by reference a standard design certification and a pending application for a revision to that certified design is inadmissible; LBP-09-10, 70 NRC 51 (2009)

an attempt to circumvent page-limit rules by incorporating documents by reference could be grounds for sanctions; CLI-10-9, 71 NRC 245 (2010)

applicant for a combined license is expressly authorized by NRC's regulations to incorporate by reference a certified design in its license application; CLI-09-8, 69 NRC 317 (2009); LBP-09-2, 69 NRC 87 (2009); LBP-09-8, 69 NRC 736 (2009)

applicant for a combined license may, at its own risk, reference in its application a design for which a design certification application has been docketed but not granted; LBP-09-10, 70 NRC 51 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-18, 70 NRC 385 (2009)

applicant would be permitted to incorporate information from its original construction permit application in a new application; CLI-10-6, 71 NRC 113 (2010)

in conducting its environmental review, an agency has discretion to rely on data, analyses, or reports prepared by persons or entities other than agency staff, including competent and responsible state authorities; LBP-06-8, 63 NRC 241 (2006)

in preparing an EIS, Staff can rely upon the environmental analyses in another agency's EIS regarding environmental impacts; LBP-06-9, 63 NRC 289 (2006)

no-action alternative discussions can be brief and can incorporate by reference other sections of an environmental report discussing the project's adverse consequences; LBP-07-3, 65 NRC 237 (2007)

NRC would not accept incorporation by reference of another petitioner's issues in an instance where the petitioner has not submitted at least one admissible issue of its own; LBP-10-11, 71 NRC 609 (2010)

petitioner may not simply incorporate massive documents by reference as the basis for a statement of his contentions; LBP-08-21, 68 NRC 554 (2008)

the Commission disapproves of incorporation by reference in petitions for review, where it has the effect of bypassing the page limits set forth in NRC regulations; CLI-10-17, 72 NRC 1 (2010)

the record of decision may in fact incorporate by reference any material contained in the relevant final environmental impact statement; LBP-06-8, 63 NRC 241 (2006)

this practice is contrary to Commission case law and will result in denial of contentions on the basis on the dearth of information; LBP-10-16, 72 NRC 361 (2010)

### INDEPENDENT SPENT FUEL STORAGE INSTALLATION

a license renewal applicant has no obligation to discuss in its environmental report the impacts of a potential expansion of the ISFSI; LBP-08-26, 68 NRC 905 (2008)

## SUBJECT INDEX

- a more detailed environmental impact statement is not required unless the contemplated action is a major federal action significantly affecting the quality of the human environment; CLI-08-26, 68 NRC 509 (2008)
- applicant does not need an NRC license for construction activity, but proceeds with construction at its own risk; CLI-06-23, 64 NRC 107 (2006); LBP-06-27, 64 NRC 399 (2006)
- potential radiological risks associated with an ISFSI license transfer are lower than those for an operating facility, because an ISFSI is essentially a passive structure, and there therefore is less chance of widespread radioactive release; CLI-07-19, 65 NRC 423 (2007); LBP-09-20, 70 NRC 565 (2009)
- the Commission declined to adopt a proximity presumption in an ISFSI license transfer proceeding, where the petitioner had not demonstrated that the mere transfer of the ISFSI somehow increases his risk of radiological harm; LBP-09-20, 70 NRC 565 (2009)
- the Commission has issued a general license for the storage of spent fuel at an onsite ISFSI to all persons authorized to possess or operate nuclear power reactors under 10 C.F.R. Part 50 or Part 52; LBP-09-20, 70 NRC 565 (2009)
- the stability of ISFSI concrete pads holding dry spent fuel storage casks during earthquakes is addressed; DD-07-2, 65 NRC 365 (2007)
- there is no obvious potential for offsite consequences from an ISFSI transfer sufficient to justify applying a presumption of standing based on proximity; CLI-07-19, 65 NRC 423 (2007)
- INDEPENDENT SPENT FUEL STORAGE INSTALLATION PROCEEDINGS**
- the Commission's rules in 10 C.F.R. § 2.1113 do not provide for supplementing Subpart K presentations; CLI-08-26, 68 NRC 509 (2008)
- the presiding officer is allowed to resolve factual and legal disputes in spent fuel storage controversies, including disagreements between experts, on the basis of a brief discovery period and written submissions and oral argument without a full trial-type evidentiary hearing; CLI-08-26, 68 NRC 509 (2008)
- under Subpart K and the Nuclear Waste Policy Act, the Commission resorts to full evidentiary hearings on spent fuel storage controversies only when necessary for accuracy; CLI-08-26, 68 NRC 509 (2008)
- INDIAN TRIBES**
- See Native Americans
- INFORMAL HEARINGS**
- as NRC hearings have moved away from the traditional trial-type adversarial format and toward a more informal model, the inquisitorial role of the presiding officer necessarily has increased; CLI-10-17, 72 NRC 1 (2010)
- in conducting Subpart L hearings, board members pose questions to the parties' witnesses in those areas that, in the Board's judgment, require additional clarification and development; LBP-08-22, 68 NRC 590 (2008)
- the informal procedural rules of Part 2, Subpart L place greater emphasis and responsibility on the presiding officer to oversee the development of a full and complete record; CLI-10-17, 72 NRC 1 (2010)
- INFORMAL PROCEEDINGS**
- once a hearing is granted under Subpart L, an informal oral hearing on the merits is required except in limited circumstances; CLI-10-18, 72 NRC 56 (2010)
- parties provide proposed written questions prior to, and during the course of, a Subpart L hearing; LBP-07-17, 66 NRC 327 (2007)
- pleadings submitted by a petitioner acting pro se are not always expected to meet the same standards as pleadings drafted by lawyers, but late filing of documents is not condoned; LBP-06-14, 63 NRC 568 (2006)
- summary disposition may be entered with respect to all or any part of the matters involved in the proceeding if the motion, along with any appropriate supporting materials, shows that there is no genuine issue as to any material fact and that the moving party is entitled to a decision as a matter of law; LBP-10-8, 71 NRC 433 (2010)
- summary disposition motions are to be resolved in accord with the standards for dispositive motions for formal hearings, as set forth in Part 2, Subpart G; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008); LBP-10-8, 71 NRC 433 (2010)
- See also Subpart L Proceedings

## SUBJECT INDEX

### INHALATION PATHWAY

petitioner's argument that high-explosive munitions could fall onto depleted uranium, pulverizing and igniting the DU and generating aerosols that might travel through the air, providing an inhalation pathway for offsite exposure was contradicted by the Army's statement that it does not use high-impact explosives in the area where DU is present; CLI-10-20, 72 NRC 185 (2010)

### INITIAL DECISIONS

a licensing board decision directing issuance or amendment of a limited work authorization or an early site permit is immediately effective upon issuance unless the presiding officer finds that good cause has otherwise been shown by a party; LBP-09-19, 70 NRC 433 (2009)

before an early site permit can be made effective, the Commission must review and approve the Atomic Safety and Licensing Board's initial decision authorizing its issuance; CLI-07-4, 65 NRC 24 (2007); LBP-07-9, 65 NRC 539 (2007)

before an early site permit can be made effective, the Commission must review and approve the licensing board's initial decision authorizing its issuance; CLI-07-23, 66 NRC 35 (2007)

licensing board decisions are not effective until they are reviewed by the Commission; LBP-09-19, 70 NRC 433 (2009)

the Commission has discretion to grant a petition for review, giving due weight to the existence of a substantial question with respect to any of the grounds listed in the Commission's regulations as potential justification; LBP-06-11, 63 NRC 483 (2006)

the Commission may take discretionary review of a licensing board's initial decision; CLI-10-23, 72 NRC 210 (2010)

See also Partial Initial Decisions

### INJUNCTIVE RELIEF

although technically not applicable to a request for a stay of NRC Staff action, the 10 C.F.R. 2.342(e) standards simply restate commonplace principles of equity universally followed when judicial (or quasi-judicial) bodies consider stays or other forms of temporary injunctive relief; CLI-10-8, 71 NRC 142 (2010)

an injunction is an equitable remedy, not a remedy that issues as of course; LBP-06-27, 64 NRC 399 (2006)

as litigation moves forward or terminates, the equities that traditionally govern stays or injunctive relief may change; CLI-06-23, 64 NRC 107 (2006)

even if injury sufficient to show an existing case or controversy is established, this does not confer standing with regard to injunctive relief; LBP-09-1, 69 NRC 11 (2009)

the bases are irreparable injury and inadequacy of legal remedies, and in each case, a court must balance the competing claims of injury and must consider the effect on each party of the granting or withholding of the requested relief; LBP-06-27, 64 NRC 399 (2006)

where, in weighing the balance of harms, injury to the environment is not at all probable, an injunction is not appropriate; LBP-06-27, 64 NRC 399 (2006)

### INJURY IN FACT

a broadly stated interest in a problem is not sufficient by itself to render the organization so adversely affected or aggrieved that standing will be granted; LBP-09-13, 70 NRC 168 (2009)

a determination that an injury is fairly traceable to the challenged action is not dependent on whether the cause of the injury flows directly from the challenged action, but whether the chain of causation is plausible; LBP-08-6, 67 NRC 241 (2008); LBP-08-24, 68 NRC 691 (2008); LBP-09-13, 70 NRC 168 (2009); LBP-10-4, 71 NRC 216 (2010)

a nexus between the injury and the relief is required rather than a nexus between the claimed injury and the contention; LBP-09-16, 70 NRC 227 (2009)

a showing that anyone who uses a substantial quantity of water personally or for livestock from a source that is reasonably contiguous to either an injection or processing site is sufficient to demonstrate an injury in fact for standing; LBP-08-6, 67 NRC 241 (2008)

a small or minor unwanted exposure, even one well within regulatory limits, is sufficient to establish an injury in fact; LBP-06-4, 63 NRC 99 (2006); LBP-08-6, 67 NRC 241 (2008)

although further analysis may show that there is no way for the radioactive materials and byproducts from ISL mining operations to cause harm to persons living nearby, a board cannot decide, when

## SUBJECT INDEX

making a standing determination, that there is no reasonable possibility that such harm could occur; LBP-08-6, 67 NRC 241 (2008)

an alleged injury to health and safety, shared equally by many, can form the basis for standing; LBP-09-18, 70 NRC 385 (2009)

an independent spent fuel storage installation is essentially a passive structure rather than an operating facility, and there therefore is less chance of widespread radioactive release; LBP-09-20, 70 NRC 565 (2009)

an injury in fact must go beyond generalized grievances to affect a petitioner in a personal and individual way; LBP-09-13, 70 NRC 168 (2009); LBP-10-16, 72 NRC 361 (2010)

an injury may be either actual or threatened, but must lie arguably within the zone of interests protected by the statutes governing the proceeding; LBP-06-10, 63 NRC 314 (2006)

an injury that establishes standing must be fairly traceable to the challenged action and likely to be redressed by a favorable decision; LBP-07-3, 65 NRC 237 (2007); LBP-07-4, 65 NRC 281 (2007)

an organization seeking representational standing on behalf of its members may meet the injury-in-fact requirement by demonstrating that at least one of its members, who has authorized the organization to represent his or her interest, will be injured by the possible outcome of the proceeding; LBP-09-16, 70 NRC 227 (2009); LBP-09-20, 70 NRC 565 (2009)

asserted harm need not be great to establish an injury in fact for standing; LBP-08-6, 67 NRC 241 (2008)

because NEPA is a procedural statute, petitioners need not show that favorable rulings on their NEPA contentions will require denial of the license, but rather that procedures intended for protection of their members' concrete interests will be observed; LBP-09-16, 70 NRC 227 (2009)

damage to a nuclear power facility's reputation does not constitute a threatened injury to the interests of the Local's members who work at the facility; CLI-08-19, 68 NRC 251 (2008)

even if a party seeking standing has some intent to return to an area, when such intentions are not supported by concrete plans or a specification of when future visits would take place, they do not support a finding of injury in the standing context; LBP-10-1, 71 NRC 165 (2010)

even if injury sufficient to show an existing case or controversy is established, this does not confer standing with regard to injunctive relief; LBP-09-1, 69 NRC 11 (2009)

in a license transfer case, a petitioner cannot successfully claim injury based on the financial qualifications and assurances of the transferor; CLI-07-22, 65 NRC 525 (2007)

in an enforcement proceeding, standing is determined by reviewing the alleged injury stemming from the regulatory action, not that asserted to arise generally from operation of the facility or the actions of the licensee involved in the proceeding; LBP-07-16, 66 NRC 277 (2007)

in demonstrating that a proposed action involves a significant source of radioactivity producing an obvious potential for offsite consequences, petitioner cannot rely on conclusory allegations about potential radiological harm, but must show how these various harms might result from the proposed action; LBP-09-20, 70 NRC 565 (2009)

in nonreactor cases, the potential for offsite consequences is not always clear, and thus the burden falls on petitioner to demonstrate that the proposed action involves a significant source of radioactivity producing an obvious potential for offsite consequences; LBP-09-20, 70 NRC 565 (2009)

injury in fact is defined as an invasion of a legally protected interest that is concrete and particularized and actual or imminent rather than conjectural or hypothetical; LBP-10-16, 72 NRC 361 (2010)

injury may be either actual or threatened to establish standing, but must arguably lie within the zone of interests protected by the statutes governing the proceeding; LBP-08-6, 67 NRC 241 (2008); LBP-10-16, 72 NRC 361 (2010)

injury-in-fact to establish standing requires more than a general interest in preserving of the environment; LBP-09-28, 70 NRC 1019 (2009)

intervention petitioner must be able to show how it would have personally suffered or will suffer a distinct and palpable harm that constitutes injury in fact; LBP-09-18, 70 NRC 385 (2009)

intervention petitioner must establish a concrete and particularized injury that is fairly traceable to the challenged action, is likely to be redressed by a favorable decision, and is arguably within the zone of interests protected by the governing statute; CLI-09-20, 70 NRC 911 (2009); LBP-09-28, 70 NRC 1019 (2009)

## SUBJECT INDEX

intervention petitioners are not required to demonstrate their asserted injury with certainty or to provide extensive technical studies in support of their standing argument; LBP-08-24, 68 NRC 691 (2008)

intervention petitioner's claimed injury must be arguably within the zone of interests protected by the governing statute; LBP-08-24, 68 NRC 691 (2008)

licensing boards are to look to judicial concepts of standing to determine whether a petitioner has established the necessary interest for intervention; LBP-07-11, 66 NRC 41 (2007)

once a party demonstrates that it has standing to intervene on its own accord, that party may then raise any contention that, if proved, will afford the party relief from the injury it relies upon for standing; LBP-09-16, 70 NRC 227 (2009)

parties taking appeals on purely procedural points are expected to explain precisely what injury to them was occasioned by the asserted error; CLI-10-23, 72 NRC 210 (2010)

petitioner may not establish standing by alleging injury on behalf of another entity, but rather, petitioner must be the object of the actual or threatened injury; LBP-10-4, 71 NRC 216 (2010)

petitioners are not required to demonstrate their asserted injury with certainty or to provide extensive technical studies in support of their standing argument; LBP-07-14, 66 NRC 169 (2007)

plaintiffs have been found to have a right to apply for preventive relief where copper mining tailings were carried 25 miles to plaintiff's farm; LBP-08-6, 67 NRC 241 (2008)

plaintiffs have prevailed against a motion for summary judgment where chloride spillage was allegedly carried 100 miles to plaintiff's farm; LBP-08-6, 67 NRC 241 (2008)

procedural violations of the National Historic Preservation Act have resulted in a grant of standing to tribes; LBP-08-24, 68 NRC 691 (2008)

redressability requires petitioner to show that its alleged injury-in-fact could be cured or alleviated by some action of the tribunal; LBP-09-13, 70 NRC 168 (2009)

showing that estimated dose consequences associated with operation under extended power uprate conditions can be expected to increase by the 20% power-level change establishes that the proposed EPU creates an obvious potential for offsite consequences; LBP-07-10, 66 NRC 1 (2007)

standing generally has been denied when the threat of injury is not concrete and particularized; LBP-09-13, 70 NRC 168 (2009); LBP-10-16, 72 NRC 361 (2010)

the Commission declined to adopt a proximity presumption in an independent spent fuel storage installation license transfer proceeding, where the petitioner had not demonstrated that the mere transfer of the ISFSI somehow increased his risk of radiological harm; LBP-09-20, 70 NRC 565 (2009)

the increased risk of living within 50 miles of a nuclear power plant constitutes injury-in-fact, is traceable to the challenged action, and is likely to be redressed by a favorable decision that either denies a license or mandates compliance with legal requirements that protect the interests of the petitioners; CLI-09-20, 70 NRC 911 (2009); LBP-09-4, 69 NRC 170 (2009); LBP-09-16, 70 NRC 227 (2009)

the injury in fact necessary to establish organizational standing must be more than a mere interest in a problem, no matter how longstanding the interest and no matter how qualified the organization is in evaluating the problem; LBP-10-16, 72 NRC 361 (2010)

the plausible-chain-of-causation standard requires not that the potential harm to petitioner flow directly from the proposed action, but that the petitioner show that the chain of causation is plausible; CLI-09-12, 69 NRC 535 (2009)

the requirement that an injury or threat of injury be concrete and particularized perforce means that the injury must not be conjectural or hypothetical; LBP-10-4, 71 NRC 216 (2010)

the requirement to show actual injury derives ultimately from the doctrine of standing, a constitutional principle that prevents courts of law from undertaking tasks assigned to the political branches; LBP-09-1, 69 NRC 11 (2009)

the requisite injury to establish standing may be either actual or threatened but must nonetheless be concrete and particularized, not conjectural or hypothetical; LBP-09-28, 70 NRC 1019 (2009)

the standing requirement for showing injury in fact has always been significantly less than for demonstrating an acceptable contention; LBP-08-6, 67 NRC 241 (2008)

the Supreme Court has defined "injury in fact" as an invasion of a legally protected interest that is concrete and particularized and actual or imminent; LBP-09-13, 70 NRC 168 (2009)

to assert an appropriate injury for organizational standing, an organization must demonstrate a palpable injury in fact to its organizational interests; LBP-09-13, 70 NRC 168 (2009); LBP-10-16, 72 NRC 361 (2010)

## SUBJECT INDEX

to demonstrate standing, a petitioner must show that it has suffered or will suffer a distinct and palpable harm that is within the zone of interests arguably protected by the governing statute and that this injury can fairly be traced to the challenged action; CLI-06-2, 63 NRC 9 (2006); LBP-06-23, 64 NRC 257 (2006); LBP-07-4, 65 NRC 281 (2007); LBP-07-11, 66 NRC 41 (2007)

to determine whether an interest is in the zone of interests of a statute, it is necessary first to discern the interests arguably to be protected by the statutory provision at issue, and then to inquire whether petitioner's interests affected by the agency action are among them; LBP-09-13, 70 NRC 168 (2009)

to establish an injury in fact, a party merely has to show some threatened concrete interest personal to the party; LBP-08-24, 68 NRC 691 (2008)

to establish an injury in fact, a party merely has to show some threatened concrete interest personal to the party that the National Historic Preservation Act was designed to protect; LBP-08-24, 68 NRC 691 (2008); LBP-10-16, 72 NRC 361 (2010)

to establish organizational standing, the injury must be more than a mere interest in a problem, no matter how longstanding the interest and no matter how qualified the organization is in evaluating the problem; LBP-09-13, 70 NRC 168 (2009)

to establish standing, petitioner must show (among other things) that its potential injury is fairly traceable to a grant of the application; CLI-06-21, 64 NRC 30 (2006)

to the extent contaminants can plausibly migrate from leach mining operations to the aquifer from which a petitioner obtains his or her water, a petitioner would have a claim of a cognizable injury and could be accorded standing; LBP-08-24, 68 NRC 691 (2008)

when denial of a license would alleviate a petitioner's asserted potential injury, any admissible contention with such a result can be prosecuted by a petitioner, regardless of whether that contention is directly related to that petitioner's articulated injury; LBP-09-16, 70 NRC 227 (2009)

See also Economic Injury; Irreparable Injury

### INSPECTION

for construction permits issued prior to January 1, 1971, licensee is required to implement an in-service inspection program that complies with section 50.55a(g)(4)-(5); LBP-08-22, 68 NRC 590 (2008)

intervenor are precluded from challenging ASME inspection requirements in a combined license proceeding because NRC regulations directly incorporate ASME inspection requirements by reference; LBP-10-21, 72 NRC 616 (2010)

motion to reopen the record to admit new contention regarding adequacy of applicant's containment/coating inspection program for two new proposed units is denied; LBP-10-21, 72 NRC 616 (2010)

Part 54 does not require a comprehensive preapplication baseline inspection for license renewal; LBP-08-13, 68 NRC 43 (2008)

the containment vessel is identified as an ASME Code Class MC component in both the inservice inspection subsection of section 50.55a as well as the inspection requirements subsection of the AP1000 DCD; LBP-10-21, 72 NRC 616 (2010)

where the application provides a commitment that, should inspection requirements be changed, the applicant will implement those new inspection requirements, it is the responsibility of NRC Staff and the applicant to ensure that this commitment is fulfilled; LBP-08-26, 68 NRC 905 (2008)

See also NRC Inspection

### INSPECTION REPORTS

Green inspection finding indicates that the deficiency in licensee performance has a very low-risk significance and has little or no impact on safety, but White, Yellow, and Red findings indicate increasingly serious safety problems; CLI-10-27, 72 NRC 481 (2010)

### INTEGRATED PLANT ASSESSMENT

aging management review for operating license renewal addresses activities identified in 10 C.F.R. 54.21(a)(3) and (c)(1); CLI-10-17, 72 NRC 1 (2010)

each license renewal application must contain an IPA; LBP-08-13, 68 NRC 43 (2008)

from among the three general categories of structures, systems, and components that fall within the initial focus of the license renewal safety review, applicants must identify and list those structures and components subject to an aging management review; CLI-10-14, 71 NRC 449 (2010)

## SUBJECT INDEX

### INTEGRATED SAFETY ANALYSIS

although not legally binding, Staff guidance documents provide further information about the content of the ISA summary and how an applicant can comply with criticality safety regulations; LBP-06-17, 63 NRC 747 (2006)  
applicant must evaluate its compliance with performance requirements regarding nuclear criticality safety; LBP-06-17, 63 NRC 747 (2006)

### INTEREST

in a materials licensing proceeding, petitioners have the burden to show a specific and plausible means whereby the licensing decision may harm them; CLI-09-9, 69 NRC 331 (2009)  
intervention petitioners must allege a concrete and particularized injury that is fairly traceable to, and may be affected by, the challenged action and is likely to be redressed by a favorable decision, and lies arguably within the zone of interests protected by the governing statutes; CLI-08-19, 68 NRC 251 (2008); LBP-08-15, 68 NRC 294 (2008)  
petitioners need not show a nexus between interest upon which standing is based and the substance of their proposed contentions; CLI-09-9, 69 NRC 331 (2009)  
the interests of an organization's member seeking representation must be germane to the organization's purpose; CLI-08-19, 68 NRC 251 (2008)

### INTERESTED GOVERNMENTAL ENTITY

a state, county, municipality, federally recognized Indian tribe, or agencies thereof may also seek to participate in a hearing as a nonparty; CLI-10-4, 71 NRC 56 (2010)  
although interested governmental entities would not have a formal role in a proceeding absent the admission of parties and contentions, boards expect that such entities would be kept appropriately apprised of the other participants' settlement efforts; LBP-09-23, 70 NRC 659 (2009)  
although interested governmental participants are afforded many rights and responsibilities with respect to participation in a proceeding, they are limited to participation on admitted contentions; LBP-09-6, 69 NRC 367 (2009)  
an advisory body that lacks executive or legislative responsibilities is so far removed from having the representative authority to speak and act for the public that it does not qualify as a governmental entity; CLI-07-18, 65 NRC 399 (2007)  
an interested local governmental body may introduce evidence, interrogate witnesses in circumstances where cross-examination by the parties is allowed, advise the Commission without being required to take a position on any issue, file proposed findings where such are allowed, and seek Commission review on admitted contentions; LBP-08-24, 68 NRC 691 (2008)  
an interested local governmental body that is not a party to the proceeding must be accorded a reasonable opportunity to participate, through a single representative, in the hearing of one or more of the admitted contentions; LBP-07-5, 65 NRC 341 (2007); LBP-08-24, 68 NRC 691 (2008)  
an interested state or local governmental body which has not been admitted as a party under 10 C.F.R. 2.309 shall be afforded a reasonable opportunity to participate in a hearing; LBP-08-21, 68 NRC 554 (2008); LBP-09-2, 69 NRC 87 (2009)  
local governmental bodies within whose boundaries a facility is located do not need to make any further demonstration of standing; CLI-07-18, 65 NRC 399 (2007)  
not all organizations with governmental ties are entitled to participate in NRC proceedings as a local governmental body (county, municipality, or other subdivision); CLI-07-18, 65 NRC 399 (2007)  
one does not acquire standing as a consequence of being a member of a legislative tribunal; LBP-07-5, 65 NRC 341 (2007)  
only a party to a proceeding, or an interested governmental entity participating under section 2.315, may file a request to stay proceedings pending a rulemaking; CLI-07-13, 65 NRC 211 (2007)  
states do not need to address standing requirements if the facility is located within their boundaries; CLI-09-15, 70 NRC 1 (2009)  
the representative of an interested local governmental body must identify those contentions on which it will participate in advance of any hearing held; LBP-08-24, 68 NRC 691 (2008)  
See also Local Governmental Bodies

## SUBJECT INDEX

### INTERESTED STATE

a stay of the close of hearings in both license renewal proceedings for 14 days following the date of issuance of mandate is ordered to afford a state the opportunity to request participant status under this section; CLI-08-9, 67 NRC 353 (2008)

an interested state may petition to suspend proceedings; CLI-08-9, 67 NRC 353 (2008)

### INTERESTED STATE PARTICIPATION

a state could seek to have licensing proceedings suspended pending an NRC decision on its rulemaking petition if it participated in the proceedings as an interested state; CLI-09-10, 69 NRC 521 (2009)

an interested state that has not been admitted as a party under section 2.309 must be provided a reasonable opportunity to participate in a hearing; LBP-08-15, 68 NRC 294 (2008)

licensing boards have granted state agencies the right to participate in NRC proceedings as the state's representative; LBP-09-16, 70 NRC 227 (2009)

nonparty interested state status has been granted to state utility commissions; LBP-09-16, 70 NRC 227 (2009)

state agencies may participate as nonparty interested states; LBP-08-15, 68 NRC 294 (2008)

the Commission has long recognized the benefits of participation in NRC proceedings by representatives of interested states; LBP-09-16, 70 NRC 227 (2009)

the representative of an interested governmental entity participating under section 2.315(c) shall identify those contentions on which it will participate in advance of any hearing held; LBP-06-20, 64 NRC 131 (2006)

### INTERLOCUTORY RULINGS

if necessary, rulings may be reviewed on appeals from partial initial decisions or other final appealable orders; CLI-09-6, 69 NRC 128 (2009)

the possibility that an interlocutory ruling may be wrong does not in itself justify interlocutory review; CLI-09-6, 69 NRC 128 (2009)

when a board has not made even a threshold ruling on petitioner's standing and contentions, the Commission considers a petition under its usual standard for review of an interlocutory Board order; CLI-08-7, 67 NRC 187 (2008)

### INTERPRETATION

if a contention header uses a particular phrase, but the statement of the contention does not refer to the phrase or regulation, then the board may interpret the contention in accordance with the express statement of the contention; LBP-10-15, 72 NRC 257 (2010)

the word "significantly" as used in the NEPA process describes the significance of environmental impacts in several contexts, including the locality; CLI-06-29, 64 NRC 417 (2006)

See also Construction of Meaning; Definitions; Regulations, Interpretation

### INTERSTATE COMPACTS

no facility located in any party state may accept low-level waste generated outside the region comprised of the party states, except under a specific procedure requiring approval of the member states; CLI-08-24, 68 NRC 491 (2008)

when authorized by Congress, interstate compacts are allowed to restrict the use of regional disposal facilities under the compact to the disposal of low-level radioactive waste generated within the compact region; CLI-08-24, 68 NRC 491 (2008)

### INTERVENORS

although an intervenor may have fewer resources and less ability than other participants, all share the same burden of uncovering relevant information that is publicly available; LBP-08-12, 68 NRC 5 (2008)

boards may reprimand, censure, or suspend intervenors for contemptuous conduct; CLI-07-28, 66 NRC 275 (2007)

NRC appropriations shall not be used to pay the expenses of, or otherwise compensate, parties intervening in regulatory or adjudicatory proceedings; LBP-09-1, 69 NRC 11 (2009)

NRC is explicitly prohibited by law from paying the expenses of or otherwise compensating intervenors, and thus cannot grant petitioners funds to prepare requests for access to safeguards information or sensitive unclassified nonsafeguards information; CLI-09-4, 69 NRC 80 (2009)

## SUBJECT INDEX

the ultimate burden of proof on the question of whether a permit or license should be issued is on the applicant, but the party contending that the permit or license should be denied has the burden of going forward with evidence to buttress that contention; CLI-09-7, 69 NRC 235 (2009)  
there is an ironclad obligation to regularly and diligently search publicly available NRC or applicant documents for information relevant to intervenor's contentions; CLI-09-2, 69 NRC 55 (2009)

### INTERVENTION

a licensing board will grant a request for a hearing if it determines that the requestor has standing and has proposed at least one admissible contention; LBP-10-4, 71 NRC 216 (2010); LBP-10-11, 71 NRC 609 (2010)  
a person denied party or interested governmental participant status may request such status upon a showing of subsequent compliance with the requirements of 10 C.F.R. 2.1003; CLI-08-25, 68 NRC 497 (2008)  
a petitioner must, in addition to demonstrating standing, submit at least one contention meeting the pleading requirements of 10 C.F.R. § 2.309(f)(1); LBP-06-10, 63 NRC 314 (2006); LBP-06-23, 64 NRC 257 (2006); LBP-07-4, 65 NRC 281 (2007)  
a state, county, municipality, federally recognized Indian tribe, or agencies thereof, may submit a petition to the Commission to participate as a party in a materials license proceeding; CLI-09-15, 70 NRC 1 (2009)  
although complying with Commission regulations may be especially difficult for pro se petitioners, it has long been a basic principle that a person who invokes the right to participate in an NRC proceeding also voluntarily accepts the obligations attendant upon such participation; LBP-10-4, 71 NRC 216 (2010)  
although petitioner has established the requisite standing, the hearing request must be denied because of a failure to proffer one admissible contention; LBP-10-1, 71 NRC 165 (2010)  
any individual, group, business, or governmental entity that wishes to intervene as a party in an adjudicatory proceeding addressing a proposed licensing action must establish that it has standing and offer at least one admissible contention meeting the requirements of 10 C.F.R. 2.309(f)(1); LBP-08-6, 67 NRC 241 (2008); LBP-08-9, 67 NRC 421 (2008)  
any person whose interest may be affected by the high-level waste proceeding and who desires to participate as a party must file a written petition for leave to intervene; CLI-08-25, 68 NRC 497 (2008)  
before petitioner can be granted party status in the high-level waste proceeding, it must be able to demonstrate substantial and timely compliance with the Licensing Support Network requirements; LBP-10-11, 71 NRC 609 (2010)  
for a petitioner to be admitted as a party in a materials license amendment proceeding, it must propose at least one admissible contention that meets the requirements of 10 C.F.R. 2.309(f)(1); LBP-06-6, 63 NRC 167 (2006)  
if petitioner fails to demonstrate substantial and timely compliance with the Licensing Support Network requirements, it may later request party status upon a showing of subsequent compliance; LBP-10-11, 71 NRC 609 (2010)  
intervention petitioners who think an order modifying a license should not be sustained, but might want further corrective measures, are precluded from intervention; LBP-09-20, 70 NRC 565 (2009)  
it is unlikely that petitioners will often obtain hearings on confirmatory enforcement orders because such orders presumably enhance rather than diminish public safety; LBP-09-20, 70 NRC 565 (2009)  
NRC intervention rules are strict by design; LBP-09-1, 69 NRC 11 (2009)  
NRC must provide a hearing upon the request of any person whose interest may be affected by the proceeding; LBP-06-10, 63 NRC 314 (2006); LBP-06-23, 64 NRC 257 (2006); LBP-09-17, 70 NRC 311 (2009); LBP-10-16, 72 NRC 361 (2010)  
once parties demonstrate that they have standing, the parties will then be free to assert any contention, which, if proved, will afford them the relief they seek; LBP-09-10, 70 NRC 51 (2009)  
petitioner may not be granted party or interested governmental participant status if petitioner cannot demonstrate substantial and timely compliance with the requirements in 10 C.F.R. 2.1003 at the time of the request for participation in the high-level waste proceeding; CLI-08-25, 68 NRC 497 (2008)  
petitioner must establish standing and proffer at least one admissible contention that meets the requirements of 10 C.F.R. 2.309(f)(1); CLI-08-17, 68 NRC 231 (2008); LBP-07-11, 66 NRC 41 (2007);

## SUBJECT INDEX

LBP-08-13, 68 NRC 43 (2008); LBP-08-24, 68 NRC 691 (2008); LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-09-26, 70 NRC 939 (2009)

petitioner must establish that it has standing, be able to demonstrate substantial and timely Licensing Support Network compliance, and proffer at least one admissible contention; LBP-09-6, 69 NRC 367 (2009)

petitioner's right to participate in a licensing proceeding stems from section 189a of the Atomic Energy Act; LBP-08-14, 68 NRC 279 (2008)

petitioners must establish the nature of their right under the governing statutes to be made a party, their interest in the proceeding, and the possible effect of any decision or order on their interests; LBP-08-17, 68 NRC 431 (2008)

the Commission shall permit intervention by the state and local governmental body in which the geologic repository operations area is located, and by any affected federally recognized Indian tribe if the contention requirements in 10 C.F.R. 2.309(f) are satisfied with respect to at least one contention; CLI-08-25, 68 NRC 497 (2008)

the Commission's power to define the scope of a proceeding will lead to the denial of intervention when the Commission amends a license to require additional or better safety measures; LBP-09-20, 70 NRC 565 (2009)

the contention admissibility threshold is less than is required at the summary disposition stage; LBP-07-16, 66 NRC 277 (2007)

threshold admissibility requirements for contentions should not be turned into a fortress to deny intervention; CLI-07-18, 65 NRC 399 (2007)

to be admitted as a party in an NRC proceeding, a petitioner must establish standing by satisfying the requirements set forth in 10 C.F.R. 2.309(d) and proffer an admissible contention; LBP-09-2, 69 NRC 87 (2009)

when deciding whether to grant standing, licensing boards shall consider the nature of petitioner's right under the Atomic Energy Act to be made a party, the nature and extent of petitioner's property, financial, or other interest in the proceeding, and the possible effect of any order that may be entered in the proceeding on petitioner's interest; LBP-09-17, 70 NRC 311 (2009)

where petitioner has established standing to intervene, but has not submitted an admissible contention, its request for an evidentiary hearing is denied; LBP-08-17, 68 NRC 431 (2008)

where the notice of hearing limits the scope to whether the order should be sustained, petitioner's sole remedy is rescission of the order; LBP-09-20, 70 NRC 565 (2009)

See also Standing to Intervene

### INTERVENTION, DISCRETIONARY

a contention must meet certain specificity and basis requirements and must fall within the scope of the proceeding; CLI-06-16, 63 NRC 708 (2006)

a petitioner denied discretionary intervention could still participate as amicus curiae or as an expert witness; CLI-06-16, 63 NRC 708 (2006)

although all six factors are examined regardless of the result on the critical first "sound record" factor, no NRC decision allowing discretionary intervention in the face of a negative finding on the "sound record" fact has occurred; CLI-06-16, 63 NRC 708 (2006)

generalized expertise, even scientific eminence, is an insufficient substitute for particularized knowledge of the issues actually in dispute; CLI-06-16, 63 NRC 708 (2006)

if petitioner did not request discretionary intervention in the event that the petitioner is found to lack standing as of right, a licensing board need not consider affording such intervention status; LBP-10-1, 71 NRC 165 (2010)

in balancing the six factors for discretionary hearing, assistance in developing a sound record is the most important; CLI-06-16, 63 NRC 708 (2006)

in justifying such an extraordinary procedure, the board should identify the specific contributions that petitioners could offer; CLI-06-16, 63 NRC 708 (2006)

in ruling on discretionary intervention requests, licensing boards will consider and balance enumerated factors weighing in favor of and against allowing intervention; LBP-09-23, 70 NRC 659 (2009)

in ruling on requests for discretionary intervention, NRC's presiding officers and licensing boards traditionally consider the six factors of 10 C.F.R. 2.309(e)(1)-(2); CLI-06-16, 63 NRC 708 (2006)

## SUBJECT INDEX

intervention is denied where petitioner has filed no contentions of its own, but the contention requirement might be viewed as ordinarily inapplicable to enforcement proceedings; LBP-09-6, 69 NRC 367 (2009)

intervention is denied where petitioner has not demonstrated how its tangible interests would be affected by the proceeding, is essentially seeking only to support the subject of the enforcement action, and provides what is deemed insufficient information about the contribution its experts could be expected to make; LBP-09-6, 69 NRC 367 (2009)

intervention is granted where petitioner's interests are within the zone of interests related to the proceeding and its extensive participation in similar proceedings in the past would provide valuable insight in developing a sound record; LBP-09-6, 69 NRC 367 (2009)

intervention may be granted in circumstances when one petitioner has standing as of right and has proffered at least one admissible contention, but other petitioners have not demonstrated their standing; LBP-10-1, 71 NRC 165 (2010)

NRC has broad discretion to provide hearings or permit interventions in cases where these avenues of public participation would not be available as a matter of right; CLI-06-16, 63 NRC 708 (2006)

petitioner must propose at least one admissible contention; CLI-06-16, 63 NRC 708 (2006)

the bar against corrective redrafting of contentions is particularly compelling in the context of a request for discretionary intervention because rewriting undermines the very basis for granting discretionary intervention, i.e., the petitioner's demonstrated ability to contribute to the record; CLI-06-16, 63 NRC 708 (2006)

the Commission may allow discretionary intervention to a person who does not meet standing requirements if there is reason to believe the person's participation will make a valuable contribution to the proceeding and if a consideration of the other criteria on discretionary intervention shows that it is warranted; CLI-06-16, 63 NRC 708 (2006)

the Commission may consider a request for discretionary intervention when at least one requestor/petitioner has established standing and at least one admissible contention has been admitted so that a hearing will be held; CLI-08-19, 68 NRC 251 (2008)

the Commission routinely accords substantial deference to licensing boards on matters involving standing and credibility determinations, and thus does not lightly set aside a board's grant of discretionary intervention; CLI-06-16, 63 NRC 708 (2006)

the Commission will reverse a licensing board's determination on discretionary intervention only if the board has abused its discretion; CLI-06-16, 63 NRC 708 (2006)

the practice of granting or denying discretionary intervention should develop "not through precedent, but through attention to the concrete facts of particular situations; CLI-06-16, 63 NRC 708 (2006)

the requirement to establish standing does not apply; CLI-06-16, 63 NRC 708 (2006)

the "sound record" factor is foremost in importance in the balancing of six factors, but other factors, especially inappropriate broadening or delay of the proceeding, could overcome it; CLI-06-16, 63 NRC 708 (2006)

this practice is meant to ensure a sound adjudicatory record, not simply to provide a second representative to assist (allegedly) ill-represented parties; CLI-06-16, 63 NRC 708 (2006)

when allowing this extraordinary action, boards are expected to set out specific findings on each of the six factors; CLI-06-16, 63 NRC 708 (2006)

when balancing the six discretionary intervention factors, licensing boards must keep in mind that discretionary intervention is an extraordinary procedure; CLI-06-16, 63 NRC 708 (2006)

**INTERVENTION PETITIONERS**

licensing boards have been lenient in permitting pro se petitioners the opportunity to cure procedural defects in petitions to intervene regarding standing; LBP-09-18, 70 NRC 385 (2009)

pro se petitioners are held to a less rigorous standard; LBP-09-18, 70 NRC 385 (2009)

the benefit of the doubt should be given to the potential intervenor in order to prevent the dismissal of a petition due to inarticulate draftsmanship or procedural or pleading defects; LBP-09-18, 70 NRC 385 (2009)

the Secretary of the Commission is authorized to establish procedures for obtaining access to sensitive unclassified nonsafeguards information prior to granting intervention in a licensing proceeding; LBP-10-2, 71 NRC 190 (2010)

## SUBJECT INDEX

### INTERVENTION PETITIONS

- a licensing board must assess an intervention petition to determine whether the elements of standing are met even if there are no objections to a petitioner's standing; LBP-09-3, 69 NRC 139 (2009)
- a petition for review and request for hearing must include a showing that the petitioner has standing; LBP-09-13, 70 NRC 168 (2009)
- a petitioner may in instances of exigent or unavoidable circumstances file a request for an extension of time to file an original hearing petition and contentions; LBP-07-4, 65 NRC 281 (2007)
- a state, county, municipality, federally recognized Indian tribe, or agencies thereof may submit a petition to the Commission to participate as a party; CLI-10-4, 71 NRC 56 (2010)
- although a board may view petitioner's supporting information in a light favorable to the petitioner, the petitioner (not the board) is required to supply all of the required elements for a valid intervention petition; CLI-10-20, 72 NRC 185 (2010); LBP-09-10, 70 NRC 51 (2009); LBP-10-16, 72 NRC 361 (2010)
- although boards should afford greater latitude to a pleading submitted by a pro se petitioner, that petitioner ultimately bears the burden to provide facts sufficient to show standing; CLI-10-20, 72 NRC 185 (2010)
- although the pleading requirements of 10 C.F.R. 2.309 are strict by design, a licensing board may permit potential intervenors to cure defects in petitions in order to obviate dismissal of a petition because of inarticulate draftsmanship or procedural or pleading defects; LBP-08-6, 67 NRC 241 (2008)
- an affirmative demonstration of compliance with the Licensing Support Network requirements is not required in an intervention petition; LBP-09-6, 69 NRC 367 (2009)
- an order denying a motion to reopen renders moot a petitioner's request for leave to submit an amended petition to intervene; CLI-06-4, 63 NRC 32 (2006)
- an unopposed motion to withdraw the petition is granted; LBP-10-3, 71 NRC 213 (2010)
- answers in the high-level waste repository proceeding shall be limited to addressing specific alleged deficiencies in petitions; LBP-08-10, 67 NRC 450 (2008)
- at the appropriate point in the overall COLA/DCD process, an interested party will have the opportunity to petition for intervention to raise matters that are material to the licensing decision the NRC must make regarding the proposed nuclear units; LBP-09-2, 69 NRC 87 (2009)
- because petitioner's circumstances may change from one proceeding to the next, it is important that the presiding officer have up-to-date information regarding any claims of standing; LBP-10-21, 72 NRC 616 (2010)
- boards are to construe the intervention petitions in a light most favorable to petitioners; LBP-10-1, 71 NRC 165 (2010)
- difficulties in coordinating action among volunteers and large public interest organizations and the challenge of simultaneously preparing for an environmental scoping meeting while drafting contentions does not constitute good cause necessary to justify an extension of the deadline to file hearing requests or petitions to intervene; CLI-09-4, 69 NRC 80 (2009)
- for a request for hearing and petition to intervene to be granted, petitioner must establish that it has standing and propose at least one admissible contention; LBP-09-18, 70 NRC 385 (2009); LBP-09-10, 70 NRC 51 (2009); LBP-10-1, 71 NRC 165 (2010); LBP-10-15, 72 NRC 257 (2010)
- for an order issued under 10 C.F.R. 2.202, the time for filing a hearing request runs from the date of the order, not the date of publication of the order in the *Federal Register*; LBP-09-20, 70 NRC 565 (2009)
- format of pleadings for high-level waste repository proceeding are specified; LBP-08-10, 67 NRC 450 (2008)
- given the information known about the nature of the facility and the available radioactive and chemical materials at risk and the resulting potential for offsite consequences, there is no need for pro se petitioners to plead these matters more specifically; LBP-07-14, 66 NRC 169 (2007)
- hearing requests must set forth with particularity the contentions sought to be raised; CLI-10-9, 71 NRC 245 (2010)
- in addition to setting forth with particularity petitioner's interest in the proceeding and how that interest may be affected by the results of the proceeding, petitioner must also include at least one contention meeting the requirements of 10 C.F.R. 2.309(f)(1); CLI-09-15, 70 NRC 1 (2009)

## SUBJECT INDEX

in assessing a petition to determine whether the requirements for standing are met, boards are to construe petitions in favor of the petitioner; LBP-07-10, 66 NRC 1 (2007); LBP-08-16, 68 NRC 361 (2008); LBP-08-21, 68 NRC 554 (2008); LBP-09-3, 69 NRC 139 (2009)

in evaluating petitions, licensing boards are not free to ignore the contention admissibility requirements of 10 C.F.R. 2.309(f)(1); CLI-09-8, 69 NRC 317 (2009)

in passing upon the question as to whether a petition should be granted, it is not the function of a licensing board to reach the merits of any contention contained therein; LBP-06-6, 63 NRC 167 (2006)

in ruling on a hearing request, a licensing board must determine whether petitioner has an interest potentially affected by the proceeding; LBP-08-15, 68 NRC 294 (2008)

in the high-level waste repository proceeding, except for readily available legal authorities, materials that cannot be attached because of copyright restrictions, and documents available on the LSN, all documents that are referenced in support of one or more contentions shall be electronically attached to the petition; LBP-08-10, 67 NRC 450 (2008)

it is generally not sufficient to seek to establish standing in a proceeding by merely cross-referencing the showing made in another proceeding, rather than making a new presentation or at least providing a submission that updates the factual information that was provided previously; LBP-10-21, 72 NRC 616 (2010)

it might be sufficient to allow petitioner to rely on a prior standing demonstration if that prior demonstration is specifically identified and shown to correctly reflect the current status of the petitioner's standing; LBP-10-21, 72 NRC 616 (2010)

licensing boards will determine whether petitioner has an interest affected by the proceeding; LBP-09-23, 70 NRC 659 (2009)

petitioner bears the burden of establishing its standing to intervene in a proceeding; LBP-07-10, 66 NRC 1 (2007)

petitioner may in instances of exigent or unavoidable circumstances file a request for an extension of time to file an original hearing petition and contentions; LBP-09-17, 70 NRC 311 (2009)

petitioner may not use its reply brief to cure pleading defects in its intervention petition; CLI-10-1, 71 NRC 1 (2010)

petitioner must demonstrate standing and proffer at least one admissible contention; CLI-06-24, 64 NRC 111 (2006)

petitioner must explain and support its contention in the petition to intervene; CLI-08-7, 67 NRC 187 (2008)

petitioner must make a fresh standing demonstration in each individual proceeding in which intervention is sought; LBP-10-21, 72 NRC 616 (2010)

petitioner must state the nature and extent of his/her/its property, financial, or other interest in the proceeding, a concept separate and apart from that of what constitutes a contention; LBP-09-1, 69 NRC 11 (2009)

petitioner must state the nature of its right under the Atomic Energy Act to be made a party to the proceeding, the nature and extent of its property, financial, or other interest in the proceeding, and the possible effect of any decision or order that may be issued in the proceeding on its interest; CLI-10-4, 71 NRC 56 (2010); LBP-09-20, 70 NRC 565 (2009); LBP-10-7, 71 NRC 391 (2010)

petitioner's claimed injury must be arguably within the zone of interests protected by the governing statute; LBP-08-24, 68 NRC 691 (2008)

petitioner's reply must narrowly focus upon the legal and factual arguments first presented in its petition and cannot be used as a vehicle to remedy a very deficient petition to which opposing parties have no opportunity to respond; LBP-09-6, 69 NRC 367 (2009)

petitioner's standing showing can be corrected or supplemented to cure deficiencies by means of its reply pleading; LBP-10-21, 72 NRC 616 (2010)

petitioners have 60 days to file intervention petitions and hearing requests in NRC proceedings other than those for license transfer requests and a construction authorization application for a high-level waste repository; CLI-08-18, 68 NRC 246 (2008)

petitioners must allege a concrete and particularized injury that is fairly traceable to the challenged action and is likely to be redressed by a favorable decision; LBP-08-24, 68 NRC 691 (2008)

petitioners must provide their name, address, and telephone number and specifically explain the reasons why intervention should be permitted; CLI-10-4, 71 NRC 56 (2010); LBP-10-7, 71 NRC 391 (2010)

## SUBJECT INDEX

petitioners shall set forth with particularity their interest in the proceeding and how that interest may be affected by the results of the proceeding; CLI-10-4, 71 NRC 56 (2010)

petitioners that are not represented by counsel will be held to less rigid standards for pleading, although a totally deficient petition will not be admitted; LBP-08-15, 68 NRC 294 (2008)

pro se petitioners are not held to the same standard of pleading as those represented by counsel; LBP-07-10, 66 NRC 1 (2007); LBP-08-6, 67 NRC 241 (2008); LBP-10-4, 71 NRC 216 (2010)

requests for hearing or petitions for leave to intervene must set forth with particularity the contentions sought to be raised, addressing six pleading requirements; CLI-10-1, 71 NRC 1 (2010)

state and federally recognized Indian tribes do not need to address standing requirements if the facility is located within their boundaries; CLI-10-4, 71 NRC 56 (2010)

the 30-day hearing petition and contention-filing deadlines have been modified for the high-level waste proceeding; CLI-08-25, 68 NRC 497 (2008)

the Commission seeks wherever possible to avoid the delays, such as an additional round of pleadings, caused by a petitioner's attempt to backstop elemental deficiencies in its original petition to intervene; CLI-08-19, 68 NRC 251 (2008)

the February 2004 revision of NRC procedural rules no longer permits the amendment and supplementation of petitions and the filing of contentions after the original filing of petitions; LBP-06-10, 63 NRC 314 (2006)

the scope of a contention is limited to issues of law and fact pleaded with particularity in the intervention petition, including its stated bases; CLI-10-5, 71 NRC 90 (2010)

to determine whether petitioners have standing, boards accept as true all material allegations of the complaint and construe the complaint in favor of the complaining party; CLI-10-20, 72 NRC 185 (2010)

to interpose a new contention after a proceeding has been terminated requires submission of a fresh intervention petition that fulfills the applicable standards for such filings, including an appropriate standing demonstration; LBP-10-21, 72 NRC 616 (2010)

under the 2004 Part 2 revisions, contentions are now required to be included with, rather than being submitted sometime subsequent to the filing of, the intervention petition; LBP-10-1, 71 NRC 165 (2010)

when a Notice of Hearing is issued before construction is commenced, additional petitions to intervene or statements of contentions may be filed as construction unfolds and reveals potential shortcomings; LBP-07-14, 66 NRC 169 (2007)

where petitioners are not conferred automatic standing in the high-level waste proceeding, they must provide information supporting their claim to standing, including the nature of their right under the governing statutes to be made a party, the nature of their interest in the proceeding, and the possible effect of any decision or order on their interest; LBP-09-6, 69 NRC 367 (2009)

whether a petitioner has met the regulatory requirements for Licensing Support Network compliance is a proper subject for challenge in an answer to an intervention petition; LBP-09-6, 69 NRC 367 (2009)

**INTERVENTION PETITIONS, LATE-FILED**

a hearing request is timely when the petitioner lacks both actual and constructive notice of its opportunity to request a hearing as of the deadline specified by the agency, and the petitioner files the hearing request promptly upon receipt of actual notice; LBP-09-20, 70 NRC 565 (2009)

a nonparty seeking late intervention after the record has closed must address both the standard for late intervention and the standard for reopening a closed record; CLI-09-5, 69 NRC 115 (2009)

a nontimely petition or contention will not be entertained in the high-level waste proceeding unless the Commission, an Atomic Safety and Licensing Board, or a presiding officer designated to rule on the petition determines that the late petition or contention meets the late-filing requirements; CLI-08-25, 68 NRC 497 (2008)

absent a showing of good cause, a nontimely petition will not be excused unless the petitioner makes a compelling showing on the remaining factors; CLI-10-12, 71 NRC 319 (2010); LBP-09-26, 70 NRC 939 (2009); LBP-10-1, 71 NRC 165 (2010); LBP-10-11, 71 NRC 609 (2010)

boards must balance eight factors in evaluating nontimely intervention petitions, hearing requests, and contentions; LBP-10-24, 72 NRC 720 (2010)

factors (v) and (vi) of 10 C.F.R. 2.309(c)(1) generally are given less weight than factors (vii) and (viii); LBP-10-1, 71 NRC 165 (2010)

## SUBJECT INDEX

factors that must be addressed for nontimely intervention petitions, hearing requests, and contentions are set forth; LBP-09-20, 70 NRC 565 (2009)

failure to carefully read the governing procedural regulations does not constitute good cause for accepting a late-filed petition; CLI-06-21, 64 NRC 30 (2006)

failure to comply with Commission pleading requirements for late filings constitutes sufficient grounds for rejecting intervention and hearing requests; LBP-10-4, 71 NRC 216 (2010)

failure to meet the good-cause factor considerably enhances the burden of showing that the other factors justify admission of a late-filed petition; LBP-10-21, 72 NRC 616 (2010)

filings that are nearly 3 months late must satisfy not only the requirements to demonstrate standing and submit at least one admissible contention, but also must satisfy the stringent requirements for untimely filings and late-filed contentions; CLI-06-21, 64 NRC 30 (2006)

good cause is the most significant of the late-filing factors in 10 C.F.R. 2.309(c); CLI-10-12, 71 NRC 319 (2010); LBP-09-6, 69 NRC 367 (2009); LBP-09-20, 70 NRC 565 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-10-1, 71 NRC 165 (2010) LBP-10-11, 71 NRC 609 (2010); LBP-10-21, 72 NRC 616 (2010)

in ruling on a nontimely petition, boards are to consider eight factors of 10 C.F.R. 2.309(c)(1) that will excuse the tardiness of the petition if, on balance, they weigh in favor of the petitioner; CLI-10-4, 71 NRC 56 (2010); CLI-10-12, 71 NRC 319 (2010); LBP-10-1, 71 NRC 165 (2010); LBP-10-4, 71 NRC 216 (2010); LBP-10-9, 71 NRC 493 (2010)

new information may constitute good cause for late intervention if petitioners file promptly thereafter; LBP-10-11, 71 NRC 609 (2010)

nontimely petitions to intervene and contentions, amended petitions, and supplemental petitions will not be entertained absent a determination by the Commission, the licensing board, or a presiding officer that the petition should be granted and/or the contentions should be admitted based upon a balancing of eight factors; CLI-09-15, 70 NRC 1 (2009)

petitioner must provide more than vague assertions that it will be able to assist in developing the record to satisfy a requirement for late filing; CLI-10-12, 71 NRC 319 (2010)

petitioner's failure to carefully read the governing procedural regulations does not constitute good cause for its late filing; CLI-10-12, 71 NRC 319 (2010)

petitioner's tardiness due to its belated realization that it could present its arguments before the NRC did not constitute good cause for its late filing; CLI-10-12, 71 NRC 319 (2010)

petitioner's vague statements that it would rely on its experts and documents from various sources are insufficient to satisfy a requirement for late filing; CLI-10-12, 71 NRC 319 (2010)

petitioners may protect their interests by filing a request for Commission action under 10 C.F.R. 2.206 rather than a late-filed intervention petition; CLI-10-12, 71 NRC 319 (2010)

petitioners may protect their interests by participating, when appropriate, as amici curiae; CLI-10-12, 71 NRC 319 (2010)

petitions and contentions filed after the initial 60-day deadline are admissible only upon a balancing of eight factors of 10 C.F.R. 2.309(c); LBP-09-26, 70 NRC 939 (2009)

under appropriate circumstances, petitions to intervene, requests for hearing, and new and amended contentions may be filed after the initial 30-day deadline; LBP-08-1, 67 NRC 37 (2008)

when a contested proceeding has been terminated following the resolution of all submitted contentions, an individual, group, or governmental entity that wishes to interpose an additional issue must submit a new intervention petition that addresses the standards in section 2.309(c)(1) that govern nontimely intervention petitions; LBP-10-21, 72 NRC 616 (2010)

when petitioner addresses 10 C.F.R. 2.309(c)(1)(viii), it should set out with as much particularity as possible the precise issues it plans to cover, identify its prospective witnesses, and summarize their proposed testimony; CLI-10-12, 71 NRC 319 (2010)

when petitioner seeks to introduce a new contention after the record has been closed, it should address the reopening standards contemporaneously with a late-filed intervention petition, which must satisfy the standards for both contention admissibility and late filing; LBP-10-21, 72 NRC 616 (2010)

where petitioner conceded that information in its addendum was previously available, admitted the lateness of her filing, and made no effort at the time of its submission to justify its lateness or explain why the board should consider it, her request to supplement her submission is denied; LBP-10-4, 71 NRC 216 (2010)

## SUBJECT INDEX

### INTERVENTION RULINGS

- a board appropriately reviews the materials cited in support of a contention, while making no pronouncements on whether the information contained in the application or the claims made in the petition are valid; CLI-10-9, 71 NRC 245 (2010)
- a board did not act unreasonably in basing standing on potential harm from new operations that would be similar to harm petitioner claims he has suffered from existing operations; CLI-09-12, 69 NRC 535 (2009)
- a board erred in referring a contention to the Staff for consideration in conjunction with the design certification rulemaking without first assessing the contention's admissibility; CLI-10-1, 71 NRC 1 (2010)
- a board may appropriately view petitioners' support for its contention in a light that is favorable to the petitioner; LBP-08-26, 68 NRC 905 (2008)
- a board's decision on one of the admission elements does not necessarily render any discussion of the other superfluous because a decision addressing only one of the two items creates the potential for significant delay if that single determination is later overturned on appeal; LBP-07-10, 66 NRC 1 (2007)
- a licensing board's review of a petition for standing is to avoid the familiar trap of confusing the standing determination with the assessment of a petitioner's case on the merits; LBP-08-24, 68 NRC 691 (2008)
- a nontimely petition or contention will not be entertained in the high-level waste proceeding unless the Commission, an Atomic Safety and Licensing Board, or a presiding officer designated to rule on the petition determines that the late petition or contention meets the late-filing requirements; CLI-08-25, 68 NRC 497 (2008)
- a ruling on standing does not constitute dicta simply because the board also concluded that the petitioner had failed to proffer an admissible contention; LBP-07-10, 66 NRC 1 (2007)
- a standing ruling in one proceeding is not dispositive of a determination in another proceeding with the same petitioner because the ruling was not the subject of appellate review; LBP-09-18, 70 NRC 385 (2009)
- absent a showing of good cause, a nontimely petition will not be excused unless the petitioner makes a compelling showing on the remaining factors; CLI-10-12, 71 NRC 319 (2010)
- although boards generally are to litigate a contention rather than the basis that provides the issue statement's foundational support, the reach of a contention necessarily hinges upon its terms coupled with its stated basis; LBP-08-16, 68 NRC 361 (2008)
- although boards may view petitioner's supporting information in a light favorable to the petitioner, it cannot do so by ignoring contention admissibility rules, which require the petitioner (not the board) to supply all of the required elements for a valid intervention petition; CLI-10-20, 72 NRC 185 (2010)
- although NRC recognizes a difference between contentions of omission and contentions of inadequacy, the board did not err in reading the contention as one of inadequacy despite the contentions' occasional use of terms such as "failed to address"; CLI-10-2, 71 NRC 27 (2010)
- although petitioner bears the burden of demonstrating standing, in ruling on standing a licensing board is to construe the petition in favor of the petitioner; LBP-09-1, 69 NRC 11 (2009); LBP-10-1, 71 NRC 165 (2010); LBP-10-21, 72 NRC 616 (2010)
- although petitioner had shown sufficient business contacts within close proximity to the plant to demonstrate standing, his intervention petition was rejected for failure to propose an admissible contention; CLI-10-7, 71 NRC 133 (2010)
- an appeal as of right from a board's ruling on an intervention petition is permitted upon denial of a petition to intervene and/or request for hearing on the question as to whether it should have been granted or upon the granting of a petition to intervene and/or request for hearing on the question as to whether it should have been wholly denied; CLI-10-16, 71 NRC 486 (2010)
- an automatic right to appeal a board decision denying a petition to intervene exists; CLI-07-25, 66 NRC 101 (2007)
- an exception to the general policy limiting interlocutory review permits an appeal of a board's ruling on contention admissibility when a board grants a petition to intervene following consideration of the full petition; CLI-09-18, 70 NRC 859 (2009)

## SUBJECT INDEX

an order denying a petition to intervene and/or request for hearing may be appealed to the Commission on the question of whether the petition and/or request should have been granted; CLI-10-20, 72 NRC 185 (2010)

any appeal by petitioners of the admitted contentions must abide the end of the case, i.e., wait approximately 2 or 3 years until the Staff issues its safety and environmental documents and the final disposition of the evidentiary hearing on the three admitted contentions; LBP-09-10, 70 NRC 51 (2009)

any supporting material provided by petitioner, including those portions of material that are not relied upon, is subject to board scrutiny; LBP-08-16, 68 NRC 361 (2008)

at the contention admissibility stage of a proceeding, a licensing board will not adjudicate merits-related issues; LBP-06-7, 63 NRC 188 (2006)

boards must avoid the familiar trap of confusing the standing determination with the assessment of petitioner's case on the merits; LBP-08-6, 67 NRC 241 (2008)

boards should consider the nature of petitioner's right under the Atomic Energy Act or the National Environmental Policy Act to be made a party to the proceeding, the nature and extent of petitioner's property, financial, or other interest in the proceeding, and the possible effect of any decision or order that may be issued in the proceeding on the petitioner's interest; LBP-09-13, 70 NRC 168 (2009)

challenges to board rulings on late-filed contentions normally fall under the rules for interlocutory review; CLI-09-18, 70 NRC 859 (2009)

determining whether a contention is adequately supported by a concise allegation of the facts or expert opinion is distinct from what is required to support petitioner's case at a hearing on the merits; LBP-07-16, 66 NRC 277 (2007); LBP-08-26, 68 NRC 905 (2008)

even if neither applicant nor NRC Staff challenges petitioner's standing, the board must make its own determination; LBP-08-15, 68 NRC 294 (2008)

good cause is accorded the greatest weight in ruling on a nontimely petition; CLI-10-12, 71 NRC 319 (2010)

if a board rejects an intervention petition in its entirety, then its sponsor may appeal to the Commission at that time; CLI-08-7, 67 NRC 187 (2008)

in assessing intervention petitions, licensing boards must determine whether standing elements are met even though there are no objections to petitioner's standing; LBP-09-23, 70 NRC 659 (2009)

in determining whether a petitioner has established standing, boards are to construe the petition in favor of the petitioner; LBP-07-10, 66 NRC 1 (2007); LBP-09-18, 70 NRC 385 (2009)

in passing on whether a particular contention meets the admissibility test, boards have confined their inquiry to whether, with or without references to particular sources or documents, the supporting expert opinion has offered enough to justify a conclusion that the contention is worthy of further consideration on its merits; LBP-09-6, 69 NRC 367 (2009)

in ruling on a nontimely petition, boards are to consider eight factors that will excuse the tardiness of the petition if, on balance, they weigh in favor of the petitioner; CLI-10-12, 71 NRC 319 (2010)

in ruling on contention admissibility a board is not to look to the merits of the contention; LBP-06-22, 64 NRC 229 (2006); LBP-09-17, 70 NRC 311 (2009)

in ruling on discretionary intervention requests, licensing boards will consider and balance enumerated factors weighing in favor of and against allowing intervention; LBP-09-23, 70 NRC 659 (2009)

in ruling on petitions to intervene in the high-level waste proceeding, boards must consider any failure of the petitioner to participate as a potential party in the pre-license application phase under 10 C.F.R. Part 2, Subpart J; CLI-08-25, 68 NRC 497 (2008); LBP-09-6, 69 NRC 367 (2009)

in ruling on standing, NRC cannot automatically assume that an organization member necessarily considers him- or herself potentially aggrieved by a particular outcome of the proceeding; CLI-08-19, 68 NRC 251 (2008)

in situations in which a board denies a petition to intervene in its entirety or grants a petition to intervene that, according to an opposing litigant, should have been denied in its entirety, the losing litigant has a right to Commission review; CLI-09-6, 69 NRC 128 (2009)

in the high-level waste proceeding, the presiding officer shall consider the factors in 10 C.F.R. 2.309 on standing to intervene; CLI-08-25, 68 NRC 497 (2008)

it is appropriate for a licensing board to defer consideration of all but one contention in some limited and exceptional circumstances; LBP-10-11, 71 NRC 609 (2010)

## SUBJECT INDEX

licensing boards must assess intervention petitions to determine whether elements for standing are met even if there are no objections to petitioner's standing; LBP-10-21, 72 NRC 616 (2010)

litigation efforts that a litigant considers unnecessary because they relate to a contention that the litigant considers to have been improperly admitted do not affect the basic structure of a proceeding at all, much less in a pervasive and unusual manner; CLI-09-6, 69 NRC 128 (2009)

material provided in support of a contention will be carefully examined by the board to confirm that on its face it does supply an adequate basis for the contention; LBP-08-16, 68 NRC 361 (2008)

on appeal, the Commission found fault with the board's failure to identify clearly which of the diffuse and, in some cases, unsupported claims were admitted for hearing; CLI-10-2, 71 NRC 27 (2010)

petitioner is not required to prove its case at the contention admission stage; LBP-09-17, 70 NRC 311 (2009)

petitioners have an automatic right to appeal a board decision wholly denying a petition to intervene; CLI-10-1, 71 NRC 1 (2010); CLI-10-9, 71 NRC 245 (2010); CLI-10-12, 71 NRC 319 (2010)

requirement to show distinct new harm from a license amendment application would not preclude standing to contest commencement of new operations at a separate site, where petitioner showed potential for harm to himself from new operation; CLI-09-12, 69 NRC 535 (2009)

the board did not make an impermissible merits ruling by observing that a contention was supported by the affidavit of an expert; CLI-10-2, 71 NRC 27 (2010)

the Commission cannot find clear error in a board's failing to acknowledge an argument that was not brought to its attention and to which the petitioners had no opportunity to respond; CLI-09-12, 69 NRC 535 (2009)

the Commission defers to a board's rulings on standing and contention admissibility unless the appeal points to an error of law or abuse of discretion; CLI-08-17, 68 NRC 231 (2008); CLI-09-7, 69 NRC 235 (2009); CLI-09-8, 69 NRC 317 (2009); CLI-09-9, 69 NRC 331 (2009); CLI-09-12, 69 NRC 535 (2009); CLI-09-14, 69 NRC 580 (2009); CLI-09-20, 70 NRC 911 (2009); CLI-09-22, 70 NRC 932 (2009); CLI-10-1, 71 NRC 1 (2010); CLI-10-2, 71 NRC 27 (2010); CLI-10-3, 71 NRC 49 (2010); CLI-10-7, 71 NRC 133 (2010); CLI-10-9, 71 NRC 245 (2010); CLI-10-12, 71 NRC 319 (2010); CLI-10-20, 72 NRC 185 (2010); CLI-10-21, 72 NRC 197 (2010)

the possibility that an interlocutory ruling may be wrong does not in itself justify interlocutory review; CLI-09-6, 69 NRC 128 (2009)

the presiding officer in the high-level waste proceeding shall resolve disputes concerning adoption of the DOE environmental impact statement by using, to the extent possible, the criteria and procedures that are followed in ruling on motions to reopen; LBP-09-6, 69 NRC 367 (2009)

the process of sifting and weighing participants' factual proffers often calls upon a board to make difficult choices, so that a petitioner who fails to provide specific information regarding the geographic proximity or the timing and duration of its visits only complicates matters for itself; LBP-09-18, 70 NRC 385 (2009)

there is an automatic right to appeal a licensing board standing and contention admissibility decision on the issue of whether the request for hearing or petition to intervene should have been wholly denied; CLI-09-22, 70 NRC 932 (2009)

to be appealable, a disputed order must dispose of the entire petition so that a successful appeal by a nonpetitioner will terminate the proceeding as to the appellee petitioner; CLI-09-18, 70 NRC 859 (2009)

to determine whether an interest is in the zone of interests of a statute, it is necessary first to discern the interests arguably to be protected by the statutory provision at issue, and then to inquire whether the petitioner's interests affected by the agency action are among them; LBP-08-24, 68 NRC 691 (2008)

to determine whether petitioners have standing, boards accept as true all material allegations of the complaint and construe the complaint in favor of the complaining party; CLI-10-20, 72 NRC 185 (2010)

were the Commission to permit litigants to successfully invoke interlocutory review based merely on an assertion that the licensing board erred in admitting or excluding a contention, then the Commission would be opening the floodgates to a potential deluge of interlocutory appeals from any number of participants who lose admissibility rulings; CLI-09-6, 69 NRC 128 (2009)

where intervenors have filed new contentions based on a supplement to a combined license application, in advance of a full board ruling on the original contentions, no appeal lies until the board acts on all contentions, both the original and the newly filed ones; CLI-09-18, 70 NRC 859 (2009)

## SUBJECT INDEX

with respect to an applicant's appeal, applicant must contend that, after considering all pending contentions, the board has erroneously granted a hearing to the petitioner; CLI-09-18, 70 NRC 859 (2009)

See also Abeyance of Contention

### INVESTIGATION

if a licensee has voluntarily provided information to the NRC, the voluntary nature of the submission is not compromised by the NRC's ability to conduct its own investigation into the same matter; CLI-08-6, 67 NRC 179 (2008)

requests for diagnostic evaluation team examination, safety culture assessment, and the NRC investigation at other licensee facilities are rejected for review because they are not requests for enforcement-type actions; DD-08-1, 67 NRC 347 (2008)

submission of information to a government agency is voluntary even if the company submitting the information feels pressure to do so as a result of its dealings with the federal government; CLI-08-6, 67 NRC 179 (2008)

### IRRADIATED FOODS

a decision on the safety of a food additive must give due weight to the anticipated levels and patterns of consumption of the additive; CLI-08-16, 68 NRC 221 (2008)

any food that has been intentionally subjected to irradiation is considered adulterated and unsafe, and therefore cannot be marketed legally unless the FDA Secretary has issued a regulation finding the specific use of the food irradiation safe, and prescribing the conditions under which the irradiation source (the food additive) may be safely used; CLI-08-16, 68 NRC 221 (2008)

for the FDA to determine that a food additive is safe, it must find, after a fair evaluation of the data, that there is a reasonable certainty in the minds of competent scientists that the substance is not harmful under all intended conditions of use; CLI-08-16, 68 NRC 221 (2008)

NEPA does not require the NRC to assess the potential health effects of consuming irradiated food; CLI-08-16, 68 NRC 221 (2008); CLI-10-18, 72 NRC 56 (2010)

whether NEPA requires the NRC to consider potential health effects of consuming irradiated food raises the kind of broad legal question appropriate for Commission interlocutory review; CLI-08-4, 67 NRC 171 (2008); CLI-08-16, 68 NRC 221 (2008)

### IRRADIATION

ionizing radiation to treat fresh fruits is safe if the radiation dose does not exceed 1 kGy (100 krad); CLI-08-16, 68 NRC 221 (2008)

sources, including radioactive isotopes, particle accelerators, and X-ray machines, intended for use in processing food are included in the term "food additives"; CLI-08-16, 68 NRC 221 (2008)

### IRRADIATOR

a categorical exclusion exists for materials licenses associated with irradiators; CLI-10-18, 72 NRC 56 (2010)

a design-based challenge involving a postulated cask drop on a sealed source is within the scope of, and material to, a licensing proceeding; LBP-06-12, 63 NRC 403 (2006)

an agency must affirmatively provide a reasoned explanation of the applicability of a categorical exclusion when special circumstances are alleged; LBP-06-4, 63 NRC 99 (2006)

at the contention admissibility stage, it is not necessary to establish a general probability threshold for irradiators to assess in qualitative terms the significance and plausibility of particular asserted siting-related threats; CLI-08-3, 67 NRC 151 (2008)

in an exceptional case, NRC may conduct an irradiator facility siting review if a unique threat is involved which may not be addressed by state and local requirements; CLI-08-3, 67 NRC 151 (2008)

irradiators are categorically excluded from the requirement to prepare an environmental analysis; CLI-08-16, 68 NRC 221 (2008)

licensees must have and follow emergency or abnormal event procedures, appropriate for the irradiator type, for a prolonged loss of electrical power; LBP-06-12, 63 NRC 403 (2006)

licensees must satisfy all applicable state and local siting, zoning, land use, and building code requirements; CLI-08-3, 67 NRC 151 (2008)

location of an irradiator may be a circumstance in which the categorical exclusions in 10 C.F.R. 51.22(b) might not apply; LBP-06-4, 63 NRC 99 (2006)

## SUBJECT INDEX

NRC Staff is required under NEPA to evaluate reasonable technological and geographical alternatives to the proposed irradiator; CLI-10-18, 72 NRC 56 (2010)

the degree of support necessary for an irradiator siting contention will depend on how obvious a threat the asserted risk is, given the irradiator facility's design and protective features; CLI-08-3, 67 NRC 151 (2008)

the proper scope of an irradiator licensing proceeding, and whether it requires or otherwise encompasses analyses of endemic site-related risks, is questioned; CLI-07-26, 66 NRC 109 (2007)

the Statement of Considerations for Part 36 indicates that in developing those regulations, the NRC considered whether there was a need to impose limits on irradiator siting, but determined that no specific siting limitations were warranted; CLI-08-3, 67 NRC 151 (2008)

there is no evidence that the Commission intended to exempt underwater irradiators from its conclusion that irradiators can be built anywhere that local authorities permit an industrial facility to be located; CLI-08-3, 67 NRC 151 (2008)

### IRREPARABLE INJURY

a party opposing a renewed license does not face irreparable harm by the mere issuance of a renewed license; CLI-08-13, 67 NRC 396 (2008)

a showing of a threat of immediate and irreparable harm that will result absent a stay is required for grant of the stay; CLI-10-8, 71 NRC 142 (2010)

a stay pending appeal is granted where the absence of a stay would mean the destruction of the business in its current form; CLI-10-8, 71 NRC 142 (2010)

deferral of review of board denial of rule waiver petition did not cause irreparable injury; CLI-10-29, 72 NRC 556 (2010)

increased litigation delay and expense do not justify interlocutory review of an admissibility decision; CLI-09-6, 69 NRC 128 (2009)

mere injuries, however substantial, in terms of money, time, and energy necessarily expended in the absence of a stay are not enough to establish irreparable injury; CLI-10-8, 71 NRC 142 (2010)

mere speculation concerning a nuclear accident does not satisfy the requirements for grant of a stay of effectiveness of a license amendment; CLI-06-8, 63 NRC 235 (2006)

no instance has occurred in NRC jurisprudence where either the Commission or its boards have ruled that expenses of any kind constituted irreparable injury; CLI-09-6, 69 NRC 128 (2009)

party seeking a stay did not show an overwhelming probability of success on the merits of its appeal sufficient to overcome its lack of showing of irreparable harm; CLI-09-23, 70 NRC 935 (2009)

rejection or admission of a contention, where petitioner has been admitted as a party and has other contentions pending, neither constitutes serious and irreparable impact nor affects the basic structure of the proceeding in a pervasive and unusual manner; CLI-08-7, 67 NRC 187 (2008); CLI-09-9, 69 NRC 331 (2009); CLI-10-16, 71 NRC 486 (2010)

the possibility that adequate compensatory or other corrective relief will be available at a later date, in the ordinary course of litigation, weighs heavily against a claim of irreparable harm; CLI-10-8, 71 NRC 142 (2010)

the possibility that the prevailing party would use the board's order in his favor to persuade a District Court to reconsider part of the penalty imposed on him in a parallel criminal proceeding did not constitute immediate, irreparable harm to the NRC Staff; CLI-09-23, 70 NRC 935 (2009)

the potential for litigation expense and delay is the kind of burden that licensees and applicants voluntarily assume when filing applications with the Commission; CLI-09-6, 69 NRC 128 (2009)

there is no presumption that irreparable damage occurs whenever there is a failure to adequately evaluate the environmental impact of a proposed project; LBP-06-27, 64 NRC 399 (2006)

when evaluating a motion for a stay the Commission places the greatest weight on irreparable injury to the moving party unless a stay is granted; CLI-10-8, 71 NRC 142 (2010)

whether the party seeking a stay faces potentially irreparable harm is the most important factor considered in the Commission's determination whether to grant a stay; CLI-09-23, 70 NRC 935 (2009)

without a showing of irreparable harm, the moving party must show that success on the merits is a virtual certainty to warrant issuance of a stay; CLI-10-8, 71 NRC 142 (2010)

See also Injury in Fact

### JUDGES

See Licensing Board Judges; Presiding Officer

## SUBJECT INDEX

### JURISDICTION

- a proceeding commences when a notice of hearing or notice of proposed action is issued; CLI-08-14, 67 NRC 402 (2008)
- concurrent but independent jurisdiction of two federal agencies is addressed; LBP-09-6, 69 NRC 367 (2009)
- EPA is responsible for promulgating standards for environmental protection, and NRC is tasked with promulgating the criteria it will apply in the licensing proceeding; LBP-09-6, 69 NRC 367 (2009)
- the mootness doctrine derives from the Constitution's limitation of federal courts' jurisdiction to cases or controversies; LBP-09-15, 70 NRC 198 (2009)
- when a claim becomes moot in federal court, the court loses jurisdiction to decide the merits of that claim; LBP-09-15, 70 NRC 198 (2009)
- when considering whether to undertake pendent appellate review of otherwise unappealable issues, the Commission has expressed a willingness to take up otherwise unappealable issues that are "inextricably intertwined" with appealable issues; CLI-08-27, 68 NRC 655 (2008)
- See also Licensing Boards, Jurisdiction; Nuclear Regulatory Commission, Jurisdiction

### JURY INSTRUCTION

- instruction to juries on deliberate ignorance or willful blindness can relieve the government of its constitutional obligation to prove the defendant's knowledge beyond a reasonable doubt; LBP-09-24, 70 NRC 676 (2009)
- instruction to juries on deliberate ignorance or willful blindness should be used with caution to avoid the possibility that the jury convict on the lesser standard that the defendant should have known his conduct was illegal; LBP-09-24, 70 NRC 676 (2009)
- the danger of instruction to juries on deliberate ignorance or willful blindness in an inappropriate case is that juries will convict on a basis akin to a standard of negligence; LBP-09-24, 70 NRC 676 (2009)
- the deliberate ignorance instruction defines when an individual has sufficient information so that he can be deemed to know something; LBP-09-24, 70 NRC 676 (2009)
- the warning to jurors that the added instruction on deliberate ignorance or willful blindness is not intended to allow them to base guilt on negligence or carelessness is sufficient to legitimize the instruction; LBP-09-24, 70 NRC 676 (2009)

### JURY VERDICT

- a fundamental tenet of the jury system assumes that the jury complies with the instructions provided by the trial court; LBP-09-24, 70 NRC 676 (2009)
- a special verdict is one where the jury answers specific questions submitted to it, thus enabling the court to determine the theory underlying the conviction; LBP-09-24, 70 NRC 676 (2009)

### LABOR ISSUES

- although the Commission is disinclined to step into the middle of a labor dispute or involve itself in the personnel decisions of licensees, it has recognized that there may be cases where employment-related contentions are closely tied to specific health-and-safety concerns or to potential violations of NRC rules that can be admitted for a hearing; CLI-06-21, 64 NRC 30 (2006)

### LABOR UNIONS

- a union in one facility lacks standing to participate in other interrelated license transfer proceedings, given that the union did not represent employees at the other facilities; CLI-08-19, 68 NRC 251 (2008)
- courts' refusal to grant automatic standing to unions may lie in the fact that unions are formed to represent their members in collective bargaining and other employment-related negotiations, not in administrative or judicial litigation; CLI-08-19, 68 NRC 251 (2008)
- damage to a nuclear power facility's reputation does not constitute a threatened injury to the interests of the Local's members who work at the facility; CLI-08-19, 68 NRC 251 (2008)
- requirements for representational standing apply to unions; CLI-08-19, 68 NRC 251 (2008)

### LAND USE

- in conducting its analysis of the impact of the license renewal on land use, applicant should consider the impact on real estate values that would be caused by license renewal or nonrenewal; LBP-08-13, 68 NRC 43 (2008)

## SUBJECT INDEX

### LAW OF THE CASE

- a prior decision should be followed unless it is clearly erroneous and its enforcement would work a manifest injustice, intervening controlling authority makes reconsideration appropriate, or substantially different evidence was adduced at a subsequent trial; LBP-06-11, 63 NRC 483 (2006)
- legal determinations made on appeal in a case are controlling precedent, becoming the law of the case for all later decisions in the same case, with only limited exceptions; LBP-06-11, 63 NRC 483 (2006); LBP-06-19, 64 NRC 53 (2006)
- the decision of an appellate tribunal should ordinarily be followed in all subsequent phases of that case, provided that the particular question in issue was actually decided or decided by necessary implication; LBP-06-1, 63 NRC 41 (2006)
- the statement of purpose and need in the final environmental impact statement is independent of any specific project area, and thus a prior decision of the Commission adjudicating an intervenor's challenge to the statement of purpose and need applies with equal force to all areas of a proposed project; LBP-06-19, 64 NRC 53 (2006)
- this doctrine is grounded in important considerations related to stability in the decisionmaking process, predictability of results, proper working relationships between trial and appellate courts, and judicial economy; LBP-06-11, 63 NRC 483 (2006)

### LEAKAGE

- applicant moves for summary disposition of a contention involving whether leak detection through monitoring wells is necessary as part of the plant's aging management program; LBP-07-12, 66 NRC 113 (2007)
- early site permit applicants must submit a safety assessment that includes an analysis of a fission product release from an accident, using the expected demonstrable containment leak rate and any fission product cleanup systems intended to mitigate the consequences of the accidents; LBP-09-19, 70 NRC 433 (2009)

### LEGAL AUTHORITIES

- authorities may be binding, adverse, or merely persuasive, but all authorities must possess some legal and precedential/persuasive value; LBP-10-21, 72 NRC 616 (2010)
- "authority" is defined as a legal writing taken as definitive or decisive, especially a judicial or administrative decision cited as a precedent, or a source, such as a statute, case, or treatise, cited in support of a legal argument; LBP-10-21, 72 NRC 616 (2010)
- generally, an additional authorities filing would be a submission that is the functional equivalent of a letter supplementing authorities; LBP-10-21, 72 NRC 616 (2010)

### LEGAL STANDARDS

- when an adjudicating agency retroactively applies a new legal standard that significantly alters the rules of the game, the agency is obliged to give litigants proper notice and a meaningful opportunity to adjust; CLI-10-23, 72 NRC 210 (2010)

### LIABILITY INSURANCE

- DOE will indemnify a uranium enrichment facility licensee against claims arising from nuclear incidents to the extent that licensee cannot obtain commercial insurance at reasonable rates; LBP-07-6, 65 NRC 429 (2007)
- proof of adequate insurance must be filed with the NRC before a license for the operation of a uranium enrichment facility may be issued; LBP-07-6, 65 NRC 429 (2007)
- the limit of liability for which DOE will indemnify a uranium enrichment facility licensee against claims arising from nuclear incidents is in excess of the liability insurance required under NRC regulations; LBP-07-6, 65 NRC 429 (2007)

### LICENSE AMENDMENT PROCEEDINGS

- contentions challenging NRC Staff's significant hazards consideration determination are not appropriate for review; LBP-08-19, 68 NRC 545 (2008); LBP-08-20, 68 NRC 549 (2008)
  - failure of a licensee to fulfill responsibilities associated with a license amendment issued by the Staff gives rise to an enforcement issue that does not come within the purview of a license amendment adjudication; LBP-07-7, 65 NRC 507 (2007)
  - in proceedings not involving power reactors, proximity alone is not sufficient to establish standing; LBP-08-6, 67 NRC 241 (2008)
- See also Materials License Amendment Proceedings; Operating License Amendment Proceedings

## SUBJECT INDEX

### LICENSE AMENDMENTS

a licensing board may modify or condition a license amendment; LBP-07-7, 65 NRC 507 (2007)  
although the analysis required by 10 C.F.R. 50.59 is not the same as the final safety analysis, it is nevertheless a formal, written analysis involving safety issues (accident probabilities and/or consequences); LBP-10-20, 72 NRC 571 (2010)

an application for an NRC permit must be made under oath or affirmation; CLI-07-12, 65 NRC 203 (2007)

an exemption can be granted if it is authorized by law and will not endanger life or property or the common defense and security, and is otherwise in the public interest; LBP-07-6, 65 NRC 429 (2007)

if, at some point in the future, applicant were to decide to change the ownership structure and to enter into a joint venture with another entity, its license would have to be amended to reflect this change; LBP-09-18, 70 NRC 385 (2009)

in determining whether an amendment will be issued, the Commission is guided by considerations that govern the issuance of initial licenses; LBP-08-9, 67 NRC 421 (2008)

licensee must apply for a license amendment and obtain NRC's approval before it can implement any proposed change; LBP-10-20, 72 NRC 571 (2010)

NRC has broad legal authority under the Atomic Energy Act and has authority to independently verify the facts contained in an application; CLI-07-12, 65 NRC 203 (2007)

NRC may revoke any license for a material false statement in the application; CLI-07-12, 65 NRC 203 (2007)

the function of 10 C.F.R. 50.59 is to deal with changes to a nuclear power plant, and it requires, as a prerequisite to any such change, that the licensee perform safety analyses in addition to those contained in the final safety analysis report; LBP-10-20, 72 NRC 571 (2010)

the standard for the Commission's decision on license renewal applications is whether or not the adverse environmental impacts of license renewal are so great that preserving the option of license renewal for energy planning decisionmakers would be unreasonable; LBP-07-4, 65 NRC 281 (2007)

there is no statutory or regulatory requirement that an applicant demonstrate any benefit from a requested license amendment; LBP-09-1, 69 NRC 11 (2009)

under certain conditions, licensee may implement changes to a nuclear power plant without obtaining a license amendment; LBP-10-20, 72 NRC 571 (2010)

See also Materials License Amendments; Operating License Amendments; Source Materials License Amendment

### LICENSE APPLICATIONS

any contention that fails to directly controvert the application or that mistakenly asserts that the application does not address a relevant issue can be dismissed; LBP-09-3, 69 NRC 139 (2009)

applicant's Safety Analysis Report is a required part of its license application and must include a preclosure safety analysis; LBP-08-1, 67 NRC 37 (2008)

contention alleging foreign ownership of applicant, failure to disclose, and various ramifications of such ownership, is admissible; LBP-09-1, 69 NRC 11 (2009)

corporate applicants must provide place of incorporation, citizenship of directors and principal officers, and whether owned, controlled, or dominated by a foreign corporation in their application; LBP-09-1, 69 NRC 11 (2009)

drafts of the license application are not Class 1, Class 2, or Class 3 documentary material under Subpart J, so the regulations do not require making draft license applications available on the Licensing Support Network; CLI-06-5, 63 NRC 143 (2006)

properly formulated contentions must focus on the license application in question, challenging either specific portions of or alleged omissions from the application so as to establish that a genuine dispute exists with the applicant on a material issue of law or fact; LBP-09-3, 69 NRC 139 (2009)

the decision to docket, and the subsequent handling of an application, is within the discretion of the Staff; LBP-10-17, 72 NRC 501 (2010)

withdrawal of an application after the issuance of a notice of hearing shall be on such terms as the presiding officer may prescribe; CLI-10-13, 71 NRC 387 (2010)

See also Combined License Application; Construction Authorization Application; License Renewal Applications; Materials License Applications; Operating License Amendment Applications; Operating License Applications; Uncontested License Applications

## SUBJECT INDEX

### LICENSE CONDITIONS

- a license renewal may be set aside or appropriately conditioned even after it has been issued, upon subsequent administrative or judicial review; CLI-10-8, 71 NRC 142 (2010)
- challenges to the position of an applicant that is based on a condition in its current license are permissible; LBP-08-6, 67 NRC 241 (2008)
- conditions are proposed that would ensure that DOE's documentary material is appropriately preserved and archived should its request to withdraw its application be granted; LBP-10-11, 71 NRC 609 (2010)
- creditor regulations may be augmented by license conditions as necessary to allow ownership arrangements, such as sale and leaseback, provided it can be found that such arrangements are not inimical to the common defense and security of the United States; CLI-09-15, 70 NRC 1 (2009)
- financial criteria of 10 C.F.R. 70.22(a)(8) and 70.23(a)(5) can be met by conditioning the license to require funding commitments to be in place prior to construction and operation; CLI-09-15, 70 NRC 1 (2009); CLI-10-4, 71 NRC 56 (2010)
- if a board determines after full adjudication that the license amendment should not have been granted, it may be revoked or conditioned; LBP-07-2, 65 NRC 153 (2007)
- if NRC Staff finds any severe accident mitigation alternative conferring a substantial benefit compared to its cost of implementation, it must make such SAMA a license condition for the renewed operating license; LBP-10-13, 71 NRC 673 (2010)
- if the Commission determines that there is a substantial increase in overall protection of public health and safety or common defense and security and that direct and indirect costs of implementation for that facility are justified, it may require backfitting to implement severe accident mitigation alternatives; LBP-10-13, 71 NRC 673 (2010)
- NRC Staff communications concerning the appropriate wording and scope are deliberative and thus may qualify for the deliberative process privilege; LBP-06-3, 63 NRC 85 (2006)
- NRC Staff communications concerning whether a potential license condition should be imposed are deliberative and thus may qualify for the deliberative process privilege; LBP-06-3, 63 NRC 85 (2006)
- NRC Staff could impose license conditions that are necessary to protect the environment under backfit procedures; CLI-10-30, 72 NRC 564 (2010)
- post-hearing resolution of licensing issues must not be employed to obviate the basic findings prerequisite to a license, including a reasonable assurance that the facility can be operated without endangering the health and safety of the public; CLI-06-1, 63 NRC 1 (2006)
- the addition of a condition on a license to operate would constitute a materially different result warranting reopening; LBP-08-12, 68 NRC 5 (2008)
- the Commission has the authority to appropriately condition a license approved by the board; CLI-07-12, 65 NRC 203 (2007)

See also Permit Conditions

### LICENSE RENEWAL APPLICATIONS

- a list of time-limited aging analyses together with a demonstration that the analyses have been projected to the end of the period of extended operation must be included in the application; CLI-08-28, 68 NRC 658 (2008)
- a technically accurate projection of the time-limited aging analysis that predicts that the component will fail due to aging during the 20-year period of extended operation will not suffice; LBP-08-25, 68 NRC 763 (2008)
- adequate aging management programs are both a required element of the LRA and a central finding that NRC must make before it can issue a license renewal; LBP-08-25, 68 NRC 763 (2008)
- although "severe accident," "severe accident mitigation alternatives," and "SAMA" are not defined in NRC's NEPA regulations, the NRC policy documents that originated the terms clearly limit them to nuclear reactors and do not include spent fuel pools or storage; LBP-10-15, 72 NRC 257 (2010)
- an integrated plant assessment identifying structures and components subject to aging management review, an evaluation of time-limited aging analyses, and a final safety analysis report supplement describing the plant's aging management programs must be included; CLI-08-23, 68 NRC 461 (2008)
- analysis of metal fatigue that ignores the known and substantial effects of the light-water reactor environment is insufficient, as both a technical and a legal matter; LBP-08-25, 68 NRC 763 (2008)
- applicant demonstrates compliance with the ASME Code by projecting the fatigue analysis for the nozzle through the extended operating period; CLI-08-28, 68 NRC 658 (2008)

## SUBJECT INDEX

- applicant is required to address new and significant information for either Category 1 or Category 2 issues in its environmental report for an LRA; LBP-08-13, 68 NRC 43 (2008)
- applicant is required to provide in its environmental report a site-specific analysis of entrainment, impingement, and heat shock/thermal discharge impacts from its once-through cooling systems; LBP-08-13, 68 NRC 43 (2008)
- applicant may demonstrate compliance with 10 C.F.R. 54.21(c)(1)(ii) by showing that the cumulative usage factor calculations have been reevaluated based on an increased number of assumed transients to bound the period of extended operation and that the resulting CUF remains less than or equal to 1.0 for the period of extended operation; CLI-10-17, 72 NRC 1 (2010)
- applicant must include an aging management review for the drywell shell; LBP-06-22, 64 NRC 229 (2006)
- applicant must submit with its application an environmental report, which must describe the proposed action, including the applicant's plans to modify the facility or its administrative control procedures, and the modifications directly affecting the environment or affecting plant effluents that affect the environment; LBP-07-4, 65 NRC 281 (2007)
- applicant seeking to satisfy aging management requirements by reliance upon existing time-limited aging analyses in its current licensing basis would rely on 10 C.F.R. 54.21(c)(1)(i) or (ii); CLI-10-17, 72 NRC 1 (2010)
- applicant who addresses the cumulative usage factor issue via an aging management program may reference Chapter X of the Generic Aging Lessons Learned Report; CLI-10-17, 72 NRC 1 (2010)
- applicant who chooses to rely upon an existing time-limited aging analysis may demonstrate compliance with 10 C.F.R. 54.21(c)(1)(i) by showing that the existing cumulative usage factor calculations remain valid because the number of assumed transients would not be exceeded during the period of extended operation; CLI-10-17, 72 NRC 1 (2010)
- applicant's decision to exclude renewable energy options from its alternatives analysis is reasonable because these sources are not always available and, with the current technology, cannot meet the goals of the LRA; LBP-08-13, 68 NRC 43 (2008)
- applicant's environmental report must include a severe accident mitigation alternatives analysis, outlining the costs and benefits of potential mitigation measures to reduce severe accident risk or consequences; CLI-10-30, 72 NRC 564 (2010); LBP-10-15, 72 NRC 257 (2010)
- applicants may in their site-specific environmental reports refer to and adopt the generic environmental impact findings found in 10 C.F.R. Part 51, Subpart A, Appendix B, Table B-1, for all Category 1 issues; LBP-06-10, 63 NRC 314 (2006)
- contentions that inappropriately focus on Staff's review of the application rather than on the errors and omissions of the application itself are inadmissible; CLI-10-27, 72 NRC 481 (2010)
- defect in an application can give rise to a valid contention of omission and cannot therefore be rejected as unripe; LBP-08-24, 68 NRC 691 (2008)
- each application must contain an evaluation of time-limited aging analyses, a list of TLAAs, a demonstration relating to TLAAs, and the actual TLAAs; LBP-08-25, 68 NRC 763 (2008)
- each application must contain an Integrated Plant Assessment for which specified components will demonstrate that the effects of aging will be adequately managed so that the intended function(s) will be maintained consistent with the current licensing basis for the period of extended operation; LBP-08-13, 68 NRC 43 (2008); LBP-08-25, 68 NRC 763 (2008)
- evaluation of time-limited aging analyses must demonstrate that the analyses will remain valid for the period of extended operation; CLI-10-17, 72 NRC 1 (2010)
- even if the time-limited aging analyses predict that the component will fail during the period of extended operation, a license renewal can still be granted if the applicant demonstrates that the effects of aging will be adequately managed during the period of extended operation; LBP-08-25, 68 NRC 763 (2008)
- from among the three general categories of structures, systems, and components that fall within the initial focus of the license renewal safety review, applicants must identify and list, in an integrated plant assessment, those structures and components subject to an aging management review; CLI-10-14, 71 NRC 449 (2010)
- if applicant can demonstrate by plant operating experience that the initially predicted number of stress cycles would not be exceeded even in the extended 20-year operating period, then 10 C.F.R. 54.21(c)(1)(i) would be satisfied; CLI-10-17, 72 NRC 1 (2010)

## SUBJECT INDEX

in addition to information supplied for the technical safety review, a license renewal applicant is required to submit a supplemental environmental report that complies with 10 C.F.R. Part 51; CLI-08-23, 68 NRC 461 (2008)

in making a decision, the Commission shall determine whether or not the adverse environmental impacts are so great that preserving the option of license renewal for energy planning decisionmakers would be unreasonable; LBP-07-11, 66 NRC 41 (2007)

information provided to the Commission by an applicant must be complete and accurate in all material respects; CLI-08-23, 68 NRC 461 (2008)

it is neither possible nor necessary for NRC Staff to verify each and every factual assertion in complex license applications; CLI-08-23, 68 NRC 461 (2008)

licensees and applicants are expected to adjust their aging management programs to reflect lessons learned in the future through individual and industrywide experiences; CLI-08-23, 68 NRC 461 (2008)

NEPA review in the license renewal process is unlike the Commission's Part 54 review because the NEPA review covers all environmental impacts associated with license renewal and is not limited to aging-related issues; LBP-10-15, 72 NRC 257 (2010)

NRC must provide a hearing upon the request of any person whose interest may be affected by the proceeding; LBP-07-11, 66 NRC 41 (2007)

NRC Staff safety review focuses on certain aging effects that would not reveal themselves through performance indicators associated with active functions; CLI-08-23, 68 NRC 461 (2008)

NUREG-1801 identifies generic aging management programs that the Staff has determined to be acceptable, based on the experiences and analyses of existing programs at operating plants during the initial license period; CLI-08-23, 68 NRC 461 (2008)

periodic amendment is required to reflect any changes to the plant's current licensing basis made after the license renewal application was submitted; CLI-08-23, 68 NRC 461 (2008)

petitioner must show why an alleged error or omission is of significance to the result of the proceeding; LBP-08-26, 68 NRC 905 (2008)

potential scope of adjudicatory hearings in license renewal proceedings is the same as the scope of the Staff's review; LBP-10-15, 72 NRC 257 (2010)

section 54.21(c)(1)(i)-(iii) requires that the applicant make its demonstration that the effects of aging will be adequately managed during the period of extended operation in the application, which is necessarily before the license may be granted; LBP-08-25, 68 NRC 763 (2008)

severe accident mitigation alternatives analyses are not required for the spent fuel storage impacts associated with license renewals; LBP-10-15, 72 NRC 257 (2010)

Staff's audit, or sampling, method of verifying a license renewal applicant's aging management programs, together with the other components of its review, enables the Staff to make the safety findings necessary for issuance of the license; CLI-08-23, 68 NRC 461 (2008)

technical accuracy of the time-limited aging analyses is necessary, but not sufficient, to demonstrate that it remains valid because a technically accurate TLAA that shows that the component will fail during the period of extended operation does not satisfy 10 C.F.R. 54.21(c)(1)(i); LBP-08-25, 68 NRC 763 (2008)

technical information that must be included as part of the time-limited aging analyses is described; CLI-08-28, 68 NRC 658 (2008)

the Commission shall determine whether or not the adverse environmental impacts of license renewal are so great that preserving the option of license renewal for energy planning decisionmakers would be unreasonable; LBP-06-10, 63 NRC 314 (2006); LBP-06-23, 64 NRC 257 (2006)

the "demonstrations" mandated by 10 C.F.R. 54.21(c)(1)(i) and (ii) require that the time-limited aging analyses both be performed in a technically accurate manner and produce a prediction that the component will not fail due to aging during the period of extended operation; LBP-08-25, 68 NRC 763 (2008)

the duty under NEPA to consider the environmental impacts of a proposed action incorporates, at least implicitly, considerations of the probability of a particular consequence occurring; LBP-10-15, 72 NRC 257 (2010)

the standard review plan presents one acceptable methodology for calculating the environmentally adjusted cumulative usage factor; CLI-10-17, 72 NRC 1 (2010)

## SUBJECT INDEX

- the time frame for filing a license renewal application is no more than 20 years prior to the expiration of the current operating license; LBP-07-4, 65 NRC 281 (2007)
- use of an aging management program identified in the Generic Aging Lessons Learned Report constitutes reasonable assurance that it will manage the targeted aging effect during the renewal period; CLI-10-17, 72 NRC 1 (2010)
- when an application is timely filed, the license is automatically extended by operation of law until final agency action is taken on the renewal request; LBP-09-13, 70 NRC 168 (2009)
- whether a severe accident mitigation alternative must be analyzed in an environmental report hinges on whether it could be cost-beneficial; LBP-08-13, 68 NRC 43 (2008)

See also Operating License Renewal

### LICENSE RENEWAL PROCEEDINGS

- a claim that the pads for storing spent fuel are defective is outside the scope of the proceeding; CLI-06-17, 63 NRC 727 (2006)
- a contention alleging that the applicant's proposed monitoring techniques are not adequate because they are based on computer models that were not benchmarked is admissible; LBP-06-20, 64 NRC 131 (2006)
- a contention questioning whether particular bits of information taken from an emergency plan are sufficiently accurate for use in computing the health and safety consequences of a severe accident, as an environmental issue, is admissible; LBP-06-23, 64 NRC 257 (2006)
- a contention that a plant's evacuation plan does not adequately protect the health and safety of public and plant workers must be denied because emergency planning is not within the scope of license renewal as a safety issue; LBP-07-11, 66 NRC 41 (2007)
- a contention that alleges that the applicant's plan to manage metal fatigue is too vague and is really only a "plan to develop a plan" raises an admissible and material issue as to whether the applicant has met its requirement to demonstrate that the effects of aging will be adequately managed; LBP-06-20, 64 NRC 131 (2006)
- a contention that applicant has failed to identify non-safety-related systems, structures, and components in the security area whose failure could prevent satisfactory accomplishment of the functions of safety-related systems, structures, and components is not admissible; LBP-06-20, 64 NRC 131 (2006)
- a contention that applicant's aging management program fails to adequately assure the continued integrity of the drywell liner for the requested license extension is denied; LBP-06-23, 64 NRC 257 (2006)
- a contention that applicant's aging management program is inadequate with regard to aging management of buried pipes and tanks that contain radioactively contaminated water because it does not provide for monitoring wells that would detect leakage is admitted; LBP-06-23, 64 NRC 257 (2006)
- a contention that applicant's severe accident mitigation alternatives analysis is deficient regarding input data on evacuation times, economic consequences, and meteorological patterns, resulting in incorrect conclusions about the costs versus benefits of possible mitigation alternatives, is admitted; LBP-06-23, 64 NRC 257 (2006)
- a contention that new and significant information about cancer rates in communities around a plant shows that another 20 years of operations may result in greater offsite radiological impacts on human health than was previously known is denied; LBP-06-23, 64 NRC 257 (2006)
- a contention that raises the question as to whether an NPDES permit that will expire before the proposed 20-year NRC license renewal would even take effect is admissible and material; LBP-06-20, 64 NRC 131 (2006)
- a contention that raises the question as to whether requirements of 10 C.F.R. 51.53(c)(3)(ii)(B) supplement the more general requirements of 10 C.F.R. 51.45(c) and 51.53(c), or instead displace and supplant the latter requirements, raises an admissible and material issue of interpretation and construction of the regulations; LBP-06-20, 64 NRC 131 (2006)
- a NEPA analysis of the potential impacts of deliberate attacks on a spent fuel pool and analysis of alternatives to mitigate spent fuel pool accidents are beyond the scope of a license renewal proceeding and therefore inadmissible; CLI-09-10, 69 NRC 521 (2009)
- a petitioner who fails to satisfy the contention pleading requirements in its initial contention submission may not use its reply to rectify those inadequacies or to raise new arguments, but may use the reply to flesh out contentions that have already met the pleading requirements; LBP-06-20, 64 NRC 131 (2006)

## SUBJECT INDEX

- a proposed new contention challenging the adequacy of applicant's recently issued metal fatigue calculations meets the three-factor test of 10 C.F.R. 2.309(f)(2)(i)-(iii) and the six-factor test of 10 C.F.R. 2.309(f)(1); LBP-07-15, 66 NRC 261 (2007)
- a request that the Commission require licensees to return spent fuel pools to their original low-density storage configuration and to use dry storage for any excess fuel is not appropriate for litigation; CLI-06-26, 64 NRC 225 (2006)
- absent a waiver pursuant to 10 C.F.R. 2.335, Category 1 issues are not subject to challenge in a relicensing proceeding because they involve environmental effects that are essentially similar for all plants and need not be assessed repeatedly on a site-specific basis; LBP-08-13, 68 NRC 43 (2008)
- additional briefing is requested on whether any additional severe accident mitigation alternatives should have been identified as potentially cost-beneficial, not whether further analysis may refine the details in the SAMA NEPA analysis; CLI-09-11, 69 NRC 529 (2009)
- adequacy or inadequacy of applicant's severe accident mitigation alternatives analysis is certainly within the scope of a license renewal proceeding; LBP-10-15, 72 NRC 257 (2010)
- affidavit support for a motion to reopen must provide sufficient information to support a prima facie showing that a deficiency exists in the application and the deficiency presents a significant safety issue; LBP-08-12, 68 NRC 5 (2008)
- an issue can be related to plant aging and still not warrant review at the time of a license renewal application, if the aging-related issue is adequately dealt with by regulatory processes on an ongoing basis; LBP-07-11, 66 NRC 41 (2007)
- any challenge to an NRC Staff decision to grant an exemption from a 1-hour barrier to a 24/30-minute barrier is a direct challenge to the current licensing basis and unrelated to the effects of plant aging and the license renewal application; LBP-08-13, 68 NRC 43 (2008)
- any new and significant information regarding the environmental impacts of license renewal of which the applicant is aware must be included in the environmental report even if this concerns a Category 1 issue; LBP-06-23, 64 NRC 257 (2006)
- applicant moves for summary disposition of a contention involving whether leak detection through monitoring wells is necessary as part of the plant's aging management program; LBP-07-12, 66 NRC 113 (2007)
- Category 1, or generic, issues need not be repeatedly assessed on a plant-by-plant basis, and license renewal applicants may in their ERs refer to and adopt the generic environmental impact findings found in 10 C.F.R. Part 51, Subpart A, Appendix B, Table B-1; LBP-06-23, 64 NRC 257 (2006)
- Category 2 issues are not essentially similar for all plants because they must be reviewed on a site-specific basis and thus challenges relating to these issues are proper; LBP-08-13, 68 NRC 43 (2008)
- Category 2 issues, for which an applicant must make a plant-specific analysis of environmental impacts in its environmental report and the NRC Staff must prepare a supplemental environmental impact statement, ordinarily are deemed to be within the scope of license renewal proceedings; LBP-06-7, 63 NRC 188 (2006); LBP-06-23, 64 NRC 257 (2006); LBP-07-11, 66 NRC 41 (2007)
- challenge to specific input data to the severe accident mitigation alternatives analysis could bring a contention on adequacy of an evacuation plan within the scope of license renewal; LBP-07-11, 66 NRC 41 (2007)
- contention challenging a particular use of a straight-line Gaussian air dispersion model in the applicant's SAMA analysis is admissible; CLI-09-11, 69 NRC 529 (2009)
- contentions pertaining to issues dealing with the current operating license, including the Updated Final Safety Analysis Report, are not within the scope of license renewal review; LBP-08-13, 68 NRC 43 (2008)
- contentions that applicant's ER fails to satisfy NEPA because it does not address the environmental impacts of severe spent fuel pool accidents, and fails to address severe accident mitigation alternatives that would reduce the potential for spent fuel pool water loss and fires, are found inadmissible; LBP-06-23, 64 NRC 257 (2006)
- emergency planning issues are not admissible in the context of license renewal; LBP-06-20, 64 NRC 131 (2006); LBP-06-23, 64 NRC 257 (2006); LBP-08-13, 68 NRC 43 (2008)
- environmental issues identified as "Category 1," or "generic," issues in 10 C.F.R. Part 51, Subpart A, Appendix B, are not within the scope of the proceeding; LBP-07-11, 66 NRC 41 (2007)

## SUBJECT INDEX

environmental issues that might otherwise be relevant to license renewal shall be resolved generically for all plants and thus are beyond the scope of a license renewal hearing; LBP-06-7, 63 NRC 188 (2006)

for determining the “likelihood” that a motion to reopen would change the outcome of a license renewal proceeding, the Commission indicated that a “would have been reached” standard is too strict, and a “might have been reached” standard is too lax; LBP-08-12, 68 NRC 5 (2008)

for systems, structures, and components subject to aging management review, discussion of proposed inspection and monitoring details will come before a board only as they are needed to demonstrate that the intended function of relevant SSCs will be maintained for the license renewal period; LBP-08-13, 68 NRC 43 (2008)

if a structure or component is already required to be replaced at mandated, specified time periods, it would fall outside the scope of review; LBP-07-11, 66 NRC 41 (2007)

if petitioner believes that current NRC regulations are inadequate, the venue for raising such a concern is a section 2.802 petition to institute a rulemaking action; LBP-08-13, 68 NRC 43 (2008)

intervenors may not challenge a licensee’s current licensing basis; LBP-07-17, 66 NRC 327 (2007)

intervention petitioners must demonstrate standing and proffer at least one admissible contention; CLI-06-24, 64 NRC 111 (2006)

issues already the focus of ongoing regulatory processes do not come within the NRC’s safety review of a license renewal application; LBP-07-11, 66 NRC 41 (2007)

issues related to the environmental impact of onsite spent fuel storage after the license renewal term are covered by NRC’s Waste Confidence Rule and are outside the scope of a license renewal proceeding because contentions may not challenge a regulation; LBP-06-20, 64 NRC 131 (2006)

issues relating to a plant’s current licensing basis are ordinarily beyond the scope of a license renewal review, because those issues already are monitored, reviewed, and commonly resolved as needed by ongoing regulatory oversight; LBP-06-7, 63 NRC 188 (2006); LBP-06-22, 64 NRC 229 (2006)

metal fatigue is an example of age-related degradation that properly falls within the scope of this proceeding; LBP-07-15, 66 NRC 261 (2007)

motion for summary disposition of contention questioning applicant’s handling of its severe accident mitigation alternatives analysis concerning evacuation times, economic consequences, and meteorological patterns is granted; LBP-07-13, 66 NRC 131 (2007)

NEPA imposes no duty on NRC to consider intentional malevolent acts; LBP-07-11, 66 NRC 41 (2007)

NEPA imposes no legal duty on the NRC to consider intentional malevolent acts on a case-by-case basis in conjunction with commercial power reactor license renewal applications; LBP-08-13, 68 NRC 43 (2008)

NEPA is the only legal grounds for an admissible contention relating to environmental justice; LBP-08-13, 68 NRC 43 (2008)

new and significant information that would normally fall within a Category 1 issue is not a proper subject for a contention, absent a waiver of the rule that Category 1 issues need not be addressed in a license renewal proceeding; LBP-07-11, 66 NRC 41 (2007)

NRC adjudicatory hearings are not environmental impact statement editing sessions; CLI-09-11, 69 NRC 529 (2009)

NRC Staff’s revision of the Final Safety Evaluation Report to account for applicant’s confirmatory analysis would not, standing alone, be a materially different result that justifies reopening the record, because it would neither change the outcome of the renewal proceeding nor impose a different licensing condition on an applicant; LBP-08-12, 68 NRC 5 (2008)

NRC’s public health and safety review ordinarily is limited to a review of the plant structures and components that will require an aging management review for the period of extended operation and the plant’s systems, structures, and components that are subject to an evaluation of time-limited aging analyses; LBP-06-7, 63 NRC 188 (2006)

Part 54 addresses safety-related issues and Part 51 addresses the environmental aspects; LBP-06-23, 64 NRC 257 (2006)

petitioner is not required to redo SAMA analyses in order to raise a material issue; LBP-08-13, 68 NRC 43 (2008)

petitioner need not submit a sensitivity analysis in order to establish that a SAMA-related contention is material; LBP-10-15, 72 NRC 257 (2010)

## SUBJECT INDEX

petitioner's assumption that, because it cannot check all SAMA analysis details, the analysis is incomplete or incorrect is mere speculation and is insufficient to support the admissibility of its contention; LBP-08-13, 68 NRC 43 (2008)

petitioners must demonstrate that an issue focuses on the potential impacts of an additional 20 years of nuclear power plant operation, not on everyday operational issues; CLI-06-4, 63 NRC 32 (2006)

proceeding will remain open during the pendency of a remand, during which time, petitioners are free to submit a motion to reopen the record should they seek to address any genuinely new issues related to the license renewal application that previously could not have been raised; CLI-10-17, 72 NRC 1 (2010)

reasonable alternatives for license renewal proceedings are limited to discrete electric generation sources that are technically feasible and commercially available; LBP-08-13, 68 NRC 43 (2008)

resolution of a summary disposition motion is governed by the standards for summary disposition set forth in Subpart G; LBP-07-12, 66 NRC 113 (2007)

safety contentions must focus on topics related to the detrimental effects of aging and related time-limited issues; LBP-07-15, 66 NRC 261 (2007)

safety issues that were reviewed for the initial license and that have been closely monitored by NRC inspection during the license term need not be reviewed again in this context; LBP-08-13, 68 NRC 43 (2008)

scope of a license renewal proceeding is limited to review of plant structures and components requiring an aging management review for the period of extended operation and to the plant's systems, structures, and components that are subject to an evaluation of time-limited aging analyses; LBP-06-22, 64 NRC 229 (2006); LBP-10-21, 72 NRC 616 (2010)

selection of appropriate hearing procedures is a contention-by-contention matter, dependent on the nature of the specific issues involved in the contention; LBP-06-20, 64 NRC 131 (2006); LBP-07-15, 66 NRC 261 (2007)

since a license amendment involves a facility with ongoing operations, a petitioner's challenge must show that the amendment will cause a distinct new harm or threat apart from the activities already licensed; LBP-06-22, 64 NRC 229 (2006)

spent fuel pool fires are Category 1 environmental issues and therefore are addressed generically in the generic environmental impact statement for license renewals; LBP-08-13, 68 NRC 43 (2008)

terrorism contentions are directly related to security and are therefore, under NRC license renewal rules, unrelated to the detrimental effects of aging, and consequently are beyond the scope of, not material to, and inadmissible in, a license renewal proceeding; CLI-07-8, 65 NRC 124 (2007); CLI-07-9, 65 NRC 139 (2007)

the Atomic Energy Act does not give a state an absolute right of cross-examination, but requires only that the Commission shall afford reasonable opportunity for state representatives to interrogate witnesses; LBP-06-20, 64 NRC 131 (2006)

the licensing board finds that petitioners have standing to intervene but have not submitted a contention that is admissible, and the proceeding must therefore be terminated; LBP-07-11, 66 NRC 41 (2007)

the scope of a proceeding is addressed, with regard to safety-related issues, in 10 C.F.R. Part 54, and, with regard to environmental issues, in 10 C.F.R. Part 51; LBP-07-11, 66 NRC 41 (2007)

the scope of the proceeding is limited to the potential detrimental effects of aging that are not routinely addressed by ongoing regulatory oversight programs; LBP-07-17, 66 NRC 327 (2007)

the term "severe accidents" encompasses only reactor accidents and not spent fuel pool accidents, which fall within the analysis of the generic Category 1 issue of onsite storage of spent fuel; LBP-06-23, 64 NRC 257 (2006)

there is no mandatory or automatic default to Subpart L procedures; LBP-07-15, 66 NRC 261 (2007)

to challenge a SAMA analysis, petitioner must, at a minimum, address the approximate relative cost and benefit of the SAMA; LBP-08-13, 68 NRC 43 (2008)

to reopen a closed record to introduce a new issue, movant has the burden of showing that the new information will likely trigger a different result; LBP-08-12, 68 NRC 5 (2008)

whether a plan is necessary to manage the cumulative effects of embrittlement of the reactor pressure vessels and associated internals is within the scope of this proceeding; LBP-08-13, 68 NRC 43 (2008)

## SUBJECT INDEX

whether the “reasonable assurance” standard is satisfied is based on sound technical judgment applied on a case-by-case basis not susceptible to formalistic quantification or mechanistic application; LBP-07-17, 66 NRC 327 (2007)

whether the reasonable assurance standard is satisfied is directly linked to an assessment of the adequacy of the aging management program; LBP-07-17, 66 NRC 327 (2007)

See also Operating License Renewal Proceedings

### LICENSE RENEWALS

a license renewal may be set aside or appropriately conditioned even after it has been issued, upon subsequent administrative or judicial review; CLI-10-8, 71 NRC 142 (2010)

a Part 51 environmental review has both a generic component and a plant-specific component; CLI-06-24, 64 NRC 111 (2006)

a party opposing a renewed license does not face irreparable harm by the mere issuance of a renewed license; CLI-08-13, 67 NRC 396 (2008)

a petition for review does not automatically prevent issuance of a renewed operating license; CLI-09-7, 69 NRC 235 (2009)

a renewed license takes effect immediately, with a term of up to 20 years plus the number of years remaining on the initial operating license; CLI-08-23, 68 NRC 461 (2008)

a waiver of 10 C.F.R. 2.335 is necessary to litigate an applicant’s failure to include new and significant information concerning a Category 1 issue in its environmental report; LBP-06-20, 64 NRC 131 (2006)

adjudicating Category 1 issues site by site based merely on a claim of new and significant information would defeat the purpose of resolving generic issues in a GEIS; CLI-07-3, 65 NRC 13 (2007)

although a contention regarding the risks of terrorism related to the high-density racking of spent fuel in pools is new and significant information concerning a Category 1 matter, the contention is not admissible; LBP-06-20, 64 NRC 131 (2006)

although the primary duties of NEPA fall on the NRC Staff in NRC proceedings, the initial requirement to analyze the environmental impacts of an action is directed to applicants; LBP-07-11, 66 NRC 41 (2007)

an issue can be related to plant aging and still not warrant safety review if the issue is adequately dealt with by regulatory processes on an ongoing basis; LBP-06-23, 64 NRC 257 (2006)

applicant must demonstrate, by a preponderance of the evidence, that its aging management program provides reasonable assurance that activities authorized by the renewed license will be conducted in a manner consistent with the current licensing basis, and that the effects of aging will be detected and corrected; LBP-07-17, 66 NRC 327 (2007)

applicant must provide additional analysis of even a Category 1 issue if new and significant information has surfaced; LBP-06-20, 64 NRC 131 (2006)

applicant need not discuss severe accident mitigation alternatives for generic, or Category 1, issues; CLI-07-3, 65 NRC 13 (2007)

applicant’s environmental report must contain a description of the proposed action, including plans to modify the facility or its administrative control procedures, and must describe in detail the modifications directly affecting the environment or affecting plant effluents that affect the environment; LBP-06-23, 64 NRC 257 (2006)

applicants must demonstrate how their programs will be effective in managing the effect of aging during the period of extended operations and identify any additional actions that will need to be taken to manage adequately the detrimental effects of aging; LBP-08-22, 68 NRC 590 (2008)

applicants must demonstrate that they will adequately manage the detrimental effects of aging for all important components and structures, with attention, for example, to metal fatigue, erosion, corrosion, thermal and radiation embrittlement, microbiologically induced effects, creep, and shrinkage; CLI-06-24, 64 NRC 111 (2006)

applicants must provide a plant-specific analysis of all Category 2 issues; CLI-09-10, 69 NRC 521 (2009)

as a general matter, NEPA imposes no legal duty on the NRC to consider intentional malevolent acts in conjunction with commercial power reactor license renewal applications; CLI-07-9, 65 NRC 139 (2007)

because Category 1 issues already have been reviewed on a generic basis for all plants, an applicant’s environmental report need not provide a site-specific analysis of these issues; CLI-09-10, 69 NRC 521 (2009)

## SUBJECT INDEX

burden is on applicant to show that concrete in containment structures will maintain its integrity during the extended period of operations or to develop an aging management plan that ensures that any indication of degradation is detected and remediated; LBP-08-13, 68 NRC 43 (2008)

condensate storage system buried pipes are outside the scope of a license renewal proceeding with respect to their "safety" functionality, but that does not eliminate the need for consideration of potential leaks from those buried pipes because of their role in fire protection; LBP-08-22, 68 NRC 590 (2008)

effects of heat shock on the protection and propagation of fish and shellfish is a Category 2 environmental issue and must be addressed on a case-by-case basis; CLI-07-16, 65 NRC 371 (2007)

environmental effects of storing spent fuel for an additional 20 years at the site of nuclear reactors would be not significant; CLI-07-3, 65 NRC 13 (2007)

even if a particular system falls within the scope of Part 54, not all structures and components comprising that system will necessarily be subject to Part 54 aging management requirements; LBP-08-22, 68 NRC 590 (2008)

failure of an applicant to include new and significant information concerning a Category 1 issue regarding the dangers of high-density racking of spent fuel in its environmental report does not give rise to an admissible contention; LBP-06-20, 64 NRC 131 (2006)

federal agencies must include in every recommendation or report on major federal actions significantly affecting the quality of the human environment, a detailed statement by the responsible official on the environmental impact of the proposed action; LBP-06-23, 64 NRC 257 (2006); LBP-07-11, 66 NRC 41 (2007)

generic environmental impacts analyzed in the GEIS for license renewal are designated "Category 1" issues, and the license renewal applicant is generally excused from discussing them; CLI-07-3, 65 NRC 13 (2007)

if a structure or component is already required to be replaced at mandated, specified time periods, it would fall outside the scope of safety review; LBP-08-22, 68 NRC 590 (2008)

if applicant's plant utilizes a once-through cooling system, applicant shall provide a copy of a Clean Water Act § 316a variance or equivalent state permit and supporting documentation; CLI-07-16, 65 NRC 371 (2007)

in conducting its analysis of the impact of the license renewal on land use, applicant should consider the impact on real estate values that would be caused by license renewal or nonrenewal; LBP-08-13, 68 NRC 43 (2008)

in evaluating metal fatigue, a component's cumulative usage factor is the fundamental parameter used to determine whether it will likely develop cracks during the license renewal period and thus is subject to an aging management plan; LBP-08-13, 68 NRC 43 (2008)

in uncontested operating license renewal proceedings, NRC Staff is authorized to issue a renewed license once the Director of the Office of Nuclear Reactor Regulation has made the appropriate findings; CLI-09-7, 69 NRC 235 (2009)

it is unnecessary and inappropriate to throw open the full gamut of provisions in a plant's current licensing basis to reanalysis during the safety review; LBP-08-22, 68 NRC 590 (2008)

monitoring, and the installation of monitoring wells, is a matter for ongoing operation and maintenance, and not within the scope of matters properly considered in a license renewal; LBP-08-22, 68 NRC 590 (2008)

new contention on the adequacy of consideration of the dissolved oxygen factor in the cumulative usage factor environmental analysis and use of inappropriate heat transfer equations was previously litigated and resolved and thus is not admissible; LBP-09-9, 70 NRC 41 (2009)

NRC is barred from imposing or second-guessing effluent limitations or water quality certification requirements imposed by EPA or an authorized state, but it is may address water quality matters in its assessment of environmental impacts; LBP-06-20, 64 NRC 131 (2006)

NRC's safety review is focused upon those potential detrimental effects of aging that are not routinely addressed by ongoing regulatory oversight programs; LBP-06-23, 64 NRC 257 (2006); LBP-07-11, 66 NRC 41 (2007)

one way to challenge a generic finding, or Category 1 issue, in a license proceeding is to apply for a waiver when special circumstances are such that the application of the rule or regulation would not serve the purposes for which the rule or regulation was adopted; CLI-07-3, 65 NRC 13 (2007)

## SUBJECT INDEX

only Category 2 environmental issues must be addressed in an environmental report and may therefore be litigated at an adjudicatory hearing; CLI-07-16, 65 NRC 371 (2007)

Part 51 was amended to establish environmental review requirements for license renewals that are both efficient and more effectively focused; LBP-07-11, 66 NRC 41 (2007)

Part 54 does not require a comprehensive preapplication baseline inspection; LBP-08-13, 68 NRC 43 (2008)

quality assurance programs must include written test procedures that incorporate the requirements and acceptance limits contained in applicable design documents, and, as appropriate, proof tests prior to installation, preoperational tests, and operational tests during nuclear power plant operation, of structures, systems, and components; LBP-08-22, 68 NRC 590 (2008)

quality assurance requirements apply to aging management plans; LBP-08-22, 68 NRC 590 (2008)

regulations established under Part 50, including compliance with the ASME Code, must be followed during the period of extended operation; CLI-08-28, 68 NRC 658 (2008)

relevant plant systems, structures, and components are those that are safety-related, or whose failure could affect safety-related functions, or that are relied on to demonstrate compliance with the NRC's regulations for fire protection, environmental qualification, pressurized thermal shock, anticipated transients without scram, and station blackout; CLI-08-23, 68 NRC 461 (2008)

review of a renewal application does not reopen issues relating to a plant's current licensing basis, or any other issues that are subject to routine and ongoing regulatory oversight and enforcement; CLI-06-24, 64 NRC 111 (2006)

site-specific claims relating to the safe ongoing operations of a nuclear reactor are not matters peculiar to plant aging or to the license extension period; CLI-07-8, 65 NRC 124 (2007)

Staff will issue a renewed license in contested proceedings only after notice to and authorization by the Commission; CLI-08-13, 67 NRC 396 (2008)

Staff's final supplemental environmental impact statement must take account of public comments concerning new and significant information on Category 1 findings; LBP-06-20, 64 NRC 131 (2006)

Staff's generic environmental impact statement for license renewal has already performed a discretionary analysis of terrorist acts in connection with license renewal and concluded that the core damage and radiological release from such acts would be no worse than the damage and release to be expected from internally initiated events; CLI-07-8, 65 NRC 124 (2007)

standards defining the findings NRC must make to support a license renewal are set forth in 10 C.F.R. 54.29; LBP-07-11, 66 NRC 41 (2007)

the Commission can legitimately rely on a state permit that expires only 5 years into the 20-year renewal period; CLI-07-16, 65 NRC 371 (2007)

the Commission will issue a renewed license if it determines, among other things, that there is reasonable assurance that the plant will operate in accordance with its current licensing basis during the period of extended operation; CLI-08-23, 68 NRC 461 (2008); LBP-08-22, 68 NRC 590 (2008)

the ER must describe the proposed action, including the applicant's plans to modify the facility or its administrative control procedures, and provide detail on the modifications directly affecting the environment or affecting plant effluents that affect the environment; LBP-07-11, 66 NRC 41 (2007)

the generic environmental impact statement provides data supporting the table of Category 1 and 2 issues in 10 C.F.R. Part 51, Subpart A, Appendix B; LBP-06-23, 64 NRC 257 (2006)

the Part 54 safety review is limited to those potential detrimental effects of aging that are not routinely addressed by ongoing regulatory oversight programs; CLI-06-24, 64 NRC 111 (2006)

the primary duties of NEPA fall on the NRC Staff in NRC proceedings, but the initial requirement to analyze the environmental impacts of an action is directed to applicants; LBP-06-23, 64 NRC 257 (2006)

the renewal may be set aside or appropriately conditioned even after it has been issued, upon subsequent administrative or judicial review; CLI-08-13, 67 NRC 396 (2008)

the statutory requirement that a federal agency contemplating a major action prepare an EIS serves NEPA's action-forcing purpose in two important respects; LBP-06-23, 64 NRC 257 (2006)

to the extent that any analyses performed during the initial licensing process were limited to the initial 40-year license period, applicant must show that it has reassessed these time-limited aging analyses and that these analyses remain valid for the period of extended operation; CLI-06-24, 64 NRC 111 (2006)

## SUBJECT INDEX

when a proceeding is contested, the Staff, as a matter of policy, seeks Commission approval to issue the license, even though issuance of the license is not stayed by the petition for review; CLI-09-7, 69 NRC 235 (2009)

when preparing the supplemental environmental impact statement, Staff must consider any significant new information related to Category 1 issues; LBP-06-20, 64 NRC 131 (2006)

where a petitioner argues that new information contradicts assumptions underlying the entire generic analysis for all facilities or a whole class of facilities, the appropriate remedy is a rulemaking petition; CLI-07-3, 65 NRC 13 (2007)

See also Materials License Renewal; Materials License Renewal Proceedings; Operating License Renewal  
LICENSE TERMINATION PLANS

if licensee wishes to challenge the compatibility category that is assigned to a particular regulation, including the license termination rule, it may do so at any time through submission of a petition for rulemaking; CLI-10-8, 71 NRC 142 (2010)

### LICENSE TRANSFER PROCEEDINGS

a petitioner cannot, for purposes of standing, successfully claim injury based on the financial qualifications and assurances of the transferor; CLI-07-22, 65 NRC 525 (2007)

a union in one facility lacks standing to participate in other interrelated license transfer proceedings, given that the union did not represent employees at the other facilities; CLI-08-19, 68 NRC 251 (2008)

although the Commission is disinclined to step into the middle of a labor dispute or involve itself in the personnel decisions of licensees, it has recognized that there may be cases where employment-related contentions are closely tied to specific health-and-safety concerns or to potential violations of NRC rules that can be admitted for a hearing; CLI-06-21, 64 NRC 30 (2006)

how the Commission determines proximity-based standing is described; CLI-08-19, 68 NRC 251 (2008)

if petitioners cannot show that their new or revised contentions could not have been submitted without the requested access to redacted information in the application, then they will have to meet not only the contention pleading requirements, but also the late-filing requirements; CLI-07-18, 65 NRC 399 (2007)

“issues” constitute “contentions” under 10 C.F.R. 2.309(f) and must therefore meet the standards for admissibility set forth in that regulation; CLI-07-18, 65 NRC 399 (2007)

NRC Staff ordinarily does not participate as a party in the adjudicatory portion of these proceedings; CLI-07-18, 65 NRC 399 (2007)

petitioners in direct license transfer cases who qualified for proximity-based standing lived within a 5-1/2-mile radius of their plant; CLI-08-19, 68 NRC 251 (2008)

proximity standing has been recognized at close distances where a petitioner frequently engages in substantial business and related activities in the vicinity of the facility, engages in normal, everyday activities in the vicinity, has regular and frequent contacts in an area near a licensed facility, or otherwise has visits of a length and nature showing an ongoing connection and presence; CLI-07-21, 65 NRC 519 (2007)

proximity-based standing has been denied where contact has been limited to mere occasional trips to areas located close to reactors; CLI-07-21, 65 NRC 519 (2007)

proximity-based standing in license transfer proceedings had been denied to petitioners within 5-10 miles, 12 miles, and 40 miles from licensed facilities; CLI-07-21, 65 NRC 519 (2007)

the Commission determines on a case-by-case basis whether the proximity presumption should apply, considering the obvious potential for offsite radiological consequences, or lack thereof, from the application at issue, and specifically taking into account the nature of the proposed action and the significance of the radioactive source; CLI-07-19, 65 NRC 423 (2007)

the longest specific distance for which the Commission has granted proximity-based standing in a post-Vogtle license transfer case is 6 to 6-1/2 miles; CLI-07-21, 65 NRC 519 (2007)

“transmission services” is a concept central to the determination of standing; CLI-06-2, 63 NRC 9 (2006)

### LICENSE TRANSFERS

direct transfers entail a change to operating and/or possession authority; CLI-08-19, 68 NRC 251 (2008)

if Staff approves a license transfer application prior to the Commission completing its adjudication, the application will lack the agency’s final approval until and unless the Commission concludes the adjudication in applicant’s favor; CLI-08-19, 68 NRC 251 (2008)

## SUBJECT INDEX

indirect transfers involve corporate restructuring or reorganizations that leave the licensee itself intact as a corporate entity and therefore involve no application for a new operating license; CLI-08-19, 68 NRC 251 (2008)

license transfer applicants who have received Staff approval but are still awaiting the results of a Commission adjudication are free to act in reliance on the Staff's order; CLI-08-19, 68 NRC 251 (2008)

prospective new owner and operator of facilities are not electric utilities and must therefore demonstrate financial qualifications to own and/or operate the plant; CLI-07-18, 65 NRC 399 (2007)

Staff approval of a license transfer could be rescinded if the Commission later determines that intervenors have raised valid objections to the license transfer application; CLI-08-19, 68 NRC 251 (2008)

the Commission declined to adopt a proximity presumption in an independent spent fuel storage installation license transfer proceeding, where the petitioner had not demonstrated that the mere transfer of the ISFSI somehow increased his risk of radiological harm; LBP-09-20, 70 NRC 565 (2009)

### LICENSEE CHARACTER

a genuine dispute exists despite the fact that character or integrity is not required by regulation to be addressed in the license application; LBP-09-6, 69 NRC 367 (2009)

a single, past violation of licensee's state permit could not demonstrate an ongoing pattern of violations or disregard for regulations that might be expected to recur in the future; CLI-09-9, 69 NRC 331 (2009)

allegations of several serious safety problems that had persisted with respect to the reactor over a period of years are a legitimate attack on management quality and integrity; CLI-09-9, 69 NRC 331 (2009)

an investigation into applicant's character should also include a review of the applicant's good character; LBP-09-6, 69 NRC 367 (2009)

as long as petitioner alleges, with sufficient support, that applicant's bad character or lack of integrity has direct and obvious relevance to the licensing action at issue in the proceeding, a character-based contention is admissible; LBP-09-6, 69 NRC 367 (2009)

contentions that DOE lacks management integrity to operate a high-level waste geologic repository are impermissible challenges to the Nuclear Waste Policy Act and are therefore beyond the scope of the proceeding; CLI-09-14, 69 NRC 580 (2009)

historical actions by an applicant are not relevant to its current fitness unless there is some direct and obvious relationship between the asserted character issues and the licensing action in dispute; CLI-09-14, 69 NRC 580 (2009); CLI-10-20, 72 NRC 185 (2010)

in making determinations about integrity or character, the Commission may consider evidence bearing upon the licensee's candor, truthfulness, willingness to abide by regulatory requirements, and acceptance of responsibility to protect public health and safety; LBP-09-6, 69 NRC 367 (2009)

in the absence of evidence to the contrary, NRC does not presume that a licensee will violate agency regulations wherever the opportunity arises; CLI-10-20, 72 NRC 185 (2010); LBP-06-7, 63 NRC 188 (2006); LBP-06-12, 63 NRC 403 (2006); LBP-10-20, 72 NRC 571 (2010)

lack of either technical competence or character qualifications on the part of licensee or applicant is sufficient grounds for the revocation of a license or the denial of a license application; LBP-09-6, 69 NRC 367 (2009)

license renewal is an appropriate occasion for appraising the entire past performance of the licensee; CLI-09-9, 69 NRC 331 (2009)

NRC is not barred from considering licensee's past and continuing managerial and performance problems when it determines whether licensee has demonstrated that actions will be taken to manage the effects of aging during the period of extended operation; LBP-10-15, 72 NRC 257 (2010)

petitioner cannot base standing or a contention on the possibility that the licensee will violate the terms of its license; CLI-10-20, 72 NRC 185 (2010)

potential scope of adjudicatory hearings in license renewal proceedings is the same as the scope of the Staff's review; LBP-10-15, 72 NRC 257 (2010)

the character or integrity of an applicant is a proper consideration in a licensing proceeding; LBP-09-6, 69 NRC 367 (2009)

the Commission's decision not to entertain a state intervenor's integrity and competence contentions in the high-level waste repository proceeding is consistent with its practice of extending comity to other governmental entities; CLI-09-14, 69 NRC 580 (2009)

## SUBJECT INDEX

to be litigable, there must be some direct and obvious relationship between licensee character issues and the licensing action in dispute; CLI-06-22, 64 NRC 37 (2006)  
to raise an admissible issue, allegations of management improprieties must be of more than historical interest; CLI-09-9, 69 NRC 331 (2009)  
when DOE is before the Commission, a heightened standard applies for the admissibility of integrity contentions beyond what is imposed by 10 C.F.R. 2.309(f)(1); LBP-09-6, 69 NRC 367 (2009)

### LICENSEE EMPLOYEES

although not required by regulation, settlement agreements that contain language reinforcing employees' rights to raise safety concerns and communicate with the NRC avoid the possibility of being construed in a way that could be a violation; DD-10-1, 72 NRC 149 (2010)  
an employee who contributes to submission of information to the NRC that the employee knows is not complete or accurate in some material respect places the licensee in violation; LBP-09-24, 70 NRC 676 (2009)  
deliberate submission to the NRC of information that an employee knows to be incomplete or inaccurate in some respect material to the NRC is a violation; CLI-10-23, 72 NRC 210 (2010); LBP-09-24, 70 NRC 676 (2009)  
nondisparagement clauses in retention bonus agreements are common in employment agreements and NRC should not interfere with these agreements unless it finds such a clause violates 10 C.F.R. 50.7(f) or is applied in a fashion that prevents or retaliates against an employee for engaging in protected activities such as communicating with NRC; DD-10-1, 72 NRC 149 (2010)  
operating reactor licensees are not required to implement an employee concerns program, but are required to establish and implement an effective corrective action program; DD-10-1, 72 NRC 149 (2010)  
petitioner's request for action concerning deficiencies in licensee's employee concerns program is denied; DD-10-1, 72 NRC 149 (2010)  
the purpose of 10 C.F.R. 50.7(f) is to ensure that licensees do not enter into employment agreements that would prohibit, restrict, or otherwise discourage an employee or former employee from providing the NRC with information of regulatory significance; DD-10-1, 72 NRC 149 (2010)

### LICENSEES

a license renewal proceeding is an appropriate occasion for appraising the entire past performance of the licensee; LBP-08-24, 68 NRC 691 (2008)  
a licensee employee who contributes to submission of information to the NRC that the employee knows is not complete or accurate in some material respect places the licensee in violation; LBP-09-24, 70 NRC 676 (2009)  
a licensee need not be an electric utility, but a non-electric utility license applicant must meet heightened financial qualifications; LBP-07-4, 65 NRC 281 (2007)  
after completion of decommissioning, neither licensee nor the NRC retains any continuing obligation or jurisdiction, respectively, with respect to a site, unless new information shows that the Part 20 criteria were not met and the residual radioactivity remaining on the site could result in a significant threat to public health and safety; CLI-09-1, 69 NRC 1 (2009)  
compliance with the current licensing basis is mandatory unless the licensing basis is properly changed or the licensee is formally excused by the NRC from compliance; LBP-06-16, 63 NRC 737 (2006)  
if a licensee has voluntarily provided information to the NRC, the voluntary nature of the submission is not compromised by the NRC's ability to conduct its own investigation into the same matter; CLI-08-6, 67 NRC 179 (2008)  
licensee remains authorized to own and possess the facility even after the operating license expires; LBP-09-17, 70 NRC 311 (2009)  
neither a uranium enrichment facility nor a nuclear power plant may be owned, controlled, or dominated by a foreign entity; CLI-09-9, 69 NRC 331 (2009)  
written commitments that are docketed and in effect constitute part of the current licensing basis, which is the set of NRC requirements applicable to a specific plant; LBP-06-16, 63 NRC 737 (2006)  
See also Applicants

### LICENSES

an NRC license is unnecessary for construction activity on an independent spent fuel storage installation; CLI-06-23, 64 NRC 107 (2006)

## SUBJECT INDEX

See Combined Licenses; General Licenses; Materials Licenses; Operating Licenses; Senior Reactor Operator License

### LICENSING, PERFORMANCE-BASED

NRC uses performance-based licensing as an additional way to decrease the administrative burden of regulation while ensuring the continued protection of public health and safety; LBP-06-19, 64 NRC 53 (2006)

### LICENSING BASIS

during the renewal term, this consists of the current licensing basis together with new commitments to monitor, manage, and correct age-related degradation unique to license renewal; LBP-08-25, 68 NRC 763 (2008)

### LICENSING BOARD DECISIONS

a board has a duty not only to resolve contested issues, but to articulate in reasonable detail the basis for the course of action chosen; CLI-09-14, 69 NRC 580 (2009)

a board is free to decide an issue on a theory different from those argued by the litigants, but only if it explains the specific basis of its ruling and gives the litigants a chance to present arguments and, where appropriate, evidence regarding the board's new theory; CLI-09-3, 69 NRC 68 (2009)

a board's decision on one of the admission elements does not necessarily render any discussion of the other superfluous because a decision addressing only one of the two items creates the potential for significant delay if that single determination is later overturned on appeal; LBP-07-10, 66 NRC 1 (2007)

a board's ultimate NEPA judgments can be made on the basis of the entire adjudicatory record in addition to the Staff's final environmental impact statement; LBP-09-7, 69 NRC 613 (2009)

a licensing board need not formally reopen the record in order to assess the relative worth of the parties' competing evidence; LBP-08-12, 68 NRC 5 (2008)

a ruling on standing does not constitute dicta simply because the board also concluded that the petitioner had failed to proffer an admissible contention; LBP-07-10, 66 NRC 1 (2007)

although a board is free to view intervenors' support for its contention in the light most favorable to intervenors, the board may not ignore the contention admissibility requirements of 10 C.F.R. 2.309(f)(1); CLI-09-3, 69 NRC 68 (2009)

although the Commission has authority to make de novo findings of fact, it does not do so where a licensing board has issued a plausible decision that rests on carefully rendered findings of fact; CLI-09-7, 69 NRC 235 (2009)

any licensing board merits litigation-based findings have the effect of amending or supplementing the final environmental impact statement; LBP-07-3, 65 NRC 237 (2007)

boards must decide whether the final environmental impact statement alternatives discussion is sufficiently complete to aid the Commission in developing and exploring appropriate alternatives to recommended courses of action in any proposal that involves unresolved conflicts concerning alternative uses of available resources; LBP-09-7, 69 NRC 613 (2009)

by its terms, 10 C.F.R. 2.342(a) applies to a stay of a decision or action of a presiding officer or licensing board and therefore does not apply to NRC's approval of a state's application to become an Agreement State; CLI-10-8, 71 NRC 142 (2010)

decisions have no precedential effect beyond the immediate proceeding in which they were issued; LBP-09-15, 70 NRC 198 (2009)

decisions on evidentiary questions fall within boards' authority to regulate hearing procedures; CLI-10-5, 71 NRC 90 (2010)

even if an environmental impact statement prepared by the Staff is found to be inadequate in certain respects, the board's findings, as well as the adjudicatory record, become, in effect, part of the final EIS; LBP-09-7, 69 NRC 613 (2009)

factual material that has not been introduced into evidence cannot serve as the basis for a decision because it deprives opposing parties of an opportunity to impeach it by cross-examination or to rebut it with other evidence; LBP-08-12, 68 NRC 5 (2008)

if a board does not explain how it has arrived at its findings of fact, it would fail to comply with its responsibilities under the Administrative Procedure Act to issue a reasoned decision; CLI-10-23, 72 NRC 210 (2010)

## SUBJECT INDEX

if the presiding officer determines that any of the admitted contentions constitute pure issues of law, those contentions must be decided on the basis of briefs or oral argument according to a schedule determined by the presiding officer; LBP-09-6, 69 NRC 367 (2009)

in evaluating a motion to reopen the record, a board properly considers the movant's new allegations and the nonmovant's contrary evidence in determining whether there is a real issue at stake warranting a reopened hearing; LBP-08-12, 68 NRC 5 (2008)

in uncontested cases, boards are expected to issue their final initial decisions generally within 4 to 6 months of the Staff's safety evaluation report and final environmental impact statement issuances; CLI-06-20, 64 NRC 15 (2006)

licensing board rulings are not precedential; CLI-10-2, 71 NRC 27 (2010)

on appeal, the Commission usually defers to boards' fact-based findings; CLI-06-12, 63 NRC 495 (2006); CLI-06-19, 64 NRC 9 (2006); CLI-06-29, 64 NRC 417 (2006)

the adjudicatory record and board decision and any Commission appellate decisions become, in effect, part of the final environmental impact statement; LBP-06-19, 64 NRC 53 (2006)

the admissibility of proposed contentions may be determined after the Staff has issued the materials license amendment; CLI-07-20, 65 NRC 499 (2007)

the Commission defers to a board's factual findings and generally steps in only to correct clearly erroneous findings, i.e., findings not even plausible in light of the record viewed in its entirety; CLI-10-5, 71 NRC 90 (2010)

the Commission does not exercise its authority to make de novo findings of fact where a licensing board has issued a plausible decision that rests on carefully rendered findings of fact; CLI-10-5, 71 NRC 90 (2010); CLI-10-18, 72 NRC 56 (2010)

the Commission generally defers to board decisions regarding standing and contention admissibility in the absence of clear error or an abuse of discretion; CLI-06-24, 64 NRC 111 (2006); CLI-08-17, 68 NRC 231 (2008); CLI-10-7, 71 NRC 133 (2010)

the Commission may take discretionary review of a licensing board's initial decision; CLI-10-23, 72 NRC 210 (2010)

the Commission will not overturn a hearing judge's findings simply because the Commission might have reached a different result; CLI-10-23, 72 NRC 210 (2010)

the Commission will review decisions on evidentiary questions under an abuse of discretion standard; CLI-10-5, 71 NRC 90 (2010)

the Commission will review legal questions de novo, and will reverse a licensing board's legal rulings if they are a departure from or contrary to established law; CLI-09-7, 69 NRC 235 (2009)

the Commission's standard of clear error for overturning a board's factual finding is quite high, and the Commission defers to its boards' findings unless clearly erroneous, i.e., not even plausible in light of the record viewed in its entirety; CLI-09-7, 69 NRC 235 (2009)

the fact that the board accorded greater weight to one party's evidence than to the other's is not a basis for overturning the initial decision; CLI-10-23, 72 NRC 210 (2010)

the precedential value of a decision that is not affirmed by the Commission is limited to its power to persuade; LBP-06-1, 63 NRC 41 (2006)

the standard of clear error for overturning a board's factual finding is quite high; CLI-10-5, 71 NRC 90 (2010)

unless there is a strong reason to believe that in a particular case a board has overlooked or misunderstood important evidence, the Commission will defer to its findings of fact; CLI-09-7, 69 NRC 235 (2009)

unreviewed board decisions have no binding effect on a later board; CLI-10-7, 71 NRC 133 (2010)

unreviewed board rulings have no precedential effect; CLI-10-23, 72 NRC 210 (2010); CLI-10-29, 72 NRC 556 (2010); CLI-10-30, 72 NRC 564 (2010)

when a board decision supplements or differs from the findings of the Staff as set forth in its final environmental impact statement, the FEIS is deemed modified by the board's decision to that extent; LBP-06-8, 63 NRC 241 (2006)

when a hearing is held on a proposed action, the licensing board's initial decision on that action constitutes the record of decision; LBP-06-8, 63 NRC 241 (2006)

## SUBJECT INDEX

where a board's decision rests in part on facts officially noticed, any party wishing to controvert the facts officially noticed may do so by filing a motion for reconsideration or an appeal from the decision; LBP-08-25, 68 NRC 763 (2008)

where a party merely complains that the board improperly weighed the evidence and identifies no clear board factual or legal error requiring further Commission consideration on appellate review, the Commission is disinclined to second-guess the board's assessment of the party's affidavits; CLI-08-28, 68 NRC 658 (2008)

within 45 days after the filing of answers and replies the presiding officer must issue a decision on each request for hearing/petition to intervene, absent an extension from the Commission; CLI-07-20, 65 NRC 499 (2007)

See also Initial Decisions; Intervention Rulings; Referral of Ruling

### LICENSING BOARD JUDGES

a judge should disqualify himself if he has personal knowledge of disputed evidentiary facts concerning the proceeding; CLI-10-22, 72 NRC 202 (2010)

boards include two judges with technical expertise; CLI-10-17, 72 NRC 1 (2010)

if a licensing board member declines to grant a party's recusal motion, the motion is referred to the Commission to determine the sufficiency of the grounds alleged; CLI-10-22, 72 NRC 202 (2010)

issues may arise about which the presiding judges lack specific expertise, but they use their training, experience, knowledge, and judgment to ask the right questions and reach sound decisions; CLI-10-17, 72 NRC 1 (2010)

mere experience or background in a relevant technical field does not imply knowledge of the specific disputed facts in a case; CLI-10-22, 72 NRC 202 (2010)

the disqualification standard under 28 U.S.C. § 455 is not directed to administrative judges, but the Commission and its adjudicatory boards have applied it in assessing a motion for disqualification under 10 C.F.R. 2.313, and it provides a helpful framework for such an assessment; CLI-10-22, 72 NRC 202 (2010)

the standard for disqualification of a judge under 28 U.S.C. § 455 is whether the reasonable person who knows all the circumstances would harbor doubts about the judge's impartiality; CLI-10-22, 72 NRC 202 (2010)

### LICENSING BOARD ORDERS

a board erred in admitting a contention on adverse health effects of exposure to arsenic, where petitioners had not laid a foundation and their arguments were speculative; CLI-09-9, 69 NRC 331 (2009)

a board has a duty not only to resolve contested issues, but to articulate in reasonable detail the basis for the course of action chosen; CLI-09-14, 69 NRC 580 (2009)

a licensing board erred in referring a contention to the NRC Staff without making an appropriate contention admissibility determination; CLI-10-9, 71 NRC 245 (2010)

Commission rules in 10 C.F.R. 2.311(d) set a 10-day limit for appealing the selection of a particular hearing procedure because an appeal cannot wait until a board issues a decision on the merits of a contention; CLI-09-7, 69 NRC 235 (2009)

denial of a petition for rule waiver is interlocutory and not immediately reviewable; CLI-10-29, 72 NRC 556 (2010)

petitioners' contention that NRC Staff has not consulted with an affected Indian tribe is premature because it was filed prior to the time for the Staff to act, and the board erred in admitting it; CLI-09-9, 69 NRC 331 (2009)

the board erred in admitting a contention concerning the economic value of wetlands without requiring petitioners to demonstrate that the proposed licensing action or no-action alternative would have any effect on wetlands; CLI-09-9, 69 NRC 331 (2009)

the Commission gives substantial deference to a board's rulings on contention admissibility in the absence of clear error or abuse of discretion; CLI-09-16, 70 NRC 33 (2009)

the presiding officer may grant extensions of time for individual milestones for the participants' filings, and may delay its own issuances for up to 30 days beyond the date of the milestone set in the hearing schedule; CLI-08-18, 68 NRC 246 (2008)

### LICENSING BOARDS

a board's chief function is to carefully review all of the evidence, including testimony and exhibits, and to resolve any factual disputes; CLI-09-7, 69 NRC 235 (2009)

## SUBJECT INDEX

a simple sufficiency review of uncontested issues should be conducted by boards; LBP-06-17, 63 NRC 747 (2006); LBP-06-28, 64 NRC 460 (2006)

boards have an obligation to establish a case scheduling order, and to advise the Commission of any significant delay in meeting major activities set forth in the hearing schedule; CLI-09-17, 70 NRC 309 (2009)

boards must perform two types of inquiries with respect to safety matters in uncontested early site permit proceedings; LBP-06-28, 64 NRC 460 (2006)

boards should not second-guess underlying technical or factual findings by the NRC Staff; LBP-06-28, 64 NRC 460 (2006)

Congress considers the Atomic Safety and Licensing Board to be a panel of experts; CLI-10-17, 72 NRC 1 (2010)

contested and uncontested issues should be reviewed differently, with considerably more deference given to NRC Staff on uncontested issues; LBP-06-17, 63 NRC 747 (2006)

even if standing is undisputed, its jurisdictional nature requires independent examination; LBP-07-10, 66 NRC 1 (2007)

extra-record conduct such as stares, glares, and scowls do not constitute evidence of personal bias, nor do occasional outbursts toward counsel; CLI-10-17, 72 NRC 1 (2010)

for a licensing board to review a settlement agreement for compliance with agency regulations, and to evaluate whether the agreement is plainly in the public interest, the wording of the agreement must be clear enough for the board to ascertain unambiguously what its terms signify; LBP-06-26, 64 NRC 431 (2006)

for early site permits, section 52.21, the notice requirements of section 2.104(b)(2), and the Notice of Hearing itself outline a board's review obligation; LBP-06-28, 64 NRC 460 (2006)

friction between the court and counsel, including intemperate and impatient remarks by the judge, does not constitute evidence of personal bias; CLI-10-17, 72 NRC 1 (2010)

in a mandatory hearing, a board's task is to constitute a check on the understanding of the NRC Staff; LBP-06-17, 63 NRC 747 (2006)

in addressing a summary disposition motion and the opposition thereto, boards must examine the substance of the information provided by the parties; LBP-07-13, 66 NRC 131 (2007)

in adjudicating petitioners' appeal from the NRC Staff's denial of their request for access to sensitive unclassified nonsafeguards information, boards consider whether Staff correctly applied the criteria established by the Commission; LBP-09-5, 69 NRC 303 (2009)

in an uncontested early site permit proceeding, the board must narrow its inquiry to those topics or sections in NRC Staff documents that it deems most important and should concentrate on portions of the documents that do not on their face adequately explain the logic, underlying facts, and applicable regulations and guidance; LBP-07-1, 65 NRC 27 (2007)

in mandatory proceedings, boards should inquire whether the NRC Staff performed an adequate review and made findings with reasonable support in logic and fact; LBP-06-17, 63 NRC 747 (2006)

in uncontested hearings, a board's focus should be on areas in which the Staff indicated that its prescriptive process was incomplete or was not followed, or instances when the board's review of the safety evaluation report and other safety-related documents led it to believe further exploration of a particular item was necessary; LBP-06-17, 63 NRC 747 (2006)

it is not the duty of an adjudicative body to dig through the reams of paper that litigants have deposited to construct and develop their arguments; LBP-06-19, 64 NRC 53 (2006)

on NEPA baseline issues in the mandatory hearing on an early site permit application, the board must reach its own independent determination; LBP-07-9, 65 NRC 539 (2007)

on uncontested issues in an early site permit proceeding, the board must independently evaluate the record and the adequacy of the Staff's review and then to decide six fundamental issues that are specified by the law and regulations; LBP-07-9, 65 NRC 539 (2007)

regarding safety issues, boards must determine whether the application and the record of the proceeding contain sufficient information and the review of the application by the NRC Staff has been adequate to support findings pursuant to 10 C.F.R. 30.33, 40.32, and 70.23; LBP-07-6, 65 NRC 429 (2007)

regardless of whether a uranium enrichment facility proceeding is contested or uncontested, a board must consider three baseline NEPA issues; LBP-06-17, 63 NRC 747 (2006)

## SUBJECT INDEX

- Staff's underlying technical and factual findings are not open to board reconsideration unless, after a review of the record, the board finds the NRC Staff review inadequate or its findings insufficient; LBP-06-28, 64 NRC 460 (2006)
- the board's judgment at the pleading stage is accorded substantial deference; CLI-09-5, 69 NRC 115 (2009)
- the board's role in mandatory hearings on early site permit applications is analogous to that of an appellate court applying the substantial evidence test; LBP-07-9, 65 NRC 539 (2007)
- the Commission has broad authority to delegate powers to the Atomic Safety and Licensing Boards; CLI-08-14, 67 NRC 402 (2008)
- the scope of the board's environmental review in an uncontested early site permit proceeding is discussed; LBP-07-1, 65 NRC 27 (2007)
- the scope of the licensing board's safety review in an uncontested early site permit proceeding is described; LBP-07-1, 65 NRC 27 (2007)
- the three NEPA-related factors that the board is required to address in uncontested early site permit proceedings are discussed; LBP-06-28, 64 NRC 460 (2006)
- when a proceeding involving an application for a construction permit is uncontested, the board will not conduct a de novo review, but rather will conduct a simple sufficiency review of the uncontested issues; LBP-07-6, 65 NRC 429 (2007)
- when taking the extraordinary action of allowing discretionary intervention, boards are expected to set out specific findings on each of the six factors; CLI-06-16, 63 NRC 708 (2006)
- where the Standard Review Plan had not been followed, no specific Regulatory Guide was applicable, a Regulatory Guide required adaptation, or the Staff's logic was incomplete or unclear, the Board sought a thorough explanation of the Staff's rationale for the process it ultimately adopted along with its conclusions, and examined that process and those conclusions to ensure they were well founded in fact and logic; LBP-06-28, 64 NRC 460 (2006)
- LICENSING BOARDS, AUTHORITY**
- a board abused its discretion in reformulating and admitting contentions; LBP-10-16, 72 NRC 361 (2010)
- a board can only decide whether or not a current funding proposal fulfills NRC requirements; LBP-09-18, 70 NRC 385 (2009)
- a board did not err in reformulating a contention to state that the application failed to comply with 10 C.F.R. Part 51, rather than with the National Environmental Policy Act; CLI-10-2, 71 NRC 27 (2010)
- a board has discretion to allow parties to cross-examine witnesses in Subpart L proceedings if the board deems this practice necessary to establish an adequate record; LBP-08-24, 68 NRC 691 (2008)
- a board is clearly authorized to dismiss a party who obstructs the discovery process, disobeys the board orders, and engages in willful, bad-faith, and prejudicial conduct toward another party; CLI-08-29, 68 NRC 899 (2008); LBP-09-1, 69 NRC 11 (2009)
- a board is free to decide an issue on a theory different from those argued by the litigants, but only if it explains the specific basis of its ruling and gives the litigants a chance to present arguments and, where appropriate, evidence regarding the board's new theory; CLI-09-3, 69 NRC 68 (2009)
- a board is to decide a motion to reopen on the information before it and has no authority to engage in discovery in order to supplement the pleadings before it; CLI-08-28, 68 NRC 658 (2008)
- a board may impose sanctions including dismissal of the specific contentions, dismissal of the adjudication, or dismissal of the application for any continuing unexcused failure to make the required mandatory disclosures; LBP-09-30, 70 NRC 1039 (2009)
- a board may modify or condition a license amendment; LBP-07-7, 65 NRC 507 (2007)
- a board may not simply infer the bases for a contention; CLI-09-7, 69 NRC 235 (2009)
- a board rested its findings regarding a contention, in part, on certain facts that it officially noticed; CLI-10-17, 72 NRC 1 (2010)
- a board, in its sound discretion, must determine the type of hearing procedures most appropriate for the specific contentions before it; LBP-06-20, 64 NRC 131 (2006)
- a board's authority to recast contentions is circumscribed in that it may not, on its own initiative, provide basic, threshold information required for contention admissibility; LBP-08-11, 67 NRC 460 (2008)
- a board's role in an early site permit proceeding is to carefully probe Staff findings by asking appropriate questions and by requiring supplemental information when necessary, but Staff's underlying technical and factual findings are not open to board reconsideration unless, after a review of the record, the

## SUBJECT INDEX

- board finds the NRC Staff review inadequate or its findings insufficient; LBP-09-19, 70 NRC 433 (2009)
- a licensing board erred in holding that it lacked authority to consider contentions based on recent revisions to a license application, but the error was harmless because intervenor had never submitted any contentions on the revisions; CLI-10-23, 72 NRC 210 (2010)
- a properly supported request to reply to a summary disposition response would seem to be a reasonable candidate for a favorable board discretionary decision permitting the filing; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)
- a request for briefs on legal issues is one of the many tools available to a presiding officer generally in the conduct of a proceeding; CLI-09-14, 69 NRC 580 (2009)
- a SUNSI requester may file a challenge to NRC Staff's adverse determination on access to SUNSI with the presiding officer, and the NRC Staff may file a reply to the requester's challenge; LBP-09-5, 69 NRC 303 (2009)
- absent delegated authority, licensing boards lack authority to direct the Staff's nonadjudicatory actions; CLI-09-2, 69 NRC 55 (2009)
- adjudicatory boards have broad discretion to regulate the course of proceedings and the conduct of participants, and the Commission is reluctant to embroil itself in day-to-day case management issues; CLI-08-14, 67 NRC 402 (2008)
- although a board in another materials license renewal proceeding allowed an Indian organization to participate in that proceeding as an interested Indian tribe under 10 C.F.R. 2.315(c), that ruling is not binding on other boards; LBP-09-13, 70 NRC 168 (2009)
- although a board is free to view intervenors' support for its contention in the light most favorable to intervenors, the board may not ignore the contention admissibility requirements of 10 C.F.R. 2.309(f)(1); CLI-09-3, 69 NRC 68 (2009)
- although a board may view petitioner's supporting information in a light favorable to petitioner, petitioner (not the board) is required to supply all of the required elements for a valid intervention petition; CLI-09-7, 69 NRC 235 (2009); LBP-10-15, 72 NRC 257 (2010)
- although boards are not required to narrow contentions to make them acceptable, they may do so; LBP-09-25, 70 NRC 867 (2009)
- although licensing boards frequently hold oral argument on contention admissibility, a board may instead elect to dispense with oral argument; LBP-08-23, 68 NRC 679 (2008)
- although NRC rules do not explicitly authorize amicus briefs at the licensing board level, such briefs might still be granted in appropriate circumstances; LBP-08-6, 67 NRC 241 (2008)
- any supporting material provided by a petitioner, including those portions of the material that are not relied upon, is subject to board scrutiny; LBP-07-10, 66 NRC 1 (2007); LBP-07-16, 66 NRC 277 (2007); LBP-09-26, 70 NRC 939 (2009)
- authority to make findings on limited work authorizations is discussed; LBP-09-19, 70 NRC 433 (2009)
- board's role in considering a petition for waiver under 10 C.F.R. 2.335 is limited to deciding whether petitioner has made a prima facie showing of special circumstances that would support a waiver; LBP-10-15, 72 NRC 257 (2010)
- boards are authorized to hold prehearing conferences to simplify or clarify the issues for hearing, after which they may admit a revised contention, as long as the revised contention does not add material not raised by the intervenor to make it admissible; LBP-10-14, 72 NRC 101 (2010)
- boards are authorized to impose additional requirements as part of a settlement; LBP-06-18, 63 NRC 830 (2006)
- boards are authorized to restrict irrelevant, immaterial, unreliable, duplicative, or cumulative evidence; LBP-09-30, 70 NRC 1039 (2009)
- boards are expected to examine cited materials to verify that they support a contention, but are not expected to search through pleadings or other materials to uncover arguments and support never advanced by the petitioners themselves; CLI-06-10, 63 NRC 451 (2006)
- boards are not bound by NRC Staff's position or by changes in that position; LBP-10-9, 71 NRC 493 (2010)
- boards are not to consider whether enforcement orders need strengthening; LBP-07-16, 66 NRC 277 (2007)

## SUBJECT INDEX

boards are obliged to evaluate the timeliness of a proposed contention even if no party raises the issue; LBP-10-17, 72 NRC 501 (2010)

boards are to construe intervention petitions in a light most favorable to petitioners; LBP-10-1, 71 NRC 165 (2010)

boards commonly reformulate, or expressly limit contentions to focus them to the precise matters that are supported; LBP-08-9, 67 NRC 421 (2008)

boards control the schedule for a proceeding to ensure that intervenors have adequate time to prepare new or amended contentions in response to new information; LBP-10-17, 72 NRC 501 (2010)

boards do not direct the Staff in the performance of its administrative functions; LBP-10-17, 72 NRC 501 (2010)

boards do not sit to flyspeck environmental documents or to add details or nuances; LBP-10-10, 71 NRC 529 (2010); LBP-10-14, 72 NRC 101 (2010)

boards have authority to narrow low-level radioactive waste contentions; LBP-09-16, 70 NRC 227 (2009)

boards have authority to set a proceeding's schedule and to ensure compliance with that schedule; LBP-10-21, 72 NRC 616 (2010)

boards have broad discretion to issue procedural orders to regulate the course of proceedings and the conduct of participants, and as a general matter, the Commission declines to interfere with the board's day-to-day case management decisions, unless there has been an abuse of power; LBP-08-23, 68 NRC 679 (2008)

boards have discretion to reframe a contention for purposes of clarity, succinctness, and a more efficient proceeding; LBP-06-22, 64 NRC 229 (2006); LBP-08-12, 68 NRC 5 (2008)

boards have substantial authority to regulate hearing procedures; LBP-10-21, 72 NRC 616 (2010)

boards have the authority to regulate hearing procedure, and decisions on evidentiary questions fall within that authority; CLI-10-18, 72 NRC 56 (2010)

boards have the duty to conduct a fair and impartial hearing according to law, to take appropriate action to control the prehearing and hearing process, to avoid delay, and to maintain order; LBP-09-22, 70 NRC 640 (2009)

boards lack authority to establish prospective sanctions for any failure by the Staff and/or the applicant to comply with the board's notice conditions; CLI-09-2, 69 NRC 55 (2009)

boards lack the authority to require applicant to adopt additional mitigation measures for the protection of endangered or threatened species; LBP-09-16, 70 NRC 227 (2009)

boards may choose the hearing process most suitable for the contentions before it; LBP-08-24, 68 NRC 691 (2008)

boards may disapprove a site for a new reactor only upon one of two findings; LBP-10-24, 72 NRC 720 (2010)

boards may not add material not raised by a petitioner in order to render a contention admissible; CLI-09-12, 69 NRC 535 (2009)

boards may not make factual inferences on a petitioner's behalf; LBP-06-10, 63 NRC 314 (2006)

boards may not order the Staff to cease review of an applicant's revised application or direct the Staff to require an applicant to submit a new application; LBP-10-17, 72 NRC 501 (2010)

boards may not supply information that is missing or make assumptions of fact not provided by the petitioner; CLI-10-14, 71 NRC 449 (2010); LBP-10-6, 71 NRC 350 (2010)

boards may reformulate contentions to eliminate extraneous issues or to consolidate issues for a more efficient proceeding; CLI-06-16, 63 NRC 708 (2006); CLI-09-12, 69 NRC 535 (2009); CLI-10-2, 71 NRC 27 (2010); CLI-10-14, 71 NRC 449 (2010); LBP-09-16, 70 NRC 227 (2009); LBP-10-9, 71 NRC 493 (2010); LBP-10-14, 72 NRC 101 (2010); LBP-10-16, 72 NRC 361 (2010)

boards may reprimand, censure, or suspend intervenors for contemptuous conduct; CLI-07-28, 66 NRC 275 (2007)

boards must not redraft inadmissible contentions to cure deficiencies and thereby render them admissible; CLI-06-16, 63 NRC 708 (2006)

boards review NRC Staff's enforcement order de novo to determine on the basis of the hearing record whether the charges are sustained and the sanction imposed is warranted; LBP-09-24, 70 NRC 676 (2009)

## SUBJECT INDEX

boards should refer contention challenging a reactor design certification to the Staff for consideration in the design certification rulemaking, and hold that contention in abeyance, if it is otherwise admissible; CLI-08-15, 68 NRC 1 (2008)

boards' case management decisions, such as determinations of whether to permit additional slide shows or enlarged exhibits, lie well within the discretion of the board; CLI-10-17, 72 NRC 1 (2010)

chief functions are to carefully review all of the evidence, including testimony and exhibits, and to resolve any factual disputes; CLI-09-7, 69 NRC 235 (2009)

common sense is a relevant consideration in determining whether to reformulate contentions; LBP-10-10, 71 NRC 529 (2010)

decisions on evidentiary questions fall within boards' authority to regulate hearing procedure; CLI-10-5, 71 NRC 90 (2010)

determining whether a contention is adequately supported by a concise allegation of the facts or expert opinion is not a hearing on the merits; LBP-07-16, 66 NRC 277 (2007)

dismissal due to counsel's malfeasance is a logical extension of the board's disciplinary authority to reprimand, censure, or suspend from a proceeding any party or representative who refuses to comply with its directions; CLI-08-29, 68 NRC 899 (2008)

disputes arising from NRC Staff's adverse determinations on access to SUNSI are adjudicated regarding likelihood of standing and need; LBP-09-5, 69 NRC 303 (2009)

if a board finds that the use of a more accurate approach than compliance with regulatory guides is needed to provide reasonable assurance that metal fatigue will be adequately managed during the period of extended operation, then the board is authorized and duty bound to impose such a requirement; LBP-08-25, 68 NRC 763 (2008)

if no particular procedure is compelled, the board must exercise its discretion and select the hearing procedure most appropriate for the newly admitted contentions; LBP-10-15, 72 NRC 257 (2010)

if petitioner did not request discretionary intervention in the event that the petitioner was found to lack standing as of right, a licensing board need not consider affording such intervention status; LBP-10-1, 71 NRC 165 (2010)

if petitioner fails to provide the requisite support for its contentions, the board may not make assumptions of fact that favor the petitioner or supply information that is lacking; LBP-07-3, 65 NRC 237 (2007); LBP-07-10, 66 NRC 1 (2007); LBP-08-9, 67 NRC 421 (2008); LBP-08-16, 68 NRC 361 (2008); LBP-08-17, 68 NRC 431 (2008) ; LBP-08-24, 68 NRC 691 (2008); LBP-08-26, 68 NRC 905 (2008); LBP-09-3, 69 NRC 139 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-10-6, 71 NRC 350 (2010); LBP-10-7, 71 NRC 391 (2010)

in a mandatory hearing, a board must narrow its inquiry to those topics or sections in Staff documents that it deems most important and should concentrate on portions of the documents that do not on their face adequately explain the logic, underlying facts, and applicable regulations and guidance; LBP-09-19, 70 NRC 433 (2009)

in an evidentiary hearing, the board may weigh competing evidence and expert opinion and may resolve/decide factual disputes, whereas this is not possible when ruling on motions for summary disposition, which are restricted to situations where there is no genuine issue as to any material fact; LBP-09-22, 70 NRC 640 (2009)

in camera hearings are authorized under 10 C.F.R. 2.390(b)(6); LBP-10-5, 71 NRC 329 (2010)

in conducting Subpart L hearings, board members pose questions to the parties' witnesses in those areas that, in the board's judgment, require additional clarification and development; LBP-07-17, 66 NRC 327 (2007); LBP-08-22, 68 NRC 590 (2008)

in establishing and enforcing schedule deadlines, boards must take care not to compromise the Commission's fundamental commitment to a fair and thorough hearing process; LBP-10-21, 72 NRC 616 (2010)

in evaluating petitions to intervene, boards are not free to ignore the contention admissibility requirements of 10 C.F.R. 2.309(f)(1); CLI-09-8, 69 NRC 317 (2009)

in passing upon the question as to whether an intervention petition should be granted, it is not the function of a licensing board to reach the merits of any contention contained therein; LBP-06-6, 63 NRC 167 (2006); LBP-06-7, 63 NRC 188 (2006)

in reaching its determinations on the baseline National Environmental Policy Act issues, the board will not second-guess the underlying technical or factual findings of the NRC Staff, but if it finds that the

## SUBJECT INDEX

Staff review is incomplete or that the Staff findings lack sufficient explanation, it will make its own determination of technical and factual findings; LBP-07-1, 65 NRC 27 (2007)

intervenor's representational status is one factor in determining whether reformulation is appropriate, and pro se status may provide additional cause for reformulation; LBP-10-10, 71 NRC 529 (2010)

it is appropriate for a licensing board to defer consideration of all but one contention in some limited and exceptional circumstances; LBP-10-11, 71 NRC 609 (2010)

it is beyond the authority of a licensing board to require applicant to choose a certain method of decommissioning funding; LBP-09-4, 69 NRC 170 (2009); LBP-09-15, 70 NRC 198 (2009)

licensing boards are bound by Commission and appeal board precedent and therefore are not at liberty to reject the 50-mile proximity presumption; LBP-09-4, 69 NRC 170 (2009)

licensing boards are expected to use applicable techniques to ensure prompt and efficient resolution of contested issues; CLI-10-4, 71 NRC 56 (2010)

licensing boards are not authorized to admit conditionally, for any reason, contentions that fall short of meeting the specificity requirements set forth in NRC procedural rules; CLI-09-2, 69 NRC 55 (2009)

licensing boards are not foreclosed from considering docketed licensing material that has been submitted to the board and that, on its face, appears to be relevant to the disposition of a pending motion; LBP-08-12, 68 NRC 5 (2008)

licensing boards have broad discretion to issue procedural orders to regulate the course of proceedings and the conduct of participants; CLI-08-7, 67 NRC 187 (2008)

licensing boards normally have considerable discretion in making evidentiary rulings; CLI-10-5, 71 NRC 90 (2010)

licensing boards shall not entertain motions for summary disposition, unless the board finds that such motions, if granted, are likely to expedite the proceeding; LBP-09-22, 70 NRC 640 (2009)

licensing boards, though not obligated to reformulate contentions, are permitted to do so in certain circumstances; LBP-08-11, 67 NRC 460 (2008)

material provided in support of a contention will be carefully examined by the board to confirm that on its face it does supply an adequate basis for the contention; LBP-07-10, 66 NRC 1 (2007)

materials cited as the basis for a contention are subject to scrutiny by the board to determine whether they actually support the facts alleged; LBP-10-24, 72 NRC 720 (2010)

neither NRC regulations nor agency policy mandates that the oral argument be conducted in person near the site; LBP-08-23, 68 NRC 679 (2008)

NRC rules of procedure authorize boards to hold prehearing conferences for the purposes of simplifying or clarifying the issues for hearing, after which a board might admit a revised contention; CLI-09-12, 69 NRC 535 (2009)

NRC's contention pleading standards, while strict, are not so strict as to require a board to abandon a commonsense approach to consideration of contentions; LBP-10-10, 71 NRC 529 (2010)

NRC's expanding adjudicatory docket makes it critically important that parties comply with NRC pleading requirements and that the board enforce those requirements; CLI-10-27, 72 NRC 481 (2010)

principal role is to carefully review all of the evidence, including testimony and exhibits, and to resolve any factual disputes; CLI-10-18, 72 NRC 56 (2010)

questions over the equivalence of the "knowledge" standard that governed the jury and the standard applicable in the administrative proceeding can lead a board to exercise its discretion not to apply collateral estoppel; LBP-09-24, 70 NRC 676 (2009)

requests for extension of time to file a petition for review are to be determined by the relevant appellate body, and accordingly must be directed to that body; LBP-07-17, 66 NRC 327 (2007)

section 2.107(a) does not authorize withdrawal of an application but rather clarifies that boards have authority to impose reasonable conditions upon voluntary withdrawals in appropriate circumstances; LBP-10-11, 71 NRC 609 (2010)

settlement shall be subject to approval by a board, which may order such adjudication of the issues as it may deem to be required in the public interest; LBP-06-21, 64 NRC 219 (2006)

the board is prohibited from considering in a combined license proceeding matters that were resolved in an early site permit proceeding when the COL application references the ESP; LBP-08-23, 68 NRC 679 (2008)

the board's principal role in the adjudicatory process is to carefully review all of the evidence, including testimony and exhibits, and to resolve any factual disputes; CLI-10-5, 71 NRC 90 (2010)

## SUBJECT INDEX

- the Commission generally defers to the boards on case management decisions; CLI-10-28, 72 NRC 553 (2010)
- the judge's function in ruling on summary disposition motions is not to weigh the evidence and determine the truth of the matter but to determine whether there is a genuine issue for hearing; CLI-10-11, 71 NRC 287 (2010)
- the presiding officer or licensing board has discretion to accelerate the merits hearing on safety issues, but not on environmental issues; CLI-07-17, 65 NRC 392 (2007)
- the role of a board is to decide whether an applicant has supplied the requisite information to the NRC, and whether the petitioners have identified any defect in that information; LBP-09-18, 70 NRC 385 (2009)
- to determine whether there is potential for offsite consequences at specific sites, boards may infer obvious intermediate steps in a chain of causation that could lead to offsite doses; LBP-07-14, 66 NRC 169 (2007)
- to ensure a more efficient proceeding, the board merges two contentions; LBP-10-16, 72 NRC 361 (2010)
- to the extent applicant may be subject to unreasonable or burdensome discovery requests in the future, it is free to seek relief from the board, which has ample authority to prevent or modify unreasonable discovery demands; CLI-09-6, 69 NRC 128 (2009)
- upon admission of a contention in a licensing proceeding, the board must identify the specific hearing procedures to be used to settle the contention; LBP-10-16, 72 NRC 361 (2010)
- use of the permissive term, "may," in 10 C.F.R. 2.310(a) indicates that licensing boards have some discretion in determining whether to hold hearings under Subpart L or Subpart G; LBP-08-6, 67 NRC 241 (2008)
- when an adjudicatory proceeding has been terminated before a licensing board pursuant to a settlement agreement, the board loses its jurisdiction over, and thus its authority to act with respect to, that licensing action; LBP-09-23, 70 NRC 659 (2009)
- where all factors are met, the application of collateral estoppel by the subsequent tribunal is to some degree a discretionary matter; LBP-09-24, 70 NRC 676 (2009)
- where the final environmental impact statement discussion of alternative sites was insufficient, the board independently reviewed the record on greenfield, competitors' brownfield, noncompetitors' brownfield, and applicant's other nuclear sites to conclude that the Staff's underlying alternative site review was adequate; LBP-09-19, 70 NRC 433 (2009)
- LICENSING BOARDS, JURISDICTION**
- a licensing board has no jurisdiction to consider any treaty-related or water-rights questions in an NRC adjudicatory proceeding; LBP-08-6, 67 NRC 241 (2008)
- a notice of hearing having been issued by the Commission in a combined license proceeding, the board has jurisdiction to approve a settlement agreement; LBP-09-23, 70 NRC 659 (2009)
- boards may not oversee or direct NRC Staff in its license reviews; CLI-08-23, 68 NRC 461 (2008)
- compliance with regulations of other federal agencies, such as Environmental Protection Agency drinking water contamination limits, is beyond a board's jurisdiction and outside the scope of a materials license proceeding; LBP-06-8, 63 NRC 241 (2006); LBP-06-15, 63 NRC 591 (2006)
- dismissal of one contention on mootness grounds would not terminate a case where the board had expressly retained jurisdiction to decide whether to admit another contention; LBP-09-27, 70 NRC 992 (2009)
- given that the board recently issued an initial decision resolving all contentions in the case, the Commission can discern no compelling reason to take the extraordinary action of stepping in at this late stage to take up the case, but parties will have the opportunity to petition for review of the board's rulings; CLI-09-19, 70 NRC 864 (2009)
- if a previously terminated contested hearing is subsequently renoticed, a new licensing board would need to be established to preside over the renoticed litigation; LBP-09-23, 70 NRC 659 (2009)
- in an uncontested uranium enrichment proceeding, a licensing board, without conducting a de novo evaluation of the application, will determine whether the application and record of the proceeding contain sufficient information to support licensing and whether the Staff's review of the application has been adequate; LBP-06-17, 63 NRC 747 (2006)

## SUBJECT INDEX

once a licensing board has concluded board action on a licensing case, jurisdiction to decide a motion to reopen regarding that proceeding passes to the Commission, which retains jurisdiction until the license in question has been issued; LBP-10-21, 72 NRC 616 (2010)

once there has been an appeal or petition to review a board order ruling on intervention petitions or, where a hearing is granted, following a partial or final initial decision, jurisdiction passes to the Commission; CLI-09-5, 69 NRC 115 (2009)

only the Commission on its own initiative may review Staff's final no significant hazards consideration determination; LBP-08-20, 68 NRC 549 (2008)

regardless of whether there is a challenge to a petitioner's standing, given the jurisdictional nature of standing under the Atomic Energy Act, the board has an independent obligation to make a standing determination; LBP-10-1, 71 NRC 165 (2010)

the Commission's referral of a motion to reopen to the ASLBP and subsequent establishment of the board gives the board jurisdiction over the motion; LBP-10-21, 72 NRC 616 (2010)

the Secretary's referral of petitioner's motion to admit a late-filed contention effectively returns jurisdiction to the licensing board to rule on the motion; CLI-09-5, 69 NRC 115 (2009)

when a case has already been dismissed by a board, it no longer has jurisdiction over a motion to reopen; CLI-06-4, 63 NRC 32 (2006)

when an adjudicatory proceeding has been terminated before a licensing board pursuant to a settlement agreement, the board loses its jurisdiction over, and thus its authority to act with respect to, that licensing action; LBP-09-23, 70 NRC 659 (2009)

### LICENSING PROCEEDINGS

although the Commission commonly looks to Article III concepts for guidance, it is not required to automatically follow them in all respects because NRC proceedings are not subject to Article III; LBP-09-15, 70 NRC 198 (2009)

claims about the adequacy of NRC Staff's safety review are not litigable; CLI-08-23, 68 NRC 461 (2008)

FEMA's finding on emergency plans constitutes a rebuttable presumption on questions of adequacy and implementation capability in NRC licensing proceedings; LBP-09-19, 70 NRC 433 (2009)

introduction of issues that are not unique to any given reactor are inappropriate in an individual reactor licensing proceeding absent evidence that the generic issue applies to that particular proceeding; LBP-06-11, 63 NRC 391 (2006)

it is the applicant, not NRC Staff, that has the burden of proof in litigation; CLI-08-23, 68 NRC 461 (2008)

motions must be initially addressed to the presiding officer when a proceeding is pending; CLI-08-23, 68 NRC 461 (2008)

the purpose and scope of a proceeding is to allow interested persons the right to challenge the sufficiency of the application; CLI-08-23, 68 NRC 461 (2008)

the ultimate burden of proof on the question of whether a permit or license should be issued is on the applicant, but the party contending that the permit or license should be denied, has the burden of going forward with evidence to buttress that contention; CLI-09-7, 69 NRC 235 (2009)

See also Combined License Proceedings; Early Site Permit Proceedings; License Renewal Proceedings; License Transfer Proceedings; Materials License Amendment Proceedings; Materials License Proceedings; Materials License Renewal Proceedings; Operating License Amendment Proceedings; Operating License Renewal Proceedings; Subpart J Proceedings; Subpart L Proceedings; Uranium Enrichment Facility Proceedings

### LICENSING SUPPORT NETWORK

a document's availability on the Internet does not authorize its exclusion from the LSN; LBP-09-6, 69 NRC 367 (2009)

an affirmative demonstration of compliance with the Licensing Support Network requirements is not required in an intervention petition; LBP-09-6, 69 NRC 367 (2009)

before petitioner can be granted party status in the high-level waste proceeding, it must be able to demonstrate substantial and timely compliance with LSN requirements; LBP-10-11, 71 NRC 609 (2010)

Class 1 documentary material covers information a party intends to rely upon in support of its position; CLI-06-5, 63 NRC 143 (2006)

Class 2 documentary material is material that the party in possession knows does not support its position; CLI-06-5, 63 NRC 143 (2006)

## SUBJECT INDEX

Class 3 documentary materials are “reports and studies” prepared on behalf of potential parties to the proceeding that are relevant to the issues listed in the Topical Guidelines contained in Regulatory Guide 3.69 and must be relevant to the license application; CLI-06-5, 63 NRC 143 (2006)

conditions are proposed that would ensure that DOE’s documentary material is appropriately preserved and archived should its request to withdraw its application be granted; LBP-10-11, 71 NRC 609 (2010)

DOE must make all of its documentary material available on the Licensing Support Network, and to so certify to the PAPO board, at least 6 months before it files its application to construct the HLW geologic repository at Yucca Mountain; LBP-08-1, 67 NRC 37 (2008)

DOE’s certification that it had made all of its then extant documentary material available on the NRC’s LSN triggered the obligation of other potential parties to make their documentary material available on the LSN within 90 days; LBP-08-1, 67 NRC 37 (2008); LBP-08-5, 67 NRC 205 (2008)

drafts of the license application are not Class 1, Class 2, or Class 3 documentary material under Subpart J, so the regulations do not require making draft license applications available; CLI-06-5, 63 NRC 143 (2006)

each party or potential party to the high-level waste proceeding must continue to supplement the production of its documentary material on the LSN; LBP-09-6, 69 NRC 367 (2009)

each petitioner must identify all its documentary material required by 10 C.F.R. 2.1003 and designate a responsible LSN official, who can certify that to the best of his or her knowledge all such material has been made electronically available; LBP-10-11, 71 NRC 609 (2010)

each potential party shall continue to supplement its documentary material made available to other participants via the LSN with any additional material created after the time of its initial certification; LBP-08-1, 67 NRC 37 (2008)

if petitioner fails to demonstrate substantial and timely compliance with LSN requirements, it may later request party status upon a showing of subsequent compliance; LBP-10-11, 71 NRC 609 (2010)

material that falls within Class 1 or Class 2 is the underlying independent documentary material used (or not used if nonsupporting) by the Department of Energy in formulating its license application; CLI-06-5, 63 NRC 143 (2006)

participants must make a good-faith effort to have made available all documentary material by the date specified for initial compliance; CLI-08-22, 68 NRC 355 (2008)

petitioner may not be granted party status in the high-level waste proceeding if it cannot demonstrate substantial and timely compliance with the requirements in 10 C.F.R. 2.1003 concerning the availability of documentary material on the LSN; LBP-09-6, 69 NRC 367 (2009)

potential participants are afforded the opportunity to frame focused and meaningful contentions and to avoid the delay potentially associated with document discovery, by requiring parties and potential parties to the proceeding to make all of their Subpart J-defined documentary material available prior to submission of the Department of Energy application; CLI-08-22, 68 NRC 355 (2008)

regarding sufficiency of documentary production, perfection is not required and any production is bound to have some human mistakes; LBP-09-6, 69 NRC 367 (2009)

section 2.1009(b) requires certification to the Pre-License Application Presiding Officer that the party or potential party has complied with the implementation procedures of section 2.1009(a)(2) and that to the best of his or her knowledge, the documentary material specified in section 2.1003 has been identified and made electronically available; LBP-09-6, 69 NRC 367 (2009)

the distinction between “preliminary” and “circulated” drafts is a significant one in the Commission’s Subpart J regulations; CLI-06-5, 63 NRC 143 (2006)

the duty to produce all documentary material generated by, or at the direction of, or acquired by, a potential party pursuant to 10 C.F.R. 2.1003(a)(1) applies to extant documentary material and does not require that the potential party delay its initial certification until all documentary material that it intends to rely on is finished and complete; LBP-08-1, 67 NRC 37 (2008)

the LSN does not have to be frozen at the time of certification; CLI-08-12, 67 NRC 386 (2008)

the LSN functions as a mechanism for early collection of all extant documents that normally would be collected later through traditional discovery; CLI-08-22, 68 NRC 355 (2008)

the regulations are unclear as to whether header searchability is a prerequisite of certification; LBP-08-1, 67 NRC 37 (2008)

whether a call memo was required to address the retention for LSN inclusion purposes of documentary material that does not support a party’s position is decided; LBP-08-5, 67 NRC 205 (2008)

## SUBJECT INDEX

### LIGHT-WATER REACTORS

the limiting standard for light-water-cooled reactors is 10 C.F.R. 20.1301(e), because a licensee within the uranium fuel cycle could not release the 100-mrem limit permitted by section 20.1301(a) without necessarily violating the 25-mrem limit of section 20.1301(e) that applies to the entire site; CLI-07-27, 66 NRC 215 (2007)

### LIMITED APPEARANCE STATEMENTS

any person who does not wish, or is not qualified, to become a party to a materials license proceeding may request permission to make a limited appearance pursuant to the provisions of 10 C.F.R. 2.315(a); CLI-09-15, 70 NRC 1 (2009); CLI-10-4, 71 NRC 56 (2010)

when boards conduct limited appearance sessions, in which members of the general public may make oral statements to the board, such sessions are generally conducted in person near the site; LBP-08-23, 68 NRC 679 (2008)

### LIMITED WORK AUTHORIZATION

a site redress plan remains in effect for an early site permit applicant even if the ESP with which the LWA is issued is not referenced in a construction permit or combined license application during the period that the ESP remains valid; LBP-09-19, 70 NRC 433 (2009)

activities constituting construction, and thus requiring an LWA, are the driving of piles, subsurface preparation, placement of backfill, concrete, or permanent retaining walls within an excavation, installation of foundations, or in-place assembly, erection, fabrication, or testing that are for safety-related structures, systems, or component; LBP-09-16, 70 NRC 227 (2009); LBP-09-19, 70 NRC 433 (2009)

although a presiding officer should issue a separate partial initial decision regarding a limited work authorization request, the board finds no practical or logical basis for separating its consideration of the adequacy of the LWA request from its determination regarding the early site permit with which it is associated; LBP-09-19, 70 NRC 433 (2009)

an early site permit applicant may request that an LWA be issued in conjunction with the early site permit; LBP-09-19, 70 NRC 433 (2009)

an initial decision directing the issuance or amendment of a LWA or an early site permit is immediately effective upon issuance unless the presiding officer finds that good cause has otherwise been shown by a party; LBP-09-19, 70 NRC 433 (2009)

an LWA authorizes activities for which either a construction permit or combined license is otherwise required, but the LWA application must include a plan for site redress that provides for restoration if the project is cancelled, the LWA is revoked, or a construction permit or COL is denied; LBP-09-19, 70 NRC 433 (2009)

any activities undertaken under an LWA are entirely at the risk of the applicant; LBP-09-19, 70 NRC 433 (2009)

applicant must submit, as part of the safety analysis report for the LWA, design information related to activities within the scope of the requested LWA; LBP-09-19, 70 NRC 433 (2009)

board authority to make findings on LWAs is discussed; LBP-09-19, 70 NRC 433 (2009)

boards are to determine whether the site redress plan will adequately redress the activities should the activities be terminated by either the holder of the LWA or by Commission denial of any corresponding early site permit or combined license; LBP-09-19, 70 NRC 433 (2009)

construction activities allowed under an LWA are discussed; LBP-09-19, 70 NRC 433 (2009)

construction activities associated with onsite emergency facilities necessary to comply with 10 C.F.R. 50.47 and 10 C.F.R. Part 50, Appendix E are included; LBP-09-19, 70 NRC 433 (2009)

if LWA activities are approved by NRC in conjunction with an early site permit, the ESP as issued shall specify those authorized activities; LBP-09-19, 70 NRC 433 (2009)

preconstruction activities that do not require NRC approval are discussed; LBP-09-19, 70 NRC 433 (2009)

when an early site permit is issued with an associated LWA, the board must find relative to the LWA that any significant adverse environmental impact resulting from activities requested under 10 C.F.R. 52.17(c) can be redressed; LBP-09-19, 70 NRC 433 (2009)

### LITIGATION EXPENSES

increased litigation delay and expense do not justify interlocutory review of an admissibility decision; CLI-09-6, 69 NRC 128 (2009)

## SUBJECT INDEX

licensing boards have awarded payment of litigation fees and expenses from a licensee to an intervenor if there has been legal harm to the intervenors caused by some activity or action of the licensee; LBP-09-1, 69 NRC 11 (2009)

no instance has occurred in NRC jurisprudence where either the Commission or its boards have ruled that expenses of any kind constituted irreparable injury; CLI-09-6, 69 NRC 128 (2009)

NRC appropriations shall not be used to pay the expenses of, or otherwise compensate, parties intervening in regulatory or adjudicatory proceedings; LBP-09-1, 69 NRC 11 (2009)

the potential for litigation expense and delay is the kind of burden that licensees and applicants voluntarily assume when filing applications with the Commission; CLI-09-6, 69 NRC 128 (2009)

### LOCAL GOVERNMENTAL BODIES

an entity wishing to participate as a governmental body must demonstrate that it goes beyond an advisory role and exercises executive or legislative responsibilities; LBP-09-13, 70 NRC 168 (2009)

any affected unit of local government need not address standing in the high-level waste proceeding, but rather shall be considered a party provided that it files at least one admissible contention in accordance with 10 C.F.R. 2.309(f); LBP-09-6, 69 NRC 367 (2009)

if applicant chooses to submit a complete and integrated emergency plan at the early site permit stage, applicant also is required to make a good-faith effort to obtain a certification from federal, state, and local governmental agencies with emergency planning responsibilities; LBP-09-19, 70 NRC 433 (2009)

not all entities with governmental ties are entitled to participate in licensing proceedings as local governmental bodies; LBP-09-13, 70 NRC 168 (2009)

the Commission shall permit intervention by the county, municipality, or other subdivision in which the geologic repository operations area is located if the contention requirements in 10 C.F.R. 2.309(f) are satisfied with respect to at least one contention; CLI-08-25, 68 NRC 497 (2008)

the fact that an ancestor of a member of the Oglala Delegation of the Great Sioux Nation Treaty Council signed several treaties with the United States more than 100 years ago does not establish that the delegation is a current and official successor to the delegation that signed such treaties, or that the delegation is a local governmental entity that currently exercises executive function; LBP-09-13, 70 NRC 168 (2009)

See also Interested Governmental Entity

### LOW-INCOME POPULATIONS

in reviewing environmental justice claims, adverse impacts that fall heavily on minority and impoverished citizens call for particularly close scrutiny; LBP-07-3, 65 NRC 237 (2007)

to qualify as an environmental justice contention, the contention must show that the affected local population qualifies as a minority or low-income population; LBP-09-18, 70 NRC 385 (2009)

### MAIN STEAM ISOLATION VALVES

applicant normally is required to perform large-transient tests before an extended power uprate can be granted; LBP-07-2, 65 NRC 153 (2007)

these valves serve a safety function in the event of fuel failure by preventing fission products from the fuel inside the reactor from being released into the steam system outside of reactor containment; LBP-07-2, 65 NRC 153 (2007)

### MAINTENANCE PROGRAMS

failure to document a falsified work order is a violation of 10 C.F.R. 50.9; LBP-08-14, 68 NRC 279 (2008)

### MANAGEMENT CHARACTER AND COMPETENCE

a license renewal proceeding is an appropriate occasion for appraising the entire past performance of the licensee; LBP-08-24, 68 NRC 691 (2008)

a materials license amendment proceeding is not an appropriate forum to throw open an opportunity to engage in a free-ranging inquiry into the character of the licensee; LBP-09-1, 69 NRC 11 (2009)

absence of perfect compliance by licensee does not rebut the presumption of compliance or support admission of a contention that the application does not satisfy 10 C.F.R. 54.29(a), but a consistent, longstanding, and continuing pattern of problems in a specific area that is relevant to managing aging equipment will; LBP-10-15, 72 NRC 257 (2010)

absent evidence to the contrary, it is assumed NRC licensees will not contravene agency regulations; LBP-07-10, 66 NRC 1 (2007)

## SUBJECT INDEX

allegation of facts, with supporting documentation, of a longstanding and continuing pattern of noncompliance or management difficulties that are reasonably linked to whether licensee will actually be able to adequately manage aging in accordance with the current licensing basis during the period of extended operation can be an admissible contention; LBP-10-15, 72 NRC 257 (2010)

contentions that DOE lacks management integrity to operate a high-level waste geologic repository are impermissible challenges to the Nuclear Waste Policy Act and are therefore beyond the scope of the proceeding; CLI-09-14, 69 NRC 580 (2009)

NRC is not barred from considering licensee's past and continuing managerial and performance problems when it determines whether licensee has demonstrated that actions will be taken to manage the effects of aging during the period of extended operation; LBP-10-15, 72 NRC 257 (2010)

past performance of management or high-ranking officers, as reflected in deliberate violations of regulations or untruthful reports to the Commission, may indicate whether a licensee will comply with agency standards, and will candidly respond to NRC inquiries; LBP-09-6, 69 NRC 367 (2009)

potential scope of adjudicatory hearings in license renewal proceedings is the same as the scope of the Staff's review; LBP-10-15, 72 NRC 257 (2010)

when character or integrity issues are raised, they are expected to be directly germane to the challenged licensing action; CLI-10-9, 71 NRC 245 (2010)

### MANDATORY HEARINGS

a baseline NEPA issue that a board must make in a hearing on an early site permit application is whether the requirements of NEPA § 102(2)(A), (C), and (E) and 10 C.F.R. Part 51 have been met; LBP-07-9, 65 NRC 539 (2007)

a baseline NEPA issue that a board must make in an early site permit proceeding is to independently consider the final balance among conflicting factors contained in the record of the proceeding with a view to determining the appropriate action to be taken; LBP-07-9, 65 NRC 539 (2007)

a baseline NEPA issue that a board must make on an early site permit application is whether a construction permit should be issued, denied, or appropriately conditioned to protect environmental values; LBP-07-9, 65 NRC 539 (2007)

a board may ask Staff to produce ACRS documents that it reviewed in conducting its license application review, but Staff need not obtain additional ACRS documents that it never saw in conducting its review; CLI-06-20, 64 NRC 15 (2006)

a board must determine whether the application and the record of the proceeding contain sufficient information, and the review of the application by the NRC Staff has been adequate, to support a negative finding on the question of whether the issuance of an early site permit will be inimical to the common defense and security or to the health and safety of the public; LBP-07-9, 65 NRC 539 (2007)

a board shall determine whether, taking into consideration the site criteria contained in 10 C.F.R. Part 100, a reactor having characteristics that fall within the parameters for the site, and which meets the terms and conditions proposed by the Staff in the Safety Evaluation Report, can be constructed and operated without undue risk to the health and safety of the public; LBP-06-28, 64 NRC 460 (2006)

a board's focus should be on areas in which the Staff indicated that its prescriptive process was incomplete or was not followed, or instances when the board's review of the safety evaluation report and other safety-related documents led it to believe further exploration of a particular item was necessary; LBP-06-17, 63 NRC 747 (2006)

a board's request for a list of all regulatory guides applicable to the Staff's analysis of a license application, as well as a list of all instances where potentially applicable regulatory guides were not used, is approved; CLI-06-20, 64 NRC 15 (2006)

a board's role in an early site permit proceeding is to carefully probe Staff findings by asking appropriate questions and by requiring supplemental information when necessary, but Staff's underlying technical and factual findings are not open to board reconsideration unless, after a review of the record, the board finds the NRC Staff review inadequate or its findings insufficient; LBP-09-19, 70 NRC 433 (2009)

a decision dismissing the contested adjudication relating to a combined license has no impact on the subsequent need to conduct a mandatory hearing relating to the COL application, over which the Commission would preside; LBP-09-23, 70 NRC 659 (2009)

a hearing for the reinstatement of previously issued construction permits is not required because the hearing already occurred when the permits were initially issued; CLI-10-6, 71 NRC 113 (2010)

## SUBJECT INDEX

- a licensing board must narrow its inquiry to those topics or sections in Staff documents that it deems most important and should concentrate on portions of the documents that do not on their face adequately explain the logic, underlying facts, and applicable regulations and guidance; LBP-09-19, 70 NRC 433 (2009)
- a simple sufficiency review of uncontested issues should be conducted by boards; LBP-06-17, 63 NRC 747 (2006)
- because an early site permit is a type of construction permit, a mandatory hearing is required by the Atomic Energy Act and thus the case will continue as an uncontested proceeding; LBP-06-24, 64 NRC 360 (2006)
- because contested and uncontested designations apply issue-by-issue, and not to proceedings-at-large, admission of a single, relatively minor contention would not negate the need to conduct a separate mandatory hearing; LBP-06-17, 63 NRC 747 (2006)
- before a uranium enrichment facility can be licensed, a hearing is required to be held on that license application; LBP-06-17, 63 NRC 747 (2006)
- before an early site permit can be made effective, the Commission must review and approve the licensing board's initial decision authorizing its issuance; CLI-07-23, 66 NRC 35 (2007)
- boards should conduct a simple sufficiency review of uncontested issues; LBP-06-28, 64 NRC 460 (2006)
- boards should not second-guess underlying technical or factual findings by the NRC Staff; LBP-06-28, 64 NRC 460 (2006)
- early site permit applications, as partial construction permit applications, are subject to the Atomic Energy Act hearing requirement, as well as all procedural requirements in 10 C.F.R. Part 2; LBP-09-19, 70 NRC 433 (2009)
- for license applications for uranium enrichment facilities, NRC shall conduct a single adjudicatory hearing on the record with regard to the licensing of the construction and operation of the facility; LBP-07-6, 65 NRC 429 (2007)
- for purposes of the mandatory/uncontested portion of an ESP proceeding, the board takes official notice of publicly available documents associated with the Staff's safety and environmental reviews; LBP-09-19, 70 NRC 433 (2009)
- for uncontested early site permit applications, section 52.21, the notice requirements of section 2.104(b)(2), and the Notice of Hearing itself outline a board's review obligation; LBP-06-28, 64 NRC 460 (2006)
- in an early site permit proceeding, NRC must address six issues; CLI-07-27, 66 NRC 215 (2007)
- in an early site permit proceeding, the board must review the sufficiency of the record and the sufficiency of the NRC Staff's review, and decide if they are adequate to support the Staff's proposed findings; LBP-07-9, 65 NRC 539 (2007)
- in an uncontested early site permit proceeding, the board must narrow its inquiry to those topics or sections in NRC Staff documents that it deems most important and should concentrate on portions of the documents that do not on their face adequately explain the logic, underlying facts, and applicable regulations and guidance; LBP-07-1, 65 NRC 27 (2007)
- in an uncontested uranium enrichment proceeding, a licensing board, without conducting a de novo evaluation of the application, will determine whether the application and record of the proceeding contain sufficient information to support licensing and whether the Staff's review of the application has been adequate; LBP-06-17, 63 NRC 747 (2006)
- in complying with the mandate of the Atomic Energy Act, the board must independently evaluate the record and the adequacy of the Staff's review and then to decide six fundamental issues that are specified by the law and regulations; LBP-07-9, 65 NRC 539 (2007)
- in uncontested cases, boards are expected to issue their final initial decisions generally within 4 to 6 months of the Staff's safety evaluation report and final environmental impact statement issuances; CLI-06-20, 64 NRC 15 (2006)
- in uncontested proceedings, licensing boards do not conduct a de novo review of the application; CLI-09-15, 70 NRC 1 (2009)
- in uranium enrichment facility proceedings, a licensing board must determine in its initial decision whether the requirements of section 102(2)(A), (C), and (E) of the National Environmental Policy Act have been complied with in the proceeding; CLI-09-15, 70 NRC 1 (2009)

## SUBJECT INDEX

in uranium enrichment facility proceedings, licensing boards must determine whether the review conducted by the NRC Staff pursuant to 10 C.F.R. Part 51 has been adequate; CLI-09-15, 70 NRC 1 (2009)

licensing boards must determine whether the applicant and record of the proceeding contain sufficient information to support license issuance; CLI-09-15, 70 NRC 1 (2009)

licensing boards must inquire whether the NRC Staff performed an adequate review and made findings with reasonable support in logic and fact; LBP-07-6, 65 NRC 429 (2007)

licensing boards must perform two types of inquiries with respect to safety matters in uncontested early site permit proceedings; LBP-06-28, 64 NRC 460 (2006)

licensing boards should not undertake a de novo review of the NRC Staff's findings, but rather should determine whether the safety and environmental record is sufficient to support license issuance; CLI-07-5, 65 NRC 109 (2007)

matters of fact and law to be considered in a uranium enrichment facility licensing proceeding are whether the application satisfies the applicable standards in 10 C.F.R. Parts 30, 40, and 70, and whether the requirements of the National Environmental Policy Act and the NRC's implementing regulations in 10 C.F.R. Part 51 have been met; CLI-09-15, 70 NRC 1 (2009); LBP-06-17, 63 NRC 747 (2006)

NRC Staff is not required to provide a board with information relevant to instances when the Staff reviewer disagreed with his supervisor with respect to the license application; CLI-06-20, 64 NRC 15 (2006)

off-again/on-again approach to construction of long-delayed units has generated a unique set of circumstances such that Commission should consider holding a new mandatory hearing prior to allowing full-power operation of units; LBP-10-12, 71 NRC 656 (2010)

on NEPA baseline issues in an early site permit proceeding, the board must reach its own independent determination; LBP-07-9, 65 NRC 539 (2007)

regarding safety issues, boards must determine whether the application and the record of the proceeding contain sufficient information and the review of the application by the NRC Staff has been adequate to support findings pursuant to 10 C.F.R. 30.33, 40.32, and 70.23; LBP-07-6, 65 NRC 429 (2007)

regardless of whether a uranium enrichment facility proceeding is contested or uncontested, a licensing board must consider three baseline NEPA issues; LBP-06-17, 63 NRC 747 (2006)

safety findings that a board must make for issuance of an early site permit are clarified; LBP-09-19, 70 NRC 433 (2009)

Staff's underlying technical and factual findings are not open to board reconsideration unless, after a review of the record, the board finds the NRC Staff review inadequate or its findings insufficient; LBP-06-28, 64 NRC 460 (2006)

the board must decide whether, taking into consideration the site criteria contained in 10 C.F.R. Part 100, a reactor or reactors, having the characteristics that fall within the parameters for the site, can be constructed without undue risk to the health and safety of the public; LBP-07-9, 65 NRC 539 (2007)

the board's demand for a complete narrative report summarizing the Staff's review of the license application is vacated and the board is directed to focus on specific issues and Staff is to provide indexes as a means to summarize the documents on which it relied for its review; CLI-06-20, 64 NRC 15 (2006)

the board's role is analogous to that of an appellate court applying the substantial evidence test; LBP-07-9, 65 NRC 539 (2007)

the Commission shall hold a hearing on each application under the Atomic Energy Act, 42 U.S.C. 2133 or 2134(b), for a construction permit for a facility; LBP-07-1, 65 NRC 27 (2007); LBP-09-19, 70 NRC 433 (2009)

the licensing board is directed to revise its mandatory hearing schedule with a goal of issuing a final Commission decision on the pending application within 30 months from the date that the application was received; CLI-07-5, 65 NRC 109 (2007)

the licensing board must narrow its inquiry to those topics or sections in Staff documents that it deems most important and should concentrate on portions of the documents that do not on their face adequately explain the logic, underlying facts, and applicable regulations and guidance; LBP-07-6, 65 NRC 429 (2007)

the licensing board's standard of review on environmental issues in a uncontested proceeding on a uranium enrichment facility application is discussed; LBP-07-6, 65 NRC 429 (2007)

## SUBJECT INDEX

- the NRC Staff's underlying technical and factual findings on an early site permit application are not open to board reconsideration unless, after a review of the record, the board finds the NRC Staff review inadequate or its findings insufficient; LBP-07-9, 65 NRC 539 (2007)
- the overriding NEPA issue that a board must determine in a proceeding on an early site permit application is whether the NEPA review conducted by the NRC Staff has been adequate; LBP-07-9, 65 NRC 539 (2007)
- the scope of the licensing board's environmental review in an uncontested early site permit proceeding is discussed; LBP-07-1, 65 NRC 27 (2007)
- the scope of the licensing board's safety review in an uncontested early site permit proceeding is discussed; LBP-07-1, 65 NRC 27 (2007)
- the three NEPA-related factors that the board is required to address in uncontested early site permit proceedings are discussed; LBP-06-28, 64 NRC 460 (2006)
- uncontested early site permit proceedings are still subject to a mandatory hearing; CLI-07-12, 65 NRC 203 (2007)
- under its inherent supervisory power over adjudications, the Commission accepts review because licensing boards are conducting the first mandatory hearings in more than two decades and additional Commission guidance is deemed appropriate; CLI-06-20, 64 NRC 15 (2006)
- when a proceeding involving an application for a construction permit is uncontested the board will not conduct a de novo review, but rather will conduct a simple sufficiency review of the uncontested issues; LBP-07-1, 65 NRC 27 (2007); LBP-07-6, 65 NRC 429 (2007)
- when an early site permit is issued with an associated limited work authorization, the board must find relative to the LWA that any significant adverse environmental impact resulting from activities requested under 10 C.F.R. 52.17(c) can be redressed; LBP-09-19, 70 NRC 433 (2009)
- when reviewing an early site permit application in an uncontested proceeding, licensing boards are to conduct a simple sufficiency review rather than a de novo review on both Atomic Energy Act and National Environmental Policy Act issues; LBP-09-19, 70 NRC 433 (2009)
- where the Standard Review Plan had not been followed, no specific Regulatory Guide was applicable, a Regulatory Guide required adaptation, or the Staff's logic was incomplete or unclear, the board sought a thorough explanation of the Staff's rationale for the process it ultimately adopted along with its conclusions, and examined that process and those conclusions to ensure they were well founded in fact and logic; LBP-06-28, 64 NRC 460 (2006)
- whether NRC Staff should be required to produce four paper copies of relevant documents is a matter best left to a board's discretion; CLI-06-20, 64 NRC 15 (2006)
- with respect to certain NEPA findings, boards in early site permit proceedings are to make independent environmental judgments, though they need not rethink or redo every aspect of the NRC Staff's environmental findings or undertake their own fact-finding activities; LBP-09-19, 70 NRC 433 (2009)
- MATERIAL CONTROL AND ACCOUNTING**
- petitioner alleges release of controlled byproduct nuclear materials in containers not certified for transport of such materials on public roads and not labeled with the required labeling; DD-10-3, 72 NRC 171 (2010)
- MATERIAL FALSE STATEMENTS**
- a false statement charge, like a perjury charge, effectively demands an inquiry into defendant's state of mind and intent to deceive at the time the testimony was given; CLI-10-23, 72 NRC 210 (2010)
- a person is proscribed from deliberately submitting to the NRC information that the person knows to be incomplete or inaccurate in some respect material to the NRC; LBP-09-24, 70 NRC 676 (2009)
- board's finding that "knowledge" does not necessarily follow simply from previous exposure to individual facts, but rather an individual must have a current appreciation of those facts and their meaning in the circumstances presented, is a finding of fact, not of law; CLI-10-23, 72 NRC 210 (2010)
- concerning criminal guilt, the words "knowledge" and "knowingly" are normally associated with awareness, understanding, or consciousness; CLI-10-23, 72 NRC 210 (2010)
- information provided to the Commission by an applicant for a license or required to be maintained by the applicant or the licensee shall be complete and accurate in all material respects; LBP-08-14, 68 NRC 279 (2008); LBP-09-1, 69 NRC 11 (2009)
- knowledge of a fact requires not only an awareness of that fact but also an understanding or recognition of its significance; CLI-10-23, 72 NRC 210 (2010)

## SUBJECT INDEX

licensee employees may not deliberately submit to the NRC information that the employee knows to be incomplete or inaccurate in some respect material to the NRC; CLI-10-23, 72 NRC 210 (2010)  
materially false, fictitious, or fraudulent statements or representations are prohibited in matters within the federal government's jurisdiction; CLI-10-23, 72 NRC 210 (2010)  
materially incorrect responses to the NRC's communications are violations; CLI-10-23, 72 NRC 210 (2010)

NRC may revoke any license for a material false statement in the application; CLI-07-12, 65 NRC 203 (2007)

some circumstances surrounding a person's false statement may be so obvious that knowledge of its character may be fairly attributed to him; CLI-10-23, 72 NRC 210 (2010)

the sole issue under 10 C.F.R. 50.5(a)(2) is whether a person knew the information was materially incomplete and inaccurate at the time it was submitted to the NRC; CLI-10-23, 72 NRC 210 (2010)

to convict a person accused of making a false statement, the government must prove not only that the statement was false, but that the accused knew it to be false; CLI-10-23, 72 NRC 210 (2010)

willfulness means nothing more in the context of a false statement than that the defendant knew that his statement was false when he made it or consciously disregarded or averted his eyes from its likely falsity; CLI-10-23, 72 NRC 210 (2010)

### MATERIAL MISREPRESENTATIONS

a licensee employee who contributes to submission of information to the NRC that the employee knows is not complete or accurate in some material respect places the licensee in violation; LBP-09-24, 70 NRC 676 (2009)

engaging in deliberate misconduct that caused inaccurate and incomplete information to be provided to the NRC concerning conditions at a reactor resulted in debarment from licensed activities for 5 years; LBP-09-11, 70 NRC 151 (2009)

ethics rules in most jurisdictions require, and the board expects, that counsel will promptly correct statements of material fact that are no longer true; LBP-09-28, 70 NRC 1019 (2009)

for the decisions of the agency's dedicated regulators to be effective in protecting the public health and safety, there is no room for the submission of falsified information; LBP-09-24, 70 NRC 676 (2009)

information submitted to an NRC inspector that was not complete and accurate in all material respects is a violation; LBP-09-12, 70 NRC 159 (2009)

### MATERIALITY

a contention based on another agency's draft environmental assessment that does not apply to the time period in which proposed reactor units would be operational is not material to the findings the licensing board must make; LBP-10-1, 71 NRC 165 (2010)

a dispute is material if its resolution would make a difference in the outcome of the licensing proceeding; LBP-06-10, 63 NRC 314 (2006); LBP-10-6, 71 NRC 350 (2010)

a dispute is not material unless it involves a significant inaccuracy or omission and resolution of the dispute could affect the outcome of the licensing proceeding; LBP-10-14, 72 NRC 101 (2010)

a genuine material dispute is one that could lead to a different conclusion on potential cost-beneficial severe accident mitigation alternatives; LBP-09-26, 70 NRC 939 (2009)

accuracy and reliability of the agency's need-for-power determination, as reflected in the draft EIS, is material to the licensing decision; LBP-10-24, 72 NRC 720 (2010)

adequacy of the draft environmental impact statement's evaluation of alternatives is a material issue in the licensing proceeding; LBP-10-24, 72 NRC 720 (2010)

allegations of deficiencies or errors in an application also indicate some significant link between the claimed deficiency and either the health and safety of the public or the environment; LBP-07-10, 66 NRC 1 (2007); LBP-07-16, 66 NRC 277 (2007)

although one of the central purposes of NEPA is information gathering and disclosure, information immaterial to the proceeding does not necessarily need to be included; LBP-07-3, 65 NRC 237 (2007)

an admissible contention must show that the alleged error or omission is of possible significance to the result of the proceeding; LBP-09-26, 70 NRC 939 (2009)

any fact-based argument in a petition for review must satisfy the materiality requirement; CLI-10-17, 72 NRC 1 (2010)

applicant's change of reactor design constitutes new and materially different information for the purposes of filing a new contention; LBP-10-17, 72 NRC 501 (2010)

## SUBJECT INDEX

at the contention admissibility stage, intervenors are not required to run a sensitivity analysis and/or to prove that alleged defects would change the result; LBP-10-14, 72 NRC 101 (2010)

by complying with the six contention requirements, an admissible contention must raise an issue that is both within the scope of the proceeding (normally defined by the hearing notice) and material to the findings the NRC must make to support the action involved; LBP-09-18, 70 NRC 385 (2009)

concerns related to an applicant's ownership are potentially material to the safety and environmental requirements of 10 C.F.R. Part 40; LBP-08-24, 68 NRC 691 (2008)

contentions alleging deficiencies or errors in an application must also indicate some significant link between the claimed deficiency and either the health and safety of the public or the environment; LBP-08-16, 68 NRC 361 (2008); LBP-10-7, 71 NRC 391 (2010)

cost-risk calculations that intervenors propose in their contention as they relate to existing reactors are not material to the findings that NRC must make to license the proposed reactors; LBP-10-14, 72 NRC 101 (2010)

ensuring that NRC Staff meets its consultation obligations under section 106 of the National Historic Preservation Act is an issue material to the findings NRC must make in support of the action involved in a materials license renewal proceeding; LBP-08-24, 68 NRC 691 (2008)

failure to provide sufficient information to show that a genuine dispute exists with the applicant on a material issue of law or fact is grounds for dismissal of a contention; CLI-10-9, 71 NRC 245 (2010)

for a fact to be material with regard to the SAMA analysis, it must be a fact that can reasonably be expected to impact the Staff's conclusion that any particular mitigation alternative may or may not be cost-effective; LBP-07-13, 66 NRC 131 (2007)

for contention admissibility, a showing that the alleged error or omission is of possible significance to the result of the proceeding is required; LBP-10-6, 71 NRC 350 (2010)

for contentions to be admissible, the subject matter of the contention must impact the grant or denial of a pending license application; LBP-09-3, 69 NRC 139 (2009)

given that consideration of terrorist attacks is part of the NRC's NEPA obligations in the Ninth Circuit, the issue of whether terrorist attacks have been fully considered in the NEPA analysis for a power plant in that jurisdiction is plainly material to the decision the NRC must make; LBP-10-15, 72 NRC 257 (2010)

if petitioner makes a prima facie allegation that the application omits information required by law, it necessarily presents a genuine dispute with applicant on a material issue in compliance and raises an issue plainly material to an essential finding of regulatory compliance needed for license issuance; LBP-09-16, 70 NRC 227 (2009); LBP-10-16, 72 NRC 361 (2010)

in addressing a summary disposition motion, guidance on determining whether an issue is "material" is taken from procedures for contention admissibility; LBP-07-13, 66 NRC 131 (2007)

intervenors' comments must be significant enough to step over a threshold requirement of materiality, not merely state that a particular mistake was made, but show why the mistake was of possible significance; LBP-10-10, 71 NRC 529 (2010)

NRC regulations teach that a fact cannot be material to a summary disposition ruling unless its consideration could materially affect the decision of the NRC vis-a-vis implementation of any particular severe accident mitigation alternative; LBP-07-13, 66 NRC 131 (2007)

only disputes over facts that might affect the outcome of the suit under the governing law will properly preclude the entry of summary judgment; LBP-07-13, 66 NRC 131 (2007)

petitioner must demonstrate that the issue raised in the contention is material to the findings the NRC must make to support the action that is involved in the proceeding; LBP-07-11, 66 NRC 41 (2007); LBP-09-17, 70 NRC 311 (2009); LBP-09-21, 70 NRC 581 (2009); LBP-09-25, 70 NRC 867 (2009)

petitioner must show that the subject matter of the contention would impact the grant or denial of the license application at issue in the proceeding; CLI-09-15, 70 NRC 1 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-09-27, 70 NRC 992 (2009); LBP-10-6, 71 NRC 350 (2010)

petitioner must show why the alleged error or omission is of possible significance to the result of the proceeding; LBP-07-16, 66 NRC 277 (2007); LBP-08-9, 67 NRC 421 (2008); LBP-09-27, 70 NRC 992 (2009)

petitioner need not submit a sensitivity analysis in order to establish that a SAMA-related contention is material; LBP-10-15, 72 NRC 257 (2010)

## SUBJECT INDEX

- properly formulated contentions must focus on the license application in question, challenging either specific portions of or alleged omissions from the application, including the safety analysis report and the environmental report, so as to establish that a genuine dispute exists with the applicant on a material issue of law or fact; LBP-10-7, 71 NRC 391 (2010)
- section 2.309(f)(1)(vi) is not a second hurdle of materiality that an intervenor must meet, but rather requires that intervenor identify the specific parts of the combined license application that it disputes and show that resolution of those disputes is material to the licensing decision; LBP-09-27, 70 NRC 992 (2009)
- the decision as to whether an alleged environmental impact or alternative is significant or reasonable is the merits of a NEPA contention and should not be adjudicated at the contention admissibility stage under the guise of materiality or scope; LBP-09-10, 70 NRC 51 (2009)
- the financial test for a parent company guarantee is a material issue because the Staff must decide whether the test is satisfied in order to grant the combined license; LBP-09-15, 70 NRC 198 (2009)
- the increased risk of living within 50 miles of a nuclear power plant constitutes injury-in-fact, is traceable to the challenged action, and is likely to be redressed by a favorable decision that either denies a license or mandates compliance with legal requirements that protect the interests of the petitioners; LBP-09-4, 69 NRC 170 (2009)
- the meaning of materiality in the context of paragraph (f)(2) differs from materiality in the context of paragraph (f)(1) of 10 C.F.R. 2.309; LBP-10-1, 71 NRC 165 (2010)
- the requirement of materiality often dictates that any contention alleging deficiencies or errors in an application also indicates some significant link between the claimed deficiency and either the health and safety of the public or the environment; LBP-09-3, 69 NRC 139 (2009)
- the subject matter of the contention must impact the grant or denial of a pending license application; LBP-07-10, 66 NRC 1 (2007); LBP-08-16, 68 NRC 361 (2008); LBP-10-17, 72 NRC 501 (2010)
- the underlying purpose of NEPA as an information-gathering and disclosure mechanism requires a different view of the concept of "materiality" under 10 C.F.R. 2.309(f)(1)(iv) than might be applied to a contention seeking to establish a health and safety issue; LBP-08-16, 68 NRC 361 (2008)
- to be admissible, a contention must show that some significant link exists between the claimed deficiency and either the health and safety of the public or the environment; LBP-09-26, 70 NRC 939 (2009); LBP-09-27, 70 NRC 992 (2009); LBP-10-6, 71 NRC 350 (2010)
- to be admissible, contentions must assert an issue of law or fact that is material to the outcome of a licensing proceeding, meaning that the subject matter of the contention must impact the grant or denial of a pending license application; LBP-10-6, 71 NRC 350 (2010); LBP-10-7, 71 NRC 391 (2010)
- where a contention challenges applicant's compliance with the Commission's rules implementing the National Environmental Policy Act, materiality relates not only to the Commission's determination regarding denial, issuance, or conditioning of the requested combined license, but also to the Commission's fulfillment of its obligations under NEPA; LBP-10-6, 71 NRC 350 (2010)
- whether excessive safety design could lead to licensing uncertainty, unnecessary costs, or delays are not issues material to the high-level waste repository construction authorization proceeding; CLI-09-14, 69 NRC 580 (2009)
- MATERIALS LICENSE AMENDMENT APPLICATIONS**
- applicant must provide a list of all approvals and describe the status of those approvals with the applicable environmental standards and requirements; LBP-08-6, 67 NRC 241 (2008)
- applicant must submit an environmental report, which is required to contain the information specified in 10 C.F.R. 51.45; LBP-08-6, 67 NRC 241 (2008)
- MATERIALS LICENSE AMENDMENT PROCEEDINGS**
- a board did not act unreasonably in basing standing on potential harm from new operations that would be similar to harm petitioner claims he has suffered from existing operations; CLI-09-12, 69 NRC 535 (2009)
- for a petitioner to be admitted as a party, it must propose at least one admissible contention that meets the requirements of 10 C.F.R. 2.309(f)(1); LBP-06-6, 63 NRC 167 (2006)
- in proceedings not involving power reactors, proximity alone is not sufficient to establish standing; LBP-08-6, 67 NRC 241 (2008)
- intervenors' nuclear proliferation concern is premised upon future third-party activities that are unrelated to the specific activities authorized by license amendments and is not litigable because it is not a direct

## SUBJECT INDEX

- consequence of the proposed license amendments or the Commission's approval thereof; LBP-09-1, 69 NRC 11 (2009)
- issues relating to threats to public health and safety and potential impacts on the environment arising out of water quality issues are within the scope of the proceeding; LBP-08-6, 67 NRC 241 (2008)
- past violations or accidents that have no direct bearing on a proposed amendment may not be litigated; CLI-09-12, 69 NRC 535 (2009)
- petitioners have the burden to show a specific and plausible means whereby the licensing decision may harm them; CLI-09-9, 69 NRC 331 (2009)
- petitioners' claim that a foreign-owned company would be more likely than a U.S.-owned company to export its product overseas falls outside the scope of the proceeding, where the applicant had not applied for a license to export recovered uranium; CLI-09-12, 69 NRC 535 (2009)
- proximity alone is not sufficient to establish standing for a petitioner's proximity to a source materials activity; CLI-09-12, 69 NRC 535 (2009); LBP-08-24, 68 NRC 691 (2008)
- requirement to show distinct new harm from a license amendment application would not preclude standing to contest commencement of new operations at a separate site, where petitioner showed potential for harm to himself from new operation; CLI-09-12, 69 NRC 535 (2009)
- Subpart G hearing procedures do not apply to these proceedings; LBP-09-1, 69 NRC 11 (2009)
- the fact that NRC Staff consultation with interested Indian tribes had not yet taken place at the time a materials license amendment application was filed did not reflect a deficiency in the application and thus a contention alleging a deficiency in the application was inadmissible; CLI-09-12, 69 NRC 535 (2009)
- this is not an appropriate forum to throw open an opportunity to engage in a free-ranging inquiry into the character of the licensee; LBP-09-1, 69 NRC 11 (2009)
- where there is no obvious potential for offsite harm, petitioner must show a specific and plausible means of how the challenged action may harm him or her; CLI-09-9, 69 NRC 331 (2009)
- MATERIALS LICENSE AMENDMENTS**
- issuance of the license must not be inimical to the common defense and security or to the health and safety of the public; LBP-09-1, 69 NRC 11 (2009)
- the admissibility of proposed contentions may be determined after the Staff has issued the amendment; CLI-07-20, 65 NRC 499 (2007)
- MATERIALS LICENSE APPLICATIONS**
- an environmental report and an environmental impact statement must include a statement on the alternatives to the proposed action, including a discussion of the no-action alternative; CLI-09-15, 70 NRC 1 (2009)
- the organization or format of an application is not germane to license issuance because the objection to the application's organization is not an objection to the licensing action at issue in the proceeding; LBP-10-16, 72 NRC 361 (2010)
- MATERIALS LICENSE PROCEEDINGS**
- a design-based challenge involving a postulated cask drop on a sealed source is within the scope of, and material to, an irradiator licensing proceeding; LBP-06-12, 63 NRC 403 (2006)
- a state, county, municipality, federally recognized Indian tribe, or agencies thereof, may submit a petition to the Commission to participate as a party in a uranium enrichment facility proceeding; CLI-09-15, 70 NRC 1 (2009)
- boards apply a proximity-plus test to establish standing in materials cases, where the petitioner must show that the proposed licensing action involves a significant source of radiation that has an obvious potential for offsite consequences; CLI-10-20, 72 NRC 185 (2010)
- challenges to the implementing procedures for a reactor emergency plan are not material; LBP-06-12, 63 NRC 403 (2006)
- compliance with regulations of other federal agencies, such as Environmental Protection Agency drinking water contamination limits, is beyond a board's jurisdiction and outside the scope of NRC proceedings; LBP-06-8, 63 NRC 241 (2006)
- general areas of concern are no longer sufficient to trigger a hearing in a Subpart L proceeding; LBP-06-12, 63 NRC 403 (2006)
- no proximity presumption applies in source materials cases; LBP-10-16, 72 NRC 361 (2010)

## SUBJECT INDEX

pursuant to the proximity-plus approach, a presumption based on geographical proximity (albeit at distances much closer than 50 miles) may be applied where there is a determination that the proposed action involves a significant source of radioactivity producing an obvious potential for offsite consequences; LBP-10-4, 71 NRC 216 (2010)

standing was found for an organization representing three members living in close proximity to decommissioning site, who expressed concern that depleted uranium materials could affect a waterway abutting the property of two members; CLI-10-20, 72 NRC 185 (2010)

the proper scope of an irradiator licensing proceeding and whether it requires or otherwise encompasses analyses of endemic site-related risks are questioned; CLI-07-26, 66 NRC 109 (2007)

the scope of a proceeding generally is defined by the Commission's notice of opportunity for hearing; LBP-06-12, 63 NRC 403 (2006)

to establish standing, petitioner must show more than that he lives or works within a certain distance of the site where materials will be located; CLI-10-20, 72 NRC 185 (2010)

whether and at what distance a petitioner can be presumed to be affected must be judged on a case-by-case basis, taking into account the nature of the proposed action and the significance of the radioactive source; LBP-10-4, 71 NRC 216 (2010)

### MATERIALS LICENSE RENEWAL

NRC Staff is required to consider whether renewing a license would be inimical to the common defense and security or the public health and safety; LBP-08-24, 68 NRC 691 (2008)

when a renewal application is timely filed, the license is automatically extended by operation of law until final agency action is taken on the renewal request; LBP-09-13, 70 NRC 168 (2009)

### MATERIALS LICENSE RENEWAL PROCEEDINGS

a contention that involves an issue of state law is outside the scope of the proceeding; LBP-08-24, 68 NRC 691 (2008)

a license renewal proceeding is an appropriate occasion for appraising the entire past performance of the licensee; LBP-08-24, 68 NRC 691 (2008)

allegations that mining activities may cause harm to public health and safety are within the scope of a materials license renewal proceeding and material to the findings the NRC must make; LBP-08-27, 68 NRC 951 (2008)

although a board in another materials license renewal proceeding allowed an Indian organization to participate in that proceeding as an interested Indian tribe under 10 C.F.R. 2.315(c), that ruling is not binding on other boards; LBP-09-13, 70 NRC 168 (2009)

an unopposed motion to withdraw the sole intervention petition is granted and the proceeding is terminated; LBP-10-3, 71 NRC 213 (2010)

appraisal of the entire past performance of the licensee is an appropriate issue in contentions; CLI-09-9, 69 NRC 331 (2009)

determination of specific hearing procedures to be used for a proceeding is made on a contention-by-contention basis, and selection of the hearing procedure is dependent on what is most appropriate for the specific contentions before it; LBP-08-24, 68 NRC 691 (2008)

ensuring that NRC Staff meets its consultation obligations under section 106 of the National Historic Preservation Act is an issue material to the findings NRC must make in support of the action involved; LBP-08-24, 68 NRC 691 (2008)

in source materials cases, petitioner has the burden to show a specific and plausible means of how proposed license activities may affect him or her; LBP-09-13, 70 NRC 168 (2009)

standing based on proximity does not apply in source materials cases; LBP-09-13, 70 NRC 168 (2009)

to participate as a party in a materials license renewal proceeding, intervention petitioner must not only establish standing, but also proffer at least one admissible contention; LBP-08-24, 68 NRC 691 (2008)

### MATERIALS LICENSES

a categorical exclusion exists for materials licenses associated with irradiators; CLI-10-18, 72 NRC 56 (2010)

a license to possess and to use special nuclear materials at a fuel fabrication facility is the functional equivalent of an operating license for more standard facilities; LBP-07-14, 66 NRC 169 (2007)

a source material license may not be issued to a corporation if the Commission determines that the corporation is owned, controlled, or dominated by a foreign corporation; LBP-08-6, 67 NRC 241 (2008)

## SUBJECT INDEX

bare ownership of land containing radioactive material is not part of the licensee's licensed operation; CLI-06-14, 63 NRC 510 (2006)

before issuing a license to receive and possess high-level waste at the repository, the Commission must find that construction of any underground storage space required for initial operation has been substantially completed; LBP-10-22, 72 NRC 661 (2010)

creditor regulations may be augmented by license conditions as necessary to allow ownership arrangements, such as sale and leaseback, provided it can be found that such arrangements are not inimical to the common defense and security of the United States; CLI-09-15, 70 NRC 1 (2009)

issuance of a materials license to a licensee wholly owned by a foreign parent is not prohibited; CLI-09-12, 69 NRC 535 (2009)

licensees must satisfy all applicable state and local siting, zoning, land use, and building code requirements for irradiators; CLI-08-3, 67 NRC 151 (2008)

NRC Staff is required under NEPA to evaluate reasonable technological and geographical alternatives to a proposed irradiator; CLI-10-18, 72 NRC 56 (2010)

Part 70 financial criteria can be met by conditioning the license to require funding commitments to be in place prior to construction and operation; CLI-09-15, 70 NRC 1 (2009)

performance-based licensing is fully consistent with sound NEPA practice and does not run counter to any agency mandate contained in the Atomic Energy Act or any established Commission regulation; LBP-06-19, 64 NRC 53 (2006)

project goals are to be determined by the applicant, not the agency; CLI-10-18, 72 NRC 56 (2010)

with respect to possession, a Part 40 license continues in effect after expiration until decommissioning is completed; CLI-09-1, 69 NRC 1 (2009)

**MEMORANDUM OF UNDERSTANDING**

an MOU is adequate to demonstrate the plausibility of applicant's depleted uranium deconversion strategy; LBP-06-15, 63 NRC 591 (2006)

**METAL FATIGUE**

a component's cumulative usage factor is the fundamental parameter used to determine whether it will likely develop cracks during the license renewal period and thus is subject to an aging management plan; LBP-08-13, 68 NRC 43 (2008)

a license renewal applicant who addresses the cumulative usage factor issue via an aging management program may reference Chapter X of the Generic Aging Lessons Learned Report; CLI-10-17, 72 NRC 1 (2010)

an aging management program is intended to manage the effects of aging on a particular component by, e.g., ensuring that the fatigue usage factor for the component does not exceed the design code limit; CLI-10-17, 72 NRC 1 (2010)

analysis of metal fatigue that ignores the known and substantial effects of the light-water reactor environment is insufficient, as both a technical and a legal matter; LBP-08-25, 68 NRC 763 (2008)

applicant may demonstrate compliance with 10 C.F.R. 54.21(c)(1)(ii) by showing that the cumulative usage factor calculations have been reevaluated based on an increased number of assumed transients to bound the period of extended operation and that the resulting CUF remains less than or equal to 1.0 for the period of extended operation; CLI-10-17, 72 NRC 1 (2010)

applicant's use of a conservative number of transients in the calculations of the environmentally adjusted cumulative usage factor is adequate to provide the degree of assurance required by 10 C.F.R. 54.29(a); LBP-08-25, 68 NRC 763 (2008)

conservatism in use of Green's function to determine cumulative usage factor for metal fatigue in the recirculation nozzle is discussed; LBP-08-12, 68 NRC 5 (2008)

cumulative use factor is a means of quantifying the fatigue that a particular metal component experiences during plant operation; CLI-10-17, 72 NRC 1 (2010)

for any material, there is a characteristic number of stress cycles that it can withstand at a particular applied stress level before fatigue failure occurs; CLI-10-17, 72 NRC 1 (2010)

for license renewal, feedwater, core spray, and reactor recirculation outlet nozzles, as part of the reactor coolant pressure boundary, must meet the metal-fatigue requirements for Class 1 components in Section III of the ASME Code; CLI-10-17, 72 NRC 1 (2010)

if a board finds that the use of a more accurate approach than compliance with regulatory guides is needed to provide reasonable assurance that metal fatigue will be adequately managed during the period

## SUBJECT INDEX

- of extended operation, then the board is authorized and duty bound to impose such a requirement; LBP-08-25, 68 NRC 763 (2008)
  - if applicant can demonstrate by plant operating experience that the initially predicted number of stress cycles would not be exceeded even in the extended 20-year operating period, then 10 C.F.R. 54.21(c)(1)(i) would be satisfied; CLI-10-17, 72 NRC 1 (2010)
  - if applicant's metal fatigue analyses on Class I components do not comply with the ASME Code and do not provide reasonable assurance as required by 10 C.F.R. 54.21(c)(1) and 54.29(a), then a license renewal cannot be issued; LBP-08-25, 68 NRC 763 (2008)
  - if the cumulative usage factor environmental analysis produces a value of greater than unity, then the analysis indicates that the component would be likely to develop metal fatigue cracks that might affect their function during the 20-year license renewal period of extended operation, and thus requires an aging management program; LBP-09-9, 70 NRC 41 (2009)
  - license renewal applicant demonstrates compliance with the ASME Code by projecting the fatigue analysis for the nozzle through the extended operating period; CLI-08-28, 68 NRC 658 (2008)
  - new contention on the adequacy of consideration of the dissolved oxygen factor in the cumulative usage factor environmental analysis and use of inappropriate heat transfer equations was previously litigated and resolved and thus is not admissible; LBP-09-9, 70 NRC 41 (2009)
  - NRC Staff's guidance document NUREG/CR-6909, which prescribes guidance on the calculation of metal fatigue on reactor components in a light water reactor environment, is built upon a larger and more recent database than NUREG/CR-5704 and -6583 but use of the earlier NUREGs is sufficient; LBP-08-25, 68 NRC 763 (2008)
  - use of a simplified Green's function methodology for the environmentally adjusted cumulative usage factor metal fatigue analyses for the core spray and reactor recirculation outlet nozzles is inconsistent with the ASME Code and thus cannot serve as the analysis-of-record and does not satisfy the requirements of 10 C.F.R. 54.21(c)(1) or 54.29(a); LBP-08-25, 68 NRC 763 (2008)
- METEOROLOGICAL FACTORS**
- the board rules on a motion for summary disposition of a contention questioning applicant's handling of its severe accident mitigation alternatives analysis; LBP-07-13, 66 NRC 131 (2007)
  - the site safety analysis report submitted with an early site permit application must contain the seismic, meteorological, hydrologic, and geologic characteristics of the proposed site; LBP-09-19, 70 NRC 433 (2009)
- MINING ACTIVITIES**
- a contention concerning environmental impacts of offsite mining is rejected because petitioner failed to support the allegations with information indicating that such impacts are even plausibly significant; LBP-09-10, 70 NRC 51 (2009)
  - controls other countries may impose on mining and milling, and the impacts of such activities, are outside the scope of a combined license proceeding; LBP-09-17, 70 NRC 311 (2009)
  - if the environmental impact of mining activities is potentially significant, then the failure of the environmental report for a combined license application to disclose the location of the offsite mine does not immunize it from being the subject of a legitimate contention; LBP-09-10, 70 NRC 51 (2009)
- MINORITIES**
- in reviewing environmental justice claims, adverse impacts that fall heavily on minority and impoverished citizens call for particularly close scrutiny; LBP-07-3, 65 NRC 237 (2007)
  - to qualify as an environmental justice contention, the contention must show that the affected local population qualifies as a minority or low-income population; LBP-09-18, 70 NRC 385 (2009)
- MISCONDUCT**
- a difference of opinion over a scientific question does not constitute fraud or misconduct on the part of the NRC Staff; CLI-06-4, 63 NRC 32 (2006)
- See also Deliberate Misconduct; Material Misrepresentations
- MODIFICATION ORDER**
- an order modifying a license, such as a Staff order, falls well within the Administrative Procedure Act's definition of adjudication, and as such, the Staff order did not trigger the notice-and-comment procedures applicable to rulemakings; CLI-10-3, 71 NRC 49 (2010)
  - any challenge to the established terms and conditions of an early site permit can only be raised as a petition to modify a license under section 2.206; CLI-07-12, 65 NRC 203 (2007)

## SUBJECT INDEX

intervention petitioners who think an order modifying a license should not be sustained, but might want further corrective measures, are precluded from intervention; LBP-09-20, 70 NRC 565 (2009)

the Commission's power to define the scope of a proceeding will lead to the denial of intervention when the Commission amends a license to require additional or better safety measures; LBP-09-20, 70 NRC 565 (2009)

twenty days in which to request a hearing is the minimum required by the agency's regulations for orders issued under 10 C.F.R. 2.202(a); LBP-09-20, 70 NRC 565 (2009)

when issuing an order modifying a license, the agency is required to inform the licensee or any other person adversely affected by the order of his or her right, within 20 days of the date of the order, or such other time as may be specified in the order, to demand a hearing; LBP-09-20, 70 NRC 565 (2009)

where the notice of hearing limits the scope to whether the order should be sustained, petitioner's sole remedy is rescission of the order; LBP-09-20, 70 NRC 565 (2009)

with respect to orders modifying a license, petitioner must always request a remedy that falls within the scope of the proceeding, as articulated in the notice of hearing; LBP-09-20, 70 NRC 565 (2009)

### MONETARY AWARDS

licensing boards have awarded payment of litigation fees and expenses from a licensee to an intervenor if there has been legal harm to the intervenors caused by some activity or action of the licensee; LBP-09-1, 69 NRC 11 (2009)

NRC is explicitly prohibited by law from paying the expenses of or otherwise compensating intervenors, and thus cannot grant petitioners funds to prepare requests for access to safeguards information or sensitive unclassified nonsafeguards information; CLI-09-4, 69 NRC 80 (2009)

### MONITORING

a contention alleging that the applicant's proposed monitoring techniques are not adequate because they are based on computer models that were not benchmarked is admissible; LBP-06-20, 64 NRC 131 (2006)

a contention stating that monitoring activities may not be sufficient to identify and control the effects of aging that will occur during the 20-year renewal period falls squarely within the scope of a license renewal proceeding; LBP-06-7, 63 NRC 188 (2006)

NRC continually takes measures to include the monitoring of safety culture in its oversight programs and internal management processes; CLI-10-27, 72 NRC 481 (2010)

preconstruction monitoring and testing to establish background information is exempted from the prohibition on commencement of construction; LBP-10-16, 72 NRC 361 (2010)

See also Radiation Monitoring System

### MOOTNESS

a contention alleging that a license application omits material information becomes moot when the applicant cures the omission; CLI-06-9, 63 NRC 433 (2006); CLI-07-8, 65 NRC 124 (2007); CLI-09-8, 69 NRC 317 (2009); LBP-06-16, 63 NRC 737 (2006); LBP-07-2, 65 NRC 153 (2007); LBP-08-12, 68 NRC 5 (2008); LBP-09-15, 70 NRC 198 (2009); LBP-09-16, 70 NRC 227 (2009); LBP-09-21, 70 NRC 581 (2009); LBP-09-27, 70 NRC 992 (2009); LBP-10-16, 72 NRC 361 (2010)

a contention challenging applicant's environmental report can be superseded by the subsequent issuance of licensing-related documents, whether a draft environmental impact statement or an applicant's response to a request for additional information; LBP-10-14, 72 NRC 101 (2010)

a contention that impacts from a severe radiological accident at any one unit on operation of other units at the site had not been, and should be, considered in the application's environmental report is found to be moot; LBP-10-10, 71 NRC 529 (2010)

although the Commission is not strictly bound by the mootness doctrine, the agency's adjudicatory tribunals have generally adhered to the principle; LBP-09-15, 70 NRC 198 (2009)

an appeal is moot where no effective relief can be granted to petitioners even if they were to prevail on their claim; LBP-09-14, 70 NRC 193 (2009)

an order denying a motion to reopen renders moot a petitioner's request for leave to submit an amended petition to intervene; CLI-06-4, 63 NRC 32 (2006)

because NRC is not subject to the jurisdictional limitations placed on the federal courts by the case or controversy provision in Article III of the Constitution, there is no insuperable barrier to its rendition of

## SUBJECT INDEX

an advisory opinion on issues that have been indisputably mooted by events occurring subsequent to a licensing board decision; LBP-09-15, 70 NRC 198 (2009)

boards may consider the merits of a contention that has become moot to the extent doing so will promote the fair and expeditious resolution of the case and there are no significant countervailing concerns; LBP-09-15, 70 NRC 198 (2009)

despite not being constitutionally limited by the case or controversy requirement of Article III, common sense counsels against proceeding with an adjudication where no effective relief can be granted; LBP-09-14, 70 NRC 193 (2009)

dismissal of one contention on mootness grounds would not terminate a case where the board had expressly retained jurisdiction to decide whether to admit another contention; LBP-09-27, 70 NRC 992 (2009)

failure to raise any challenge to a Staff EIS correction essentially renders that aspect of an intervenor challenge moot, as the intervenor has failed to raise a litigable challenge to the previously identified error; LBP-06-9, 63 NRC 289 (2006)

imminent mootness of an issue has been cause for taking interlocutory review if the issue sought to be reviewed would have become moot by the time the board issued a final decision; CLI-10-29, 72 NRC 556 (2010)

mootness occurs when a justiciable controversy no longer exists; LBP-10-10, 71 NRC 529 (2010)

on issues of whether a contention has been rendered moot by provision of information by an applicant, the applicant bears the burden of persuasion; LBP-10-10, 71 NRC 529 (2010)

post-contention admission events, such as issuance of a Staff draft environmental impact statement, can render a previously admitted contention of omission subject to dismissal as moot; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008); LBP-08-6, 67 NRC 241 (2008)

the case or controversy jurisdictional limitation restricts the business of federal courts to questions presented in an adversary context and in a form historically viewed as capable of resolution through the judicial process; LBP-09-14, 70 NRC 193 (2009)

the executive branch is not bound by the same constitutional constraints as Article III courts, but it has consistently followed the same principles of declining to consider moot cases, in the interest of administrative economy; LBP-09-14, 70 NRC 193 (2009)

the mere potential that an issue may become moot in the future due to a rulemaking does not affect the finality of a decision resting on current law; CLI-07-13, 65 NRC 211 (2007)

the mootness doctrine derives from the Constitution's limitation of federal courts' jurisdiction to cases or controversies; LBP-09-15, 70 NRC 198 (2009)

the question whether to hold an NRC enforcement proceeding in abeyance pending a related criminal prosecution is generally suitable for interlocutory Commission review because, unlike most interlocutory questions, the abeyance issue cannot await the end of the proceeding because it becomes moot; CLI-10-29, 72 NRC 556 (2010)

under Commission precedent on contentions of omission, once information asserted to have been omitted is supplied, the original contention is moot, and intervenors must timely file a new or amended contention in order to raise specific challenges regarding the new information; LBP-10-5, 71 NRC 329 (2010); LBP-10-10, 71 NRC 529 (2010); LBP-10-14, 72 NRC 101 (2010)

when a claim becomes moot in federal court, the court loses jurisdiction to decide the merits of that claim; LBP-09-15, 70 NRC 198 (2009)

when a claim becomes moot, a decision on the merits may be appropriate if the same basic dispute is likely to recur in the future, unless it seems sufficient to await the event or better to defer to another court; LBP-09-15, 70 NRC 198 (2009)

when a contention is based on a factual underpinning in a document that has been essentially repudiated by the source of that document, the contention may be dismissed unless the intervenor offers another independent source; LBP-10-9, 71 NRC 493 (2010)

when a federal court dismisses a claim as moot and avoids any further consideration of the merits of that claim, it does so because the claim no longer satisfies the case or controversy requirement of Article III; LBP-09-15, 70 NRC 198 (2009)

when an issue is no longer live, such that a party no longer has a legal interest in the issue, then it is moot; LBP-10-10, 71 NRC 529 (2010)

## SUBJECT INDEX

where a contention alleges the omission of particular information or an issue from an application, and the information is later supplied by NRC Staff in a draft environmental statement, the contention is moot; LBP-10-10, 71 NRC 529 (2010)

where a contention is superseded by the subsequent issuance of licensing-related documents the contention must be disposed of or modified; LBP-10-17, 72 NRC 501 (2010)

### MOTIONS

a party in the high-level waste proceeding who files a motion must certify that he or she has made a reasonable effort to consult with counsel for the other parties in an effort to resolve the matter in advance of filing the motion; CLI-08-25, 68 NRC 497 (2008)

a person who has not been admitted as a party to a proceeding is not entitled to make a motion in an ongoing proceeding; CLI-10-10, 71 NRC 281 (2010)

all motions are required to include a certification that the sponsor of the motion has made a sincere effort to contact the other parties and to resolve the issues raised in the motion; CLI-08-22, 68 NRC 355 (2008)

although NRC regulations do not provide for a motion to suspend a proceeding, the Commission has considered similar requests in the exercise of its inherent supervisory powers over proceedings; CLI-08-23, 68 NRC 461 (2008)

any motion must be filed within 10 days of the occurrence or circumstance from which the motion arises, and any movant must contact other parties prior to filing the motions; LBP-08-6, 67 NRC 241 (2008)

any motion, other than one made orally on the record during a hearing or as otherwise directed by the presiding officer, must contain a certification that the movant has made a sincere effort to contact the other parties and resolve the matter, and that this effort was unsuccessful; LBP-07-4, 65 NRC 281 (2007)

filing deadline is no more than 10 days after the occurrence or circumstance from which the motion arises; CLI-06-2, 63 NRC 9 (2006)

if a board erroneously rejected petitioner's motions, but the record does not suggest that petitioner suffered any prejudicial error, Commission review is not warranted; CLI-10-14, 71 NRC 449 (2010)

if the attorney or representative of a party is contacted pursuant to the consultation requirement, then that person (or his or her alternate) must make a sincere effort to make himself or herself available to listen and to respond to the moving party's explanation, and to resolve the factual and legal issues raised in the motion; LBP-09-22, 70 NRC 640 (2009)

intervenors must move for leave to file a timely new or amended contention under 10 C.F.R. 2.309(c), (f)(2); LBP-10-14, 72 NRC 101 (2010)

it is inconsistent with dispute avoidance/resolution purposes, and thus insufficient, for a contacted attorney or representative to fail or refuse to consider the substance of the consultation attempt, or for the party to respond that it takes no position on the motion (or issues) and that it reserves the right to file a response to the motion when it is filed; LBP-09-22, 70 NRC 640 (2009)

motions are to be filed within 10 days of the event or circumstance from which they arise; LBP-10-23, 72 NRC 692 (2010)

motions will be rejected if they do not include certification by the attorney or representative of the moving party that they have made a sincere effort to contact the other parties in this proceeding, to explain to them the factual and legal issues raised in the motion, and to resolve those issues; LBP-09-22, 70 NRC 640 (2009)

movant has no right to reply except as permitted by the presiding officer; CLI-08-23, 68 NRC 461 (2008) no later than 30 days after service of materials, all parties shall file any motions or requests to permit that party to conduct cross-examination of a specified witness or witnesses, together with the associated cross-examination plans; LBP-09-22, 70 NRC 640 (2009)

parties must make good-faith efforts to resolve with the other parties the subject matter of their motion; CLI-10-10, 71 NRC 281 (2010)

petitioners' requests that do not fit cleanly within any of the procedures described within the rules of practice are treated as general motions brought under the procedural requirements of 10 C.F.R. 2.323; CLI-08-23, 68 NRC 461 (2008)

there is no requirement that information provided to the board by Staff counsel about a telephone call from petitioner's former expert witness be in the form of a motion; LBP-06-10, 63 NRC 314 (2006)

## SUBJECT INDEX

to be sincere, movant should contact other parties sufficiently in advance to provide enough time for the possible resolution of the matter or issues in question; LBP-09-22, 70 NRC 640 (2009)

See also Referral of Motion

### MOTIONS FOR RECONSIDERATION

a motion may not be filed except with leave of the licensing board, upon a showing of compelling circumstances, such as the existence of a clear and material error in a decision, which could not reasonably have been anticipated, that renders the decision invalid; CLI-07-13, 65 NRC 211 (2007); CLI-07-21, 65 NRC 519 (2007); CLI-07-22, 65 NRC 525 (2007); CLI-10-9, 71 NRC 245 (2010); CLI-10-15, 71 NRC 479 (2010); LBP-08-23, 68 NRC 679 (2008)

arguments on a separate matter, which petitioner adopts in a motion for reconsideration but could have made earlier, do not provide a compelling substantive basis for reconsidering a decision; CLI-09-8, 69 NRC 317 (2009)

because deferral of the consideration of the balance of petitioner's contentions might prejudice parties' legitimate interests, they will be subject to the filing of a timely motion for reconsideration; LBP-07-5, 65 NRC 341 (2007)

motions are appropriately considered under 10 C.F.R. 2.323(e); CLI-10-9, 71 NRC 245 (2010)

motions may not be filed except upon leave of the adjudicatory body that rendered the decision; CLI-10-9, 71 NRC 245 (2010)

motions must be filed within 10 days of the action for which reconsideration is requested; CLI-10-9, 71 NRC 245 (2010)

motions will be denied if they point to no compelling circumstances warranting reconsideration; CLI-10-10, 71 NRC 281 (2010)

movant must show a compelling circumstance, such as the existence of a clear and material error in a decision, which could not have reasonably been anticipated and that renders the decision invalid; LBP-06-27, 64 NRC 399 (2006)

NRC rules do not allow for multiple requests for reconsideration of the same decision; CLI-09-8, 69 NRC 317 (2009); CLI-10-9, 71 NRC 245 (2010)

petitioner cannot satisfy NRC's standing requirement by offering a vague claim of 50-mile proximity in an initial petition and later using a petition for reconsideration to fill in gaps with more specific information that was available all along; CLI-07-21, 65 NRC 519 (2007)

petitioner may not claim standing based on vague assertions, and when that fails, attempt to repair the defective pleading with fresh details offered for the first time in a petition for reconsideration; CLI-08-19, 68 NRC 251 (2008)

petitioners must seek leave to request reconsideration of a decision and set forth compelling circumstances that petitioners could not reasonably have anticipated and that would render the decision invalid; CLI-10-21, 72 NRC 197 (2010)

petitioners seeking reconsideration of a Commission order must demonstrate that the Commission has committed clear error, must do so by raising new arguments, and must not previously have been able to make those arguments; CLI-07-22, 65 NRC 525 (2007)

petitioners should not use this venue merely to re-argue matters that the Commission already has considered but rejected; LBP-06-27, 64 NRC 399 (2006)

petitions are limited to 10 pages; CLI-07-22, 65 NRC 525 (2007)

raising new arguments for the first time is prohibited; LBP-06-27, 64 NRC 399 (2006)

the Commission finds no changed circumstances that could not previously have been brought to it; CLI-10-9, 71 NRC 245 (2010)

where a board's decision rests in part on facts officially noticed, any party wishing to controvert the facts officially noticed may do so by filing a motion for reconsideration or an appeal from the decision; LBP-08-25, 68 NRC 763 (2008)

### MOTIONS TO COMPEL

a party seeking to challenge NRC Staff's claim of privilege or protected status may file a motion to compel production of the document; CLI-10-24, 72 NRC 451 (2010)

challenges regarding the adequacy of any mandatory disclosure or hearing file, redactions, or the validity of any claim that a document is privileged or protected shall be filed within 10 days after the occurrence or circumstance from which the motion arises; LBP-09-22, 70 NRC 640 (2009)

## SUBJECT INDEX

the board grants intervenors' motion to compel disclosure of certain groundwater modeling information associated with a combined license application; LBP-10-23, 72 NRC 692 (2010)

### MOTIONS TO DISMISS

collateral estoppel effect is given to judgments granting a motion to dismiss, when the party against which collateral estoppel is invoked had a full and fair opportunity to oppose the dismissal; LBP-08-23, 68 NRC 679 (2008)

### MOTIONS TO REOPEN

a board is to decide the motion on the information before it and has no authority to engage in discovery in order to supplement the pleadings before it; CLI-08-28, 68 NRC 658 (2008)

a mere showing of a possible violation is not enough to reopen a record; CLI-09-7, 69 NRC 235 (2009)

a motion to reopen that does not satisfy the Commission's procedural requirements but which arguably raises a significant safety or environmental issue may be referred to the Staff under 10 C.F.R. 2.206; CLI-06-4, 63 NRC 32 (2006)

a party seeking to reopen a closed record to raise a new matter faces an elevated burden to lay a proper foundation for its claim; CLI-08-28, 68 NRC 658 (2008)

a petitioner seeking to reopen the record does not show the existence of a significant safety issue by showing merely that a plant component performs safety functions and thus has safety significance; LBP-08-12, 68 NRC 5 (2008)

a pleading cannot be timely when petitioner does not explain why the motion was filed 11 months after the NRC terminated the case, 9 months after the petitioner first raised the particular issue in its comments, and 4 months after the Staff issued the final document containing the position the petitioner disputes; CLI-06-4, 63 NRC 32 (2006)

a significant safety or environmental issue must be addressed; CLI-08-23, 68 NRC 461 (2008)

a timely motion may be denied if it raises issues that are not of major significance to plant safety whereas a nontimely motion may be granted if it raises an issue of sufficient gravity; LBP-10-21, 72 NRC 616 (2010)

affidavit support for a motion to reopen must provide a prima facie showing that a deficiency exists in the license renewal application and the deficiency presents a significant safety issue; LBP-08-12, 68 NRC 5 (2008)

affidavit support that sets forth the factual and/or technical basis for the movants' claim that a significant and material safety or environmental issue exists is required; CLI-08-23, 68 NRC 461 (2008); LBP-08-12, 68 NRC 5 (2008)

affidavits must set forth the factual and/or technical bases for the movant's claim that the criteria of 10 C.F.R. 2.326(a) have been satisfied, including addressing each of the reopening criteria separately with a specific explanation of why it has been met; LBP-10-19, 72 NRC 529 (2010); LBP-10-21, 72 NRC 616 (2010)

although the motion must be timely, an exceptionally grave issue may be considered even if the motion is not timely; LBP-10-19, 72 NRC 529 (2010); LBP-10-21, 72 NRC 616 (2010)

an order denying a motion to reopen renders moot a petitioner's request for leave to submit an amended petition to intervene; CLI-06-4, 63 NRC 32 (2006)

bare assertions and speculation do not supply the requisite support and a judge's dissenting opinion cannot substitute for the affidavit required to be submitted to the board; CLI-08-28, 68 NRC 658 (2008)

expert affidavits supporting motions must be presented by competent individuals with knowledge of the facts alleged or by experts in the appropriate disciplines and the evidence must meet admissibility standards; CLI-09-7, 69 NRC 235 (2009)

factors (vii) and (viii) of 10 C.F.R. 2.309(c)(1) are generally considered to have the most significance in the balancing process in instances in which there are no other parties or ongoing related proceedings; LBP-10-21, 72 NRC 616 (2010)

failure by movant to address all reopening requirements in its motion is reason enough to deny the motion; LBP-08-12, 68 NRC 5 (2008)

good cause for late filing is the most important factor, and failure to meet this factor considerably enhances the burden of showing that the other factors justify admission of a late-filed petition; LBP-10-21, 72 NRC 616 (2010)

## SUBJECT INDEX

if a motion to reopen and the proposed new contention are based on material information that was not previously available, then it qualifies as timely; LBP-10-19, 72 NRC 529 (2010)

if a motion to reopen relates to a contention not previously in controversy among the parties, movant must meet the late-filing requirements of section 2.309(c); LBP-10-21, 72 NRC 616 (2010)

if a party seeks to reopen a closed record and, in the process, raises an issue that was not an admitted contention in the initial proceeding, it must also satisfy the requirements for a nontimely or late-filed contention; CLI-06-4, 63 NRC 32 (2006)

in addressing the section 2.309(c)(1) factors, failure to provide any specific discussion of most of these items or the weight they should be given in the balance is a potentially fatal omission; LBP-10-21, 72 NRC 616 (2010)

in light of the requirements that any new contention be based on material information that was not previously available, the timeliness determination required under 10 C.F.R. 2.309(f)(2) and the section 2.326(a) reopening standard can be closely equated; LBP-10-21, 72 NRC 616 (2010)

motions are governed by 10 C.F.R. 2.326, which requires satisfaction of three listed criteria and that the motion be accompanied by an affidavit that meets certain specific requirements; CLI-09-7, 69 NRC 235 (2009)

motions must be accompanied by affidavits of qualified experts presenting the factual and/or technical bases for the claim that there is a significant safety issue, together with evidence that satisfies the admissibility standards; CLI-08-28, 68 NRC 658 (2008); CLI-09-5, 69 NRC 115 (2009); CLI-09-7, 69 NRC 235 (2009)

movant must show that a materially different result would have been likely if the new information had been available to the board; CLI-08-23, 68 NRC 461 (2008)

movant must show that it is more probable than not that it would have prevailed on the merits of the proposed new contention; LBP-10-19, 72 NRC 529 (2010)

new contention asserting issues related to aging management of effects of moist or wet environments on buried, below-grade, underground, or hard-to-access safety-related electrical cables is denied; LBP-10-19, 72 NRC 529 (2010)

new information sufficient to reopen a closed hearing record at the last minute must be significant and plausible enough to require reasonable minds to inquire further; CLI-08-28, 68 NRC 658 (2008)

NRC will not consider a last-second reopening of an adjudication and a restart of licensing board proceedings based on a pleading that is defective on its face; CLI-06-4, 63 NRC 32 (2006)

once a licensing board has concluded board action on a licensing case, jurisdiction to decide a motion to reopen regarding that proceeding passes to the Commission, which retains jurisdiction until the license in question has been issued; LBP-10-21, 72 NRC 616 (2010)

once there has been an appeal or petition to review a board order ruling on intervention petitions or, where a hearing is granted, following a partial or final initial decision, jurisdiction passes to the Commission; CLI-09-5, 69 NRC 115 (2009)

only a party to a proceeding may move to reopen a closed record; CLI-09-5, 69 NRC 115 (2009)

proceeding will remain open during the pendency of a remand, during which time, petitioners are free to submit a motion to reopen the record should they seek to address any genuinely new issues related to the license renewal application that previously could not have been raised; CLI-10-17, 72 NRC 1 (2010)

proponent of a motion to reopen must do more than simply raise a safety issue, but must show that the safety issue it raises is significant; LBP-10-19, 72 NRC 529 (2010)

reopening a closed record requires, among other things, a showing that the motion is timely; CLI-08-23, 68 NRC 461 (2008)

summary disposition standards are not applicable to and do not replace the standards applicable to motions to reopen; CLI-08-28, 68 NRC 658 (2008)

the burden of satisfying the reopening requirements is a heavy one, and proponents of a reopening motion bear the burden of meeting all of these requirements; CLI-08-28, 68 NRC 658 (2008); CLI-09-7, 69 NRC 235 (2009)

the Commission's referral of a motion to reopen to the ASLBP and subsequent establishment of the board gives the board jurisdiction over the motion; LBP-10-21, 72 NRC 616 (2010)

the most important of the late-filing factors is good cause for the failure to file on time; CLI-09-5, 69 NRC 115 (2009)

## SUBJECT INDEX

the presiding officer in the high-level waste proceeding shall resolve disputes concerning adoption of the DOE environmental impact statement by using, to the extent possible, the criteria and procedures that are followed in ruling on motions to reopen; LBP-09-6, 69 NRC 367 (2009)

the requirements of 10 C.F.R. § 2.326 must be satisfied; CLI-06-4, 63 NRC 32 (2006)

the Secretary's referral of petitioner's motion to admit a late-filed contention effectively returns jurisdiction to the licensing board to rule on the motion; CLI-09-5, 69 NRC 115 (2009)

the significance of the issue being raised by a new contention would be a relevant "good cause" consideration; LBP-10-21, 72 NRC 616 (2010)

timeliness as measured under NRC regulations is from the point at which new information is discovered relevant to the question; LBP-08-12, 68 NRC 5 (2008)

timeliness of a new contention depends primarily on an assessment as to when the proponent of the motion first knew, or should have known, enough information to raise the issues presented in the new contention; LBP-10-19, 72 NRC 529 (2010)

timeliness of the motion depends on what/when was the trigger that provided the footing for the new contention and whether the motion was timely filed after that trigger event; LBP-10-21, 72 NRC 616 (2010)

to interpose a new contention after a proceeding has been terminated requires submission of a fresh intervention petition that fulfills the applicable standards for such filings, including an appropriate standing demonstration; LBP-10-21, 72 NRC 616 (2010)

to introduce an entirely new contention, petitioner must successfully navigate at least nineteen different regulatory factors under 10 C.F.R. 2.326, 2.309(c), and 2.309(f)(1); LBP-10-19, 72 NRC 529 (2010)

until a license has actually been issued, the Commission itself, as opposed to the licensing board, retains jurisdiction to reopen a closed case; CLI-06-4, 63 NRC 32 (2006)

when a contested proceeding has been terminated following the resolution of all submitted contentions, an individual, group, or governmental entity that wishes to interpose an additional issue must submit a new intervention petition that addresses the standards in section 2.309(c)(1) that govern nontimely intervention petitions; LBP-10-21, 72 NRC 616 (2010)

when a licensing board has already dismissed the case, the board no longer has jurisdiction; CLI-06-4, 63 NRC 32 (2006)

when a reopening motion is untimely, the section 3.326(a)(1) "exceptionally grave circumstances" test supplants the "significant issue" standard under section 2.326(a)(2); LBP-10-21, 72 NRC 616 (2010)

when petitioner seeks to introduce a new contention after the record has been closed, it should address the reopening standards contemporaneously with a late-filed intervention petition, which must satisfy the standards for both contention admissibility and late filing; LBP-10-21, 72 NRC 616 (2010)

where a motion to introduce a new contention founded on several of the initial criteria, the board found it unnecessary to analyze all of the other factors; LBP-10-19, 72 NRC 529 (2010)

where a motion to reopen proposes a contention not previously part of the proceeding, the requirements for late-filed contentions set out in 10 C.F.R. 2.309(c) must also be satisfied; CLI-08-28, 68 NRC 658 (2008)

See also Reopening a Record

### MOTIONS TO STRIKE

a licensing board will not "strike from the record" any portions of petitioner's reply, because any part of a record, whether or not appropriately considered in making any rulings, may become relevant in an appeal; LBP-07-4, 65 NRC 281 (2007)

a motion to strike is an inappropriate vehicle to address whether arguments in a summary disposition answer raise matters outside the scope of a contention; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)

answers to a motion to strike are limited to legal or factual issues raised by the motion, and new issues should be raised in a separate motion; LBP-08-1, 67 NRC 37 (2008)

in high-level waste repository proceeding, the burden of proof rests on the movant; LBP-08-5, 67 NRC 205 (2008)

intervenor's appeal 3 days out of time was accepted when applicants' motion to strike failed to even hint at prejudice; LBP-10-21, 72 NRC 616 (2010)

## SUBJECT INDEX

it is reasonable to expect that movant will buttress its motion with some concrete evidence, usually in the form of an affidavit or declaration by a person with asserted knowledge of the fact or facts upon which the motion is based; LBP-08-5, 67 NRC 205 (2008)

the board rejected the motion on the grounds that counsel failed to comply with the certification requirements regarding consultation with opposing counsel and also failed to state with particularity the grounds for the motion; CLI-08-29, 68 NRC 899 (2008)

### MOTIONS TO WITHDRAW

absent written consent of the party and the prior appearance of another attorney, many courts require that an attorney file a motion to withdraw; LBP-10-21, 72 NRC 616 (2010)

### MUNITIONS

application for approval of an alternative schedule for the submission of a decommissioning plan for a site containing expended depleted uranium munitions is approved; LBP-08-4, 67 NRC 105 (2008)

petitioner's argument that high-explosive munitions could fall onto depleted uranium, pulverizing and igniting the DU and generating aerosols that might travel through the air, providing an inhalation pathway for offsite exposure was contradicted by the Army's statement that it does not use high-impact explosives in the area where DU is present; CLI-10-20, 72 NRC 185 (2010)

### NATIONAL ENVIRONMENTAL POLICY ACT

a baseline NEPA issue that a board must make in a mandatory hearing on an early site permit application is whether the requirements of NEPA § 102(2)(A), (C), and (E) and 10 C.F.R. Part 51 have been met; LBP-07-9, 65 NRC 539 (2007)

a baseline NEPA issue that a board must make in a mandatory hearing is to independently consider the final balance among conflicting factors contained in the record of the proceeding with a view to determining the appropriate action to be taken; LBP-07-9, 65 NRC 539 (2007)

a baseline NEPA issue that a board must make in a mandatory proceeding on an early site permit application is whether a construction permit should be issued, denied, or appropriately conditioned to protect environmental values; LBP-07-9, 65 NRC 539 (2007)

a board did not err in reformulating a contention to state that the application failed to comply with 10 C.F.R. Part 51, rather than with NEPA; CLI-10-2, 71 NRC 27 (2010)

a board's ultimate NEPA judgments can be made on the basis of the entire adjudicatory record in addition to the Staff's final environmental impact statement; LBP-09-7, 69 NRC 613 (2009)

a conclusion that something is a "connected action" does not necessarily inform the type of impact analysis that is performed, whether direct, indirect, or cumulative; LBP-09-7, 69 NRC 613 (2009)

a contention that raises the question as to whether requirements of 10 C.F.R. 51.53(c)(3)(ii)(B) supplement the more general requirements of 10 C.F.R. 51.45(c) and 51.53(c), or instead displace and supplant the latter requirements, raises an admissible and material issue of interpretation and construction of the regulations; LBP-06-20, 64 NRC 131 (2006)

a cost-benefit analysis among alternatives must consider and weigh the environmental effects of the proposed action and the alternatives available for reducing or avoiding adverse environmental effects; LBP-06-19, 64 NRC 53 (2006)

a decision on whether an environmental impact report is based on the best scientific methodology available is not required, nor is the resolution of disagreements among various scientists as to methodology; CLI-08-26, 68 NRC 509 (2008)

a draft or final environmental impact statement is not considered deficient per se simply because its various NEPA findings do not include an explanation that is sufficient on its face to enable independent verification of any scientific results that underlie those findings; LBP-06-9, 63 NRC 289 (2006)

a federal agency must study, develop, and describe appropriate alternatives to the recommended courses of action in any proposal that involves unresolved conflicts concerning alternative uses of available resources; LBP-06-28, 64 NRC 460 (2006)

a final environmental impact statement is necessarily more concise than the underlying pre-FEIS analysis, as the explanation is intended to summarize the analysis in a manner both concise and understandable to the public; CLI-07-27, 66 NRC 215 (2007)

a license applicant is required to describe and the Staff to consider the potential environmental effects of the proposed agency action; LBP-06-8, 63 NRC 241 (2006)

a mitigation plan need not be legally enforceable, funded, or even in final form to comply with NEPA's procedural requirements; CLI-06-29, 64 NRC 417 (2006)

## SUBJECT INDEX

- a more detailed environmental impact statement is not required unless the contemplated action is a major federal action significantly affecting the quality of the human environment; CLI-08-26, 68 NRC 509 (2008)
- a NEPA environmental analysis is not an appropriate vehicle for exploring questions about the potential for a terrorist attack upon a proposed nuclear facility; CLI-09-10, 69 NRC 521 (2009); LBP-08-16, 68 NRC 361 (2008); LBP-09-2, 69 NRC 87 (2009)
- a possible 1-year slip in construction schedule is clearly within the margin of uncertainty and therefore, in the context of relitigating an issue, is unlikely to affect the need for power; LBP-10-6, 71 NRC 350 (2010)
- a practical definition of “reasonable” for use when selecting alternative concepts would be an alternative is reasonable if it is both feasible (possible, viable) and nonspeculative; LBP-10-10, 71 NRC 529 (2010)
- a reasonably close causal relationship between federal agency action and environmental consequences is necessary to trigger NEPA; CLI-07-8, 65 NRC 124 (2007)
- a reasonably close causal relationship must exist between a federal agency action and any environmental consequences of that action in order to trigger a NEPA review, and such a relationship does not exist with terrorism; LBP-08-6, 67 NRC 241 (2008)
- a record of decision must accompany any Commission decision on any action for which a final environmental impact statement has been prepared; LBP-06-8, 63 NRC 241 (2006)
- a reviewing agency determines whether an alternative is appropriate by looking at the objectives (i.e., purpose and need) of a project sponsor; LBP-09-2, 69 NRC 87 (2009)
- a rule of reason is implicit in NEPA’s requirement that an agency consider reasonable alternatives to a proposed action; CLI-10-18, 72 NRC 56 (2010); CLI-10-22, 72 NRC 202 (2010); LBP-09-10, 70 NRC 51 (2009); LBP-09-17, 70 NRC 311 (2009)
- a SAMA analysis contention was found to be inadmissible because it lacked supporting information regarding the relative costs and benefits of that proposed alternative; LBP-10-15, 72 NRC 257 (2010)
- a solely wind- or solar-powered facility could not satisfy the project’s purpose to generate baseload power; LBP-10-6, 71 NRC 350 (2010)
- a Staff determination that certain scenarios, such as Part 61 intruder scenarios, are so unlikely as to fall outside the scope of the Staff’s NEPA review is a proper exercise of NEPA’s rule of reason; LBP-06-8, 63 NRC 241 (2006)
- a Staff environmental analysis is not necessarily insufficient if, in the face of a deficiency on the part of its contractor, a responsible Staff official has “stepped into the breach” and conducted the necessary review and analysis; LBP-06-8, 63 NRC 241 (2006)
- a supplemental EIS is needed where new information raises new concerns of sufficient gravity such that another, formal in-depth look at the environmental consequences of the proposed action is necessary; CLI-06-19, 63 NRC 19 (2006)
- abdicated water quality effects entirely to other agencies’ certifications subverts the special purpose of NEPA; LBP-09-16, 70 NRC 227 (2009)
- absent a waiver pursuant to 10 C.F.R. 2.335, Category 1 issues are not subject to challenge in a relicensing proceeding because they involve environmental effects that are essentially similar for all plants and need not be assessed repeatedly on a site-specific basis; LBP-08-13, 68 NRC 43 (2008)
- accuracy and reliability of the agency’s need-for-power determination, as reflected in the draft EIS, is material to the licensing decision; LBP-10-24, 72 NRC 720 (2010)
- accuracy of an applicant’s cost estimate is not material to the findings the NRC must make under NEPA; LBP-09-16, 70 NRC 227 (2009)
- accuracy of project cost estimates only becomes relevant if an environmentally preferable alternative has been identified; LBP-09-2, 69 NRC 87 (2009)
- adequacy of the NEPA alternatives analysis is judged on the substance of the alternatives rather than the sheer number of alternatives examined; CLI-10-18, 72 NRC 56 (2010)
- adjudications resulting in the disclosure of matters under law considered secret or confidential are not contemplated; CLI-08-8, 67 NRC 193 (2008)
- affidavits supporting environmental contentions in the high-level waste proceeding must set forth factual and/or technical bases for the claim that it is not practicable to adopt the DOE environmental impact statement; LBP-09-6, 69 NRC 367 (2009)

## SUBJECT INDEX

agencies are allowed to select their own methodology as long as that methodology is reasonable; CLI-10-11, 71 NRC 287 (2010)

agencies are given broad discretion in determining how thoroughly to analyze a particular subject, and may decline to examine issues that an agency in good faith considers remote and speculative or inconsequentially small; LBP-09-7, 69 NRC 613 (2009)

agencies are not allowed to define objectives of a project so narrowly as to preclude a reasonable consideration of alternatives; CLI-10-18, 72 NRC 56 (2010)

agencies are not required to select the most environmentally benign option or to require an applicant/licensee to do so; LBP-06-15, 63 NRC 591 (2006)

agencies are not required to use technologies and methodologies that are still emerging and under development, or to study phenomena for which there are not yet standard methods of measurement or analysis; CLI-10-11, 71 NRC 287 (2010)

agencies are required to consider measures to mitigate environmental impacts; LBP-09-19, 70 NRC 433 (2009)

agencies are required to exercise a degree of skepticism in dealing with self-serving statements from the prime beneficiary of a project and to look at the general goal of the project, rather than only those alternatives by which a particular applicant can reach its own specific goals; LBP-09-10, 70 NRC 51 (2009); LBP-09-17, 70 NRC 311 (2009)

agencies are required to study, develop, and describe appropriate alternatives to recommended courses of action in any proposal that involves unresolved conflicts concerning alternative uses of available resources and include a detailed statement of the alternatives to the proposed action in its environmental impact statement; LBP-09-10, 70 NRC 51 (2009)

agencies are required to use a systematic, interdisciplinary approach that will ensure the integrated use of the natural and social sciences and the environmental design arts in planning and in decisionmaking that may have an impact on man's environment; LBP-07-1, 65 NRC 27 (2007); LBP-07-6, 65 NRC 429 (2007); LBP-07-9, 65 NRC 539 (2007)

agencies may coordinate their NEPA and National Historic Preservation Act reviews, but the reviews remain separate and the regulations associated with each act must be independently satisfied; LBP-06-11, 63 NRC 483 (2006)

agencies may defer certain issues in an environmental impact statement for a multistage project when detailed useful information on a given topic is not meaningfully possible to obtain, and the unavailable information is not essential to determination at the earlier stage; CLI-07-27, 66 NRC 215 (2007)

agencies must consult with and obtain the comments of any federal agency that has jurisdiction by law or special expertise with respect to any environmental impact involved; LBP-06-17, 63 NRC 747 (2006)

agencies must include a detailed statement on the environmental impact of the proposed action, any unavoidable adverse environmental effects, alternatives to the proposed action, the relationship between local short-term uses of man's environment and the maintenance and enhancement of long-term productivity, and irreversible and irretrievable commitments of resources that would be involved in the proposed action should it be implemented; LBP-07-1, 65 NRC 27 (2007)

agencies need not elevate environmental concerns over other appropriate considerations, but rather must only take a hard look at the environmental consequences before taking a major action; LBP-06-19, 64 NRC 53 (2006)

agencies need only discuss those alternatives that are reasonable and will bring about the ends of the proposed action; CLI-06-10, 63 NRC 451 (2006); LBP-10-6, 71 NRC 350 (2010)

all federal agencies must apply a systematic, interdisciplinary approach that will ensure the integrated use of the natural and social sciences and the environmental design arts in planning and in decisionmaking that may have an impact on the human environment; LBP-06-17, 63 NRC 747 (2006); LBP-06-28, 64 NRC 460 (2006)

alternative energy sources that will be dependent on future environmental safeguards and technological developments need not be considered in an environmental impact statement; LBP-09-7, 69 NRC 613 (2009)

alternatives analysis is the heart of the environmental impact statement; LBP-10-24, 72 NRC 720 (2010)

alternatives that do not advance the purpose of the project will not be considered reasonable or appropriate; CLI-10-18, 72 NRC 56 (2010)

## SUBJECT INDEX

- although all environmental contentions may, in a general sense, ultimately be challenges to the NRC's compliance with NEPA, factual disputes of particular issues can be raised before the draft environmental impact statement is prepared; CLI-10-2, 71 NRC 27 (2010)
- although analysis of aircraft impact is required, reactors whose construction permits were issued prior to July 13, 2009, are excluded, and the rule is not NEPA-based; LBP-09-26, 70 NRC 939 (2009)
- although applicant's goals are given substantial weight, applicant is not allowed to define its goals so narrowly as to unreasonably circumscribe the range of alternatives that must be considered; LBP-09-17, 70 NRC 311 (2009)
- although construction of the provisions of 10 C.F.R. Part 51 mandating the contents of applicant's environmental report may be informed by consideration of general NEPA principles, the Commission must look to the wording of the Part 51 regulations to determine if an ER is satisfactory or deficient; LBP-09-10, 70 NRC 51 (2009)
- although Council on Environmental Quality regulations are not binding on the NRC when the agency has not expressly adopted them, they are entitled to considerable deference; LBP-06-8, 63 NRC 241 (2006)
- although economic benefits are properly considered in an environmental impact statement, NEPA does not transform financial costs and benefits into environmental costs and benefits; CLI-06-19, 63 NRC 19 (2006)
- although federal permits and exemptions must be mentioned in the final environmental impact statement, the absence of such mention does not render the FEIS invalid; LBP-06-19, 64 NRC 53 (2006)
- although NEPA requires that the environmental impact statement identify and address all reasonable alternatives, this does not mean that every conceivable alternative must be included; LBP-10-10, 71 NRC 529 (2010)
- although NRC will consider the fact that an applicant is subject to, and compliant with, other environmental laws and permits, it must still perform an environmental assessment prior to any major federal action significantly affecting the environment; LBP-06-20, 64 NRC 131 (2006)
- although one of the central purposes of NEPA is information gathering and disclosure, information immaterial to the proceeding does not necessarily need to be included; LBP-07-3, 65 NRC 237 (2007)
- although "severe accident," "severe accident mitigation alternatives," and "SAMA" are not defined in NRC's NEPA regulations, the NRC policy documents that originated the terms clearly limit them to nuclear reactors and do not include spent fuel pools or storage; LBP-10-15, 72 NRC 257 (2010)
- although Staff inadvertently omitted information about background radiation from the final environmental impact statement, but the information was made available to the public in the draft environmental impact statement and was taken into account by Staff in its NEPA analysis in the FEIS, intervenors were not prejudiced nor was the correctness of the Staff's analysis undermined; LBP-06-19, 64 NRC 53 (2006)
- although substantial weight is accorded to a license applicant's preferences, if the identified purpose of a proposed project reasonably may be accomplished at locations other than the proposed site, the board may require consideration of those alternative sites; CLI-10-18, 72 NRC 56 (2010)
- although the Commission has complied with the court's ruling for facilities within the Ninth Circuit, that experience is very limited and does not demonstrate that conducting environmental analyses of terrorist scenarios for the licensing of all major facilities would be practicable or lead to meaningful additional information; CLI-10-9, 71 NRC 245 (2010)
- although the discussion of alternatives in the environmental assessment need only be brief, it must be sufficient to fully comply with the requirement to study, develop, and describe appropriate alternatives; CLI-10-18, 72 NRC 56 (2010)
- although the duty to comply with NEPA falls upon the agency and not upon the applicant or licensee, the requirements of Part 51 must be met by the applicant; LBP-10-16, 72 NRC 361 (2010)
- although the methodology is available to provide the required analysis, neither NEPA nor NRC regulations require that the analysis under 10 C.F.R. 51.45(c) be performed using that methodology; LBP-09-26, 70 NRC 939 (2009)
- although the obligations under NEPA fall to the agency and therefore the NRC Staff, petitioners are required to raise environmental objections based on the applicant's environmental report; LBP-10-15, 72 NRC 257 (2010)
- although the primary duties of NEPA fall on the NRC Staff in NRC proceedings, the initial requirement to analyze the environmental impacts of an action, including license renewal, is directed to applicants;

## SUBJECT INDEX

LBP-07-11, 66 NRC 41 (2007); LBP-08-6, 67 NRC 241 (2008); LBP-10-10, 71 NRC 529 (2010)  
although the U.S. Court of Appeals for the Ninth Circuit has held that the NRC must address certain terrorism-related matters to satisfy its NEPA obligations, the Commission has stated that it does not consider itself bound by that holding outside the Ninth Circuit; LBP-09-2, 69 NRC 87 (2009)  
although the ultimate burden with respect to NEPA lies with the NRC Staff, NRC policy with respect to the identification of issues for hearing has long been that such issues must be raised as early as possible; CLI-10-2, 71 NRC 27 (2010)  
although there will always be more data that could be gathered, agencies must have some discretion to draw the line and move forward with decisionmaking; CLI-10-11, 71 NRC 287 (2010)  
an agency cannot redefine the applicant's goals, and the EIS alternatives analysis should be based around the applicant's goals, including its economic goals; LBP-09-17, 70 NRC 311 (2009)  
an agency environmental impact statement must address both direct and indirect, or secondary, effects of an action; LBP-06-8, 63 NRC 241 (2006)  
an agency is not required to assess potential psychological impacts due to fear of radiological harm; CLI-10-11, 71 NRC 287 (2010)  
an agency is required to address the purpose of the proposed project, reasonable alternatives to the project, and to what extent the agency should explore each particular reasonable alternative; CLI-10-18, 72 NRC 56 (2010)  
an agency is to include in every recommendation or report on major federal actions significantly affecting the quality of the human environment, a detailed statement by the responsible official on the environmental impact of the proposed action; LBP-08-6, 67 NRC 241 (2008)  
an agency may be excused from complying with NEPA where it has no discretion to prevent, or to refuse to take, the action involved; LBP-09-6, 69 NRC 367 (2009)  
an agency may rely on an environmental impact statement prepared by another federal agency if such reliance will aid in the presentation of issues, eliminate repetition, or reduce the length of an EIS; LBP-09-7, 69 NRC 613 (2009)  
an agency must affirmatively provide a reasoned explanation of the applicability of a categorical exclusion when special circumstances are alleged; LBP-06-4, 63 NRC 99 (2006)  
an agency must consider all reasonable alternatives but is not required to choose the most environmentally benign site; LBP-07-9, 65 NRC 539 (2007)  
an agency must consider alternatives that are appropriate to recommended courses of action; LBP-09-2, 69 NRC 87 (2009)  
an agency must consider every significant aspect of the environmental impact of a proposed action and inform the public that it has, in fact, considered environmental concerns in its decisionmaking process; LBP-06-19, 64 NRC 53 (2006)  
an agency must consult with and obtain the comments of any federal agency that has jurisdiction by law or special expertise with respect to any environmental impact involved; LBP-06-28, 64 NRC 460 (2006)  
an agency's consideration of alternatives is sufficient if it considers an appropriate range of alternatives, even if it does not consider every available alternative; LBP-10-24, 72 NRC 720 (2010)  
an agency's environmental review must consider not every possible alternative, but every reasonable alternative; LBP-10-6, 71 NRC 350 (2010)  
an early site permit applicant must submit an environmental report containing a description of the proposed action, a statement of its purposes, and a description of the environment affected; LBP-09-7, 69 NRC 613 (2009)  
an environmental analysis relating to aquatic impacts must, as a practical matter, have a baseline from which to operate; LBP-07-3, 65 NRC 237 (2007)  
an environmental assessment must include a Reference Document List that identifies the sources used; LBP-08-7, 67 NRC 361 (2008)  
an environmental assessment, with its accompanying finding of no significant impact, constitutes an agency's evaluation of the environmental effects of a proposed action unless a more detailed statement is required; CLI-08-26, 68 NRC 509 (2008)  
an environmental impact statement is not intended to be a research document, reflecting the frontiers of scientific methodology, studies, and data; CLI-10-11, 71 NRC 287 (2010); CLI-10-22, 72 NRC 202 (2010)

## SUBJECT INDEX

- an environmental impact statement is required for any agency action that is a major action significantly affecting the environment; LBP-10-7, 71 NRC 391 (2010)
- an environmental impact statement must address alternatives to the proposed action; LBP-09-19, 70 NRC 433 (2009)
- an environmental impact statement must address both direct and indirect effects of an action; LBP-09-7, 69 NRC 613 (2009)
- an environmental impact statement must disclose measures that will mitigate potential adverse environmental impacts; LBP-09-4, 69 NRC 170 (2009)
- an environmental impact statement must include a detailed statement of reasonable alternatives to a proposed action; LBP-10-24, 72 NRC 720 (2010)
- an environmental impact statement must provide a detailed statement concerning the environmental impact of the proposed action, any adverse environmental effects that cannot be avoided should the proposal be implemented, and any irreversible and irretrievable commitments of resources that would be involved in the proposed action should it be implemented; LBP-09-16, 70 NRC 227 (2009)
- an environmental impact statement must rigorously explore and objectively evaluate all reasonable alternatives, and for alternatives that were eliminated from detailed study, briefly discuss the reasons for their having been eliminated; LBP-10-10, 71 NRC 529 (2010)
- an environmental report and an environmental impact statement for a materials license must include a statement on the alternatives to the proposed action, including a discussion of the no-action alternative; CLI-09-15, 70 NRC 1 (2009)
- an environmental report prepared for a license renewal need not discuss economic or technical benefits and costs of the proposed action or alternatives except as they are either essential for determining whether an alternative should be included or relevant to mitigation; LBP-08-13, 68 NRC 43 (2008)
- an organization's promotion of the public interest, environmental protection, and consumer protection are broad interests shared with many others and too general to constitute a protected interest; CLI-07-18, 65 NRC 399 (2007)
- an otherwise reasonable alternative will not be excluded from discussion in an environmental impact statement solely on the ground that it is not within the jurisdiction of NRC; LBP-09-10, 70 NRC 51 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-10-10, 71 NRC 529 (2010)
- analysis of all impacts of connected actions, including direct, indirect, and cumulative impacts, is required for major federal actions; CLI-10-5, 71 NRC 90 (2010)
- analysis of potential terrorist attacks on a proposed nuclear facility is not required; LBP-08-21, 68 NRC 554 (2008)
- analysis of the potential impacts of an increase in the supply of irradiated food is not required; CLI-08-16, 68 NRC 221 (2008)
- any power level selected at the COL stage other than the target value used in the environmental impact statement's alternative energy analysis for the early site permit would constitute new information that, if found to be significant, would have to be evaluated at the construction permit or combined license application stage; CLI-07-14, 65 NRC 216 (2007)
- applicant has no obligation to select the most environmentally benign alternative; LBP-06-19, 64 NRC 53 (2006)
- applicant is only required to provide an analysis that considers and balances alternatives available for reducing or avoiding adverse environmental effects; LBP-09-26, 70 NRC 939 (2009)
- applicant is required to address new and significant information for either Category 1 or Category 2 issues in its environmental report for a license renewal application; LBP-08-13, 68 NRC 43 (2008)
- applicant is required to present a cost-benefit analysis (and therefore provide cost estimates) for nuclear power plants and facilities only where the applicant's alternatives analysis indicates that there is an environmentally preferable alternative; LBP-08-21, 68 NRC 554 (2008)
- applicant is required to provide in its environmental report a site-specific analysis of entrainment, impingement, and heat shock/thermal discharge impacts from its once-through cooling systems; LBP-08-13, 68 NRC 43 (2008)
- applicant may not define the objectives of its action in terms so unreasonably narrow that only one alternative would accomplish the applicant's goals because this would make the agency's EIS alternatives analysis a foreordained formality; LBP-09-10, 70 NRC 51 (2009)

## SUBJECT INDEX

applicant must provide enough information and in sufficient detail to allow for an evaluation of important environmental impacts; LBP-07-3, 65 NRC 237 (2007)

applicant need not look at every conceivable alternative, but rather must only consider feasible, nonspeculative, reasonable alternatives; LBP-08-13, 68 NRC 43 (2008)

applicant's comparison of the environmental impacts of nuclear and wind/compressed air energy storage is insufficient to adequately inform decision makers about the competing choices; LBP-10-10, 71 NRC 529 (2010)

applicant's environmental report is required to analyze the alternatives available for reducing or avoiding adverse environmental effects; LBP-09-10, 70 NRC 51 (2009)

applicant's environmental report must, in relevant part, contain a discussion of alternatives sufficiently complete to aid the Commission in developing and exploring, pursuant to section 102(2)(E) of NEPA, appropriate alternatives to recommended courses of action; LBP-10-6, 71 NRC 350 (2010)

applicants are not required to eliminate adverse environmental impacts; LBP-09-16, 70 NRC 227 (2009)

applicants or licensees are not required to consider terrorist attacks as part of their environmental reviews; LBP-09-26, 70 NRC 939 (2009)

applicants' assertion that low-level radioactive waste could be transferred to another licensee or that some other arrangement might be established in the future is not sufficient to erase the requirement that reasonably foreseeable environmental impacts be assessed in an environmental report; CLI-09-20, 70 NRC 911 (2009)

as a general matter, NEPA imposes no legal duty on the NRC to consider intentional malevolent acts in conjunction with commercial power reactor license renewal applications; CLI-07-9, 65 NRC 139 (2007)

as long as all reasonable alternatives have been considered and an appropriate explanation is provided as to why an alternative was eliminated, the regulatory requirement is satisfied; CLI-10-18, 72 NRC 56 (2010)

as long as applicant has not set forth an unreasonably narrow objective of its project, NRC adheres to the principle that when the purpose is to accomplish one thing, it makes no sense to consider alternative ways by which another thing might be accomplished; LBP-09-2, 69 NRC 87 (2009)

as the proponent of the agency action at issue, applicant generally has the burden of proof in a licensing proceeding, but when environmental contentions are involved, the burden shifts to the Staff, because NRC, not an applicant, has the burden of complying with NEPA; LBP-09-7, 69 NRC 613 (2009)

asserted deficiencies in the environmental report intake/discharge impact discussion as it is associated with the baseline discussion of aquatic resources, if properly supported, can be admitted for further litigation; LBP-08-16, 68 NRC 361 (2008)

because blending down highly enriched uranium for reactor fuel would not promote applicant's primary purpose of maintaining the viability of a dwindling domestic uranium industry, it is outside the scope of reasonable alternatives that must be considered; LBP-06-19, 64 NRC 53 (2006)

because demand-side management reduces by a small portion applicant's demand for power, it should be analyzed in this instance as a surrogate for need for power; LBP-10-6, 71 NRC 350 (2010)

because NEPA is a procedural statute, petitioners need not show that favorable rulings on their NEPA contentions will require denial of the license, but rather that procedures intended for protection of their members' concrete interests will be observed; LBP-09-16, 70 NRC 227 (2009)

because Staff relies heavily upon applicant's environmental report in preparing the environmental impact statement, should applicant become a proponent of a particular challenged position set forth in the EIS, applicant, as such a proponent, also has the burden on that matter; LBP-09-7, 69 NRC 613 (2009)

because the environmental report is the only environmental document available when NRC issues its notice of opportunity to request a hearing, all initial contentions necessarily focus on the adequacy of the applicant's ER, but the public will have a new opportunity to file environmental contentions when the NRC Staff issues the environmental impact statement or environmental analysis; LBP-09-10, 70 NRC 51 (2009)

boards must decide whether the final environmental impact statement alternatives discussion is sufficiently complete to aid the Commission in developing and exploring appropriate alternatives to recommended courses of action in any proposal that involves unresolved conflicts concerning alternative uses of available resources; LBP-09-7, 69 NRC 613 (2009)

## SUBJECT INDEX

boards should treat as a cognizable new consideration an attack on the Yucca Mountain environmental impact statements based on significant and substantial information that, if true, would render the statements inadequate; LBP-09-6, 69 NRC 367 (2009)

business strategies in the context of need for power and any challenges to them are outside the scope of a licensing proceeding; LBP-10-10, 71 NRC 529 (2010)

by defining significantly different information in the draft EIS as a permissible basis for filing a new contention, the Commission has in effect concluded that such new information is good cause for filing a new contention; LBP-10-24, 72 NRC 720 (2010)

certain actions are designated as categorically excluded from the requirement to prepare an environmental assessment or an environmental impact statement; CLI-10-18, 72 NRC 56 (2010)

challenges to a severe accident mitigation design alternatives analysis are within the scope of a combined license proceeding; LBP-10-14, 72 NRC 101 (2010)

compliance with NEPA requires that, if new and significant information arises after the date of the issuance of the EIS and before the agency decision, then the agency must supplement or revise its EIS and consider such information; LBP-10-15, 72 NRC 257 (2010)

conformity of a proposed action to federal regulations governing other aspects of that action's interrelationship with the environment will buttress a finding of no significant impact; CLI-08-16, 68 NRC 221 (2008)

consideration and evaluation of intruder scenarios and related intruder dose are part of the "hard look" NEPA requires the Staff to take at the environmental impacts associated with a particular licensing action; LBP-06-8, 63 NRC 241 (2006)

consideration of alternatives is an integral part of the application process from the outset, with no preconditions; CLI-06-9, 63 NRC 433 (2006)

consideration of energy efficiency is not a reasonable alternative, where that alternative would not achieve applicant's goal of providing additional power to sell on the open market, and is not possible for an applicant who has no transmission or distribution system of its own, and no link to the ultimate power consumer; CLI-10-21, 72 NRC 197 (2010)

consideration of environmental impacts need not address every impact that could possibly result, but rather only those that are reasonably foreseeable or have some likelihood of occurring; LBP-09-7, 69 NRC 613 (2009)

contention raising question of whether a quantitative as opposed to qualitative analysis of terrorist attacks and the alternatives for mitigation and prevention is necessary is referred to the Commission as a novel issue; LBP-10-15, 72 NRC 257 (2010)

contention that a license renewal application fails to satisfy NEPA because it does not address environmental impacts of an attack by deliberate and malicious crash of aircraft into the plant is denied; LBP-07-11, 66 NRC 41 (2007)

contentions asserting that the risks associated with terrorist attacks require that the agency prepare an environmental assessment or an environmental impact statement are outside the scope of agency NEPA review and are inadmissible; LBP-06-4, 63 NRC 99 (2006)

contentions relating to the conclusions that the NRC Staff reaches in its NEPA analysis with regard to the environmental impacts from radiological releases to groundwater must await future publication of its supplemental environmental impact statement; LBP-08-13, 68 NRC 43 (2008)

contentions that seek compliance with NEPA must be based on applicant's environmental report; CLI-10-2, 71 NRC 27 (2010)

contested proceedings litigate particular contentions that may include arguable NEPA-analysis shortfalls, whereas the Staff's NEPA analysis encompasses the full range of NEPA issues whether a contested proceeding even takes place; CLI-10-5, 71 NRC 90 (2010)

copies of environmental impact statements shall be made available to the President, the Council on Environmental Quality, and the public; CLI-08-1, 67 NRC 1 (2008)

costs for a project are relevant for the determination only if an environmentally preferable option is identified; LBP-09-2, 69 NRC 87 (2009)

Council on Environmental Quality regulations are not binding on NRC when the agency has not expressly adopted them, but are entitled to considerable deference; LBP-09-7, 69 NRC 613 (2009)

Council on Environmental Quality regulations receive substantial deference from federal courts in interpreting the requirements of NEPA; LBP-10-16, 72 NRC 361 (2010)

## SUBJECT INDEX

courts have consistently interpreted NEPA as a procedural statute that requires disclosure and analysis of environmental impacts, not one that imposes substantive obligations for the protection of natural resources; LBP-09-16, 70 NRC 227 (2009)

cumulative impacts analysis looks to whether a new impact is significantly enhanced by already existing environmental effects; LBP-06-1, 63 NRC 41 (2006); LBP-06-19, 64 NRC 53 (2006)

cumulative impacts are defined; LBP-09-7, 69 NRC 613 (2009)

cumulative impacts can result from individually minor but collectively significant actions taking place over a period of time; CLI-10-5, 71 NRC 90 (2010)

direct environmental effects are those caused by the federal action, and occurring at the same time and place as that action, while indirect effects are those caused by the action at a later time or more distant place, yet are still reasonably foreseeable; LBP-09-7, 69 NRC 613 (2009)

disclosure of documents under NEPA is expressly governed by the Freedom of Information Act; CLI-08-5, 67 NRC 174 (2008); CLI-08-8, 67 NRC 193 (2008)

discussion of the no-action alternative in a final environmental impact statement is governed by a rule of reason and need not be exhaustive or inordinately detailed; LBP-06-19, 64 NRC 53 (2006)

each factual environmental contention must be accompanied by one or more affidavits, but a purely legal issue contention cannot logically require affidavit support, as by definition such a contention alleges no facts that require support; LBP-09-6, 69 NRC 367 (2009)

economic impact of a proposed action on ratepayers is outside the scope of a NEPA analysis; LBP-10-14, 72 NRC 101 (2010)

energy sales projections are inherently uncertain, and the Commission is clear that it does not impose burdensome attempts to predict future conditions, and that it should be sufficient to reasonably characterize the costs and benefits associated with proposed licensing actions; LBP-10-6, 71 NRC 350 (2010)

environmental contentions are to be filed based on an applicant's environmental report; LBP-10-10, 71 NRC 529 (2010)

environmental issues that might otherwise be relevant to license renewal shall be resolved generically for all plants and thus are beyond the scope of a license renewal hearing; LBP-06-7, 63 NRC 188 (2006)

environmental justice contentions must be based on the specific characteristics of a particular minority community; LBP-07-3, 65 NRC 237 (2007)

environmental reports and environmental impact statements must include an assessment of all environmental impacts and alternatives, even though NRC has no jurisdiction to regulate such impacts or jurisdiction to impose such alternatives; LBP-09-10, 70 NRC 51 (2009)

environmental review in the license renewal process is unlike the Commission's Part 54 review because the NEPA review covers all environmental impacts associated with license renewal and is not limited to aging-related issues; LBP-10-15, 72 NRC 257 (2010)

even if an environmental impact statement prepared by the Staff is found to be inadequate in certain respects, the board's findings, as well as the adjudicatory record, become, in effect, part of the final EIS; LBP-09-7, 69 NRC 613 (2009)

even if offsite construction does not appear to be part of the plan, it does not follow that offsite consequences need not be considered; CLI-10-18, 72 NRC 56 (2010)

events having a less than a one in one million probability of occurring are not credible events; LBP-09-4, 69 NRC 170 (2009)

except for its overall NEPA balancing, the NRC can limit its analysis of aquatic impacts to those determined by the Environmental Protection Agency, when EPA has analyzed an alternative technology extensively and made conclusions as to its suitability; LBP-07-3, 65 NRC 237 (2007)

Executive Order 12898 itself does not establish new substantive or procedural requirements applicable to NRC regulatory or licensing activities; CLI-07-27, 66 NRC 215 (2007)

existence of reasonable but unexamined alternatives renders an environmental impact statement inadequate; LBP-10-24, 72 NRC 720 (2010)

federal agencies are charged with weighing the environmental effects and impacts of the proposed project and its alternatives against each other and balancing those effects against the benefits of each such project; LBP-09-2, 69 NRC 87 (2009)

federal agencies are required to consider the likely environmental impacts of the preferred course of action as well as reasonable alternatives; LBP-10-24, 72 NRC 720 (2010)

## SUBJECT INDEX

federal agencies are required to study, develop, and describe appropriate alternatives to recommend courses of action in any proposal that involves unresolved conflicts concerning alternative uses of available resources; CLI-10-18, 72 NRC 56 (2010); LBP-06-17, 63 NRC 747 (2006)

federal agencies are required to take a hard look at the environmental consequences of their actions; LBP-09-7, 69 NRC 613 (2009); LBP-09-16, 70 NRC 227 (2009)

federal agencies are required, to the fullest extent possible, to include in every recommendation or report on proposals for major federal actions significantly affecting the quality of the human environment a detailed statement on the environmental impact of the proposed action; CLI-10-18, 72 NRC 56 (2010); LBP-06-23, 64 NRC 257 (2006)

federal agencies must examine, analyze, and disclose not only direct effects, but also indirect effects that are later in time or farther removed in distance, but are still reasonably foreseeable; LBP-09-6, 69 NRC 367 (2009)

federal courts and the NRC use a rule of reason in identifying alternatives and do not require that unreasonable alternatives be examined; LBP-07-9, 65 NRC 539 (2007)

findings that a board must make to authorize issuance of an early site permit are described; LBP-09-19, 70 NRC 433 (2009)

focus of this statute is on assessment, not regulation; LBP-09-10, 70 NRC 51 (2009)

for a contention regarding environmental impacts of spent fuel storage to be within the scope of an operating license renewal proceeding, petitioner must obtain a waiver under 10 C.F.R. 2.335(d); LBP-10-15, 72 NRC 257 (2010)

for a SAMA analysis, NEPA demands no fully developed plan or detailed examination of specific measures that will be used to mitigate adverse environmental effects; CLI-10-11, 71 NRC 287 (2010)

for an early site permit, NRC is required to provide a detailed statement on alternatives to the proposed action; CLI-07-27, 66 NRC 215 (2007)

for impacts that are reasonably foreseeable, but for which the agency lacks complete information in its analysis, the agency must indicate that such information is lacking; LBP-09-7, 69 NRC 613 (2009)

for licensing decisions involving facilities located within the jurisdictional boundaries of the U.S. Court of Appeals for the Ninth Circuit, the NRC Staff will consider, as part of its NEPA analysis, the potential environmental consequences, if any, of a terrorist attack on the proposed facility; CLI-09-15, 70 NRC 1 (2009)

for purposes of the environmental impact statement, the potential construction and operation of the plant or plants for which the early site permit is being obtained is the proposed action that must be the focus of the board's review; LBP-07-1, 65 NRC 27 (2007)

further review of need for power and alternative energy sources is precluded once a construction permit has been issued; CLI-10-29, 72 NRC 556 (2010)

general statements about possible effects and some risk do not constitute a hard look absent a justification regarding why more definitive information could not be provided; CLI-10-18, 72 NRC 56 (2010)

generic analysis is an appropriate method of meeting the agency's statutory obligations under NEPA; CLI-07-3, 65 NRC 13 (2007)

given that consideration of terrorist attacks is part of the NRC's NEPA obligations in the Ninth Circuit, the issue of whether terrorist attacks have been fully considered in the NEPA analysis for a power plant in that jurisdiction is plainly material to the decision the NRC must make; LBP-10-15, 72 NRC 257 (2010)

given the fact-specific nature of environmental justice issues and inquiries, the methods and form of Staff review, including any decision whether to hold discussions with knowledgeable community and governmental representatives, is best left to the informed discretion of the Staff; CLI-07-27, 66 NRC 215 (2007)

goals of a project's sponsor are given substantial weight in determining whether a NEPA alternative is reasonable; LBP-09-10, 70 NRC 51 (2009); LBP-09-17, 70 NRC 311 (2009)

if a harm does not have a sufficiently close connection to the physical environment, NEPA does not apply, regardless of the gravity of the harm; CLI-08-16, 68 NRC 221 (2008)

if a major federal action significantly affects the quality of the human environment, an environmental impact statement must be prepared; CLI-08-8, 67 NRC 193 (2008)

## SUBJECT INDEX

- if a NEPA contention alleges that impacts or alternatives that are patently outside the realm of reason must be considered, then the contention should be denied for failure to demonstrate that the issue raised is within the legitimate scope of NEPA; LBP-09-10, 70 NRC 51 (2009)
- if an alternative to the applicant's proposal is environmentally preferable, then NRC must determine whether the environmental benefits conferred by that alternative are worthwhile enough to outweigh any additional cost needed to achieve them; CLI-10-1, 71 NRC 1 (2010)
- if federal agencies were free to ignore related environmental effects that they do not directly regulate, NEPA would be meaningless; LBP-09-6, 69 NRC 367 (2009)
- if issuing a license involves oversight of a private project rather than a federally sponsored project, the agency is entitled to give the applicant's preferences substantial weight when considering project design alternatives; LBP-10-14, 72 NRC 101 (2010)
- if significant new information becomes available, NRC Staff must explain how it took the new information into account in determining whether the additional generating capacity is required; LBP-10-24, 72 NRC 720 (2010)
- if the accident sought to be considered is sufficiently unlikely that it can be characterized fairly as remote and speculative, then consideration under NEPA is not required as a matter of law; LBP-09-4, 69 NRC 170 (2009); LBP-09-26, 70 NRC 939 (2009)
- if the adverse environmental effects of the proposed action are adequately identified and evaluated, the agency is not constrained by NEPA from deciding that other values outweigh the environmental costs; LBP-07-4, 65 NRC 281 (2007); LBP-09-16, 70 NRC 227 (2009)
- if the proposed siting of a plant slated for an early site permit involves unresolved conflicts concerning alternative uses of available resources, then this discussion must be sufficiently complete to allow the Staff to develop and to explore appropriate alternatives to the ESP pursuant to NEPA § 102(2)(E); LBP-09-19, 70 NRC 433 (2009)
- impacts that are reasonably foreseeable under NEPA must be analyzed publicly, even if their probability of occurrence is low; CLI-10-18, 72 NRC 56 (2010)
- impacts that are remote and speculative or inconsequentially small need not be examined; LBP-10-14, 72 NRC 101 (2010)
- implicit in NEPA is a rule of reason, under which the agency may limit the alternatives discussion where there is no environmental effect or where an effect is simply not significant; LBP-10-10, 71 NRC 529 (2010)
- in accord with the environmental justice executive order, NRC has obligated itself to address only the disproportionate distribution of high and adverse effects in its environmental analysis; LBP-07-3, 65 NRC 237 (2007)
- in an environmental impact statement, federal agencies must address the environmental impact of the proposed action, any adverse environmental effects that cannot be avoided, alternatives to the proposed action, the relationship between local short-term uses of the environment and the maintenance and enhancement of long-term productivity, and any irreversible and irretrievable commitments of resources that would be involved in the proposed action; LBP-06-17, 63 NRC 747 (2006); LBP-06-28, 64 NRC 460 (2006)
- in conducting its analysis of the impact of the license renewal on land use, applicant should consider the impact on real estate values that would be caused by license renewal or nonrenewal; LBP-08-13, 68 NRC 43 (2008)
- in conducting its environmental review, an agency has discretion to rely on data, analyses, or reports prepared by persons or entities other than agency staff, including competent and responsible state authorities; LBP-06-8, 63 NRC 241 (2006)
- in considering alternatives under NEPA, an agency must take into account the needs and goals of the parties involved in the application; LBP-10-10, 71 NRC 529 (2010)
- in determining whether to prepare an environmental impact statement, the federal agency shall prepare an environmental assessment, which will briefly provide sufficient evidence and analysis for determining whether to prepare an environmental impact statement or a finding of no significant impact; LBP-06-27, 64 NRC 438 (2006)
- in implementing NEPA, the NRC uses certain of the definitions provided in Council on Environmental Quality regulations; LBP-09-7, 69 NRC 613 (2009); LBP-09-19, 70 NRC 433 (2009)

## SUBJECT INDEX

- in its conclusions regarding the environmental impacts of a proposed action or alternative actions, the Staff uses as guidance a standard scheme to categorize or quantify the impacts; LBP-09-7, 69 NRC 613 (2009)
- in its environmental justice analysis, NRC makes nearby nuclear facility-related harm an appropriate issue to consider cumulatively with any impacts from proposed reactors; LBP-07-3, 65 NRC 237 (2007)
- in its environmental report, applicant must provide enough information and in sufficient detail to allow for an evaluation of important impacts; LBP-08-16, 68 NRC 361 (2008)
- in its environmental review of a private applicant's proposed project, the agency may accord appropriate deference to the applicant's proposed siting and design plans; LBP-06-19, 64 NRC 53 (2006)
- in performing NEPA evaluations, agencies must consider three types of actions, three types of alternatives, and three types of impacts; CLI-10-5, 71 NRC 90 (2010)
- in preparing an environmental impact statement, Staff can rely upon the environmental analyses in another agency's EIS regarding environmental impacts; LBP-06-9, 63 NRC 289 (2006)
- in reaching its determinations on the baseline issues, the board will not second-guess the underlying technical or factual findings of the NRC Staff, but if it finds that the Staff review is incomplete or that the Staff findings lack sufficient explanation, it will make its own determination of technical and factual findings; LBP-07-1, 65 NRC 27 (2007)
- in reviewing an application filed by a private entity, as opposed to a project initiated by the federal government, NRC may accord substantial weight to the applicant's preferences with regard to consideration of alternatives, including site selection and project design; LBP-06-8, 63 NRC 241 (2006)
- in reviewing environmental justice claims, adverse impacts that fall heavily on minority and impoverished citizens call for particularly close scrutiny; LBP-07-3, 65 NRC 237 (2007)
- in ruling on petitioner's standing, boards should consider the nature of petitioner's right under the Atomic Energy Act or NEPA to be made a party to the proceeding, the nature and extent of petitioner's property, financial, or other interest in the proceeding, and the possible effect of any decision or order that may be issued in the proceeding on the petitioner's interest; LBP-09-13, 70 NRC 168 (2009)
- in the context of NEPA, one must examine underlying policies or legislative intent to draw a manageable line between those causal changes that make an agency responsible for an effect and those that do not; CLI-08-16, 68 NRC 221 (2008)
- in the mandatory early site permit proceeding, NRC must address whether the requirements of section 102(2)(A), (C), and (E) of NEPA and the regulations in 10 C.F.R. Part 51, Subpart A have been complied with; CLI-07-27, 66 NRC 215 (2007)
- in the mandatory early site permit proceeding, NRC must address whether the review conducted by the Commission pursuant to NEPA has been adequate; CLI-07-27, 66 NRC 215 (2007)
- in the mandatory early site permit proceeding, NRC must determine, after considering reasonable alternatives, whether the construction permit should be issued, denied, or appropriately conditioned to protect environmental values; CLI-07-27, 66 NRC 215 (2007)
- in the mandatory early site permit proceeding, NRC must independently consider the final balance among the conflicting factors contained in the record of the proceeding with a view to determining the appropriate action to be taken; CLI-07-27, 66 NRC 215 (2007)
- in uranium enrichment facility proceedings, a licensing board must determine in its initial decision, whether the requirements of section 102(2)(A), (C), and (E) have been complied with; CLI-09-15, 70 NRC 1 (2009)
- information in an environment impact statement or environmental assessment that must be considered as part of the NEPA decisionmaking process may be withheld from public disclosure pursuant to FOIA exemptions; CLI-08-1, 67 NRC 1 (2008)
- inherent in any forecast of future electric power demands is a substantial margin of uncertainty; LBP-10-24, 72 NRC 720 (2010)
- interest in the promotion of economic use of energy falls outside the protected zone of interests; CLI-07-18, 65 NRC 399 (2007)
- intervenor that has sufficient information to file a NEPA contention but delays that filing until publication of the environmental impact statement does so at its peril; LBP-10-24, 72 NRC 720 (2010)
- interveners are required to file environmental contentions in the first instance based on the applicant's environmental report; LBP-09-7, 69 NRC 613 (2009)

## SUBJECT INDEX

intervenors' preference that the final environmental impact statement contain additional details on any particular issue is not, standing alone, probative of the FEIS's adequacy; LBP-06-19, 64 NRC 53 (2006)

issues related to costs only become relevant if an intervenor identifies an environmentally preferable, reasonable alternative; LBP-10-10, 71 NRC 529 (2010)

it is appropriate to consider reasonably foreseeable environmental impacts of a proposed action, even if they are only indirect effects; CLI-06-15, 63 NRC 687 (2006)

it is appropriate to defer issues concerning the effects of short-term damage to the environment and the irretrievable commitment of resources to the construction permit or combined license stage; CLI-07-14, 65 NRC 216 (2007)

it is inappropriate for the agency to consider economic costs when no environmentally preferable alternative has been identified; CLI-10-1, 71 NRC 1 (2010); CLI-10-9, 71 NRC 245 (2010)

it is not enough to consider only the proposed action and the no-action alternative in an environmental assessment; CLI-10-18, 72 NRC 56 (2010)

it is not necessary to examine every conceivable aspect of federally licensed projects; LBP-07-3, 65 NRC 237 (2007)

it is the NRC Staff, not the intervenors, that has the burden of complying with NEPA; LBP-10-24, 72 NRC 720 (2010)

it would be inconsistent with the rule of reason to require that the cumulative impacts analysis individually analyze the effects of remote facilities absent a demonstration that such additional effort would lead to a different conclusion; LBP-09-4, 69 NRC 170 (2009)

license renewal environmental reports must include a severe accident mitigation alternatives analysis if not previously considered by NRC Staff; LBP-10-15, 72 NRC 257 (2010)

licensing boards are required to apply the Commission's directive that outside the Ninth Circuit, NEPA does not require the evaluation of the impact of terrorist attacks by aircraft or other means; LBP-09-10, 70 NRC 51 (2009); LBP-09-18, 70 NRC 385 (2009)

licensing boards do not sit to flyspeck environmental documents or to add details or nuances; LBP-10-14, 72 NRC 101 (2010)

location of an irradiator may be a circumstance in which the categorical exclusions in 10 C.F.R. 51.22(b) might not apply; LBP-06-4, 63 NRC 99 (2006)

low probability is the key to applying NEPA's rule-of-reason test to contentions that allege that specified accident scenarios present a significant environmental impact that must be evaluated; LBP-09-26, 70 NRC 939 (2009); LBP-10-10, 71 NRC 529 (2010)

merely contemplating a certain action, even if accompanied by research or study, does not necessarily constitute a proposal for a major federal action requiring NEPA review; CLI-09-14, 69 NRC 580 (2009)

neither mitigative action against harmful effects of major federal actions nor in-depth statements of planned actions to be taken to dull such impacts is required; LBP-10-13, 71 NRC 673 (2010)

neither NRC nor applicant has the mission or authority to implement a general societal interest in energy efficiency; LBP-08-13, 68 NRC 43 (2008)

NEPA analyses are subject to a rule of reason, but it is necessary to have a criterion upon which reasonableness may be determined; LBP-09-4, 69 NRC 170 (2009)

NEPA is the only legal grounds for an admissible contention relating to environmental justice issues; LBP-09-18, 70 NRC 385 (2009)

NEPA itself does not mandate particular results, but simply prescribes the necessary process; LBP-09-25, 70 NRC 867 (2009)

new information that might emerge following issuance of an environmental impact statement requires a supplement to the impacts analysis if the new information presents a seriously different picture of the environmental impact of the proposed project from what was previously envisioned; CLI-06-29, 64 NRC 417 (2006)

no terrorism inquiry is required; CLI-10-1, 71 NRC 1 (2010); LBP-10-10, 71 NRC 529 (2010)

no-action alternative discussions can be brief and can incorporate by reference other sections of an environmental report discussing the project's adverse consequences; LBP-07-3, 65 NRC 237 (2007)

nothing in NEPA shall be deemed to authorize any federal agency to review any effluent limitation or other requirement established pursuant to the Clean Water Act or to authorize any such agency to impose any effluent limitation other than those set by the Environmental Protection Agency or a state agency that has been delegated such authority; LBP-09-25, 70 NRC 867 (2009)

## SUBJECT INDEX

nothing in the agency's Part 51 NEPA regulations or the Staff's ER preparation guidance in regard to providing a description of the local environment indicates exactly how, as a general matter, a baseline for NEPA analysis is to be established; LBP-07-3, 65 NRC 237 (2007)

notwithstanding TVA's status as a federal entity, it is within NRC's regulatory authority to review TVA's combined license application, including its compliance with the agency's NEPA requirements; LBP-08-16, 68 NRC 361 (2008)

NRC can presume that increases in emissions that still fall within statutory limits will be insignificant; CLI-08-16, 68 NRC 221 (2008)

NRC cannot categorically refuse to consider the consequences of a terrorist attack against a spent fuel storage facility; CLI-10-1, 71 NRC 1 (2010)

NRC cannot either fail to perform an adequate evaluation or evade a NEPA responsibility by deferring to another agency; CLI-10-5, 71 NRC 90 (2010)

NRC cannot generically dispense with the consideration of SAMAs, under NEPA, through a policy statement issued pursuant to its Atomic Energy Act authority; LBP-10-13, 71 NRC 673 (2010)

NRC has broad discretion to determine how thoroughly it needs to analyze a particular subject for NEPA compliance; LBP-10-14, 72 NRC 101 (2010)

NRC has discretion in determining the extent to which a particular subject is analyzed, and may decline to examine remote and speculative or inconsequentially small impacts; LBP-06-8, 63 NRC 241 (2006)

NRC has no legal duty to consider intentional malevolent acts on a case-by-case basis in conjunction with commercial power reactor license renewal applications; LBP-08-13, 68 NRC 43 (2008)

NRC is barred from imposing or second-guessing effluent limitations or water quality certification requirements imposed by EPA or an authorized state, but it may address water quality matters in its assessment of the environmental impact of a license renewal; LBP-06-20, 64 NRC 131 (2006)

NRC is not in the business of regulating the market strategies of licensees and leaves to them the ongoing business decisions that relate to costs and profit; LBP-09-2, 69 NRC 87 (2009)

NRC is not required to assess every impact or effect of its proposed action, only effects on the environment; CLI-08-16, 68 NRC 221 (2008)

NRC is not required to assess the potential health effects of consuming irradiated food; CLI-10-18, 72 NRC 56 (2010)

NRC is not required to consider every imaginable alternative to a proposed action, but rather only reasonable alternatives; LBP-10-14, 72 NRC 101 (2010)

NRC is not required to consider the environmental consequences of hypothetical terrorist attacks on NRC-licensed facilities; CLI-07-8, 65 NRC 124 (2007); CLI-07-9, 65 NRC 139 (2007); CLI-07-10, 65 NRC 144 (2007); CLI-07-11, 65 NRC 148 (2007)

NRC is not required to revisit matters related to high-density spent fuel pool coolant loss or other SFP events in combined license proceedings; LBP-08-21, 68 NRC 554 (2008)

NRC is obligated to study matters that may be far afield of its primary mission, including the environmental impacts related to the permits and licenses issued by other governmental agencies; LBP-09-21, 70 NRC 581 (2009)

NRC is prohibited from using NEPA to impose additional effluent limitations on an applicant's wastewater discharges to surface waters; LBP-10-14, 72 NRC 101 (2010)

NRC is required to consider measures to mitigate the environmental impacts of the project; LBP-09-10, 70 NRC 51 (2009); LBP-09-16, 70 NRC 227 (2009)

NRC is required to provide a reasonable mitigation alternatives analysis, containing reasonable estimates, including full disclosures of any known shortcomings in methodology, incomplete or unavailable information, and significant uncertainties; CLI-10-22, 72 NRC 202 (2010)

NRC may comply with NEPA without requiring that applicant submit an environmental report, but NEPA and Council on Environmental Quality regulations permit agencies to request information from an applicant for a license or permit that will require a NEPA analysis; CLI-10-2, 71 NRC 27 (2010)

NRC may, consistent with NEPA, define baseload power generation as the purpose of and need for a project; LBP-10-24, 72 NRC 720 (2010)

NRC regulations do not impose a numerical floor on alternatives to be considered; CLI-10-18, 72 NRC 56 (2010)

## SUBJECT INDEX

NRC regulations require petitioner to raise contentions related to NEPA as challenges to the applicant's environmental report, which acts as a surrogate for the environmental impact statement during the early stages of a relicensing proceeding; LBP-08-26, 68 NRC 905 (2008)

NRC Staff is required to prepare an environmental impact statement in connection with the issuance of an early site permit; LBP-09-7, 69 NRC 613 (2009)

NRC Staff is required under NEPA to evaluate reasonable technological and geographical alternatives to the proposed irradiator; CLI-10-18, 72 NRC 56 (2010)

NRC Staff must balance the benefits of the project against its environmental costs; LBP-10-24, 72 NRC 720 (2010)

NRC Staff must consult with interested Indian tribes as part of its review of the application; CLI-09-12, 69 NRC 535 (2009)

NRC Staff must first prepare a draft environmental impact statement; LBP-09-7, 69 NRC 613 (2009)

NRC's alternatives analysis should be based around the applicant's goals, including the applicant's economic goals; LBP-07-9, 65 NRC 539 (2007)

NRC's categorical refusal to consider the environmental effects of a terrorist attack is found to be unreasonable; CLI-06-23, 64 NRC 107 (2006)

NRC's NEPA responsibilities and, by extension, the applicant's responsibilities under 10 C.F.R. Part 51 are subject to a rule of reason; LBP-10-6, 71 NRC 350 (2010)

NRC's obligations under NEPA focus on the adjective "environmental," and NEPA does not require the agency to assess every impact or effect, but only the impact or effect on the environment; LBP-09-2, 69 NRC 87 (2009)

NRC's process for preparation of an environmental impact statement mandates openness and clarity; CLI-07-27, 66 NRC 215 (2007)

omitting consideration of accident scenarios anticipated under 10 C.F.R. 50.150 and 50.54(hh) is contrary to the requirements of 42 U.S.C. § 2133(d); LBP-10-10, 71 NRC 529 (2010)

on baseline issues in early site permit cases, boards must reach their own independent determination, but should do so without second-guessing underlying technical or factual findings by the NRC Staff; LBP-07-9, 65 NRC 539 (2007); LBP-09-19, 70 NRC 433 (2009)

on issues arising under the National Environmental Policy Act, petitioner shall file contentions based on the applicant's environmental report; LBP-10-24, 72 NRC 720 (2010)

once the adverse environmental effects of a proposed action are adequately identified and evaluated, the agency is not constrained from deciding that other values outweigh the environmental costs; LBP-09-7, 69 NRC 613 (2009)

one in a million per year is the threshold above which accident scenarios should be evaluated for NEPA consideration; LBP-10-10, 71 NRC 529 (2010)

only feasible, nonspeculative alternatives must be considered; LBP-10-10, 71 NRC 529 (2010)

only reasonably foreseeable indirect environmental effects of a proposed licensing action must be considered; CLI-06-15, 63 NRC 687 (2006)

petitioner did not properly challenge applicant's conclusion that no environmentally preferable alternative existed where the only alternative that petitioner mentions on appeal is the no-reactor option, and petitioner neither raised that option before the board nor supported its argument that it would always be environmentally preferable; LBP-10-6, 71 NRC 350 (2010)

petitioner has alleged sufficient new information concerning the seismic situation to raise a prima facie showing that strict application of the generic NEPA analysis of the management of spent fuel in nuclear reactors would not serve the purpose for which Part 51 Appendix B and 10 C.F.R. 51.53(c)(2) were adopted; LBP-10-15, 72 NRC 257 (2010)

petitioner may amend contentions based on the applicant's environmental report or file new contentions if there are data or conclusions in the NRC draft or final environmental impact statement, environmental assessment, or any supplements relating thereto, that differ significantly from the data or conclusions in the applicant's documents; CLI-06-9, 63 NRC 433 (2006); LBP-10-1, 71 NRC 165 (2010); LBP-10-24, 72 NRC 720 (2010)

petitioner need not submit a sensitivity analysis in order to establish that a SAMA-related contention is material; LBP-10-15, 72 NRC 257 (2010)

preparation of an environmental impact statement is required for all major federal actions significantly affecting the quality of the human environment; LBP-06-27, 64 NRC 438 (2006)

## SUBJECT INDEX

presentation of an alternative analysis is, without more, insufficient to support a contention alleging that the original analysis failed to meet applicable requirements; LBP-08-13, 68 NRC 43 (2008)

prior NRC precedent is consistent with Supreme Court NEPA doctrine, which requires a reasonably close causal relationship between federal agency action and environmental consequences before NEPA is triggered, a relationship similar to that of proximate cause in tort law; LBP-07-14, 66 NRC 169 (2007)

procedural restraints are imposed on agencies, requiring that they take a “hard look” at the environmental impacts of a proposed action and reasonable alternatives to that action; LBP-06-8, 63 NRC 241 (2006)

project goals are to be determined by the applicant, not the agency; CLI-10-18, 72 NRC 56 (2010)

projects, for the purposes of NEPA, are described as proposed actions, or proposals in which action is imminent; CLI-09-14, 69 NRC 580 (2009)

purpose of the cost-benefit analysis called for by NEPA is to identify each significant environmental cost and to determine whether, all other factors considered, on balance the incurring of that cost is warranted; LBP-10-24, 72 NRC 720 (2010)

pursuant to environmental justice principles, each agency should identify and address, as appropriate, any disproportionately high and adverse human health or environmental effects of its programs, policies, and activities on minority or low-income populations; LBP-06-19, 64 NRC 53 (2006)

quibbling over the details of an economic analysis amounts to standing NEPA on its head by asking that the license be rejected not due to environmental costs, but because the economic benefits are not as great as estimated; LBP-09-2, 69 NRC 87 (2009)

reasonable alternatives for license renewal proceedings are limited to discrete electric generation sources that are technically feasible and commercially available; LBP-08-13, 68 NRC 43 (2008)

reasonable alternatives under NEPA do not include alternatives that are impractical, that present unique problems, or that cause extraordinary costs; LBP-09-7, 69 NRC 613 (2009); LBP-09-16, 70 NRC 227 (2009)

“reasonably foreseeable” impacts include those that have catastrophic consequences, even if their probability of occurrence is low, provided that the analysis of the impacts is supported by credible scientific evidence, is not based on pure conjecture, and is within the rule of reason; CLI-08-8, 67 NRC 193 (2008)

regarding consideration of specific combination alternatives, the burden rests on petitioner to propose a particular alternative, and bare generalizations will not support an admissible contention; LBP-10-6, 71 NRC 350 (2010)

regarding public disclosure of an agency’s NEPA analysis, Congress has established that the environmental impact statement shall be made available to the public as provided by FOIA; LBP-08-7, 67 NRC 361 (2008)

regardless of whether a uranium enrichment facility proceeding is contested or uncontested, a licensing board must consider three baseline issues; LBP-06-17, 63 NRC 747 (2006)

rejection of even viable and reasonable alternatives, after an appropriate evaluation, is not arbitrary and capricious; LBP-10-10, 71 NRC 529 (2010)

secondary or indirect consequences of disposal of the waste generated by a facility cannot, and need not for the purposes of satisfying the agency’s NEPA obligation, be examined with particularity when a specific disposal site has not yet been identified; LBP-06-8, 63 NRC 241 (2006)

severe accident mitigation alternatives analyses are rooted in a cost-benefit assessment and the purpose of the assessment is to identify plant changes whose costs would be less than their benefit; LBP-10-14, 72 NRC 101 (2010)

severe accident mitigation alternatives analysis must be site specific and given careful consideration in order to comply with environmental requirements; LBP-09-10, 70 NRC 51 (2009)

Staff is obliged to perform a severe accident mitigation alternatives analysis; LBP-07-13, 66 NRC 131 (2007)

Staff must consider measures to mitigate environmental impacts by examining alternatives available for reducing or avoiding adverse effects and must discuss the mitigation measures in sufficient detail to ensure that environmental consequences have been fairly evaluated; LBP-06-19, 64 NRC 53 (2006)

Staff shall supplement an environmental impact statement if there are substantial changes in the proposed action that are relevant to environmental concerns or there are significant new circumstances or information relevant to environmental concerns and bearing on the proposed action or its impacts; LBP-06-19, 64 NRC 53 (2006)

## SUBJECT INDEX

Staff's draft and final environmental impact statements are to include a statement that will briefly describe and specify the need for the proposed action; LBP-06-17, 63 NRC 747 (2006)

Staff's failure to disclose data underlying its terrorism analysis in the final environmental assessment failed to meet the NEPA-mandated hard-look standard; CLI-10-18, 72 NRC 56 (2010)

technologically unproven alternatives need not be considered in an environmental impact statement; LBP-09-7, 69 NRC 613 (2009)

terrorist attacks are not to be considered part of the NEPA analysis required for licensing actions; LBP-07-14, 66 NRC 169 (2007)

the Act does not mandate particular results, but simply prescribes the necessary process; LBP-09-6, 69 NRC 367 (2009)

the adjudicatory record and board decision and any Commission appellate decisions become, in effect, part of the final environmental impact statement; LBP-06-19, 64 NRC 53 (2006)

the alternatives analysis is the heart of the environmental impact statement; LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009)

the alternatives discussion in the environmental report or environmental impact statement need not include every possible alternative, but every reasonable alternative; LBP-09-16, 70 NRC 227 (2009); LBP-09-21, 70 NRC 581 (2009)

the alternatives provision of section 102(2)(E) applies both when an agency prepares an environmental impact statement and when it prepares an environmental assessment; CLI-10-18, 72 NRC 56 (2010)

the appropriate state or federal regulatory authority, such as an Agreement State, will conduct any necessary site-specific evaluation to confirm that applicable radiological dose limits and standards for disposal of depleted uranium can be met at a particular site; CLI-06-15, 63 NRC 687 (2006)

the board erred in admitting a contention concerning the economic value of wetlands without requiring petitioners to demonstrate that the proposed licensing action or no-action alternative would have any effect on wetlands; CLI-09-9, 69 NRC 331 (2009)

the central purpose of Part 51 rules is to allow NRC to comply with NEPA by identifying and evaluating environmental impacts that are generic to reactor license renewal proceedings and then allowing applicant and NRC to dispense with site-specific evaluations of such environmental impacts in situations covered by the generic analysis; LBP-10-15, 72 NRC 257 (2010)

the claimed impact of a terrorist attack on NRC-licensed facilities is too attenuated to find the proposed federal action to be the proximate cause of that impact; CLI-07-9, 65 NRC 139 (2007); CLI-07-10, 65 NRC 144 (2007)

the Commission is not required to reveal sensitive government security information regarding the agency's environmental analysis; CLI-08-26, 68 NRC 509 (2008)

the Commission is ultimately responsible for analyzing environmental justice issues, but license renewal applicants are required to assist the Commission with that evaluation; LBP-08-26, 68 NRC 905 (2008)

the Commission may find special circumstances warranting a categorical exclusion upon its own initiative, or upon the request of an interested person; CLI-10-18, 72 NRC 56 (2010)

the Commission may have more to offer regarding the need for a NEPA carbon footprint analysis in new reactor licensing proceedings; LBP-09-19, 70 NRC 433 (2009)

the Commission may withhold from public disclosure any information that is exempt under the Freedom of Information Act; CLI-08-26, 68 NRC 509 (2008)

the Commission's discussion of the Staff's underlying review adds necessary additional details and constitutes a supplement to the final environmental impact statement's alternative site review; CLI-07-27, 66 NRC 215 (2007)

the concept of alternatives must be bounded by some notion of feasibility; LBP-09-17, 70 NRC 311 (2009); LBP-10-10, 71 NRC 529 (2010)

the cost-benefit analysis involves the scrutiny of many factors, among them, offsetting benefits, available alternatives, and the possible means (and attendant costs) of reducing the environmental harm; LBP-10-24, 72 NRC 720 (2010)

the decision as to whether an alleged environmental impact or alternative is significant or reasonable is the merits of a NEPA contention and should not be adjudicated at the contention admissibility stage under the guise of materiality or scope; LBP-09-10, 70 NRC 51 (2009)

## SUBJECT INDEX

the discussion of alternatives in the final environmental impact statement shall identify reasonable alternatives, present the environmental impacts of the proposal and the alternatives in comparative form, and include a final recommendation on the action to be taken; LBP-06-19, 64 NRC 53 (2006)

the draft EIS is distributed for public comment and, based on the comments received, a review of information provided by the applicant, and supplemental independent information and analysis, the Staff prepares and issues a final EIS; LBP-09-7, 69 NRC 613 (2009)

the draft environmental impact statement may rely in part on the environmental report, but agency regulations require the Staff to independently evaluate and be responsible for the reliability of all information used in the DEIS; LBP-09-7, 69 NRC 613 (2009)

the duty to consider the environmental impacts of a proposed action incorporates, at least implicitly, considerations of the probability of a particular consequence occurring; LBP-10-15, 72 NRC 257 (2010)

the environmental baseline reflects the effects of all currently existing pollution sources in the relevant watershed, including contributions of all nuclear power plants, and petitioners failed to provide information indicating that this aggregate analysis was insufficient; LBP-09-16, 70 NRC 227 (2009)

the environmental effect caused by third-party miscreants is simply too far removed from the natural or expected consequences of agency action to require a study under NEPA; CLI-07-10, 65 NRC 144 (2007); CLI-10-1, 71 NRC 1 (2010)

the environmental report is required to address a list of environmental considerations that correspond to the environmental considerations that NEPA § 102(2)(C)(i)-(v) requires the agency to address in the environmental impact statement; LBP-09-16, 70 NRC 227 (2009)

the environmental report's impact analysis must include sufficient data and the alternatives analysis must be sufficiently complete to aid the Commission in preparing the environmental impact statement; LBP-09-10, 70 NRC 51 (2009)

the final environmental impact statement is required to include a description of the underlying purpose and need of a proposed project; LBP-06-19, 64 NRC 53 (2006)

the general rule applicable to cases involving differences or changes in demand forecasts is not whether applicant will need additional generating capacity but when; LBP-10-24, 72 NRC 720 (2010)

the good cause factor favors petitioners who have filed their petition within 30 days of the availability of the document they contend contains new and significant information so as to form the basis for their contention; LBP-10-1, 71 NRC 165 (2010)

the hard look required by NEPA is subject to a rule of reason, such that it is not necessary to look at every conceivable alternative to the proposed licensing action, but only those that are feasible and reasonably related to the scope and goals of the proposed action; LBP-10-10, 71 NRC 529 (2010)

the hard-look doctrine is subject to a rule of reason that the Commission has interpreted as obligating the agency to consider all reasonable alternatives to the proposed action; LBP-10-14, 72 NRC 101 (2010)

the issue of need for power is a part of NRC's combined license NEPA review process; LBP-08-16, 68 NRC 361 (2008)

the level of risk of a terrorist attack depends upon political, social, and economic factors external to the NRC licensing process, and thus it is not sensible to hold an NRC licensing decision, rather than terrorists themselves, as the proximate cause of an attack on an NRC-licensed facility; CLI-07-8, 65 NRC 124 (2007)

the licensing board's standard of review on environmental issues in a mandatory uncontested proceeding on a uranium enrichment facility application is discussed; LBP-07-6, 65 NRC 429 (2007)

the "major federal action" triggering the environmental impact statement is issuance of the license, not adjudication of the license; CLI-06-19, 63 NRC 19 (2006)

the National Infrastructure Protection Plan is concerned with security issues, not environmental quality standards and requirements, and it is environmental quality standards and requirements that the environmental analysis is obliged to address, not security issues; CLI-08-1, 67 NRC 1 (2008)

the NEPA requirement to prepare an environmental impact statement is a procedural mechanism designed to ensure that agencies give proper consideration to the environmental consequences of their actions; LBP-10-24, 72 NRC 720 (2010)

the NEPA rule of reason does not require applicant to consider energy efficiency in its NEPA analysis, because energy efficiency is not a reasonable alternative for a merchant power producer; CLI-10-1, 71 NRC 1 (2010)

## SUBJECT INDEX

- the obligation of agencies to consider alternatives is a lesser one under an environmental assessment than under an environmental impact statement; CLI-10-18, 72 NRC 56 (2010)
- the only alternatives that are relevant to NRC's decision are those alternatives that are environmentally preferable; LBP-10-6, 71 NRC 350 (2010)
- the overriding NEPA issue that a board must determine in a mandatory proceeding on an early site permit application is whether the NEPA review conducted by the NRC Staff has been adequate; LBP-07-9, 65 NRC 539 (2007)
- the permitting agency determines what cooling system a nuclear power facility may use, and NRC factors the impacts resulting from use of that system into the NEPA cost-benefit analysis; CLI-07-16, 65 NRC 371 (2007)
- the proper inquiry for determining the sufficiency of the purpose and need statement is whether the final environmental impact statement, read as a whole, includes a correct and adequate description of the purpose of and need for the proposed action; LBP-06-19, 64 NRC 53 (2006)
- the purpose of an environmental justice review is to ensure that the Commission considers and publicly discloses environmental factors peculiar to minority or low-income populations that may cause them to suffer harm disproportionate to that suffered by the general population; LBP-08-13, 68 NRC 43 (2008)
- the range of alternatives that must be considered need not extend beyond those reasonably related to the purposes of the project and a rule of reason necessarily informs that choice; CLI-10-18, 72 NRC 56 (2010)
- the requirement to discuss alternatives in the environmental report parallels NEPA's requirement that an environmental impact statement provide a detailed statement of reasonable alternatives to a proposed action; LBP-09-16, 70 NRC 227 (2009)
- the requirements of NEPA and, by extension, NRC's regulations implementing NEPA are subject to a rule of reason, and only reasonably foreseeable environmental impacts must be addressed; LBP-09-26, 70 NRC 939 (2009)
- the rule of reason does not demand an analysis of energy efficiency because conservation measures are beyond the ability of an applicant to implement, and are therefore outside the scope required by a NEPA review of reasonable alternatives; LBP-08-13, 68 NRC 43 (2008)
- the rule of reason excludes consideration of demand-side management if the proposed new plant is intended to be a merchant plant, selling power on the open market, because it is not feasible for licensee to engage in demand-side management; CLI-10-21, 72 NRC 197 (2010)
- the statement of purpose and need in the final environmental impact statement is independent of any specific project area, and thus a prior decision of the Commission adjudicating an intervenor's challenge to the statement of purpose and need applies with equal force to all areas of a proposed project; LBP-06-19, 64 NRC 53 (2006)
- the statute applies to agencies of the federal government, not to private parties such as applicants for NRC licenses; LBP-09-10, 70 NRC 51 (2009)
- the statute does not mandate particular results, but simply prescribes the necessary process; LBP-06-19, 64 NRC 53 (2006); LBP-10-24, 72 NRC 720 (2010)
- the statute has only a limited role to play in interpreting 10 C.F.R. Part 51's requirements for the environmental report; LBP-09-16, 70 NRC 227 (2009)
- the statute imposes procedural requirements on the NRC to take a hard look at the environmental impacts of building and operating a nuclear reactor; LBP-10-14, 72 NRC 101 (2010)
- the statute's dual purpose is to ensure that federal officials fully take into account the environmental consequences of a federal action before reaching major decisions and to inform the public, Congress, and other agencies of those consequences; LBP-07-9, 65 NRC 539 (2007)
- the statutory language requires an impact statement only in the event of a proposed action, and thus in the absence of a proposal there is nothing that could be the subject of the analysis envisioned by the statute for an impact statement; CLI-10-5, 71 NRC 90 (2010)
- the ultimate objective of the NEPA requirement to examine alternatives is to ensure that NRC has made an informed decision by examining reasonable alternatives to the proposed action; LBP-10-6, 71 NRC 350 (2010)
- the underlying purpose of NEPA as an information-gathering and disclosure mechanism requires a different view of the concept of "materiality" under 10 C.F.R. 2.309(f)(1)(iv) than might be applied to a contention seeking to establish a health and safety issue; LBP-08-16, 68 NRC 361 (2008)

## SUBJECT INDEX

the waste confidence rule applies to the spent fuel discharged from any new generation of reactor designs; LBP-08-21, 68 NRC 554 (2008)

the word "significantly" as used in the NEPA process describes the significance of environmental impacts in several contexts, including the locality; CLI-06-29, 64 NRC 417 (2006)

there is a difference between what NRC must look at to evaluate cumulative impacts under NEPA and the scope of a particular cumulative impacts contention, which may be a subset of the total array of cumulative impacts required to be examined; CLI-10-5, 71 NRC 90 (2010)

there is no proximate-cause link between an NRC licensing action, such as renewing an operating license, and any altered risk of terrorist attack; CLI-07-8, 65 NRC 124 (2007)

there is no requirement to use the best scientific methodology, and NEPA should be construed in the light of reason if it is not to demand virtually infinite study and resources; CLI-10-11, 71 NRC 287 (2010)

there must be a finding that something is remote and speculative to preclude it from further analysis, and there must be support in the agency's record of decision to justify this finding; LBP-10-14, 72 NRC 101 (2010)

throughout the repository development program, the Secretary and other agencies must meet the general requirements and the spirit of NEPA; LBP-09-6, 69 NRC 367 (2009)

to be encompassed by NEPA, there needs to be a reasonably close causal relationship between a change in the physical environment and the effect at issue; CLI-08-16, 68 NRC 221 (2008)

to implicate environmental justice scrutiny, support must be presented regarding the alleged existence of adverse impacts or harm on the physical or human environment, and a supported case must be made that these purported adverse impacts could disproportionately affect poor or minority communities in the vicinity of the facility at issue; LBP-07-3, 65 NRC 237 (2007)

uncertainties are dealt with by inclusion in an environmental impact statement of a summary of existing credible scientific evidence relevant to evaluating the reasonably foreseeable significant adverse impacts regarding those events with potential catastrophic consequences even if their probability is low; LBP-09-26, 70 NRC 939 (2009)

under NEPA the Commission looks to the reasonably foreseeable impacts of simply licensing the facility, not the reasonably foreseeable effects of a successful terrorist attack; LBP-09-26, 70 NRC 939 (2009)

when a board decision supplements or differs from the findings of the Staff as set forth in its final environmental impact statement, the FEIS is deemed modified by the board's decision to that extent; LBP-06-8, 63 NRC 241 (2006)

when a new contention is filed challenging new data or conclusions in NRC's environmental documents, the timeliness of the new contention is based on whether it was filed promptly after the NRC's NEPA document became publicly available, not whether it was filed promptly after the information on which the intervenor bases its challenge became publicly available; LBP-10-24, 72 NRC 720 (2010)

when reviewing a license application filed by a private applicant, as opposed to a federally sponsored project, an agency may give substantial weight to the stated preferences of the applicant with regard to issues such as site selection and facility design; CLI-06-10, 63 NRC 451 (2006); CLI-10-18, 72 NRC 56 (2010); LBP-09-7, 69 NRC 613 (2009)

when the draft or final environmental impact statement for a combined license application has not been issued so as to provide petitioner with a basis for framing its contention, the licensing board must look to the three other factors specified in 10 C.F.R. 2.309(f)(2) in assessing the admissibility of a new NEPA-related issue statement; LBP-10-1, 71 NRC 165 (2010)

when the purpose of a proposed action is to accomplish one thing, it makes no sense to consider the alternative ways by which another thing might be achieved; LBP-06-19, 64 NRC 53 (2006)

when there are substantial changes in a proposed action that are relevant to environmental concerns, NRC Staff will prepare a supplement to a final environmental impact statement; LBP-10-17, 72 NRC 501 (2010)

where a contention challenges applicant's compliance with the Commission's rules implementing NEPA, materiality relates not only to the Commission's determination regarding denial, issuance, or conditioning of the requested combined license, but also to the Commission's fulfillment of its obligations under NEPA; LBP-10-6, 71 NRC 350 (2010)

## SUBJECT INDEX

- where petitioner has not shown a reasonably close causal relationship between an aircraft attack and the relicensing proceeding at issue, such an attack does not warrant NEPA evaluation; CLI-10-9, 71 NRC 245 (2010)
- where the agency's action is to approve or deny a proposal by a private party, the agency should ordinarily accord substantial weight to the preferences of the applicant and/or sponsor in the siting and design of the project; LBP-10-6, 71 NRC 350 (2010)
- where there is no proposal for major federal action within the meaning of section 102(C), there is no requirement for a NEPA analysis of dredging; CLI-10-5, 71 NRC 90 (2010)
- whether and how the Staff fulfills its National Historic Preservation Act and NEPA obligations are issues that could form the basis of a new contention; LBP-10-16, 72 NRC 361 (2010)
- whether NEPA requires NRC to consider potential health effects of consuming irradiated food raises the kind of broad legal question appropriate for Commission interlocutory review; CLI-08-4, 67 NRC 171 (2008); CLI-08-16, 68 NRC 221 (2008)
- with respect to certain NEPA findings, boards in early site permit proceedings are to make independent environmental judgments, though they need not rethink or redo every aspect of the NRC Staff's environmental findings or undertake their own fact-finding activities; LBP-09-19, 70 NRC 433 (2009)
- NATIONAL HISTORIC PRESERVATION ACT**
- a federal agency must consult with an Indian tribe concerning a federal action that might affect sites of cultural interest to the tribe; CLI-09-9, 69 NRC 331 (2009)
- a federal agency, prior to the issuance of any license, is required to take into account the effect of the federal action on any area eligible for inclusion in the National Register of Historic Places; LBP-08-6, 67 NRC 241 (2008); LBP-08-24, 68 NRC 691 (2008); LBP-10-16, 72 NRC 361 (2010)
- a form letter is not sufficient to constitute the reasonable effort that section 106 of the National Historic Preservation Act requires; LBP-08-6, 67 NRC 241 (2008)
- a license renewal applicant must assess whether any historic or archaeological properties will be affected by the proposed project; LBP-08-26, 68 NRC 905 (2008)
- a mere request for information is not necessarily sufficient to constitute the reasonable effort that section 106 requires; LBP-08-6, 67 NRC 241 (2008)
- a tribe may become a consulting party when it considers property potentially affected by a federal undertaking to have religious or cultural significance; LBP-08-6, 67 NRC 241 (2008)
- agencies may coordinate their National Environmental Policy Act and NHPA reviews, but the reviews remain separate and the regulations associated with each act must be independently satisfied; LBP-06-11, 63 NRC 483 (2006)
- an Indian tribe claims a procedural interest in identifying, evaluating, and establishing protections for historic and cultural resources; LBP-10-16, 72 NRC 361 (2010)
- any contractual provision that purports to shift NHPA compliance responsibility from a third party to the prospective licensee cannot affect the NRC's statutory obligation to comply with the Act with respect to the licensing of the proposed project; CLI-06-9, 63 NRC 433 (2006)
- consideration of alternatives is required only if the project will have an adverse effect on historic properties, and only after that determination is made; CLI-06-9, 63 NRC 433 (2006)
- ensuring that NRC Staff meets its consultation obligations under section 106 is an issue material to the findings the NRC must make in support of the action involved in a materials license renewal proceeding; LBP-08-24, 68 NRC 691 (2008)
- federal agencies must follow notification and consultation procedures prior to a federal undertaking to consider the undertaking's effect on historic properties; LBP-10-16, 72 NRC 361 (2010)
- federal agencies must notify all consulting parties, including Indian tribes, when a finding of no effect has been made, and to provide those consulting parties with an invitation to inspect the documentation prior to approving the undertaking; LBP-08-6, 67 NRC 241 (2008)
- federal "undertakings," are defined as any project, activity, or program funded in whole or in part under the direct or indirect jurisdiction of a federal agency, including those requiring a federal permit, license, or approval; CLI-09-12, 69 NRC 535 (2009)
- in initiating the section 106 process, NRC is required to make a reasonable and good-faith effort to identify Indian tribes who may attach religious and cultural significance to historic properties that may be affected by the proposed undertaking and invite them to participate as consulting parties in the section 106 process; LBP-08-24, 68 NRC 691 (2008)

## SUBJECT INDEX

no nomination or formal determination of eligibility is necessary to trigger an NHPA review, but a site must be within the area of potential effects and the project must affect the site to trigger a review of that site; CLI-06-9, 63 NRC 433 (2006)

NRC Staff must consult with interested Indian tribes as part of its review of the application; CLI-09-12, 69 NRC 535 (2009)

only Indian tribes that appear on the Department of the Interior's list of recognized tribes have consultation rights under the National Historic Preservation Act; LBP-09-13, 70 NRC 168 (2009)  
petitioners' contention that NRC Staff has not consulted with an affected Indian tribe is premature if it is filed prior to the time for the Staff to act; CLI-09-9, 69 NRC 331 (2009)

procedural violations of the Act have resulted in a grant of standing to tribes; LBP-08-24, 68 NRC 691 (2008)

to establish an injury in fact, a party merely has to show some threatened concrete interest personal to the party that the National Historic Preservation Act was designed to protect; LBP-08-24, 68 NRC 691 (2008); LBP-10-16, 72 NRC 361 (2010)

tribes that have addressed procedural violations of the National Historic Preservation Act have uniformly been granted standing under the relaxed standard and have proceeded directly to the merits of the NHPA claim; LBP-10-16, 72 NRC 361 (2010)

whether and how the Staff fulfills its National Historic Preservation Act and NEPA obligations are issues that could form the basis of a new contention; LBP-10-16, 72 NRC 361 (2010)

### NATIONAL INFRASTRUCTURE PROTECTION PLAN

NIPP is concerned with security issues, not environmental quality standards and requirements, and it is environmental quality standards and requirements that the environmental analysis is obliged to address, not security issues; CLI-08-1, 67 NRC 1 (2008)

### NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM PERMIT

although NRC will consider the fact that an applicant is subject to, and compliant with, other environmental laws and permits, it must still perform an environmental assessment prior to any major federal action significantly affecting the environment; LBP-06-20, 64 NRC 131 (2006)

Congress severely limited NRC's scope of inquiry into Clean Water Act § 316(a) determinations to examining whether the EPA or the state agency considered its permit to be a section 316(a) determination; CLI-07-16, 65 NRC 371 (2007)

for purposes of NPDES permits, effluent is defined as liquid waste that is discharged into a river, lake, or other body of water; CLI-07-16, 65 NRC 371 (2007)

heat shock falls within the parameters of the NPDES provisions of the Clean Water Act's section 402(b); CLI-07-16, 65 NRC 371 (2007)

if applicant's plant utilizes a once-through cooling system, applicant shall provide a copy of a Clean Water Act § 316a variance or equivalent state permit and supporting documentation; CLI-07-16, 65 NRC 371 (2007)

no state may issue an NPDES permit for a period longer than 5 years; CLI-07-16, 65 NRC 371 (2007)

NRC is prohibited from using NEPA to impose additional effluent limitations on an applicant's wastewater discharges to surface waters; LBP-10-14, 72 NRC 101 (2010)

permits may address thermal discharges into bodies of water; CLI-07-16, 65 NRC 371 (2007)

the Commission can legitimately rely on a state permit that expires only 5 years into the 20-year renewal period; CLI-07-16, 65 NRC 371 (2007)

the Commission has previously rejected claims that NRC regulations require discharge permits of their licensees; LBP-09-25, 70 NRC 867 (2009)

the question as to whether an NPDES permit that will expire before the proposed 20-year NRC license renewal would even take effect raises an admissible and material issue of law and fact; LBP-06-20, 64 NRC 131 (2006)

whether applicant has a valid NPDES permit is outside the scope of a power uprate proceeding; LBP-08-9, 67 NRC 421 (2008)

### NATIONAL SECURITY INFORMATION

NRC has a statutory obligation to protect national security information; CLI-08-1, 67 NRC 1 (2008)

NRC Staff must file a notice of intent if, at the time of publication of Notice of Hearing, it appears that it will be impracticable for the Staff to avoid the introduction of restricted data or national security information into a proceeding; CLI-10-4, 71 NRC 56 (2010)

## SUBJECT INDEX

- Staff may withhold some facts underlying its findings and conclusions on terrorism-related risks; CLI-07-11, 65 NRC 148 (2007)
- NATIVE AMERICAN GRAVES PROTECTION AND REPATRIATION ACT
- notification and inventory procedures are required so that Indian cultural objects and burial remains found on federal lands will be repatriated to the appropriate tribe; LBP-08-24, 68 NRC 691 (2008); LBP-10-16, 72 NRC 361 (2010)
- NATIVE AMERICANS
- a board may grant party status only to a single representative for each affected federally recognized Indian tribe; LBP-09-6, 69 NRC 367 (2009)
  - a consulting tribe is entitled to a reasonable opportunity to identify its concerns about historic properties, to advise on the identification and evaluation of them (including those of traditional religious and cultural importance), to articulate its views on the undertaking's effects on such properties, and to participate in the resolution of adverse effects; LBP-10-16, 72 NRC 361 (2010)
  - a "federally recognized Indian tribe" is one that is included on the Bureau of Indian Affairs' list of federally recognized Indian Tribes published in the *Federal Register*; LBP-09-13, 70 NRC 168 (2009)
  - a federally recognized Indian tribe may seek to participate in a proceeding; LBP-10-16, 72 NRC 361 (2010)
  - a Native American group that has failed to establish that it is a federally recognized Indian tribe is denied standing based on its tribal status; LBP-09-13, 70 NRC 168 (2009)
  - a Native American nation retains its water rights even after its land rights have been extinguished, but those reserved rights must originate in a treaty in order to survive; LBP-09-6, 69 NRC 367 (2009)
  - a tribe is free to file a contention later in the proceeding if, after Staff releases its environmental documents, the tribe believes that the Staff has failed to satisfy its obligations under NEPA and the National Historic Preservation Act; LBP-10-16, 72 NRC 361 (2010)
  - a tribe may become a consulting party if its property, potentially affected by a federal undertaking, has religious or cultural significance; LBP-08-6, 67 NRC 241 (2008); LBP-08-24, 68 NRC 691 (2008); LBP-10-16, 72 NRC 361 (2010)
  - although a board in another materials license renewal proceeding allowed an Indian organization to participate in that proceeding as an interested Indian Tribe under 10 C.F.R. 2.315(c), that ruling is not binding on other boards; LBP-09-13, 70 NRC 168 (2009)
  - an affected federally recognized Indian tribe is automatically entitled to participate in the Yucca Mountain proceeding; LBP-09-6, 69 NRC 367 (2009)
  - an Indian tribe claims a procedural interest in identifying, evaluating, and establishing protections for historic and cultural resources; LBP-10-16, 72 NRC 361 (2010)
  - an Indian Tribe whose reservation is adjacent to facilities where spent nuclear fuel is currently stored, the nearest of which resides just 600 yards from an ISFSI, has more than a mere interest in a problem; LBP-10-11, 71 NRC 609 (2010)
  - an individual member of a Native American tribe may assert his or her rights on behalf of the tribe; LBP-08-24, 68 NRC 691 (2008)
  - any treaty-based claims to ownership of the land upon which a mining site sits cannot support standing; LBP-08-24, 68 NRC 691 (2008)
  - as long as counsel is an attorney in good standing and a member of the bar, a Notice of Appearance is sufficient in itself for him or her to represent the tribe in a proceeding; LBP-08-26, 68 NRC 905 (2008)
  - Congress's plenary power with respect to Native Americans entitles it to abrogate treaties with Native American nations; LBP-09-13, 70 NRC 168 (2009)
  - continuous and exclusive use of property is sufficient, unless duly extinguished, to establish Indian or aboriginal title; LBP-08-24, 68 NRC 691 (2008)
  - criteria and procedures pursuant to which a federal land manager may issue excavation permits for federal lands are provided as well as notification to Indian tribes if permits may result in harm to cultural or religious sites; LBP-10-16, 72 NRC 361 (2010)
  - federal agencies are to consult with a tribe if that tribe ascribes cultural or religious significance to properties not on tribal lands; LBP-08-24, 68 NRC 691 (2008)
  - federal agencies must follow notification and consultation procedures prior to a federal undertaking to consider the undertaking's effect on historic properties; LBP-10-16, 72 NRC 361 (2010)

## SUBJECT INDEX

federal agencies should be sensitive to the special concerns of Indian tribes in historic preservation issues; LBP-08-6, 67 NRC 241 (2008)

federal recognition by the Bureau of Indian Affairs is a formal political act confirming a tribe's existence as a distinct political society, and institutionalizing the government-to-government relationship between the tribe and the federal government; LBP-09-13, 70 NRC 168 (2009)

federally recognized Indian tribes do not need to address standing requirements if the facility is located within their boundaries; CLI-09-15, 70 NRC 1 (2009)

general counsel for an Indian tribe is not required to submit a declaration stating the basis of his or her authority to represent the tribe; LBP-08-26, 68 NRC 905 (2008)

"Indian tribe" is defined as an Indian or Alaska Native tribe, band, nation, pueblo, village, or community that the Secretary of the Interior acknowledges to exist as an Indian tribe pursuant to the Federally Recognized Indian Tribe List Act of 1994; LBP-09-13, 70 NRC 168 (2009)

it is not the duty of applicant to consult with a tribe regarding cultural resources at a proposed site, but instead is the duty of the agency to initiate and follow through with the consultation process; LBP-10-16, 72 NRC 361 (2010)

licensing boards are required to reject treaty-based claims of ownership; LBP-08-24, 68 NRC 691 (2008)

membership of a petitioning Indian group must be composed principally of persons who are not members of any other acknowledged North American Indian tribe; LBP-09-13, 70 NRC 168 (2009)

Native American historic preservation issues, which often extend beyond Indian lands to other historic properties, and should invite the governing body of the responsible tribe to be a consulting party and to concur in any agreement; LBP-08-24, 68 NRC 691 (2008); LBP-10-16, 72 NRC 361 (2010)

notification and inventory procedures are provided so that Indian cultural objects and burial remains found on federal lands will be repatriated to the appropriate tribe; LBP-08-24, 68 NRC 691 (2008)

NRC must make a reasonable and good-faith effort to identify any Indian tribes that might attach religious and cultural significance to historic properties in the area of potential effects and invite them to be consulting parties; CLI-09-12, 69 NRC 535 (2009)

petitioners' contention that NRC Staff has not consulted with an affected Indian tribe is premature if it is filed prior to the time for the Staff to act; CLI-09-9, 69 NRC 331 (2009)

plenary authority over the tribal relations of the Indians has been exercised by Congress from the beginning, and the power has always been deemed a political one, not subject to be controlled by the judicial department of the government; LBP-08-24, 68 NRC 691 (2008); LBP-09-13, 70 NRC 168 (2009)

preservation of cultural traditions is a protected interest under federal law, and its endangerment or harm qualifies as an injury for the purposes of establishing standing; LBP-08-24, 68 NRC 691 (2008)

preservation of Native American cultural traditions is a protected interest under federal law; LBP-10-16, 72 NRC 361 (2010)

procedural violations of the National Historic Preservation Act have resulted in a grant of standing to tribes; LBP-08-24, 68 NRC 691 (2008)

standing is granted to an Indian tribe based on its interest in cultural artifacts onsite that could be affected by a proposed licensing action; CLI-09-9, 69 NRC 331 (2009)

the Commission shall permit intervention by any affected federally recognized Indian tribe in the area where the geologic repository operations is located if the contention requirements in 10 C.F.R. 2.309(f) are satisfied with respect to at least one contention; CLI-08-25, 68 NRC 497 (2008)

the difference between "aboriginal title" and "aboriginal lands" is distinguished; LBP-08-24, 68 NRC 691 (2008)

the fact that an ancestor of a member of the Oglala Delegation of the Great Sioux Nation Treaty Council signed several treaties with the United States more than 100 years ago does not establish that the delegation is a current and official successor of the delegation that signed such treaties, or that the delegation is a local governmental entity that currently exercises executive or; LBP-09-13, 70 NRC 168 (2009)

the Trust Responsibility requires federal agencies to take actions or refrain from taking actions in fulfillment of Congress's duty to protect the Indians; LBP-09-13, 70 NRC 168 (2009)

the United States is no longer bound by the terms of the 1868 Fort Laramie Treaty; LBP-09-13, 70 NRC 168 (2009)

## SUBJECT INDEX

- to establish an injury in fact, a party merely has to show some threatened concrete interest personal to the party that the National Historic Preservation Act was designed to protect; LBP-08-24, 68 NRC 691 (2008)
- to qualify for recognition on the Bureau of Indian Affairs' list as an Indian tribe, a petitioning group must establish that it has historically been recognized as an American Indian entity since 1900, that it is composed of a cohesive group of individuals that share a distinct community and an autonomous government, and that its members are descended from a historic Indian tribe or tribes; LBP-09-13, 70 NRC 168 (2009)
- treaties granting ownership of the Black Hills to the Sioux Nation had been abrogated by act of Congress and are no longer in effect; CLI-09-9, 69 NRC 331 (2009)
- tribes are entitled to a reasonable opportunity to participate in NRC proceedings; LBP-08-6, 67 NRC 241 (2008)
- tribes that have addressed procedural violations of the National Historic Preservation Act have uniformly been granted standing under the relaxed standard and have proceeded directly to the merits of the NHPA claim; LBP-10-16, 72 NRC 361 (2010)
- trust responsibility imposes a fiduciary duty on NRC, as a federal agency, to the tribe and its members; LBP-08-24, 68 NRC 691 (2008)
- where a facility will not be located within an Indian tribe's boundaries, the tribe must meet the standing requirements imposed by 10 C.F.R. 2.309(d)(1); LBP-10-16, 72 NRC 361 (2010)
- where an abrogated treaty was the only grounds supporting an Indian group's claim of standing, the board correctly found that the Indian group did not have standing as a party to the proceeding; CLI-09-9, 69 NRC 331 (2009)
- without consultation with a tribe, culturally significant resources will go unidentified and unprotected, resulting in development or use of the land that might cause damage to these cultural resources, thereby injuring the protected interests of the tribe; LBP-08-24, 68 NRC 691 (2008)
- NATURALLY OCCURRING RADIOACTIVE MATERIAL**
- allegation that the environmental report's analysis of cancer deaths and illnesses relative to natural radiation source exposures is inadequate is inadmissible; LBP-08-16, 68 NRC 361 (2008)
- emissions from NORM are background radiation; CLI-06-14, 63 NRC 510 (2006)
- examples of industrial wastes that are not regulated by the Commission include uranium mining overburden, phosphate waste, water treatment waste, petroleum production waste, mineral processing waste, and geothermal energy production waste; LBP-06-1, 63 NRC 41 (2006)
- NORM includes radioactive materials that are undisturbed in nature, as well as radioactive materials that, as a result of human activities, are no longer in their natural state; LBP-06-1, 63 NRC 41 (2006)
- NEED FOR POWER**
- a possible 1-year slip in construction schedule is clearly within the margin of uncertainty and therefore, in the context of relitigating an issue, is unlikely to affect the need for power; LBP-10-6, 71 NRC 350 (2010)
- accuracy and reliability of the agency's need-for-power determination, as reflected in the draft EIS, is material to the licensing decision; LBP-10-24, 72 NRC 720 (2010)
- at the operating license stage, licensing boards will not admit contentions concerning the need for power or alternative energy sources; LBP-10-12, 71 NRC 656 (2010)
- because demand-side management reduces by a small portion applicant's demand for power, it should be analyzed in this instance as a surrogate for need for power; LBP-10-6, 71 NRC 350 (2010)
- business strategies in the context of need for power and any challenges to them are outside the scope of a licensing proceeding; LBP-10-10, 71 NRC 529 (2010)
- contention that calls for a more detailed analysis than NRC requires is inadmissible; LBP-10-24, 72 NRC 720 (2010)
- energy sales projections are inherently uncertain, and the Commission does not impose burdensome attempts to predict future conditions, and thus it should be sufficient to reasonably characterize the costs and benefits associated with proposed licensing actions; LBP-10-6, 71 NRC 350 (2010)
- fluctuations in demand that may occur over a period of several years, such as changes brought about by an economic recession, are not a legally sufficient ground for challenging the need for power analysis; LBP-10-24, 72 NRC 720 (2010)

## SUBJECT INDEX

- further review of need for power and alternative energy sources are precluded once a construction permit has been issued; CLI-10-29, 72 NRC 556 (2010)
- if significant new information becomes available, NRC Staff must explain how it took the new information into account in determining whether the additional generating capacity is required; LBP-10-24, 72 NRC 720 (2010)
- inherent in any forecast of future electric power demands is a substantial margin of uncertainty; LBP-10-24, 72 NRC 720 (2010)
- notwithstanding TVA's status as a federal entity, it is within NRC's regulatory authority to review TVA's combined license application, including its compliance with the agency's NEPA requirements; LBP-08-16, 68 NRC 361 (2008)
- NRC must analyze the need for additional power when it relies upon a benefit in performing the balancing of benefits and costs; LBP-09-16, 70 NRC 227 (2009)
- NRC Staff's final environmental impact statement need not include a discussion of the need for power or alternative energy sources; LBP-10-12, 71 NRC 656 (2010)
- NRC's longstanding approach to electric power demand forecasting has emphasized historical, conservative planning to ensure that electricity generating capacity will be available to meet reasonably expected needs; LBP-08-16, 68 NRC 361 (2008)
- petition for waiver of regulation excluding consideration of alternatives and the need for power from the operating license phase must establish that all of applicant's fossil fuel baseload generation that is less efficient than the facility under consideration has been accounted for; LBP-10-12, 71 NRC 656 (2010)
- request for waiver of application of 10 C.F.R. 51.53(b), 51.95(b), and 51.106(c) precluding consideration of need for power and alternative energy sources from a Part 50 operating license proceeding fails to provide the prima facie showing required; LBP-10-12, 71 NRC 656 (2010)
- the general rule applicable to cases involving differences or changes in demand forecasts is not whether applicant will need additional generating capacity but when; LBP-10-24, 72 NRC 720 (2010)
- the issue of need for power is a part of the NRC's combined license NEPA review process; LBP-08-16, 68 NRC 361 (2008)
- to meet its burden to justify certification of its request to waive 10 C.F.R. 51.53(b), 51.95(b), and 51.106(c), petitioner must make a prima facie showing that the proposed facility would not be needed to meet increased energy needs or to replace older, less economical operating capacity, and that there are viable alternatives likely to exist that could tip the NEPA cost-benefit balance against issuance of the operating license; LBP-10-12, 71 NRC 656 (2010)
- NEED TO KNOW**
- content of a statement that explains an individual's "need to know" safeguards information is described; CLI-09-15, 70 NRC 1 (2009)
- NEGLIGENCE**
- a "negligent defendant" is one who should have had suspicions but, in fact, did not; LBP-09-24, 70 NRC 676 (2009)
- the danger of instruction to juries on deliberate ignorance or willful blindness in an inappropriate case is that juries will convict on a basis akin to a standard of negligence; LBP-09-24, 70 NRC 676 (2009)
- NO SIGNIFICANT HAZARDS DETERMINATION**
- after publishing its proposed findings for public comment, the Staff made a no significant hazards consideration finding and issued a power uprate amendment; CLI-06-8, 63 NRC 235 (2006)
- an agency can presume that increases in emissions that still fall within statutory limits will be insignificant; CLI-08-16, 68 NRC 221 (2008)
- conformity of a proposed action to federal regulations governing other aspects of that action's interrelationship with the environment will buttress a finding of no significant impact; CLI-08-16, 68 NRC 221 (2008)
- contentions challenging Staff's determination are not appropriate for review in a license amendment proceeding; LBP-08-18, 68 NRC 533 (2008); LBP-08-19, 68 NRC 545 (2008); LBP-08-20, 68 NRC 549 (2008)
- licensing boards have no jurisdiction to consider an intervention petition seeking to challenge Staff's final determination; LBP-08-20, 68 NRC 549 (2008)
- no petition on or other request for review of the Staff's significant hazards consideration determination will be entertained by the Commission; LBP-07-10, 66 NRC 1 (2007)

## SUBJECT INDEX

only the Commission on its own initiative may review Staff's final no significant hazards consideration determination; LBP-08-18, 68 NRC 533 (2008); LBP-08-20, 68 NRC 549 (2008)  
Staff is permitted to issue an amendment to a reactor operating license notwithstanding the pendency of an adjudicatory hearing if it determines that the licensing action involves no significant hazards consideration; CLI-09-5, 69 NRC 115 (2009)  
Staff's no significant hazards consideration determination is final, subject only to the Commission's discretion, on its own initiative, to review the determination; LBP-07-2, 65 NRC 153 (2007); LBP-07-10, 66 NRC 1 (2007)

### NO-ACTION ALTERNATIVE

discussions can be brief and can incorporate by reference other sections of an environmental report discussing the project's adverse consequences; LBP-07-3, 65 NRC 237 (2007)  
the board erred in admitting a contention concerning the economic value of wetlands without requiring petitioners to demonstrate that the proposed licensing action or no-action alternative would have any effect on wetlands; CLI-09-9, 69 NRC 331 (2009)  
the generic environmental impact statement addresses the need to consider energy conservation for the no-action alternative; LBP-08-13, 68 NRC 43 (2008)

### NONCOMPLIANCES

despite lack of compliance with various agency NUREGs, a decommissioning plan is lawful because it acknowledges the fiscal realities of the licensee's bankruptcy and is consistent with the mandate that the plan be completed as soon as practicable and adequately protect the health and safety of workers and the public; LBP-08-4, 67 NRC 105 (2008)  
licensee is not required to submit docketed information on the resolution of each fire protection noncompliance during its transition to a risk-informed and performance-based fire protection program, but it is required to implement and maintain compensatory measures for remaining noncompliances; DD-07-3, 65 NRC 643 (2007)

### NONDISCLOSURE AGREEMENTS

a sample agreement is provided; CLI-07-18, 65 NRC 399 (2007)  
if applicants and petitioners cannot agree on the terms of a confidentiality and nondisclosure agreement, then they shall inform the presiding officer, indicate specifically the areas where they disagree, and then move the presiding officer for issuance of a protective order; CLI-07-18, 65 NRC 399 (2007)

### NONSAFETY-RELATED

all non-safety-related structures, systems, and components whose failure could prevent satisfactory accomplishment of any of the safety functions identified in 10 C.F.R. 54.4(a)(1), including auxiliary systems necessary for the function of safety-related systems, are subject to aging management review for license renewal; CLI-10-14, 71 NRC 449 (2010)  
cracking of a nonsafety-related steam dryer could cause a release of loose parts that could have an adverse impact on safety-related equipment and thus it is within the scope of aging management review in a license renewal proceeding; LBP-08-25, 68 NRC 763 (2008)

### NOTICE AND COMMENT PROCEDURES

an order modifying a license, such as a Staff order, falls well within the Administrative Procedure Act's definition of adjudication, and as such, the Staff order did not trigger the notice-and-comment procedures applicable to rulemakings; CLI-10-3, 71 NRC 49 (2010)  
when an adjudicating agency retroactively applies a new legal standard that significantly alters the rules of the game, the agency is obliged to give litigants proper notice and a meaningful opportunity to adjust; CLI-10-23, 72 NRC 210 (2010)

### NOTICE OF APPEARANCE

as long as counsel is an attorney in good standing and a member of the bar, a Notice of Appearance is sufficient in itself for him or her to represent an Indian tribe in a proceeding; LBP-08-26, 68 NRC 905 (2008)  
exactly when a notice of appearance must be filed, or a notice of withdrawal submitted when an attorney or representative is no longer acting as a participant representative, is not specified in the agency's rules of practice; LBP-10-7, 71 NRC 391 (2010)  
failure of an organizational participant to have a representative provide an appearance notice in accord with section 2.314(b) might provide cause for an appropriate sanction for failure properly to prosecute the litigation; LBP-10-7, 71 NRC 391 (2010)

## SUBJECT INDEX

identifying the individual or individuals authorized to act on behalf of each participant should provide the means whereby any participant needing to reach another participant's authorized representatives to serve a filing or have a discussion about any litigation-related matters will be able to do so; LBP-10-7, 71 NRC 391 (2010)

### NOTICE OF HEARING

a party filing a response to a notice of hearing must state in its answer its intent to introduce classified information into the proceeding, if it appears to the party that it will be impracticable to avoid such introduction; CLI-08-21, 68 NRC 351 (2008)

agency notices must provide at least 15 days before the opportunity for a hearing is forfeited unless a shorter period is reasonable; LBP-09-20, 70 NRC 565 (2009)

an opportunity for hearing will be provided in the *Federal Register* notice of fuel loading, regarding whether inspections, tests, or analyses that have not been found to have been met under 10 C.F.R. 52.97(a)(2) prior to issuance of the combined license; LBP-09-19, 70 NRC 433 (2009)

any ambiguity relative to the filing date for hearing requests arising from the language of the agency's hearing opportunity notice should be construed in favor of a participant who was seeking to comply with the notice; LBP-08-16, 68 NRC 361 (2008)

before a participant may be precluded from litigating an issue because it failed to raise the issue in an earlier proceeding, it must have had reasonable notice that such an opportunity existed; LBP-08-15, 68 NRC 294 (2008)

given that the *Federal Register* notice defines the scope of the issues that may properly be raised in a request for a hearing, it also defines the scope of the issues that could reasonably be deemed resolved during an early site permit proceeding; LBP-08-15, 68 NRC 294 (2008)

if applicant requests a Commission finding on the completion of inspections, tests, analyses, and acceptance criteria needed for issuance of a combined license, the Commission is required to identify these ITAAC in the notice of hearing published in the *Federal Register* for the COL proceeding; LBP-09-19, 70 NRC 433 (2009)

if safety contentions filed before construction begins would be considered premature and/or speculative, NRC hearing opportunities could soon come to be viewed as chimerical; LBP-07-14, 66 NRC 169 (2007)

NRC Staff must include a notice of intent to introduce classified information in the notice of hearing, if it would be impracticable to avoid such introduction; CLI-08-21, 68 NRC 351 (2008)

the fundamental purpose of the notice is to provide facility opponents a fair opportunity to be heard; LBP-07-14, 66 NRC 169 (2007)

the scope of a proceeding is defined in the Commission's initial hearing notice and order referring the proceeding to the licensing board; LBP-09-25, 70 NRC 867 (2009); LBP-09-26, 70 NRC 939 (2009)

when a hearing notice has been issued, withdrawal of an application would be subject to such terms as the presiding officer may prescribe; LBP-09-23, 70 NRC 659 (2009)

when issuing an order modifying a license, the agency is required to inform the licensee or any other person adversely affected by the order of his or her right, within 20 days of the date of the order, or such other time as may be specified in the order, to demand a hearing; LBP-09-20, 70 NRC 565 (2009)

where the notice of hearing limits the scope to whether the order should be sustained, petitioner's sole remedy is rescission of the order; LBP-09-20, 70 NRC 565 (2009)

with respect to orders modifying a license, petitioner must always request a remedy that falls within the scope of the proceeding, as articulated in the notice of hearing; LBP-09-20, 70 NRC 565 (2009)

withdrawal of an application after the issuance of a notice of hearing shall be on such terms as the presiding officer may prescribe; CLI-10-13, 71 NRC 387 (2010)

### NOTICE OF INTENT

NRC Staff must file a notice of intent if, at the time of publication of the Notice of Hearing, it appears that it will be impracticable for the Staff to avoid the introduction of restricted data or national security information into a proceeding; CLI-10-4, 71 NRC 56 (2010)

### NOTIFICATION

a hearing request is timely when the petitioner lacks both actual and constructive notice of its opportunity to request a hearing as of the deadline specified by the agency, and the petitioner files the hearing request promptly upon receipt of actual notice; LBP-09-20, 70 NRC 565 (2009)

## SUBJECT INDEX

at appropriate intervals during the time between issuance of a combined license and the last date for submission of requests for hearing under 10 C.F.R. 52.103(a), NRC shall publish notices in the *Federal Register* of NRC Staff's determination of the successful completion of inspections, tests, and analyses; LBP-09-19, 70 NRC 433 (2009)

criteria and procedures pursuant to which a federal land manager may issue excavation permits for federal lands are provided as well as notification to Indian tribes if permits may result in harm to cultural or religious sites; LBP-10-16, 72 NRC 361 (2010)

emergency action levels are the criteria used to determine the notifications that need to be made to federal, state, and local authorities and to determine the appropriate protective responses to a particular set of emergency conditions; LBP-09-19, 70 NRC 433 (2009)

even in the absence of constructive notice, the possibility remains that a petitioner had actual notice of the right to request a hearing; LBP-09-20, 70 NRC 565 (2009)

federal agencies must follow notification and consultation procedures prior to a federal undertaking to consider the undertaking's effect on historic properties; LBP-10-16, 72 NRC 361 (2010)

licensee must provide written notification to NRC Staff within 60 days and either begin decommissioning of the site or submit a decommissioning plan to the Staff within 12 months of the notification; LBP-08-8, 67 NRC 409 (2008)

prior to operation under a combined license, a notice of intended operation will be published in the *Federal Register* not less than 180 days before the date scheduled for initial loading of fuel; LBP-09-19, 70 NRC 433 (2009)

publication in the *Federal Register* is legally sufficient notice to all interested or affected persons regardless of actual knowledge or hardship resulting from ignorance, except those who are legally entitled to personal notice; LBP-09-20, 70 NRC 565 (2009)

See also Emergency Notification System

### NRC GUIDANCE DOCUMENTS

although the severe accident mitigation alternatives methodology is available to provide the required analysis, neither NEPA nor NRC regulations require that the analysis under 10 C.F.R. 51.45(c) be performed using that methodology; LBP-09-26, 70 NRC 939 (2009)

because of the security-related SUNSI categorization of a Staff guidance document used to assess an application's compliance with NRC rules, the Staff would not have to produce the document but would be required to identify the document as part of its continuing duty of disclosure; CLI-10-24, 72 NRC 451 (2010)

despite lack of compliance with various agency NUREGs, a decommissioning plan is lawful because it acknowledges the fiscal realities of the licensee's bankruptcy and is consistent with the mandate that the plan be completed as soon as practicable and adequately protect the health and safety of workers and the public; LBP-08-4, 67 NRC 105 (2008)

in proffering contentions that challenge an application, petitioner or intervenor must provide support, including references to sources and documents on which it intends to rely, and a guidance document could be one of those sources; CLI-10-24, 72 NRC 451 (2010)

in the absence of documentary or expert support, reliance on a guidance document to form the basis of a proposed contention does not, by itself, demonstrate a dispute with applicant; LBP-10-5, 71 NRC 329 (2010)

litigant opposing a licensing action is entitled to challenge the sufficiency of any guidance document on which a licensee or applicant relies, but it must do so with substantive support; CLI-10-17, 72 NRC 1 (2010)

NRC provides detailed guidance for Staff personnel reviewing the safety aspects of early site permit applications; LBP-09-19, 70 NRC 433 (2009)

NUREGs are guidance documents, with no binding effect, but are entitled to special weight, such that they are appropriate to consider in evaluating contentions; LBP-09-17, 70 NRC 311 (2009)

Staff guidance documents are not legally binding, but can be useful in instances where legal authority is lacking; CLI-10-24, 72 NRC 451 (2010); LBP-10-5, 71 NRC 329 (2010); LBP-10-16, 72 NRC 361 (2010)

such documents do not have the binding force of law but are entitled to some level of deference; LBP-10-10, 71 NRC 529 (2010)

## SUBJECT INDEX

the standard review plan provides guidance but does not impose requirements on license renewal applicants; CLI-10-17, 72 NRC 1 (2010)

### NRC INSPECTION

based on results of its problem identification and resolution biennial team inspections with annual followup of selected issues at licensed facilities, NRC takes any appropriate enforcement action to ensure compliance with 10 C.F.R. Part 50, Appendix B, Criterion XVI; DD-10-1, 72 NRC 149 (2010) if a uranium enrichment facility is licensed, prior to commencement of operations NRC will verify through an inspection that the facility meets the construction and operation requirements of the license; CLI-10-4, 71 NRC 56 (2010)

### NRC INSPECTORS

prior to providing safeguards information to a requestor, NRC Staff will conduct an inspection to confirm that recipient's information protection system is sufficient to satisfy the requirements of 10 C.F.R. 73.22; CLI-10-4, 71 NRC 56 (2010)

### NRC POLICY

although the ultimate burden with respect to NEPA lies with the NRC Staff, NRC policy with respect to the identification of issues for hearing has long been that such issues must be raised as early as possible; CLI-10-2, 71 NRC 27 (2010)

because it disfavors piecemeal appeals, the Commission will grant interlocutory review only in extraordinary circumstances; CLI-10-29, 72 NRC 556 (2010)

Commission policy of permitting the conduct of an adjudicatory proceeding on a combined license that references a design certification that the Commission has not approved does not violate the Atomic Energy Act of 1954, 10 C.F.R. Part 52, or judicial decisions; CLI-09-4, 69 NRC 80 (2009)

contentions that simply state petitioner's views about what regulatory policy should be do not present a litigable issue; CLI-08-17, 68 NRC 231 (2008); LBP-07-11, 66 NRC 41 (2007); LBP-08-9, 67 NRC 421 (2008); LBP-08-26, 68 NRC 905 (2008); LBP-10-7, 71 NRC 391 (2010); LBP-10-21, 72 NRC 616 (2010)

issues concerning a reactor design certification application should be resolved in the design certification rulemaking and not in an individual combined license proceeding; CLI-08-15, 68 NRC 1 (2008)

it is NRC stated policy to take into account Council on Environmental Quality regulations voluntarily, subject to some conditions; CLI-10-18, 72 NRC 56 (2010)

licensing boards should not accept in individual license proceedings contentions that are or are about to become the subject of general rulemaking by the Commission; CLI-10-19, 72 NRC 98 (2010)

NRC generally defers to the Department of Justice when it seeks a delay in NRC enforcement proceedings pending the conclusion of DOJ's own criminal investigations or proceedings; CLI-06-12, 63 NRC 495 (2006)

NRC has a longstanding policy of encouraging the fair and reasonable settlement of contested licensing proceedings; CLI-06-18, 64 NRC 1 (2006); LBP-06-18, 63 NRC 830 (2006)

questions of law and policy call for a Commission determination; LBP-06-28, 64 NRC 404 (2006)

the Commission has long endorsed a balanced approach to hearings that both expedites the hearing process and ensures fairness in order to produce a record that leads to high-quality decisions that adequately protect the public health and safety, the common defense and security, and the environment; LBP-10-21, 72 NRC 616 (2010)

### NRC PROCEEDINGS

because federal agencies are neither constrained by Article III nor governed by judicially created standing doctrines, the criteria for establishing administrative standing therefore may permissibly be less demanding than the criteria for judicial standing; LBP-08-24, 68 NRC 691 (2008)

before a licensing board will close future proceedings, the party seeking closure must demonstrate that the need to close the hearing outweighs the strong presumption that all licensing board proceedings will be open to the public; LBP-10-2, 71 NRC 190 (2010)

collateral estoppel doctrine has long been recognized as part of NRC adjudicatory practice; CLI-10-23, 72 NRC 210 (2010); LBP-08-15, 68 NRC 294 (2008)

parties are generally entitled to obtain, through discovery and other pretrial activities, the fullest possible knowledge of the issues and facts before trial; LBP-06-25, 64 NRC 367 (2006)

water use issues that are under the jurisdiction of another agency, and which are not affected by any NRC regulation, are outside the scope; CLI-07-25, 66 NRC 101 (2007)

## SUBJECT INDEX

- with certain very limited exceptions, all NRC hearings will be public; LBP-10-2, 71 NRC 190 (2010)
- NRC REVIEW**
- an environmental assessment must include a Reference Document List that identifies the sources used; LBP-08-7, 67 NRC 361 (2008)
  - neither the number nor location of public meetings required to satisfy an agency's public review process for its environmental document is specified; LBP-09-6, 69 NRC 367 (2009)
  - NRC must undertake its own assessment of DOE's environmental documents to determine whether it is practicable to adopt them; LBP-09-6, 69 NRC 367 (2009)
  - the agency's environmental review need only account for those impacts that have some likelihood of occurring or are reasonably foreseeable; LBP-09-26, 70 NRC 939 (2009)
- NRC STAFF**
- a difference of opinion over a scientific question does not constitute fraud or misconduct on the part of the Staff; CLI-06-4, 63 NRC 32 (2006)
  - a request to an applicant for more information does not make an application incomplete; CLI-08-15, 68 NRC 1 (2008)
  - a SUNSI requester may file a challenge to NRC Staff's adverse determination on access to SUNSI with the presiding officer, and the NRC Staff may file a reply to the requester's challenge; LBP-09-5, 69 NRC 303 (2009)
  - absent delegated authority, licensing boards lack authority to direct the Staff's nonadjudicatory actions; CLI-09-2, 69 NRC 55 (2009)
  - although the primary duties of NEPA fall on the NRC Staff in NRC proceedings, the initial requirement to analyze the environmental impacts of an action, including license renewal, is directed to applicants; LBP-07-11, 66 NRC 41 (2007); LBP-10-16, 72 NRC 361 (2010)
  - although the ultimate burden with respect to NEPA lies with the NRC Staff, NRC policy with respect to the identification of issues for hearing has long been that such issues must be raised as early as possible; CLI-10-2, 71 NRC 27 (2010)
  - an appeal as of right by the NRC Staff is permitted on the question of whether a request for access to sensitive unclassified nonsafeguards information should have been denied in whole or in part; CLI-10-24, 72 NRC 451 (2010)
  - an environmental impact statement must be prepared in connection with the issuance of an early site permit; LBP-09-7, 69 NRC 613 (2009)
  - as the proponent of the agency action at issue, applicant generally has the burden of proof in a licensing proceeding, but when NEPA contentions are involved, the burden shifts to the Staff, because NRC, not an applicant, has the burden of complying with NEPA; LBP-09-7, 69 NRC 613 (2009)
  - because Staff relies heavily upon applicant's environmental report in preparing the environmental impact statement, should applicant become a proponent of a particular challenged position set forth in the EIS, applicant also has the burden on that matter; LBP-09-7, 69 NRC 613 (2009)
  - boards lack authority to establish prospective sanctions for any failure by the Staff and/or the applicant to comply with the board's notice conditions; CLI-09-2, 69 NRC 55 (2009)
  - if a SUNSI request is denied, Staff shall briefly state the reasons for the denial; LBP-09-5, 69 NRC 303 (2009)
  - if it seeks to withhold a document from a party or the public, or to bar a party or member of the public from attending any adjudicatory proceeding before a licensing board, NRC Staff must carry the burden of proving that the document or situation fits one of FOIA's specifically enumerated exceptions; LBP-10-2, 71 NRC 190 (2010)
  - in Subpart L proceedings, Staff must produce a hearing file and make it available to all parties; LBP-09-22, 70 NRC 640 (2009)
  - it is not the duty of applicant to consult with a tribe regarding cultural resources at a proposed site, but instead is the duty of the agency to initiate and follow through with the consultation process; LBP-10-16, 72 NRC 361 (2010)
  - licensing boards are not bound by NRC Staff's position or by changes in that position; LBP-10-9, 71 NRC 493 (2010)
  - petitioners' contention that NRC Staff has not consulted with an affected Indian tribe is premature if it is filed prior to the time for the Staff to act; CLI-09-9, 69 NRC 331 (2009)
  - Staff has a continuing duty to update the hearing file; LBP-09-22, 70 NRC 640 (2009)

## SUBJECT INDEX

- Staff has authority to recategorize a violation from a Severity Level III to a violation with no assigned severity level; LBP-10-18, 72 NRC 519 (2010)
- Staff is permitted to issue an amendment to a reactor operating license notwithstanding the pendency of an adjudicatory hearing if it determines that the licensing action involves no significant hazards consideration; CLI-09-5, 69 NRC 115 (2009)
- Staff ordinarily does not participate as a party in the adjudicatory portion of license transfer proceedings; CLI-07-18, 65 NRC 399 (2007)
- Staff's role in an enforcement proceeding is akin to that of a prosecutor, and it has the burden to prove its allegations by a preponderance of the reliable, probative, and substantial evidence; LBP-09-24, 70 NRC 676 (2009)
- the decision to docket, and the subsequent handling of an application, is within the discretion of the Staff; LBP-10-17, 72 NRC 501 (2010)
- the potential environmental effects of a proposed agency action must be considered; LBP-06-8, 63 NRC 241 (2006)
- the Staff elects whether or not to be a party to some or all contentions; CLI-07-20, 65 NRC 499 (2007)
- See also Discovery Against NRC Staff
- NRC STAFF REVIEW**
- a board may ask Staff to produce ACRS documents that it reviewed in conducting its license application review, but Staff need not obtain additional ACRS documents that it never saw in conducting its review; CLI-06-20, 64 NRC 15 (2006)
- a board's role in an early site permit proceeding is to carefully probe Staff findings by asking appropriate questions and by requiring supplemental information when necessary, but Staff's underlying technical and factual findings are not open to board reconsideration unless, after a review of the record, the board finds the NRC Staff review inadequate or its findings insufficient; LBP-09-19, 70 NRC 433 (2009)
- a new contention will necessarily fail if it attacks the quality of the Staff's review rather than identifying a deficiency in the application; CLI-09-5, 69 NRC 115 (2009)
- a Staff determination that certain scenarios, such as Part 61 intruder scenarios, are so unlikely as to fall outside the scope of the Staff's NEPA review is a proper exercise of NEPA's rule of reason; LBP-06-8, 63 NRC 241 (2006)
- a Staff NEPA analysis is not necessarily insufficient if, in the face of a deficiency on the part of its contractor, a responsible Staff official has "stepped into the breach" and conducted the necessary review and analysis; LBP-06-8, 63 NRC 241 (2006)
- agencies are given broad discretion in determining how thoroughly to analyze a particular subject, and may decline to examine issues that an agency in good faith considers remote and speculative or inconsequentially small; LBP-09-7, 69 NRC 613 (2009)
- agencies need only consider those alternatives that can achieve the purposes of the project; CLI-06-10, 63 NRC 451 (2006)
- although Staff inadvertently omitted information about background radiation from the final environmental impact statement, but the information was made available to the public in the draft environmental impact statement and was taken into account by Staff in its NEPA analysis in the FEIS, intervenors were not prejudiced nor was the correctness of the Staff's analysis undermined; LBP-06-19, 64 NRC 53 (2006)
- although Staff's explanation of how it reached its conclusions regarding environmental justice is cursory, the Commission believes that the review was sufficient; CLI-07-27, 66 NRC 215 (2007)
- although the draft environmental impact statement may rely in part on applicant's environmental report, Staff must independently evaluate and be responsible for the reliability of all information used in the DEIS; LBP-09-19, 70 NRC 433 (2009)
- although the requirements of NEPA are directed to federal agencies and thus the primary duties of NEPA fall on the NRC Staff in NRC proceedings, the initial requirement to analyze the environmental impacts of an action is directed to applicants; LBP-07-4, 65 NRC 281 (2007); LBP-08-6, 67 NRC 241 (2008)
- an otherwise admissible contention that raises challenges to information in a design certification rulemaking should be referred to the Staff for resolution in the rulemaking; CLI-09-8, 69 NRC 317 (2009)

## SUBJECT INDEX

analysis of compliance with section 103d of the Atomic Energy Act is a function performed by the NRC Staff as part of its evaluation of the combined license application; CLI-09-20, 70 NRC 911 (2009)

at appropriate intervals during the time between issuance of a combined license and the last date for submission of requests for hearing under section 52.103(a), NRC shall publish notices in the *Federal Register* of NRC Staff's determination of the successful completion of inspections, tests, and analyses; LBP-09-19, 70 NRC 433 (2009)

availability of Staff review outside the hearing process generally does not constitute adequate protection of a private party's rights when considering 10 C.F.R. 2.309(c)(1)(ii); LBP-08-12, 68 NRC 5 (2008)

boards may not direct the Staff in the performance of its administrative functions; LBP-10-17, 72 NRC 501 (2010)

boards may not order the Staff to cease review of an applicant's revised application or direct the Staff to require an applicant to submit a new application; LBP-10-17, 72 NRC 501 (2010)

boards must decide whether the final environmental impact statement alternatives discussion is sufficiently complete to aid the Commission in developing and exploring appropriate alternatives to recommended courses of action in any proposal that involves unresolved conflicts concerning alternative uses of available resources; LBP-09-7, 69 NRC 613 (2009)

challenges to how the Staff performs its reviews are outside the scope of licensing proceeding; CLI-08-23, 68 NRC 461 (2008); CLI-09-14, 69 NRC 580 (2009); LBP-08-9, 67 NRC 421 (2008); LBP-10-17, 72 NRC 501 (2010)

consideration of environmental impacts need not address every impact that could possibly result, but rather only those that are reasonably foreseeable or have some likelihood of occurring; LBP-09-7, 69 NRC 613 (2009)

contentions that inappropriately focus on Staff's review of the application rather than on the errors and omissions of the application itself are inadmissible; CLI-10-27, 72 NRC 481 (2010)

determination of economic benefits and costs that are tangential to environmental consequences are within a wide area of agency discretion; LBP-10-24, 72 NRC 720 (2010)

ensuring that NRC Staff meets its consultation obligations under section 106 of the National Historic Preservation Act is an issue material to the findings the NRC must make in support of the action involved in a materials license renewal proceeding; LBP-08-24, 68 NRC 691 (2008)

factors important to hydrological radionuclide transport must be obtained from onsite measurements; LBP-09-19, 70 NRC 433 (2009)

federal agencies must take a hard look at the environmental impacts of a proposed action, as well as reasonable alternatives to that action; LBP-09-7, 69 NRC 613 (2009)

generic NRC policies and standards and the nature of the NRC Staff's licensing review are not subject to challenge in an adjudicatory proceeding; CLI-08-17, 68 NRC 231 (2008)

given the fact-specific nature of environmental justice issues and inquiries, the methods and form of Staff review, including any decision whether to hold discussions with knowledgeable community and governmental representatives, is best left to the informed discretion of the Staff; CLI-07-27, 66 NRC 215 (2007)

if a document or study is prepared by a nonfederal party, the agency official is responsible for ensuring that its content meets applicable standards and guidelines; LBP-08-24, 68 NRC 691 (2008)

if applicant submits a complete and integrated emergency plan in conjunction with an early site permit application, NRC Staff must find that the emergency plans provide reasonable assurance that adequate protective measures can and will be taken in the event of a radiological emergency; LBP-09-19, 70 NRC 433 (2009)

if issuing a license involves oversight of a private project rather than a federally sponsored project, the agency is entitled to give the applicant's preferences substantial weight when considering project design alternatives; LBP-10-14, 72 NRC 101 (2010)

if significant new information becomes available, NRC Staff must explain how it took the new information into account in determining whether the additional generating capacity is required; LBP-10-24, 72 NRC 720 (2010)

in a license renewal review, Staff is obligated to consider severe accident mitigation alternatives if it has not already done so as part of its NEPA obligations; LBP-10-13, 71 NRC 673 (2010)

in a mandatory hearing, a licensing board must narrow its inquiry to those topics or sections in Staff documents that it deems most important and should concentrate on portions of the documents that do

## SUBJECT INDEX

- not on their face adequately explain the logic, underlying facts, and applicable regulations and guidance; LBP-09-19, 70 NRC 433 (2009)
- in a mandatory proceeding, a licensing board is to determine, with respect to safety matters, whether the application and record of the proceeding contain sufficient information and whether the NRC Staff's review of the application has been adequate; LBP-06-17, 63 NRC 747 (2006)
- in adjudicatory proceedings it is the license application, not the NRC Staff review, that is at issue; CLI-08-15, 68 NRC 1 (2008)
- in conducting its acceptance review of the high-level waste repository construction authorization application, Staff only determines whether the license application contains sufficient information for the NRC to begin its safety review; CLI-08-20, 68 NRC 272 (2008)
- in evaluating early site permit applications, where detailed design information is not available, the Commission may defer resolution of severe accident mitigation alternatives until the construction permit or combined license stage; LBP-09-19, 70 NRC 433 (2009)
- in its review of early site permit applications, Staff must consider physical characteristics of the site, specifically noting that factors important to hydrological radionuclide transport must be obtained from onsite measurements; LBP-09-19, 70 NRC 433 (2009)
- in its review of emergency plans, NRC Staff must take into account FEMA's findings; LBP-09-19, 70 NRC 433 (2009)
- in the context of the National Environmental Policy Act, one must examine underlying policies or legislative intent to draw a manageable line between those causal changes that make an agency responsible for an effect and those that do not; CLI-08-16, 68 NRC 221 (2008)
- in the mandatory early site permit proceeding, NRC must address whether the review conducted by Staff pursuant to the National Environmental Policy Act has been adequate; CLI-07-27, 66 NRC 215 (2007)
- it is applicant, not NRC Staff, that has the burden of proof in litigation; CLI-08-23, 68 NRC 461 (2008)
- it is necessary for Staff to take a uniform approach to its review of analyses by license applicants and for performance of its own analyses; LBP-07-13, 66 NRC 131 (2007)
- it is neither possible nor necessary for the Staff to verify each and every factual assertion in complex license applications; CLI-08-23, 68 NRC 461 (2008)
- it is the NRC Staff, not the intervenors, that has the burden of complying with NEPA; LBP-10-24, 72 NRC 720 (2010)
- license applications may be modified or improved during the NRC review process; LBP-10-17, 72 NRC 501 (2010)
- licensing boards should review contested and uncontested issues differently, giving the NRC Staff considerably more deference on uncontested issues; LBP-06-17, 63 NRC 747 (2006)
- NEPA imposes procedural requirements on NRC to take a hard look at the environmental impacts of building and operating a nuclear reactor; LBP-10-14, 72 NRC 101 (2010)
- NEPA requires evaluation of reasonable technological and geographical alternatives to a proposed irradiator; CLI-10-18, 72 NRC 56 (2010)
- no petition or other request for review of the Staff's significant hazards consideration determination will be entertained by the Commission; LBP-07-10, 66 NRC 1 (2007)
- NRC may appropriately accord substantial weight to the preferences of the applicant and/or sponsor in the siting and design of the project and should take into account the needs and goals of the parties involved in the application; CLI-06-10, 63 NRC 451 (2006)
- NRC must make a reasonable and good-faith effort to identify any Indian tribes that might attach religious and cultural significance to historic properties in the area of potential effects and invite them to be consulting parties; CLI-09-12, 69 NRC 535 (2009)
- NRC provides detailed guidance for Staff personnel reviewing the safety aspects of early site permit applications; LBP-09-19, 70 NRC 433 (2009)
- NRC Staff is obliged under NEPA to supplement its environmental review documents if there is new and significant information; CLI-10-29, 72 NRC 556 (2010)
- NRC Staff is required by law to conduct periodic reviews of the adequacy and compatibility of an Agreement State's regulatory program; CLI-10-8, 71 NRC 142 (2010)
- NRC Staff is required to present its position on whether it is practicable to adopt DOE's environmental impact statement for Yucca Mountain without supplementation; LBP-09-6, 69 NRC 367 (2009)

## SUBJECT INDEX

NRC Staff may adopt the underlying scientific data and inferences from another agency's analysis without independent review, as long as it exercises independent judgment with respect to conclusions about the environmental impacts of the current proposed agency action; LBP-09-7, 69 NRC 613 (2009)

NRC's NEPA responsibilities and, by extension, the applicant's responsibilities under 10 C.F.R. Part 51 are subject to a rule of reason; LBP-10-6, 71 NRC 350 (2010)

on baseline NEPA issues in early site permit cases, boards must reach their own independent determination, but should do so without second-guessing underlying technical or factual findings by the NRC Staff; LBP-09-19, 70 NRC 433 (2009)

potential scope of adjudicatory hearings in license renewal proceedings is the same as the scope of the Staff's review; LBP-10-15, 72 NRC 257 (2010)

review of an integrated emergency plan focuses primarily on the applicant-prepared onsite provisions of the plans, which include the evacuation time estimate provided by applicant, and the inspections, tests, analyses, and acceptance criteria; LBP-09-19, 70 NRC 433 (2009)

safety review for license renewal applications is governed by 10 C.F.R. Part 54, and principally NUREG-1800 and NUREG-1801; CLI-08-23, 68 NRC 461 (2008)

secondary or indirect consequences of disposal of the waste generated by a facility cannot, and need not for the purposes of satisfying the agency's NEPA obligation, be examined with particularity when a specific disposal site has not yet been identified; LBP-06-8, 63 NRC 241 (2006)

Staff appropriately uses an audit system to prioritize the facts it will independently verify, taking into account whether the issue involves first-of-a-kind analysis, use of new modeling techniques, application of new or revised review guidance, areas of higher significance based upon risk-informed reviews, or where the Staff's independent analysis or technical experience and judgment does not support the analysis results of the applicant; CLI-07-12, 65 NRC 203 (2007)

Staff is not required to provide a board with information relevant to instances when the Staff reviewer disagreed with his supervisor with respect to the license application; CLI-06-20, 64 NRC 15 (2006)

Staff is required to prepare an environmental impact statement in connection with issuance of an early site permit; LBP-09-19, 70 NRC 433 (2009)

Staff is to provide indexes as a means to summarize the documents on which it relied as a means to assist the board in its mandatory hearing on a license application; CLI-06-20, 64 NRC 15 (2006)

Staff is to review early site permit applications according to the applicable standards set out in 10 C.F.R. Part 50 and its appendices and 10 C.F.R. Part 100; LBP-09-19, 70 NRC 433 (2009)

Staff is ultimately responsible for the work undertaken, or not undertaken, by its contractors; LBP-06-8, 63 NRC 241 (2006)

Staff need not replicate the work done by another entity, but rather must independently review and find relevant and scientifically reasonable any outside reports or analyses on which it intends to rely; LBP-06-8, 63 NRC 241 (2006)

Staff's audit, or sampling, method of verifying a license renewal applicant's aging management programs, together with the other components of its review, enables the Staff to make the safety findings necessary for issuance of a renewed license; CLI-08-23, 68 NRC 461 (2008)

Staff's final supplemental environmental impact statement on a license renewal must take account of public comments concerning new and significant information on Category 1 findings; LBP-06-20, 64 NRC 131 (2006)

Staff's significant hazards consideration determination is final, subject only to the Commission's discretion on its own initiative, to review the determination; LBP-07-10, 66 NRC 1 (2007)

Staff's underlying technical and factual findings are not open to board reconsideration unless, after a review of the record, the board finds the NRC Staff review inadequate or its findings insufficient; LBP-06-28, 64 NRC 460 (2006)

the adequacy of the applicant's license application, not the NRC Staff's safety evaluation, is the safety issue in any licensing proceeding, and contentions on the adequacy of the content of the Safety Evaluation Report are not cognizable in a proceeding; LBP-06-27, 64 NRC 438 (2006)

the Council on Environmental Quality has implemented regulations providing guidance on agency compliance with NEPA, which may help to direct the Staff's NEPA review; LBP-06-8, 63 NRC 241 (2006)

## SUBJECT INDEX

- the draft environmental impact statement is distributed for public comment and, based on the comments received, a review of information provided by the applicant, and supplemental independent information and analysis, the Staff prepares and issues a final EIS; LBP-09-19, 70 NRC 433 (2009)
- the fact that NRC Staff consultation with interested Indian tribes had not yet taken place at the time a materials license amendment application was filed did not reflect a deficiency in the application and thus a contention alleging a deficiency in the application was inadmissible; CLI-09-12, 69 NRC 535 (2009)
- the issue of need for power is a part of the NRC's combined license NEPA review process; LBP-08-16, 68 NRC 361 (2008)
- the NRC Staff's underlying technical and factual findings on an early site permit application are not open to board reconsideration unless, after a review of the record, the board finds the NRC Staff review inadequate or its findings insufficient; LBP-07-9, 65 NRC 539 (2007)
- the overriding NEPA issue that a board must determine in a mandatory proceeding on an early site permit application is whether the NEPA review conducted by the NRC Staff has been adequate; LBP-07-9, 65 NRC 539 (2007)
- the primary duties of NEPA fall on the NRC Staff in NRC proceedings, but the initial requirement to analyze the environmental impacts of an action, including license renewal, is directed to applicants; LBP-06-23, 64 NRC 257 (2006)
- the safety review must support a conclusion that a proposed irradiator would protect health and minimize danger to life or property; CLI-08-3, 67 NRC 151 (2008)
- the safety review of each license renewal application focuses on the adequacy of the applicant's aging management programs and an evaluation of the applicant's time-limited aging analyses; LBP-08-25, 68 NRC 763 (2008)
- there is no legal requirement that the Staff find that the proposed design is not too conservative or that the associated costs are not excessive as part of its safety review of the high-level waste repository construction authorization application; CLI-09-14, 69 NRC 580 (2009)
- there must be a finding that something is remote and speculative to preclude it from further analysis, and there must be support in the agency's record of decision to justify this finding; LBP-10-14, 72 NRC 101 (2010)
- under the National Environmental Policy Act and the National Historic Preservation Act, NRC Staff must consult with interested Indian tribes as part of its review of the application; CLI-09-12, 69 NRC 535 (2009)
- under the National Environmental Policy Act, Staff is obliged to perform a severe accident mitigation alternatives analysis; LBP-07-13, 66 NRC 131 (2007)
- when applicant is a private entity, as opposed to the federal government, Staff may accord substantial weight to the applicant's preferences with regard to consideration of alternatives, including choices regarding site selection and project design; LBP-06-8, 63 NRC 241 (2006)
- when preparing the supplemental environmental impact statement for a license renewal, Staff must consider any significant new information related to Category 1 issues; LBP-06-20, 64 NRC 131 (2006)
- when reviewing a license application filed by a private applicant, as opposed to a federally sponsored project, an agency may give substantial weight to the stated preferences of the applicant with regard to issues such as site selection and facility design; LBP-09-7, 69 NRC 613 (2009)
- where the final environmental impact statement discussion of alternative sites was insufficient, the board independently reviewed the record on greenfield, competitors' brownfield, noncompetitors' brownfield, and applicant's other nuclear sites to conclude that the Staff's underlying alternative site review was adequate; LBP-09-19, 70 NRC 433 (2009)
- where the Standard Review Plan had not been followed, no specific Regulatory Guide was applicable, a Regulatory Guide required adaptation, or the Staff's logic was incomplete or unclear, the Board sought a thorough explanation of the Staff's rationale for the process it ultimately adopted along with its conclusions, and examined that process and those conclusions to ensure they were well founded in fact and logic; LBP-06-28, 64 NRC 460 (2006)
- whether NRC Staff should be required to produce four paper copies of relevant documents is a matter best left to a board's discretion; CLI-06-20, 64 NRC 15 (2006)

## SUBJECT INDEX

with regard to alternative sites for an early site permit, NRC Staff must evaluate both the process (i.e., methodology) used by the applicant and the reasonableness of the product (e.g., potential sites) identified by that process; LBP-09-19, 70 NRC 433 (2009)

### NUCLEAR NON-PROLIFERATION

in the absence of unusual circumstances, the Commission need not look beyond the non-proliferation safeguards in determining whether the common defense and security standard is met; LBP-09-1, 69 NRC 11 (2009)

intervenor's nuclear proliferation concern is premised upon future third-party activities that are unrelated to the specific activities authorized by license amendments and is not litigable because it is not a direct consequence of the proposed license amendments or the Commission's approval thereof; LBP-09-1, 69 NRC 11 (2009)

### NUCLEAR POWER PLANTS

a request for action regarding leaks or potential leaks of radioactively contaminated water into the ground is granted in part; DD-06-3, 64 NRC 407 (2006)

although "severe accident," "severe accident mitigation alternatives," and "SAMA" are not defined in NRC's NEPA regulations, the NRC policy documents that originated the terms clearly limit them to nuclear reactors and do not include spent fuel pools or storage; LBP-10-15, 72 NRC 257 (2010)

existence of another independent nuclear power plant within the 10-mile-radius emergency planning zone of a proposed new nuclear power plant is a significant factor for purposes of emergency planning for the new reactor; LBP-09-10, 70 NRC 51 (2009)

neither a uranium enrichment facility nor a nuclear power plant may be owned, controlled, or dominated by a foreign entity; CLI-09-9, 69 NRC 331 (2009)

plants must be designed against accidents that are anticipated during the life of the facility; CLI-10-9, 71 NRC 245 (2010)

### NUCLEAR REGULATORY COMMISSION

although NRC is not bound by CEQ regulations that it has not expressly adopted, it gives those regulations substantial deference; LBP-06-19, 64 NRC 53 (2006)

an agency or commission must articulate with clarity and precision its findings and the reasons for its decisions; LBP-08-22, 68 NRC 590 (2008)

before entering into an agreement with any state, NRC is required to find the state radiation control program compatible in certain respects with that of the NRC, and adequate to protect the public health and safety with respect to the materials covered by the proposed agreement; LBP-06-8, 63 NRC 241 (2006)

NEPA applies only to NRC and not to the applicant; LBP-09-10, 70 NRC 51 (2009)

NEPA requires that an agency consider every significant aspect of the environmental impact of a proposed action and inform the public that it has, in fact, considered environmental concerns in its decisionmaking process; LBP-06-19, 64 NRC 53 (2006)

NRC has a statutory obligation to protect national security information; CLI-08-1, 67 NRC 1 (2008)

trust responsibility imposes a fiduciary duty on NRC, as a federal agency, to Indian tribes and their members; LBP-08-24, 68 NRC 691 (2008)

when specialists express conflicting views, an agency must have discretion to rely on the reasonable opinions of its own qualified experts; CLI-08-26, 68 NRC 509 (2008)

See also NRC Policy; NRC Staff Review

### NUCLEAR REGULATORY COMMISSION, AUTHORITY

a dispute over the Commission's authority to direct the Department of Energy to disclose classified information to cleared state representatives over DOE's objection as the originating agency is deferred until there is an actual controversy over a specific document request; CLI-08-21, 68 NRC 351 (2008)

a petition for review may be granted in the Commission's discretion; CLI-10-11, 71 NRC 287 (2010)

a sensitive unclassified nonsafeguards information access order is issued by the Commission or NRC in its role as supervisor of NRC Staff and does not constitute an adjudicatory ruling by the Commission; LBP-10-2, 71 NRC 190 (2010)

action of the Commission is determined by a majority vote of the members present; CLI-09-1, 69 NRC 1 (2009)

administrative agencies have inherent authority to change and modify their own prior decisions; CLI-10-6, 71 NRC 113 (2010)

## SUBJECT INDEX

agencies are given broad discretion in determining how thoroughly to analyze a particular subject, and may decline to examine issues that an agency in good faith considers remote and speculative or inconsequentially small; LBP-09-7, 69 NRC 613 (2009)

although a petition for review does not challenge anything the boards actually decided, the Commission addresses the merits of the request as an exercise of its ultimate supervisory control over NRC proceedings; CLI-09-10, 69 NRC 521 (2009)

although a request for suspension of a proceeding does not fit cleanly into NRC procedural rules for stays, the Commission exercises discretion and consider petitioner's request; CLI-10-17, 72 NRC 1 (2010)

although interlocutory appeal is denied, the Commission exercises its inherent supervisory authority over adjudications to take sua sponte review of a board order; CLI-10-27, 72 NRC 481 (2010)

although NRC regulations do not provide for a motion to suspend a proceeding, the Commission has considered similar requests in the exercise of its inherent supervisory powers over proceedings; CLI-08-23, 68 NRC 461 (2008)

although the Commission has authority to make de novo findings of fact, it does not do so where a licensing board has issued a plausible decision that rests on carefully rendered findings of fact; CLI-09-7, 69 NRC 235 (2009)

although the Commission has discretion to review all underlying factual issues de novo, it is disinclined to do so where a board has weighed arguments presented by experts and rendered reasonable, record-based factual findings; CLI-06-1, 63 NRC 1 (2006); CLI-06-22, 64 NRC 37 (2006); CLI-06-29, 64 NRC 417 (2006); CLI-10-5, 71 NRC 90 (2010)

an administrative agency may establish administrative standing criteria that are less rigorous than those for judicial standing; CLI-09-20, 70 NRC 911 (2009)

an agency cannot redefine the applicant's goals, and the EIS alternatives analysis should be based around the applicant's goals, including its economic goals; LBP-09-17, 70 NRC 311 (2009)

an agency's interpretation of its own regulation is controlling provided it is not plainly erroneous or inconsistent with the regulation; CLI-10-13, 71 NRC 387 (2010)

as an exercise of the Commission's inherent supervisory authority over adjudicatory proceedings, the Commission directs the board to provide the Commission with a status report outlining the board's timetable for resolving all pending matters; CLI-10-18, 72 NRC 56 (2010)

because of an attorney's previous disregard of the NRC's practices and procedures, the Commission orders the Office of the Secretary to screen all filings bearing the offender's signature and not to accept or docket them unless they meet all procedural requirements; CLI-06-4, 63 NRC 32 (2006)

business decisions of licensees or applicants are beyond NRC purview; CLI-10-1, 71 NRC 1 (2010)

challenges to NRC's authority to engage in administrative dispute resolution is beyond the scope of enforcement order proceedings; LBP-08-14, 68 NRC 279 (2008)

Congress severely limited NRC's scope of inquiry into Clean Water Act § 316(a) determinations to examining whether the EPA or the state agency considered its permit to be a section 316(a) determination; CLI-07-16, 65 NRC 371 (2007)

Council on Environmental Quality regulations are not binding on NRC when the agency has not expressly adopted them, but are entitled to considerable deference; LBP-09-7, 69 NRC 613 (2009)

courts generally accord considerable weight to an agency's construction of the statutes it administers; CLI-10-13, 71 NRC 387 (2010)

determination of what constitutes adequate protection under the Atomic Energy Act is a situation in which the Commission should be permitted to have discretion to make case-by-case judgments based on its technical expertise and on all the relevant information; CLI-10-14, 71 NRC 449 (2010)

discretionary Commission review of a presiding officer's initial decision is allowed under 10 C.F.R. 2.341(b)(1); CLI-10-17, 72 NRC 1 (2010)

EPA is responsible for promulgating standards for environmental protection, and NRC is tasked with promulgating the criteria it will apply in the licensing proceeding; LBP-09-6, 69 NRC 367 (2009)

even if NRC's proximity presumption is viewed as more lenient than judicial standing requirements, NRC may choose to retain it; CLI-09-20, 70 NRC 911 (2009)

even if the Commission could waive the application fee for access to safeguards information, the mere fact that petitioners are public interest organizations provides no special reason for departing from well-established NRC practice; CLI-09-4, 69 NRC 80 (2009)

## SUBJECT INDEX

federal courts have long recognized the right of agencies to tailor their own standing requirements to fit their specific needs; CLI-08-19, 68 NRC 251 (2008)

given that the board recently issued an initial decision resolving all contentions, the Commission can discern no compelling reason to take the extraordinary action of stepping in at this late stage to take up the case, but parties will have the opportunity to petition for review of the board's rulings; CLI-09-19, 70 NRC 864 (2009)

grant of petitions for review is discretionary, given due weight to the existence of a substantial question with respect to the five considerations listed in 10 C.F.R. 2.341(b)(4); CLI-09-7, 69 NRC 235 (2009); CLI-10-18, 72 NRC 56 (2010)

if a licensee has voluntarily provided information to the NRC, the voluntary nature of the submission is not compromised by the NRC's ability to conduct its own investigation into the same matter; CLI-08-6, 67 NRC 179 (2008)

if the Commission's supervisory authority constituted grounds for a party's own request for appellate review, there would be no limit to the kinds of arguments parties could legitimately present on appeal, a result at odds with the Commission's oft-expressed intent to limit the availability of such appeals; CLI-07-1, 65 NRC 1 (2007)

in its oversight capacity, NRC is required to conduct regular reviews of an Agreement State's radiation control program; LBP-06-8, 63 NRC 241 (2006)

in its supervisory capacity, the Commission provides guidance on the "need for SUNSI" analysis, for use in those instances when an access order applies; CLI-10-24, 72 NRC 451 (2010)

NEPA charges federal agencies with weighing the environmental effects and impacts of the proposed project and its alternatives against each other and balancing those effects against the benefits of each such project; LBP-09-2, 69 NRC 87 (2009)

nothing in the National Environmental Policy Act shall be deemed to authorize any federal agency to review any effluent limitation or other requirement established pursuant to the Clean Water Act or to authorize any such agency to impose any effluent limitation other than those set by the Environmental Protection Agency or a state agency that has been delegated such authority; LBP-09-25, 70 NRC 867 (2009)

notwithstanding the requirement that motions initially be addressed to the presiding officer when a proceeding is pending, the Commission sometimes addresses the motions pursuant to its inherent supervisory authority over agency proceedings; CLI-08-23, 68 NRC 461 (2008)

notwithstanding TVA's status as a federal entity, it is within NRC's regulatory authority to review TVA's combined license application, including its compliance with the agency's NEPA requirements; LBP-08-16, 68 NRC 361 (2008)

NRC appropriations shall not be used to pay the expenses of, or otherwise compensate, parties intervening in regulatory or adjudicatory proceedings; LBP-09-1, 69 NRC 11 (2009)

NRC cannot generically dispense with the consideration of SAMAs, under NEPA, through a policy statement issued pursuant to its Atomic Energy Act authority; LBP-10-13, 71 NRC 673 (2010)

NRC cannot grant petitioners funds to prepare requests for access to safeguards information or sensitive unclassified nonsafeguards information; CLI-09-4, 69 NRC 80 (2009)

NRC does not owe deference to DOE where DOE's interpretation of NRC's own responsibilities is reflected in nothing more formal than a motion before the board and not, for example, in a formal agency adjudication or notice-and-comment rulemaking; LBP-10-11, 71 NRC 609 (2010)

NRC has broad discretion to provide hearings or permit interventions in cases where these avenues of public participation would not be available as a matter of right; CLI-06-16, 63 NRC 708 (2006)

NRC has broad legal authority under the Atomic Energy Act and has authority to independently verify the facts contained in an application; CLI-07-12, 65 NRC 203 (2007)

NRC has discretion to grant a petition for review, giving due weight to the existence of a substantial question with respect to any of the grounds listed in the Commission's regulations as potential justification; LBP-06-11, 63 NRC 483 (2006)

NRC has discretion to review all underlying factual issues de novo, but it is disinclined to do so where a board has weighed arguments presented by experts and rendered reasonable, record-based factual findings; CLI-06-15, 63 NRC 687 (2006)

NRC has maximum procedural leeway in how it addresses the environmental impacts of terrorism; LBP-06-27, 64 NRC 399 (2006)

## SUBJECT INDEX

NRC has the authority and responsibility to supplement or to amend conditions to the current licensing basis of an existing operating license at the time of license renewal if such supplements or amendments are deemed necessary to protect the environment; LBP-10-13, 71 NRC 673 (2010)

NRC is not obliged to adhere, in all of its proceedings, to the first court of appeals decision to address a controversial question; CLI-10-1, 71 NRC 1 (2010)

NRC is prohibited from reviewing any effluent limitation or other requirement established pursuant to the Clean Water Act; CLI-07-16, 65 NRC 371 (2007)

NRC may comply with NEPA without requiring that applicant submit an environmental report, but NEPA and Council on Environmental Quality regulations permit agencies to request information from an applicant for a license or permit that will require a NEPA analysis; CLI-10-2, 71 NRC 27 (2010)

NRC may use its broad discretion of authority under the Atomic Energy Act to reinstate expired construction permits that the licensee inadvertently failed to renew; CLI-10-6, 71 NRC 113 (2010)

NRC possesses broad discretion to act under the Atomic Energy Act when the statute is otherwise silent; CLI-10-6, 71 NRC 113 (2010)

NRC retains only oversight authority over the specific activities covered by the agreement, while an Agreement State assumes all active regulatory authority with regard to those specified activities; LBP-06-8, 63 NRC 241 (2006)

NRC retains the power to terminate or suspend an agreement with any state under certain circumstances if it determines that such action is required to ensure public health and safety; LBP-06-8, 63 NRC 241 (2006)

NRC was reasonable in not providing a quantifiable definition for the key regulatory phrase “conservative manner,” given that relevant judgment calls did not lend themselves to rigid statistical definitions; CLI-10-14, 71 NRC 449 (2010)

NRC’s adjudicatory process is not a forum for litigating matters that are primarily the responsibility of other federal or state/local regulatory agencies; LBP-07-10, 66 NRC 1 (2007)

NRC’s criteria must not be inconsistent with EPA’s environmental protection standards; LBP-09-6, 69 NRC 367 (2009)

NRC’s obligations under the National Environmental Policy Act focus on the adjective “environmental,” and NEPA does not require the agency to assess every impact or effect, but only the impact or effect on the environment; LBP-09-2, 69 NRC 87 (2009)

only the Commission on its own initiative may review Staff’s final no significant hazards consideration determination; LBP-08-20, 68 NRC 549 (2008)

parties should not seek interlocutory review by invoking the grounds under which the Commission might exercise its supervisory authority; CLI-10-30, 72 NRC 564 (2010)

permission to file an amicus brief under 10 C.F.R. 2.315(d) is at the discretion of the Commission; CLI-08-22, 68 NRC 355 (2008)

questions of law and policy call for a Commission determination; LBP-06-28, 64 NRC 404 (2006)

routine rulings on contention admissibility are usually not occasions for the Commission to exercise its authority to step into ongoing licensing board proceedings and undertake interlocutory review; CLI-09-3, 69 NRC 68 (2009)

that Congress may have authorized NRC to regulate DOE’s disposal of radioactive waste before it enacted the Nuclear Waste Policy Act hardly negates the fact that in the NWPA, Congress specifically directed NRC to issue requirements and criteria for evaluating repository-related applications and, not insignificantly, how to do so; LBP-10-11, 71 NRC 609 (2010)

the agency has broad discretion to determine how thoroughly it needs to analyze a particular subject for NEPA compliance; LBP-10-14, 72 NRC 101 (2010)

the Atomic Energy Act authorizes the Commission to enter into agreements with the governor of any state to transfer authority to regulate byproduct materials, source materials, and small quantities of special nuclear materials, including the disposal of such materials; LBP-06-8, 63 NRC 241 (2006)

the Atomic Energy Act’s hearing requirement does not unduly limit the Commission’s wide discretion to structure its licensing hearings in the interests of speed and efficiency; CLI-08-28, 68 NRC 658 (2008)

the Commission acts as adjudicator and in that light considers the reinstatement of a construction permit afresh, without regard for its earlier views; CLI-10-6, 71 NRC 113 (2010)

the Commission can issue case-specific orders modifying procedural regulations, including milestone schedules; CLI-08-18, 68 NRC 246 (2008)

## SUBJECT INDEX

- the Commission declines to exercise its discretion to allow oral argument because the written record in the case is thorough, effectively sets forth the positions of the participants, and, overall, contains sufficient information on which to base its decision; CLI-10-9, 71 NRC 245 (2010)
- the Commission generally does not entertain requests to invoke its inherent supervisory authority over adjudications; CLI-10-13, 71 NRC 387 (2010)
- the Commission has authority to review board rulings sua sponte, in the exercise of its inherent supervisory authority over NRC adjudications, regardless of whether the Commission accepts the referral; CLI-09-3, 69 NRC 68 (2009)
- the Commission has broad authority to delegate powers to the Atomic Safety and Licensing Boards; CLI-08-14, 67 NRC 402 (2008)
- the Commission has discretion to allow oral argument upon the request of a party made in a petition for review, brief on review, or upon its own initiative; CLI-10-9, 71 NRC 245 (2010)
- the Commission has discretion under the Administrative Procedure Act to impose binding, prospectively applicable legal requirements by either rulemaking or adjudication; CLI-10-3, 71 NRC 49 (2010)
- the Commission has the authority to appropriately condition the license approved by a board; CLI-07-12, 65 NRC 203 (2007)
- the Commission has the authority to enter case-specific procedural orders to facilitate the efficient resolution of issues before a licensing board; LBP-07-3, 65 NRC 237 (2007); CLI-07-17, 65 NRC 392 (2007)
- the Commission is entitled to review the record itself and amplify the board's findings; CLI-09-14, 69 NRC 580 (2009)
- the Commission is not obliged to adhere, in all of its proceedings, to the first court of appeals decision to address a controversial question, and is not prevented from relitigating the issue in future cases; LBP-07-14, 66 NRC 169 (2007)
- the Commission itself may exercise its discretion to review a licensing board's interlocutory order if the Commission wants to address a novel or important issue; CLI-09-6, 69 NRC 128 (2009)
- the Commission may find special circumstances warranting a categorical exclusion upon its own initiative, or upon the request of an interested person; CLI-10-18, 72 NRC 56 (2010)
- the Commission may grant a petition for review at its discretion, giving due weight to the existence of a substantial question with respect to the five considerations listed in 10 C.F.R. 2.341(b)(4); CLI-08-28, 68 NRC 658 (2008)
- the Commission may review a board ruling pursuant to the inherent supervisory powers where a significant issue may affect multiple pending or imminent licensing proceedings; CLI-08-2, 67 NRC 31 (2008)
- the Commission may take discretionary review of a licensing board's initial decision; CLI-10-23, 72 NRC 210 (2010)
- the Commission may, at its discretion, grant a party's request for interlocutory review of a board decision; CLI-10-29, 72 NRC 556 (2010); CLI-10-30, 72 NRC 564 (2010)
- the Commission or presiding officer may extend a time limit upon a showing of good cause; CLI-09-4, 69 NRC 80 (2009)
- the Commission refrains from exercising its authority to make de novo findings of fact in situations where a licensing board has issued a plausible decision that rests on carefully rendered findings of fact; CLI-10-18, 72 NRC 56 (2010)
- the Commission retains its inherent supervisory authority over the uranium enrichment facility proceeding to provide additional guidance to the licensing board and participants and to resolve any matter in controversy itself; CLI-09-15, 70 NRC 1 (2009)
- the Commission will endeavor to identify efficiencies, and provide pertinent resources, to further reduce the time the agency needs to complete reviews and reach decisions in licensing uranium enrichment facilities; CLI-07-17, 65 NRC 392 (2007)
- the Commission, if certain conditions are met, may discontinue its regulatory authority over certain categories of material, which authority then is assumed by the state; CLI-10-8, 71 NRC 142 (2010)
- the Commission, rather than petitioner, holds the authority to define the scope of a proceeding; LBP-09-20, 70 NRC 565 (2009)

## SUBJECT INDEX

- the Commission's exercise of its discretion to review a licensing board's interlocutory order stems from its inherent supervisory authority over adjudications and in no way implies that parties have a right to seek interlocutory review on that same ground; CLI-09-6, 69 NRC 128 (2009)
- the Nuclear Waste Policy Act does not diminish any part of the Commission's authority to review license applications and issue licenses under the Atomic Energy Act; LBP-09-6, 69 NRC 367 (2009)
- the permitting agency determines what cooling system a nuclear power facility may use, and NRC factors the impacts resulting from use of that system into the NEPA cost-benefit analysis; CLI-07-16, 65 NRC 371 (2007)
- the Secretary of the Department of Energy does not have the discretion to substitute his policy for the one established by Congress that mandates progress toward a merits decision by NRC on a construction permit for the high-level waste repository; LBP-10-11, 71 NRC 609 (2010)
- under its inherent supervisory power over adjudications, the Commission accepts review because licensing boards are conducting the first mandatory hearings in more than two decades and additional Commission guidance is deemed appropriate; CLI-06-20, 64 NRC 15 (2006)
- under the Atomic Energy Act, broad responsibility is reposed in the administering agency, free of close prescription in its charter as to how it shall proceed in achieving the statutory objective; CLI-10-6, 71 NRC 113 (2010)
- until a license is issued, the Commission still has authority to add license conditions or to supplement an environmental impact statement if intervenors or the NRC Staff uncover significant, previously unconsidered, and newly arising safety concerns or environmental effects; CLI-06-19, 63 NRC 19 (2006)
- when reviewing a license application filed by a private applicant, as opposed to a federally sponsored project, an agency may give substantial weight to the stated preferences of the applicant with regard to issues such as site selection and facility design; LBP-09-7, 69 NRC 613 (2009)
- when water quality decisions have been made by a state pursuant to the Clean Water Act and these decisions are raised in NRC licensing proceedings, the NRC is bound to take the Environmental Protection Agency's considered decisions at face value; LBP-09-25, 70 NRC 867 (2009)
- where the Commission found that the board did not provide clarity on the scope of admitted contentions, it exercised its authority to reformulate the contentions; CLI-10-18, 72 NRC 56 (2010)
- whether NEPA requires the NRC to consider potential health effects of consuming irradiated food raises the kind of broad legal question appropriate for Commission interlocutory review; CLI-08-4, 67 NRC 171 (2008)
- NUCLEAR REGULATORY COMMISSION, JURISDICTION**
- after completion of decommissioning, neither licensee nor the NRC retains any continuing obligation or jurisdiction, respectively, with respect to a site, unless new information shows that the Part 20 criteria were not met and the residual radioactivity remaining on the site could result in a significant threat to public health and safety; CLI-09-1, 69 NRC 1 (2009)
- although the Commission commonly looks to Article III concepts for guidance, it is not required to automatically follow them in all respects because NRC proceedings are not subject to Article III; LBP-09-15, 70 NRC 198 (2009)
- an operating license proceeding that can be reopened remains in existence until a license is issued; CLI-06-19, 63 NRC 19 (2006)
- an otherwise reasonable alternative will not be excluded from discussion in the environmental impact statement solely on the ground that it is not within the jurisdiction of the NRC; LBP-09-10, 70 NRC 51 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-10-10, 71 NRC 529 (2010)
- authority over uranium ore and other source material attaches only after removal from its place of deposit in nature and not when the ore is mined; CLI-06-14, 63 NRC 510 (2006)
- because NRC is not subject to the jurisdictional limitations placed on the federal courts by the case or controversy provision in Article III of the Constitution, there is no insuperable barrier to its rendition of an advisory opinion on issues that have been indisputably mooted by events occurring subsequent to a licensing board decision; LBP-09-15, 70 NRC 198 (2009)
- concurrent but independent jurisdiction of two federal agencies is addressed; LBP-09-6, 69 NRC 367 (2009)

## SUBJECT INDEX

environmental reports and environmental impact statements must include an assessment of all environmental impacts and alternatives, even though NRC has no jurisdiction to regulate such impacts or jurisdiction to impose such alternatives; LBP-09-10, 70 NRC 51 (2009)

licensing boards should not entertain collateral attacks on the actions of other federal agencies on matters over which the Commission has no jurisdiction; LBP-06-15, 63 NRC 591 (2006)

NRC has entertained requests for stays of final agency action in anticipation of judicial review; CLI-10-8, 71 NRC 142 (2010)

NRC proceedings are not an appropriate forum to challenge DOE's procurement process, which fall under the jurisdiction of the Government Accountability Office or Court of Federal Claims; CLI-08-11, 67 NRC 379 (2008)

NRC's adjudicatory process is not the proper forum for investigating alleged violations that are primarily the responsibility of other federal, state, or local agencies; CLI-07-25, 66 NRC 101 (2007)

once a licensing board has concluded board action on a licensing case, jurisdiction to decide a motion to reopen regarding that proceeding passes to the Commission, which retains jurisdiction until the license in question has been issued; LBP-10-21, 72 NRC 616 (2010)

once there has been an appeal or petition to review a board order ruling on intervention petitions or, where a hearing is granted, following a partial or final initial decision, jurisdiction passes to the Commission; CLI-09-5, 69 NRC 115 (2009)

submission of the application to construct a high-level waste geologic repository at Yucca Mountain triggered a duty on NRC's part to consider and to render a decision on the application; LBP-10-11, 71 NRC 609 (2010)

the Commission's referral of a motion to reopen to the ASLBP and subsequent establishment of the board gives the board jurisdiction over the motion; LBP-10-21, 72 NRC 616 (2010)

the fact that disposal of dredged or fill material in wetlands is regulated by the Environmental Protection Agency and the U.S. Army Corps of Engineers does not render a contention inadmissible; LBP-09-10, 70 NRC 51 (2009)

the Secretary's referral of petitioner's motion to admit a late-filed contention effectively returns jurisdiction to the licensing board to rule on the motion; CLI-09-5, 69 NRC 115 (2009)

until a license has actually been issued, the Commission itself, as opposed to the licensing board, retains jurisdiction to reopen a closed case; CLI-06-4, 63 NRC 32 (2006)

whether applicant will be able to obtain permits from and comply with regulatory requirements imposed by other agencies is outside NRC's jurisdiction; LBP-08-15, 68 NRC 294 (2008)

**NUCLEAR WASTE POLICY ACT**

a detailed, specific procedure for site selection and review by the Secretary of Energy, the President, and the Congress, followed by submission of the application for a construction permit, review, and final decision thereon by the NRC was set out; LBP-10-11, 71 NRC 609 (2010)

Congress did not intend that its explicit mandate to the NRC to consider and decide the merits of the high-level waste repository application might be nullified by a nonspecific reference to an obscure NRC procedural regulation as being among the laws to be applied; LBP-10-11, 71 NRC 609 (2010)

Congress enacted this law for the purpose of establishing a definite federal policy for the disposal of high-level radioactive waste and spent nuclear fuel; LBP-10-11, 71 NRC 609 (2010)

contentions that DOE lacks management integrity to operate a high-level waste geologic repository are impermissible challenges to the NWPA and are therefore beyond the scope of the proceeding; CLI-09-14, 69 NRC 580 (2009)

DOE was directed to limit its site selection efforts to Yucca Mountain and to provide for an orderly phase-out of site-specific activities at all other candidate sites; LBP-10-11, 71 NRC 609 (2010)

economic harm itself has been held sufficient to establish standing; LBP-10-11, 71 NRC 609 (2010)

no requirement for a quantitative evaluation of an individual barrier's capabilities appears in the statutory language of the act; LBP-10-22, 72 NRC 661 (2010)

NRC is given flexibility in determining how best to provide for the use of a system of multiple barriers in the design of the high-level waste repository; LBP-10-22, 72 NRC 661 (2010)

NRC's adoption of any environmental impact statement prepared in connection with a repository shall be deemed to also satisfy the responsibilities of NRC under NEPA and no further consideration shall be required except any independent responsibilities of NRC to protect public health under the Atomic Energy Act; LBP-09-6, 69 NRC 367 (2009)

## SUBJECT INDEX

NRC's criteria must not be inconsistent with EPA's environmental protection standards; LBP-09-6, 69 NRC 367 (2009)

ratepayers are not third-party beneficiaries of the Standard Contract and therefore cannot sue for breach of contract when DOE fails to dispose of nuclear waste by the statutory deadline; LBP-10-11, 71 NRC 609 (2010)

"repository" is defined as any system licensed by the Commission that is intended to be used for, or may be used for the permanent deep geologic disposal of high-level radioactive waste and spent nuclear fuel; LBP-09-6, 69 NRC 367 (2009)

section 121 does not require that each barrier provide either wholly independent protection or a specifically quantified amount of protection in the high-level waste repository; LBP-10-22, 72 NRC 661 (2010)

submission of the application to construct a high-level waste geologic repository at Yucca Mountain triggered a duty on NRC's part to consider and to render a decision on the application; LBP-10-11, 71 NRC 609 (2010)

Subpart K implements the totally new procedure established for adjudicating spent fuel storage controversies expeditiously; CLI-08-26, 68 NRC 509 (2008)

the court deferred to NRC's interpretation of the NWPA in promulgating regulations to be applied in administering the licensing stage for the high-level waste repository; LBP-10-11, 71 NRC 609 (2010)

the definition of "party" implies that local governments enjoy standing as of right; LBP-08-10, 67 NRC 450 (2008)

the mandate that the environmental impact statement be adopted by NRC to the extent practicable is intended to avoid duplication of the environmental review process but does not permit NRC to premise a construction-authorization or licensing decision upon an EIS that does not meet the substantive requirements of the NEPA or the Council on Environmental Quality's NEPA regulations; LBP-09-6, 69 NRC 367 (2009)

the Secretary of the Department of Energy does not have the discretion to substitute his policy for the one established by Congress that mandates progress toward a merits decision by NRC on a construction permit for the high-level waste repository; LBP-10-11, 71 NRC 609 (2010)

this statute does not diminish any part of the Commission's authority to review license applications and issue licenses under the Atomic Energy Act; LBP-09-6, 69 NRC 367 (2009)

### OBJECTIONS

issues not challenged at hearing are deemed waived; CLI-10-14, 71 NRC 449 (2010)

it is not a ground for objection that the information sought will be inadmissible at the hearing if the information sought appears reasonably calculated to lead to the discovery of admissible evidence; LBP-09-30, 70 NRC 1039 (2009)

unless and until a document or information is proffered into evidence, there is no basis for a party to object that the information it received in a mandatory disclosure was unreliable or otherwise not admissible as evidence; LBP-09-30, 70 NRC 1039 (2009)

See also Waiver of Objection

### OFFER OF PROOF

because appellant submitted no offer of proof, its case could be so weak that the denial of a right to reply by the licensing board would have been harmless error; CLI-10-23, 72 NRC 210 (2010)

if appellant had submitted an offer of proof, indicating what rebuttal evidence it would have offered to the board, then the Commission might have some basis for determining whether that evidence would be substantial enough to justify a remand to the Board; CLI-10-23, 72 NRC 210 (2010)

### OFFICIAL NOTICE

a board rested its findings regarding a contention, in part, on certain facts that it officially noticed; CLI-10-17, 72 NRC 1 (2010)

a licensing board can take official notice of the locations and the distances to the various locations specified by a petitioner as denominated on Mapquest and an American Automobile Association roadmap; LBP-07-10, 66 NRC 1 (2007)

for purposes of the mandatory/uncontested portion of an ESP proceeding, the board takes official notice of publicly available documents associated with the Staff's safety and environmental reviews; LBP-09-19, 70 NRC 433 (2009)

## SUBJECT INDEX

- where a board's decision rests in part on facts officially noticed, any party wishing to controvert the facts officially noticed may do so by filing a motion for reconsideration or an appeal from the decision; LBP-08-25, 68 NRC 763 (2008)
- OPERATING LICENSE AMENDMENT APPLICATIONS**
- mere issuance of requests for additional information does not mean an application is incomplete for docketing; CLI-08-17, 68 NRC 231 (2008)
- OPERATING LICENSE AMENDMENT PROCEEDINGS**
- a contention stating that monitoring activities may not be sufficient to identify and control the effects of aging that will occur during the 20-year renewal period falls squarely within the scope of a license renewal proceeding; LBP-06-7, 63 NRC 188 (2006)
- applicant for a power uprate must comply with all relevant NRC regulations, whether the application meets the requirements for a license amendment; LBP-08-9, 67 NRC 421 (2008)
- challenges to the current operating license are outside the scope of matters challengeable in a power uprate application; LBP-08-9, 67 NRC 421 (2008)
- extended power uprate involves increase in reactor core radioactivity with obvious potential for offsite consequences; LBP-07-10, 66 NRC 1 (2007)
- in the absence of a showing that the proposed amendment obviously entails an increased potential for offsite consequences, petitioner must base its standing upon more than residence or activities within a particular proximity of the plant by making a showing of a plausible chain of events that would result in offsite radiological consequences posing a distinct new harm or threat to the participant; LBP-07-10, 66 NRC 1 (2007)
- licensee requests that operating licenses for both units be amended to change the associated technical specifications to implement uprated power operation; LBP-07-10, 66 NRC 1 (2007)
- petitioner must assert an injury-in-fact associated with the challenged license amendment, not simply a general objection to the facility; LBP-07-10, 66 NRC 1 (2007)
- whether applicant has a valid NPDES permit is outside the scope of a power uprate proceeding; LBP-08-9, 67 NRC 421 (2008)
- OPERATING LICENSE AMENDMENTS**
- a request for a power uprate requires an amendment to the facility's operating license; CLI-08-17, 68 NRC 231 (2008)
- absent evidence to the contrary, it is assumed NRC licensees will not contravene agency regulations; LBP-07-10, 66 NRC 1 (2007)
- applicant normally is required to perform two large-transient tests before an extended power uprate can be granted; LBP-07-2, 65 NRC 153 (2007)
- if a board determines after full adjudication that the license amendment should not have been granted, it may be revoked or conditioned; LBP-07-2, 65 NRC 153 (2007)
- no petition or other request for review on the Staff's significant hazards consideration determination will be entertained by the Commission; LBP-07-10, 66 NRC 1 (2007)
- proceedings on license amendments continue until they are over, even if the amendment is issued in the interim; CLI-09-5, 69 NRC 115 (2009)
- since a license amendment involves a facility with ongoing operations, a petitioner's challenge must show that the amendment will cause a distinct new harm or threat apart from the activities already licensed; LBP-06-22, 64 NRC 229 (2006)
- Staff is permitted to issue an amendment to a reactor operating license notwithstanding the pendency of an adjudicatory hearing if it determines that the licensing action involves no significant hazards consideration; CLI-09-5, 69 NRC 115 (2009)
- Staff is to issue its approval or denial of an application promptly once it completes its own review of the application, notwithstanding the pendency of any hearing; CLI-06-8, 63 NRC 235 (2006)
- technical aspects of an extended power uprate are discussed; LBP-07-10, 66 NRC 1 (2007)
- OPERATING LICENSE APPLICATIONS**
- although analysis of aircraft impact is required, reactors whose construction permits were issued prior to July 13, 2009, are excluded, and the rule is not NEPA-based; LBP-09-26, 70 NRC 939 (2009)
- applicant must list all federal permits, licenses, approvals, and other entitlements that must be obtained in connection with the issuance of an operating license for a second nuclear reactor and adequately discuss the status of its compliance with them; LBP-09-26, 70 NRC 939 (2009)

## SUBJECT INDEX

- applicant must submit a supplement to its environmental report at the operating license stage that discusses the same matters described in sections 51.45, 51.51, and 51.52, which would have been initially discussed in the environmental report at the construction permit stage, but only to the extent that those matters differ from those discussed or reflect new information; LBP-09-26, 70 NRC 939 (2009)
- direct transfers entail a change to operating and/or possession authority; CLI-08-19, 68 NRC 251 (2008)
- indirect transfers involve corporate restructuring or reorganizations which leave the licensee itself intact as a corporate entity and therefore involve no application for a new operating license; CLI-08-19, 68 NRC 251 (2008)
- OPERATING LICENSE PROCEEDINGS**
- administrative regularity in the regulatory process is assumed, and review of the operating license application takes place independently of that associated with plant construction; CLI-10-29, 72 NRC 556 (2010)
- further review of need for power and alternative energy sources are precluded once a construction permit has been issued; CLI-10-29, 72 NRC 556 (2010)
- licensing boards will not admit contentions concerning the need for power or alternative energy sources; LBP-10-12, 71 NRC 656 (2010)
- need-for-power contentions are barred in operating license proceedings partly because at the time the OL application is submitted, most of the environmental disruption would have already occurred and an electric utility would use the new nuclear plant to meet increased energy demand or replace older, less economical generation capacity; LBP-10-12, 71 NRC 656 (2010)
- off-again/on-again approach to construction of long-delayed units has generated a unique set of circumstances such that Commission should consider holding a new mandatory hearing prior to allowing full-power operation of units; LBP-10-12, 71 NRC 656 (2010)
- petition for waiver of regulation excluding consideration of alternatives and the need for power from the operating license phase must establish that all of applicant's fossil fuel baseload generation that is less efficient than the facility under consideration has been accounted for; LBP-10-12, 71 NRC 656 (2010)
- proximity within 50 miles of a plant is often enough on its own to demonstrate standing; LBP-08-24, 68 NRC 691 (2008)
- request for waiver of application of 10 C.F.R. 51.53(b), 51.95(b), and 51.106(c) precluding consideration of need for power and alternative energy sources from a Part 50 operating license proceeding fails to provide the prima facie showing required; LBP-10-12, 71 NRC 656 (2010)
- rule waivers are limited to very unusual cases, such as where it appears that an alternative exists that is clearly and substantially environmentally superior; LBP-10-12, 71 NRC 656 (2010)
- OPERATING LICENSE RENEWAL**
- a finding of reasonable assurance that there will be adequate protection to the health and safety of the public is based on judgment, not on the application of a mechanical verbal formula, a set of objective standards, or specific confidence interval; LBP-08-25, 68 NRC 763 (2008)
- a technically accurate projection of the time-limited aging analysis that predicts that the component will fail due to aging during the 20-year period of extended operation will not suffice; LBP-08-25, 68 NRC 763 (2008)
- after issuance of a renewed license, licensee may demonstrate that its use of an aging management program identified in the GALL Report constitutes reasonable assurance that it will manage the targeted aging effect during the renewal period; CLI-10-17, 72 NRC 1 (2010)
- age-related degradation can affect a number of reactor and auxiliary systems, including the reactor vessel, the reactor coolant system pressure boundary, steam generators, electrical cables, the pressurizer, heat exchangers, and the spent fuel pool; LBP-07-4, 65 NRC 281 (2007)
- aging management review addresses activities identified in 10 C.F.R. 54.21(a)(3) and (c)(1) regarding the integrated plant assessment; CLI-10-17, 72 NRC 1 (2010)
- aging management review focuses on structures and components that perform passive functions, with no moving parts or changes in configuration or properties; CLI-10-14, 71 NRC 449 (2010)
- all non-safety-related structures, systems, and components whose failure could prevent satisfactory accomplishment of any of the safety functions identified in 10 C.F.R. 54.4(a)(1), including auxiliary systems necessary for the function of safety-related systems, are subject to aging management review; CLI-10-14, 71 NRC 449 (2010)

## SUBJECT INDEX

all structures, systems, and components relied on in safety analyses or plant evaluations to perform a function that demonstrates compliance with the NRC's regulations for fire protection, environmental qualification, pressurized thermal shock, anticipated transients without scram, and station blackout are subject to aging management review for license renewal; CLI-10-14, 71 NRC 449 (2010)

allowing applicant to postpone performance of an analysis-of-record time-limited aging analysis until after the license renewal is issued is inconsistent with the language, structure, and intent of the Part 54 regulations and inconsistent with NRC precedent; LBP-08-25, 68 NRC 763 (2008)

alternatives to mitigate severe accidents must be considered for all plants that have not previously considered such alternatives; LBP-07-4, 65 NRC 281 (2007)

although "severe accident," "severe accident mitigation alternatives," and "SAMA" are not defined in NRC's NEPA regulations, the NRC policy documents that originated the terms clearly limit them to nuclear reactors and do not include spent fuel pools or storage; LBP-10-15, 72 NRC 257 (2010)

an aging management program is intended to manage the effects of aging on a particular component by, e.g., ensuring that the fatigue usage factor for the component does not exceed the design code limit; CLI-10-17, 72 NRC 1 (2010)

an aging management program that consists solely of bald statements does not satisfy the requirement that an applicant demonstrate that it will adequately manage aging; LBP-08-25, 68 NRC 763 (2008)

an applicant seeking to renew or extend the term of an operating license for a power reactor need not submit the financial information that is required in an application for an initial license; LBP-07-4, 65 NRC 281 (2007)

an application may be granted only if the Commission finds that the continued operation of the facility will be in accord with the common defense and security and will provide adequate protection to the health and safety of the public; LBP-08-25, 68 NRC 763 (2008)

an emergency evacuation issue was admitted in a license renewal proceeding because it was in the context of three of the specific input data for the severe accident mitigation alternatives analysis that license renewal applicants are required to perform; LBP-07-4, 65 NRC 281 (2007)

an issue can be related to plant aging and still not warrant review at the time of a license renewal application, if the issue is adequately dealt with by regulatory processes on an ongoing basis; LBP-06-10, 63 NRC 314 (2006)

an issue cannot be identified as Category 1 if NRC has not made a generic determination that additional mitigation measures are unlikely to be warranted, given mitigation practices already in place; CLI-10-14, 71 NRC 449 (2010)

analysis of a component subject to aging may be performed showing that the aging mechanism will not cause failure of the component; LBP-08-26, 68 NRC 905 (2008)

analysis of entrainment and impingement of fish, and heat shock, is required only for plants with once-through cooling or cooling ponds, because it has been determined generically that such impacts are small for plants that use cooling towers; LBP-07-4, 65 NRC 281 (2007)

applicant has no obligation to discuss in its environmental report the impacts of a potential expansion of the independent spent fuel storage installation; LBP-08-26, 68 NRC 905 (2008)

applicant must assess whether any historic or archaeological properties will be affected by the proposed project; LBP-08-26, 68 NRC 905 (2008)

applicant must establish an aging management program that is adequate to provide reasonable assurance that the intended function of the piping subject to flow accelerated corrosion will be maintained in accordance with the current licensing basis for the period of extended operation; LBP-08-25, 68 NRC 763 (2008)

applicant must submit with its application an environmental report, which must describe the proposed action, including plans to modify the facility or its administrative control procedures, and the modifications directly affecting the environment or affecting plant effluents that affect the environment; LBP-07-4, 65 NRC 281 (2007)

applicants are required to consider severe accident mitigation alternatives in the environmental report prepared in connection with the application; CLI-10-11, 71 NRC 287 (2010)

applicants must demonstrate that all important systems, structures, and components will continue to perform their intended function in the period of extended operation and must identify any additional actions that will need to be taken to adequately manage the detrimental effects of aging; LBP-08-22, 68 NRC 590 (2008)

## SUBJECT INDEX

applicants need not provide site-specific analyses of environmental impacts of subjects identified as Category 1 issues in Appendix B to 10 C.F.R. Part 51, Subpart A; CLI-10-14, 71 NRC 449 (2010)

because environmentally adjusted cumulative usage factors are not contained in licensee's current licensing basis, they cannot be time-limited aging analyses and thereby a prerequisite to license renewal; CLI-10-17, 72 NRC 1 (2010)

Category 1, or generic, issues in Appendix B to Subpart A of Part 51 are not within the scope of a license renewal proceeding; LBP-06-10, 63 NRC 314 (2006)

Category 2, or plant-specific, issues in 10 C.F.R. Part 51, Subpart A, Appendix B are within the scope of a license renewal proceeding; LBP-06-10, 63 NRC 314 (2006)

Category 2, or plant-specific, issues involve environmental impact severity levels that might differ significantly from one plant to another, or impacts for which additional plant-specific mitigation measures should be considered; LBP-07-4, 65 NRC 281 (2007)

Commission review is in the public interest if the decision could affect pending and future license renewal determinations; CLI-10-17, 72 NRC 1 (2010)

current licensing basis represents an evolving set of requirements and commitments for a specific plant that are modified as necessary over the life of a plant to ensure continuation of an adequate level of safety; LBP-08-25, 68 NRC 763 (2008)

current plant licensing remains in effect pending final outcome of any hearing on renewal; LBP-08-12, 68 NRC 5 (2008)

discharge of chlorine or other biocides is a Category 1, out-of-scope issue; LBP-07-4, 65 NRC 281 (2007)

during the license renewal term, the current licensing basis incorporates the CLB for the current license, including all licensee commitments, plus any new commitments to monitor, manage, and correct age-related degradation unique to license renewal; LBP-08-25, 68 NRC 763 (2008)

each application must contain an evaluation of time-limited aging analyses, a list of TLAAs, a demonstration relating to TLAAs, and the actual TLAAs; LBP-08-25, 68 NRC 763 (2008)

each application must demonstrate that the time-limited aging analyses remain valid for the period of extended operation, have been projected to the end of the period of extended operation, or that the effects of aging on the intended function(s) will be adequately managed for the period of extended operation; LBP-08-25, 68 NRC 763 (2008)

each nuclear power plant has a plant-specific licensing basis that must be maintained during the renewal term in the same manner and to the same extent as during the original licensing term; CLI-10-14, 71 NRC 449 (2010)

emergency planning is excluded from consideration because the issue is not germane to age-related degradation or unique to the period of time covered by the license renewal; LBP-07-4, 65 NRC 281 (2007)

environmental impacts from the spent fuel pool, including potential beyond-design-basis accidents and the need for mitigation measures, are addressed in NRC's generic environmental impact statement for license renewal and do not require a site-specific analysis as part of an individual license renewal environmental review; CLI-10-14, 71 NRC 449 (2010)

feedwater, core spray, and reactor recirculation outlet nozzles, as part of the reactor coolant pressure boundary, must meet the metal-fatigue requirements for Class 1 components in Section III of the ASME Code; CLI-10-17, 72 NRC 1 (2010)

from among the three general categories of structures, systems, and components that fall within the initial focus of the license renewal safety review, applicants must identify and list, in an integrated plant assessment, those structures and components subject to an aging management review; CLI-10-14, 71 NRC 449 (2010)

general categories of structures, systems, and components falling within the initial focus of safety review are outlined; CLI-10-14, 71 NRC 449 (2010)

if a structure or component is already required to be replaced at mandated, specified time periods, it would fall outside the scope of license renewal review; LBP-07-4, 65 NRC 281 (2007)

if aging-related analysis fails, then the application must include a specific aging program to manage the effects of aging on that component; LBP-08-26, 68 NRC 905 (2008)

## SUBJECT INDEX

if applicant's metal fatigue analyses on Class I components do not comply with the ASME Code and do not provide reasonable assurance as required by 10 C.F.R. 54.21(c)(1) and 54.29(a), then a license renewal cannot be issued; LBP-08-25, 68 NRC 763 (2008)

if NRC Staff finds any severe accident mitigation alternative conferring a substantial benefit compared to its cost of implementation, it must make such SAMA a license condition for the renewed operating license; LBP-10-13, 71 NRC 673 (2010)

if NRC Staff has not previously considered severe accident mitigation alternatives for the applicant's plant in an environmental impact statement or related supplement or in an environmental assessment, a consideration of alternatives to mitigate severe accidents must be provided; LBP-07-13, 66 NRC 131 (2007)

if the benefit-to-cost ratio is glaringly large for a potentially cost-beneficial SAMA, NRC Staff must, as a prerequisite to extending a license, impose implementation of that SAMA as a license condition or, in the alternative, explain why it is not requiring implementation of that SAMA; LBP-10-13, 71 NRC 673 (2010)

issues and concerns involved in an extended 20 years of operation are not identical to the issues reviewed when a reactor facility is first built and licensed; LBP-07-4, 65 NRC 281 (2007)

licensee must comply with Part 50 regulations, including the provisions requiring compliance with the ASME Code, during the period of extended operation; CLI-10-17, 72 NRC 1 (2010)

NRC has authority and responsibility to supplement or to amend conditions to the current licensing basis of an existing operating license at the time of license renewal if such supplements or amendments are deemed necessary to protect the environment; LBP-10-13, 71 NRC 673 (2010)

NRC is not barred from considering licensee's past and continuing managerial and performance problems when it determines whether licensee has demonstrated that actions will be taken to manage the effects of aging during the period of extended operation; LBP-10-15, 72 NRC 257 (2010)

NRC review is based upon those potential detrimental effects of aging that are not routinely addressed by ongoing regulatory oversight programs; LBP-08-22, 68 NRC 590 (2008)

NRC Staff is obligated to consider severe accident mitigation alternatives if it has not already done so as part of its NEPA obligations in a license renewal review; LBP-10-13, 71 NRC 673 (2010)

NRC Staff's hard look at all potentially cost-beneficial severe accident mitigation alternatives under NEPA and Part 51 ensures that it has given proper consideration to all relevant factors in granting a license renewal; LBP-10-13, 71 NRC 673 (2010)

NRC Staff's review of the safety-related aspects of each license renewal application focuses on the adequacy of the applicant's aging management programs and an evaluation of the applicant's time-limited aging analyses; LBP-08-25, 68 NRC 763 (2008)

offsite radiological impacts are a Category 1 issue, and the Commission has determined such impacts to be "small" for all nuclear power plants seeking a renewed license; LBP-08-26, 68 NRC 905 (2008)

onsite storage of spent fuel during the license renewal term is a Category 1 issue, and as such does not warrant any additional site-specific analysis of mitigation measures; CLI-10-14, 71 NRC 449 (2010)

radiological monitoring is an operational program that is beyond the scope of license renewal; LBP-07-4, 65 NRC 281 (2007)

requiring a full reassessment of safety issues that were thoroughly reviewed when the facility was first licensed and continue to be routinely monitored and assessed by ongoing agency oversight and agency-mandated licensee programs would be both unnecessary and wasteful; LBP-07-4, 65 NRC 281 (2007)

safety issues other than age-related degradation may arise in connection with renewal that are not relevant to safety during the initial operating license term but, because of their plant-specific nature, must be addressed in renewals case by case; LBP-08-25, 68 NRC 763 (2008)

safety review focuses on those systems, structures, and components that are of principal importance to safety; CLI-10-14, 71 NRC 449 (2010)

safety review is focused upon those potential detrimental effects of aging that are not routinely addressed by ongoing regulatory oversight programs; LBP-06-10, 63 NRC 314 (2006)

safety-related structures, systems, and components are those that are relied upon to remain functional during and following design-basis events to ensure the integrity of the reactor coolant pressure boundary, the capability to shut down the reactor and maintain it in a safe shutdown condition, or the

## SUBJECT INDEX

capability to prevent or mitigate the consequences of accidents that could result in potential offsite exposures; CLI-10-14, 71 NRC 449 (2010)

technical accuracy of the time-limited aging analyses is necessary, but not sufficient, to demonstrate that it remains valid, because a technically accurate TLAA that shows that the component will fail during the period of extended operation does not satisfy 10 C.F.R. 54.21(c)(1)(i); LBP-08-25, 68 NRC 763 (2008)

the aging management review for license renewal does not focus on all aging-related issues; CLI-10-27, 72 NRC 481 (2010)

the general scope of the license renewal safety review is outlined in 10 C.F.R. 54.4; CLI-10-14, 71 NRC 449 (2010)

the Generic Aging Lessons Learned Report sets forth three ways that a license renewal applicant proposing to use an aging management plan may comply with the requirements of 10 C.F.R. 54.21(c)(1)(iii); CLI-10-17, 72 NRC 1 (2010)

the generic environmental impact statement for license renewal was part of an amendment of the requirements of Part 51 undertaken by the Commission to establish environmental review requirements for license renewals that were both efficient and more effectively focused; LBP-07-4, 65 NRC 281 (2007)

the licensing basis for a nuclear power plant during the renewal term consists of the current licensing basis together with new commitments to monitor, manage, and correct age-related degradation unique to license renewal; LBP-08-25, 68 NRC 763 (2008)

the only safety issue where the regulatory process may not adequately maintain a plant's current licensing basis involves the potential detrimental effects of aging on the functionality of certain systems, structures, and components in the period of extended operations; CLI-10-27, 72 NRC 481 (2010)

the only severe accident mitigation alternatives that applicant must implement as part of a license renewal safety review are those dealing with aging management; LBP-10-13, 71 NRC 673 (2010)

the phrase "reasonable assurance" specified in 10 C.F.R. 54.29 is not defined, but requires, at a minimum, that an applicant demonstrate compliance with all of NRC's safety regulations; LBP-08-25, 68 NRC 763 (2008)

the reasonable assurance determination need not be reduced to a mechanical verbal formula or set of objective standards, but may be given content through case-by-case applications of the Commission's technical judgment, in light of all relevant information; CLI-10-14, 71 NRC 449 (2010)

the safety review focuses on those potential detrimental effects of aging that are not routinely addressed by ongoing regulatory oversight programs; LBP-07-4, 65 NRC 281 (2007)

the scope of license renewal review for a nuclear power reactor is generally restricted to plant structures and components that will require an aging management review for the period of extended operation and the plant's systems, structures, and components that are subject to an evaluation of time-limited aging analysis; LBP-10-13, 71 NRC 673 (2010)

the standard for the Commission's decision on license renewal applications is whether or not the adverse environmental impacts of license renewal are so great that preserving the option of license renewal for energy planning decisionmakers would be unreasonable; LBP-07-4, 65 NRC 281 (2007)

the standard review plan provides guidance but does not impose requirements on license renewal applicants; CLI-10-17, 72 NRC 1 (2010)

the statutory conditions for grant of a license are described; LBP-08-25, 68 NRC 763 (2008)

the ten elements of an effective aging management program must be addressed only when an applicant's AMP differs from the relevant AMP identified in the GALL Report; LBP-08-26, 68 NRC 905 (2008)

under 10 C.F.R. 2.325, applicant has the burden of proving that it has met the reasonable assurance standard of 10 C.F.R. 54.29; LBP-08-25, 68 NRC 763 (2008)

under NEPA, the Commission is ultimately responsible for analyzing environmental justice issues, but license renewal applicants are required to assist the Commission with that evaluation; LBP-08-26, 68 NRC 905 (2008)

when a licensee is applying to extend its operating license, the NRC cannot address requests for enforcement action; DD-07-3, 65 NRC 643 (2007)

where the application provides a commitment that, should inspection requirements be changed, the applicant will implement those new inspection requirements, it is the responsibility of NRC Staff and the applicant to ensure that this commitment is fulfilled; LBP-08-26, 68 NRC 905 (2008)

## SUBJECT INDEX

### OPERATING LICENSE RENEWAL PROCEEDINGS

- absence of perfect compliance by licensee does not rebut the presumption of compliance or support admission of a contention that the application does not satisfy 10 C.F.R. 54.29(a), but a consistent, longstanding, and continuing pattern of problems in a specific area that is relevant to managing aging equipment will; LBP-10-15, 72 NRC 257 (2010)
- adequacy of emergency planning is outside the scope of license renewal proceedings; LBP-10-13, 71 NRC 673 (2010)
- allegation of facts, with supporting documentation, of a longstanding and continuing pattern of noncompliance or management difficulties that are reasonably linked to whether licensee will actually be able to adequately manage aging in accordance with the current licensing basis during the period of extended operation can be an admissible contention; LBP-10-15, 72 NRC 257 (2010)
- allegations of radiological and nonradiological contamination of drinking water are outside the scope of renewal proceedings because they involve no aging-related issues and are Category 1, or generic, issues; LBP-06-10, 63 NRC 314 (2006)
- broad-based issues akin to safety culture, such as operational history, quality assurance, quality control, management competence, and human factors, are beyond the bounds of a license renewal proceeding; CLI-10-27, 72 NRC 481 (2010)
- Category 1 issues, which are those addressed by NRC's generic environmental impact statement for license renewal, are inadmissible in a license renewal proceeding; LBP-10-13, 71 NRC 673 (2010)
- challenges to the current licensing basis are outside the scope of a license renewal proceeding; LBP-10-15, 72 NRC 257 (2010)
- cracking of a nonsafety-related steam dryer could cause a release of loose parts that could have an adverse impact on safety-related equipment and thus it is within the scope of aging management review; LBP-08-25, 68 NRC 763 (2008)
- embrittlement of the reactor pressure vessel is within the scope of a license renewal proceeding; LBP-06-10, 63 NRC 314 (2006)
- environmental justice issues are inadmissible if no sufficiently specific disproportionate effects with a nexus to the physical environment, falling on low-income and minority communities, are alleged or shown; LBP-06-10, 63 NRC 314 (2006)
- for a contention regarding environmental impacts of spent fuel storage to be within the scope of an operating license renewal proceeding, petitioner must obtain a waiver under 10 C.F.R. 2.335(d); LBP-10-15, 72 NRC 257 (2010)
- if a board finds that the use of a more accurate approach than compliance with regulatory guides is needed to provide reasonable assurance that metal fatigue will be adequately managed during the period of extended operation, then the board is authorized and duty bound to impose such a requirement; LBP-08-25, 68 NRC 763 (2008)
- if NRC Staff has not previously considered severe accident mitigation alternatives for applicant's plant in an environmental impact statement or related supplement or assessment, they must be considered for license renewal; LBP-10-13, 71 NRC 673 (2010)
- license renewal should not include a new, broad-scoped inquiry into compliance that is separate from and parallel to NRC ongoing compliance oversight activity; CLI-10-27, 72 NRC 481 (2010)
- NRC review is limited to plant structures and components that will require an aging management review for the period of extended operation and the plant's systems, structures, and components that are subject to an evaluation of time-limited aging analyses; LBP-08-22, 68 NRC 590 (2008)
- petitioner has presented a prima facie showing for waiver of the NRC regulation covering the environmental impacts of spent fuel pool accidents generically, and has shown that its contention concerning earthquake-induced spent fuel pool accidents is otherwise admissible; LBP-10-15, 72 NRC 257 (2010)
- petitioner's assertion that terrorist-act-originated SAMA analysis is required by Ninth Circuit law satisfies the requirements of 10 C.F.R. 2.309(f)(1)(iii) that the issue be within the scope of a license renewal proceeding; LBP-10-15, 72 NRC 257 (2010)
- potential scope of adjudicatory hearings for license renewal is the same as the scope of the Staff's review; LBP-10-15, 72 NRC 257 (2010)
- spent fuel storage issues are outside the scope of a license renewal proceeding; LBP-06-10, 63 NRC 314 (2006)

## SUBJECT INDEX

- the portion of the current licensing basis that can be affected by the detrimental effects of aging is limited to the design bases aspects of the CLB; LBP-10-15, 72 NRC 257 (2010)
- the proximity presumption has been found to arise if the petitioner lives within a specific distance from the power reactor; LBP-08-26, 68 NRC 905 (2008)
- the radioactive source posing the danger in a reactor license renewal case is the identical source giving rise to the 50-mile proximity presumption rule for standing in reactor construction permit and operating license proceedings; LBP-06-7, 63 NRC 188 (2006)
- the regulatory authority relating to renewal of nuclear power plant operating licenses is found in 10 C.F.R. Parts 51 and 54, which enumerate issues to be addressed; LBP-08-22, 68 NRC 590 (2008)
- the scope of a proceeding under 10 C.F.R. Part 54 encompasses a review of the plant structures and components that will require an aging management review for the period of extended operation and the plant's systems, structures, and components that are subject to an evaluation of time-limited aging analyses; CLI-10-17, 72 NRC 1 (2010)
- the scope of each proceeding encompasses a review of the plant structures and components that will require an aging management review for the period of extended operation and the plant's systems, structures, and components that are subject to an evaluation of time-limited aging analyses; LBP-08-25, 68 NRC 763 (2008)
- the scope of license renewal proceedings is quite limited under Commission rules and case law; LBP-08-22, 68 NRC 590 (2008)
- the scope of the proceeding is defined by the Commission in its initial hearing notice and order referring the proceeding to the licensing board; LBP-08-26, 68 NRC 905 (2008)
- OPERATING LICENSES**
- current plant licensing remains in effect pending final outcome of any hearing on renewal; LBP-08-12, 68 NRC 5 (2008)
- General Design Criteria are not applicable to nuclear power plants with construction permits issued prior to May 21, 1971; LBP-08-13, 68 NRC 43 (2008)
- if any aspect of a facility fails to pass muster at the operating license stage, applicant bears the risk the plant will not be allowed to operate, regardless of the amount of money expended during construction; LBP-10-7, 71 NRC 391 (2010)
- licensee remains authorized to own and possess the facility even after the operating license expires; LBP-09-17, 70 NRC 311 (2009)
- NRC Staff's final environmental impact statement need not include a discussion of the need for power or alternative energy sources; LBP-10-12, 71 NRC 656 (2010)
- the 10 C.F.R. Part 50 licensing process that was formerly applied to commercial nuclear power plants required that an applicant first obtain a construction permit for the facility, followed by an operating license; LBP-10-7, 71 NRC 391 (2010)
- the overriding regulatory precondition to the award of an operating license is that every major aspect of the facility has been completed in accordance with its design; LBP-08-11, 67 NRC 460 (2008)
- OPINIONS**
- See Advisory Opinions
- ORAL ARGUMENT**
- a licensing board order canceling oral argument on the admissibility of petitioner's proposed contention did not cause serious and irreparable harm to petitioner; CLI-08-7, 67 NRC 187 (2008)
- although licensing boards frequently hold oral argument on contention admissibility, a board may instead elect to dispense with oral argument; LBP-08-23, 68 NRC 679 (2008)
- as NRC hearings have moved away from the traditional trial-type adversarial format and toward a more informal model, the inquisitorial role of the presiding officer necessarily has increased; CLI-10-17, 72 NRC 1 (2010)
- diligent, even aggressive, probing for weaknesses in a witness's or counsel's position may be necessary if presiding officers are to fulfill their duty to develop an adequate record that will contribute to informed decisionmaking; CLI-10-17, 72 NRC 1 (2010)
- grant of a request for oral argument requires a showing of how it will assist the Commission in reaching a decision; CLI-10-9, 71 NRC 245 (2010)
- neither NRC regulations nor agency policy mandates that the arguments be conducted in person near the site; LBP-08-23, 68 NRC 679 (2008)

## SUBJECT INDEX

once a hearing is granted under Subpart L, an informal oral hearing on the merits is required except in limited circumstances; CLI-10-18, 72 NRC 56 (2010)

the Commission declines to exercise its discretion to allow oral argument because the written record in the case is thorough, effectively sets forth the positions of the participants, and, overall, contains sufficient information on which to base its decision; CLI-10-9, 71 NRC 245 (2010)

the Commission has discretion to allow oral argument upon the request of a party made in a petition for review, brief on review, or upon its own initiative; CLI-10-9, 71 NRC 245 (2010)

to enable presiding officers to fulfill their duty, they have been given broad authority to examine witnesses at evidentiary hearings; CLI-10-17, 72 NRC 1 (2010)

### ORDERS

policy statements are neither rules nor orders, and therefore do not establish requirements that bind either the agency or the public; CLI-07-27, 66 NRC 215 (2007)

See also Confirmatory Order; Enforcement Orders; Intervention Rulings; Licensing Board Decisions; Licensing Board Orders; Modification Order

### OWNERSHIP

continuous and exclusive use of property is sufficient, unless duly extinguished, to establish Indian or aboriginal title; LBP-08-24, 68 NRC 691 (2008)

licensing boards are required to reject treaty-based claims of ownership by Native American tribes; LBP-08-24, 68 NRC 691 (2008)

the difference between "aboriginal title" and "aboriginal lands" is distinguished; LBP-08-24, 68 NRC 691 (2008)

See also Foreign Ownership; Transfer of Ownership

### PARTIAL INITIAL DECISIONS

although a presiding officer should issue a separate partial initial decision regarding a limited work authorization request, the board finds no practical or logical basis for separating its consideration of the adequacy of the LWA request from its determination regarding the early site permit with which it is associated; LBP-09-19, 70 NRC 433 (2009)

the provision expressly permitting immediate review of a partial initial decision is an exception to the Commission's established policy of disfavoring interlocutory appeals; CLI-08-2, 67 NRC 31 (2008)

### PARTIES

a person who has not been admitted as a party to a proceeding is not entitled to make a motion in an ongoing proceeding; CLI-10-10, 71 NRC 281 (2010)

a person who invokes the right to participate in an NRC proceeding also voluntarily accepts the obligations attendant upon such participation; CLI-09-8, 69 NRC 317 (2009)

a "potential party" is any person who intends or may intend to participate as a party by demonstrating standing and filing an admissible contention under 10 C.F.R. 2.309; CLI-09-15, 70 NRC 1 (2009); LBP-09-5, 69 NRC 303 (2009)

in the high-level waste repository proceeding, "potential party," means DOE, the NRC Staff, the State of Nevada, and any person or entity that meets the definition of "party," "potential party," or "interested governmental participant"; LBP-08-10, 67 NRC 450 (2008)

NRC Staff ordinarily does not participate as a party in the adjudicatory portion of license transfer proceedings; CLI-07-18, 65 NRC 399 (2007)

obligations include participation within the schedule established for the proceeding despite the burden on a participant's time and resources and despite uncertainties engendered by the potential for new information; CLI-09-8, 69 NRC 317 (2009)

only a party to a proceeding may move to reopen a closed record; CLI-09-5, 69 NRC 115 (2009)

only a party to a proceeding, or an interested governmental entity participating under section 2.315, may file a request to stay proceedings pending a rulemaking; CLI-07-13, 65 NRC 211 (2007)

participant in administrative litigation, having an even greater interest in obtaining access to sensitive unclassified nonsafeguards information than does the general public, is entitled to obtain documents under standards no more restrictive than would be accorded the general public under the Freedom of Information Act; LBP-10-2, 71 NRC 190 (2010)

participants in ongoing adjudicatory proceedings that have filed a rulemaking petition should be provided an opportunity to seek a stay of the adjudication pending a resolution of the rulemaking petition; LBP-08-16, 68 NRC 361 (2008)

## SUBJECT INDEX

parties and NRC Staff have a continuing duty to update their mandatory disclosures; LBP-09-22, 70 NRC 640 (2009)

parties and NRC Staff must provide a list of documents otherwise required to be disclosed for which a claim of privilege or protected status is being made, together with sufficient information for assessing the claim of privilege or protected status of the documents; LBP-09-22, 70 NRC 640 (2009)

“potential party” is defined in as any person who has requested, or who may intend to request, a hearing or petition to intervene in a hearing under 10 C.F.R. Part 2, other than hearings conducted under Subparts J and M of 10 C.F.R. Part 2; LBP-10-5, 71 NRC 329 (2010)

the party to be prevented from relitigating an issue must have been a party to the prior action, but the party seeking to prevent relitigation through the application of collateral estoppel need not have been a party; CLI-10-23, 72 NRC 210 (2010)

the Staff elects whether or not to be a party to some or all contentions; CLI-07-20, 65 NRC 499 (2007)

See also Conduct of Parties

### PENALTIES

engaging in deliberate misconduct that caused inaccurate and incomplete information to be provided to the NRC concerning conditions at a reactor resulted in debarment from licensed activities for 5 years; LBP-09-11, 70 NRC 151 (2009)

### PERFORMANCE ASSESSMENT

a legal issue contention raises a genuine dispute with the application, because it challenges DOE’s performance assessment for the post-10,000-year period; LBP-09-29, 70 NRC 1028 (2009)

a systematic analysis that quantitatively estimates radiological exposures is the definition of performance assessment; LBP-09-6, 69 NRC 367 (2009)

adequate confidence in the assessment for the high-level waste repository is derived from sufficient analyses, data, and the technical basis offered to demonstrate compliance with postclosure performance objectives; LBP-10-22, 72 NRC 661 (2010)

analysis is required of only those features, events, and processes that cannot be excluded on the basis of low probability of occurrence and whose exclusion would result in a significant change in the results of the performance assessment for the high-level waste repository in the first 10,000-year postclosure period; LBP-10-22, 72 NRC 661 (2010)

compliance with limits on radiological exposures, over necessarily long time periods, requires a performance assessment; LBP-09-6, 69 NRC 367 (2009)

contention that the high-level waste application inadequately addresses generalized corrosion because it relies on flawed experimental data raises a genuine, material dispute with the application by pointing to specific sections that allegedly fail to comply with the NRC’s requirements for conducting a post-closure performance assessment; LBP-09-29, 70 NRC 1028 (2009)

demonstration of compliance with 10 C.F.R. 63.113 must consider alternative conceptual models; LBP-09-6, 69 NRC 367 (2009)

if the performance margins analysis for the high-level waste repository is needed to establish adequate confidence in the total system performance assessment, then it is subject to the quality assurance requirements of 10 C.F.R. 63.142; LBP-10-22, 72 NRC 661 (2010)

only features, events, and processes that produce significant changes in releases or doses within the first 10,000 years after disposal in the high-level waste repository must be included in performance assessments; LBP-10-22, 72 NRC 661 (2010)

performance assessment for the high-level waste repository must meet a number of very specific requirements; LBP-09-6, 69 NRC 367 (2009)

the performance margins analysis cannot be used to validate or provide confidence in the total systems performance assessment if its data and models are not qualified under DOE’s quality assurance program; LBP-10-22, 72 NRC 661 (2010)

### PERJURY

saying the government needs to demonstrate the potential for the tainting of evidence is not the equivalent of insisting that the government establish that perjury or intimidation would necessarily take place; LBP-06-13, 63 NRC 523 (2006)

the entire focus of a perjury inquiry centers on what the testifier knew and when he knew it, in order to establish beyond a reasonable doubt that he knew his testimony to be false when he gave it; CLI-10-23, 72 NRC 210 (2010)

## SUBJECT INDEX

### PERMIT CONDITIONS

any imposed conditions that are not met before a combined license referencing the early site permit is issued will attach to the COL; LBP-09-19, 70 NRC 433 (2009)  
radioactive waste management systems, structures, and components for a future reactor must include features to preclude accidental releases of radionuclides into potential liquid pathways; CLI-07-14, 65 NRC 216 (2007)

### PERMITS

although NRC will consider the fact that an applicant is subject to, and compliant with, other environmental laws and permits, it must still perform an environmental assessment prior to any major federal action significantly affecting the environment; LBP-06-20, 64 NRC 131 (2006)  
an operating license application must list all federal permits, licenses, approvals, and other entitlements that must be obtained in connection with the issuance of an operating license for a second nuclear reactor and adequately discuss the status of its compliance with them; LBP-09-26, 70 NRC 939 (2009)  
criteria and procedures pursuant to which a federal land manager may issue excavation permits for federal lands are provided as well as notification to Indian tribes if permits may result in harm to cultural or religious sites; LBP-10-16, 72 NRC 361 (2010)  
in the context of NEPA, NRC is obligated to study matters that may be far afield of its primary mission, including the environmental impacts related to the permits and licenses issued by other governmental agencies; LBP-09-21, 70 NRC 581 (2009)  
whether other permits may be required from other agencies is outside the scope of NRC proceedings, and those concerns are properly raised before those respective permitting authorities; LBP-09-21, 70 NRC 581 (2009)

See also Construction Permits; Early Site Permits

### PERSONAL PRIVACY INTEREST

although an initial position of protecting privacy may be founded on mere theoretical constructs, when a fact-based challenge is made, concrete or specific analysis is needed to effectively counter the challenge and to establish the privacy interests involved; LBP-06-25, 64 NRC 367 (2006)  
NRC's regulatory scheme for balancing privacy interests arising in a law enforcement context against the need for party discovery combines elements of both FOIA and the Federal Rules of Civil Procedure; LBP-06-25, 64 NRC 367 (2006)  
privacy interest depends on such specific factors as the impact of the information's disclosure upon particular individuals and in particular circumstances; LBP-06-25, 64 NRC 367 (2006)  
the interests for which protection is sought can be amply preserved by a protective order that limits the disclosures to those involved in the litigation and thus having a need to know; LBP-06-25, 64 NRC 367 (2006)  
the law generally recognizes a personal privacy interest not to have allegations of unlawful activity publicly disseminated after they have been shown to be insubstantial, but a privacy interest does not exist as a generalized theory; LBP-06-25, 64 NRC 367 (2006)  
when an investigation is open and notorious, the interview transcripts are not confidential, and the public has constructive knowledge that those interviewed had a sufficient relationship to the root problem to warrant being interviewed, the right of personal privacy being asserted is weak compared to the privacy rights in other circumstances of unsubstantiated allegation; LBP-06-25, 64 NRC 367 (2006)  
where a protective order precludes public disclosure, the strength of the privacy interest diminishes because any threatened harm in releasing the information can be virtually eliminated; LBP-06-25, 64 NRC 367 (2006)

### PERSONHOOD

the Department of Energy is not a "person" for purposes of AEA § 11s; CLI-09-14, 69 NRC 580 (2009)

### PHYSICAL SECURITY PLAN

during closed portions of oral argument, only the board, NRC Staff, applicant, and individuals who signed nondisclosure affidavits pursuant to protective order would be permitted to remain in the hearing room; LBP-10-5, 71 NRC 329 (2010)  
legal authority exists for nondisclosure and protection of security-related information concerning the physical protection of nuclear power plants under 10 C.F.R. 2.390(d)(1); LBP-10-5, 71 NRC 329 (2010)  
section 2.390(d)(1) of 10 C.F.R. provides legal authority for nondisclosure and protection of security-related information concerning the physical protection of nuclear power plants, and for the

## SUBJECT INDEX

closing of portions of hearings and other sessions in which such information will necessarily be discussed; LBP-10-5, 71 NRC 329 (2010)

### PIPING

applicant must establish an aging management that is adequate to provide reasonable assurance that the intended function of the piping subject to flow accelerated corrosion will be maintained in accordance with the current licensing basis for the period of extended operation; LBP-08-25, 68 NRC 763 (2008)

condensate storage system buried pipes are outside the scope of a license renewal proceeding with respect to their safety functionality, but that does not eliminate the need for consideration of potential leaks from those buried pipes because of their role in fire protection; LBP-08-22, 68 NRC 590 (2008)

### PLEADINGS

a party at risk of filing out of time can request an extension, doing so well before the time specified expires; LBP-10-21, 72 NRC 616 (2010)

a reply is not an opportunity for a petitioner to bolster its original contentions with new supporting facts and arguments; LBP-08-26, 68 NRC 905 (2008)

affidavits must set forth facts that would be admissible in evidence; LBP-07-13, 66 NRC 131 (2007)

although NRC may reasonably accommodate pro se petitioners who are not technically perfect in their pleadings, such parties must still meet the basic requirements of the contention admissibility rules, and if these are not met, boards may not "fill in" any missing support, but rather are legally required to deny the contention; LBP-07-4, 65 NRC 281 (2007)

although the pleading requirements of 10 C.F.R. 2.309 are strict by design, a licensing board may permit potential intervenors to cure defects in petitions in order to obviate dismissal of an intervention petition because of inarticulate draftsmanship or procedural or pleading defects; LBP-08-6, 67 NRC 241 (2008)

an appeal that merely recites earlier arguments without explaining how they demonstrate legal error or abuse of discretion on the board's part does not satisfy NRC pleading standards; CLI-10-21, 72 NRC 197 (2010)

an attempt to circumvent page-limit rules by incorporating documents by reference could be grounds for sanctions; CLI-10-9, 71 NRC 245 (2010)

any material provided by a petitioner in support of its contention, including those portions of the material that are not relied upon, is subject to board scrutiny; LBP-08-26, 68 NRC 905 (2008); LBP-09-3, 69 NRC 139 (2009)

because of an attorney's previous disregard of the NRC's practices and procedures, the Commission orders the Office of the Secretary to screen all filings bearing the offender's signature and not to accept or docket them unless they meet all procedural requirements; CLI-06-4, 63 NRC 32 (2006)

Commission regulations do not contemplate filing a vague, unsupported pleading as a placeholder for a more detailed pleading to follow; CLI-09-5, 69 NRC 115 (2009)

contention admissibility requirements are rigorous and demand a level of discipline and preparedness on the part of petitioners, who must examine the publicly available material and set forth their claims and the support for their claims at the outset; LBP-06-12, 63 NRC 403 (2006)

contention admissibility rules require a concise statement of the alleged facts or expert opinions that support petitioner's position, but does not require the submission of an expert opinion or require that an expert opinion be submitted in the form of admissible evidence; LBP-06-7, 63 NRC 188 (2006)

counsel's alleged unfamiliarity with the agency's rules of practice or counsel's asserted busy schedule are not satisfactory explanations for late filings; LBP-10-21, 72 NRC 616 (2010)

detailed pleadings put other parties in the proceeding on notice of the petitioners' specific grievances, thereby giving them a good idea of the claims they will be either supporting or opposing; LBP-07-11, 66 NRC 41 (2007)

even if petitioners later retain counsel, it would not be appropriate to hold their petition to those standards of clarity and precision to which a lawyer might reasonably be expected to adhere; LBP-08-6, 67 NRC 241 (2008)

every participant in the adjudicative process has an obligation to fully develop its arguments; LBP-06-7, 63 NRC 188 (2006)

intervention petitioner must state the nature and extent of his/her/its property, financial, or other interest in the proceeding, a concept separate and apart from that of what constitutes a contention; LBP-09-1, 69 NRC 11 (2009)

## SUBJECT INDEX

it is not the board's duty to forage through a petition in order to find statements or other support that may be located in various portions of the petition but not referenced in the contention; LBP-10-16, 72 NRC 361 (2010)

material provided in support of a contention will be carefully examined by the board to confirm that on its face it does supply adequate support for the contention; LBP-09-3, 69 NRC 139 (2009)

more than mere notice pleading, which is a broad standard requiring only a short and plain statement of the claim, is required for contention admission; LBP-09-17, 70 NRC 311 (2009)

"notice pleading" is a broad standard requiring only a short and plain statement of the claim; LBP-08-26, 68 NRC 905 (2008)

notice pleading is expressly prohibited by the rules of practice; CLI-09-5, 69 NRC 115 (2009)

page limits on briefs are intended to encourage parties to make their strongest arguments as concisely as possible; CLI-06-10, 63 NRC 451 (2006)

participant filing out of time must offer a satisfactory explanation for its lateness, including, if necessary, an account as to why a request for extension could not have been filed beforehand; LBP-10-21, 72 NRC 616 (2010)

petitioner should submit a fully developed showing regarding standing in each proceeding in which it seeks to intervene, regardless of whether it has previously been found to have standing relative to the facility that is the locus of the proceedings; LBP-07-10, 66 NRC 1 (2007)

petitioner's reply must be narrowly focused on the legal or logical arguments presented in the applicant/licensee or NRC Staff answer; LBP-06-12, 63 NRC 403 (2006)

petitioners represented by counsel are held to higher standard of specificity in pleading; CLI-10-20, 72 NRC 185 (2010); LBP-10-10, 71 NRC 529 (2010)

petitioners that are not represented by counsel will be held to less rigid standards for pleading, although a totally deficient petition will not be admitted; CLI-10-1, 71 NRC 1 (2010); LBP-08-6, 67 NRC 241 (2008); LBP-08-11, 67 NRC 460 (2008); LBP-08-15, 68 NRC 294 (2008)

presiding officers have authority to dispose of certain issues on the pleadings; CLI-09-14, 69 NRC 580 (2009)

regulations governing appeals from the denial of intervention provide for a notice of appeal with a supporting brief, and for a brief opposing the appeal, but do not provide for reply briefs; CLI-06-9, 63 NRC 433 (2006)

specificity and support are required for the positions parties take in their filings; LBP-07-13, 66 NRC 131 (2007)

the board's judgment at the pleading stage is accorded substantial deference; CLI-09-5, 69 NRC 115 (2009)

the burden of setting forth a clear and coherent argument rests squarely on the shoulders of the petitioner; LBP-06-12, 63 NRC 403 (2006)

the Commission should not be expected to sift unaided through earlier briefs or other documents filed before the Board to piece together and discern a party's argument and the grounds for its claims; CLI-09-11, 69 NRC 529 (2009)

the contention rule is strict by design and does not permit the filing of a vague, unparticularized contention, unsupported by affidavit, expert, or documentary support; LBP-07-5, 65 NRC 341 (2007)

unlike federal court practice, the Commission does not accept mere notice pleading in support of an admissible contention; LBP-08-24, 68 NRC 691 (2008)

whether a petitioner has met the regulatory requirements for Licensing Support Network compliance is a proper subject for challenge in an answer to an intervention petition; LBP-09-6, 69 NRC 367 (2009)

See also Amicus Pleadings

**POLICY**

an exception to the application of collateral estoppel occurs when broad public policy considerations or special public interest factors are involved such that an agency's need for flexibility outweighs the reasons underlying this repose doctrine so as to favor relitigation of a particular issue; LBP-09-24, 70 NRC 676 (2009)

NRC's adjudicatory process is not the proper venue for the evaluation of a petitioner's own view regarding the direction that regulatory policy should take; LBP-09-3, 69 NRC 139 (2009); LBP-09-26, 70 NRC 939 (2009)

See also NRC Policy

## SUBJECT INDEX

### POLICY STATEMENTS

as a general matter, a policy statement announces what the Commission seeks to establish as policy and does not bind either the agency or the public; CLI-10-8, 71 NRC 142 (2010)

if a construction permit holder wishes to discontinue construction activities at a facility but continue to have its 10 C.F.R. Part 50 construction authorization remain effective, it can do so under the terms of the 1987 Commission Policy Statement on Deferred Plants; LBP-10-7, 71 NRC 391 (2010)

issue of whether location of a nuclear plant in a densely populated area allowed adoption of generic risk factors and a severe accident mitigation design alternatives decision supported by a policy statement rather than a rulemaking was confronted; LBP-10-10, 71 NRC 529 (2010)

NRC cannot generically dispense with the consideration of SAMAs, under NEPA, through a policy statement issued pursuant to its Atomic Energy Act authority; LBP-10-13, 71 NRC 673 (2010)

these are neither rules nor orders, and therefore do not establish requirements that bind either the agency or the public; CLI-07-27, 66 NRC 215 (2007)

### POPULATION DENSITY

issue of whether location of a nuclear plant in a densely populated area allowed adoption of generic risk factors and a severe accident mitigation design alternatives decision supported by a policy statement rather than a rulemaking was confronted; LBP-10-10, 71 NRC 529 (2010)

### POSSESSION-ONLY LICENSES

with respect to possession, a Part 40 license continues in effect after expiration until decommissioning is completed; CLI-09-1, 69 NRC 1 (2009)

### POTASSIUM IODIDE

distribution beyond the 10-mile emergency planning zone is not necessary; LBP-09-16, 70 NRC 227 (2009)

### POWER UPRATE

a measurement uncertainty recapture power uprate typically involves a power level increase of less than 2%, achieved by enhanced techniques for calculating reactor power; CLI-08-17, 68 NRC 231 (2008)

a stretch power uprate typically results in power level increases up to 7% and generally does not involve major plant modifications; CLI-08-17, 68 NRC 231 (2008)

an amendment to the facility's operating license is required; CLI-08-17, 68 NRC 231 (2008)

an extended power uprate usually requires significant modifications to major plant equipment, and may be for power level increases as high as 20%; CLI-08-17, 68 NRC 231 (2008)

applicant for a power uprate must comply with all relevant NRC regulations, whether the application meets the requirements for a license amendment; LBP-08-9, 67 NRC 421 (2008)

applicant normally is required to perform two large-transient tests before an extended power uprate can be granted; LBP-07-2, 65 NRC 153 (2007)

challenges to the current operating license are outside the scope of matters challengeable in a power uprate application; LBP-08-9, 67 NRC 421 (2008)

demonstrating proximity-based standing requires a determination that the proposed action involves a significant source of radioactivity producing an obvious potential for offsite consequences; LBP-08-9, 67 NRC 421 (2008)

extended power uprate proceeding that has been terminated may not be reopened; CLI-10-17, 72 NRC 1 (2010)

issues concerning alleged violations of state law or regulations are outside the scope of, and not material to, an NRC power uprate proceeding; CLI-07-25, 66 NRC 101 (2007)

licensee requests that operating licenses for both units be amended to change the associated technical specifications to implement uprated power operation; LBP-07-10, 66 NRC 1 (2007)

NRC labels or classifies uprates based on the relative magnitude of the power increase and the methods used to achieve the increase; CLI-08-17, 68 NRC 231 (2008)

relevant NRC regulations, be it a stretch power uprate or an extended power uprate, are set forth in 10 C.F.R. 50.90 to 50.92; LBP-08-9, 67 NRC 421 (2008)

showing that estimated dose consequences associated with operation under extended power uprate conditions can be expected to increase by the 20% power level change establishes that the proposed EPU creates an obvious potential for offsite consequences; LBP-07-10, 66 NRC 1 (2007)

Staff is to issue its approval or denial of an application promptly once it completes its own review of the application, notwithstanding the pendency of any hearing; CLI-06-8, 63 NRC 235 (2006)

## SUBJECT INDEX

technical aspects of an extended power uprate are discussed; LBP-07-10, 66 NRC 1 (2007)  
whether applicant has a valid NPDES permit is outside the scope of a power uprate proceeding;  
LBP-08-9, 67 NRC 421 (2008)

### PRECEDENTIAL EFFECT

a board in one proceeding is not constrained to follow the rulings of another board on standing, absent explicit affirmation by the Commission; LBP-07-10, 66 NRC 1 (2007); LBP-09-18, 70 NRC 385 (2009)  
although a board in another materials license renewal proceeding allowed an Indian organization to participate in that proceeding as an interested Indian tribe under 10 C.F.R. 2.315(c), that ruling is not binding on other boards; LBP-09-13, 70 NRC 168 (2009)  
although the Atomic Safety and Licensing Appeal Board was disbanded in 1991, its decisions still carry precedential value; CLI-08-19, 68 NRC 251 (2008); CLI-09-2, 69 NRC 55 (2009)  
legal authorities may be binding, adverse, or merely persuasive, but all authorities must possess some legal and precedential/persuasive value; LBP-10-21, 72 NRC 616 (2010)  
legal determinations made on appeal in a case are controlling precedent, becoming the law of the case for all later decisions in the same case, with only limited exceptions; LBP-06-11, 63 NRC 483 (2006)  
licensing board decisions have no precedential effect beyond the immediate proceeding in which they were issued; CLI-10-2, 71 NRC 27 (2010); LBP-09-15, 70 NRC 198 (2009)  
licensing boards are bound by Commission and appeal board precedent and therefore are not at liberty to reject the 50-mile proximity presumption; LBP-09-4, 69 NRC 170 (2009)  
NRC is not obligated to adhere, in all of its proceedings, to the first court of appeals decision to address a controversial question; CLI-07-8, 65 NRC 124 (2007)  
petitioner's showing establishing standing in one proceeding need not be repeated to establish standing in another proceeding regarding that same facility; LBP-07-10, 66 NRC 1 (2007); LBP-07-14, 66 NRC 169 (2007)  
the Atomic Safety and Licensing Appeal Board was disbanded in 1991, but its decisions still carry precedential value; CLI-07-16, 65 NRC 371 (2007)  
the peculiar procedural circumstances and the unusual nature of the equities favoring intervenors may combine to render a decision *sui generis*, and as such, it should not be considered precedential; CLI-09-13, 69 NRC 575 (2009)  
the practice of granting or denying discretionary intervention should develop not through precedent, but through attention to the concrete facts of particular situations; CLI-06-16, 63 NRC 708 (2006)  
the value of a licensing board decision that is not affirmed by the Commission is limited to its power to persuade; LBP-06-1, 63 NRC 41 (2006)  
unreviewed board decisions lack precedential effect; CLI-09-14, 69 NRC 580 (2009); CLI-10-7, 71 NRC 133 (2010); CLI-10-23, 72 NRC 210 (2010); CLI-10-29, 72 NRC 556 (2010); CLI-10-30, 72 NRC 564 (2010)

### PRECLUSION DOCTRINES

a court of appeals decision may prevent the government from relitigating the same issue with the same party, but it still leaves the government free to litigate the same issue in the future with other litigants; CLI-07-8, 65 NRC 124 (2007)

### PREHEARING CONFERENCES

NRC rules of procedure authorize boards to hold prehearing conferences for the purposes of simplifying or clarifying the issues for hearing, after which a board might admit a revised contention; CLI-09-12, 69 NRC 535 (2009)

### PREJUDICE

if a board erroneously rejected petitioner's motions, but the record does not suggest that petitioner suffered any prejudicial error, Commission review is not warranted; CLI-10-14, 71 NRC 449 (2010)  
Staff's petition for review is granted on the grounds that Staff has demonstrated substantial questions as to the board's correct application of NEPA jurisprudence, and as to whether certain actions taken by the board constituted prejudicial procedural error; CLI-10-18, 72 NRC 56 (2010)  
the prospect of a second lawsuit with its expenses and uncertainties or another application does not provide the requisite quantum of legal harm to warrant dismissal of an application with prejudice; LBP-10-11, 71 NRC 609 (2010)  
to prevail on a disqualification motion, petitioner first must demonstrate that the purported instances of bias had a substantial impact on the outcome of the proceeding; CLI-10-17, 72 NRC 1 (2010)

## SUBJECT INDEX

- where the impact of delay is a concern, the desirability of avoiding any further delay in reaching a final merits determination can be a key discretionary factor counseling nonreliance upon the collateral estoppel principle even if that doctrine otherwise appears applicable; LBP-09-24, 70 NRC 676 (2009)
- PRESIDING OFFICER**
- a judge's use of strong language toward a party or in expressing his views on matters before him does not constitute evidence of personal bias; CLI-10-17, 72 NRC 1 (2010)
- PRESIDING OFFICER, AUTHORITY**
- a request for briefs on legal issues is one of the many tools available to a presiding officer generally in the conduct of a proceeding; CLI-09-14, 69 NRC 580 (2009)
  - a stipulation or compromise in an enforcement proceeding is subject to approval by the designated presiding officer, who may order such adjudication of the issues as he may deem to be required in the public interest; LBP-06-18, 63 NRC 830 (2006)
  - although a presiding officer should issue a separate partial initial decision regarding a limited work authorization request, the board finds no practical or logical basis for separating its consideration of the adequacy of the LWA request from its determination regarding the early site permit with which it is associated; LBP-09-19, 70 NRC 433 (2009)
  - an exceptionally grave issue may be considered in the discretion of the presiding officer, even if untimely presented; CLI-09-5, 69 NRC 115 (2009); LBP-08-12, 68 NRC 5 (2008)
  - as NRC hearings have moved away from the traditional trial-type adversarial format and toward a more informal model, the inquisitorial role of the presiding officer necessarily has increased; CLI-10-17, 72 NRC 1 (2010)
  - diligent, even aggressive, probing for weaknesses in a witness's or counsel's position may be necessary if presiding officers are to fulfill their duty to develop an adequate record that will contribute to informed decisionmaking; CLI-10-17, 72 NRC 1 (2010)
  - extensions of time may be granted by the presiding officer for individual milestones for the participants' filings, and it may delay its own issuances for up to 30 days beyond the date of the milestone set in the hearing schedule; CLI-08-18, 68 NRC 246 (2008)
  - in procedural and scheduling matters, where first-hand contact with and appreciation for all the circumstances surrounding a case are necessary, maximum reliance on the proper discretion of a presiding officer is essential; CLI-10-17, 72 NRC 1 (2010)
  - motions must be initially addressed to the presiding officer when a proceeding is pending; CLI-08-23, 68 NRC 461 (2008)
  - presiding officers have authority to dispose of certain issues on the pleadings; CLI-09-14, 69 NRC 580 (2009)
  - the Commission or presiding officer may extend a time limit upon a showing of good cause; CLI-09-4, 69 NRC 80 (2009)
  - the informal procedural rules of Part 2, Subpart L place greater emphasis and responsibility on the presiding officer to oversee the development of a full and complete record; CLI-10-17, 72 NRC 1 (2010)
  - the judge's function in ruling on summary disposition motions is not to weigh the evidence and determine the truth of the matter but to determine whether there is a genuine issue for hearing; CLI-10-11, 71 NRC 287 (2010)
  - the presiding officer has no authority or duty to resolve uncontested issues in the high-level waste proceeding; CLI-08-25, 68 NRC 497 (2008)
  - the presiding officer is authorized to hold conferences before or during the hearing for settlement, simplification of contentions, or any other proper purpose; LBP-08-11, 67 NRC 460 (2008)
  - the presiding officer or licensing board has discretion to accelerate the merits hearing on safety issues, but not on environmental issues; CLI-07-17, 65 NRC 392 (2007)
  - the process for determining whether a proposed settlement is in the public interest is left to the discretion of the board; LBP-06-18, 63 NRC 830 (2006)
  - to enable presiding officers to fulfill their duty, they have been given broad authority to examine witnesses at evidentiary hearings; CLI-10-17, 72 NRC 1 (2010)
  - when a hearing notice has been issued, withdrawal of an application would be subject to such terms as the presiding officer may prescribe; LBP-09-23, 70 NRC 659 (2009)

## SUBJECT INDEX

### PRESSURE VESSEL

See Reactor Pressure Vessel

### PRESSURIZED THERMAL SHOCK

all structures, systems, and components relied on in safety analyses or plant evaluations to perform a function that demonstrates compliance with the NRC's regulations are subject to aging management review for license renewal; CLI-10-14, 71 NRC 449 (2010)

### PRESUMPTION OF REGULARITY

there is a longstanding presumption, absent strong and concrete evidence otherwise, that government agencies and their employees will do their jobs honestly and properly; CLI-09-14, 69 NRC 580 (2009)

### PRIMA FACIE SHOWING

a board's role in considering a petition for waiver under 10 C.F.R. 2.335 is limited to deciding whether petitioner has made a prima facie showing of special circumstances that would support a waiver; LBP-10-15, 72 NRC 257 (2010)

a prima facie showing merely requires the presentation of enough information to allow a board to infer (absent disproof) that special circumstances exist to support a rule waiver; LBP-10-15, 72 NRC 257 (2010)

because petitioner had not made a prima facie case for rule waiver, the board declined to certify the matter to the Commission and found that it was prohibited from considering the matter further; CLI-10-29, 72 NRC 556 (2010)

existence of a prima facie case is determined based on the sufficiency of the movant's assertions and informational/evidentiary support alone; LBP-10-15, 72 NRC 257 (2010)

petitioner has alleged sufficient new information concerning the seismic situation to raise a prima facie showing that strict application of the generic NEPA analysis of the management of spent fuel in nuclear reactors would not serve the purpose for which Part 51 Appendix B and 10 C.F.R. 51.53(c)(2) were adopted; LBP-10-15, 72 NRC 257 (2010)

showing necessary for grant of a petition for interlocutory review is described; CLI-10-29, 72 NRC 556 (2010)

### PRIVILEGE

a privilege that is not claimed is waived; LBP-06-25, 64 NRC 367 (2006)

an assertion that material can be withheld must expressly state the specific privilege being claimed; LBP-06-25, 64 NRC 367 (2006)

if insufficient information is provided to support a claim of privilege, the privilege may be denied; LBP-06-25, 64 NRC 367 (2006)

qualified materials may be excluded from discovery, depending on the particular circumstances presented; LBP-06-25, 64 NRC 367 (2006)

sufficient information for assessing the claim of privilege or protected status of documents withheld from discovery must be provided to the requesting party; LBP-06-25, 64 NRC 367 (2006)

the greater the interest protected, the more compelling the need and the other circumstances must be to overcome it; LBP-06-25, 64 NRC 367 (2006)

where the privilege and the need may be equally weak, but the privilege can be protected by other means, adjudicators return to the norms of full and open discovery, so that relevancy, not need, becomes the determinative standard; LBP-06-25, 64 NRC 367 (2006)

See also Attorney-Client Privilege; Deliberative Process Privilege; Qualified Privilege

### PRIVILEGE LOG

parties and NRC Staff must provide a list of documents otherwise required to be disclosed for which a claim of privilege or protected status is being made, together with sufficient information for assessing the claim of privilege or protected status of the documents; CLI-10-24, 72 NRC 451 (2010); CLI-10-25, 72 NRC 469 (2010); LBP-09-22, 70 NRC 640 (2009)

### PRIVILEGED INFORMATION

although the NRC public website states that SUNSI encompasses a wide variety of categories (e.g., personnel privacy, attorney-client privilege, confidential source), there is no legal basis for sweeping aside the well-established and long-recognized privileges such as the Privacy Act, 5 U.S.C. § 552(a), and the attorney-client privilege; LBP-10-2, 71 NRC 190 (2010)

excessively broad claims of SUNSI in a licensing proceeding impact not just an intervenors' access to documents, but also the public's access to the adjudicatory process; LBP-10-2, 71 NRC 190 (2010)

## SUBJECT INDEX

motions to compel or challenges regarding the adequacy of any mandatory disclosure or hearing file, redactions, or the validity of any claim that a document is privileged or protected shall be filed within 10 days after the occurrence or circumstance from which the motion arises; LBP-09-22, 70 NRC 640 (2009)

### PRO SE LITIGANTS

although boards are to provide latitude to pro se participants, petitioner's decision to provide an expert affidavit, available when it filed its hearing petition, at the time it submitted its reply runs afoul of the Commission's directive that reply pleadings cannot be used to introduce additional supporting information relative to a contention; LBP-08-16, 68 NRC 361 (2008)

although boards should afford greater latitude to a pleading submitted by a pro se petitioner, that petitioner ultimately bears the burden to provide facts sufficient to show standing; CLI-10-20, 72 NRC 185 (2010)

although complying with Commission regulations may be especially difficult for pro se petitioners, it has long been a basic principle that a person who invokes the right to participate in an NRC proceeding also voluntarily accepts the obligations attendant upon such participation; LBP-10-4, 71 NRC 216 (2010)

although latitude is to be afforded a pro se intervenor in the mechanics of contention pleading and citation, an organization that has appeared several times previously is expected to have a heightened awareness of the agency's pleading rules; LBP-08-16, 68 NRC 361 (2008)

although NRC may reasonably accommodate pro se petitioners who are not technically perfect in their pleading, such parties must still meet the basic requirements of the contention admissibility rules, and if these are not met, boards may not "fill in" any missing support, but, rather, are legally required to deny the contention; LBP-07-4, 65 NRC 281 (2007); LBP-07-5, 65 NRC 341 (2007)

any ambiguity relative to the filing date for hearing requests arising from the language of the agency's hearing opportunity notice should be construed in favor of a participant who was seeking to comply with the notice; LBP-08-16, 68 NRC 361 (2008)

boards hold pro se petitioners to a less rigorous standard; LBP-09-18, 70 NRC 385 (2009)

boards may reprimand, censure, or suspend intervenors for contemptuous conduct; CLI-07-28, 66 NRC 275 (2007)

even if petitioners later retain counsel, it would not be appropriate to hold their petition to those standards of clarity and precision to which a lawyer might reasonably be expected to adhere; LBP-08-6, 67 NRC 241 (2008)

given the information known about the nature of the facility and the available radioactive and chemical materials at risk and the resulting potential for offsite consequences, there is no need for petitioners to plead these matters more specifically; LBP-07-14, 66 NRC 169 (2007)

intervenors' representational status is one factor in determining whether reformulation is appropriate, and pro se status may provide additional cause for reformulation; LBP-10-10, 71 NRC 529 (2010)

licensing boards have been lenient in permitting pro se petitioners the opportunity to cure procedural defects in petitions to intervene regarding standing; LBP-09-18, 70 NRC 385 (2009)

parties represented by counsel are generally held to a higher standard than pro se litigants; CLI-10-20, 72 NRC 185 (2010); LBP-10-10, 71 NRC 529 (2010)

petitioners that are not represented by counsel are held to less rigid pleading standards, so that parties with a clear but imperfectly stated interest in the proceeding are not excluded; CLI-10-20, 72 NRC 185 (2010)

petitioners that are not represented by counsel will be held to less rigid standards for pleading, although a totally deficient petition will not be admitted; LBP-08-15, 68 NRC 294 (2008)

petitioners who act without attorney representation are not held to those standards of clarity and precision to which a lawyer might reasonably be expected to adhere; CLI-10-17, 72 NRC 1 (2010); LBP-08-6, 67 NRC 241 (2008); LBP-08-11, 67 NRC 460 (2008); LBP-10-4, 71 NRC 216 (2010)

pleadings submitted by a petitioner acting pro se are not always expected to meet the same standards as pleadings drafted by lawyers, but late filing of documents is not condoned; LBP-06-14, 63 NRC 568 (2006)

somewhat greater latitude generally is afforded pro se petitioners in drafting their intervention petitions; LBP-07-10, 66 NRC 1 (2007)

## SUBJECT INDEX

the Commission generally extends some latitude to pro se litigants, but they still are expected to comply with NRC procedural rules, including contention pleading requirements; CLI-10-1, 71 NRC 1 (2010)

### PROBABILISTIC RISK ASSESSMENT

contention asserting that DOE's description of its expert elicitation relating to a probabilistic volcanic hazard analysis update fails to comply with NRC regulations or the NRC guidance document that DOE formally committed to follow is admissible; LBP-09-29, 70 NRC 1028 (2009)

low probability is the key to applying NEPA's rule-of-reason test to contentions that allege that a specified accident scenario presents a significant environmental impact that must be evaluated; LBP-09-26, 70 NRC 939 (2009); LBP-10-10, 71 NRC 529 (2010)

PRA is the Commission's accepted and standard practice in severe accident mitigation alternatives analyses; LBP-10-15, 72 NRC 257 (2010)

the safety analysis report component of an application for a Standard Design Certification must analyze and address the problem of extremely low probability for accidents that could result in the release of significant quantities of radioactive fission products; LBP-09-10, 70 NRC 51 (2009)

the threshold probability that calls for analysis for reactors is generally greater than 1 in 10 million per year; CLI-10-1, 71 NRC 1 (2010)

### PROOF

See Burden of Proof

### PROPERTY INTERESTS

the subject of an enforcement action has a property interest in his employment-related license sufficient to invoke the procedural protections of the Due Process Clause, the vindication of which invokes a public interest; LBP-06-25, 64 NRC 367 (2006)

### PROPRIETARY INFORMATION

although the SUNSI access procedures do not impose a high threshold for demonstrating need, they must be applied consistent with the principle that it is important to prevent unnecessary disclosure of sensitive information; LBP-09-5, 69 NRC 303 (2009)

applicant's claim that computer models should be excused from the mandatory disclosure requirements because they entail proprietary information is rejected; LBP-10-23, 72 NRC 692 (2010)

handling of confidential commercial or financial proprietary information that has been submitted to the agency is governed by 10 C.F.R. 2.390; CLI-10-24, 72 NRC 451 (2010)

if litigation over a contention brings into play financial or other information that has been designated as nonpublic, petitioners must request that the board issue a protective order that permits access; LBP-08-16, 68 NRC 361 (2008)

if petitioners cannot show that their new or revised contentions could not have been submitted without the requested access to redacted information in the license transfer application, then they will have to meet not only the contention pleading requirements, but also the late-filing requirements; CLI-07-18, 65 NRC 399 (2007)

if petitioners offer a reason for needing such information material to the findings a licensing board must make and otherwise explain why publicly available versions of the application would not be sufficient to provide the basis and specificity for a proffered contention, they would satisfied the need criterion; LBP-09-5, 69 NRC 303 (2009)

in licensing proceedings, protective orders provide an effective means for safeguarding proprietary information, where the party seeking discovery is not a competitor; CLI-10-24, 72 NRC 451 (2010)

petitioner's lack of access to SUNSI may hinder it in its ability to demonstrate why publicly available versions of the application would not be sufficient to provide the basis and specificity for a proffered contention, but this does not absolve a petitioner from at least endeavoring to address this criterion; LBP-09-5, 69 NRC 303 (2009)

protective orders and in camera proceedings are the customary and favored means of handling disputes that arise in which one party to a proceeding seeks purportedly proprietary information from another; CLI-10-24, 72 NRC 451 (2010)

the procedure for seeking access to SUNSI does not provide a method for general or topical access, but only access to information necessary to meaningfully participate in an adjudicatory proceeding and to provide the basis and specificity of a proffered contention; LBP-09-5, 69 NRC 303 (2009)

## SUBJECT INDEX

the requirement to discuss the basis for a proffered contention to obtain access to SUNSI is not to be equated with the discussion that would be necessary to support an admissible contention; LBP-09-5, 69 NRC 303 (2009)

the use of any proprietary information that is produced is strictly limited to the proceeding for which it is produced, and such information must be promptly returned at the close of this proceeding; LBP-10-23, 72 NRC 692 (2010)

### PROTECTIVE ORDERS

a sensitive unclassified nonsafeguards information access order is issued by the Commission or NRC in its role as supervisor of NRC Staff and does not constitute an adjudicatory ruling by the Commission; LBP-10-2, 71 NRC 190 (2010)

DOE's request for Commission approval of a protective order in anticipation of allowing access to the classified information in its application pertaining to naval spent nuclear fuel is referred to the Pre-License Application Presiding Officer Board; CLI-08-21, 68 NRC 351 (2008)

even if a document contains information that is exempt from disclosure, FOIA mandates that any reasonably segregable portion of the record shall be provided to any person requesting such record after deletion of the portions that are exempt; LBP-10-2, 71 NRC 190 (2010)

if applicants and petitioners cannot agree on the terms of a confidentiality and nondisclosure agreement, then they shall inform the presiding officer, indicate specifically the areas where they disagree, and then move the presiding officer for issuance of a protective order; CLI-07-18, 65 NRC 399 (2007)

if it seeks to withhold a document from a party or the public, or to bar a party or member of the public from attending any adjudicatory proceeding before a licensing board, NRC Staff must carry the burden of proving that the document or situation fits one of FOIA's specifically enumerated exceptions; LBP-10-2, 71 NRC 190 (2010)

if litigation over a contention brings into play financial or other information that has been designated as nonpublic, petitioners must request that the board issue a protective order that permits access; LBP-08-16, 68 NRC 361 (2008)

in licensing proceedings, protective orders provide an effective means for safeguarding proprietary information, where the party seeking discovery is not a competitor; CLI-10-24, 72 NRC 451 (2010)

petitioners or intervenors may request and, where appropriate, obtain, under protective order or other measures, information withheld from the general public for proprietary or security reasons; CLI-10-24, 72 NRC 451 (2010)

procedures and schedules set forth in the SUNSI access order are intended only to deal with issues arising before intervention occurs and a board is created; LBP-10-2, 71 NRC 190 (2010)

proponent bears the burden of proof; LBP-10-2, 71 NRC 190 (2010)

the board issued a protective order governing access to and use of protected information in the correspondence from applicant to NRC Staff regarding the requirements under 10 C.F.R. 52.80(d) and any related documents; CLI-10-24, 72 NRC 451 (2010)

the privacy interests for which protection is sought can be amply preserved by a protective order that limits the disclosures to those involved in the litigation and thus having a need to know; LBP-06-25, 64 NRC 367 (2006)

the Secretary of the Commission is authorized to establish procedures for obtaining access to sensitive unclassified nonsafeguards information prior to granting intervention in a licensing proceeding; LBP-10-2, 71 NRC 190 (2010)

the use of any proprietary information that is produced is strictly limited to the proceeding for which it is produced, and such information must be promptly returned at the close of this proceeding; LBP-10-23, 72 NRC 692 (2010)

the weight of privacy interests is tempered by the capability in the discovery process of making limited disclosure to a litigant under a protective order instead of public disclosure; LBP-06-25, 64 NRC 367 (2006)

to counter a board's normal assumption that protective orders will not be breached, the withholding party must show evidence of the likelihood of a breach; LBP-06-25, 64 NRC 367 (2006)

where a protective order precludes public disclosure, the strength of the privacy interest diminishes because any threatened harm in releasing the information can be virtually eliminated; LBP-06-25, 64 NRC 367 (2006)

## SUBJECT INDEX

with a confidential protection order in place, weighing the privacy invasion from public disclosure against a party's need for the materials is no longer appropriate; LBP-06-25, 64 NRC 367 (2006)

### PROXIMATE CAUSE

a reasonably close causal relationship between federal agency action and environmental consequences is necessary to trigger NEPA; CLI-07-8, 65 NRC 124 (2007)

prior NRC precedent is consistent with Supreme Court NEPA doctrine, which requires a reasonably close causal relationship between federal agency action and environmental consequences before NEPA is triggered, a relationship similar to that of proximate cause in tort law; LBP-07-14, 66 NRC 169 (2007)

the claimed impact of a terrorist attack on NRC-licensed facilities is too attenuated to find the proposed federal action to be the proximate cause of that impact; CLI-07-9, 65 NRC 139 (2007); CLI-07-10, 65 NRC 144 (2007)

the effects that must be considered in an environmental impact statement are those that are caused by the action and there must be a reasonably close causal relationship between the proposed action and an alleged environmental effect or impact, similar to proximate cause in tort law, before that effect need be considered; LBP-07-4, 65 NRC 281 (2007)

the level of risk of a terrorist attack depends upon political, social, and economic factors external to the NRC licensing process, and thus it is not sensible to hold an NRC licensing decision, rather than terrorists themselves, as the proximate cause of an attack on an NRC-licensed facility; CLI-07-8, 65 NRC 124 (2007)

there is no proximate-cause link between an NRC licensing action, such as renewing an operating license, and any altered risk of terrorist attack; CLI-07-8, 65 NRC 124 (2007)

where an agency has no ability to prevent a certain effect due to its limited statutory authority, it cannot be considered a legally relevant cause of the effect; LBP-07-4, 65 NRC 281 (2007)

### PROXIMITY PRESUMPTION

a board is not at liberty to abandon the Commission's 50-mile proximity presumption; LBP-09-16, 70 NRC 227 (2009)

a claim of residence within 50 miles of a facility might entitle petitioner to a presumption of standing based on proximity in a reactor construction permit or operating license proceeding; CLI-07-19, 65 NRC 423 (2007)

a declaration in support of petitioner's standing based on geographic proximity must include a specific statement of distance from the licensed facility; CLI-07-18, 65 NRC 399 (2007)

a licensing board can take official notice of the locations and the distances to the various locations specified by a petitioner as denominated on Mapquest and an American Automobile Association roadmap; LBP-07-10, 66 NRC 1 (2007)

a petitioner who fails to provide specific information regarding the geographic proximity or the timing and duration of its visits only complicates matters for itself; LBP-07-10, 66 NRC 1 (2007)

a presumption of standing applies when an individual, an organization, or an individual authorizing an organization to represent his or her interests resides within 50 miles of the proposed facility or has frequent contacts with the area affected by the proposed facility; LBP-10-7, 71 NRC 391 (2010)

a regular commute that takes petitioner past a plant entrance once or twice a week is sufficient to establish standing; LBP-10-1, 71 NRC 165 (2010)

a "same zip code" test for standing is inappropriate, given that the sizes of zip-code areas vary greatly throughout the country; CLI-07-22, 65 NRC 525 (2007)

a showing that anyone who uses a substantial quantity of water personally or for livestock from a source that is reasonably contiguous to either an injection or processing site is sufficient to demonstrate an injury in fact for standing; LBP-08-6, 67 NRC 241 (2008)

a significant pattern of regular contacts within the 50-mile radius around the plant is sufficient to establish proximity-based standing; LBP-09-18, 70 NRC 385 (2009)

although a proximity presumption has been invoked when resolving issues of standing for cases involving reactor licensing, in a case involving an enforcement order, the standing requirement is also based on the confirmatory order itself and the adverse effect of the confirmatory order; LBP-07-16, 66 NRC 277 (2007)

an extended power uprate is directly associated with continuing reactor operation, and thus the potential geographic scope of the consequences of EPU operation can be considered to be similar to that which

## SUBJECT INDEX

supported the creation of a 50-mile presumption for construction permit and operating license proceedings; LBP-07-10, 66 NRC 1 (2007)

as long as petitioners reside within an area that could realistically be impacted if an accidental release occurs, it is reasonable and consistent with Atomic Energy Act § 189a to find that they have standing to challenge applicant's safety claims and its environmental analysis under the National Environmental Policy Act; LBP-09-4, 69 NRC 170 (2009)

assertions that a member lives within the service area of the utility that operates a licensed facility or within the same county as the facility is insufficiently specific to justify a finding of standing; CLI-07-18, 65 NRC 399 (2007)

boards apply a proximity-plus test to establish standing in materials cases, where the petitioner must show that the proposed licensing action involves a significant source of radiation that has an obvious potential for offsite consequences; CLI-10-20, 72 NRC 185 (2010)

close proximity to a facility has always been deemed to be enough, standing alone, to establish the requisite interest to confer standing; LBP-07-4, 65 NRC 281 (2007)

daily commute near vicinity of a reactor is sufficient to establish standing; LBP-08-9, 67 NRC 421 (2008)

demonstrating proximity-based standing in a power uprate proceeding requires a determination that the proposed action involves a significant source of radioactivity producing an obvious potential for offsite consequences; LBP-08-9, 67 NRC 421 (2008)

descriptions of activities as being "near," in "close proximity," or "in the vicinity" of the facility in question are insufficient to establish standing; CLI-07-18, 65 NRC 399 (2007)

even if a party seeking standing has some intent to return to an area, when such intentions are not supported by concrete plans or a specification of when future visits would take place, they do not support a finding of injury in the standing context; LBP-10-1, 71 NRC 165 (2010)

even if NRC's proximity presumption is viewed as more lenient than judicial standing requirements, NRC may choose to retain it; CLI-09-20, 70 NRC 911 (2009)

even in nonreactor construction permit/operating license cases involving an increased potential for offsite consequences in which proximity can be the primary basis for establishing standing, the distance at which a petitioner can be presumed to be affected must take into account the nature of the proposed action and the significance of the radioactive source; LBP-07-10, 66 NRC 1 (2007)

for an organization to qualify for the proximity presumption, a bare assertion that a member lives within 50 miles is not sufficient; LBP-07-4, 65 NRC 281 (2007)

for standing, distance from a facility can be verified using the Google Maps distance measurement tool; LBP-10-1, 71 NRC 165 (2010)

if petitioner cannot establish the elements of proximity-based standing, then he must establish standing according to traditional standing principles; CLI-10-20, 72 NRC 185 (2010)

in a case involving an enforcement order, the standing requirement is based on the confirmatory order itself, and petitioner must show that he will be adversely affected by the terms of the order; LBP-08-14, 68 NRC 279 (2008)

in a decommissioning proceeding, where the proximity presumption did not apply, a petitioner who commuted past the entrance of plant once or twice a week was found to have standing; CLI-10-7, 71 NRC 133 (2010)

in a materials licensing case, petitioner must show more than that he lives or works within a certain distance of the site where materials will be located; CLI-10-20, 72 NRC 185 (2010)

in addition to the distance of petitioner from a facility, a link between the confirmatory order and the alleged harm to the petitioner is necessary to establish standing in an enforcement proceeding; LBP-07-16, 66 NRC 277 (2007)

in an indirect license transfer case involving no change in the facility, its operation, licensees, personnel, or financing, petitioners living within 5-10 miles of the plant do not qualify for proximity-based standing; CLI-08-19, 68 NRC 251 (2008)

in cases involving construction or operation of a nuclear power reactor, proximity to the proposed facility has been considered sufficient to establish the requisite standing elements; LBP-08-15, 68 NRC 294 (2008); LBP-08-16, 68 NRC 361 (2008); LBP-08-24, 68 NRC 691 (2008); LBP-09-3, 69 NRC 139 (2009)

## SUBJECT INDEX

- in cases involving ISL uranium mining and other source materials licensing, petitioner must demonstrate injury, causation, and redressability because proximity to the proposed facility alone is not adequate to demonstrate standing; LBP-10-16, 72 NRC 361 (2010)
- in cases involving possible construction or operation of a nuclear power reactor, the Commission has created a presumption that residing or regularly conducting activities within a 50-mile proximity of the proposed facility is considered sufficient to establish the requisite injury, causation, and redressability elements; LBP-07-10, 66 NRC 1 (2007)
- in cases other than nuclear power reactor construction and operating licenses, licensing boards must address standing on a case-by-case basis, taking into account the nature of the proposed action and the significance of the radioactive source; LBP-09-28, 70 NRC 1019 (2009)
- in construction permit and operating license proceedings for power reactors, petitioner is presumed to have standing to intervene if petitioner lives within, or otherwise has frequent contacts with, the zone of possible harm; CLI-09-20, 70 NRC 911 (2009)
- in evaluating the specificity of petitioners' standing arguments, a licensing board must take into account the information provided by the applicant and the NRC Staff in the environmental impact statement; LBP-07-14, 66 NRC 169 (2007)
- in in-situ leach mining cases the geographical areas that may be affected by mining operations are largely dependent on the size and other characteristics of underground aquifers; LBP-08-6, 67 NRC 241 (2008)
- in license transfer cases, the Commission determines on a case-by-case basis whether the proximity presumption should apply, considering the obvious potential for offsite radiological consequences, or lack thereof, from the application at issue, and specifically taking into account the nature of the proposed action and the significance of the radioactive source; CLI-07-19, 65 NRC 423 (2007)
- in proceedings for construction permit and operating licenses for nuclear power plants, a proximity presumption is recognized in favor of standing for persons who have frequent contacts within a 50-mile radius of the plant; CLI-10-7, 71 NRC 133 (2010); LBP-10-1, 71 NRC 165 (2010); LBP-10-4, 71 NRC 216 (2010); LBP-10-7, 71 NRC 391 (2010)
- in proceedings involving nuclear power reactors, petitioner is presumed to have standing to intervene without the need to specifically plead injury, causation, and redressability if petitioner lives within 50 miles of the proposed facility; LBP-10-15, 72 NRC 257 (2010); LBP-10-16, 72 NRC 361 (2010)
- in proceedings not involving power reactors, proximity alone is not sufficient to establish standing; LBP-08-6, 67 NRC 241 (2008)
- in proceedings other than for construction permits, operating licenses, or significant amendments thereto, the Commission decides on a case-by-case basis whether the proximity presumption should apply, taking into account any obvious potential for offsite radiological consequences, as well as the nature of the proposed action and the significance of the radioactive source; LBP-09-20, 70 NRC 565 (2009)
- in reactor licensing proceedings, that zone of possible harm for proximity-based standing is generally deemed to constitute the areas within a 50-mile radius of the site; LBP-08-13, 68 NRC 43 (2008); LBP-08-15, 68 NRC 294 (2008); LBP-08-17, 68 NRC 431 (2008); LBP-08-18, 68 NRC 533 (2008)
- in the absence of a showing that the proposed operating license amendment obviously entails an increased potential for offsite consequences, petitioner must base its standing upon more than residence or activities within a particular proximity of the plant by making a showing of a plausible chain of events that would result in offsite radiological consequences posing a distinct new harm or threat to the participant; LBP-07-10, 66 NRC 1 (2007)
- it is petitioner's responsibility to provide enough detail to allow the board to distinguish a casual interest from a substantial one; LBP-10-1, 71 NRC 165 (2010)
- licensing boards are bound by Commission and appeal board precedent and therefore are not at liberty to reject the 50-mile presumption; LBP-09-4, 69 NRC 170 (2009)
- living within 50 miles from the plant is enough to confer standing on an individual or group in proceedings for construction permits, operating licenses, or significant amendments thereto without the need to specifically plead injury, causation, and redressability if the petitioner lives within 50 miles of the nuclear power reactor; LBP-09-10, 70 NRC 51 (2009); LBP-09-13, 70 NRC 168 (2009); LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-09-20, 70 NRC 565 (2009); LBP-09-21, 70 NRC 581 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-09-28, 70 NRC 1019 (2009)

## SUBJECT INDEX

local governmental bodies within whose boundaries a facility is located, do not need to make any further demonstration of standing; CLI-07-18, 65 NRC 399 (2007)

members of intervenor organizations who reside, work, or recreate within 50 miles of the proposed nuclear power plant have proximity-based standing; LBP-10-9, 71 NRC 493 (2010)

no obvious potential for offsite consequences sufficient to establish organizational standing was shown even though the organization's office was a mere 3 miles from the facility; LBP-09-28, 70 NRC 1019 (2009)

no proximity presumption applies in source materials cases; LBP-10-16, 72 NRC 361 (2010)

NRC's proximity presumption does not disregard contemporaneous judicial concepts of standing, but rather the Commission applied its expertise to determine that persons living within a 50-mile radius of a nuclear reactor face a realistic threat of harm if a release of radioactive material were to occur from the facility; LBP-09-16, 70 NRC 227 (2009)

occasional contact with an affected area is not sufficient to establish standing; LBP-07-4, 65 NRC 281 (2007)

occasional trips to areas located close to reactors have been found to be insufficient grounds to demonstrate a risk to the intervenor's health and safety; LBP-08-9, 67 NRC 421 (2008)

one who does something "frequently" does so at frequent or short intervals, "frequent" being defined as often or habitually; LBP-10-1, 71 NRC 165 (2010)

one who performs an act "regularly" does so in a regular, orderly, or methodical way; LBP-10-1, 71 NRC 165 (2010)

persons with no actual or imminent claim of injury are not permitted to obtain a hearing; LBP-09-4, 69 NRC 170 (2009)

petitioner cannot satisfy NRC's standing requirement by offering a vague claim of 50-mile proximity in an initial petition and later using a petition for reconsideration to fill in gaps with more specific information that was available all along; CLI-07-21, 65 NRC 519 (2007)

petitioner has standing to intervene without the need to specifically plead injury, causation, and redressability if the petitioner lives within, or otherwise has frequent contacts with, the zone of possible harm from the nuclear reactor or other source of radioactivity; LBP-08-9, 67 NRC 421 (2008); LBP-08-17, 68 NRC 431 (2008); LBP-08-26, 68 NRC 905 (2008)

petitioner organizations have established standing based on their members' proximity to transportation routes, even where it was not possible to predict with accuracy which of its members were most likely to be harmed or the extent of the damage; LBP-09-6, 69 NRC 367 (2009)

petitioner who frequently visited an area allegedly affected by the proposed action for recreational purposes showed injury in the standing context; LBP-10-1, 71 NRC 165 (2010)

petitioner who seeks to base standing on contacts within a 50-mile radius of a proposed facility must provide enough detail to allow the board to distinguish a casual interest from a substantial one; CLI-10-7, 71 NRC 133 (2010)

petitioner whose daily commute took her within less than one-half mile of a research reactor had standing based on the obvious potential for offsite consequences; CLI-10-7, 71 NRC 133 (2010)

petitioner whose office was located within one-half mile from a research reactor may be presumed to be affected by operation of the facility; CLI-10-7, 71 NRC 133 (2010)

petitioner's claim that he routinely pierces the 50-mile radius around a reactor site is too vague to support standing; LBP-10-1, 71 NRC 165 (2010)

petitioner's residence within a 50-mile radius of the proposed facility has established standing in his own right, and, accordingly, representational standing has been established through him; LBP-09-18, 70 NRC 385 (2009)

petitioners bear the burden of providing sufficient relevant, specific information, whether by good-faith estimate or otherwise, to establish the basis for their standing claims; LBP-10-1, 71 NRC 165 (2010)

petitioners in direct license transfer cases who live within a 5-1/2-mile radius of their plant qualify for proximity-based standing; CLI-08-19, 68 NRC 251 (2008)

petitioners who fail to provide specific information regarding proximity or frequency of contacts that may establish standing only complicate matters for themselves; LBP-10-1, 71 NRC 165 (2010)

presumption of standing applies in proceedings for nuclear power plant construction permits, operating licenses, or significant amendments thereto; LBP-08-13, 68 NRC 43 (2008); LBP-08-15, 68 NRC 294

## SUBJECT INDEX

(2008); LBP-09-26, 70 NRC 939 (2009); LBP-10-15, 72 NRC 257 (2010); LBP-10-16, 72 NRC 361 (2010); LBP-10-21, 72 NRC 616 (2010)

proximity alone does not suffice for standing in materials licensing cases; CLI-09-12, 69 NRC 535 (2009); LBP-08-24, 68 NRC 691 (2008)

proximity standing in a license transfer proceeding has been recognized at close distances where a petitioner frequently engages in substantial business and related activities in the vicinity of the facility, engages in normal, everyday activities in the vicinity, has regular and frequent contacts in an area near a licensed facility, or otherwise has visits of a length and nature showing an ongoing connection and presence; CLI-07-21, 65 NRC 519 (2007)

proximity-based standing has been denied where contact has been limited to mere occasional trips to areas located close to reactors; CLI-07-21, 65 NRC 519 (2007)

proximity-based standing in license transfer proceedings had been denied to petitioners within 5-10 miles, 12 miles, and 40 miles from licensed facilities; CLI-07-21, 65 NRC 519 (2007)

proximity-based standing must be based on the factual circumstances presented by the information before the licensing board regarding the petitioner's activities, which may include consideration of the proximity, timing, and duration of those activities; LBP-07-10, 66 NRC 1 (2007)

pursuant to the proximity-plus approach, a presumption based on geographical proximity (albeit at distances much closer than 50 miles) may be applied where there is a determination that the proposed action involves a significant source of radioactivity producing an obvious potential for offsite consequences; LBP-10-4, 71 NRC 216 (2010)

regular but intermittent residence 1 week a month in a house 35 miles from a facility is sufficient for standing purposes; LBP-07-10, 66 NRC 1 (2007)

significant contacts with an affected area can be sufficient to establish standing, even when full-time residence within the 50-mile zone is not shown; LBP-07-4, 65 NRC 281 (2007)

some circumstances exist in which petitioners may be presumed to have standing based on their geographical proximity to a facility or source of radioactivity, without the need to show injury in fact, causation, or redressability; LBP-08-6, 67 NRC 241 (2008)

someone living adjacent to the site for proposed construction of a federally licensed facility has standing to challenge the licensing agency's failure to prepare an environmental impact statement, even though he cannot establish with any certainty that the statement will cause the license to be withheld or altered, and even though the facility will not be completed for many years; LBP-10-24, 72 NRC 720 (2010)

standing based on proximity does not apply in source materials cases; LBP-09-13, 70 NRC 168 (2009)

standing depends on the petitioner's present circumstances or the extent to which activities in the recent past reflect a likely pattern of future conduct; LBP-07-10, 66 NRC 1 (2007)

standing has been denied when petitioner has demonstrated only occasional contact with the zone of possible harm; LBP-10-1, 71 NRC 165 (2010)

standing rests on the presumption that an accident associated with the nuclear facility could adversely affect the health and safety of people working, living, or regularly engaging in activities offsite but within a certain distance of that facility; CLI-08-19, 68 NRC 251 (2008)

standing was found for an organization representing three members living in close proximity to decommissioning site, who expressed concern that depleted uranium materials could affect a waterway abutting the property of two members; CLI-10-20, 72 NRC 185 (2010)

standing will be denied when petitioner fails to supply more specific information regarding the frequency, nature, and length of his contacts within the proximity zone; LBP-10-1, 71 NRC 165 (2010)

the appropriate distance for proximity standing is decided on a case-by-case basis taking into account the nature of the proposed action and the significance of the radioactive source; LBP-07-14, 66 NRC 169 (2007)

the benefits of the proximity presumption are not limited to those who reside within the area in which the presumption applies, but can be extended to those who conduct everyday activities or visit within that area; LBP-07-10, 66 NRC 1 (2007)

the Commission has accepted a proximity presumption granting standing to residents within 50 miles of a reactor, but has not accepted any such presumption in nonreactor cases; LBP-07-14, 66 NRC 169 (2007)

## SUBJECT INDEX

- the common thread in decisions applying the 50-mile proximity presumption is a recognition of the potential effects at significant distances from the facility of the accidental release of fissionable materials; LBP-09-4, 69 NRC 170 (2009)
- the distinction between “frequently” and “regularly” highlights the importance of making a more detailed factual showing, rather than relying on conclusory adjectives and adverbs, when a standing claim rests on the nature of petitioner’s activities purportedly near to, or bearing some connection with, the reactor facility at issue; LBP-10-1, 71 NRC 165 (2010)
- the elements of standing will be presumed to be satisfied if an individual lives within the zone of possible harm from a significant source of radioactivity, which has been defined in proceedings involving nuclear power plants as being within a 50-mile radius of such a plant; LBP-07-11, 66 NRC 41 (2007)
- the longest specific distance for which the Commission has granted proximity-based standing in a post-Vogtle license transfer case is 6 to 6-1/2 miles; CLI-07-21, 65 NRC 519 (2007)
- the nontrivial increased risk of living within 50 miles of a proposed reactor constitutes injury-in-fact, is traceable to the challenged action, and is likely to be redressed by a favorable decision that either denies a license or mandates compliance with legal requirements that protect the interests of the petitioners; CLI-09-20, 70 NRC 911 (2009); LBP-09-16, 70 NRC 227 (2009)
- the presumption of standing applies to combined license proceedings; LBP-09-16, 70 NRC 227 (2009)
- the process of sifting and weighing participants’ factual proffers often calls upon a board to make difficult choices, so that a petitioner who fails to provide specific information regarding the geographic proximity or the timing and duration of its visits only complicates matters for itself; LBP-09-18, 70 NRC 385 (2009)
- the rationale for the 50-mile presumption does not depend upon the probability that a proposed reactor is likely to generate an accidental release of radioactive materials, but rather the fact that, if such an accident were to occur, it could realistically impact the geographic area within which the petitioners reside; LBP-09-4, 69 NRC 170 (2009)
- the ultimate test for standing is not whether NRC’s test conforms to that applied by federal courts, but whether NRC’s test represents a reasonable construction of section 189a of the Atomic Energy Act; LBP-09-4, 69 NRC 170 (2009)
- there is no conflict between judicial concepts of standing and the NRC’s 50-mile presumption of standing; CLI-09-22, 70 NRC 932 (2009); LBP-09-4, 69 NRC 170 (2009)
- there is no obvious potential for harm at petitioner’s property 20 miles from a uranium enrichment facility location; LBP-08-6, 67 NRC 241 (2008)
- three conditions must be satisfied for the proximity presumption to afford standing as of right; LBP-07-10, 66 NRC 1 (2007)
- to establish proximity-based standing, it is petitioner’s responsibility to provide enough detail to allow the board to distinguish a casual interest from a substantial one; LBP-10-7, 71 NRC 391 (2010)
- to establish standing based on frequent contacts, petitioner must show that it frequently engages in substantial business and related activities in the vicinity of the facility, engages in normal, everyday activities in the vicinity, has regular and frequent contacts in an area near a licensed facility, or otherwise has visits of a length and nature showing an ongoing connection and presence; LBP-10-1, 71 NRC 165 (2010)
- to establish the requisite proximity for standing, petitioner must clearly indicate where he lives and/or what contact he has with the site; LBP-10-1, 71 NRC 165 (2010); LBP-10-7, 71 NRC 391 (2010)
- when petitioner cannot establish proximity-plus standing, he or she must resort to establishing standing under traditional principles; LBP-10-4, 71 NRC 216 (2010)
- whether and at what distance a petitioner can be presumed to be affected must be judged on a case-by-case basis, taking into account the nature of the proposed action and the significance of the radioactive source; LBP-08-6, 67 NRC 241 (2008); LBP-10-4, 71 NRC 216 (2010)
- PSYCHOLOGICAL EFFECTS**
- the National Environmental Policy Act does not require an agency to assess potential psychological impacts due to fear of radiological harm; CLI-10-11, 71 NRC 287 (2010)
- PUBLIC COMMENTS**
- any member of the public who wishes to comment on the draft environmental assessment outside the adjudicatory process, pursuant to NRC’s normal environmental process, must do so within 30 days after

## SUBJECT INDEX

- it is made available (or within 45 days) of the publication of a draft environmental impact statement; CLI-07-11, 65 NRC 148 (2007)
- Staff's final supplemental environmental impact statement on a license renewal must take account of public comments concerning new and significant information on Category 1 findings; LBP-06-20, 64 NRC 131 (2006)
- when preparing an environmental assessment, an agency must provide the public with sufficient environmental information, considered in the totality of circumstances, to permit members of the public to weigh in with their views and thus inform the agency decisionmaking process; CLI-10-18, 72 NRC 56 (2010)
- PUBLIC HEARINGS**
- a First Amendment basis for public access to administrative proceedings is recognized; LBP-10-2, 71 NRC 190 (2010)
- a trial is a public event, and what transpires in the courtroom is public property; LBP-10-2, 71 NRC 190 (2010)
- all NRC hearings are to be public except as requested under section 181 of the Atomic Energy Act or otherwise ordered by the Commission; LBP-10-5, 71 NRC 329 (2010)
- Anglo-American jurisprudence has long ensured that judicial proceedings will be open to the public; LBP-10-2, 71 NRC 190 (2010)
- as long as the administrative proceedings walk, talk, and squawk very much like an Article III judicial proceeding, they should be open to the public; LBP-10-2, 71 NRC 190 (2010)
- public access to courts is grounded in the First Amendment and free speech carries with it some freedom to listen; LBP-10-2, 71 NRC 190 (2010)
- the First Amendment requires a presumption of openness in civil proceedings; LBP-10-2, 71 NRC 190 (2010)
- the First Amendment requires public access to deportation hearings despite government's strenuous objections that open hearings would enable terrorists to obtain information useful to their malevolent goals; LBP-10-2, 71 NRC 190 (2010)
- the principle that justice cannot survive behind walls of silence has long been reflected in the Anglo-American distrust for secret trials; LBP-10-2, 71 NRC 190 (2010)
- PUBLIC INTEREST**
- a stipulation or compromise in an enforcement proceeding is subject to approval by the designated presiding officer, who may order such adjudication of the issues as he may deem to be required in the public interest; LBP-06-18, 63 NRC 830 (2006)
- an exception to the application of collateral estoppel occurs when broad public policy considerations or special public interest factors are involved such that an agency's need for flexibility outweighs the reasons underlying this repose doctrine so as to favor relitigation of a particular issue; LBP-09-24, 70 NRC 676 (2009)
- Commission review is in the public interest if the decision could affect pending and future license renewal determinations; CLI-10-17, 72 NRC 1 (2010)
- given the extended history of the proceeding and the nature of the license amendment sought, it can scarcely be thought that the deferral of a hearing to await the completion of Staff's technical review might of itself have an adverse impact; LBP-06-6, 63 NRC 167 (2006)
- no adjudication is required where a licensing board finds a settlement to be in the public interest; LBP-06-21, 64 NRC 219 (2006)
- the process for determining whether a proposed settlement is in the public interest is left to the discretion of the board; LBP-06-18, 63 NRC 830 (2006)
- the public interest would best be served by leaving the option open to the applicant should changed conditions warrant pursuit of a withdrawn application; LBP-10-11, 71 NRC 609 (2010)
- the subject of an enforcement action has a property interest in his employment-related license sufficient to invoke the procedural protections of the Due Process Clause, the vindication of which invokes a public interest; LBP-06-25, 64 NRC 367 (2006)
- there is an important public interest in the proper resolution of all aspects of what occurred at a nuclear facility when serious safety and communication issues are involved; LBP-06-25, 64 NRC 367 (2006)

## SUBJECT INDEX

when determining whether good cause exists for delay of a proceeding, the decisionmaker must consider both the public interest as well as the interests of the person subject to the immediately effective order; CLI-06-12, 63 NRC 495 (2006)

### PUBLIC INTEREST ORGANIZATIONS

even if the Commission could waive the application fee for access to safeguards information, the mere fact that petitioners are public interest organizations provides no special reason for departing from well-established NRC practice; CLI-09-4, 69 NRC 80 (2009)

petitioner's status as an anti-nuclear advocate and a source of information for its community is insufficient, without more, to qualify it for organizational standing; CLI-08-19, 68 NRC 251 (2008)

the principle regarding the representational standing of unions is also applicable of public interest groups, who also, in significant part, exist to represent the interests of their members; CLI-08-19, 68 NRC 251 (2008)

### PYROCHLORE

this material contains more than 0.05% by weight uranium and thorium, and thus it is subject to NRC regulation as a source material; LBP-07-5, 65 NRC 341 (2007); LBP-08-8, 67 NRC 409 (2008); CLI-10-8, 71 NRC 142 (2010)

### QUALIFIED PRIVILEGE

a board has discretion to compel production of a document upon a finding that the need for the evidence outweighs the interests that support the privilege; LBP-06-3, 63 NRC 85 (2006)

in a proceeding involving the safety of a proposed 20% increase in the power of a nuclear power reactor, the seriousness of the litigation and the issues involved weigh in favor of disclosing deliberative process documents; LBP-06-3, 63 NRC 85 (2006)

in ruling on the qualified nature of deliberative process privilege, five factors are relevant in balancing the need for the documents against the government's interest in nondisclosure; LBP-06-3, 63 NRC 85 (2006)

the fact that deliberative process privilege documents contain important new analyses that are relevant to admitted contentions weighs in favor of their disclosure; LBP-06-3, 63 NRC 85 (2006)

the imminent availability of Staff's authoritative position on a subject that is discussed in deliberative process documents constitutes "other evidence" such that the immediate need for the documents does not outweigh the deliberative process privilege; LBP-06-3, 63 NRC 85 (2006)

when NRC Staff is a party in a proceeding and not merely an indifferent bystander to private-party litigation, the role of the government in the litigation weighs in favor of disclosure; LBP-06-3, 63 NRC 85 (2006)

### QUALITY ASSURANCE

applicant normally is required to perform two large-transient tests before an extended power uprate can be granted; LBP-07-2, 65 NRC 153 (2007)

each nuclear power plant must implement a program that includes all testing required to demonstrate that the structures, systems, and components will perform satisfactorily in service; LBP-07-2, 65 NRC 153 (2007)

programs must include written test procedures that incorporate the requirements and acceptance limits contained in applicable design documents, and, as appropriate, proof tests prior to installation, preoperational tests, and operational tests during nuclear power plant operation, of structures, systems, and components; LBP-08-22, 68 NRC 590 (2008)

requirements of 10 C.F.R. Part 50, Appendix B apply to license renewal aging management plans; LBP-08-22, 68 NRC 590 (2008)

### QUALITY ASSURANCE PROGRAMS

a contention alleging a breakdown of applicant's QA program must provide evidence that there is legitimate doubt as to whether the plant can be operated safely; LBP-10-9, 71 NRC 493 (2010)

applicant for a combined license is required to establish a QA program and to apply that program to its safety-related activities; LBP-10-9, 71 NRC 493 (2010)

because intervenors cannot reasonably be expected to discover the QA issues that gave rise to a notice of violation without the NOV itself as notice, they have plausibly argued that their new contention is based on new and materially different information; LBP-10-9, 71 NRC 493 (2010)

DOE is required to provide adequate confidence that the geologic repository and its structures, systems, or components will perform satisfactorily in service; LBP-10-22, 72 NRC 661 (2010)

## SUBJECT INDEX

if the performance margins analysis for the high-level waste repository is needed to establish adequate confidence in the total system performance assessment, then it is subject to the quality assurance requirements of 10 C.F.R. 63.142; LBP-10-22, 72 NRC 661 (2010)

perfection in applicant's QA program is not required, but once a pattern of QA violations has been shown, applicant has the burden of showing that the license may be granted notwithstanding the violations; LBP-10-9, 71 NRC 493 (2010)

perfection in plant construction and the construction quality assurance program is not a precondition for a license, but rather what is required is reasonable assurance that the plant, as built, can and will be operated without endangering the public health and safety; LBP-10-9, 71 NRC 493 (2010)

the effects of the high-level waste repository QA program can be taken into account in determining the probability and consequences of a feature, event, or process; LBP-10-22, 72 NRC 661 (2010)

the performance margins analysis cannot be used to validate or provide confidence in the total systems performance assessment if its data and models are not qualified under DOE's QA program; LBP-10-22, 72 NRC 661 (2010)

the program for the geologic repository must be applied to all structures, systems, and components that are important to waste isolation and to related activities, defined as including analyses of samples and data; LBP-10-22, 72 NRC 661 (2010)

to the extent a new contention will cause delay, it is the price for affording the public the opportunity to litigate questions arising from an applicant's failure to comply with QA requirements; LBP-10-9, 71 NRC 493 (2010)

### RADIATION

See Background Radiation

### RADIATION CONTROL PROGRAM

a combined license application must explain the kinds and quantities of radioactive materials expected to be produced in the operation and the means for controlling and limiting radioactive effluents and radiation exposures within the limits set forth in 10 C.F.R. Part 20; LBP-09-27, 70 NRC 992 (2009)

applicant is to describe equipment to be installed to maintain control over radioactive materials in gaseous and liquid effluents produced during normal reactor operations, including expected operational occurrences; LBP-09-19, 70 NRC 433 (2009)

COL applications must include information on kinds and quantities of materials expected to be produced during plant operation and the means for controlling and limiting radioactive effluents and radiation exposures to comply with Part 20 limits; CLI-09-16, 70 NRC 33 (2009)

for applications filed after January 2, 1971, applicant must identify design objectives and means to maintain levels of radioactive effluents as low as is reasonably achievable; LBP-09-19, 70 NRC 433 (2009)

licensee must use procedures and controls to reduce occupational doses and doses to members of the public to levels that are as low as reasonably achievable; CLI-09-16, 70 NRC 33 (2009)

the combined license application must describe the means for controlling and limiting the radioactive effluents and radiation exposures from the proposed nuclear reactors; LBP-10-20, 72 NRC 571 (2010)

### RADIATION MONITORING SYSTEM

interim protective measures to prevent contamination from slag and baghouse dust piles until final decommissioning is completed are discussed; CLI-09-1, 69 NRC 1 (2009)

monitoring, and the installation of monitoring wells, is a matter for ongoing operation and maintenance, and not within the scope of matters properly considered in a license renewal; LBP-08-22, 68 NRC 590 (2008)

### RADIATION PROTECTION PROGRAM

a combined license application must include a description of equipment and measures taken to ensure that any exposures to radioactive materials such as low-level radioactive waste are kept as low as reasonably achievable, including a description of the provisions for storage of solid waste containing radioactive materials; LBP-09-10, 70 NRC 51 (2009)

ALARA means making every reasonable effort to maintain exposure to radiation as far below the dose limits set out in Part 20 as is possible, consistent with the activity for which the licensed activity is undertaken; LBP-07-6, 65 NRC 429 (2007)

## SUBJECT INDEX

- applicant must explain how it intends, through its design, operational organization, and procedures, to comply with relevant substantive radiation protection requirements in 10 C.F.R. Part 20, including, but not limited to, low-level radioactive waste handling and storage; LBP-09-27, 70 NRC 992 (2009)
- applicant must have a program to achieve occupational doses and doses to members of the public that are as low as is reasonably achievable; LBP-10-20, 72 NRC 571 (2010)
- applicant's recordkeeping and reporting commitments for occupational exposure to radiation exceeding the dose limits are described; LBP-07-6, 65 NRC 429 (2007)
- containers are exempted from labeling requirements if they are attended by an individual who takes the precautions necessary to prevent the exposure of individuals in excess of the established limits; LBP-07-6, 65 NRC 429 (2007)
- DOE need not weigh ALARA considerations outside the geologic repository operations area for which it is responsible; LBP-10-22, 72 NRC 661 (2010)
- how a COL applicant intends, through its design, operational organization, and procedures, to comply with relevant substantive radiation protection requirements in 10 C.F.R. Part 20 is governed by 10 C.F.R. 52.79(a)(3); LBP-10-20, 72 NRC 571 (2010)
- plans or procedures are a valid means by which radiation exposure may be controlled; LBP-10-20, 72 NRC 571 (2010)
- potassium iodide distribution beyond the 10-mile emergency planning zone is not necessary; LBP-09-16, 70 NRC 227 (2009)
- recordkeeping and reporting commitments for occupational exposure to radiation exceeding the dose limits are described; LBP-07-6, 65 NRC 429 (2007)
- the final safety analysis report must include the kinds and quantities of radioactive materials expected to be produced by low-level radioactive waste in the operation and the means for controlling and limiting radioactive effluents and radiation exposures within the limits set forth in 10 C.F.R. Part 20; LBP-10-20, 72 NRC 571 (2010)
- the occupational radiation protection measures that a uranium enrichment facility must address are discussed; LBP-07-6, 65 NRC 429 (2007)
- use of conspicuously posted signs, in conjunction with the applicant's radiation work permit program, is an acceptable alternative; LBP-07-6, 65 NRC 429 (2007)
- ### RADIATION PROTECTION STANDARDS
- a challenge to the pending EPA proposed rule setting standards for offsite releases from radioactive materials that would be stored in the proposed Yucca Mountain high-level waste geologic repository is inadmissible; LBP-08-16, 68 NRC 361 (2008)
- a decommissioning plan for a restricted release site will be judged exclusively upon whether residual radioactivity levels will be as low as is reasonably achievable and the total effective dose equivalent to offsite human beings will be below 25 mrem; LBP-08-4, 67 NRC 105 (2008)
- a substantial regulatory framework governs release limits on radioactive gases and requires calculations or measurements of radioactive releases; CLI-08-17, 68 NRC 231 (2008)
- licensees must use, to the extent practical, procedures and engineering controls based on sound radiation protection principles to achieve occupational doses that are as low as reasonably achievable; CLI-09-14, 69 NRC 580 (2009); LBP-10-22, 72 NRC 661 (2010)
- no protection standard has been promulgated for the high-level waste repository post-closure period beyond 10,000 years following disposal of high-level waste; CLI-08-20, 68 NRC 272 (2008)
- NRC must modify its technical requirements and criteria for the high-level waste repository as necessary to be consistent with final EPA standards; CLI-08-20, 68 NRC 272 (2008)
- Part 63 licensees are required to use, to the extent practical, procedures and engineering controls based upon sound radiation protection principles to achieve occupational doses and doses to members of the public that are as low as is reasonably achievable; LBP-10-22, 72 NRC 661 (2010)
- petitioners' allegation that NRC regulations are insufficient to protect the constitutional right of due process under the law by allowing citizens to be exposed to impermissible levels of radiation is inadmissible; LBP-08-16, 68 NRC 361 (2008)
- the "total effective dose equivalent" is defined as the sum of the deep-dose equivalent (for external exposures) and the committed effective dose equivalent (for internal exposures); LBP-08-4, 67 NRC 105 (2008)

## SUBJECT INDEX

the regulatory limit of 25 mrem per year represents the value for the total effective dose equivalent; LBP-08-4, 67 NRC 105 (2008)

See also Dose Limits

### RADIATION SAFETY

each licensee must evaluate the extent of radiation hazards that may be present; DD-10-3, 72 NRC 171 (2010)

petitioner alleges that routine unprotected handling of an unshielded neutron source by licensed operators and uncontrolled access by untrained and unlicensed facility visitors to this neutron source violated ALARA requirements; DD-10-3, 72 NRC 171 (2010)

### RADIATION SHIELDING

adequacy of applicant's control room and equipment design for radiological protections, in light of the fact that the reactor is proposed to be located within the EPZ of an existing reactor, is an issue that is appropriate in a combined license or standard design certification proceeding; LBP-09-10, 70 NRC 51 (2009)

### RADIATION SURVEYS

licensee's actions to survey an abnormal radiological effluent release affecting groundwater conform to regulatory requirements; DD-08-2, 68 NRC 339 (2008)

the field sampling plan's analysis of waterways is intended to identify groundwater, possible cave, and surface water paths and to assess the contents of those waters to determine if depleted uranium is leaching or will leach off the site in quantities significant enough that humans might receive more than 25 mrems of total radioactive exposure from all of the site's pathways; LBP-08-4, 67 NRC 105 (2008)

### RADIOACTIVE CONTAMINATION

NRC includes the EPA drinking water standard in the technical specifications that a licensee must meet; LBP-07-9, 65 NRC 539 (2007)

### RADIOACTIVE EFFLUENTS

a challenge to applicant's site-specific measurements of adsorption and retention coefficients relative to hydrological radionuclide transport is an admissible contention; LBP-09-16, 70 NRC 227 (2009)

a combined license application must explain the kinds and quantities of radioactive materials expected to be produced in the operation and the means for controlling and limiting radioactive effluents and radiation exposures within the limits set forth in 10 C.F.R. Part 20; CLI-09-16, 70 NRC 33 (2009); LBP-09-27, 70 NRC 992 (2009)

a request for action regarding leaks or potential leaks of radioactively contaminated water into the ground is granted in part regarding power reactors and denied regarding research and test reactors; DD-06-3, 64 NRC 407 (2006)

applicant is to describe equipment to be installed to maintain control over radioactive materials in gaseous and liquid effluents produced during normal reactor operations, including expected operational occurrences; LBP-09-19, 70 NRC 433 (2009)

for applications filed after January 2, 1971, applicant must identify design objectives and means to maintain levels of radioactive effluents as low as is reasonably achievable; LBP-09-19, 70 NRC 433 (2009)

inadequacy of environmental report's reliance on Table S-3 regarding radioactive effluents from the uranium fuel cycle is not litigable in a combined license proceeding; LBP-08-16, 68 NRC 361 (2008)

licensee's efforts to maintain compliance with dose limits for individual members of the public in light of radiological release from cracked spent fuel pool are described; DD-08-2, 68 NRC 339 (2008)

petitioner's concerns regarding underground leakage of contaminated water at Indian Point are addressed; DD-08-2, 68 NRC 339 (2008)

safety regulations in 10 C.F.R. 52.79(a)(3) require applicant to describe the kinds and quantities of radioactive materials that will be produced in operating a proposed new power plant and to describe the means for controlling and limiting the radioactive effluents and radiation exposures; CLI-10-2, 71 NRC 27 (2010)

Staff and applicant must address matters such as the environmental impacts of unregulated seepage into adjacent groundwater in their environmental impact statement and environmental report; LBP-09-25, 70 NRC 867 (2009)

## SUBJECT INDEX

Table S-3 assumes that solid, low-level waste from reactors will be disposed of through shallow land burial, and concludes that this kind of disposal will not result in the release of any significant effluent to the environment; LBP-09-16, 70 NRC 227 (2009)

the combined license application must describe the means for controlling and limiting the radioactive effluents and radiation exposures from the proposed nuclear reactors; LBP-10-20, 72 NRC 571 (2010)

the final safety analysis report must include the kinds and quantities of radioactive materials expected to be produced by low-level radioactive waste in the operation and the means for controlling and limiting radioactive effluents and radiation exposures within the limits set forth in 10 C.F.R. Part 20; LBP-10-20, 72 NRC 571 (2010)

### RADIOACTIVE MATERIALS

pyrochlore is subject to NRC regulation as a radioactive source material; LBP-08-8, 67 NRC 409 (2008)

### RADIOACTIVE RELEASES

a substantial regulatory framework governs release limits on radioactive gases and requires calculations or measurements of radioactive releases; CLI-08-17, 68 NRC 231 (2008)

an early site permit is conditioned to require that radioactive waste management systems, structures, and components for a future reactor must include features to preclude accidental releases of radionuclides into potential liquid pathways; CLI-07-14, 65 NRC 216 (2007)

an independent spent fuel storage installation is essentially a passive structure rather than an operating facility, and there therefore is less chance of widespread radioactive release; LBP-09-20, 70 NRC 565 (2009)

analysis of a fission product release from an accident uses the expected demonstrable containment leak rate and any fission product cleanup systems intended to mitigate the consequences of the accidents; LBP-09-19, 70 NRC 433 (2009)

contentions relating to the conclusions that the NRC Staff reaches in its NEPA analysis with regard to the environmental impacts from radiological releases to groundwater must await future publication of its supplemental environmental impact statement; LBP-08-13, 68 NRC 43 (2008)

early site permit applicants must perform an analysis of the postulated fission product release to evaluate the offsite radiological consequences; LBP-09-19, 70 NRC 433 (2009)

if chelating agents are to be comingled in radioactive waste liquids or used to mitigate an accidental release, then they have to be specifically accounted for in the dose analyses; LBP-09-19, 70 NRC 433 (2009)

in applicant's safety assessment, the fission product releases in question are associated with accidents that have generally been assumed to result in substantial meltdown of the core with subsequent release into the containment of appreciable quantities of fission products; LBP-09-19, 70 NRC 433 (2009)

individuals located at the boundary of the exclusion area cannot be exposed to more than 25 rem total effective dose equivalent in any 2-hour period, and any individual located at the outer boundary of the low population zone cannot be exposed to more than 25 rem TEDE during the entire period of any radioactive release; LBP-09-19, 70 NRC 433 (2009)

only features, events, and processes that produce significant changes in releases or doses within the first 10,000 years after disposal in the high-level waste repository must be included in performance assessments; LBP-10-22, 72 NRC 661 (2010)

potential radiological risks associated with an ISFSI license transfer are lower than those for an operating facility, because an ISFSI is essentially a passive structure, and there therefore is less chance of widespread radioactive release; CLI-07-19, 65 NRC 423 (2007)

releases from the nuclear fuel cycle in general, incidences of childhood cancers near nuclear power plants, and a request for the NRC to address radioactive releases from the burning of coal at fossil fuel plants are outside the scope of a combined license proceeding; LBP-09-16, 70 NRC 227 (2009)

Staff's generic environmental impact statement for license renewal has already performed a discretionary analysis of terrorist acts in connection with license renewal and concluded that the core damage and radiological release from such acts would be no worse than the damage and release to be expected from internally initiated events; CLI-07-8, 65 NRC 124 (2007)

the fission product release assumed for the final safety analysis report is based on a major accident assumed to result in substantial meltdown of the core with subsequent release into the containment of appreciable quantities of fission products; LBP-09-10, 70 NRC 51 (2009)

## SUBJECT INDEX

the safety analysis report component of an application for a Standard Design Certification must analyze and address the problem of extremely low probability for accidents that could result in the release of significant quantities of radioactive fission products; LBP-09-10, 70 NRC 51 (2009)

to the extent that petitioners have any basis for claiming that there are current, ongoing excessive radiological releases from a facility, petitioners may seek NRC enforcement action under 10 C.F.R. 2.206; CLI-08-17, 68 NRC 231 (2008)

### RADIOACTIVE WASTE

depleted uranium is classified as Class A waste under current agency regulations; LBP-08-16, 68 NRC 361 (2008)

if chelating agents are to be comingled in radioactive waste liquids or used to mitigate an accidental release, then they have to be specifically accounted for in the dose analyses; LBP-09-19, 70 NRC 433 (2009)

waste that does not contain any of the radionuclides listed in 10 C.F.R. 61.55(a)(2)(iv) is, by default, designated Class A waste; LBP-06-8, 63 NRC 241 (2006)

### RADIOACTIVE WASTE, HIGH-LEVEL

applicant is required to take Table S-3 as the basis for evaluating the contribution of the environmental effects of management of high-level wastes related to uranium fuel cycle activities; LBP-09-21, 70 NRC 581 (2009)

contentions concerning an applicant's plan for disposal of Greater-Than-Class-C radioactive waste cannot be admitted because disposal of that type of waste is the responsibility of the federal government; LBP-09-4, 69 NRC 170 (2009)

contentions that concern greater-than-Class-C waste, seek to require a change to the decommissioning cost estimate, or constitute a challenge to Table S-3 of 10 C.F.R. 51.51 are inadmissible; LBP-09-16, 70 NRC 227 (2009)

disposal of greater-than-Class-C waste is the responsibility of the federal government; CLI-10-2, 71 NRC 27 (2010); LBP-09-16, 70 NRC 227 (2009)

even assuming arguendo that applicant might someday require a permit under Part 61 for a disposal facility, that issue is too speculative at the combined license stage and is therefore not material to the findings the NRC must make to support the action that is involved in the COL proceeding; LBP-09-27, 70 NRC 992 (2009)

Part 61 is inapplicable in a combined license proceeding because it applies only to land disposal facilities that receive waste from others, not to onsite facilities where licensee intends to store its own low-level radioactive waste; LBP-09-27, 70 NRC 992 (2009)

petitioners' assertion that applicant's environmental report fails to include an analysis of the impacts of a governmental entity managing long-term storage of high-level waste onsite and cost quantifications of such management fails to create a genuine dispute; LBP-09-21, 70 NRC 581 (2009)

recoverability of spent nuclear fuel storage expenses is equally applicable to greater-than-Class-C waste, which is stored onsite in the same manner as spent nuclear fuel; CLI-10-2, 71 NRC 27 (2010)

there is reasonable assurance that a geologic repository will be available by 2025 and that sufficient repository capacity will be available within 30 years beyond the licensed life to dispose of high-level waste and spent fuel generated by any reactor up to that time; LBP-09-18, 70 NRC 385 (2009)

utilities must dispose of greater-than-Class-C waste before they can decommission reactor sites; CLI-10-2, 71 NRC 27 (2010)

### RADIOACTIVE WASTE, LOW-LEVEL

a combined license application must include a description of equipment and measures taken to ensure that any exposures to radioactive materials such as LLRW are kept as low as reasonably achievable, including a description of the provisions for storage of solid waste containing radioactive materials; LBP-09-10, 70 NRC 51 (2009)

a combined license application's lack of consideration of any alternative to offsite disposal of LLRW is a material issue for litigation; LBP-09-18, 70 NRC 385 (2009)

a contention is timely to the extent it challenges the adequacy of the new LLRW storage plan, but untimely as to those aspects of the contention that merely reargue issues already decided by the board, without identifying any new information relevant to those issues; LBP-09-27, 70 NRC 992 (2009)

a literal reading of 10 C.F.R. 61.55(a)(6) renders depleted uranium a Class A waste, but the Part 61 rulemaking did not analyze the uranium enrichment waste stream; CLI-06-15, 63 NRC 687 (2006)

## SUBJECT INDEX

a waste confidence rulemaking is not the appropriate instrument for resolving LLRW issues, particularly issues of disposal; CLI-09-3, 69 NRC 68 (2009)

a well-pleaded environmental contention concerning the effects of long-term onsite management of low-level radioactive waste is admissible; CLI-10-2, 71 NRC 27 (2010)

an amended contention challenging applicant's final safety analysis report on its LLRW storage plan was admitted based on intervenor's adequately supported challenge to the plan's provisions regarding waste volume reduction; LBP-10-8, 71 NRC 433 (2010)

an application-specific contention concerning the environmental consequences of the need for extended onsite storage of LLRW is admissible if it satisfies the requirements of 10 C.F.R. 2.309(f)(1); LBP-09-4, 69 NRC 170 (2009)

an approach for disposition of depleted tails that is consistent with the USEC Privatization Act, such as transfer to DOE for disposal, constitutes a plausible strategy; CLI-10-4, 71 NRC 56 (2010)

applicant must explain how it intends, through its design, operational organization, and procedures, to comply with relevant substantive radiation protection requirements in 10 C.F.R. Part 20, including, but not limited to, LLRW handling and storage; LBP-09-27, 70 NRC 992 (2009)

applicant seeks an exemption from the disposal site requirements of 10 C.F.R. 30.3 and 70.3 to allow disposal of low-activity radioactive waste from the Hematite facility at a site near Grand View, Idaho, that is not licensed by the NRC; LBP-09-28, 70 NRC 1019 (2009)

applicant's COLA discussion of LLRW management contained no omission where the applicant addressed the closure of the Barnwell LLRW disposal facility, discussed in detail additional waste minimization measures, and committed to build an additional storage facility in accordance with NRC guidelines if further additional storage became necessary; LBP-10-20, 72 NRC 571 (2010)

applicant's COLA fails to address the management of low-level radioactive waste plan for a longer term than envisioned in the COLA; LBP-10-20, 72 NRC 571 (2010)

applicant's contingent long-term onsite LLRW storage facility and the contents of its final safety analysis report with regard to that facility are not governed by 10 C.F.R. 52.79(a)(4) as a part of the reactor facilities to be constructed under the requested combined licenses; LBP-10-8, 71 NRC 433 (2010)

applicant's reliance on a facility for LLRW disposal that will no longer permit out-of-compact entities to import LLRW for disposal at its site could provide the basis for a new contention; LBP-10-8, 71 NRC 433 (2010)

applicants' assertion that LLRW could be transferred to another licensee or that some other arrangement might be established in the future is not sufficient to erase the requirement that reasonably foreseeable environmental impacts be assessed in an environmental report; CLI-09-20, 70 NRC 911 (2009)

application for license to import low-level radioactive waste from Italy for processing and ultimate disposal in Utah is held in abeyance; CLI-08-24, 68 NRC 491 (2008)

arguments premised on the prediction that someday a nuclear plant site will become a permanent storage or disposal facility for low-level radioactive waste are too speculative and therefore not material to the findings the NRC must make to support the action that is involved in a combined license proceeding; LBP-09-16, 70 NRC 227 (2009)

because applicant did not apply for an early site permit, petitioners thus are not precluded from raising an environmental issue relative to failure of applicant's environmental report to assess the onsite impacts associated with the potential long-term storage of low-level waste; LBP-08-16, 68 NRC 361 (2008)

boards have authority to narrow LLRW contentions; LBP-09-16, 70 NRC 227 (2009)

combined license applicants are to consider long-term onsite LLRW storage, but 10 C.F.R. 52.79(a)(3) sets no quantity or time restrictions relative to onsite storage of such waste; CLI-09-16, 70 NRC 33 (2009); LBP-09-27, 70 NRC 992 (2009)

combined license applicants should explain their current plan for management of LLRW, given the lack of an offsite disposal facility, and the potential environmental impact of retaining LLRW at the reactor site for an extended period; LBP-09-16, 70 NRC 227 (2009)

contentions challenging low-level radioactive waste storage may not rely on 10 C.F.R. Part 61, which pertains to land disposal facilities; CLI-10-2, 71 NRC 27 (2010)

contentions may not challenge Table S-3, consistent with NRC policy that regulations may not be the subject of collateral attack in an adjudication; CLI-10-2, 71 NRC 27 (2010)

criteria for NRC issuance of an import license are described; CLI-08-24, 68 NRC 491 (2008)

## SUBJECT INDEX

depleted uranium is appropriately classified as a low-level radioactive waste; CLI-09-15, 70 NRC 1 (2009); CLI-10-4, 71 NRC 56 (2010); LBP-07-6, 65 NRC 429 (2007)

detailed design, location, and health impacts information on low-level radioactive waste storage is not required in the combined license application; LBP-10-20, 72 NRC 571 (2010)

from a safety standpoint, the required LLRW storage information is tied to the combined license applicant's particular plans for compliance through design, operational organization, and procedures; CLI-10-2, 71 NRC 27 (2010)

how applicant intends to handle LLRW in the absence of an offsite disposal facility is material to the findings the agency must make on a combined license; LBP-09-3, 69 NRC 139 (2009); LBP-09-4, 69 NRC 170 (2009)

licensee's onsite LLRW storage facility must comply with requirements for security, occupational and public dose limits, survey and monitoring, labeling, and reports and record retention; CLI-09-16, 70 NRC 33 (2009)

LLRW contentions were not admissible because of technical defects in the pleadings such as failure to satisfy 10 C.F.R. 2.309(f)(1)(vi), (i), or (ii); LBP-10-20, 72 NRC 571 (2010)

LLRW storage information required by 10 C.F.R. 52.79(a)(3) is tied to the COL applicant's particular plans for compliance through design, operational organization, and procedures; LBP-10-20, 72 NRC 571 (2010)

Part 61 is inapplicable in a combined license proceeding because it applies only to land disposal facilities that receive waste from others, not to onsite facilities where licensee intends to store its own low-level radioactive waste; LBP-09-10, 70 NRC 51 (2009); CLI-09-3, 69 NRC 68 (2009); LBP-09-27, 70 NRC 992 (2009)

power reactor licensees have safely stored and managed LLRW under NRC oversight for years without the development of immediate safety problems or concerns; LBP-09-16, 70 NRC 227 (2009)

purported failure to provide detailed information regarding design, location, and worker health impacts does not identify a deficiency in final safety analysis report LLRW information that is required to be provided in the COL application; LBP-10-8, 71 NRC 433 (2010)

questions of the safety and environmental impacts of onsite LLRW storage are largely site- and design-specific and appropriately decided in an individual licensing proceeding, provided that litigants proffer properly framed and supported contentions; CLI-09-16, 70 NRC 33 (2009); LBP-09-10, 70 NRC 51 (2009)

regulations do not dictate the duration of onsite low-level radioactive waste storage capacity; LBP-10-20, 72 NRC 571 (2010)

Table S-3 assumes that solid, low-level waste from reactors will be disposed of through shallow land burial, and concludes that this kind of disposal will not result in the release of any significant effluent to the environment; LBP-09-16, 70 NRC 227 (2009)

the board did not create a new regulatory requirement in finding that an application must show how the proposed facility will deal with long-term storage of low-level radioactive waste; CLI-10-2, 71 NRC 27 (2010)

the Commission declines to accept the board's suggestion that the Commission consider instituting a "low-level waste confidence" rulemaking proceeding; CLI-09-3, 69 NRC 68 (2009)

the fact that an extended LLRW storage plan is contingent does not mean that it does not need to comply with 10 C.F.R. 52.79 or that it is subject to a relaxed standard; LBP-10-20, 72 NRC 571 (2010)

the final safety analysis report must include the kinds and quantities of radioactive materials expected to be produced by LLRW in the operation and the means for controlling and limiting radioactive effluents and radiation exposures within the limits set forth in 10 C.F.R. Part 20; LBP-10-20, 72 NRC 571 (2010)

the licensing board did not commit reversible error by admitting a contention based on LLRW storage duration because the NRC Staff itself had issued a request for additional information on this very issue and thus this conflicted with Staff's argument that the issue is immaterial to the findings that must be made on the application; LBP-09-27, 70 NRC 992 (2009)

the questions of the safety and environmental impacts of onsite low-level waste storage are, in the Commission's view, largely site- and design-specific, and appropriately decided in an individual

## SUBJECT INDEX

- licensing proceeding, provided that litigants proffer properly framed and supported contentions; CLI-09-3, 69 NRC 68 (2009)
- there is no prohibition on an applicant using a plan for compliance with section 52.79(a)(3) that includes contingent plans should future low-level radioactive waste storage become necessary; LBP-10-20, 72 NRC 571 (2010)
- waste disposal contentions have been admitted when that issue was not sufficiently discussed in the applications and there was no mention of the closure of the Barnwell facility; LBP-09-18, 70 NRC 385 (2009)
- ### RADIOACTIVE WASTE DISPOSAL
- a combined license application must explain how applicant intends to manage low level radioactive waste in the absence of an offsite disposal facility; LBP-09-4, 69 NRC 170 (2009)
- a combined license application's lack of consideration of any alternative to offsite disposal of low-level radioactive waste is a material issue for litigation; LBP-09-18, 70 NRC 385 (2009)
- a facility that is licensed to receive only Class A low-level radioactive waste is not pertinent to a contention regarding Class B and C waste; LBP-09-18, 70 NRC 385 (2009)
- a "land disposal facility" includes any land, building and structures, and equipment that are intended to be used for the disposal of radioactive wastes, but does not include a geologic repository; LBP-06-8, 63 NRC 241 (2006)
- a "near-surface disposal facility" is a land disposal facility in which radioactive waste is disposed of in or within the upper 30 meters of the earth's surface; LBP-06-8, 63 NRC 241 (2006)
- a waste confidence rulemaking is not the appropriate instrument for resolving low-level radioactive waste issues, particularly issues of disposal; CLI-09-3, 69 NRC 68 (2009)
- a well-pleaded environmental contention concerning the effects of long-term onsite management of low-level radioactive waste is admissible; CLI-10-2, 71 NRC 27 (2010)
- an approach for disposition of depleted tails that is consistent with the USEC Privatization Act, such as transfer to DOE for disposal, constitutes a plausible strategy; CLI-10-4, 71 NRC 56 (2010)
- an approach that is consistent with the USEC Privatization Act, such as transfer to DOE for disposal, constitutes a plausible strategy for disposition of depleted tails; CLI-09-15, 70 NRC 1 (2009)
- applicant seeks an exemption from the disposal site requirements of 10 C.F.R. 30.3 and 70.3 to allow disposal of low-activity radioactive waste from the Hematite facility at a site near Grand View, Idaho, that is not licensed by the NRC; LBP-09-28, 70 NRC 1019 (2009)
- applicants' assertion that low-level radioactive waste could be transferred to another licensee or that some other arrangement might be established in the future is not sufficient to erase the requirement that reasonably foreseeable environmental impacts be assessed in an environmental report; CLI-09-20, 70 NRC 911 (2009)
- Class A, B, and C wastes are generally appropriate for near-surface disposal, whereas wastes having a greater radioactivity than Class C waste typically are not appropriate for near-surface disposal; LBP-06-8, 63 NRC 241 (2006)
- combined license applicants are to consider long-term onsite low-level radioactive waste storage, but 10 C.F.R. 52.79(a)(3) sets no quantity or time restrictions relative to onsite storage of such waste; CLI-09-16, 70 NRC 33 (2009)
- contention in combined license proceeding focusing exclusively on regulations governing waste disposal is inadmissible; CLI-09-16, 70 NRC 33 (2009)
- contentions challenging low-level radioactive waste storage may not rely on 10 C.F.R. Part 61, which pertains to land disposal facilities; CLI-10-2, 71 NRC 27 (2010)
- contentions concerning an applicant's plan for disposal of Greater-Than-Class-C radioactive waste cannot be admitted because disposal of that type of waste is the responsibility of the federal government; LBP-09-4, 69 NRC 170 (2009)
- disposal of greater-than-Class-C waste is the responsibility of the federal government; CLI-10-2, 71 NRC 27 (2010); LBP-09-16, 70 NRC 227 (2009)
- DOE must accept for disposition depleted uranium from a private uranium enrichment facility upon request of the facility operator or appropriate third party; LBP-06-15, 63 NRC 591 (2006)
- from a safety standpoint, the required low-level radioactive waste storage information is tied to the combined license applicant's particular plans for compliance through design, operational organization, and procedures; CLI-10-2, 71 NRC 27 (2010)

## SUBJECT INDEX

if new information becomes available in the course of waste confidence rulemaking proceedings that contravenes a combined license application, petitioner may file a motion to admit a new or amended contention; LBP-09-18, 70 NRC 385 (2009)

in a future combined license proceeding, petitioner could proffer an application-specific contention suitable for litigation on the subject of onsite storage of low-level radioactive waste; CLI-09-3, 69 NRC 68 (2009)

low-level radioactive waste disposal contentions have been admitted when that issue was not sufficiently discussed in the applications and there was no mention of the closure of the Barnwell facility; LBP-09-18, 70 NRC 385 (2009)

low-level radioactive waste disposal contentions may not challenge Table S-3, consistent with NRC policy that regulations may not be the subject of collateral attack in an adjudication; CLI-10-2, 71 NRC 27 (2010)

neither an intervenor nor an applicant/licensee nor the NRC has the authority to challenge or direct DOE's estimates of the fees it will charge to a uranium enrichment facility that requests DOE to disposition its depleted uranium waste; LBP-06-15, 63 NRC 591 (2006)

no facility located in any party state may accept low-level waste generated outside the region comprised of the party states, except under a specific procedure requiring approval of the member states; CLI-08-24, 68 NRC 491 (2008)

Part 61 of Title 10 applies only to land disposal facilities that receive waste from others, not to onsite facilities where the licensee intends to store its own low-level radioactive waste; CLI-09-3, 69 NRC 68 (2009); LBP-09-27, 70 NRC 992 (2009)

ratepayers are not third-party beneficiaries of the Standard Contract and therefore cannot sue for breach of contract when DOE fails to dispose of nuclear waste by the statutory deadline; LBP-10-11, 71 NRC 609 (2010)

some near-surface disposal facilities may not be capable of accepting large quantities of depleted uranium from enrichment operations, and dose pathway analyses should be performed on a site-specific basis to ensure compliance with Part 61, Subpart C; LBP-06-8, 63 NRC 241 (2006)

Table S-3 assumes that solid, low-level waste from reactors will be disposed of through shallow land burial, and concludes that this kind of disposal will not result in the release of any significant effluent to the environment; LBP-09-16, 70 NRC 227 (2009)

the appropriate state or federal regulatory authority, such as an Agreement State, will conduct any necessary site-specific evaluation to confirm that applicable radiological dose limits and standards for disposal of depleted uranium can be met at a particular site; CLI-06-15, 63 NRC 687 (2006)

the questions of the safety and environmental impacts of onsite low-level waste storage are, in the Commission's view, largely site- and design-specific, and appropriately decided in an individual licensing proceeding, provided that litigants proffer properly framed and supported contentions; CLI-09-3, 69 NRC 68 (2009)

there is reasonable assurance that a geologic repository will be available by 2025 and that sufficient repository capacity will be available within 30 years beyond the licensed life to dispose of high-level waste and spent fuel generated by any reactor up to that time; LBP-09-18, 70 NRC 385 (2009)

transfer of depleted uranium from enrichment operations to DOE for deconversion and disposal constitutes a plausible strategy for disposition; LBP-06-15, 63 NRC 591 (2006); LBP-07-6, 65 NRC 429 (2007)

utilities must dispose of greater-than-Class-C waste before they can decommission reactor sites; CLI-10-2, 71 NRC 27 (2010)

whether near-surface disposal is appropriate for a particular type of radioactive waste turns in large part on how that waste is classified; LBP-06-8, 63 NRC 241 (2006)

See also Waste Confidence Rule

### RADIOACTIVE WASTE MANAGEMENT

an integral aspect of the Commission's determination of a facility's appropriateness for disposal of imported waste is whether the facility can actually accept that waste for disposal; CLI-08-24, 68 NRC 491 (2008)

applicant is required to take Table S-3 as the basis for evaluating the contribution of the environmental effects of management of high-level wastes related to uranium fuel cycle activities; LBP-09-21, 70 NRC 581 (2009)

## SUBJECT INDEX

applicant must explain how it intends, through its design, operational organization, and procedures, to comply with relevant substantive radiation protection requirements in 10 C.F.R. Part 20, including, but not limited to, low-level radioactive waste handling and storage; LBP-09-27, 70 NRC 992 (2009)

application for license to import low-level radioactive waste from Italy for processing and ultimate disposal in Utah is held in abeyance; CLI-08-24, 68 NRC 491 (2008)

combined license applicants should explain their current plan for management of low-level radioactive waste, given the lack of an offsite disposal facility, and the potential environmental impact of retaining LLRW at the reactor site for an extended period; LBP-09-16, 70 NRC 227 (2009)

creation of interstate compacts is authorized as may be necessary to provide for the establishment and operation of regional disposal facilities for low-level radioactive waste; CLI-08-24, 68 NRC 491 (2008)

only the management of Class B and Class C wastes is properly the subject of a contention in a combined license proceeding; LBP-09-16, 70 NRC 227 (2009)

petitioners' assertion that applicant's environmental report fails to include an analysis of the impacts of a governmental entity managing long-term storage of high-level waste onsite and cost quantifications of such management fails to create a genuine dispute; LBP-09-21, 70 NRC 581 (2009)

when authorized by Congress, interstate compacts are allowed to restrict the use of regional disposal facilities under the compact to the disposal of low-level radioactive waste generated within the compact region; CLI-08-24, 68 NRC 491 (2008)

### RADIOACTIVE WASTE STORAGE

a contention is timely to the extent it challenges the adequacy of the new low-level radioactive waste storage plan, but untimely as to those aspects of the contention that merely reargue issues already decided by the board, without identifying any new information relevant to those issues; LBP-09-27, 70 NRC 992 (2009)

an agency is not authorized to grant conditional approval to plans that do nothing more than promise to do tomorrow what the statute requires today; LBP-10-20, 72 NRC 571 (2010)

an amended contention challenging applicant's final safety analysis report on its low-level radioactive waste storage plan was admitted based on intervenor's adequately supported challenge to the plan's provisions regarding waste volume reduction; LBP-10-8, 71 NRC 433 (2010)

an application-specific contention concerning the environmental consequences of the need for extended onsite storage of low-level radioactive waste is admissible if it satisfies the requirements of 10 C.F.R. 2.309(f)(1); LBP-09-4, 69 NRC 170 (2009)

applicant's COLA discussion of LLRW management contained no omission where the applicant addressed the closure of the Barnwell LLRW disposal facility, discussed in detail additional waste minimization measures, and committed to build an additional storage facility in accordance with NRC guidelines if further additional storage became necessary; LBP-10-20, 72 NRC 571 (2010)

applicant's combined license application fails to address the management of low-level radioactive waste plan for a longer term than envisioned in the COLA; LBP-10-20, 72 NRC 571 (2010)

applicant's contingent long-term onsite low-level radioactive waste storage facility and the contents of its final safety analysis report with regard to that facility are not governed by 10 C.F.R. 52.79(a)(4) as a part of the reactor facilities to be constructed under the requested combined licenses; LBP-10-8, 71 NRC 433 (2010)

applicant's environmental report must address the environmental costs of management of low-level wastes and high-level wastes related to uranium fuel cycle activities; LBP-08-15, 68 NRC 294 (2008)

applicant's plan for storage of low-level radioactive waste is a litigable issue because it is material to the findings NRC must make to support the action that is involved in a combined license proceeding; LBP-08-15, 68 NRC 294 (2008)

applicant's reliance on a facility for low-level radioactive waste disposal that will no longer permit out-of-compact entities to import LLRW for disposal at its site could provide the basis for a new contention; LBP-10-8, 71 NRC 433 (2010)

arguments premised on the prediction that someday a nuclear plant site will become a permanent storage or disposal facility for low-level radioactive waste are too speculative and therefore not material to the findings the NRC must make to support the action that is involved in a combined license proceeding; LBP-09-16, 70 NRC 227 (2009)

## SUBJECT INDEX

because applicant did not apply for an early site permit, petitioners thus are not precluded from raising an environmental issue relative to failure of applicant's environmental report to assess the onsite impacts of potential long-term storage of low-level waste; LBP-08-16, 68 NRC 361 (2008)

contentions on information a combined license applicant should supply in order to satisfy NRC regulations regarding the safety of long-term storage of low-level radioactive waste are application-specific and thus would benefit from further development by the board and the parties; CLI-09-16, 70 NRC 33 (2009)

detailed design, location, and health impacts information on low-level radioactive waste storage is not required in the combined license application; LBP-10-20, 72 NRC 571 (2010)

even assuming arguendo that applicant might someday require a permit under Part 61 for a disposal facility, that issue is too speculative at the combined license stage and is therefore not material to the findings the NRC must make to support the action that is involved in the COL proceeding; LBP-09-27, 70 NRC 992 (2009)

how applicant intends to handle LLRW in the absence of an offsite disposal facility is material to the findings the agency must make on a combined license; LBP-09-3, 69 NRC 139 (2009)

licensee's onsite low-level radioactive waste storage facility must comply with requirements for security, occupational and public dose limits, survey and monitoring, labeling, and reports and record retention; CLI-09-16, 70 NRC 33 (2009)

low-level radioactive waste contentions were not admissible because of technical defects in the pleadings such as failure to satisfy 10 C.F.R. 2.309(f)(1)(vi), (i), or (ii); LBP-10-20, 72 NRC 571 (2010)

low-level radioactive waste storage information required by 10 C.F.R. 52.79(a)(3) is tied to the COL applicant's particular plans for compliance through design, operational organization, and procedures; LBP-10-20, 72 NRC 571 (2010)

NRC regulations set no quantity or time restrictions relative to onsite storage of low-level radioactive waste; LBP-09-27, 70 NRC 992 (2009); LBP-10-20, 72 NRC 571 (2010)

Part 61 only applies to the land disposal of radioactive waste received from other persons and is therefore inapplicable to the issue of low-level waste generated and managed onsite at the nuclear power plant; LBP-09-10, 70 NRC 51 (2009)

petitioner failed to establish materiality of its contention related to management of low-level radioactive waste by referring to 10 C.F.R. Part 61 because applicant was not seeking a license under Part 61, and it was speculative whether such a license would ever be necessary; LBP-08-15, 68 NRC 294 (2008)

power reactor licensees have safely stored and managed low-level radioactive waste under NRC oversight for years without the development of immediate safety problems or concerns; LBP-09-16, 70 NRC 227 (2009)

purported failures to provide detailed information regarding design, location, and worker health impacts do not identify a deficiency in final safety analysis report low-level radioactive waste information that is required to be provided in the COL application; LBP-10-8, 71 NRC 433 (2010)

questions of the safety and environmental impacts of onsite low-level waste storage are largely site- and design-specific and appropriately decided in an individual licensing proceeding, provided that litigants proffer properly framed and supported contentions; LBP-09-10, 70 NRC 51 (2009); LBP-09-16, 70 NRC 227 (2009)

spent fuel can be stored safely onsite for at least 30 years beyond a plant's licensed life for operation; LBP-09-17, 70 NRC 311 (2009)

the board did not create a new regulatory requirement in finding that an application must show how the proposed facility will deal with long-term storage of low-level radioactive waste; CLI-10-2, 71 NRC 27 (2010)

the fact that an extended low-level radioactive waste storage plan is contingent does not mean that it does not need to comply with 10 C.F.R. 52.79 or that it is subject to a relaxed standard; LBP-10-20, 72 NRC 571 (2010)

the FSAR was configured to accommodate at least 10 years of onsite storage; LBP-10-20, 72 NRC 571 (2010)

the licensing board did not commit reversible error by admitting a contention based on low-level radioactive waste storage duration because the NRC Staff itself had issued a request for additional information on this very issue and thus this conflicted with Staff's argument that the issue is immaterial to the findings that must be made on the application; LBP-09-27, 70 NRC 992 (2009)

## SUBJECT INDEX

there is no prohibition on an applicant using a plan for compliance with section 52.79(a)(3) that includes contingent plans should future low-level radioactive waste storage become necessary; LBP-10-20, 72 NRC 571 (2010)

there is no requirement in section 52.79(a)(3) for applicant's FSAR to include details regarding building materials and high-integrity containers, exact location, or health impacts on employees for the contingent onsite long-term LLRW storage facility; LBP-10-20, 72 NRC 571 (2010)

See also Dry Cask Storage; High-Level Waste Repository

### RADIOACTIVE WASTE SYSTEMS

an early site permit is conditioned to require that radioactive waste management systems, structures, and components for a future reactor must include features to preclude accidental releases of radionuclides into potential liquid pathways; CLI-07-14, 65 NRC 216 (2007)

### RADIOLOGICAL CONTAMINATION

a general assessment of radioactivity within waters of the Great Lakes Basin does not address specific issues with regard to the proposed reactor, and it does not provide any support for petitioners' assertions needed to advance an admissible contention; LBP-09-16, 70 NRC 227 (2009)

a request for action regarding leaks or potential leaks of radioactively contaminated water into the ground is granted in part regarding power reactors and denied regarding research and test reactors; DD-06-3, 64 NRC 407 (2006)

a site characterization plan should provide sufficient information to allow the NRC to determine the extent and range of expected radioactive contamination; LBP-08-4, 67 NRC 105 (2008)

a site will be considered for restricted release if further reductions in residual radioactivity necessary to comply with the provisions of 10 C.F.R. 20.1402 would result in net public or environmental harm or need not be made because residual levels associated with the restricted conditions are as low as reasonably achievable; CLI-09-1, 69 NRC 1 (2009)

after completion of decommissioning, neither licensee nor the NRC retains any continuing obligation or jurisdiction, respectively, with respect to a site, unless new information shows that the Part 20 criteria were not met and the residual radioactivity remaining on the site could result in a significant threat to public health and safety; CLI-09-1, 69 NRC 1 (2009)

allegations of contamination of drinking water are outside the scope of license renewal proceeding because they involve no aging-related issues and are Category 1, or generic, issues; LBP-06-10, 63 NRC 314 (2006)

offsite radiological impacts are a Category 1 issue, and the Commission has determined such impacts to be "small" for all nuclear power plants seeking a renewed license; LBP-08-26, 68 NRC 905 (2008)

the potential for tritium contamination of water is primarily a NEPA issue because it involves the environmental impacts of the proposed early site permit and possible mitigation measures, but also has a safety element because safety regulations require that exposure to radiation be as low as reasonably achievable; LBP-07-9, 65 NRC 539 (2007)

See also Groundwater Contamination

### RADIOLOGICAL EXPOSURE

a contention that new and significant information about cancer rates in communities around a plant shows that another 20 years of operations may result in greater offsite radiological impacts on human health than was previously known is denied; LBP-06-23, 64 NRC 257 (2006)

a small or minor unwanted exposure, even one well within regulatory limits, is sufficient to establish an injury in fact; LBP-08-6, 67 NRC 241 (2008)

allegation that NRC has inadequately characterized human health impacts of radiation exposure from the high-level waste repository is inadmissible in a combined license proceeding; LBP-08-16, 68 NRC 361 (2008)

applicant shall conduct operations so that the total effective dose equivalent to individual members of the public does not exceed 100 millirems per year; LBP-10-20, 72 NRC 571 (2010)

applicant shall provide reasonable assurance that the annual dose equivalent to members of the public from planned discharges not exceed 25 millirems to the whole body; LBP-10-20, 72 NRC 571 (2010)

combined license applications must include information on kinds and quantities of materials expected to be produced during plant operation and the means for controlling and limiting radioactive effluents and radiation exposures to comply with Part 20 limits; CLI-09-16, 70 NRC 33 (2009)

## SUBJECT INDEX

- compliance with limits on radiological exposures, over necessarily long time periods, requires a performance assessment; LBP-09-6, 69 NRC 367 (2009)
- individuals located at the boundary of the exclusion area cannot be exposed to more than 25 rem total effective dose equivalent in any 2-hour period, and any individual located at the outer boundary of the low population zone cannot be exposed to more than 25 rem TEDE during the entire period of any radioactive release; LBP-09-19, 70 NRC 433 (2009)
- licensees must use, to the extent practical, procedures and engineering controls based on sound radiation protection principles to achieve occupational doses that are as low as reasonably achievable; CLI-09-14, 69 NRC 580 (2009)
- licensees subject to the Environmental Protection Agency's generally applicable environmental radiation standards in 40 C.F.R. Part 190 shall comply with those standards; LBP-09-19, 70 NRC 433 (2009)
- numerical limits for radiation exposure, including occupational dose limits and radiation dose limits for members of the public, are provided; LBP-09-19, 70 NRC 433 (2009)
- petitioner's argument that high-explosive munitions could fall onto depleted uranium, pulverizing and igniting the DU and generating aerosols that might travel through the air, providing an inhalation pathway for offsite exposure was contradicted by the Army's statement that it does not use high-impact explosives in the area where DU is present; CLI-10-20, 72 NRC 185 (2010)
- petitioners' assertion that no exposure levels are safe is an impermissible challenge to the exposure limits set forth in the NRC's regulations; LBP-09-16, 70 NRC 227 (2009)
- safety regulations in 10 C.F.R. 52.79(a)(3) require applicant to describe the kinds and quantities of radioactive materials that will be produced in operating a proposed new power plant and to describe the means for controlling and limiting the radioactive effluents and radiation exposures; CLI-10-2, 71 NRC 27 (2010)
- the "total effective dose equivalent" is defined as the sum of the deep-dose equivalent (for external exposures) and the committed effective dose equivalent (for internal exposures); LBP-08-4, 67 NRC 105 (2008)
- the combined license application must describe the means for controlling and limiting the radioactive effluents and radiation exposures from the proposed nuclear reactors; LBP-10-20, 72 NRC 571 (2010)
- the Environmental Protection Agency has established radiation exposure standards under 40 C.F.R. Part 190, the applicability of which the Commission has acknowledged; LBP-09-19, 70 NRC 433 (2009)
- the final safety analysis report must include the kinds and quantities of radioactive materials expected to be produced by low-level radioactive waste in the operation and the means for controlling and limiting radioactive effluents and radiation exposures within the limits set forth in 10 C.F.R. Part 20; LBP-10-20, 72 NRC 571 (2010)
- the geologic repository operations area must meet the requirements of 10 C.F.R. Part 20; CLI-09-14, 69 NRC 580 (2009)
- the preclosure safety analysis for the high-level waste repository must demonstrate that in the event of Category 1 or Category 2 event sequences, prescribed dose limits will be met; CLI-09-14, 69 NRC 580 (2009)
- the safety analysis report for the high-level waste repository application must contain information pertaining to evaluation of potential exposures during the post-closure period beyond 10,000 years following disposal; CLI-08-20, 68 NRC 272 (2008)
- See also Dose Limits
- RADIOLOGICAL MONITORING**
- a site characterization must include sufficient information so that it can effectively track pathways for significant offsite contamination and estimate the quantity of those pathways; LBP-08-4, 67 NRC 105 (2008)
- applicant moves for summary disposition of a contention involving whether leak detection through monitoring wells is necessary as part of the plant's aging management program; LBP-07-12, 66 NRC 113 (2007)
- groundwater, surface, and subsurface water monitoring programs must assess whether depleted uranium will reach offsite humans through drinking water or the consumption of animals or plants that have in turn consumed water from the site in quantities significant enough that those offsite humans might receive more than 25 mrems of total radioactive exposure from all pathways per year; LBP-08-4, 67 NRC 105 (2008)

## SUBJECT INDEX

the board finds that the biota sampling component of the field sampling plan is sufficient to meet the criteria for a 5-year alternate schedule for submission of a decommissioning plan; LBP-08-4, 67 NRC 105 (2008)

this is an operational program that is beyond the scope of license renewal; LBP-07-4, 65 NRC 281 (2007)

### RADIONUCLIDE TRANSPORT

factors important to hydrological radionuclide transport must be obtained from onsite measurements; LBP-09-19, 70 NRC 433 (2009)

in its review of early site permit applications, Staff must consider physical characteristics of the site, specifically noting that factors important to hydrological radionuclide transport must be obtained from onsite measurements; LBP-09-19, 70 NRC 433 (2009)

### RATEMAKING PROCESS

ratepayer impacts are outside the scope of a combined license proceeding because the state, not the NRC, is charged with protecting ratepayers' interests; LBP-09-10, 70 NRC 51 (2009)

### REACTOR COOLING SYSTEMS

asserted deficiencies in the environmental report intake/discharge impact discussion as it is associated with the baseline discussion of aquatic resources, if properly supported, can be admitted for further litigation; LBP-08-16, 68 NRC 361 (2008)

components such as the recirculation outlet nozzle must meet the requirements for Class 1 components in Section III of the ASME Boiler and Pressure Vessel Code; CLI-08-28, 68 NRC 658 (2008)

for license renewal, feedwater, core spray, and reactor recirculation outlet nozzles, as part of the reactor coolant pressure boundary, must meet the metal-fatigue requirements for Class 1 components in section III of the ASME Code; CLI-10-17, 72 NRC 1 (2010)

### REACTOR CORE

in applicant's safety assessment, the fission product releases in question are associated with accidents that have generally been assumed to result in substantial meltdown of the core with subsequent release into the containment of appreciable quantities of fission products; LBP-09-19, 70 NRC 433 (2009)

Staff's generic environmental impact statement for license renewal has already performed a discretionary analysis of terrorist acts in connection with license renewal and concluded that the core damage and radiological release from such acts would be no worse than the damage and release to be expected from internally initiated events; CLI-07-8, 65 NRC 124 (2007)

### REACTOR DESIGN

a board erred in referring a contention to the Staff for consideration in conjunction with the design certification rulemaking without first assessing its admissibility; CLI-10-1, 71 NRC 1 (2010)

a contention raised in a combined license hearing challenging information in a design certification rulemaking, if otherwise admissible, should be referred to the Staff for consideration in the rulemaking, and held in abeyance by the licensing board pending the outcome of the rulemaking; CLI-09-4, 69 NRC 80 (2009); CLI-09-8, 69 NRC 317 (2009); LBP-09-3, 69 NRC 139 (2009); LBP-10-21, 72 NRC 616 (2010)

a license application will not be held in abeyance until the design certification rulemaking is completed; LBP-09-16, 70 NRC 227 (2009)

all environmental issues concerning severe accident mitigation design alternatives associated with the information in the NRC's environmental assessment for a certified design are considered resolved; LBP-09-19, 70 NRC 433 (2009)

all nuclear safety and environmental issues concerning severe accident mitigation design alternatives associated with NRC's environmental assessment for the AP1000 design and Appendix 1B of the generic Design Control Document are considered resolved by the Commission; LBP-09-2, 69 NRC 87 (2009)

any contention directed at a design undergoing rulemaking review fails on its face to satisfy the admission requirements because all matters subject of a rulemaking are outside the scope of licensing proceedings; LBP-09-8, 69 NRC 736 (2009)

applicant for a combined license is expressly authorized by NRC's regulations to incorporate by reference a certified design in its license application; LBP-09-2, 69 NRC 87 (2009); LBP-09-8, 69 NRC 736 (2009)

## SUBJECT INDEX

applicant for a combined license may, at its own risk, reference in its application a design for which a design certification application has been docketed but not granted; LBP-08-17, 68 NRC 431 (2008); LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-10-9, 71 NRC 493 (2010); LBP-10-20, 72 NRC 571 (2010)

applicant may, at its own risk, submit a combined license application that does not reference a certified design; CLI-10-1, 71 NRC 1 (2010)

applicant's change of reactor design constitutes new and materially different information for the purposes of filing a new contention; LBP-10-17, 72 NRC 501 (2010)

at the combined license stage, applicant may reference both an early site permit and a standard design certification in its application; LBP-09-16, 70 NRC 227 (2009); LBP-09-19, 70 NRC 433 (2009)

combined license applicants will also have to demonstrate that the site-specific parameters are bounded by the parameters developed for the certified design; LBP-09-2, 69 NRC 87 (2009)

Commission policy of permitting the conduct of an adjudicatory proceeding on a combined license that references a design certification that the Commission has not approved does not violate the Atomic Energy Act of 1954, 10 C.F.R. Part 52, or judicial decisions; CLI-09-4, 69 NRC 80 (2009)

concerns relating specifically to the AP1000 reactor design amendment may be raised by filing comments on the proposed rule when it is issued; LBP-08-17, 68 NRC 431 (2008)

design certification applicants are required to address severe accident mitigation design alternatives; LBP-09-19, 70 NRC 433 (2009)

design certification rulemaking and individual combined license adjudicatory proceedings may proceed simultaneously, and issues raised in an adjudicatory proceeding that are appropriately addressed in the generic design certification rulemaking are to be referred to the rulemaking for resolution; CLI-09-8, 69 NRC 317 (2009)

each combined license applicant will have to determine whether it will adopt in toto the certified design, or whether it will take exemptions thereto and/or departures therefrom; LBP-09-2, 69 NRC 87 (2009)

failure to frame a safety concern arising from the interaction of the proposed design certification document amendment with the existing certified standard design and/or a facility-specific provision of the COLA leaves the contention as an inadmissible challenge to the Part 52 regulatory framework; LBP-09-3, 69 NRC 139 (2009)

generic issues are to be resolved as part of the design certification rulemaking process, and any concerns related to those issues must be addressed in the rulemaking and not within the scope of a combined license proceeding; LBP-09-8, 69 NRC 736 (2009)

if a contention concerning a certification application that has been docketed but not granted is otherwise admissible under 10 C.F.R. 2.309(f)(1), it might be held in abeyance and referred to the Staff; LBP-09-17, 70 NRC 311 (2009)

if applicant proceeds with a site-specific reactor design instead of a certified design, any admissible issues would have to be addressed in the licensing adjudication; CLI-08-15, 68 NRC 1 (2008)

if the combined license application references an early site permit, applicant must demonstrate that the chosen design falls within the parameters specified in the ESP or, on the safety side, request a variance; LBP-09-19, 70 NRC 433 (2009)

in making the findings required for issuance of a combined license, the Commission shall treat as resolved those matters resolved in connection with the issuance or renewal of a design certification rule; LBP-10-21, 72 NRC 616 (2010)

in the absence of a 10 C.F.R. 2.335 waiver petition, any challenge brought to aspects of a referenced certified reactor design is outside the scope of a combined license proceeding; LBP-08-16, 68 NRC 361 (2008)

incorporation by reference in the COL application is consistent with NRC rules when an applicant chooses to reference a standard design; CLI-09-8, 69 NRC 317 (2009)

nuclear reactors are required to be designed to withstand certain postulated events or accidents, which result in negligible offsite consequences because the reactor is designed to handle such events; LBP-09-10, 70 NRC 51 (2009)

"otherwise admissible" has been interpreted to mean a contention that meets the contention admissibility requirements of 10 C.F.R. 2.309(f)(1) but for the fact that it challenges a yet-to-be-certified reactor design; LBP-10-9, 71 NRC 493 (2010)

## SUBJECT INDEX

- petitioner failed to identify any statute or NRC regulation to support its theory that applicant may not revise its application to include a different reactor design; LBP-10-17, 72 NRC 501 (2010)
- petitioner's dispute with the combined license application concerning completeness of the AP1000 Design Certification Document is referred to Staff for resolution during the rulemaking on the certification of the AP1000 design and any hearing on the merits is held in abeyance pending the outcome of the rulemaking; LBP-08-21, 68 NRC 554 (2008)
- request that a combined license application be held in abeyance until the design certification is completed must be denied; LBP-09-18, 70 NRC 385 (2009)
- severe accident mitigation alternatives design analysis focuses on severe accident mitigation dealing with reactor design and hardware issues; LBP-09-10, 70 NRC 51 (2009)
- severe accident mitigation design alternative issues are resolved for an application referencing a design control document if the specific site parameters are covered by the site parameters assumed in the DCD SAMDA analysis; LBP-09-19, 70 NRC 433 (2009)
- the appropriate path for any petitioner's challenges to proposed reactor design revisions is through participation in those rulemaking proceedings, not through a combined license proceeding; LBP-09-2, 69 NRC 87 (2009)
- the Commission generally refuses to modify, rescind, or impose new requirements on reactor design certification information, except through rulemaking; LBP-10-21, 72 NRC 616 (2010)
- the EPA standard of 25 mrem only applies to the uranium fuel cycle, which only includes the generation of electricity by a light-water-cooled nuclear power plant; LBP-07-9, 65 NRC 539 (2007)
- the process for taking exemptions and departures from a certified design is set forth in 10 C.F.R. Part 52, App. D, § VIII; LBP-09-2, 69 NRC 87 (2009)
- the SAMDA analysis is part of the design certification application and thus intervenor's contention constitutes an impermissible challenge to a future rulemaking; LBP-10-10, 71 NRC 529 (2010)
- to the degree that the general precept that a rule, including a design certification, cannot be challenged in an adjudication might be seen as placing such matters outside the scope of the proceeding; LBP-10-21, 72 NRC 616 (2010)
- unless and until specific numerical guidelines for maintaining effluent releases ALARA for non-LWRs are implemented, compliance with ALARA requirements will be determined on a case-by-case basis in the context of a future COL or CP application referencing the early site permit; CLI-07-27, 66 NRC 215 (2007)
- until the reactor design is certified and the rulemaking proceeding concluded, the design continues to change, creating potentially new safety and environmental concerns; LBP-09-18, 70 NRC 385 (2009)
- REACTOR DESIGN CERTIFICATION**
- issues concerning a reactor design certification application should be resolved in the design certification rulemaking and not in an individual combined license proceeding; CLI-08-15, 68 NRC 1 (2008)
- REACTOR OPERATOR EXAMINATIONS**
- applicant is exempted from the 6-month waiting period required for a third application for a reactor operator license, contingent upon participation in licensed operator requalification training program; LBP-06-2, 63 NRC 80 (2006)
- REACTOR PRESSURE VESSEL**
- embrittlement of the RPV is within the scope of a license renewal proceeding; LBP-06-10, 63 NRC 314 (2006)
- whether a plan is necessary to manage the cumulative effects of embrittlement of the reactor pressure vessels and associated internals is within the scope of a license renewal proceeding; LBP-08-13, 68 NRC 43 (2008)
- REACTOR TRIP**
- licensee's report to NRC of a manual reactor trip due to main turbine high vibrations included the details of the event, provided an analysis of the event, including estimated change in conditional core damage probability, and provided a list of corrective actions; DD-09-2, 70 NRC 899 (2009)
- REASONABLE ASSURANCE**
- a board's analysis of decommissioning cost estimates should be tailored to the specifics of the proceeding; CLI-06-22, 64 NRC 37 (2006)

## SUBJECT INDEX

- a board's examination of licensee's decommissioning cost estimates for reliability is consistent with its obligation to verify whether the estimates provided reasonable assurance for decommissioning funding; CLI-06-22, 64 NRC 37 (2006)
  - a "compelling reasons" standard should not be applied; LBP-08-22, 68 NRC 590 (2008)
  - a finding of reasonable assurance that there will be adequate protection to the health and safety of the public is based on judgment, not on the application of a mechanical verbal formula, a set of objective standards, or specific confidence interval; LBP-08-25, 68 NRC 763 (2008)
  - applicants for license renewal must demonstrate how their programs will be effective in managing the effect of aging during the period of extended operations and identify any additional actions that will need to be taken to adequately manage the detrimental effects of aging; LBP-08-22, 68 NRC 590 (2008)
  - neither the Atomic Energy Act nor the regulations require totally risk-free siting; LBP-08-22, 68 NRC 590 (2008)
  - obtaining an estimate from an experienced third-party vendor is not the only way for an applicant to demonstrate that its cost estimate is documented and reasonable; CLI-06-22, 64 NRC 37 (2006)
  - perfection in plant construction and the construction quality assurance program is not a precondition for a license, but rather what is required is reasonable assurance that the plant, as built, can and will be operated without endangering the public health and safety; LBP-10-9, 71 NRC 493 (2010)
  - the determination need not be reduced to a mechanical verbal formula or set of objective standards, but may be given content through case-by-case applications of the Commission's technical judgment, in light of all relevant information; CLI-10-14, 71 NRC 449 (2010)
  - the license renewal applicant's use of an aging management program identified in the Generic Aging Lessons Learned Report constitutes reasonable assurance that it will manage the targeted aging effect during the renewal period; CLI-10-17, 72 NRC 1 (2010)
  - the phrase as specified in 10 C.F.R. 54.29 is not defined, but requires, at a minimum, that an applicant demonstrate compliance with all of NRC's safety regulations; LBP-08-25, 68 NRC 763 (2008)
  - the standard should not be interpreted to require proof beyond a reasonable doubt; LBP-08-22, 68 NRC 590 (2008)
  - this term is not quantified as equivalent to a 95% (or any other percent) confidence level, but is based on sound technical judgment of the particulars of a case and on compliance with the Commission's regulations; CLI-09-7, 69 NRC 235 (2009)
  - to satisfy the reasonable assurance standard for its aging management program, a license renewal applicant must make a showing that meets the preponderance of the evidence threshold of compliance with the applicable regulations, not a 95% confidence level of compliance; CLI-09-7, 69 NRC 235 (2009)
  - under 10 C.F.R. 2.325, applicant has the burden of proving that it has met the reasonable assurance standard of 10 C.F.R. 54.29; LBP-08-25, 68 NRC 763 (2008)
  - whether the standard is satisfied is based on sound technical judgment applied on a case-by-case basis; LBP-09-6, 69 NRC 367 (2009)
- REBUTTABLE PRESUMPTION**
- absence of perfect compliance by licensee does not rebut the presumption of compliance or support admission of a contention that the application does not satisfy 10 C.F.R. 54.29(a), but a consistent, longstanding, and continuing pattern of problems in a specific area that is relevant to managing aging equipment will; LBP-10-15, 72 NRC 257 (2010)
  - FEMA's finding on emergency plans constitutes a rebuttable presumption on questions of adequacy and implementation capability in NRC licensing proceedings; LBP-09-19, 70 NRC 433 (2009)
  - there is a presumption that governmental officials, acting in their official capacities, have properly discharged their duties, and clear evidence is usually required to rebut this presumption; CLI-06-22, 64 NRC 37 (2006)
- RECIRCULATION SPRAY SYSTEM**
- components that are part of the reactor coolant pressure boundary must meet the requirements of Class 1 components in Section III of the ASME Boiler and Pressure Vessel Code; LBP-08-25, 68 NRC 763 (2008)
  - conservatism in use of Green's function to determine cumulative usage factor for metal fatigue in the recirculation nozzle is discussed; LBP-08-12, 68 NRC 5 (2008)

## SUBJECT INDEX

### RECONSIDERATION

the Commission does not lightly revisit its own already-issued and well-considered decisions, doing so only if the party seeking reconsideration brings decisive new information to its attention or demonstrates a fundamental Commission misunderstanding of a key point; LBP-06-27, 64 NRC 399 (2006)  
See also Motions for Reconsideration

### RECORD

the relevant record includes legal issues and necessarily legal arguments; LBP-10-11, 71 NRC 609 (2010)

### RECORD OF DECISION

after the board issues its initial decision, it must provide questions proffered by the parties to the Commission's Secretary for inclusion in the official record of the proceeding; LBP-07-17, 66 NRC 327 (2007)  
any Commission decision on any action for which an FEIS has been prepared must be accompanied by a record of decision; LBP-06-8, 63 NRC 241 (2006)  
documents and information exchanged in the mandatory disclosures enter the adjudicatory record only if and when a party proffers the document or information as evidence for the evidentiary hearing; LBP-09-30, 70 NRC 1039 (2009)  
for license renewal applications, the Commission shall determine whether or not the adverse environmental impacts of license renewal are so great that preserving the option of license renewal for energy planning decisionmakers would be unreasonable; LBP-06-10, 63 NRC 314 (2006)  
in making a decision on license renewal, the Commission shall determine whether or not the adverse environmental impacts are so great that preserving the option of license renewal for energy planning decisionmakers would be unreasonable; LBP-07-11, 66 NRC 41 (2007)  
the Commission declines to exercise its discretion to allow oral argument because the written record in the case is thorough, effectively sets forth the positions of the participants, and, overall, contains sufficient information on which to base its decision; CLI-10-9, 71 NRC 245 (2010)  
the Commission shall determine whether or not the adverse environmental impacts of license renewal are so great that preserving the option of license renewal for energy planning decisionmakers would be unreasonable; LBP-06-23, 64 NRC 257 (2006)  
there is no per se regulatory bar that precludes the Staff from using the hearing process to clarify the administrative record supporting its final EA, and that record, along with any adjudicatory decision, becomes, in effect, part of the final environmental document; CLI-10-18, 72 NRC 56 (2010)  
there must be a finding that something is remote and speculative to preclude it from further analysis, and there must be support in the agency's record of decision to justify this finding; LBP-10-14, 72 NRC 101 (2010)  
when a hearing is held on a proposed action, the licensing board's initial decision on that action constitutes the record of decision; LBP-06-8, 63 NRC 241 (2006)

### RECORDKEEPING

an agency employee's working file constitutes an "agency record" if it both contains unique information that underlies an agency decision and it was also made available to other agency employees for purposes of helping to reach or support that decision; CLI-08-23, 68 NRC 461 (2008)  
applicant's commitments for occupational exposure to radiation exceeding the dose limits are described; LBP-07-6, 65 NRC 429 (2007)  
failure to document a falsified work order is a violation of 10 C.F.R. 50.9; LBP-08-14, 68 NRC 279 (2008)  
federal agencies have some discretion in determining which documentary materials are appropriate for preservation as an agency "record"; CLI-08-23, 68 NRC 461 (2008)  
materials created by an employee for the individual's own use in performing his or her job, and which are not circulated and are not otherwise required by NRC policy to be maintained, may be discarded at the employee's discretion; CLI-08-23, 68 NRC 461 (2008)  
See also Documentation

### RECUSAL

a judge should disqualify himself if he has personal knowledge of disputed evidentiary facts concerning the proceeding; CLI-10-22, 72 NRC 202 (2010)  
if a licensing board member declines to grant a party's recusal motion, the motion is referred to the Commission to determine the sufficiency of the grounds alleged; CLI-10-22, 72 NRC 202 (2010)

## SUBJECT INDEX

that an unreasonable person, focusing on only one aspect of the story, might perceive a risk of bias is irrelevant; CLI-10-22, 72 NRC 202 (2010)

the disqualification standard under 28 U.S.C. § 455 is not directed to administrative judges, but the Commission and its adjudicatory boards have applied it in assessing a motion for disqualification under 10 C.F.R. 2.313, and it provides a helpful framework for such an assessment; CLI-10-22, 72 NRC 202 (2010)

the proper inquiry under 28 U.S.C. § 455 is made from the perspective of a reasonable person, knowing all the circumstances; CLI-10-22, 72 NRC 202 (2010)

the standard for disqualification of a judge under 28 U.S.C. § 455 is whether the reasonable person who knows all the circumstances, would harbor doubts about the judge's impartiality; CLI-10-22, 72 NRC 202 (2010)

### REDRRESSABILITY

a limited work authorization authorizes activities for which either a construction permit or combined license is otherwise required, but the LWA application must include a plan for site redress that provides for restoration if the project is cancelled, the LWA is revoked, or a construction permit or COL is denied; LBP-09-19, 70 NRC 433 (2009)

a person who has been accorded a procedural right to protect his concrete interests can assert that right without meeting all the normal standards for redressability and immediacy; CLI-09-9, 69 NRC 331 (2009)

a site redress plan remains in effect for an early site permit applicant even if the ESP with which the LWA is issued is not referenced in a construction permit or COL application during the period that the ESP remains valid; LBP-09-19, 70 NRC 433 (2009)

as long as either denial of a license or issuance of a decision mandating compliance with legal requirements would alleviate a petitioner's potential injury, then under longstanding NRC jurisprudence the petitioner may prosecute any admissible contention that could result in the denial or in the compliance decision; CLI-09-20, 70 NRC 911 (2009)

boards are to determine whether the site redress plan will adequately redress the activities performed under a limited work authorization should the activities be terminated by either the holder of the LWA or by Commission denial of any corresponding early site permit or combined license; LBP-09-19, 70 NRC 433 (2009)

if petitioner requests a remedy that is beyond the scope of the hearing, then the hearing request must be denied because redressability is an element of standing; LBP-08-14, 68 NRC 279 (2008)

if there is nothing that can be done by way of judicial review to redress the adverse consequences that petitioners say they are suffering, review will be denied; LBP-10-11, 71 NRC 609 (2010)

intervention petitioner must establish a concrete and particularized injury that is fairly traceable to the challenged action, is likely to be redressed by a favorable decision, and is arguably within the zone of interests protected by the governing statute; CLI-09-20, 70 NRC 911 (2009)

one who asserts a procedural right to protect a concrete interest can assert that right without meeting all the normal standards for redressability and immediacy; LBP-10-11, 71 NRC 609 (2010)

petitioner is required to show that its alleged injury-in-fact could be cured or alleviated by some action of the tribunal; LBP-09-13, 70 NRC 168 (2009)

petitioners need not demonstrate a substantial likelihood of redressability, but rather need only show that redress is likely as opposed to speculative; LBP-10-11, 71 NRC 609 (2010)

the increased risk of living within 50 miles of a nuclear power plant constitutes injury-in-fact, is traceable to the challenged action, and is likely to be redressed by a favorable decision that either denies a license or mandates compliance with legal requirements that protect the interests of the petitioners; LBP-09-4, 69 NRC 170 (2009)

to establish standing, petitioner must show that its alleged injury-in-fact could be cured or alleviated by some action of the tribunal; LBP-10-16, 72 NRC 361 (2010)

### REFERRAL OF MOTION

the Secretary of the Commission has authority to refer a motion to the board for any action the board deems appropriate; CLI-09-5, 69 NRC 115 (2009)

the Secretary's referral of petitioner's motion to admit a late-filed contention effectively returns jurisdiction to the licensing board to rule on the motion; CLI-09-5, 69 NRC 115 (2009)

## SUBJECT INDEX

### REFERRAL OF RULING

- a board may refer a ruling to the Commission if it determines that prompt decision is necessary to prevent detriment to the public interest or unusual delay or expense, or if the ruling involves a novel issue that merits Commission review at the earliest opportunity; CLI-09-6, 69 NRC 128 (2009); CLI-09-13, 69 NRC 575 (2009)
- a board ruling on a contention may be referred to the Commission if it raises significant and novel legal or policy issues or the referral would materially advance the orderly disposition of the proceeding; LBP-09-16, 70 NRC 227 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-09-26, 70 NRC 939 (2009)
- contention raising question of whether a quantitative as opposed to qualitative analysis of terrorist attacks and the alternatives for mitigation and prevention is necessary is referred to the Commission as a novel issue; LBP-10-15, 72 NRC 257 (2010)
- contentions involving possible errors in Table S-3 have been referred to the Commission; LBP-09-21, 70 NRC 581 (2009)
- decisions that involve significant and novel issues, the resolution of which would materially advance the orderly disposition of proceedings, should be referred to the Commission; LBP-10-20, 72 NRC 571 (2010)
- novel issues that the Commission may wish to address generically at the earliest opportunity are appropriately referred to the Commission; LBP-08-16, 68 NRC 361 (2008); LBP-08-17, 68 NRC 431 (2008); LBP-10-15, 72 NRC 257 (2010)
- the board may refer certain rulings to the Commission, and certain participants in the proceeding may request that the presiding officer certify to the Commission rulings not otherwise immediately appealable pursuant to section 2.1015(b); CLI-10-10, 71 NRC 281 (2010)

### REFERRED RULINGS

- guidance is provided on declining review of referred rulings; CLI-10-9, 71 NRC 245 (2010)
- outside the context of petitions for interlocutory review, the Commission may take interlocutory review of questions or rulings that a licensing board either refers or certifies to the Commission; CLI-07-1, 65 NRC 1 (2007)
- the Commission addresses a board's additional views when the board refers its decision to the Commission; CLI-10-9, 71 NRC 245 (2010)
- the Commission declined to review licensing board referred rulings because the contentions were rejected by the board due to legal insufficiency; CLI-09-21, 70 NRC 927 (2009)
- the Commission will review a referred ruling only if it raises significant and novel legal or policy issues, and resolution of the issues would materially advance the orderly disposition of the proceeding; CLI-09-3, 69 NRC 68 (2009); CLI-09-13, 69 NRC 575 (2009); CLI-09-21, 70 NRC 927 (2009)

### REGULATIONS

- a contention is not an impermissible challenge to agency regulations merely because the applicant and the Staff believe the regulations have been satisfied; LBP-06-12, 63 NRC 403 (2006)
- a contention on spent fuel pool fires is rejected as an impermissible challenge to NRC regulations and the license renewal generic environmental impact statement; CLI-10-11, 71 NRC 287 (2010)
- a contention that attacks a Commission rule, or which seeks to litigate a matter that is, or clearly is about to become, the subject of a rulemaking, is inadmissible; LBP-09-3, 69 NRC 139 (2009); LBP-10-21, 72 NRC 616 (2010)
- a contention that seeks to impose new requirements on applicants and licensees is an impermissible challenge to the agency's regulations; LBP-09-26, 70 NRC 939 (2009)
- a licensing board may not admit a contention that directly or indirectly challenges Table S-3 of 10 C.F.R. 51.51; LBP-09-16, 70 NRC 227 (2009)
- a rule or regulation may be challenged outside the adjudicatory context by filing a petition for rulemaking under 10 C.F.R. 2.802 or requesting that the NRC Staff take enforcement action under 10 C.F.R. 2.206; LBP-07-11, 66 NRC 41 (2007)
- absent a waiver under 10 C.F.R. 2.335(b), contentions challenging applicable statutory requirements or Commission regulations are not admissible in agency adjudications; CLI-07-16, 65 NRC 371 (2007); CLI-08-15, 68 NRC 1 (2008); CLI-08-17, 68 NRC 231 (2008); CLI-09-20, 70 NRC 911 (2009); CLI-10-1, 71 NRC 1 (2010); LBP-07-4, 65 NRC 281 (2007); LBP-08-13, 68 NRC 43 (2008); LBP-08-16, 68 NRC 361 (2008); LBP-08-17, 68 NRC 431 (2008); LBP-09-10, 70 NRC 51 (2009);

## SUBJECT INDEX

LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-21, 70 NRC 581 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-10-9, 71 NRC 493 (2010); LBP-10-16, 72 NRC 361 (2010)

adjudication is not the proper forum for challenging applicable statutory requirements or the basic structure of the agency's regulatory process; LBP-07-10, 66 NRC 1 (2007); LBP-10-7, 71 NRC 391 (2010)

all nuclear safety and environmental issues concerning severe accident mitigation design alternatives associated with NRC's environmental assessment for the AP1000 design and Appendix 1B of the generic Design Control Document are considered resolved by the Commission; LBP-09-2, 69 NRC 87 (2009)

allowing applicant to postpone performance of an analysis-of-record time-limited aging analysis until after the license renewal is issued is inconsistent with the language, structure, and intent of the Part 54 regulations and inconsistent with NRC precedent; LBP-08-25, 68 NRC 763 (2008)

although Council on Environmental Quality regulations are not binding on the NRC when the agency has not expressly adopted them, they are entitled to considerable deference; CLI-07-27, 66 NRC 215 (2007); LBP-06-19, 64 NRC 53 (2006); LBP-06-8, 63 NRC 241 (2006); LBP-09-7, 69 NRC 613 (2009); LBP-09-10, 70 NRC 51 (2009); LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-10-15, 72 NRC 257 (2010)

although Part 40 generally applies to in situ leach mining, Appendix A to Part 40, including Criterion 1, was designed to address the problems related to mill tailings and not problems related to injection mining; LBP-10-16, 72 NRC 361 (2010)

an exemption can be granted if it is authorized by law and will not endanger life or property or the common defense and security, and is otherwise in the public interest; LBP-07-6, 65 NRC 429 (2007)

applicant seeks an exemption from the disposal site requirements of 10 C.F.R. 30.3 and 70.3 to allow disposal of low-activity radioactive waste from the Hematite facility at a site near Grand View, Idaho, that is not licensed by the NRC; LBP-09-28, 70 NRC 1019 (2009)

as Class I components, the feedwater, reactor recirculation, and core spray outlet nozzles on a boiling water reactor must be designed, fabricated, erected, and tested to the highest quality standards practical as specified in Part 50, Appendix A, GDC 30; LBP-08-25, 68 NRC 763 (2008)

because a generic environmental analysis was incorporated into a regulation, the conclusions of that analysis are not subject to attack in an individual adjudication unless the rule is waived or suspended; CLI-07-3, 65 NRC 13 (2007)

challenges to the Commission regulations regarding the design certification process are inadmissible; LBP-09-18, 70 NRC 385 (2009)

compliance with regulations of other federal agencies, such as Environmental Protection Agency drinking water contamination limits, is beyond a board's jurisdiction and outside the scope of a materials license proceeding; LBP-06-8, 63 NRC 241 (2006)

consistency of the generic guidance in NUREG-1757 governing restricted release with the text and intent of the regulations is discussed; CLI-09-1, 69 NRC 1 (2009)

contentions involving possible errors in Table S-3 have been referred to the Commission; LBP-09-21, 70 NRC 581 (2009)

contentions that advocate more stringent requirements than the NRC rules impose or that otherwise seek to litigate a generic determination that the Commission has established by rulemaking, or that raise a matter that is or is about to become the subject of rulemaking are barred; LBP-07-3, 65 NRC 237 (2007); LBP-08-9, 67 NRC 421 (2008); LBP-08-17, 68 NRC 431 (2008)

contentions that directly or indirectly challenge Table S-3 of 10 C.F.R. 51.51 are inadmissible; LBP-09-4, 69 NRC 170 (2009)

Council on Environmental Quality regulations receive substantial deference from federal courts in interpreting the requirements of NEPA; LBP-10-16, 72 NRC 361 (2010); LBP-10-24, 72 NRC 720 (2010)

Council on Environmental Quality regulations state that an environmental impact statement must address both direct and indirect effects of an action; LBP-09-7, 69 NRC 613 (2009)

creditor regulations in 10 C.F.R. 50.81 apply to the creation of creditor interests in equipment, devices, or important parts thereof, capable of separating the isotopes of uranium or enriching uranium in the isotope U-235; CLI-10-4, 71 NRC 56 (2010)

## SUBJECT INDEX

creditor regulations in 10 C.F.R. 70.44 apply to the creation of creditor interests in special nuclear material; CLI-10-4, 71 NRC 56 (2010)

creditor regulations may be augmented by license conditions as necessary to allow ownership arrangements, such as sale and leaseback, provided it can be found that such arrangements are not inimical to the common defense and security of the United States; CLI-10-4, 71 NRC 56 (2010)

decommissioning rules are designed to minimize the administrative effort of licensees and the Commission and to provide reasonable assurance that funds will be available to carry out decommissioning in a manner that protects public health and safety; LBP-09-21, 70 NRC 581 (2009)

failure of an applicant to address any guidance topics or deviation from the guidance provided does not rise to the level of failure to comply with NRC regulations; LBP-08-9, 67 NRC 421 (2008)

guidance documents do not create binding legal requirements; CLI-10-24, 72 NRC 451 (2010)

handling of confidential commercial or financial (proprietary) information that has been submitted to the agency is governed by 10 C.F.R. 2.390; CLI-10-24, 72 NRC 451 (2010)

in implementing the National Environmental Policy Act, NRC uses the definitions provided in Council on Environmental Quality regulations; LBP-09-7, 69 NRC 613 (2009); LBP-09-19, 70 NRC 433 (2009)

in the license renewal context, regulations established under Part 50, including compliance with the ASME Code, must be followed during the period of extended operation; CLI-08-28, 68 NRC 658 (2008)

intervenor may petition the Commission for permission to challenge a rule, but must make a showing of special circumstances; LBP-10-9, 71 NRC 493 (2010)

intervention petitioners may not demand an adjudicatory hearing to attack generic NRC requirements or regulations or to express generalized grievances about NRC policies; LBP-07-11, 66 NRC 41 (2007)

it is NRC stated policy to take into account Council on Environmental Quality regulations voluntarily, subject to some conditions; CLI-10-18, 72 NRC 56 (2010)

it may be inferred that an exemption is implicitly authorized by law if all of the conditions for granting the exemption are met and no other provision prohibits, or otherwise restricts, its application; LBP-07-6, 65 NRC 429 (2007)

low-level radioactive waste disposal contentions may not challenge Table S-3, consistent with NRC policy that regulations may not be the subject of collateral attack in an adjudication; CLI-10-2, 71 NRC 27 (2010)

motions to reopen a proceeding to introduce an entirely new contention must successfully navigate at least nineteen different regulatory factors under 10 C.F.R. 2.326, 2.309(c), and 2.309(f)(1); LBP-10-19, 72 NRC 529 (2010)

new regulations cannot be applied retroactively absent clear evidence that Congress authorized, in the statute being implemented, the issuance of retroactive regulations, and that the statute intended the regulations to be applied retroactively; LBP-06-11, 63 NRC 483 (2006)

no rule or regulation of the Commission concerning the licensing of production and utilization facilities is subject to attack by way of discovery, proof, argument, or other means in any adjudicatory proceeding; LBP-10-14, 72 NRC 101 (2010)

NRC may grant an exemption from a particular regulatory provision if it will not threaten the common defense and security or endanger life or property and is otherwise in the public interest; CLI-06-10, 63 NRC 451 (2006)

NRC regulations do not address conflicts of interest as such, but the absence of a specific rule does not interfere with the Commission's inherent supervisory authority over the conduct of adjudicatory proceedings; CLI-08-11, 67 NRC 379 (2008)

NRC regulations may not be attacked in individual NRC adjudicatory proceedings, unless the Commission waives the rule at issue for a particular proceeding, or the rule is changed or suspended due to a rulemaking review; CLI-09-3, 69 NRC 68 (2009); CLI-09-10, 69 NRC 521 (2009); LBP-09-6, 69 NRC 367 (2009)

NRC takes into account Council on Environmental Quality regulations, with certain exceptions; CLI-10-2, 71 NRC 27 (2010)

once an early site permit is issued, the Commission may not impose new requirements on the site unless they are necessary to ensure adequate protection of the public health and safety or the common defense and security; LBP-07-9, 65 NRC 539 (2007)

## SUBJECT INDEX

Part 51 of 10 C.F.R. does not authorize NRC to regulate or enforce compliance with all other environmental laws and regulations; LBP-09-10, 70 NRC 51 (2009)

Part 51 of 10 C.F.R. sets out Staff's obligation to perform a severe accident mitigation alternatives analysis, as required by the National Environmental Policy Act; LBP-07-13, 66 NRC 131 (2007)

petitioner's challenge to the one-fire assumption in the AP1000 design constitutes an impermissible challenge to Commission regulations; CLI-10-9, 71 NRC 245 (2010)

probabilistic rather than deterministic methodology is required to perform a severe accident mitigation alternatives analysis because modeling of extremely complex time- and physical-condition-dependent phenomena is involved; LBP-07-13, 66 NRC 131 (2007)

relevant NRC requirements for a power uprate, be it a stretch power uprate or an extended power uprate, are set forth in 10 C.F.R. 50.90 to 50.92; LBP-08-9, 67 NRC 421 (2008)

Staff guidance documents are not legally binding, but can be useful in instances where legal authority is lacking; LBP-10-16, 72 NRC 361 (2010)

Staff is to review early site permit applications according to the applicable standards set out in 10 C.F.R. Part 50 and its appendices and 10 C.F.R. Part 100; LBP-09-19, 70 NRC 433 (2009)

summary disposition rules 2.1205 and 2.710 are substantially similar; LBP-10-20, 72 NRC 571 (2010)

the board did not create a new regulatory requirement in finding that an application must show how the proposed facility will deal with long-term storage of low-level radioactive waste; CLI-10-2, 71 NRC 27 (2010)

the central purpose of Part 51 rules is to allow NRC to comply with NEPA by identifying and evaluating environmental impacts that are generic to reactor license renewal proceedings and then allowing applicant and NRC to dispense with site-specific evaluations of such environmental impacts in situations covered by the generic analysis; LBP-10-15, 72 NRC 257 (2010)

the Commission has an announced policy to take account of Council on Environmental Quality regulations voluntarily, subject to certain conditions; LBP-10-24, 72 NRC 720 (2010)

the court deferred to NRC's interpretation of the Nuclear Waste Policy Act in promulgating regulations to be applied in administering the licensing stage for the high-level waste repository; LBP-10-11, 71 NRC 609 (2010)

the distinction between contentions of omission and contentions of inadequacy does not appear in NRC contention pleading regulations, but rather is a useful concept from agency case law; CLI-10-2, 71 NRC 27 (2010)

the principal regulatory standards for in situ leach applications are 10 C.F.R. 40.32(c) and (d), which mandate protection of public health and safety; LBP-10-16, 72 NRC 361 (2010)

the regulatory authority relating to renewal of nuclear power plant operating licenses is found in 10 C.F.R. Parts 51 and 54, which enumerate issues to be addressed in license renewal proceedings; LBP-08-22, 68 NRC 590 (2008)

the standard review plan provides guidance but does not impose requirements on license renewal applicants; CLI-10-17, 72 NRC 1 (2010)

to challenge a regulation, petitioner must submit a supporting affidavit setting forth with particularity the special circumstances that justify the waiver or exception requested; LBP-09-18, 70 NRC 385 (2009)

to challenge a rule or regulation in the adjudicatory context, petitioner must submit a request for waiver of the rule under 10 C.F.R. 2.335; LBP-07-11, 66 NRC 41 (2007)

to the extent that an intervenor disagrees with a regulation, its recourse is to petition the Commission for rulemaking to change it; LBP-06-1, 63 NRC 41 (2006)

under 10 C.F.R. 50.55a, components that are part of the reactor coolant pressure boundary must meet the requirements of Class 1 components in Section III of the ASME Boiler and Pressure Vessel Code; LBP-08-25, 68 NRC 763 (2008)

waiver of a rule or regulation is granted on the sole ground that special circumstances with respect to the subject matter of the particular proceeding are such that the application of the rule or regulation would not serve the purposes for which the rule or regulation was adopted; LBP-09-6, 69 NRC 367 (2009)

when a Commission regulation permits the use of a particular analysis, a contention asserting that a different analysis or technique should be utilized is inadmissible because it indirectly attacks the Commission's regulations; LBP-09-16, 70 NRC 227 (2009)

## SUBJECT INDEX

with limited exceptions, no rule or regulation of the Commission is subject to attack in any adjudicatory proceeding; LBP-07-16, 66 NRC 277 (2007)

See also Amendment of Regulations; Rules of Practice

### REGULATIONS, INTERPRETATION

a conclusion that something is a “connected action” under 40 C.F.R. 1508.25 does not necessarily inform the type of impact analysis that is performed, whether direct, indirect, or cumulative; LBP-09-7, 69 NRC 613 (2009)

a contention calling for a siting safety analysis for an irradiator is not barred by the Part 36 regulatory scheme, but must be sufficiently supported, in light of the Statement of Considerations’ conclusions; CLI-08-3, 67 NRC 151 (2008)

a contention that raises the question as to whether requirements of 10 C.F.R. 51.53(c)(3)(ii)(B) supplement the more general requirements of 10 C.F.R. 51.45(c) and 51.53(c), or instead displace and supplant the latter requirements, raises an admissible and material issue of interpretation and construction of the regulations; LBP-06-20, 64 NRC 131 (2006)

a licensing board’s interpretation of 10 C.F.R. 54.3, 54.21, 54.29 is challenged; CLI-10-17, 72 NRC 1 (2010)

a literal reading of 10 C.F.R. 61.55(a)(6) renders depleted uranium a Class A waste, but the Part 61 rulemaking did not analyze the uranium enrichment waste stream; CLI-06-15, 63 NRC 687 (2006)

a matter need not be actually litigated in order to be “resolved” in an early site permit proceeding; LBP-08-15, 68 NRC 294 (2008)

a term that lacks a statutory or regulatory definition should be construed in accord with its ordinary or natural meaning; LBP-06-1, 63 NRC 41 (2006)

a text should be construed so that effect is given to all of its provisions, so no part will be inoperative or superfluous, void or insignificant; LBP-10-22, 72 NRC 661 (2010)

absent particular circumstances for excluding intruder scenarios in evaluating compliance with the Part 61 regulations, they must be considered by the licensing entity at the time of initial licensing or any subsequent license amendment; LBP-06-8, 63 NRC 241 (2006)

administrative history and other available guidance may be consulted for background information and the resolution of ambiguities in a regulation’s language; LBP-06-11, 63 NRC 483 (2006)

although 10 C.F.R. 2.390(d) never uses the term “sensitive unclassified nonsafeguards information”, this regulation seems to fit NRC Staff’s claim that SUNSI is security-related; LBP-10-2, 71 NRC 190 (2010)

although administrative history and other available guidance may be consulted for background information and the resolution of ambiguities in a regulation’s language, its interpretation may not conflict with the plain meaning of the wording used in that regulation; LBP-09-15, 70 NRC 198 (2009)

although technically not applicable to a request for a stay of NRC Staff action, the 10 C.F.R. 2.342(e) standards simply restate commonplace principles of equity universally followed when judicial (or quasi-judicial) bodies consider stays or other forms of temporary injunctive relief; CLI-10-8, 71 NRC 142 (2010)

although the phrase “possession, custody, or control” appears in 10 C.F.R. 2.336(a)(2)(i), 2.704(a)(2), and 2.707(a)(1)), no NRC decision has ever provided guidance as to what constitutes “control”; LBP-10-23, 72 NRC 692 (2010)

an agency’s interpretation of its own regulation is controlling provided it is not plainly erroneous or inconsistent with the regulation; CLI-10-13, 71 NRC 387 (2010)

any new contentions filed by petitioners, whose original petition was timely and who have demonstrated their standing, that are attributable to the applicant’s construction activity or change of plans or design, are governed by the basic provisions of 10 C.F.R. 2.309(f)(2) rather than by the more restrictive elements applicable to nontimely filings; LBP-07-14, 66 NRC 169 (2007)

“any reactor” in 10 C.F.R. 51.23(a) applies to new reactors; LBP-09-17, 70 NRC 311 (2009); LBP-09-21, 70 NRC 581 (2009)

as guidance reached in a rulemaking following notice and comment, and endorsed by the Commission, the Statement of Considerations is entitled to special weight; CLI-08-3, 67 NRC 151 (2008)

as with a statute, interpretation begins with the language and structure of the provision itself; CLI-08-12, 67 NRC 386 (2008); CLI-08-28, 68 NRC 658 (2008); LBP-08-1, 67 NRC 37 (2008); LBP-09-15, 70 NRC 198 (2009)

## SUBJECT INDEX

because a combined license is, in part, an operating license, 10 C.F.R. § 50.33(f) also applies to an application for a combined license; LBP-09-10, 70 NRC 51 (2009)

because applicant's change in cumulative usage factor is already endorsed by 10 C.F.R. 50.55a(g), the approval requirements of subsection 50.55a(a)(3) do not apply; CLI-06-24, 64 NRC 111 (2006)

"close of the hearing" in 10 C.F.R. 2.1209 refers to the closing of the evidentiary record; CLI-08-9, 67 NRC 353 (2008)

constructive knowledge is knowledge of facts sufficient to prompt an inquiry that would have uncovered misrepresentations and is not actual knowledge; LBP-09-24, 70 NRC 676 (2009)

contentions challenging low-level radioactive waste storage may not rely on 10 C.F.R. Part 61, which pertains to land disposal facilities; CLI-10-2, 71 NRC 27 (2010)

courts construe regulations in the same manner as they do statutes, by ascertaining the plain meaning of the regulation; LBP-06-11, 63 NRC 483 (2006)

courts generally will defer to an agency's construction of the statute it is charged with implementing, and to the procedures it adopts for implementing that statute; CLI-10-13, 71 NRC 387 (2010)

courts must construe regulations in light of the statutes they implement, keeping in mind that where there is an interpretation of an ambiguous regulation that is reasonable and consistent with the statute, that interpretation is to be preferred; LBP-09-16, 70 NRC 227 (2009)

"deliberate misconduct" within the meaning 10 C.F.R. 50.5(a)(2) refers to an intentional act or omission that the person knows would cause a licensee to be in violation of any rule; LBP-09-24, 70 NRC 676 (2009)

design basis event is distinguished from design basis threat; CLI-10-9, 71 NRC 245 (2010)

discussion in the environmental report of unaffected areas or sites is not required by 10 C.F.R. 51.45(b); CLI-06-9, 63 NRC 433 (2006)

even if the term "contention," as used in 10 C.F.R. 2.336(a)(1) must be read as pertaining only to formal contentions admitted under section 2.309(f)(1), the term "claim," is not so constrained, and can only be read in its normal sense; LBP-09-30, 70 NRC 1039 (2009)

except as specifically authorized by the Commission in writing, no interpretation of the meaning of the regulations in Part 40 by any officer or employee of the Commission other than a written interpretation by the General Counsel will be recognized to be binding upon the Commission; LBP-08-6, 67 NRC 241 (2008)

for tailings or wastes to fall within the definition of byproduct material, the plain statutory and regulatory language requires that such tailings or wastes be produced from ore that has been processed for its source material content; LBP-06-1, 63 NRC 41 (2006)

in any conflict between a general rule in Part 2, Subpart C, and a special rule in Part 2, the special rule governs; LBP-08-16, 68 NRC 361 (2008)

in construing a regulation, the intent of the enacting body may be ascertained by considering the language used and the overall purpose of the regulation, and by reflecting on the practical effect of the possible interpretations; LBP-06-11, 63 NRC 483 (2006)

"intended functions" that structures, systems, and components must be shown to fulfill in the aging management review are those functions specified in 10 C.F.R. 54.4(a)(1)-(3); CLI-10-14, 71 NRC 449 (2010)

interpretation may not conflict with the plain meaning of the wording used in the regulation; CLI-06-5, 63 NRC 143 (2006)

like Congress, the Commission is not to be assumed to hide elephants in mouseholes; LBP-08-1, 67 NRC 37 (2008)

materiality in the context of paragraph (f)(2) differs from materiality in the context of paragraph (f)(1) of 10 C.F.R. 2.309; LBP-10-1, 71 NRC 165 (2010)

NEPA has only a limited role to play in interpreting Part 51's requirements for the environmental report; LBP-09-16, 70 NRC 227 (2009)

not only the bare meaning of the word but also its placement and purpose in the statutory scheme are considered; LBP-09-15, 70 NRC 198 (2009)

NRC has traditionally read the language "authorized by law" to be the functional equivalent of "not prohibited by law"; LBP-07-6, 65 NRC 429 (2007)

## SUBJECT INDEX

organizations seeking to challenge regulations of a government agency failed to demonstrate standing where they did not demonstrate a concrete application of the regulations that threatened imminent harm to their interests; CLI-09-20, 70 NRC 911 (2009)

paragraph (4) of 10 C.F.R. 52.79(a) governs only those structures that are a component of the facility to be constructed under the combined license; LBP-10-8, 71 NRC 433 (2010)

Part 61 of 10 C.F.R. applies only to land disposal facilities that receive waste from others, not to onsite facilities where the licensee intends to store its own low-level radioactive waste; CLI-09-3, 69 NRC 68 (2009)

Part 61 of 10 C.F.R. contains flexibility to deal with the occurrence of new waste streams or disposal methods that were not included in the Part 61 rulemaking; LBP-06-8, 63 NRC 241 (2006)

Part 61 of 10 C.F.R. is inapplicable in a combined license proceeding because it applies only to land disposal facilities that receive waste from others, not to onsite facilities where licensee intends to store its own low-level radioactive waste; LBP-09-10, 70 NRC 51 (2009); LBP-09-27, 70 NRC 992 (2009)

Part 61 of 10 C.F.R. sets forth the NRC's regulations for the disposal of low-level radioactive waste in a land disposal facility, including certain "performance objectives" and "technical requirements" that must be met before waste can be disposed of at a particular site; LBP-06-8, 63 NRC 241 (2006)

Part 61, Subpart C "performance objectives" must be met regardless of the classification of the waste involved; LBP-06-8, 63 NRC 241 (2006)

participants in Subpart J proceedings must make a good-faith effort to make available all documentary material by the date specified for initial compliance; CLI-08-22, 68 NRC 355 (2008)

performance objectives for a near-surface disposal facility require that the relevant licensing entity examine whether, at any particular time after active institutional controls are removed, the section 61.41 dose limitations will be met for an inadvertent intruder; LBP-06-8, 63 NRC 241 (2006)

pursuant to the rule of the last antecedent, qualifying words, phrases, and clauses must be applied to the words or phrases immediately preceding them and are not to be construed as extending to and including others more remote; LBP-06-1, 63 NRC 41 (2006)

"reasonable assurance" specified in 10 C.F.R. 54.29 is not defined, but requires, at a minimum, that an applicant demonstrate compliance with all of NRC's safety regulations; LBP-08-25, 68 NRC 763 (2008)

recourse to regulatory history is not necessary unless the language and structure of the regulation reveal an ambiguity that must be resolved; CLI-08-12, 67 NRC 386 (2008)

section 2.1003's reference to "all documentary material (including circulated drafts but excluding preliminary drafts) generated by, or at the direction of, or acquired by" clearly conveys that possession or control of the documentary material is a prerequisite to the duty to produce it; CLI-08-12, 67 NRC 386 (2008)

section 2.107(a) does not authorize withdrawal of an application but rather clarifies that licensing boards have authority to impose reasonable conditions upon voluntary withdrawals in appropriate circumstances; LBP-10-11, 71 NRC 609 (2010)

section 2.309(f)(1)(vi) is not a second hurdle of materiality that an intervenor must meet, but rather requires that intervenor identify the specific parts of the combined license application that it disputes and show that resolution of those disputes is material to the licensing decision; LBP-09-27, 70 NRC 992 (2009)

section 2.311 is not applicable to the board's refusal to supplement the basis of a contention or to add new contentions because the section applies only when a board decision rules on a request for hearing, petition to intervene, or selection of hearing procedures; CLI-06-24, 64 NRC 111 (2006)

section 40.38 of 10 C.F.R. applies exclusively to uranium enrichment facilities; LBP-09-1, 69 NRC 11 (2009)

section 40.42(d) is written in terms of releasing buildings or areas in accordance with NRC criteria; CLI-09-1, 69 NRC 1 (2009)

section 52.79(a)(3) sets no quantity or time restrictions relative to onsite storage of low level radioactive waste; LBP-09-27, 70 NRC 992 (2009)

section 54.21(c)(1)(i)-(iii) requires that the applicant make its demonstration that the effects of aging will be adequately managed during the period of extended operation in the application, which is necessarily before the license may be granted; LBP-08-25, 68 NRC 763 (2008)

## SUBJECT INDEX

section 54.29(a) speaks of both past and future actions, referring specifically to those that have been or will be taken with respect to managing the effects of aging and time-limited aging analyses; CLI-10-17, 72 NRC 1 (2010)

some near-surface disposal facilities may not be capable of accepting large quantities of depleted uranium from enrichment operations, and dose pathway analyses should be performed on a site-specific basis to ensure compliance with Part 61, Subpart C; LBP-06-8, 63 NRC 241 (2006)

summary disposition standards are not applicable to and do not replace the standards applicable to motions to reopen; CLI-08-28, 68 NRC 658 (2008)

technical terms of art should be interpreted by reference to the trade or industry to which they apply; CLI-06-14, 63 NRC 510 (2006)

the “deliberate ignorance” theory is not embraced within the “deliberate misconduct” standard that governs NRC proceedings; LBP-09-24, 70 NRC 676 (2009)

the “demonstrations” mandated by 10 C.F.R. 54.21(c)(1)(i) and (ii) require that the time-limited aging analyses both be performed in a technically accurate manner and produce a prediction that the component will not fail due to aging during the period of extended operation; LBP-08-25, 68 NRC 763 (2008)

the “reasonable assurance” requirement of section 54.29(a) is interpreted; LBP-08-22, 68 NRC 590 (2008)

the amended late-filed contentions rule, 10 C.F.R. 2.309(f)(2), is not intended to alter the standards in section 2.714(a) of its rules of practice as interpreted by NRC case law; LBP-10-17, 72 NRC 501 (2010)

the Commission often refers to the Statement of Considerations as an aid in interpreting its regulations; CLI-08-3, 67 NRC 151 (2008)

the entirety of the provision must be given effect; CLI-08-12, 67 NRC 386 (2008); CLI-08-28, 68 NRC 658 (2008); LBP-09-15, 70 NRC 198 (2009)

the fact that the Commission included language deferring the obligation that would otherwise apply to COL applicants in 10 C.F.R. 50.75(b)(4), but included no equivalent provision in section 50.75(b)(3), confirms that the Commission did not intend to defer the requirement of section 50.75(b)(3) until after the license is issued; LBP-09-15, 70 NRC 198 (2009)

the form, content, and board approval provisions of 10 C.F.R. 2.338 are not limited to settlement agreements achieved via alternative dispute resolution, but apply to all settlement agreements that purport to be binding on the proceeding and that are submitted to a board after the notice of hearing; LBP-06-18, 63 NRC 830 (2006)

the interlocutory review standard in 10 C.F.R. 2.323(f)(1) does not apply to litigants’ petitions for interlocutory review; CLI-09-6, 69 NRC 128 (2009)

the language of 10 C.F.R. 52.79(a)(4) is contrasted with the “means” language of 10 C.F.R. 52.79(a)(3); LBP-10-20, 72 NRC 571 (2010)

the language of a regulation should not be read to destroy itself and a provision should not be read in a way that is inconsistent with its purpose; LBP-07-6, 65 NRC 429 (2007)

the language of the Commission’s case-specific notice establishing 11:59 p.m. Eastern Standard Time as the filing time for hearing petitions controls over the agency’s rule of general applicability for all cases that refers only to 11:59 p.m. Eastern Time; LBP-08-16, 68 NRC 361 (2008)

the most natural way to read a provision that sets forth a general obligation followed by a set of specific requirements is that the specific requirements provide the details necessary to fulfilling the general obligation; LBP-09-15, 70 NRC 198 (2009)

the performance requirements of sections 70.60 and 70.61 regarding nuclear criticality safety are discussed; LBP-06-17, 63 NRC 747 (2006)

the phrase “from the licensed operation” in 10 C.F.R. 20.1301(a)(1) appears to serve as a limitation on what is to be included in the total effective dose equivalent calculation; LBP-06-1, 63 NRC 41 (2006)

the phrase “not under the control of the licensee” in 10 C.F.R. 20.1003 was intended only to apply to Chernobyl-like fallout, not to the antecedent phrase “naturally occurring radioactive materials; LBP-06-1, 63 NRC 41 (2006)

the phrase “possession, custody, or control” as found in the Federal Rules of Civil Procedure and 10 C.F.R. 2.336(a) is in the disjunctive, and thus only one of the enumerated requirements needs to be met; LBP-10-23, 72 NRC 692 (2010)

## SUBJECT INDEX

the plain language of 10 C.F.R. 2.336(a)(1) makes it clear that it applies to all parties; LBP-09-30, 70 NRC 1039 (2009)

the plain language of 10 C.F.R. 63.305 does not say anything about analyzing future climate based upon the historical geological record; LBP-10-22, 72 NRC 661 (2010)

the plain meaning of a regulation controls its interpretation; CLI-08-23, 68 NRC 461 (2008)

the purpose of 10 C.F.R. 2.1003 is to define the availability of material, not to provide definitions of types of materials; CLI-06-5, 63 NRC 143 (2006)

the purpose of 10 C.F.R. 40.42 is to reduce the potential risk to public health and the environment from radioactive material remaining for long periods of time at materials facilities after licensed activities have ceased; CLI-09-1, 69 NRC 1 (2009)

the relevance standard of 10 C.F.R. 2.336 is more flexible than the relevance standard of Fed. R. Evid. 401; LBP-10-23, 72 NRC 692 (2010)

the requirement that the designated amount of financial assurance be covered by an acceptable method arises concurrently with the requirement that the applicant submit a decommissioning report to NRC; LBP-09-15, 70 NRC 198 (2009)

the sole issue under 10 C.F.R. 50.5(a)(2) is whether a person knew the information was materially incomplete and inaccurate at the time it was submitted to the NRC; CLI-10-23, 72 NRC 210 (2010)

the Statement of Considerations for Part 36 indicates that in developing those regulations, the NRC considered whether there was a need to impose limits on irradiator siting, but determined that no specific siting limitations were warranted; CLI-08-3, 67 NRC 151 (2008)

the statement of considerations should be given special weight; LBP-09-15, 70 NRC 198 (2009)

the term "contention" in 10 C.F.R. 2.336(a)(1) means simply a point or argument asserted or advanced by any party; LBP-09-30, 70 NRC 1039 (2009)

the term "demonstrate" as used in 10 C.F.R. 54.21 is a strong, definitive verb that logically requires an applicant to provide a reasonably thorough description of its aging management program and to show conclusively how this program will ensure that the effects of aging will be managed for its specific plant; LBP-08-25, 68 NRC 763 (2008)

the term "document" as used in 10 C.F.R. 2.336 includes computer models and associated electronic inputs, outputs, data, and software; LBP-10-23, 72 NRC 692 (2010)

the term "document" as used in 10 C.F.R. 2.336 is not limited to paper documents and it refers to information stored on any medium or form, including electronically stored information; LBP-10-23, 72 NRC 692 (2010)

the term "likely" in section 2.326(a)(3) is construed to be synonymous with "probable" or "more likely than not"; LBP-08-12, 68 NRC 5 (2008)

the term "sensitive unclassified nonsafeguards information" or SUNSI is used only twice in the NRC regulations, relating to authority to establish procedures for disclosure and for appeals of disclosure rulings; LBP-10-2, 71 NRC 190 (2010)

the unavailability of funding for decommissioning adequate to achieve unrestricted release of a site is not one of the conditions specified in 10 C.F.R. 20.1403(a); CLI-09-1, 69 NRC 1 (2009)

there is no prohibition on an applicant using a plan for compliance with 10 C.F.R. 52.79(a)(3) that includes contingent plans should future low-level radioactive waste storage become necessary; LBP-10-20, 72 NRC 571 (2010)

under 10 C.F.R. 2.336(a)(1), intervenors' expert is not required to create a written analysis, but only disclose the written analysis or other documentary authority, if any, that exists and is reasonably available at the time of the disclosure; LBP-09-30, 70 NRC 1039 (2009)

under Part 36, in an exceptional case, NRC may conduct an irradiator facility siting review if a unique threat is involved which may not be addressed by state and local requirements; CLI-08-3, 67 NRC 151 (2008)

use of the permissive term, "may," in 10 C.F.R. 2.310(a) indicates that licensing boards have some discretion in determining whether to hold hearings under Subpart L or Subpart G; LBP-08-6, 67 NRC 241 (2008)

use of the term "resolved" in 10 C.F.R. 52.39(a) implies an intent to grant preclusive effect only when the appropriate agency official makes a determination concerning the issue in dispute; LBP-08-15, 68 NRC 294 (2008)

## SUBJECT INDEX

whether a feature, event, or process must be included in the performance assessment for the period after 10,000 years is governed by 10 C.F.R. 63.342, not by section 63.102(j); LBP-10-22, 72 NRC 661 (2010)

words of a statute must be read in their context and with a view to their place in the overall statutory scheme; LBP-10-20, 72 NRC 571 (2010)

### REGULATORY GUIDES

a board's request for a list of all regulatory guides applicable to the Staff's analysis of a license application, as well as a list of all instances where potentially applicable regulatory guides were not used, is approved; CLI-06-20, 64 NRC 15 (2006)

although not legally binding, Staff guidance documents provide further information about the content of the integrated safety analysis summary and how an applicant can comply with criticality safety regulations; LBP-06-17, 63 NRC 747 (2006)

although NRC guidance documents are entitled to some weight, they do not have the force of a legally binding regulation and, like any guidance document, may be challenged in an adjudicatory proceeding; LBP-08-22, 68 NRC 590 (2008)

although some special weight should be given to some NRC guidance documents, the same does not apply to industry guidance documents; LBP-08-25, 68 NRC 763 (2008)

compliance with NRC guidance documents is neither necessary nor necessarily sufficient to satisfy the legal requirements that each application must meet under the Atomic Energy Act; LBP-08-25, 68 NRC 763 (2008)

consistency of the generic guidance in NUREG-1757 governing restricted release with the text and intent of the regulations is discussed; CLI-09-1, 69 NRC 1 (2009)

failure of an applicant to address any guidance topics or deviation from the guidance provided does not rise to the level of failure to comply with NRC regulations; LBP-08-9, 67 NRC 421 (2008)

guidance documents are not legally binding, but are useful in instances where legal authority is lacking; LBP-08-24, 68 NRC 691 (2008)

guidance documents do not prescribe requirements, are not substitutes for regulations, and are not binding authority; LBP-07-6, 65 NRC 429 (2007)

if a board finds that the use of a more accurate approach than compliance with regulatory guides is needed to provide reasonable assurance that metal fatigue will be adequately managed during the period of extended operation, then the board is authorized and duty bound to impose such a requirement; LBP-08-25, 68 NRC 763 (2008)

NRC guidelines and regulatory guides are not legally binding on the Staff, the board, or the Commission; LBP-09-10, 70 NRC 51 (2009)

NRC Staff's guidance document NUREG/CR-6909, which prescribes guidance on the calculation of metal fatigue on reactor components in a light water reactor environment, is built upon a larger and more recent database than NUREG/CR-5704 and -6583, but use of the earlier NUREGs is sufficient; LBP-08-25, 68 NRC 763 (2008)

Staff guidance documents are worth noting but do not have the force of law and are not binding on the board's determination as to whether applicant's testing program satisfies the legal standard; LBP-07-2, 65 NRC 153 (2007)

Staff guidance documents generally do not constitute legally binding interpretations of agency regulations; LBP-06-15, 63 NRC 591 (2006)

the fact that a given guidance document upon which an applicant relied was withdrawn does not suffice to support a contention; LBP-07-14, 66 NRC 169 (2007)

### REINSTATEMENT OF PERMIT

reinstatement of construction permits did not authorize construction of reactors, but rather was to place the facility in a terminated plant status; CLI-10-26, 72 NRC 474 (2010)

### REINSTATEMENT OF PROCEEDING

an admissible contention under the good cause standard must allege that a construction permit holder's reasons for past delay failed to constitute good cause for a CP extension and be supported by a showing that construction delay is traceable to permit holder action that was intentional and without a valid business purpose; LBP-10-7, 71 NRC 391 (2010)

## SUBJECT INDEX

boards should restrict their inquiry in a construction permit reinstatement proceeding, including their consideration of contention admissibility matters, in line with the good cause standard of the Atomic Energy Act; LBP-10-7, 71 NRC 391 (2010)

### RELEVANCE

the universal understanding of relevance, applicable to the NRC Staff and others, includes matters that appear reasonably calculated to lead to the discovery of admissible evidence; LBP-06-25, 64 NRC 367 (2006)

where the privilege and the need may be equally weak, but the privilege can be protected by other means, adjudicators return to the norms of full and open discovery, so that relevancy, not need, becomes the determinative standard; LBP-06-25, 64 NRC 367 (2006)

### REMAND

if a board on remand were to rule in petitioners' favor regarding the admissibility of one contention, then the board should also reconsider its prior ruling that related contentions were admissible; CLI-10-21, 72 NRC 197 (2010)

if appellant had submitted an offer of proof, indicating what rebuttal evidence it would have offered to the board, then the Commission might have some basis for determining whether that evidence would be substantial enough to justify a remand to the Board; CLI-10-23, 72 NRC 210 (2010)

proceeding will remain open during the pendency of a remand, during which time, petitioners are free to submit a motion to reopen the record should they seek to address any genuinely new issues related to the license renewal application that previously could not have been raised; CLI-10-17, 72 NRC 1 (2010)

the Commission grants review of an Atomic Safety and Licensing Board decision that dismissed a contention on summary disposition, reversing the decision in part, and remanding the contention to the board for hearing, as limited by the Commission's ruling; CLI-10-11, 71 NRC 287 (2010)

### REOPENING A RECORD

a licensing board need not formally reopen the record in order to assess the relative worth of the parties' competing evidence; LBP-08-12, 68 NRC 5 (2008)

a mere showing of a possible violation is not enough to reopen a closed record; CLI-08-28, 68 NRC 658 (2008)

a motion filed 4 months after release of the information on which it is based is not timely; CLI-08-23, 68 NRC 461 (2008)

a newly proffered contention submitted after the close of the record must meet timeliness standards as well as the requirements of 10 C.F.R. 2.309(c); LBP-08-12, 68 NRC 5 (2008)

a nonparty seeking late intervention after the record has closed must address both the standard for late intervention and the standard for reopening a closed record; CLI-09-5, 69 NRC 115 (2009)

a presiding officer considering environmental contentions in the high-level waste proceeding should apply NRC reopening procedures and standards in 10 C.F.R. 2.326 to the extent possible; CLI-08-25, 68 NRC 497 (2008)

availability of Staff review outside the hearing process generally does not constitute adequate protection of a private party's rights when considering 10 C.F.R. 2.309(c)(1)(ii); LBP-08-12, 68 NRC 5 (2008)

Commission jurisdiction continues until a license is actually issued; CLI-06-19, 63 NRC 19 (2006)

discovery is not permitted for the purpose of developing a motion to reopen or to assist a petitioner in the framing of contentions; LBP-08-12, 68 NRC 5 (2008)

evidence contained in supporting affidavits must meet the regulatory admissibility standards of relevance, materiality, and reliability; LBP-08-12, 68 NRC 5 (2008)

extended power uprate proceeding that has been terminated may not be reopened; CLI-10-17, 72 NRC 1 (2010)

for determining the "likelihood" that a motion to reopen would change the outcome of a license renewal proceeding, the Commission indicated that a "would have been reached" standard is too strict, and a "might have been reached" standard is too lax; LBP-08-12, 68 NRC 5 (2008)

if a matter as presented is devoid of safety significance, there is no likelihood whatsoever that a materially different result would have been likely had the newly proffered evidence been considered initially; LBP-08-12, 68 NRC 5 (2008)

## SUBJECT INDEX

if standards for reopening were not strict and demanding, there would be little hope of completing administrative proceedings if each newly arising allegation required an agency to reopen its hearings; LBP-08-12, 68 NRC 5 (2008)

if the problem raised in a late-filed contention presents a sufficiently grave threat to public safety, a board should reopen the record to consider it even if it is not newly discovered and could have been raised in timely fashion; LBP-08-12, 68 NRC 5 (2008)

if, within 60 days after pertinent information that would support the framing of a contention first becomes available, intervenors submit a particularized and otherwise admissible contention regarding the construction of the facility, then the contention will be deemed timely without the need to satisfy the balancing test for late-filing requirements; CLI-09-2, 69 NRC 55 (2009)

in evaluating a motion to reopen, a licensing board properly considers the movant's new allegations and the nonmovant's contrary evidence in determining whether there is a real issue at stake warranting a reopened hearing; LBP-08-12, 68 NRC 5 (2008)

motions must be accompanied by affidavits that set forth the factual and/or technical bases for the movant's claim that the criteria in 10 C.F.R. 2.326(a) have been satisfied; LBP-08-12, 68 NRC 5 (2008)

movant must show that a balancing of eight factors of 10 C.F.R. 2.309(c)(1), to the extent they are relevant to the particular filing, weighs in favor of reopening; LBP-08-12, 68 NRC 5 (2008)

movant must show that its motion is timely; CLI-09-5, 69 NRC 115 (2009); LBP-08-12, 68 NRC 5 (2008)

movants must satisfy a multifactor test in 10 C.F.R. 2.326(a) and (d) that is governed by prescribed evidentiary requirements; LBP-08-12, 68 NRC 5 (2008)

NRC Staff's revision of the final safety evaluation report to account for applicant's confirmatory analysis would not, standing alone, be a materially different result that justifies reopening the record, because it would neither change the outcome of the renewal proceeding nor impose a different licensing condition on an applicant; LBP-08-12, 68 NRC 5 (2008)

once the record of a proceeding is closed, new information may not be considered in the proceeding unless the reopening standards are met; LBP-10-21, 72 NRC 616 (2010)

petitioners seeking to introduce new contentions after the board has denied their initial petition to intervene need to address the reopening standards; LBP-10-21, 72 NRC 616 (2010)

proponents of motions seeking to reopen the record bear a heavy burden; CLI-06-19, 63 NRC 19 (2006); CLI-09-2, 69 NRC 55 (2009); LBP-08-12, 68 NRC 5 (2008)

referral of petitioner's motion to admit a late-filed contention effectively returns jurisdiction to the licensing board to rule on the motion but does not reopen the already-closed record; CLI-09-5, 69 NRC 115 (2009)

relevant, material, and reliable evidence of a significant safety issue in the form of expert affidavit, Staff reports, and statements by the Commission and the NRC must be provided to support a motion to reopen; LBP-08-12, 68 NRC 5 (2008)

speculation that NRC Staff may have failed to identify a health or safety issue because its review was insufficiently thorough does not meet the requirement that the motion address a significant safety or environmental issue; CLI-08-23, 68 NRC 461 (2008)

standards are discussed and analyzed; LBP-10-21, 72 NRC 616 (2010)

the addition of a condition on a license to operate would constitute a materially different result warranting reopening; LBP-08-12, 68 NRC 5 (2008)

the affidavit supporting a motion to reopen a license renewal proceeding must provide sufficient information to support a prima facie showing that a deficiency exists in the application and the deficiency presents a significant safety issue; LBP-08-12, 68 NRC 5 (2008)

the Commission need not reopen adjudicatory proceedings simply on a claim of new evidence; CLI-06-19, 63 NRC 19 (2006)

the goal of this procedure is to maintain "finality" of the hearing process while still enabling participants to bring to light new post-hearing information concerning significant safety situations; LBP-08-12, 68 NRC 5 (2008)

the standard for admitting a new contention after the record is closed is higher than for an ordinary late-filed contention; CLI-08-28, 68 NRC 658 (2008)

## SUBJECT INDEX

the term “likely” in section 2.326(a)(3) is construed to be synonymous with “probable” or “more likely than not”; LBP-08-12, 68 NRC 5 (2008)

to justify reopening the record to admit a new contention, the moving papers must be strong enough, in the light of any opposing filings, to avoid summary disposition, and the new information must be significant and plausible enough to require reasonable minds to inquire further; LBP-10-21, 72 NRC 616 (2010)

to reopen a closed record to introduce a new issue, movant has the burden of showing that the new information will likely trigger a different result; LBP-08-12, 68 NRC 5 (2008)

when the contested portion of a proceeding was terminated following an unchallenged merits determination in favor of applicant regarding the proceeding’s sole admitted contention, the board’s focus must be on the requirements applicable to reopening a closed record set out in 10 C.F.R. 2.326; LBP-10-21, 72 NRC 616 (2010)

See also Motions to Reopen

### REPLY BRIEFS

a board erred when it disregarded the rule that a reply cannot expand the scope of the arguments set forth in the original hearing request; CLI-09-12, 69 NRC 535 (2009)

a claim not raised in the hearing petition, but added as a new claim in petitioners’ reply brief is considered impermissibly late; CLI-08-17, 68 NRC 231 (2008)

a motion to file late should generally be denied, except under extraordinary conditions; LBP-10-21, 72 NRC 616 (2010)

a moving party has no right to reply except as permitted by the presiding officer; CLI-08-23, 68 NRC 461 (2008)

a party may not present a new contention, or a new basis for a proposed contention, in its reply; LBP-10-9, 71 NRC 493 (2010)

a petitioner may file a reply to any answer within 7 days after service of that answer; LBP-07-4, 65 NRC 281 (2007)

a petitioner may not rectify its contention pleading inadequacies in its reply; LBP-06-12, 63 NRC 403 (2006)

a petitioner that fails to develop an argument in its petition is foreclosed from doing so in the first instance in its reply brief; LBP-06-7, 63 NRC 188 (2006)

a petitioner that fails to submit a reply brief is foreclosed from challenging the assertions advanced by the licensee and the NRC Staff in their answers, unless it put such assertions in issue in its petition; LBP-06-7, 63 NRC 188 (2006)

a reply cannot be used to substantively supplement or amend a contention; LBP-08-18, 68 NRC 533 (2008); LBP-08-26, 68 NRC 905 (2008)

a reply may not be used as a vehicle to introduce new arguments or support, may not expand the scope of arguments set forth in the original petition, and may not attempt to cure an otherwise deficient contention; LBP-07-4, 65 NRC 281 (2007); LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009)

allowing new claims in a reply would unfairly deprive other participants of an opportunity to rebut the new claims; LBP-09-6, 69 NRC 367 (2009)

although a licensing board will take into account any information from reply briefs that legitimately amplifies issues presented in the original petitions, it will not consider instances of what essentially constitute untimely attempts to amend the original petitions; LBP-09-17, 70 NRC 311 (2009)

although boards are to provide latitude to pro se participants, petitioner’s decision to provide an expert affidavit, available when it filed its hearing petition, at the time it submitted its reply runs afoul of the Commission’s directive that reply pleadings cannot be used to introduce additional supporting information relative to a contention; LBP-08-16, 68 NRC 361 (2008)

although NRC’s rules of practice regarding motions do not provide for reply pleadings, the board presumes that for a reply to be timely it would have to be filed within 7 days of the date of service of the response it is intended to address; LBP-09-22, 70 NRC 640 (2009)

although petitioners may not use their reply pleadings to provide new threshold support for their contentions, they may use their reply to clarify and to develop information included in their initial petition; LBP-09-6, 69 NRC 367 (2009)

## SUBJECT INDEX

answers to a motion to strike are limited to legal or factual issues raised by the motion, and new issues should be raised in a separate motion; LBP-08-1, 67 NRC 37 (2008)

arguments and alleged facts should focus on the legal, factual, or logical arguments presented in the answers; LBP-10-19, 72 NRC 529 (2010)

attempt to introduce a new argument to establish a contention's admissibility is improper; LBP-07-10, 66 NRC 1 (2007)

authorization affidavits for representational standing may not be filed with a reply; CLI-08-19, 68 NRC 251 (2008)

because appellant submitted no offer of proof, its case could be so weak that the denial of a right to reply by the licensing board would have been harmless error; CLI-10-23, 72 NRC 210 (2010)

because of apparent electronic complications and the lack of a challenge to intervenors' reply document as late, the board treats a late filing as a valid reply; LBP-10-9, 71 NRC 493 (2010)

except in a proceeding under section 52.103, the requestor/petitioner may file a reply to any answer, but no other written answers or replies will be entertained; LBP-09-6, 69 NRC 367 (2009)

filings that raise new issues must address the nontimely filing and new-contention factors in 10 C.F.R. 2.309(c) or (f)(2); LBP-09-17, 70 NRC 311 (2009)

format of pleadings for the high-level waste repository proceeding are specified; LBP-08-10, 67 NRC 450 (2008)

if a contention as originally pleaded did not cite adequate documentary support, the petitioner cannot remediate the deficiency in its reply brief by introducing documents that were available to it during the time frame for initially filing contentions; CLI-06-17, 63 NRC 727 (2006)

if no potential party has challenged whether the existence of a genuine dispute has been established with respect to a particular contention, petitioner's reply need not and should not address that issue any further with respect to that contention; LBP-08-10, 67 NRC 450 (2008)

in an abundance of caution and in order to give petitioners every benefit of the doubt, the board considers whether any of the material at issue in a reply brief that would not constitute legitimate amplification might be admissible under the criteria of section 2.309(c) or (f)(2); LBP-09-17, 70 NRC 311 (2009)

in ruling on admissibility of contentions, licensing boards do not consider anything found in a reply to an answer to an intervention petition that was not in petitioners' original contentions, unless it constitutes legitimate amplification of original contentions or properly late-filed material; LBP-06-10, 63 NRC 314 (2006)

new arguments may not be raised for the first time in a reply brief; CLI-06-22, 64 NRC 37 (2006); CLI-06-29, 64 NRC 417 (2006); CLI-07-25, 66 NRC 101 (2007); LBP-06-20, 64 NRC 131 (2006)

new arguments or new legal theories that opposing parties have not had the opportunity to address are not permitted; CLI-06-9, 63 NRC 433 (2006)

new bases for a contention cannot be introduced in a reply brief or at any other time after the date the original contentions are due, unless petitioner meets the late-filing criteria set forth in 10 C.F.R. 2.309(c), (f)(2); CLI-09-7, 69 NRC 235 (2009); CLI-09-12, 69 NRC 535 (2009)

once petitioner's LSN compliance has been raised in an answer to an intervention petition, petitioner then has the opportunity to respond to the challenges in its reply; LBP-09-6, 69 NRC 367 (2009)

petitioner is limited to the contention as initially filed and may not rectify its deficiencies through a reply brief or on appeal; CLI-09-14, 69 NRC 580 (2009); LBP-08-6, 67 NRC 241 (2008)

petitioner may not use its reply brief to cure pleading defects in its intervention petition; CLI-10-1, 71 NRC 1 (2010)

petitioner may respond to and focus on any legal, logical, or factual arguments presented in the answers, and the amplification of statements provided in an initial petition is legitimate and permissible; LBP-06-20, 64 NRC 131 (2006); LBP-06-23, 64 NRC 257 (2006); LBP-07-4, 65 NRC 281 (2007); LBP-08-6, 67 NRC 241 (2008); LBP-09-1, 69 NRC 11 (2009)

petitioner's reply must narrowly focus upon the legal and factual arguments first presented in its petition and cannot be used as a vehicle to remedy a very deficient petition to which opposing parties have no opportunity to respond; LBP-06-12, 63 NRC 403 (2006); LBP-09-2, 69 NRC 87 (2009); LBP-09-6, 69 NRC 367 (2009)

petitioners may not raise entirely new arguments in a reply brief unless the standards for late-filed contentions are met; CLI-09-7, 69 NRC 235 (2009)

## SUBJECT INDEX

- petitioners should narrowly focus on the legal or logical arguments presented in the answers on a request for hearing or petition to intervene; CLI-10-1, 71 NRC 1 (2010); LBP-10-9, 71 NRC 493 (2010)
- petitioner's standing showing can be corrected or supplemented to cure deficiencies by means of its reply pleading; LBP-10-21, 72 NRC 616 (2010)
- regulations governing appeals from the denial of intervention provide for a notice of appeal with a supporting brief, and for a brief opposing the appeal, but do not provide for reply briefs; CLI-06-9, 63 NRC 433 (2006)
- replies may provide only legitimate amplifications of the original contentions or a logical/legal response to the answers of the Staff and applicant; LBP-09-17, 70 NRC 311 (2009)
- Subpart J rules do not provide for the filing of reply briefs in the context of appeals from interlocutory decisions or initial or partial decisions; CLI-08-12, 67 NRC 386 (2008)
- the focus must be on the legal or factual arguments first presented in the original petition or raised in the answers to it; CLI-06-17, 63 NRC 727 (2006)
- the proper purpose of a reply is to discuss alleged deficiencies in a petition, not to try to fix them; LBP-08-17, 68 NRC 431 (2008)
- the scope of a reply filed pursuant to 10 C.F.R. 2.309(h)(2) should be narrowly focused on the legal or logical arguments presented in the applicant/licensee or NRC Staff answer; LBP-07-16, 66 NRC 277 (2007)
- were the Commission to accept and consider a belatedly submitted representative-standing affidavit attached to a reply brief, the applicant would be deprived of the right to challenge the substantive sufficiency of the affidavit; CLI-08-19, 68 NRC 251 (2008)
- when its Licensing Support Network compliance is challenged, petitioner need only make a straightforward statement in its reply that it has complied with the LSN requirements; LBP-09-6, 69 NRC 367 (2009)
- REPLY TO ANSWER TO MOTION**
- a properly supported request to reply to a summary disposition response would seem to be a reasonable candidate for a favorable board discretionary decision permitting the filing; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)
- because of the significance of the issues at hand, applicant was permitted to reply to the answers to its motion to withdraw; LBP-10-11, 71 NRC 609 (2010)
- except for a motion to file a new or amended contention, or where there are compelling circumstances, movant has no right to reply to an answer or respond to a motion; LBP-09-22, 70 NRC 640 (2009)
- permission to file must be sought from the board before the replies are due; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)
- silence about facts constitutes a waiver of the specific factual contentions made by the opposing party in a brief filed earlier; LBP-06-7, 63 NRC 188 (2006)
- the appropriate vehicle to address whether arguments in a summary disposition answer raise matters outside the scope of a contention is a reply pleading, for which permission to file should have been sought from the board before the replies were due; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)
- there is no right to reply to an answer to a motion for summary disposition, but if the answer contains an allegation that is plainly and factually incorrect, the moving party can request the opportunity to respond and to correct the record; LBP-06-5, 63 NRC 116 (2006)
- within 25 days after service of a motion and proposed contention, any other party may file an answer responding to all elements of the motion and contention, and within 7 days of service of the answer, the movant may file a reply; LBP-09-22, 70 NRC 640 (2009)
- REPORTING REQUIREMENTS**
- applicant's commitments for occupational exposure to radiation exceeding the dose limits are described; LBP-07-6, 65 NRC 429 (2007)
- failure to document a falsified work order is a violation of 10 C.F.R. 50.9; LBP-08-14, 68 NRC 279 (2008)
- generator load rejection transients must be analyzed and reported to the NRC; LBP-07-2, 65 NRC 153 (2007)
- information provided to the Commission by an applicant for a license or by a licensee must be complete and accurate in all material respects; LBP-09-1, 69 NRC 11 (2009)

## SUBJECT INDEX

licensee is not required to submit docketed information on the resolution of each fire protection noncompliance during its transition to a risk-informed and performance-based fire protection program, but it is required to implement and maintain compensatory measures for remaining noncompliances; DD-07-3, 65 NRC 643 (2007)

licensee's report to NRC of a manual reactor trip due to main turbine high vibrations included the details of the event, provided an analysis of the event, including estimated change in conditional core damage probability, and provided a list of corrective actions; DD-09-2, 70 NRC 899 (2009)

when an MSIV transient occurs, the reactor operator is required to analyze what happened and how the reactor systems responded and performed, and to report to the NRC; LBP-07-2, 65 NRC 153 (2007)

**REQUEST FOR ACTION**

a motion to reopen that does not satisfy the Commission's procedural requirements but which arguably raises a significant safety or environmental issue may be referred to the Staff under 10 C.F.R. § 2.206; CLI-06-4, 63 NRC 32 (2006)

although a petition for review does not challenge anything the boards actually decided, the Commission addresses the merits of the request as an exercise of its ultimate supervisory control over proceedings; CLI-09-10, 69 NRC 521 (2009)

challenges to an Agreement State's program may be raised in a 10 C.F.R. 2.206 petition; CLI-10-8, 71 NRC 142 (2010)

following termination of a proceeding, the proper avenue for a challenge to an existing license is to file a request to modify, suspend, or revoke a license; CLI-09-5, 69 NRC 115 (2009)

if intervenors have any cause to believe that a licensee is not adequately following its license conditions, they can petition the NRC Staff for appropriate enforcement action; CLI-06-1, 63 NRC 1 (2006)

if petitioners wish to propose security measures in addition to those laid out in a Staff enforcement order, their remedy is to petition the NRC under 10 C.F.R. 2.206 for further enforcement action; CLI-10-3, 71 NRC 49 (2010)

petitioner's request for action concerning deficiencies in licensee's employee concerns program is denied; DD-10-1, 72 NRC 149 (2010)

petitioner's request that NRC issue a demand for information to licensee regarding vibration levels prior to restart is denied; DD-09-2, 70 NRC 899 (2009)

petitioner's request that unescorted access authorization be restored so that he could perform his accepted job tasks with all record of denial removed from any and all records is denied; DD-10-2, 72 NRC 163 (2010)

petitioner's requests for enforcement action for alleged regulatory, criminal, and ethical misconduct and coverup by NRC Staff is denied; DD-10-3, 72 NRC 171 (2010)

petitioners may protect their interests by filing a request for Commission action under 10 C.F.R. 2.206 rather than a late-filed intervention petition; CLI-10-12, 71 NRC 319 (2010)

petitions submitted under 10 C.F.R. 2.206 are assessed by the Staff in accord with NRC Management Directive 8.11 and associated Handbook 8.11; LBP-10-7, 71 NRC 391 (2010)

request for an enforcement-type action where the underlying concern is the partial collapse of a cooling tower is credible and sufficient to warrant further inquiry; DD-08-1, 67 NRC 347 (2008)

requests for diagnostic evaluation team examination, safety culture assessment, and the NRC investigation at other licensee facilities are rejected for review because they are not requests for enforcement-type actions; DD-08-1, 67 NRC 347 (2008)

the appropriate avenue for resolution of concerns regarding an ongoing operational issue at a facility is via a request under section 2.206; CLI-08-23, 68 NRC 461 (2008)

to the extent petitioner believes that NRC Staff has overlooked facts indicating an inadequate safety culture as a matter separate and apart from license renewal, then its remedy is to direct Staff's attention to the supporting facts via a petition for enforcement action; CLI-10-27, 72 NRC 481 (2010)

**REQUEST FOR ADDITIONAL INFORMATION**

a Staff-issued RAI ordinarily may not be used to support admission of a new contention because such a request, standing alone, generally does not give rise to a genuine dispute on material issues; LBP-06-11, 63 NRC 391 (2006)

contention that the mere existence of numerous RAIs constituted prima facie evidence that the application is incomplete is rejected; CLI-09-12, 69 NRC 535 (2009)

## SUBJECT INDEX

documents that contain the analysis, opinions, and recommendations of NRC Staff members regarding an applicant's response to prior RAIs or the formulation of new RAIs are deliberative and thus may qualify for the privilege; LBP-06-3, 63 NRC 85 (2006)

mere issuance of RAIs does not mean an application is incomplete for docketing; CLI-08-15, 68 NRC 1 (2008); CLI-08-17, 68 NRC 231 (2008)

NRC Staff issuance of an RAI does not alone establish deficiencies in an application, and intervention petitioner must do more than merely quote an RAI to justify admission of a contention; CLI-09-16, 70 NRC 33 (2009); LBP-09-10, 70 NRC 51 (2009); LBP-09-16, 70 NRC 227 (2009)

outstanding RAIs do not give rise to an evidentiary hearing; LBP-08-9, 67 NRC 421 (2008)

petitioner may not simply wait for the Staff to identify missing information and then ground a new contention on that request; CLI-09-12, 69 NRC 535 (2009)

petitioners who base their contentions on RAIs must provide analysis, discussion, or information of their own on the issues raised; LBP-09-16, 70 NRC 227 (2009)

the fact that Staff issues an RAI does not immunize the combined license application from challenge or bar the admission of a new contention on the same subject, provided the contention satisfies the criteria of 10 C.F.R. 2.309(f)(1)(i)-(vi) and (f)(2) or (c); LBP-09-10, 70 NRC 51 (2009)

the licensing board did not commit reversible error by admitting a contention based on low-level radioactive waste storage duration because the NRC Staff itself had issued a request for additional information on this very issue and thus this conflicted with Staff's argument that the issue is immaterial to the findings that must be made on the application; LBP-09-27, 70 NRC 992 (2009)

**RESEARCH REACTORS**

a request for action regarding leaks or potential leaks of radioactively contaminated water into the ground is denied because existing NRC design and regulatory programs ensure that there is a minimal risk for a significant release of contaminated liquid effluents; DD-06-3, 64 NRC 407 (2006)

petitioner alleges failure to conduct safety review of the modification of the controlled access area by the addition of an undocumented roof access for a siphon breaker experiment; DD-10-3, 72 NRC 171 (2010)

petitioner whose daily commute took her within less than one-half mile of a research reactor had standing based on the obvious potential for offsite consequences; CLI-10-7, 71 NRC 133 (2010)

petitioner whose office was located within one-half mile from a research reactor may be presumed to be affected by operation of the facility; CLI-10-7, 71 NRC 133 (2010)

**RESPONSES TO PETITIONS**

an answer supporting or opposing a motion for summary disposition or other dispositive motion shall be filed within 20 days after service of the motion; LBP-09-22, 70 NRC 640 (2009)

no later than 20 days after service of materials, the parties and the NRC Staff shall file their written responses, rebuttal testimony with supporting affidavits, and rebuttal exhibits, on a contention-by-contention basis; LBP-09-22, 70 NRC 640 (2009)

to the extent that licensee's response focuses on the merits of petitioner's contention at the admissibility stage, and not on whether it is admissible, the response is beyond consideration; LBP-06-6, 63 NRC 167 (2006)

within 25 days after service of a motion and proposed contention, any other party may file an answer responding to all elements of the motion and contention, and within 7 days of service of the answer, the movant may file a reply; LBP-09-22, 70 NRC 640 (2009)

**RESTART**

petitioner's request that NRC issue a demand for information to licensee regarding vibration levels prior to restart is denied; DD-09-2, 70 NRC 899 (2009)

**RESTRICTED RELEASE**

a decommissioning plan will be judged exclusively upon whether residual radioactivity levels will be as low as is reasonably achievable and the total effective dose equivalent to offsite human beings will be below 25 mrem; LBP-08-4, 67 NRC 105 (2008)

a license is terminated upon the completion of decommissioning; CLI-09-1, 69 NRC 1 (2009)

a site will be considered for restricted release if further reductions in residual radioactivity necessary to comply with the provisions of 10 C.F.R. 20.1402 would result in net public or environmental harm or need not be made because residual levels associated with the restricted conditions are as low as reasonably achievable; CLI-09-1, 69 NRC 1 (2009)

## SUBJECT INDEX

consistency of the generic guidance in NUREG-1757 governing restricted release with the text and intent of the regulations is discussed; CLI-09-1, 69 NRC 1 (2009)  
New Jersey's restricted release criteria are compatible with NRC rules; CLI-10-8, 71 NRC 142 (2010)  
the criteria for acceptability of a site for license termination under restricted conditions are discussed; CLI-09-1, 69 NRC 1 (2009)  
until decommissioning is completed, a licensee must limit actions to those related to decommissioning and control access to restricted areas until they are suitable for release; CLI-09-1, 69 NRC 1 (2009)

### REVERSAL OF RULING

the Commission grants review of licensing board decision that dismissed a contention on summary disposition, reversing the decision in part, and remanding the contention to the board for hearing, as limited by the Commission's ruling; CLI-10-11, 71 NRC 287 (2010)  
the Commission reverses the board's admission of two contentions; CLI-09-3, 69 NRC 68 (2009)

### REVIEW

a requester may challenge an adverse determination with respect to access to safeguards information by filing a request for review pursuant to 10 C.F.R. 2.311; CLI-09-15, 70 NRC 1 (2009); CLI-10-4, 71 NRC 56 (2010)  
all decisions on questions of classification or declassification of information shall be made by appropriate classification officials in the NRC and are not subject to de novo review; CLI-09-15, 70 NRC 1 (2009)  
ripeness for judicial review is determined on the basis of the fitness of the issue for judicial decision and the hardship to the parties of withholding court consideration; LBP-09-6, 69 NRC 367 (2009)  
See also Antitrust Review; Appellate Review; Environmental Review; Immediate Effectiveness Review; NRC Review; NRC Staff Review; Safety Review; Standard of Review

### REVIEW, DISCRETIONARY

although the Commission has discretion to review all underlying factual issues de novo, it is disinclined to do so where a board has weighed arguments presented by experts and rendered reasonable, record-based factual findings; CLI-10-5, 71 NRC 90 (2010)  
as for conclusions of law, the Commission will review legal questions de novo and reverse a licensing board's legal rulings if they are a departure from or contrary to established law; CLI-10-5, 71 NRC 90 (2010)  
Commission denies petitions for interlocutory review of a licensing board decision that admitted new and amended contentions; CLI-10-30, 72 NRC 564 (2010)  
interlocutory review is permitted at the Commission's discretion only upon a showing that the issue for which it is sought threatens the party adversely affected by it with immediate and serious irreparable impact or affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-06-12, 63 NRC 495 (2006); CLI-07-1, 65 NRC 1 (2007); CLI-07-2, 65 NRC 10 (2007); CLI-10-16, 71 NRC 486 (2010); CLI-10-30, 72 NRC 564 (2010)  
outside the context of petitions for interlocutory review, the Commission may take interlocutory review of questions or rulings that a licensing board either refers or certifies to the Commission; CLI-07-1, 65 NRC 1 (2007)  
parties should not seek review by invoking the grounds under which the Commission might exercise its supervisory authority; CLI-10-30, 72 NRC 564 (2010)  
petitioner must demonstrate that the issue for which it seeks review could not be alleviated through a petition for review of the presiding officer's final decision; CLI-10-30, 72 NRC 564 (2010)  
the Commission customarily does not entertain discretionary interlocutory appeals, due in large part to a general unwillingness to engage in piecemeal interference in ongoing Licensing Board proceedings; CLI-07-1, 65 NRC 1 (2007)  
the Commission generally does not entertain requests to invoke its inherent supervisory authority over adjudications; CLI-10-13, 71 NRC 387 (2010)  
the Commission grants review based on petitioner's showing that there is a substantial question with respect to the five considerations listed in 10 C.F.R. 2.341(b)(4); CLI-08-28, 68 NRC 658 (2008); CLI-10-5, 71 NRC 90 (2010)  
the Commission grants review only in extraordinary circumstances; CLI-10-30, 72 NRC 564 (2010)  
the Commission may, at its discretion, grant a party's request for interlocutory review of a board decision; CLI-10-30, 72 NRC 564 (2010)

## SUBJECT INDEX

the mere potential for legal error in a contention admissibility decision is not a ground for review; CLI-10-30, 72 NRC 564 (2010)  
the standard of clear error for overturning a board's factual finding is quite high; CLI-10-5, 71 NRC 90 (2010)

### REVIEW, INTERLOCUTORY

an exception to the general policy limiting interlocutory review permits an appeal of a board's ruling on contention admissibility when a board grants a petition to intervene following consideration of the full petition; CLI-09-18, 70 NRC 859 (2009)  
challenges to board rulings on late-filed contentions normally fall under the rules for interlocutory review; CLI-09-18, 70 NRC 859 (2009)  
discretionary interlocutory review is allowed only when a licensing board certifies a ruling or refers a question, or when an interlocutory board ruling creates immediate and serious irreparable impact or affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-06-18, 64 NRC 1 (2006); CLI-06-24, 64 NRC 111 (2006)  
if the Commission's supervisory authority constituted grounds for a party's own request for appellate review, there would be no limit to the kinds of arguments parties could legitimately present on appeal, a result at odds with the Commission's oft-expressed intent to limit the availability of such appeals; CLI-07-1, 65 NRC 1 (2007)  
increased litigation delay and expense do not justify interlocutory review of an admissibility decision; CLI-09-6, 69 NRC 128 (2009)  
litigation efforts that a litigant considers unnecessary because they relate to a contention that the litigant considers to have been improperly admitted do not affect the basic structure of a proceeding at all, much less in a pervasive and unusual manner; CLI-09-6, 69 NRC 128 (2009)  
no instance has occurred in NRC jurisprudence where either the Commission or its boards have ruled that expenses of any kind constituted irreparable injury; CLI-09-6, 69 NRC 128 (2009)  
NRC rules governing the high-level waste proceeding do not provide for interlocutory review; CLI-10-13, 71 NRC 387 (2010)  
outside the context of petitions for interlocutory review, the Commission may take interlocutory review of questions or rulings that a licensing board either refers or certifies to the Commission; CLI-07-1, 65 NRC 1 (2007)  
review is granted under the pervasive-and-unusual-effect standard only in extraordinary circumstances; CLI-06-24, 64 NRC 111 (2006)  
review is permitted at the Commission's discretion only upon a showing that the issue for which review is sought threatens the party adversely affected by it with immediate and serious irreparable impact or affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-06-24, 64 NRC 111 (2006); CLI-07-1, 65 NRC 1 (2007); CLI-10-13, 71 NRC 387 (2010); CLI-10-16, 71 NRC 486 (2010)  
routine rulings on contention admissibility are usually not occasions for the Commission to exercise its authority to step into ongoing licensing board proceedings and undertake interlocutory review; CLI-09-3, 69 NRC 68 (2009)  
settling some but not all contentions is a routine feature of NRC litigation, but it does not affect the proceeding in a pervasive or unusual manner; CLI-06-18, 64 NRC 1 (2006)  
the Commission customarily does not entertain discretionary interlocutory appeals, due in large part to a general unwillingness to engage in piecemeal interference in ongoing licensing board proceedings; CLI-07-1, 65 NRC 1 (2007); CLI-10-16, 71 NRC 486 (2010)  
the Commission grants discretionary interlocutory review only in extraordinary circumstances; CLI-09-6, 69 NRC 128 (2009)  
the Commission's exercise its discretion to review a licensing board's interlocutory order stems from its inherent supervisory authority over adjudications and in no way implies that parties have a right to seek interlocutory review on that same ground; CLI-09-6, 69 NRC 128 (2009)  
the interlocutory review standard in 10 C.F.R. 2.323(f)(1) does not apply to litigants' petitions for interlocutory review; CLI-09-6, 69 NRC 128 (2009)  
the possibility that an interlocutory ruling may be wrong does not in itself justify interlocutory review; CLI-09-6, 69 NRC 128 (2009)  
the potential for litigation expense and delay is the kind of burden that licensees and applicants voluntarily assume when filing applications with the Commission; CLI-09-6, 69 NRC 128 (2009)

## SUBJECT INDEX

the presiding officer may refer a ruling to the Commission if the ruling involves a novel issue that merits Commission review at the earliest opportunity; CLI-09-6, 69 NRC 128 (2009)

the presiding officer may refer a ruling to the Commission if, in the presiding officer's judgment, prompt decision is necessary to prevent detriment to the public interest or unusual delay or expense; CLI-09-6, 69 NRC 128 (2009)

the question whether to hold an NRC enforcement proceeding in abeyance pending a related criminal prosecution is generally suitable for interlocutory review because the abeyance issue cannot await the end of the proceeding; CLI-07-6, 65 NRC 112 (2007)

were the Commission to permit litigants to successfully invoke interlocutory review based merely on an assertion that the licensing board erred in admitting or excluding a contention, then the Commission would be opening the floodgates to a potential deluge of interlocutory appeals from any number of participants who lose admissibility rulings; CLI-09-6, 69 NRC 128 (2009)

whether NEPA requires the NRC to consider potential health effects of consuming irradiated food raises the kind of broad legal question appropriate for Commission interlocutory review; CLI-08-4, 67 NRC 171 (2008); CLI-08-16, 68 NRC 221 (2008)

See also Appeals, Interlocutory; Appellate Review

### REVIEW, SUA SPONTE

it is appropriate for the Commission to take review of a claim that raises a threshold legal question going to the proper scope of a proceeding, and a matter with potential new significant NEPA implications for the NRC; CLI-08-16, 68 NRC 221 (2008)

the Commission has authority to review board rulings sponte, in the exercise of its inherent supervisory authority over NRC adjudications, regardless of whether the Commission accepts the referral; CLI-09-3, 69 NRC 68 (2009)

the Commission has used sua sponte review as a vehicle to address unappealed issues or orders, to set a specific timetable or otherwise customize NRC procedures for individual adjudications, to suspend a proceeding, to vacate an unreviewed board order after withdrawal of the challenged application, to decide whether to disqualify a presiding officer, to address an issue of wide implication, and to provide guidance to a licensing board; CLI-07-1, 65 NRC 1 (2007)

the Commission itself may exercise its discretion to review a licensing board's interlocutory order if the Commission wants to address a novel or important issue; CLI-09-6, 69 NRC 128 (2009)

the Commission may review a board ruling pursuant to the inherent supervisory powers where a significant issue may affect multiple pending or imminent licensing proceedings; CLI-08-2, 67 NRC 31 (2008)

the Commission will occasionally take review of an issue on its own motion when that issue is not otherwise before it on appeal; CLI-07-1, 65 NRC 1 (2007)

the Commission's exercise of its authority to instruct the board to certify novel license renewal issues yields essentially the same result as taking sua sponte review; CLI-07-1, 65 NRC 1 (2007)

the section 2.341(a)(2) process that applies to a licensing board determination approving a settlement agreement affords the Commission the opportunity to correct any participant or board misapprehensions regarding the items contemplated in the settlement agreement; LBP-09-23, 70 NRC 659 (2009)

whether NEPA requires the NRC to consider potential health effects of consuming irradiated food raises the kind of broad legal question appropriate for Commission interlocutory review; CLI-08-4, 67 NRC 171 (2008); CLI-08-16, 68 NRC 221 (2008)

### REVOCAION OF LICENSES

a license renewal may be set aside or appropriately conditioned even after it has been issued, upon subsequent administrative or judicial review; CLI-10-8, 71 NRC 142 (2010)

lack of either technical competence or character qualifications on the part of licensee or applicant is sufficient grounds for the revocation of a license or the denial of a license application; LBP-09-6, 69 NRC 367 (2009)

NRC may revoke any license for a material false statement in the application; CLI-07-12, 65 NRC 203 (2007)

voluntary surrender of a valid construction permit does not amount to wrongful activity that would warrant revocation; CLI-10-6, 71 NRC 113 (2010)

## SUBJECT INDEX

### RISK ANALYSIS

Staff's generic environmental impact statement for license renewal has already performed a discretionary analysis of terrorist acts in connection with license renewal and concluded that the core damage and radiological release from such acts would be no worse than the damage and release to be expected from internally initiated events; CLI-07-8, 65 NRC 124 (2007)

the level of risk of a terrorist attack depends upon political, social, and economic factors external to the NRC licensing process, and thus it is not sensible to hold an NRC licensing decision, rather than terrorists themselves, as the proximate cause of an attack on an NRC-licensed facility; CLI-07-8, 65 NRC 124 (2007)

### RISK ASSESSMENT

issue of whether location of a nuclear plant in a densely populated area allowed adoption of generic risk factors and a severe accident mitigation design alternatives decision supported by a policy statement rather than a rulemaking was confronted; LBP-10-10, 71 NRC 529 (2010)

### RISK-INFORMED PERFORMANCE-BASED PROGRAMS

licensee is not required to submit docketed information on the resolution of each fire protection noncompliance during its transition to a risk-informed and performance-based fire protection program, but it is required to implement and maintain compensatory measures for remaining noncompliances; DD-07-3, 65 NRC 643 (2007)

licensees may voluntarily adopt a risk-informed and performance-based fire protection program; DD-07-3, 65 NRC 643 (2007)

### RISKS

events having a less than a one in one million probability of occurring are not credible events; LBP-09-4, 69 NRC 170 (2009)

events that could cause radioactive releases, including aircraft impact events, are included within the set of design basis events required to be analyzed and designed against only if the probability of such events is above one in one million per year; LBP-09-2, 69 NRC 87 (2009)

potential radiological risks associated with an ISFSI license transfer are lower than those for an operating facility, because an ISFSI is essentially a passive structure, and there therefore is less chance of widespread radioactive release; CLI-07-19, 65 NRC 423 (2007)

when an applicant receives a construction permit, it proceeds at its own risk, regardless of the amount of money that it may have expended during construction; LBP-10-7, 71 NRC 391 (2010)

See also Assumption of Risk

### RULE OF REASON

a Staff determination that certain scenarios, such as Part 61 intruder scenarios, are so unlikely as to fall outside the scope of the Staff's NEPA review is a proper exercise of NEPA's rule of reason; LBP-06-8, 63 NRC 241 (2006)

all significant environmental impacts and all reasonable alternatives should be considered for a combined license, but these are governed by the rule of reason; LBP-09-10, 70 NRC 51 (2009); LBP-09-17, 70 NRC 311 (2009)

an agency's environmental review need only account for those impacts that have some likelihood of occurring or are reasonably foreseeable; LBP-06-8, 63 NRC 241 (2006)

consideration and evaluation of intruder scenarios and related intruder dose are part of the "hard look" NEPA requires the Staff to take at the environmental impacts associated with a particular licensing action; LBP-06-8, 63 NRC 241 (2006)

consideration of environmental impacts need not address every impact that could possibly result, but rather only those that are reasonably foreseeable or have some likelihood of occurring; LBP-09-7, 69 NRC 613 (2009)

goals of the project sponsor are given substantial weight in determining whether an alternative is reasonable; LBP-09-10, 70 NRC 51 (2009)

if a NEPA contention alleges that impacts or alternatives that are patently outside the realm of reason must be considered, then the contention should be denied for failure to demonstrate that the issue raised is within the legitimate scope of NEPA; LBP-09-10, 70 NRC 51 (2009)

if the accident sought to be considered is sufficiently unlikely, such that it can be characterized fairly as remote and speculative, then consideration under NEPA is not required as a matter of law; LBP-09-4, 69 NRC 170 (2009)

## SUBJECT INDEX

- implicit in NEPA is a rule of reason, under which the agency may limit the alternatives discussion where there is no environmental effect or where an effect is simply not significant; LBP-10-10, 71 NRC 529 (2010)
- it would be inconsistent with the National Environmental Policy Act to require that the cumulative impacts analysis individually analyze the effects of remote facilities absent a demonstration that such additional effort would lead to a different conclusion; LBP-09-4, 69 NRC 170 (2009)
- low probability is the key to applying NEPA's rule-of-reason test to contentions that allege that a specified accident scenario presents a significant environmental impact that must be evaluated; LBP-09-26, 70 NRC 939 (2009); LBP-10-10, 71 NRC 529 (2010)
- NEPA analyses are subject to a rule of reason, but it is necessary to have a criterion upon which reasonableness may be determined; LBP-09-4, 69 NRC 170 (2009)
- NEPA does not require applicant to consider energy efficiency in its NEPA analysis, because it is not a reasonable alternative for a merchant power producer; CLI-10-1, 71 NRC 1 (2010)
- NEPA requirements are tempered by a practical rule of reason; CLI-10-22, 72 NRC 202 (2010)
- the hard look required by NEPA is subject to a rule of reason, such that it is not necessary to look at every conceivable alternative to the proposed licensing action, but only those that are feasible, and reasonably related to the scope and goals of the proposed action; LBP-09-21, 70 NRC 581 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-10-10, 71 NRC 529 (2010); LBP-10-14, 72 NRC 101 (2010)
- the National Environmental Policy Act excludes consideration of demand-side management if the proposed new plant is intended to be a merchant plant, selling power on the open market, because it is not feasible for licensee to engage in demand-side management; CLI-10-21, 72 NRC 197 (2010)
- the range of alternatives that must be considered need not extend beyond those reasonably related to the purposes of the project and a rule of reason necessarily informs that choice; CLI-10-18, 72 NRC 56 (2010)
- RULEMAKING**
- a board erred in referring a contention to the Staff for consideration in conjunction with the design certification rulemaking without first assessing its admissibility; CLI-10-1, 71 NRC 1 (2010)
- a challenge to the Waste Confidence Rule, which is the subject of a rulemaking, is inadmissible; CLI-10-9, 71 NRC 245 (2010)
- a contention that attacks a Commission rule, or that seeks to litigate a matter that is, or clearly is about to become, the subject of a rulemaking, is inadmissible; CLI-10-9, 71 NRC 245 (2010); CLI-10-19, 72 NRC 98 (2010); LBP-06-7, 63 NRC 188 (2006); LBP-07-3, 65 NRC 237 (2007); LBP-08-21, 68 NRC 554 (2008); LBP-09-2, 69 NRC 87 (2009); LBP-09-3, 69 NRC 139 (2009); LBP-09-8, 69 NRC 736 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-21, 70 NRC 581 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-10-7, 71 NRC 391 (2010)
- a license application will not be held in abeyance until the design certification rulemaking is completed; LBP-09-16, 70 NRC 227 (2009)
- a petition for rulemaking is a more appropriate venue to resolve generic concerns about spent fuel fires; LBP-08-13, 68 NRC 43 (2008)
- a Staff order that neither repudiates nor rescinds any NRC safety and security requirements, but rather imposes new, more stringent security requirements that supplement those already found in NRC regulations does not amount to unlawfully promulgated regulations; CLI-10-3, 71 NRC 49 (2010)
- a state could seek to have licensing proceedings suspended pending an NRC decision on its rulemaking petition, if it participated in the proceedings as an interested state; CLI-09-10, 69 NRC 521 (2009)
- a waste confidence rulemaking is not the appropriate instrument for resolving low-level radioactive waste issues, particularly issues of disposal; CLI-09-3, 69 NRC 68 (2009)
- agencies generally are free to exercise their discretion in determining whether to formulate policy through rulemaking or adjudication; LBP-06-7, 63 NRC 188 (2006)
- agency decisions on rulemaking petitions are judicially reviewable; CLI-07-13, 65 NRC 211 (2007)
- amendment of a combined license application to comply with an amended aircraft impacts rule during the pendency of the COL application could form the basis for a late-filed contention; CLI-10-1, 71 NRC 1 (2010)
- an order modifying a license, such as a Staff order, falls well within the Administrative Procedure Act's definition of adjudication, and as such, the Staff order does not trigger the notice-and-comment procedures applicable to rulemakings; CLI-10-3, 71 NRC 49 (2010)

## SUBJECT INDEX

an otherwise admissible contention that raises challenges to information in a design certification rulemaking should be referred to the Staff for resolution in the rulemaking; CLI-09-4, 69 NRC 80 (2009); CLI-09-8, 69 NRC 317 (2009)

any contention directed at a design undergoing rulemaking review fails on its face to satisfy the admission requirements because all matters subject of a rulemaking are outside the scope of licensing proceedings; LBP-09-8, 69 NRC 736 (2009)

challenges to the adequacy of Table S-3, which was initially prepared more than 25 years ago, may be made through a petition for rulemaking; LBP-08-17, 68 NRC 431 (2008)

challenges to the Waste Confidence Rule must be made in the context of a rulemaking, not in the context of an adjudicative proceeding; CLI-10-19, 72 NRC 98 (2010)

contentions that advocate stricter requirements than agency rules impose or that otherwise seek to litigate a generic determination established by a Commission rulemaking are inadmissible; LBP-10-7, 71 NRC 391 (2010)

design certification rulemaking and individual combined license adjudicatory proceedings may proceed simultaneously, and issues raised in an adjudicatory proceeding that are appropriately addressed in the generic design certification rulemaking are to be referred to the Staff for resolution; CLI-09-8, 69 NRC 317 (2009)

if licensee wishes to challenge the compatibility category that is assigned to a particular regulation, including the license termination rule, it may do so at any time through submission of a petition for rulemaking; CLI-10-8, 71 NRC 142 (2010)

if new information becomes available in the course of waste confidence rulemaking proceedings that contravenes a combined license application, petitioner may file a motion to admit a new or amended contention; LBP-09-18, 70 NRC 385 (2009)

if petitioner believes that current NRC regulations are inadequate, the venue for raising such a concern is a section 2.802 petition to institute a rulemaking action; LBP-08-13, 68 NRC 43 (2008)

if petitioners are dissatisfied with NRC's generic approach to a problem, their remedy lies in the rulemaking process, not in adjudication; CLI-10-19, 72 NRC 98 (2010); LBP-08-23, 68 NRC 679 (2008); LBP-09-16, 70 NRC 227 (2009); LBP-09-18, 70 NRC 385 (2009)

if petitioners believe that the specification for climate change no longer provides a reasonable basis for demonstrating compliance based on new scientific evidence, they can petition NRC to amend the rules; LBP-10-22, 72 NRC 661 (2010)

if petitioners wish to propose security measures in addition to those laid out in a Staff enforcement order, their remedy is to ask NRC to institute a rulemaking to impose broader security measures; CLI-10-3, 71 NRC 49 (2010)

if there is reason to believe that a departure from the NRC's license renewal generic environmental impact statement and related regulations is warranted, then the remedy is a petition for rulemaking to modify the rules or a petition for a waiver of the rules based on special circumstances, not an adjudicatory contention; CLI-07-8, 65 NRC 124 (2007)

issuance of a post-9/11 security order does not amount to unlawfully promulgated regulations; CLI-10-3, 71 NRC 49 (2010)

issuance of a proposed rulemaking and requests for comments does not, in itself, constitute information not previously available that entitles a party to file a new contention; LBP-09-10, 70 NRC 51 (2009)

issue of whether location of a nuclear plant in a densely populated area allowed adoption of generic risk factors and a severe accident mitigation design alternatives decision supported by a policy statement rather than a rulemaking was confronted; LBP-10-10, 71 NRC 529 (2010)

issues concerning a reactor design certification application should be resolved in the design certification rulemaking and not in an individual COL proceeding; CLI-08-15, 68 NRC 1 (2008); LBP-08-17, 68 NRC 431 (2008)

it makes more sense for NRC to study whether, as a technical matter, the agency should modify its requirements for all plants across the board than to litigate in particular adjudications whether generic findings in the GEIS are impeached by a claim of new information; CLI-07-3, 65 NRC 13 (2007)

notice-and-comment rulemaking is required only when the NRC is attempting to change a regulation; CLI-10-6, 71 NRC 113 (2010)

NRC rules permit the filing of a combined license application during the pendency of a design certification rulemaking; CLI-10-9, 71 NRC 245 (2010)

## SUBJECT INDEX

- NRC rules recognize the possibility of new and significant information calling into question prior generic findings, and a petition for rulemaking is one means to alert the Commission to new information that may render a GEIS finding incorrect; CLI-09-10, 69 NRC 521 (2009)
- once a licensing proceeding has been closed, petitioners will still have the opportunity to raise issues by filing a petition under 10 C.F.R. 2.802; CLI-10-17, 72 NRC 1 (2010)
- only a party to a proceeding, or an interested governmental entity participating under section 2.315, may file a request to stay proceedings pending a rulemaking; CLI-07-13, 65 NRC 211 (2007)
- outside the adjudicatory context, a petitioner's concerns may be addressed through a petition for rulemaking; LBP-07-4, 65 NRC 281 (2007)
- participants in ongoing adjudicatory proceedings that have filed a rulemaking petition should be provided an opportunity to seek a stay of the adjudication pending a resolution of the rulemaking petition; LBP-08-16, 68 NRC 361 (2008)
- pending resolution of a rulemaking petition, NRC Staff may, where appropriate, seek the Commission's permission to suspend the generic determination of a Category 1 issue and include a new analysis in the plant-specific environmental impact statements; CLI-07-3, 65 NRC 13 (2007)
- petitioners and others who believe the Waste Confidence Rule needs revision must use rulemaking proceedings to express their concerns; LBP-09-4, 69 NRC 170 (2009)
- the agency decided not to include the threat of air attacks in the 2007 revision to the design basis threat rule, a decision upheld by the Ninth Circuit; CLI-10-9, 71 NRC 245 (2010)
- the appropriate path for any petitioner's challenges to proposed reactor design revisions is through participation in those rulemaking proceedings, not through a combined license proceeding; LBP-09-2, 69 NRC 87 (2009)
- the Commission declines to accept the board's suggestion that the Commission consider instituting a "low-level waste confidence" rulemaking proceeding; CLI-09-3, 69 NRC 68 (2009)
- the Commission generally refuses to modify, rescind, or impose new requirements on reactor design certification information, unless through rulemaking; LBP-10-21, 72 NRC 616 (2010)
- the Commission has discretion under the Administrative Procedure Act to impose binding, prospectively applicable legal requirements by either rulemaking or adjudication; CLI-10-3, 71 NRC 49 (2010)
- the design certification rulemaking and individual COL adjudicatory proceedings may proceed simultaneously, and issues raised in an adjudicatory proceeding that are appropriately addressed in the generic design certification rulemaking are to be referred to the rulemaking for resolution; LBP-10-17, 72 NRC 501 (2010)
- the mere potential that an issue may become moot in the future due to a rulemaking does not affect the finality of a decision resting on current law; CLI-07-13, 65 NRC 211 (2007)
- the need for design features to guard against design basis threats is outside the scope of a combined license proceeding because it is the subject of an ongoing rulemaking; LBP-09-2, 69 NRC 87 (2009)
- the SAMDA analysis is part of the design certification application and thus intervenor's contention constitutes an impermissible challenge to a future rulemaking; LBP-10-10, 71 NRC 529 (2010)
- the universe of potential contentions in a combined license proceeding includes site-specific contentions that do not implicate issues appropriately considered in a design certification rulemaking; CLI-09-8, 69 NRC 317 (2009)
- to the extent that an intervenor disagrees with a regulation, its recourse is to petition the Commission for rulemaking to change it; LBP-06-1, 63 NRC 41 (2006)
- to the extent that petitioners argue that the provisions of 10 C.F.R. 50.54(hh) should be applied to dry cask storage, they may file a rulemaking petition with the Commission; LBP-09-17, 70 NRC 311 (2009)
- where a petitioner argues that new information contradicts assumptions underlying the entire generic analysis for all facilities or a whole class of facilities, the appropriate remedy is a rulemaking petition; CLI-07-3, 65 NRC 13 (2007)
- RULES**
- a contention that challenges any Commission rule is outside the scope of the proceeding because, absent a waiver, no rule or regulation of the Commission is subject to attack in any adjudicatory proceeding; LBP-07-4, 65 NRC 281 (2007); LBP-10-7, 71 NRC 391 (2010)
- an adjudication is not the proper forum for challenging applicable statutory requirements or the basic structure of the agency's regulatory process; LBP-07-3, 65 NRC 237 (2007)

## SUBJECT INDEX

contentions challenging dose limits in NRC regulations are not admissible; LBP-08-6, 67 NRC 241 (2008)  
contentions that advocate stricter requirements than agency rules impose or that otherwise seek to litigate a generic determination established by a Commission rulemaking are inadmissible; LBP-10-7, 71 NRC 391 (2010)  
if a rule is suspended for analysis, each supplemental EIS would reflect the corrected analysis until such time as the rule is amended; CLI-07-3, 65 NRC 13 (2007)  
policy statements are neither rules nor orders, and therefore do not establish requirements that bind either the agency or the public; CLI-07-27, 66 NRC 215 (2007)  
See also Regulations; Waiver of Rule

### RULES OF PRACTICE

a board appropriately rejected the contention of a petitioner who failed to support his premise that a river water intake valve is a safety-related system with information or expert opinion; CLI-07-25, 66 NRC 101 (2007)  
a board has a duty not only to resolve contested issues, but to articulate in reasonable detail the basis for the course of action chosen; CLI-09-14, 69 NRC 580 (2009)  
a board in one proceeding is not constrained to follow the rulings of another board on standing, absent explicit affirmation by the Commission; LBP-08-24, 68 NRC 691 (2008); LBP-07-10, 66 NRC 1 (2007)  
a board is not at liberty to abandon the Commission's 50-mile proximity presumption; LBP-09-16, 70 NRC 227 (2009)  
a board is not to permit incorporation by reference where the effect would be to circumvent NRC-prescribed specificity requirements; LBP-08-24, 68 NRC 691 (2008)  
a board may refer a ruling to the Commission if it determines that prompt decision is necessary to prevent detriment to the public interest or unusual delay or expense, or if the ruling involves a novel issue that merits Commission review at the earliest opportunity; CLI-09-13, 69 NRC 575 (2009); LBP-09-26, 70 NRC 939 (2009)  
a board may view a petitioner's supporting information in a light favorable to the petitioner, but it cannot do so by ignoring contention admissibility rules, which require the petitioner (not the board) to supply all required elements for a valid intervention petition; CLI-09-7, 69 NRC 235 (2009)  
a board properly found no standing when petitioner failed to demonstrate that it, or any of its members, would suffer any concrete or particularized harm from a proposed license renewal; CLI-06-6, 63 NRC 161 (2006)  
a board's determination of standing does not depend on whether the cause of the injury flows directly from the challenged action, but whether the chain of causation is plausible; LBP-09-13, 70 NRC 168 (2009); LBP-10-16, 72 NRC 361 (2010)  
a board's determination on a request for access to sensitive unclassified nonsafeguards information is reviewed de novo; CLI-10-24, 72 NRC 451 (2010)  
a board's standing analysis must avoid the familiar trap of confusing the standing determination with the assessment of a petitioner's case on the merits; LBP-10-16, 72 NRC 361 (2010)  
a brief explanation of the basis for the contention is a necessary prerequisite to its admission; LBP-07-16, 66 NRC 277 (2007); LBP-09-26, 70 NRC 939 (2009)  
a broadly stated interest in a problem is not sufficient by itself to render an organization so adversely affected or aggrieved that standing will be granted; LBP-09-13, 70 NRC 168 (2009)  
a claim not raised in the hearing petition, but added as a new claim in petitioners' reply brief is considered impermissibly late; CLI-08-17, 68 NRC 231 (2008)  
a claim of residence within 50 miles of a facility might entitle petitioner to a presumption of standing based on proximity in a reactor construction permit or operating license proceeding; CLI-07-19, 65 NRC 423 (2007)  
a contention based on new information will be considered timely if it is filed within 30 days of the availability of the new information; CLI-10-18, 72 NRC 56 (2010); LBP-10-14, 72 NRC 101 (2010)  
a contention can be one of omission as well as one of inadequacy when it alleges that the environmental report is insufficient because it fails to discuss all aspects of the topic adequately; LBP-09-10, 70 NRC 51 (2009)  
a contention challenging applicant's environmental report can be superseded by the subsequent issuance of licensing-related documents, whether a draft environmental impact statement or an applicant's response to a request for additional information; LBP-10-14, 72 NRC 101 (2010)

## SUBJECT INDEX

- a contention is admissible if it raises a genuine dispute that is material to the findings the NRC must make to support the action involved; LBP-09-25, 70 NRC 867 (2009)
- a contention is material if it shows that some significant link exists between the claimed deficiency and either the health and safety of the public, or the environment; LBP-09-26, 70 NRC 939 (2009)
- a contention is not admissible if it is not plausibly explained or supported by alleged facts; LBP-09-21, 70 NRC 581 (2009)
- a contention must explain why the application is deficient through reference to specific portions of the application, and it must directly controvert a position taken by the applicant in the application; LBP-09-17, 70 NRC 311 (2009)
- a contention must meet certain specificity and basis requirements and must fall within the scope of the proceeding; CLI-06-16, 63 NRC 708 (2006)
- a contention must show that a genuine dispute exists on a material issue of law or fact with regard to the license application, challenge and identify either specific portions of, or alleged omissions from, the application, and provide the supporting reasons for each dispute; LBP-09-26, 70 NRC 939 (2009)
- a contention of omission claims that the application fails to contain information on a relevant matter as required by law and provides the supporting reasons for the petitioner's belief; LBP-08-15, 68 NRC 294 (2008); LBP-09-16, 70 NRC 227 (2009); LBP-09-27, 70 NRC 992 (2009)
- a contention raised in a combined license hearing challenging information in a design certification rulemaking, if otherwise admissible, should be referred to the Staff for consideration in the rulemaking, and held in abeyance by the licensing board pending outcome of rulemaking; LBP-09-3, 69 NRC 139 (2009)
- a contention shall not be admitted if the admissibility requirements are not satisfied or if the contention, even if proven, would not entitle petitioner to relief; CLI-08-1, 67 NRC 1 (2008)
- a contention that attacks a Commission rule or that seeks to litigate a matter that is, or clearly is about to become, the subject of a rulemaking, is inadmissible; CLI-10-9, 71 NRC 245 (2010); LBP-07-3, 65 NRC 237 (2007); LBP-08-16, 68 NRC 361 (2008); LBP-08-21, 68 NRC 554 (2008); LBP-09-2, 69 NRC 87 (2009); LBP-09-3, 69 NRC 139 (2009); LBP-09-8, 69 NRC 736 (2009); LBP-10-7, 71 NRC 391 (2010)
- a contention that attacks applicable statutory requirements, challenges the basic structure of the NRC's regulatory process, or merely expresses generalized policy grievances is not appropriate for a board hearing; LBP-09-3, 69 NRC 139 (2009); LBP-09-6, 69 NRC 367 (2009)
- a contention that challenges applicant's reliance on a pending design certification fundamentally on procedural grounds, constitutes an impermissible challenge to NRC regulations that allow the procedure applicant has chosen; LBP-08-17, 68 NRC 431 (2008)
- a contention that does not directly controvert a position taken by the applicant in the application is subject to dismissal; LBP-06-10, 63 NRC 314 (2006)
- a contention that fails to comply with any of the pleading requirements of 10 C.F.R. 2.309(f)(1) must be rejected; LBP-06-22, 64 NRC 229 (2006); LBP-07-7, 65 NRC 507 (2007)
- a contention that seeks to impose new requirements on applicants and licensees is an impermissible challenge to the agency's regulations; LBP-09-26, 70 NRC 939 (2009)
- a contention that simply states the petitioner's views about what regulatory policy should be does not present a litigable issue; LBP-07-3, 65 NRC 237 (2007); LBP-09-3, 69 NRC 139 (2009)
- a contention will be ruled inadmissible if petitioner has offered no tangible information, no experts, no substantive affidavits, but instead only bare assertions and speculation; LBP-06-7, 63 NRC 188 (2006); LBP-10-6, 71 NRC 350 (2010)
- a decision may be referred to the Commission if it raises significant and novel legal or policy issues, and resolution of the issues would materially advance the orderly disposition of the proceeding; LBP-09-18, 70 NRC 385 (2009)
- a declaration in support of petitioner's standing based on geographic proximity must include a specific statement of distance from the licensed facility; CLI-07-18, 65 NRC 399 (2007)
- a detailed summary of relevant case law on contention admissibility is presented; LBP-07-4, 65 NRC 281 (2007)
- a determination that an injury is fairly traceable to the challenged action does not depend on whether the cause of the injury flows directly from the challenged action, but whether the chain of causation is plausible; LBP-10-4, 71 NRC 216 (2010)

## SUBJECT INDEX

- a dispute is material if its resolution would make a difference in the outcome of the licensing proceeding; LBP-10-6, 71 NRC 350 (2010)
- a filing that was 3 days late, which the board characterized as not excessively late, was accepted based on findings that intervenor offered a reasonable explanation for the delay and the delay did not prejudice any of the other parties; LBP-10-21, 72 NRC 616 (2010)
- a filing will be considered complete by electronic transmission when the filer performs the last act that it must perform to transmit a document, in its entirety, electronically; LBP-08-16, 68 NRC 361 (2008)
- a finding that applicant has cured an omission does not preclude litigation concerning the adequacy of the information the applicant has supplied and intervenors must timely file a new or amended contention that addresses the factors in 10 C.F.R. 2.309(f)(1); LBP-09-15, 70 NRC 198 (2009)
- a genuine material dispute is one that could lead to a different conclusion on potential cost-beneficial severe accident mitigation alternatives; LBP-09-26, 70 NRC 939 (2009)
- a hearing must be held upon the request of any person whose interest may be affected by the proceeding; LBP-08-14, 68 NRC 279 (2008)
- a hearing request is timely when petitioner lacks both actual and constructive notice of its opportunity to request a hearing as of the deadline specified by the agency, and the petitioner files the hearing request promptly upon receipt of actual notice; LBP-09-20, 70 NRC 565 (2009)
- a hearing request must state the name, address, and telephone number of the requestor, the nature of the requestor's right under the governing statutes to be made a party to the proceeding, the nature and extent of the requestor's property, financial, or other interest in the proceeding, and the possible effect of any decision or order that may be issued in the proceeding on the requestor's interest; LBP-09-28, 70 NRC 1019 (2009)
- a lack of specificity will be sufficient to reject a claim of standing; LBP-09-18, 70 NRC 385 (2009)
- a late-filed contention will be rejected as untimely unless the petitioner demonstrates that the eight-factor balancing test in 10 C.F.R. 2.309(c) militates in favor of considering the contention's admissibility; LBP-06-22, 64 NRC 229 (2006)
- a late-filed document that supports or provides a basis for a proposed contention should be considered using the late-filing factors of 10 C.F.R. 2.309(c) and 2.309(f)(2); CLI-09-12, 69 NRC 535 (2009)
- a late-filed environmental contention may be admitted only where petitioner relies upon newly available, significant information, meets the late-filing requirements, or successfully argues for supplementing the EIS; LBP-08-11, 67 NRC 460 (2008)
- a legal issue contention need not satisfy all the contention admissibility criteria; LBP-09-29, 70 NRC 1028 (2009)
- a license to possess and to use special nuclear materials at a fuel fabrication facility is the functional equivalent of an operating license for more standard facilities; LBP-07-14, 66 NRC 169 (2007)
- a licensing board cannot make a determination of whether there is a genuine issue of material fact without carefully examining the evidence presented in the parties' affidavits; LBP-07-13, 66 NRC 131 (2007)
- a licensing board is clearly authorized to dismiss a party who obstructs the discovery process, disobeys the board orders, and engages in willful, bad-faith, and prejudicial conduct toward another party; CLI-08-29, 68 NRC 899 (2008)
- a licensing board may not admit a contention that directly or indirectly challenges Table S-3 of 10 C.F.R. 51.51; LBP-09-16, 70 NRC 227 (2009)
- a licensing board need not formally reopen the record in order to assess the relative worth of the parties' competing evidence; LBP-08-12, 68 NRC 5 (2008)
- a licensing board order canceling oral argument on the admissibility of petitioner's proposed contention did not cause serious and irreparable harm to petitioner; CLI-08-7, 67 NRC 187 (2008)
- a licensing board order is final for appellate purposes where it either disposes of at least a major segment of the case or terminates a party's right to participate, and rulings that do neither are interlocutory; CLI-06-18, 64 NRC 1 (2006)
- a licensing board ruling on a summary disposition motion must view the record in the light most favorable to the party opposing such a motion and deny the motion if movant fails to meet its burden, even in the face of an inadequate response; LBP-07-12, 66 NRC 113 (2007)

## SUBJECT INDEX

- a licensing board will not “strike from the record” any portions of petitioner’s reply, because any part of a record, whether or not appropriately considered in making any rulings, may become relevant in an appeal; LBP-07-4, 65 NRC 281 (2007)
- a litany of facts and figures on various items without citation to a specific document, expert opinion, or other supporting source reduces them to bare assertions and speculation that will not support the contention admission; LBP-08-16, 68 NRC 361 (2008)
- a motion and proposed contention filed later than 30 days after the date when the new and material information on which it is based first becomes available shall be deemed untimely; LBP-09-22, 70 NRC 640 (2009); LBP-09-29, 70 NRC 1028 (2009)
- a motion for reconsideration may not be filed except with leave of the licensing board, upon a showing of compelling circumstances, such as the existence of a clear and material error in a decision, which could not reasonably have been anticipated, that renders the decision invalid; CLI-07-13, 65 NRC 211 (2007); CLI-10-15, 71 NRC 479 (2010); LBP-08-23, 68 NRC 679 (2008)
- a motion for summary disposition must be granted if the filings in the proceeding together with the statements of the parties and the affidavits, if any, show that there is no genuine issue as to any material fact and that the moving party is entitled to a decision as a matter of law; LBP-09-15, 70 NRC 198 (2009)
- a motion to file late should generally be denied, except under extraordinary conditions; LBP-10-21, 72 NRC 616 (2010)
- a motion to reopen a closed proceeding must satisfy the requirements of 10 C.F.R. 2.326; CLI-06-4, 63 NRC 32 (2006)
- a motion to reopen must be accompanied by affidavits that set forth the factual and/or technical bases for the movant’s claim that the criteria of 10 C.F.R. 2.326(a) have been satisfied, including addressing each of the reopening criteria separately with a specific explanation of why it has been met; LBP-10-21, 72 NRC 616 (2010)
- a motion to reopen that does not satisfy the Commission’s procedural requirements but which arguably raises a significant safety or environmental issue may be referred to the Staff under 10 C.F.R. 2.206; CLI-06-4, 63 NRC 32 (2006)
- a motion to strike is an inappropriate vehicle to address whether arguments in a summary disposition answer raise matters outside the scope of a contention; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)
- a Native American group that has failed to establish that it is a federally recognized Indian tribe is denied standing based on its tribal status; LBP-09-13, 70 NRC 168 (2009)
- a new contention may be filed after the deadline in the notice of hearing with leave of the presiding officer upon a showing that information upon which it is based was not previously available, is materially different than information previously available, and has been submitted in a timely fashion based on the availability of the subsequent information; LBP-09-27, 70 NRC 992 (2009); LBP-10-9, 71 NRC 493 (2010); LBP-10-17, 72 NRC 501 (2010)
- a newly proffered contention submitted after the close of the record must meet timeliness standards as well as the requirements of 10 C.F.R. 2.309(c); LBP-08-12, 68 NRC 5 (2008)
- a nexus between the injury and the relief is required rather than a nexus between the claimed injury and the contention; LBP-09-16, 70 NRC 227 (2009)
- a notice of appeal must be accompanied by a brief; CLI-06-6, 63 NRC 161 (2006)
- a notice of withdrawal combined with an attached memorandum of understanding whereby applicant agrees to perform certain actions and testing, in return for which the intervenor agrees to withdraw, with prejudice, from the litigation, constitutes a *quid pro quo* arrangement which is a settlement agreement within the meaning of 10 C.F.R. 2.338; LBP-06-18, 63 NRC 830 (2006)
- a party at risk of filing out of time can request an extension, doing so well before the time specified expires; LBP-10-21, 72 NRC 616 (2010)
- a party cannot satisfy the “not previously available” standard of 10 C.F.R. 2.309(f)(2)(i) by showing that, as a subjective matter, he or she only recently became aware of, or realized the significance of, public information that was previously available to all; LBP-09-10, 70 NRC 51 (2009)
- a party is excused from producing a document if the document is publicly available and if the party specifies where the document may be found; LBP-10-23, 72 NRC 692 (2010)

## SUBJECT INDEX

- a party is not required to prove its case in making or opposing a motion for summary disposition; LBP-07-13, 66 NRC 131 (2007)
- a party may comply by merely providing a description by category and location of all documents subject to mandatory disclosure; LBP-10-23, 72 NRC 692 (2010)
- a party opposing summary disposition must counter each adequately supported material fact with its own statement of material facts in dispute and supporting materials, or the movant's facts will be deemed admitted; LBP-06-9, 63 NRC 289 (2006)
- a party seeking a stay must show that it faces imminent, irreparable harm that is both certain and great; CLI-09-23, 70 NRC 935 (2009)
- a party seeking to reopen a closed record to raise a new matter faces an elevated burden to lay a proper foundation for its claim; CLI-08-28, 68 NRC 658 (2008)
- a party's failure to raise a matter in its proposed findings of fact and conclusions of law seemingly waives this matter as grounds for its challenge to the final environmental impact statement; LBP-09-7, 69 NRC 613 (2009)
- a petition for reconsideration must demonstrate a compelling circumstance, such as the existence of a clear and material error in a decision, which could not have been reasonably anticipated, which renders the decision invalid; CLI-07-22, 65 NRC 525 (2007)
- a petition for review and request for hearing must include a showing that petitioner has standing and that the board should consider the nature of the petitioner's right under the AEA or NEPA to be made a party to the proceeding, the nature and extent of petitioner's property, financial, or other interest in the proceeding, and the possible effect of any decision or order that may be issued in the proceeding on the petitioner's interest; LBP-09-13, 70 NRC 168 (2009); LBP-10-16, 72 NRC 361 (2010)
- a petition for rule waiver must be accompanied by an affidavit that describes with particularity the special circumstances that justify the waiver; CLI-10-10, 71 NRC 281 (2010)
- a petition for rule waiver must show that special circumstances with respect to the subject matter of the particular proceeding are such that the application of the rule or regulation (or a provision of it) would not serve the purposes for which the rule or regulation was adopted; CLI-10-10, 71 NRC 281 (2010); LBP-10-12, 71 NRC 656 (2010)
- a petition or other request for review of or hearing on the Staff's significant hazards consideration determination will not be entertained by the Commission; LBP-08-18, 68 NRC 533 (2008)
- a petition seeking review of an order granting or denying an abeyance motion meets NRC's standard for interlocutory review because the appealed order would have an immediate and serious irreparable impact which, as a practical matter, could not be alleviated through a petition for review of the presiding officer's final decision; CLI-07-6, 65 NRC 112 (2007)
- a petition to waive a Commission regulation can be granted only in unusual and compelling circumstances; LBP-10-22, 72 NRC 661 (2010)
- a petition would qualify for interlocutory review where it challenges a board decision that affects the basic structure of the proceeding in a pervasive and unusual manner; CLI-10-13, 71 NRC 387 (2010)
- a petitioner awarded standing in one proceeding need not restate all of its case to establish standing in another proceeding related to the same facility; LBP-07-14, 66 NRC 169 (2007)
- a petitioner may file a reply to any answer within 7 days after service of that answer; LBP-07-4, 65 NRC 281 (2007)
- a petitioner may have standing based upon geographical proximity to a particular facility; LBP-06-4, 63 NRC 99 (2006); LBP-06-7, 63 NRC 188 (2006)
- a petitioner may in instances of exigent or unavoidable circumstances file a request for an extension of time to file an original hearing petition and contentions; LBP-07-4, 65 NRC 281 (2007)
- a petitioner seeking discretionary intervention must propose at least one admissible contention; CLI-06-16, 63 NRC 708 (2006)
- a petitioner that fails to develop an argument in its petition is foreclosed from doing so in the first instance in its reply brief; LBP-06-7, 63 NRC 188 (2006)
- a petitioner that fails to submit a reply brief is foreclosed from challenging the assertions advanced by the licensee and the NRC Staff in their answers, unless it put such assertions in issue in its petition; LBP-06-7, 63 NRC 188 (2006)

## SUBJECT INDEX

- a petitioner who without reason fails to argue that a nontimely contention satisfies the eight-factor balancing test in 10 C.F.R. 2.309(c) may be deemed as having waived that argument; LBP-06-22, 64 NRC 229 (2006)
- a presumption of standing applies when an individual, organization, or individual authorizing an organization to represent his or her interests resides within 50 miles of the proposed facility or has frequent contacts with the area affected by the proposed facility; LBP-10-7, 71 NRC 391 (2010)
- a prima facie showing merely requires the presentation of enough information to allow a board to infer (absent disproof) that special circumstances exist to support a rule waiver; LBP-10-15, 72 NRC 257 (2010)
- a properly pleaded contention of omission must challenge a specific portion of the application and provide a basis for demonstrating the alleged deficiency; LBP-09-26, 70 NRC 939 (2009)
- a proposed contention that fails to directly controvert the application or that mistakenly asserts the application does not address a relevant issue is subject to dismissal; LBP-09-27, 70 NRC 992 (2009)
- a proposed new or amended contention shall be deemed timely if it is filed within 30 days of the date when the new and material information on which it is based first becomes available; LBP-10-9, 71 NRC 493 (2010)
- a public interest group may establish representational standing by having its affected members authorize the organization to represent them; LBP-06-10, 63 NRC 314 (2006)
- a regular commute that takes petitioner past a plant entrance once or twice a week is sufficient to establish standing; LBP-10-1, 71 NRC 165 (2010)
- a reply cannot expand the scope of the arguments set forth in the original pleading; CLI-06-17, 63 NRC 727 (2006)
- a reply is not an opportunity for a petitioner to bolster its original contentions with new supporting facts and arguments; LBP-08-26, 68 NRC 905 (2008)
- a reply may include arguments and alleged facts that are focused on the legal or logical arguments presented in the answers; LBP-10-19, 72 NRC 529 (2010)
- a reply may not be used as a vehicle to introduce new arguments or support, may not expand the scope of arguments set forth in the original petition, and may not attempt to cure an otherwise deficient contention; LBP-07-4, 65 NRC 281 (2007); LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009)
- a request for an exemption from a particular regulatory provision does not render a license application deficient; CLI-06-10, 63 NRC 451 (2006)
- a request for an order to modify a license based upon an allegedly hazardous condition in the current spent fuel pool amounts to a request for agency enforcement action and thus is not suitable for a license renewal adjudication, but may be considered under 10 C.F.R. 2.206; CLI-06-26, 64 NRC 225 (2006)
- a rule or regulation may be challenged outside the adjudicatory context by filing a petition for rulemaking under 10 C.F.R. 2.802 or requesting that NRC Staff take enforcement action under 10 C.F.R. 2.206; LBP-07-11, 66 NRC 41 (2007)
- a ruling granting summary disposition on a single contention, where other contentions are still pending in an adjudication, is not a final decision, and is not susceptible to Commission review; CLI-08-2, 67 NRC 31 (2008)
- a safety contention arising from a matter resolved in an early site permit proceeding is within the scope of a combined license proceeding that references the ESP if it concerns whether the site characteristics and design parameters specified in the ESP have been met; LBP-08-15, 68 NRC 294 (2008)
- a SAMA analysis contention was found to be inadmissible because it lacked supporting information regarding the relative costs and benefits of that proposed alternative; LBP-10-15, 72 NRC 257 (2010)
- a "same zip code" test for standing is inappropriate, given that the sizes of zip-code areas vary greatly throughout the country; CLI-07-22, 65 NRC 525 (2007)
- a showing of relevance alone is not sufficient for a party seeking a deliberative process privilege document to demonstrate that its need for the document outweighs the need to protect the document; LBP-06-3, 63 NRC 85 (2006)
- a significant pattern of regular contacts within the 50-mile radius around the plant is sufficient to establish proximity-based standing; LBP-09-18, 70 NRC 385 (2009)

## SUBJECT INDEX

- a single sentence labeled a contention, with no reference to the six elements of 10 C.F.R. 2.309(f)(1) does not make an admissible contention; LBP-10-16, 72 NRC 361 (2010)
- a Staff request to an applicant for more information does not make an application incomplete; CLI-08-15, 68 NRC 1 (2008)
- a standing ruling in one proceeding is not dispositive of a determination in another proceeding with the same petitioner because the ruling was not the subject of appellate review; LBP-09-18, 70 NRC 385 (2009)
- a state or local governmental entity that wishes to be a party in a proceeding that involves a facility located within its boundaries is automatically deemed to have standing; LBP-06-7, 63 NRC 188 (2006); LBP-06-23, 64 NRC 257 (2006); LBP-08-13, 68 NRC 43 (2008)
- a statement of petitioner's views about what regulatory policy should be does not present a litigable issue; LBP-08-16, 68 NRC 361 (2008)
- a statement purporting to show a real potential for injury sufficient for standing will be rejected if it is too vague and general; CLI-06-2, 63 NRC 9 (2006)
- a stay of the close of hearings in both license renewal proceedings for 14 days following the date of issuance of mandate is ordered to afford a state the opportunity to request participant status under this section; CLI-08-9, 67 NRC 353 (2008)
- a sufficiently high-ranking person must sign the affidavit asserting the deliberative process privilege; LBP-06-25, 64 NRC 367 (2006)
- a summary disposition movant bears the initial burden of making the requisite showing that there is no genuine issue as to any material fact, which it attempts to do by means of a required statement of material facts not at issue and any supporting materials (including affidavits, discovery responses, and documents) that accompany its dispositive motion; LBP-06-9, 63 NRC 289 (2006)
- a supporting document available in NRC ADAMS system 51 days prior to its submission, but received by petitioners only 1 day before its submission, is timely filed; LBP-08-6, 67 NRC 241 (2008)
- a threatened unwanted exposure to radiation, even a minor one, is sufficient to establish an injury; LBP-06-4, 63 NRC 99 (2006)
- a timely motion to reopen may be denied if it raises issues that are not of major significance to plant safety whereas a nontimely motion may be granted if it raises an issue of sufficient gravity; LBP-10-21, 72 NRC 616 (2010)
- absent a waiver under 10 C.F.R. 2.335(b), contentions challenging applicable statutory requirements or Commission regulations are not admissible in agency adjudications; CLI-08-15, 68 NRC 1 (2008); CLI-08-17, 68 NRC 231 (2008); CLI-09-3, 69 NRC 68 (2009); LBP-08-13, 68 NRC 43 (2008); LBP-08-16, 68 NRC 361 (2008); LBP-08-17, 68 NRC 431 (2008); LBP-09-6, 69 NRC 367 (2009); LBP-09-10, 70 NRC 51 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-09-21, 70 NRC 581 (2009); LBP-10-15, 72 NRC 257 (2010); LBP-10-16, 72 NRC 361 (2010)
- absent an obvious potential for harm, it is a petitioner's burden to show how harm will or may occur; LBP-09-28, 70 NRC 1019 (2009)
- absent evidence to the contrary, a licensing board will not assume licensee will act in derogation of its formal commitments to the NRC Staff; LBP-06-7, 63 NRC 188 (2006)
- absent extreme circumstances, the Commission will not consider on appeal either new arguments or new evidence supporting a contention that the licensing board never had the opportunity to consider; CLI-06-10, 63 NRC 451 (2006); CLI-10-21, 72 NRC 197 (2010)
- absent good cause, a compelling showing must be made on the other section 2.309(c) factors if a nontimely petition is to be granted or a nontimely contention is to be admitted; CLI-10-12, 71 NRC 319 (2010); LBP-09-26, 70 NRC 939 (2009); LBP-10-1, 71 NRC 165 (2010); LBP-10-11, 71 NRC 609 (2010)
- adjudication is not the proper forum for challenging applicable statutory requirements or the basic structure of the agency's regulatory process; LBP-07-10, 66 NRC 1 (2007); LBP-08-16, 68 NRC 361 (2008); LBP-10-7, 71 NRC 391 (2010)
- administrative agencies and their adjudicators routinely approve stipulations and settlements to which fewer than all the parties in a case subscribe; CLI-06-18, 64 NRC 1 (2006)
- admissibility requirements for contentions are specified; LBP-07-10, 66 NRC 1 (2007)
- admissible contentions must include references to specific portions of the application (including the applicant's environmental report and safety report) that petitioner disputes and the supporting reasons for

## SUBJECT INDEX

- each dispute, or, if the petitioner believes that the application fails to contain information on a relevant matter as required by law, the identification of each failure and the supporting reasons for the petitioner's belief; LBP-09-21, 70 NRC 581 (2009)
- admissible contentions must provide sufficient information to show that a genuine dispute exists with the applicant/licensee on a material issue of law or fact; CLI-09-15, 70 NRC 1 (2009); LBP-09-21, 70 NRC 581 (2009)
- affidavits by an individual with standing authorizing an organization to represent him must be filed with specific reference to the proceeding in which standing is sought for the organization; CLI-09-9, 69 NRC 331 (2009)
- after the board issues its initial decision, it must provide questions proffered by the parties to the Commission's Secretary for inclusion in the official record of the proceeding; LBP-07-17, 66 NRC 327 (2007)
- agencies generally are free to exercise their discretion in determining whether to formulate policy through rulemaking or adjudication; LBP-06-7, 63 NRC 188 (2006)
- agencies should be accorded broad discretion in establishing and applying rules for public participation, including rules for determining which community representatives are to be allowed to participate; CLI-08-19, 68 NRC 251 (2008)
- all material facts set forth in the statement required to be served by the moving party will be considered to be admitted unless controverted by the statement required to be served by the opposing party; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)
- all motions are required to include a certification that the sponsor of the motion has made a sincere effort to contact the other parties and to resolve the issues raised in the motion; CLI-08-22, 68 NRC 355 (2008)
- all nuclear safety and environmental issues concerning severe accident mitigation design alternatives associated with NRC's environmental assessment for the AP1000 design and Appendix IB of the generic Design Control Document are considered resolved by the Commission; LBP-09-2, 69 NRC 87 (2009)
- all of the contention admissibility requirements of 10 C.F.R. 2.309(f)(1) must be met for a contention to be admissible; LBP-08-19, 68 NRC 545 (2008); LBP-08-20, 68 NRC 549 (2008)
- all proffered contentions must be within the scope of the proceeding as defined by the Commission in its initial hearing notice and order referring the proceeding to the licensing board; LBP-07-10, 66 NRC 1 (2007); LBP-09-3, 69 NRC 139 (2009)
- all properly formulated contentions must focus on the license application in question, challenging either specific portions of or alleged omissions from the application (including the Safety Analysis Report and the Environmental Report) so as to establish that a genuine dispute exists with the applicant on a material issue of law or fact; LBP-07-3, 65 NRC 237 (2007)
- although a board may appropriately view a petitioner's supporting information in a light favorable to the petitioner, failure to provide such information regarding a proffered contention requires that the contention be rejected; LBP-07-3, 65 NRC 237 (2007); LBP-08-16, 68 NRC 361 (2008); LBP-09-3, 69 NRC 139 (2009); LBP-10-6, 71 NRC 350 (2010)
- although a board may appropriately view petitioners' support for its contention in a light that is favorable to the petitioner, petitioner must provide some support for his or her contention, in the form of either facts or expert testimony; LBP-09-26, 70 NRC 939 (2009)
- although a board may deny certain portions of a multipart contention as outside of the scope or too attenuated, applying all six criteria of 10 C.F.R. 2.309(f)(1) to each subpart of the contention is inappropriate; LBP-09-10, 70 NRC 51 (2009)
- although a board may view petitioner's supporting information in a light favorable to the petitioner, petitioner (not the board) is required to supply all of the required elements for a valid intervention petition; LBP-10-15, 72 NRC 257 (2010); CLI-10-20, 72 NRC 185 (2010); LBP-10-16, 72 NRC 361 (2010)
- although a certain amount of latitude might appropriately be extended to pro se litigants, there nonetheless must be a substantial endeavor to meet the clear regulatory requirements for a hearing request; LBP-07-5, 65 NRC 341 (2007)

## SUBJECT INDEX

although a licensing board will take into account any information from reply briefs that legitimately amplifies issues presented in the original petitions, it will not consider instances of what essentially constitutes untimely attempts to amend the original petitions; LBP-09-17, 70 NRC 311 (2009)

although a motion to reopen must be timely, an exceptionally grave issue may be considered even if the motion is not timely; LBP-10-19, 72 NRC 529 (2010)

although a petitioner does not have to prove its contention at the admissibility stage, mere notice pleading is insufficient; LBP-09-6, 69 NRC 367 (2009); LBP-09-18, 70 NRC 385 (2009)

although a proximity presumption has been invoked when resolving issues of standing for cases involving reactor licensing, in a case involving an enforcement order, the standing requirement is also based on the confirmatory order itself and the adverse effect of the confirmatory order; LBP-07-16, 66 NRC 277 (2007)

although a request for suspension of a proceeding does not fit cleanly into NRC procedural rules for stays, the Commission exercises discretion and consider petitioner's request; CLI-10-17, 72 NRC 1 (2010)

although all six factors are examined regardless of the result on the critical first "sound record" factor, no NRC decision allowing discretionary intervention in the face of a negative finding on the "sound record" fact has occurred; CLI-06-16, 63 NRC 708 (2006)

although an initial position of protecting privacy may be founded on mere theoretical constructs, when a fact-based challenge is made, concrete or specific analysis is needed to effectively counter the challenge and to establish the privacy interests involved; LBP-06-25, 64 NRC 367 (2006)

although Article III of the Constitution does not constrain the NRC hearing process, and NRC hearings therefore are not governed by judicially created standing doctrine, the Commission nonetheless has generally looked to judicial concepts of standing where appropriate to determine those interests affected within the meaning of section 189a of the Atomic Energy Act; LBP-09-1, 69 NRC 11 (2009)

although boards are to provide latitude to pro se participants, petitioner's decision to provide an expert affidavit, available when it filed its hearing petition, at the time it submitted its reply runs afoul of the Commission's directive that reply pleadings cannot be used to introduce additional supporting information relative to a contention; LBP-08-16, 68 NRC 361 (2008)

although boards generally are to litigate a contention rather than the basis that provides the issue statement's foundational support, the reach of a contention necessarily hinges upon its terms coupled with its stated basis; LBP-08-16, 68 NRC 361 (2008)

although exhibits are not themselves either "petitions" or "contentions," the board considers the timeliness of their filing; LBP-08-6, 67 NRC 241 (2008)

although interlocutory appeal is denied, the Commission exercises its inherent supervisory authority over adjudications to take sua sponte review of a board order; CLI-10-27, 72 NRC 481 (2010)

although latitude is to be afforded a pro se intervenor in the mechanics of contention pleading and citation, an organization that has appeared several times previously is expected to have a heightened awareness of the agency's pleading rules; LBP-08-16, 68 NRC 361 (2008)

although licensing boards generally are to litigate "contentions" rather than "bases," it has been recognized that the reach of a contention necessarily hinges on its terms coupled with its stated bases; LBP-07-3, 65 NRC 237 (2007)

although NRC does not consider Council on Environmental Quality regulations to be binding, they are entitled to substantial deference; LBP-09-10, 70 NRC 51 (2009)

although NRC may reasonably accommodate pro se petitioners who are not technically perfect in their pleading, such parties must still meet the basic requirements of the contention admissibility rules, and if these are not met, boards may not "fill in" any missing support, but, rather, are legally required to deny the contention; LBP-07-4, 65 NRC 281 (2007)

although NRC rules do not explicitly authorize amicus briefs at the licensing board level, such briefs might still be granted in appropriate circumstances; LBP-08-6, 67 NRC 241 (2008)

although petitioner bears the burden of demonstrating standing, in ruling on standing a licensing board is to construe the petition in favor of the petitioner; LBP-09-1, 69 NRC 11 (2009)

although petitioner could participate in another federal agency's comment process relating to a proposed environmental assessment that is the focus of a new contention and thus does have some alternative means for protecting its interests, for the purpose of 10 C.F.R. 2.309(c)(1)(v), that process is not

## SUBJECT INDEX

analogous to participation in an NRC adjudicatory proceeding and therefore does not weigh heavily against the petitioner's intervention in the NRC proceeding; LBP-10-1, 71 NRC 165 (2010)

although petitioner does not have to prove its contention at the admissibility stage, mere notice pleading is insufficient; LBP-08-17, 68 NRC 431 (2008)

although petitioner has established the requisite standing, the hearing request must be denied because of a failure to proffer one admissible contention; LBP-10-1, 71 NRC 165 (2010)

although the Army has the burden to protect the public from depleted uranium, that issue is not relevant to a standing inquiry; LBP-10-4, 71 NRC 216 (2010)

although the Commission abolished the Atomic Safety and Licensing Appeal Board in 1991, its decisions still carry precedential weight; CLI-08-19, 68 NRC 251 (2008)

although the Commission commonly looks to Article III concepts for guidance, it is not required to automatically follow them in all respects because NRC proceedings are not subject to Article III; LBP-09-15, 70 NRC 198 (2009)

although the Commission customarily follows judicial concepts of standing, it is not bound to do so given that it is not an Article III court; CLI-08-19, 68 NRC 251 (2008); LBP-08-24, 68 NRC 691 (2008)

although the Commission is disinclined to step into the middle of a labor dispute or involve itself in the personnel decisions of licensees, it has recognized that there may be cases where employment-related contentions are closely tied to specific health-and-safety concerns or to potential violations of NRC rules that can be admitted for a hearing; CLI-06-21, 64 NRC 30 (2006)

although the Commission is not strictly bound by the mootness doctrine, the agency's adjudicatory tribunals have generally adhered to the principle; LBP-09-15, 70 NRC 198 (2009)

although the contention admissibility rule imposes on a petitioner the burden of going forward with a sufficient factual basis, it does not shift the ultimate burden of proof from the applicant to the petitioner; LBP-09-27, 70 NRC 992 (2009)

although the February 2004 revision of the NRC procedural rules no longer permits the amendment and supplementation of petitions and filing of contentions after the original filing of petitions, the substantive contention admissibility standards are essentially the same; LBP-07-11, 66 NRC 41 (2007)

although the obligations under NEPA fall to the agency and therefore the NRC Staff, petitioners are required to raise environmental objections based on the applicant's environmental report; LBP-10-15, 72 NRC 257 (2010)

although the phrase "possession, custody, or control" appears in 10 C.F.R. 2.336(a)(2)(i), 2.704(a)(2), and 2.707(a)(1), no NRC decision has ever provided guidance as to what constitutes "control"; LBP-10-23, 72 NRC 692 (2010)

although the pleading requirements of 10 C.F.R. 2.309 are strict by design, a licensing board may permit potential intervenors to cure defects in petitions in order to obviate dismissal of an intervention petition because of inarticulate draftsmanship or procedural or pleading defects; LBP-08-6, 67 NRC 241 (2008)

although the SUNSI access procedures do not impose a high threshold for demonstrating need, they must be applied consistent with the principle that it is important to prevent unnecessary disclosure of sensitive information; LBP-09-5, 69 NRC 303 (2009)

although wholly conclusory statements for which no supporting evidence is offered need not be taken as true for summary judgment purposes, a court may not make credibility determinations or weigh the evidence at the summary judgment stage; LBP-07-12, 66 NRC 113 (2007)

amicus briefs must be filed by the same deadline as the brief of the party whose side the amicus brief supports, unless the Commission provides otherwise; CLI-08-22, 68 NRC 355 (2008)

amicus curiae briefs are contemplated only after the Commission grants a petition for review, not briefs supporting or opposing petitions for review; CLI-10-17, 72 NRC 1 (2010)

an admissible contention must include a specific statement of the issue of law or fact to be raised or controverted as well as a brief explanation of the basis for the contention; LBP-08-26, 68 NRC 905 (2008)

an admissible contention must raise an issue that is both within the scope of the proceeding, generally defined by the hearing notice, and material to the findings the NRC must make to support the action involved; LBP-08-17, 68 NRC 431 (2008); LBP-09-6, 69 NRC 367 (2009)

an admissible contention must satisfy the six pleading requirements of 10 C.F.R. 2.309(f)(1); LBP-09-3, 69 NRC 139 (2009); LBP-09-6, 69 NRC 367 (2009)

## SUBJECT INDEX

- an admissible contention under the good cause standard must allege that a construction permit holder's reasons for past delay failed to constitute good cause for a CP extension and be supported by a showing that construction delay is traceable to permit holder action that was intentional and without a valid business purpose; LBP-10-7, 71 NRC 391 (2010)
- an advisory body that lacks executive or legislative responsibilities is so far removed from having the representative authority to speak and act for the public that it does not qualify as a governmental entity; CLI-07-18, 65 NRC 399 (2007)
- an affidavit supporting representational standing must describe precisely how the affiant is aggrieved, whether based on employment, residence, or activities; CLI-08-19, 68 NRC 251 (2008)
- an allegation that some aspect of a license application is inadequate or unacceptable does not give rise to a genuine dispute unless it is supported by facts and a reasoned statement of why the application is unacceptable in some material respect; LBP-08-17, 68 NRC 431 (2008)
- an alleged injury to health and safety, shared equally by many, can form the basis for standing; LBP-09-18, 70 NRC 385 (2009)
- an ambiguous provision is construed most strongly against the person who selected the language; LBP-08-16, 68 NRC 361 (2008)
- an amended or new contention must be submitted in a timely fashion based on the availability of the subsequent information; LBP-09-27, 70 NRC 992 (2009)
- an appeal as of right by the NRC Staff is permitted on the question of whether a request for access to sensitive unclassified nonsafeguards information should have been denied in whole or in part; CLI-10-24, 72 NRC 451 (2010)
- an appeal as of right from a board's ruling on an intervention petition is permitted upon denial of a petition to intervene and/or request for hearing on the question as to whether it should have been granted or upon the granting of a petition to intervene and/or request for hearing on the question as to whether it should have been wholly denied; CLI-10-16, 71 NRC 486 (2010)
- an applicant has the right to file an interlocutory appeal of board orders admitting contentions, but only if the appeal challenges the admissibility of all admitted contentions; CLI-06-13, 63 NRC 508 (2006)
- an application-specific contention concerning the environmental consequences of the need for extended onsite storage of low-level radioactive waste is admissible if it satisfies the requirements of 10 C.F.R. 2.309(f)(1); LBP-09-4, 69 NRC 170 (2009)
- an assertion that material can be withheld must expressly state the specific privilege being claimed; LBP-06-25, 64 NRC 367 (2006)
- an automatic right to appeal a board decision denying a petition to intervene exists; CLI-07-25, 66 NRC 101 (2007)
- an entity seeking to intervene on behalf of its members must show it has an individual member who can fulfill all the necessary standing elements and who has authorized the organization to represent his or her interests; LBP-08-16, 68 NRC 361 (2008); LBP-10-21, 72 NRC 616 (2010)
- an entity wishing to participate as a governmental body must demonstrate that it goes beyond an advisory role and exercises executive or legislative responsibilities; LBP-09-13, 70 NRC 168 (2009)
- an environmental contention may be admitted during a combined license proceeding if it concerns a significant issue that was not resolved in the early site permit proceeding or if it involves the impacts of construction and operation of the facility and significant new information has been identified; LBP-08-15, 68 NRC 294 (2008)
- an exception to the general policy limiting interlocutory review permits an appeal of a board's ruling on contention admissibility when a board grants a petition to intervene following consideration of the full petition; CLI-09-18, 70 NRC 859 (2009)
- an expert opinion that merely states a conclusion (e.g., the application is deficient, inadequate, or wrong) without providing a reasoned basis or explanation for that conclusion is inadequate because it deprives the board of the ability to make the necessary, reflective assessment of the opinion; CLI-06-10, 63 NRC 451 (2006); LBP-09-16, 70 NRC 227 (2009)
- an Indian tribe whose reservation is adjacent to facilities where spent nuclear fuel is currently stored, the nearest of which resides just 600 yards from an ISFSI, has more than a mere interest in a problem; LBP-10-11, 71 NRC 609 (2010)
- an individual may satisfy the standing requirements by demonstrating that his or her residence is within the geographical area that might be affected by an accidental release of fission products, and in

## SUBJECT INDEX

- proceedings involving nuclear power plants this area has been defined as being within a 50-mile radius of such a plant; LBP-07-4, 65 NRC 281 (2007)
- an individual petitioner may not request to intervene in his or her own right while simultaneously authorizing other petitioners to represent his or her interests in the proceeding; CLI-07-19, 65 NRC 423 (2007); LBP-10-16, 72 NRC 361 (2010)
- an injury in fact must go beyond generalized grievances to affect a petitioner in a personal and individual way; LBP-09-13, 70 NRC 168 (2009)
- an interested governmental entity that has not been admitted as a party under section 2.309 must be provided a reasonable opportunity to participate in a hearing; LBP-08-21, 68 NRC 554 (2008); LBP-08-24, 68 NRC 691 (2008)
- an interested local governmental body may introduce evidence, interrogate witnesses in circumstances where cross-examination by the parties is allowed, advise the Commission without being required to take a position on any issue, file proposed findings where such are allowed, and seek Commission review on admitted contentions; LBP-08-24, 68 NRC 691 (2008)
- an interested state or political subdivision thereof that has not become a party to the proceeding must be accorded a reasonable opportunity to participate, through a single representative, in the hearing of one or more of the admitted contentions; LBP-07-5, 65 NRC 341 (2007); LBP-09-2, 69 NRC 87 (2009)
- an intervenor attempting to litigate an issue based on expressed concerns about the draft environmental impact statement may need to amend the admitted contention or, if the information in the DEIS is sufficiently different from that in the environmental report that supported the contention's admission, submit a new contention; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)
- an intervenor may not attempt to use a license application proceeding to rewrite Commission regulations; LBP-06-1, 63 NRC 41 (2006)
- an intervention petitioner must demonstrate a concrete and particularized injury that is fairly traceable to the challenged action and is likely to be redressed by a favorable decision; CLI-06-2, 63 NRC 9 (2006); LBP-06-4, 63 NRC 99 (2006); LBP-06-7, 63 NRC 188 (2006); LBP-06-10, 63 NRC 314 (2006)
- an order denying a petition to intervene and/or request for hearing may be appealed to the Commission on the question of whether the petition and/or request should have been granted; CLI-10-20, 72 NRC 185 (2010)
- an organization asserting representational standing must demonstrate that the interest of at least one of its members will be harmed, demonstrate that the member would have standing in his or her own right, identify that member by name and address, and demonstrate that the organization is authorized to request a hearing on behalf of that member; CLI-08-19, 68 NRC 251 (2008); LBP-08-6, 67 NRC 241 (2008); LBP-08-9, 67 NRC 421 (2008); LBP-08-13, 68 NRC 43 (2008); LBP-08-17, 68 NRC 431 (2008); LBP-08-24, 68 NRC 691 (2008); LBP-09-6, 69 NRC 367 (2009); LBP-09-13, 70 NRC 168 (2009); LBP-09-16, 70 NRC 227 (2009); LBP-09-20, 70 NRC 565 (2009); LBP-09-21, 70 NRC 581 (2009); LBP-10-16, 72 NRC 361 (2010)
- an organization seeking to intervene in its own right must allege that the challenged action will cause a cognizable injury to its interests or to the interests of its members; LBP-10-15, 72 NRC 257 (2010); LBP-10-16, 72 NRC 361 (2010)
- an organization seeking to intervene in its own right must demonstrate a palpable injury in fact to its organizational interests that is within the zone of interests protected by the Atomic Energy Act or the National Environmental Policy Act; LBP-08-24, 68 NRC 691 (2008)
- an organization that wishes to intervene in a proceeding may do so either in its own right by demonstrating harm to its organizational interests, or in a representational capacity by demonstrating harm to its members; LBP-06-23, 64 NRC 257 (2006); LBP-09-2, 69 NRC 87 (2009)
- an organization's member seeking representation must qualify for standing in his or her own right; CLI-08-19, 68 NRC 251 (2008)
- an organization's promotion of the public interest, environmental protection, and consumer protection are broad interests shared with many others and too general to constitute a protected interest under the Atomic Energy Act or the National Environmental Policy Act; CLI-07-18, 65 NRC 399 (2007)
- an unexplained lapse of several years between the Staff's completion of a thorough investigation and its initiation of an immediately effective enforcement order may jeopardize both public confidence in government decisionmaking and public protection from asserted safety threats, and may require an

## SUBJECT INDEX

- explanation if the immediate effectiveness of the order were to be challenged; LBP-06-26, 64 NRC 431 (2006)
- an untimely motion to reopen must demonstrate that the issue raised is not merely significant but exceptionally grave; LBP-10-21, 72 NRC 616 (2010)
- analysis of a motion to compel the mandatory disclosure of information under 10 C.F.R. 2.336(a) is contingent on six factors; LBP-10-23, 72 NRC 692 (2010)
- answers to a motion to strike are limited to legal or factual issues raised by the motion, and new issues should be raised in a separate motion; LBP-08-1, 67 NRC 37 (2008)
- any affected unit of local government need not address standing in the high-level waste proceeding, but rather shall be considered a party provided that it files at least one admissible contention in accordance with 10 C.F.R. 2.309(f); LBP-09-6, 69 NRC 367 (2009)
- any ambiguity relative to the filing date for hearing requests arising from the language of the agency's hearing opportunity notice should be construed in favor of a participant who was seeking to comply with the notice; LBP-08-16, 68 NRC 361 (2008)
- any appeal by petitioners of the admitted contentions must abide the end of the case, i.e., wait approximately 2 or 3 years until the Staff issues the FSER and FEIS and the final disposition of the evidentiary hearing on the three admitted contentions; LBP-09-10, 70 NRC 51 (2009)
- any application of the NRC rules to prevent all parties from raising material issues which could not be raised prior to the release of the environmental reports would be a misapplication subject to judicial review; LBP-06-14, 63 NRC 568 (2006)
- any contention alleging deficiencies or errors in an application must also indicate some significant link between the claimed deficiency and either the health and safety of the public or the environment; LBP-07-3, 65 NRC 237 (2007)
- any contention directed at a design undergoing rulemaking review fails on its face to satisfy the admission requirements because all matters subject of a rulemaking are outside the scope of licensing proceedings; LBP-09-8, 69 NRC 736 (2009)
- any contention that fails to directly controvert the application or that mistakenly asserts the application does not address a relevant issue can be dismissed; LBP-07-3, 65 NRC 237 (2007); LBP-08-17, 68 NRC 431 (2008); LBP-09-3, 69 NRC 139 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-10-6, 71 NRC 350 (2010); LBP-10-7, 71 NRC 391 (2010)
- any contention that falls outside the specified scope of a proceeding must be rejected; LBP-07-3, 65 NRC 237 (2007); LBP-08-26, 68 NRC 905 (2008); LBP-09-3, 69 NRC 139 (2009); LBP-10-17, 72 NRC 501 (2010)
- any doubt as to the existence of a genuine issue of material fact is resolved against the proponent of summary disposition; LBP-10-20, 72 NRC 571 (2010)
- any material provided by a petitioner in support of its contention, including those portions of the material that are not relied upon, is subject to board scrutiny; LBP-07-3, 65 NRC 237 (2007); LBP-07-16, 66 NRC 277 (2007); LBP-08-16, 68 NRC 361 (2008); LBP-08-26, 68 NRC 905 (2008); LBP-09-3, 69 NRC 139 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-10-7, 71 NRC 391 (2010)
- any motion, other than one made orally on the record during a hearing or as otherwise directed by the presiding officer, must contain a certification that the movant has made a sincere effort to contact the other parties and resolve the matter, and that this effort was unsuccessful; LBP-07-4, 65 NRC 281 (2007)
- any organization seeking representational standing must also show that at least one of its members may be affected by the Commission's approval of the transfer, must identify that member, and must demonstrate that the member has (preferably by affidavit) authorized the organization to represent him or her and to request a hearing on his or her behalf; CLI-07-18, 65 NRC 399 (2007); LBP-07-4, 65 NRC 281 (2007)
- any potential harm associated with petitioner's use of water from a water source connecting to a mining site is fairly traceable to the proposed action; LBP-10-16, 72 NRC 361 (2010)
- any request for waiver of or exception to a rule must be accompanied by an affidavit that identifies with particularity the special circumstances alleged to justify the waiver or exception requested; LBP-08-17, 68 NRC 431 (2008)

## SUBJECT INDEX

anyone who wishes to request a hearing concerning a proposed licensing action must establish standing and proffer at least one admissible contention; LBP-09-28, 70 NRC 1019 (2009)

appeals as of right are permitted in three circumstances only; CLI-07-2, 65 NRC 10 (2007)

appeals of an initial decision or partial initial decision of the presiding officer are permitted in the high-level waste repository proceeding; CLI-10-10, 71 NRC 281 (2010)

appellate briefs amicus curiae are welcomed from parties in other Commission adjudications that have presented similar issues; CLI-10-17, 72 NRC 1 (2010)

applicable NRC standards governing summary disposition are set forth in 10 C.F.R. 2.710; CLI-10-11, 71 NRC 287 (2010)

applicant's change of reactor design constitutes new and materially different information for the purposes of filing a new contention; LBP-10-17, 72 NRC 501 (2010)

applicant's claim that computer models should be excused from the mandatory disclosure requirements because they entail proprietary information is rejected; LBP-10-23, 72 NRC 692 (2010)

applicant's "control" of computer models prepared by and in possession of a contractor is illustrated by the fact that if NRC Staff requested these documents, applicant could obtain and provide them; LBP-10-23, 72 NRC 692 (2010)

applicant's plan for storage of low-level radioactive waste is a litigable issue because it is material to the findings the NRC must make to support the action that is involved in a combined license proceeding; LBP-08-15, 68 NRC 294 (2008)

applicants are not required to address or demonstrate whether the issuance of a combined license will improve the general welfare, increase the standard of living, or strengthen free competition in private enterprise; LBP-08-17, 68 NRC 431 (2008)

arguments made before the board that are abandoned on appeal are deemed to be waived; CLI-10-3, 71 NRC 49 (2010); CLI-10-9, 71 NRC 245 (2010)

arguments or new facts raised for the first time on appeal are not considered unless their proponent can demonstrate that the information was previously unavailable; CLI-10-3, 71 NRC 49 (2010)

arguments that an intervenor fails to adequately develop are treated as waived; LBP-06-19, 64 NRC 53 (2006)

as a general matter, a board ruling denying a waiver request is interlocutory in nature, and therefore not appealable until the board has issued a final decision resolving the case; CLI-08-27, 68 NRC 655 (2008)

as guidance reached in a rulemaking following notice and comment, and endorsed by the Commission, the Statement of Considerations is entitled to special weight; CLI-08-3, 67 NRC 151 (2008)

as long as counsel is an attorney in good standing and a member of the bar, a Notice of Appearance is sufficient in itself for him or her to represent an Indian tribe in a proceeding; LBP-08-26, 68 NRC 905 (2008)

as the proponent of the agency action at issue, applicant generally has the burden of proof in a licensing proceeding, but when NEPA contentions are involved, the burden shifts to the Staff, because NRC, not an applicant, has the burden of complying with NEPA; LBP-09-7, 69 NRC 613 (2009)

assertions that a member lives within the service area of the utility that operates a licensed facility or within the same county as the facility is insufficiently specific to justify a finding of standing; CLI-07-18, 65 NRC 399 (2007)

at the admissibility stage, petitioner does not have to prove its contentions and boards do not adjudicate disputed facts; LBP-06-20, 64 NRC 131 (2006); LBP-09-6, 69 NRC 367 (2009)

at the admission stage of the proceedings, boards admit contentions, not bases; LBP-09-26, 70 NRC 939 (2009)

at the appropriate point in the overall COLA/DCD process, an interested party will have the opportunity to petition for intervention to raise matters that are material to the decision the NRC must make regarding the licensing of the proposed nuclear units; LBP-09-2, 69 NRC 87 (2009)

at the contention admissibility stage, all that is required is that the petitioner provide an expert opinion or some alleged fact, or facts, in support of its position; LBP-09-26, 70 NRC 939 (2009)

at the contention admission stage, the board's purpose in applying 10 C.F.R. 2.309(f)(1) is only to ensure that the adjudicatory process is used to address real, concrete, specific issues that are appropriate for litigation; LBP-06-20, 64 NRC 131 (2006)

## SUBJECT INDEX

at the contention pleading stage, a board simply has to find that each of the elements of contention admissibility is satisfied, and need not weigh the merits of the petitioner's arguments; CLI-09-9, 69 NRC 331 (2009); LBP-06-7, 63 NRC 188 (2006)

at the contention pleading stage, arguments that petitioners' claims are unfounded go to the merits of the contention and do not show that there is no genuine dispute over the substance of the contention; CLI-09-9, 69 NRC 331 (2009)

at the summary disposition stage, the quality of evidentiary support is expected to be of a higher level than that at the contention filing stage; CLI-10-15, 71 NRC 479 (2010)

availability, not possession, custody, or control, is the criterion for the NRC Staff's mandatory disclosure responsibilities; LBP-10-23, 72 NRC 692 (2010)

bare assertions without the requisite support for claims are inadequate to support the admission of a contention; LBP-09-16, 70 NRC 227 (2009)

because agencies are not constrained by Article III of the Constitution, nor are they governed by judicially created standing doctrines restricting access to federal courts, the criteria for establishing administrative standing may permissibly be less demanding than the criteria for judicial standing; LBP-09-18, 70 NRC 385 (2009)

because Intervenor's inability to satisfy the contention admissibility rules is due to factors beyond their control, the Commission declines to require them to meet both the strict late-filing requirements and the even stricter reopening standards if they identify safety issues during the upcoming years of ongoing construction of a fuel fabrication facility; CLI-09-2, 69 NRC 55 (2009)

because it disfavors piecemeal appeals, the Commission will grant interlocutory review only in extraordinary circumstances; CLI-10-29, 72 NRC 556 (2010)

because NEPA is a procedural statute, petitioners need not show that favorable rulings on their NEPA contentions will require denial of the license, but rather that procedures intended for protection of their members' concrete interests will be observed; LBP-09-16, 70 NRC 227 (2009)

because of the significance of the issues at hand, applicant was permitted to reply to the answers to its motion to withdraw; LBP-10-11, 71 NRC 609 (2010)

because petitioner fails to establish his own standing as an individual, the board is precluded from granting representational standing on behalf of an organization; LBP-10-4, 71 NRC 216 (2010)

because petitioner's circumstances may change from one proceeding to the next, it is important that the presiding officer have up-to-date information regarding any standing claims; LBP-10-21, 72 NRC 616 (2010)

because petitioner's pleadings fail to provide adequate information about the interests of the organization to which he belongs and how those interests would be adversely affected by the licensing proceeding, the board is precluded from granting organizational standing; LBP-10-4, 71 NRC 216 (2010)

because Staff relies heavily on applicant's environmental report in preparing the environmental impact statement, should applicant become a proponent of a particular challenged position set forth in the EIS, applicant also has the burden on that matter; LBP-09-7, 69 NRC 613 (2009)

because the burden is on the summary disposition movant, the board must examine the record in the light most favorable to the nonmoving party and give the nonmoving party the benefit of all favorable inferences that can be drawn from the evidence; LBP-10-20, 72 NRC 571 (2010)

because the reach of a contention necessarily hinges upon its terms and its stated bases, the brief explanation helps define the scope of the contention; LBP-09-26, 70 NRC 939 (2009)

before a participant may be precluded from litigating an issue because it failed to raise the issue in an earlier proceeding, it must have had reasonable notice that such an opportunity existed; LBP-08-15, 68 NRC 294 (2008)

before a petition to admit a late-filed contention can be granted, five factors must be balanced; CLI-08-1, 67 NRC 1 (2008)

before an early site permit can be made effective, the Commission must review and approve the licensing board's initial decision authorizing its issuance; CLI-07-7, 65 NRC 122 (2007)

before the board can consider a new contention, petitioner must show that it is based on information that was not previously available, is based on information that is materially different than information previously available, and has been submitted in a timely fashion; LBP-09-29, 70 NRC 1028 (2009)

## SUBJECT INDEX

binding case management requirements and related recommendations pertaining to petitions to intervene, contentions, responses and replies, standing arguments, and referencing or attaching supporting materials are provided; LBP-08-10, 67 NRC 450 (2008)

board's role in considering a petition for waiver under 10 C.F.R. 2.335, is limited to deciding whether petitioner has made a prima facie showing of special circumstances that would support a waiver; LBP-10-15, 72 NRC 257 (2010)

boards apply a proximity-plus test to establish standing in materials cases, where the petitioner must show that the proposed licensing action involves a significant source of radiation that has an obvious potential for offsite consequences; CLI-10-20, 72 NRC 185 (2010)

boards are obliged to evaluate the timeliness of a proposed contention even if no party raises the issue; LBP-10-17, 72 NRC 501 (2010)

boards have discretion to reframe contentions for purposes of clarity, succinctness, and a more efficient proceeding; LBP-08-12, 68 NRC 5 (2008)

boards may allow parties to conduct cross-examination in Subpart L proceedings; LBP-09-22, 70 NRC 640 (2009)

boards may appropriately view petitioners' support for their contentions in a light favorable to petitioners, but it is petitioners' burden to establish the admissibility of a contention; LBP-08-16, 68 NRC 361 (2008); LBP-09-17, 70 NRC 311 (2009); LBP-10-21, 72 NRC 616 (2010)

boards may appropriately view petitioner's supporting information in a light favorable to the petitioner, but failure to provide such information regarding a proffered contention requires that the contention be rejected; LBP-10-1, 71 NRC 165 (2010); LBP-10-7, 71 NRC 391 (2010)

boards may consider the merits of a contention that has become moot to the extent doing so will promote the fair and expeditious resolution of the case and there are no significant countervailing concerns; LBP-09-15, 70 NRC 198 (2009)

boards may not supply information that is missing or make assumptions of fact not provided by the petitioner; LBP-10-6, 71 NRC 350 (2010)

boards may reframe contentions, following a determination of their admissibility, for purposes of clarity, succinctness, and a more efficient proceeding; CLI-06-16, 63 NRC 708 (2006)

boards must avoid the familiar trap of confusing the standing determination with the assessment of petitioner's case on the merits; LBP-08-6, 67 NRC 241 (2008)

boards must balance eight factors in evaluating nontimely intervention petitions, hearing requests, and contentions; LBP-10-24, 72 NRC 720 (2010)

boards must consider the extent a petitioner's interests are represented by existing parties, not potential parties; LBP-10-11, 71 NRC 609 (2010)

boards must exercise their discretion and select the hearing procedure most appropriate for newly admitted contentions; LBP-09-10, 70 NRC 51 (2009)

boards must not redraft inadmissible contentions to cure deficiencies and thereby render them admissible; CLI-06-16, 63 NRC 708 (2006)

boards should treat as a cognizable new consideration an attack on the Yucca Mountain environmental impact statements based on significant and substantial information that, if true, would render the statements inadequate; LBP-09-6, 69 NRC 367 (2009)

broad and conclusory statements by petitioners that they have direct information concerning the threat to health and safety posed by the license applicant are insufficient to establish standing; LBP-10-4, 71 NRC 216 (2010)

by complying with the six contention requirements in 10 C.F.R. 2.309(f)(1)(i)-(vi), petitioner must demonstrate that a contention raises an issue that is appropriate for a licensing board hearing and that such a hearing would not likely be a waste of time and resources; LBP-08-17, 68 NRC 431 (2008)

by complying with the six contention requirements, an admissible contention must raise an issue that is both within the scope of the proceeding (normally defined by the hearing notice) and material to the findings the NRC must make to support the action involved; LBP-09-18, 70 NRC 385 (2009)

by defining significantly different information in the draft EIS as a permissible basis for filing a new contention, the Commission has in effect concluded that such new information is good cause for filing a new contention; LBP-10-24, 72 NRC 720 (2010)

## SUBJECT INDEX

by definition, contentions admitted under 10 C.F.R. 2.309(f)(2)(i)-(iii) are timely because they are founded on material new information that was not available at the time when the petition was initially due; LBP-09-10, 70 NRC 51 (2009)

challenges to board rulings on late-filed contentions normally fall under the rules for interlocutory review; CLI-09-18, 70 NRC 859 (2009)

challenges to how the Staff performs its reviews are outside the scope of licensing proceedings; LBP-08-9, 67 NRC 421 (2008)

challenges to the admissibility of less than all admitted contentions must abide the end of the case; CLI-06-13, 63 NRC 508 (2006)

challenges to the current operating license are outside the scope of matters challengeable in a power uprate application; LBP-08-9, 67 NRC 421 (2008)

challenges to the merits of contentions must await either motions for summary disposition or an evidentiary hearing; LBP-07-5, 65 NRC 341 (2007)

circumstances in which a particular hearing procedure is required are specified in 10 C.F.R. 2.310(b)-(k); LBP-09-10, 70 NRC 51 (2009)

citation to specific and potentially inconsistent portions of applicant's documents together with the declaration of petitioner's unchallenged expert provide alleged facts or expert opinion that are sufficient to meet the contention pleading requirements; LBP-06-20, 64 NRC 131 (2006)

collateral estoppel should be applied in appropriate circumstances in NRC proceedings; LBP-08-15, 68 NRC 294 (2008)

Commission has authority to issue case-specific orders modifying procedural regulations, including milestone schedules; CLI-08-18, 68 NRC 246 (2008)

Commission jurisdiction to reopen a proceeding continues until a license is actually issued; CLI-06-19, 63 NRC 19 (2006)

Commission pleading rules permit contentions that raise issues of law as well as contentions that raise issues of fact; CLI-09-14, 69 NRC 580 (2009)

Commission regulations do not contemplate filing a vague, unsupported pleading as a placeholder for a more detailed pleading to follow; CLI-09-5, 69 NRC 115 (2009)

Commission regulations may not be directly attacked in adjudicatory proceedings, but a party may petition for a waiver of the application of a regulation; LBP-10-12, 71 NRC 656 (2010)

Commission rules bar contentions where petitioners have only what amounts to generalized suspicions that they hope to substantiate later; LBP-08-17, 68 NRC 431 (2008); LBP-09-18, 70 NRC 385 (2009)

compliance with the requirement that a summary disposition movant make a sincere effort to contact other parties in the proceeding and to resolve the issues raised in the motion can only be determined from the objective reasonableness of the movant's efforts, as shown by all the facts and circumstances, not by his or her subjective intent; LBP-06-5, 63 NRC 116 (2006)

consideration of pending issues will not be postponed until the resolution of other issues unrelated to the adjudication; CLI-10-17, 72 NRC 1 (2010)

contemporaneous judicial standing concepts are applied in NRC proceedings; LBP-10-7, 71 NRC 391 (2010)

contemporaneous judicial standing concepts require that participant establish that it has suffered or will suffer a distinct and palpable injury that constitutes injury-in-fact within the zones of interests arguably protected by the governing, the injury is fairly traceable to the challenged action, and the injury is likely to be redressed by a favorable decision; LBP-10-7, 71 NRC 391 (2010)

contention admissibility requirements are deliberately strict and any contention that does not satisfy the requirements of 10 C.F.R. 2.309(f)(1) will be rejected; CLI-06-24, 64 NRC 111 (2006); CLI-09-14, 69 NRC 580 (2009); CLI-09-20, 70 NRC 911 (2009); CLI-10-1, 71 NRC 1 (2010); CLI-10-9, 71 NRC 245 (2010); CLI-10-21, 72 NRC 197 (2010); LBP-06-22, 64 NRC 229 (2006); LBP-09-10, 70 NRC 51 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-10-6, 71 NRC 350 (2010)

contention admissibility requirements are rigorous and demand a level of discipline and preparedness on the part of petitioners, who must examine the publicly available material and set forth their claims and the support for their claims at the outset; LBP-06-12, 63 NRC 403 (2006)

contention admissibility requirements are strict by design to ensure that hearings cover only genuine and pertinent issues of concern and that the issues are framed and supported concisely enough at the outset

## SUBJECT INDEX

to ensure that the proceedings are effective and focused on real, concrete issues; LBP-08-24, 68 NRC 691 (2008)

contention admissibility requirements for a hearing on a confirmatory order are addressed; LBP-08-14, 68 NRC 279 (2008)

contention admissibility rules are not designed to erect an onerous evidentiary hurdle, but rather to help to ensure that full adjudicatory hearings are triggered only by those able to proffer at least some minimal factual and legal foundation in support of their contentions; LBP-06-7, 63 NRC 188 (2006)

contention admissibility rules require a concise statement of the alleged facts or expert opinions that support petitioner's position, but do not require the submission of an expert opinion or require that an expert opinion be submitted in the form of admissible evidence; LBP-06-7, 63 NRC 188 (2006)

contention admissibility standards do not require dispositive proof of the contention or its bases, but they do require a clear statement as to the bases for the contention and supporting information and references to documents and sources that establish the validity of the contention; CLI-10-1, 71 NRC 1 (2010); LBP-10-6, 71 NRC 350 (2010)

contention alleging foreign ownership of applicant, failure to disclose, and various ramifications of such ownership, is admissible; LBP-09-1, 69 NRC 11 (2009)

contention alleging that depleted uranium-contaminated bombing plume dust causes health issues in the community is inadmissible because it lacks a supporting statement of the alleged facts or expert opinions; LBP-10-4, 71 NRC 216 (2010)

contention alleging that worldwide uranium supplies will be inadequate is dismissed for failure to provide expert opinion, documents, or other sources to support its allegation; LBP-08-15, 68 NRC 294 (2008)

contention raising question of whether a quantitative as opposed to qualitative analysis of terrorist attacks and the alternatives for mitigation and prevention is necessary is referred to the Commission as a novel issue; LBP-10-15, 72 NRC 257 (2010)

contention requirements were never intended to be turned into a fortress to deny intervention; LBP-09-6, 69 NRC 367 (2009)

contention standards require pleading specific grievances, not simply providing general notice pleadings; CLI-10-11, 71 NRC 287 (2010); CLI-10-15, 71 NRC 479 (2010)

contention that asks the licensing board to determine whether applicant would be able to obtain permits from and comply with regulatory requirements imposed by other agencies is outside NRC's jurisdiction; LBP-08-15, 68 NRC 294 (2008)

contention that suggests that financial qualifications information should be provided in the application submitted by a regulated electric utility represents an impermissible challenge to Commission regulations; LBP-08-17, 68 NRC 431 (2008)

contention that the environmental report is based on incomplete information because a new earthquake fault has been discovered within 600 meters of nuclear reactors and the results of studies concerning the new fault will be available in the near term is admissible; LBP-10-15, 72 NRC 257 (2010)

contention that worldwide uranium supplies will be inadequate to permit the anticipated power production benefits during the license term is potentially material to the licensing proceeding; LBP-08-15, 68 NRC 294 (2008)

contentions alleging deficiencies or errors in an application must indicate some significant link between the claimed deficiency and either the health and safety of the public or the environment; LBP-08-16, 68 NRC 361 (2008)

contentions are comparable to neither "forms of relief" nor Article III "claims," but are instead comparable to various "grounds" that may be asserted in opposition to a proposed agency action at issue; LBP-09-1, 69 NRC 11 (2009)

contentions challenging applicable statutory requirements or Commission regulations are not admissible in agency adjudications; LBP-08-26, 68 NRC 905 (2008); LBP-09-16, 70 NRC 227 (2009)

contentions challenging Staff's significant hazards consideration determination are not appropriate for review in a license amendment proceeding; LBP-08-19, 68 NRC 545 (2008); LBP-08-20, 68 NRC 549 (2008)

contentions challenging the Waste Confidence Rule are inadmissible; LBP-09-17, 70 NRC 311 (2009)

contentions concerning an applicant's plan for disposal of Greater-Than-Class-C radioactive waste cannot be admitted because disposal of that type of waste is the responsibility of the federal government; LBP-09-4, 69 NRC 170 (2009)

## SUBJECT INDEX

contentions for which petitioners have only what amounts to generalized suspicions, hoping to substantiate them later, are barred; LBP-09-6, 69 NRC 367 (2009)

contentions may be filed after the initial 60-day deadline if the petitioner shows that the information on which the amended or new contention is based was not previously available and is materially different than information previously available; and the amended or new contention has been submitted in a timely fashion based on the availability of the subsequent information; CLI-10-18, 72 NRC 56 (2010); LBP-09-26, 70 NRC 939 (2009)

contentions must assert an issue of law or fact that is material to the outcome of a licensing proceeding, meaning that the subject matter of the contention must impact the grant or denial of a pending license application; LBP-08-16, 68 NRC 361 (2008)

contentions must be accompanied by a concise statement of the alleged facts or expert opinions that support the requestor's/petitioner's position on the issue together with references to the specific sources and documents on which it intends to rely to support its position; LBP-09-10, 70 NRC 51 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-10-6, 71 NRC 350 (2010)

contentions must be based on a genuine material dispute, not the possibility that petitioners, if they perform their own additional analyses, may ultimately disagree with the application; CLI-06-10, 63 NRC 451 (2006)

contentions must be based on documents or information available when the hearing petition is to be filed; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008); LBP-08-27, 68 NRC 951 (2008)

contentions must be filed with the original intervention petition within 60 days of notice of the proceeding in the *Federal Register*, unless a longer period is therein specified, an extension is granted, or the contentions meet certain criteria for late-filed or new contentions based on information that is available only at a later time; LBP-07-4, 65 NRC 281 (2007); LBP-08-6, 67 NRC 241 (2008); LBP-09-17, 70 NRC 311 (2009)

contentions must be within the scope of the proceeding as defined by the Commission in its initial hearing notice and order referring the proceeding to the licensing board; CLI-10-2, 71 NRC 27 (2010); LBP-08-16, 68 NRC 361 (2008); LBP-10-7, 71 NRC 391 (2010)

contentions must directly controvert a position taken by the applicant in the application and explain why the application is deficient; LBP-08-6, 67 NRC 241 (2008)

contentions must focus on the license application in question, challenging either specific portions of or alleged omissions from the application; LBP-08-16, 68 NRC 361 (2008)

contentions must satisfy six pleading requirements to be admissible; LBP-08-13, 68 NRC 43 (2008); LBP-08-16, 68 NRC 361 (2008); LBP-10-14, 72 NRC 101 (2010)

contentions must show that a genuine dispute exists on a material issue of law or fact with regard to the license application in question, challenge and identify either specific portions of, or alleged omissions from, the application, and provide the supporting reasons for each dispute; LBP-10-6, 71 NRC 350 (2010)

contentions must specifically challenge the license application to be admissible; LBP-08-9, 67 NRC 421 (2008)

contentions of omission must describe the information that should have been included in the environmental report and provide the legal basis that requires the omitted information to be included; LBP-09-16, 70 NRC 227 (2009)

contentions on the environmental impacts of spent fuel storage are inadmissible; LBP-09-18, 70 NRC 385 (2009)

contentions ought to be interpreted in light of the required specificity, so that adjudicators and parties need not search out broader meanings than were clearly intended; LBP-10-16, 72 NRC 361 (2010)

contentions pertaining to issues dealing with the current operating license, including the updated final safety analysis report, are not within the scope of license renewal review; LBP-08-13, 68 NRC 43 (2008)

contentions raising legal issues, like fact-based contentions, must fall within the allowable scope of the proceeding to be admissible; LBP-10-17, 72 NRC 501 (2010)

contentions relating to the conclusions that the NRC Staff reaches in its NEPA analysis with regard to the environmental impacts from radiological releases to groundwater must await future publication of its supplemental environmental impact statement; LBP-08-13, 68 NRC 43 (2008)

## SUBJECT INDEX

contentions that advocate more or less stringent requirements than the NRC rules impose, otherwise seek to litigate a generic determination that the Commission has established by rulemaking, or raise a matter that is or is about to become the subject of rulemaking are barred; LBP-08-9, 67 NRC 421 (2008); LBP-08-17, 68 NRC 431 (2008); LBP-08-16, 68 NRC 361 (2008); LBP-09-3, 69 NRC 139 (2009); LBP-09-6, 69 NRC 367 (2009); LBP-10-7, 71 NRC 391 (2010); LBP-10-21, 72 NRC 616 (2010)

contentions that applicant's ER fails to satisfy NEPA because it does not address the environmental impacts of severe spent fuel pool accidents, and fails to address severe accident mitigation alternatives that would reduce the potential for spent fuel pool water loss and fires, are found inadmissible; LBP-06-23, 64 NRC 257 (2006)

contentions that attack a Commission rule, or that seeks to litigate a matter that is, or clearly is about to become, the subject of a rulemaking, are inadmissible; LBP-10-21, 72 NRC 616 (2010)

contentions that attack applicable statutory requirements, challenge the basic structure of the NRC's regulatory process, or merely express generalized policy grievances are not appropriate for a licensing board hearing; LBP-09-18, 70 NRC 385 (2009); LBP-10-21, 72 NRC 616 (2010)

contentions that directly or indirectly challenge Table S-3 of 10 C.F.R. 51.51 are inadmissible; LBP-09-4, 69 NRC 170 (2009)

contentions that do not satisfy the requirements of 10 C.F.R. 2.309(f)(1) must be rejected; CLI-09-8, 69 NRC 317 (2009)

contentions that fail to directly controvert the application or that mistakenly assert the application does not address a relevant issue can be dismissed; LBP-08-16, 68 NRC 361 (2008)

contentions that fail to provide supporting facts or expert opinion are inadmissible; LBP-08-19, 68 NRC 545 (2008)

contentions that fail to raise a genuine dispute of material fact or law with the applicant are inadmissible; LBP-08-19, 68 NRC 545 (2008)

contentions that fail to satisfy the pleading requirements of 10 C.F.R. 2.309(f)(1) are inadmissible; LBP-08-18, 68 NRC 533 (2008)

contentions that fall outside the scope of the proceeding must be rejected; LBP-08-16, 68 NRC 361 (2008); LBP-09-26, 70 NRC 939 (2009)

contentions that raise issues of law as well as contentions that raise issues of fact are permitted; LBP-10-17, 72 NRC 501 (2010)

contentions that simply state petitioner's views about what regulatory policy should be do not present a litigable issue; LBP-10-7, 71 NRC 391 (2010); LBP-10-21, 72 NRC 616 (2010)

contentions will be ruled inadmissible if petitioner has offered no tangible information, no experts, no substantive affidavits, but instead only bare assertions and speculation; LBP-08-16, 68 NRC 361 (2008); LBP-08-17, 68 NRC 431 (2008)

counsel have a continuing duty to update a tribunal about any development that may conceivably affect the outcome of litigation; LBP-06-10, 63 NRC 314 (2006)

counsel have an ethical responsibility not to knowingly make a false statement of fact or law to a tribunal or fail to correct a false statement of material fact or law previously made to the tribunal by the lawyer; LBP-06-10, 63 NRC 314 (2006)

counsel have an obligation to assure that, to the best of their knowledge, information, and belief, representations made in all pleadings are true; LBP-06-10, 63 NRC 314 (2006)

counsel's alleged unfamiliarity with the agency's rules of practice or counsel's asserted busy schedule are not satisfactory explanations for late filings; LBP-10-21, 72 NRC 616 (2010)

cross-examination occurs virtually automatically in Subpart G hearings, subject to normal judicial management and the requirement to file a cross-examination plan; LBP-09-10, 70 NRC 51 (2009)

damage to a nuclear power facility's reputation does not constitute a threatened injury to the interests of the Local's members who work at the facility; CLI-08-19, 68 NRC 251 (2008)

decisions on nontimely filings require a balancing of the eight factors set forth in 10 C.F.R. 2.309(c)(1), the first of which, good cause for failure to file on time, is the most important; CLI-09-7, 69 NRC 235 (2009)

deliberative process privilege is a qualified privilege; LBP-06-3, 63 NRC 85 (2006)

deliberative process privilege requires that the information be both predecisional and deliberative; LBP-06-3, 63 NRC (2006)

## SUBJECT INDEX

descriptions of activities as being “near,” in “close proximity,” or “in the vicinity” of the facility in question are insufficient to establish standing; CLI-07-18, 65 NRC 399 (2007)

despite not being constitutionally limited by the case or controversy requirement of Article III, common sense counsels against proceeding with an adjudication where no effective relief can be granted; LBP-09-14, 70 NRC 193 (2009)

detailed pleadings put other parties in the proceeding on notice of the petitioners’ specific grievances, thereby giving them a good idea of the claims they will be either supporting or opposing; LBP-07-11, 66 NRC 41 (2007)

determining whether the contention is adequately supported by a concise allegation of the facts or expert opinion is not a hearing on the merits; LBP-09-26, 70 NRC 939 (2009)

disclosure is not required if the burden or expense of the proposed discovery outweighs its likely benefit; LBP-10-23, 72 NRC 692 (2010)

discovery is not permitted for the purpose of developing a motion to reopen the record or to assist a petitioner in the framing of contentions; LBP-08-12, 68 NRC 5 (2008)

discretionary Commission review of a presiding officer’s initial decision is allowed under 10 C.F.R. 2.341(b)(1); CLI-10-17, 72 NRC 1 (2010)

discretionary interlocutory review is allowed if the challenged board decision threatens immediate and serious irreparable impact or affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-06-18, 64 NRC 1 (2006); CLI-06-12, 63 NRC 495 (2006)

discretionary interlocutory review is allowed when a licensing board certifies a ruling or refers a question; CLI-06-18, 64 NRC 1 (2006)

discretionary intervention is meant to ensure a sound adjudicatory record, not simply to provide a second representative to assist (allegedly) ill-represented parties; CLI-06-16, 63 NRC 708 (2006)

discretionary intervention may be granted in circumstances when one petitioner has standing as of right and has proffered at least one admissible contention, but other petitioners have not demonstrated their standing; LBP-10-1, 71 NRC 165 (2010)

discretionary standing is appropriate only when one petitioner has been shown to have standing as of right and an admissible contention so that a hearing will be conducted; LBP-07-10, 66 NRC 1 (2007)

dismissal due to counsel’s malfeasance is a logical extension of the board’s disciplinary authority to reprimand, censure, or suspend from a proceeding any party or representative who refuses to comply with its directions; CLI-08-29, 68 NRC 899 (2008)

dismissal of a party falls within the spectrum of sanctions available to the boards to assist in the management of proceedings, although dismissal should be reserved for severe cases; CLI-08-29, 68 NRC 899 (2008)

docketing decisions are not challengeable in an adjudicatory proceeding; CLI-08-15, 68 NRC 1 (2008)

documents are deemed to be within the control of a party if the party has the right to obtain the documents on demand or if it is held by the party’s attorney, expert, insurance company, accountant, or agent; LBP-10-23, 72 NRC 692 (2010)

documents that contain the analysis, opinions, and recommendations of NRC Staff members regarding an applicant’s response to prior requests for additional information or the formulation of new RAIs are deliberative and thus may qualify for deliberative process privilege; LBP-06-3, 63 NRC 85 (2006)

each intervening participant that wishes to be a party to a proceeding must establish its own standing; LBP-10-7, 71 NRC 391 (2010)

each party to a proceeding must automatically disclose and provide all documents and data compilations in their possession, custody, or control that are relevant to the admitted contentions, without waiting for a party to file a discovery request; LBP-10-23, 72 NRC 692 (2010)

each proposed new contention must satisfy the requirements of 10 C.F.R. 2.309(f)(1)(i)-(vi); CLI-09-5, 69 NRC 115 (2009)

early site permit applications, as partial construction permit applications, are subject to the Atomic Energy Act hearing requirement, as well as all procedural requirements in 10 C.F.R. Part 2; LBP-09-19, 70 NRC 433 (2009)

eight factors of 10 C.F.R. 2.309(c)(1) apply to nontimely intervention petitions, hearing requests, and contentions; LBP-10-9, 71 NRC 493 (2010)

electronic production, filing, and service of all documents are required in the high-level waste proceeding; CLI-08-25, 68 NRC 497 (2008)

## SUBJECT INDEX

establishing standing for a contention involves a showing of a concrete and particularized injury that is fairly traceable to the challenged action and likely to be redressed by a favorable decision; LBP-09-1, 69 NRC 11 (2009)

even if a petitioner is unable to show that the NRC Staff's NEPA document differs significantly from the environmental report, it may still be able to meet the late-filed contention requirements; LBP-10-24, 72 NRC 720 (2010)

even if late-filing criteria are satisfied, proposed contentions must still meet the Commission's pleading standards; CLI-08-1, 67 NRC 1 (2008)

even if neither applicant nor the NRC Staff challenges petitioner's standing, the board must make its own determination; LBP-07-10, 66 NRC 1 (2007); LBP-08-15, 68 NRC 294 (2008)

even if NRC's proximity presumption is viewed as more lenient than judicial standing requirements, NRC may choose to retain it; CLI-09-20, 70 NRC 911 (2009)

even if petitioners later retain counsel, it would not be appropriate to hold their petition to those standards of clarity and precision to which a lawyer might reasonably be expected to adhere; LBP-08-6, 67 NRC 241 (2008)

even if the basic facts are uncontroverted, summary disposition is inappropriate when the evidence is susceptible of different interpretations or inferences; LBP-07-12, 66 NRC 113 (2007)

every participant in the adjudicative process has an obligation to fully develop its arguments; LBP-06-7, 63 NRC 188 (2006)

every petitioner bears the burden of demonstrating standing in order to participate in hearings before a licensing board; LBP-09-18, 70 NRC 385 (2009)

evidence contained in affidavits supporting motions to reopen must meet the regulatory admissibility standards of relevance, materiality, and reliability; LBP-08-12, 68 NRC 5 (2008)

exactly when a notice of appearance must be filed (or a notice of withdrawal submitted when an attorney or representative is no longer acting as a participant representative) is not specified in NRC's rules; LBP-10-7, 71 NRC 391 (2010)

except for a motion to file a new or amended contention, or where there are compelling circumstances, movant has no right to reply to an answer or respond to a motion; LBP-09-22, 70 NRC 640 (2009)

existence of a prima facie case is determined based on the sufficiency of the movant's assertions and informational/evidentiary support alone; LBP-10-15, 72 NRC 257 (2010)

expert statements by intervenors that merely state conclusions and provide no reasoned basis or explanation for such conclusions do not meet the contention admission requirement of 10 C.F.R. 2.309(f)(1)(v); LBP-10-6, 71 NRC 350 (2010); LBP-10-10, 71 NRC 529 (2010)

expert support is not required for admission of a contention; LBP-08-6, 67 NRC 241 (2008)

factors (v) and (vi) of 10 C.F.R. 2.309(c) generally are given less weight than factors (vii) and (viii); LBP-10-1, 71 NRC 165 (2010)

factors (vii) and (viii) of 10 C.F.R. 2.309(c)(1) are generally considered to have the most significance in the balancing process in instances in which there are no other parties or ongoing related proceedings; LBP-10-21, 72 NRC 616 (2010)

factors that influence the grant of a stay are addressed; LBP-08-11, 67 NRC 460 (2008)

factors that must be addressed for nontimely intervention petitions, hearing requests, and contentions are set forth; LBP-09-20, 70 NRC 565 (2009)

facts are "material" if they will affect the outcome of a proceeding under the governing law; LBP-07-12, 66 NRC 113 (2007)

facts relied on in support of a contention of omission need not show that applicant's facility cannot be safely operated, but rather that the application is incomplete under the governing regulations; LBP-08-15, 68 NRC 294 (2008)

factual disputes that are irrelevant or unnecessary will not be counted in ruling on summary disposition motions; LBP-07-13, 66 NRC 131 (2007)

failure by movant to address all reopening requirements in its motion is reason enough to deny the motion; LBP-08-12, 68 NRC 5 (2008)

failure of a contention to meet any of the pleading requirements of 10 C.F.R. 2.309(f)(1)(i)-(vi) precludes its admission; CLI-09-7, 69 NRC 235 (2009); CLI-09-15, 70 NRC 1 (2009); LBP-07-3, 65 NRC 237 (2007); LBP-07-4, 65 NRC 281 (2007); LBP-07-10, 66 NRC 1 (2007); LBP-07-11, 66 NRC 41 (2007); LBP-07-16, 66 NRC 277 (2007); LBP-08-6, 67 NRC 241 (2008); LBP-08-16, 68 NRC 361 (2008);

## SUBJECT INDEX

LBP-08-24, 68 NRC 691 (2008); LBP-08-26, 68 NRC 905 (2008); LBP-09-3, 69 NRC 139 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-21, 70 NRC 581 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-10-4, 71 NRC 216 (2010); LBP-10-6, 71 NRC 350 (2010); LBP-10-7, 71 NRC 391 (2010); LBP-10-15, 72 NRC 257 (2010); LBP-10-16, 72 NRC 361 (2010); LBP-10-21, 72 NRC 616 (2010)

failure of an organizational participant to have a representative provide an appearance notice in accord with section 2.314(b) might provide cause for an appropriate sanction for failure properly to prosecute the litigation; LBP-10-7, 71 NRC 391 (2010)

failure of petitioner to reference any portion of the combined license application with which it takes issue is grounds for dismissal of a contention; CLI-10-9, 71 NRC 245 (2010)

failure to carefully read the governing procedural regulations does not constitute good cause for accepting a late-filed petition; CLI-06-21, 64 NRC 30 (2006)

failure to comply with Commission pleading requirements for late filings constitutes sufficient grounds for rejecting intervention and hearing requests; CLI-09-7, 69 NRC 235 (2009); LBP-10-4, 71 NRC 216 (2010)

failure to indicate how alleged harms might result from license amendments, particularly given not only the shutdown status of the facility, but also the continued applicability of the NRC's safety-oriented regulations governing defueled nuclear plants, is grounds for denial of standing; LBP-10-11, 71 NRC 609 (2010)

failure to provide sufficient information to show that a genuine dispute exists with the applicant on a material issue of law or fact is grounds for dismissal of a contention; CLI-10-9, 71 NRC 245 (2010); LBP-10-6, 71 NRC 350 (2010)

failure to raise any challenge to a Staff EIS correction essentially renders that aspect of an intervenor challenge moot, as the intervenor has failed to raise a litigable challenge to the previously identified error; LBP-06-9, 63 NRC 289 (2006)

failure to specify any radiological contacts with enough concreteness to establish some impact on petitioner will result in denial of standing; LBP-10-11, 71 NRC 609 (2010)

failure to specify the language of a contention and distinguish it from the discussion that might otherwise be considered the basis for the issue statement might be grounds for dismissing the contention; LBP-10-7, 71 NRC 391 (2010); LBP-08-16, 68 NRC 361 (2008)

failure under 10 C.F.R. 2.309(d) to support an intervention petition with affidavits providing necessary information regarding the basis for representational standing could interpose a jurisdictional flaw potentially warranting the participant's dismissal from the proceeding; LBP-10-7, 71 NRC 391 (2010)

fairness requires that all participants in NRC adjudicatory proceedings abide by its procedural rules, especially those who are cognizant of those rules and represented by counsel; CLI-10-12, 71 NRC 319 (2010)

federal courts have long recognized the right of agencies to tailor their own standing requirements to fit their specific needs; CLI-08-19, 68 NRC 251 (2008)

filing of a new contention on the basis of the draft or final environmental impact statement where that document contains information that differs significantly from the information that was previously available is allowed; CLI-09-12, 69 NRC 535 (2009)

filings that are nearly 3 months late must satisfy not only the requirements to demonstrate standing and submit at least one admissible contention, but also must satisfy the stringent requirements for untimely filings and late-filed contentions; CLI-06-21, 64 NRC 30 (2006)

five factors must be balanced under pre-2004 rules before a petition to admit a late-filed contention can be granted; CLI-08-8, 67 NRC 193 (2008)

for a contention of omission, petitioner's burden is to show the facts necessary to establish that the application omits information that should have been included; LBP-09-16, 70 NRC 227 (2009)

for a contention regarding environmental impacts of spent fuel storage to be within the scope of an operating license renewal proceeding, petitioner must obtain a waiver under 10 C.F.R. 2.335(d); LBP-10-15, 72 NRC 257 (2010)

for a contention to be admissible, it must satisfy eight pleading requirements; LBP-10-13, 71 NRC 673 (2010)

for a request for hearing and petition to intervene to be granted, a petitioner must establish that it has standing and propose at least one admissible contention; LBP-10-15, 72 NRC 257 (2010)

## SUBJECT INDEX

- for an admissible contention, petitioner must provide a concise statement of the alleged facts or expert opinion that support the petitioner's position; LBP-09-10, 70 NRC 51 (2009)
- for an order issued under 10 C.F.R. 2.202, the time for filing a hearing request runs from the date of the order, not the date of publication of the order in the *Federal Register*; LBP-09-20, 70 NRC 565 (2009)
- for an organization to establish standing, it must show either immediate or threatened injury to its organizational interests or to the interests of identified members; LBP-08-6, 67 NRC 241 (2008); LBP-09-17, 70 NRC 311 (2009)
- for contentions to be admissible, the subject matter of a contention must impact the grant or denial of a pending license application; LBP-09-3, 69 NRC 139 (2009)
- for determining the "likelihood" that a motion to reopen would change the outcome of a license renewal proceeding, the Commission indicated that a "would have been reached" standard is too strict, and a "might have been reached" standard is too lax; LBP-08-12, 68 NRC 5 (2008)
- for each contention, a petitioner must provide a specific statement of the issue of law or fact to be raised or controverted, and a brief explanation of the basis for the contention; LBP-06-10, 63 NRC 314 (2006)
- for each contention, a petitioner must provide sufficient information to show that a genuine dispute exists with the applicant/licensee on a material issue of law or fact; LBP-06-10, 63 NRC 314 (2006)
- for factual disputes, petitioner must present sufficient information to show a genuine dispute; CLI-10-20, 72 NRC 185 (2010)
- for factual disputes, petitioner need not proffer facts in formal affidavit or evidentiary form, sufficient to withstand a summary disposition motion, but must present sufficient information to show a genuine dispute and reasonably indicating that a further inquiry is appropriate; LBP-09-16, 70 NRC 227 (2009); LBP-09-27, 70 NRC 992 (2009)
- for organizational standing, petitioner must identify any discrete institutional injury to itself other than general environmental and policy interests of the sorts the federal courts and NRC repeatedly have found insufficient; CLI-10-3, 71 NRC 49 (2010); LBP-07-14, 66 NRC 169 (2007)
- for organizational standing, the organization must, in its own right, satisfy the same requirements of injury, causation, and redressability as an individual; LBP-09-28, 70 NRC 1019 (2009)
- for organizations to demonstrate standing to intervene, they must allege that the challenged action will cause a cognizable injury to the organization's interests or to the interests of its members; LBP-08-13, 68 NRC 43 (2008); LBP-08-24, 68 NRC 691 (2008)
- for representational standing, an organization must demonstrate that the licensing action will affect at least one of its members, identify that member by name and address, show that it is authorized by that member to request a hearing on his or her behalf, demonstrate that the member would qualify for standing in his or her own right, show that the interests the organization seeks to protect are germane to its own purpose, and show that neither the proffered contentions nor the requested relief would require an individual member to participate in the proceeding; LBP-07-14, 66 NRC 169 (2007); LBP-09-28, 70 NRC 1019 (2009)
- for Subpart G proceedings, each expert witness is required to create, sign, and submit a written expert report; LBP-09-30, 70 NRC 1039 (2009)
- for systems, structures, and components subject to aging management review, discussion of proposed inspection and monitoring details will come before a board only as they are needed to demonstrate that the intended function of relevant SSCs will be maintained for the license renewal period; LBP-08-13, 68 NRC 43 (2008)
- for the purposes of summary disposition, mere allegations are insufficient, including speculative or bare conclusory statements by an expert; LBP-07-13, 66 NRC 131 (2007)
- for timely new or amended contentions, the pleading shall include a motion for leave to file the contention showing that it satisfies 10 C.F.R. 2.309(f)(1); LBP-09-22, 70 NRC 640 (2009)
- for untimely new or amended contentions, the pleading shall include a motion for leave to file the contention and the support for the proposed new or amended contention showing that it satisfies 10 C.F.R. 2.309(f)(1); LBP-09-22, 70 NRC 640 (2009)
- general allegations covering the overall adequacy of structures, systems, and components, with no mention of potential errors or deficiencies in an applicant's license renewal application, do not support the admissibility of a contention; LBP-08-13, 68 NRC 43 (2008)

## SUBJECT INDEX

- general assertions, unsupported by specific facts or expert opinion, that personnel reductions may adversely affect health and safety are inadmissible in a license transfer proceeding; CLI-06-21, 64 NRC 30 (2006)
- general assertions, without some effort to show why the assertions undercut findings or analyses in the environmental report, fail to satisfy the requirements of 10 C.F.R. 2.309(f)(1)(vi); LBP-10-6, 71 NRC 350 (2010)
- general counsel for an Indian tribe is not required to submit a declaration stating the basis of his or her authority to represent the tribe; LBP-08-26, 68 NRC 905 (2008)
- general environmental and policy interests are insufficient for organizational standing; LBP-09-20, 70 NRC 565 (2009)
- generalized claims that are vague and insufficiently supported and do not tend to establish any connection with the proposed license or potential harm to petitioner are insufficient to support a contention; CLI-10-20, 72 NRC 185 (2010)
- generalized expertise, even scientific eminence, is an insufficient substitute for particularized knowledge of the issues actually in dispute; CLI-06-16, 63 NRC 708 (2006)
- generic NRC policies and standards and the nature of the NRC Staff's licensing review are not subject to challenge in an adjudicatory proceeding; CLI-08-17, 68 NRC 231 (2008)
- given that consideration of terrorist attacks is part of the NRC's NEPA obligations in the Ninth Circuit, the issue of whether terrorist attacks have been fully considered in the NEPA analysis for a power plant in that jurisdiction is plainly material to the decision the NRC must make; LBP-10-15, 72 NRC 257 (2010)
- given that the *Federal Register* notice defines the scope of the issues that may properly be raised in a request for a hearing, it also defines the scope of the issues that could reasonably be deemed resolved during an ESP proceeding; LBP-08-15, 68 NRC 294 (2008)
- given the information known about the nature of the facility and the available radioactive and chemical materials at risk and the resulting potential for offsite consequences, there is no need for pro se petitioners to plead these matters more specifically; LBP-07-14, 66 NRC 169 (2007)
- good cause for late filing is the most important factor, and failure to meet this factor considerably enhances the burden of showing that the other factors justify admission of a late-filed petition; CLI-10-12, 71 NRC 319 (2010); CLI-10-17, 72 NRC 1 (2010); LBP-09-20, 70 NRC 565 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-10-1, 71 NRC 165 (2010); LBP-10-9, 71 NRC 493 (2010); LBP-10-11, 71 NRC 609 (2010); LBP-10-21, 72 NRC 616 (2010); LBP-10-24, 72 NRC 720 (2010)
- having established proximity standing, petitioner need not separately establish the requisite injury, causation, and redressability elements; LBP-09-10, 70 NRC 51 (2009); LBP-09-13, 70 NRC 168 (2009); LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-09-20, 70 NRC 565 (2009); LBP-09-21, 70 NRC 581 (2009)
- health effects of arsenic contamination of drinking water from mining operations are admissible in materials license amendment proceedings; LBP-09-1, 69 NRC 11 (2009)
- hearing requests and intervention petitions must set forth with particularity the contentions sought to be raised; CLI-10-9, 71 NRC 245 (2010)
- hearings regarding immediately effective enforcement orders must be held expeditiously; CLI-07-6, 65 NRC 112 (2007)
- how the Commission determines proximity-based standing in license transfer cases is described; CLI-08-19, 68 NRC 251 (2008)
- identifying the individual or individuals authorized to act on behalf of each participant should provide the means whereby any participant needing to reach another participant's authorized representatives to serve a filing or have a discussion about any litigation-related matters will be able to do so; LBP-10-7, 71 NRC 391 (2010)
- if a combined license application is amended or material new information subsequently becomes available, petitioners must be given a fair opportunity to file new or amended contentions challenging these changes; LBP-09-10, 70 NRC 51 (2009)
- if a contention alleges the omission of particular information or an issue from an application, and the information is later supplied by the applicant, the contention is moot; LBP-06-16, 63 NRC 737 (2006)

## SUBJECT INDEX

- if a contention as originally pleaded did not cite adequate documentary support, the petitioner cannot remediate the deficiency in its reply brief by introducing documents that were available to it during the time frame for initially filing contentions; CLI-06-17, 63 NRC 727 (2006)
- if a contention based on new information fails to satisfy the three-part test for admission, it may be evaluated under section 2.309(c); LBP-10-24, 72 NRC 720 (2010)
- if a contention challenges the legal sufficiency of the application that is the subject of the Notice of Hearing and Opportunity to Petition for Leave to Intervene, the contention is within the scope of the proceeding; LBP-08-15, 68 NRC 294 (2008)
- if a contention header uses a particular phrase, but the statement of the contention does not refer to the phrase or regulation, then the board may interpret the contention in accordance with the express statement of the contention; LBP-10-15, 72 NRC 257 (2010)
- if a contention makes a prima facie allegation that the application omits information required by law, it necessarily presents a genuine dispute with applicant on a material issue; LBP-09-16, 70 NRC 227 (2009)
- if a contention meets the 10 C.F.R. 2.309(f)(2) criteria, it is timely and the intervenor proffering the contention need not also make a showing under 10 C.F.R. 2.309(c); LBP-09-27, 70 NRC 992 (2009); LBP-10-9, 71 NRC 493 (2010); LBP-10-14, 72 NRC 101 (2010)
- if a motion to reopen and the proposed new contention are based on material information that was not previously available, then it qualifies as timely; LBP-10-19, 72 NRC 529 (2010)
- if a motion to reopen relates to a contention not previously in controversy among the parties, movant must meet the late-filing requirements of section 2.309(c); CLI-06-4, 63 NRC 32 (2006); LBP-10-21, 72 NRC 616 (2010)
- if a NEPA contention alleges that impacts or alternatives that are patently outside the realm of reason must be considered, then the contention should be denied for failure to demonstrate that the issue raised is within the legitimate scope of NEPA; LBP-09-10, 70 NRC 51 (2009)
- if a newly presented contention fails to satisfy 10 C.F.R. 2.309(f)(2), it will be deemed nontimely and must satisfy 10 C.F.R. 2.309(c) to be admitted; LBP-06-11, 63 NRC 391 (2006)
- if a notice of adoption of a contention is filed within a reasonable time (such as 20 days) after the contention has been filed and admitted, then it is deemed timely; LBP-06-20, 64 NRC 131 (2006)
- if a party files a new contention within 30 days of the availability of the information new to that party, the contention will generally be considered timely; LBP-09-17, 70 NRC 311 (2009)
- if a petitioner neglects to provide the requisite support for its contentions, it is not within the board's power to make assumptions of fact that favor the petitioner, nor may the board supply information that is lacking; LBP-07-3, 65 NRC 237 (2007)
- if a question arises over the scope of an admitted contention, the board or Commission will refer back to the bases set forth in support of the contention; CLI-10-15, 71 NRC 479 (2010)
- if a requested document or data compilation is publicly available, then a citation to the document and a description of where it may be publicly obtained is sufficient; LBP-10-23, 72 NRC 692 (2010)
- if an expert asserts a factual or technical position that is so patently incorrect or absurd, a presiding officer must reject that position as constituting a genuine dispute; LBP-06-5, 63 NRC 116 (2006)
- if an organization does not identify the members it purportedly represents, the Commission cannot determine whether the organization actually does represent members who consider that they will be affected by the licensing action or is simply seeking the vindication of its own value preference; CLI-07-18, 65 NRC 399 (2007)
- if an organization seeks to intervene as a representative of its members, it must identify at least one member by name and address, show that member would have standing in his or her own right, and demonstrate that the member has authorized the organization to intervene on his or her behalf; LBP-09-26, 70 NRC 939 (2009)
- if applicant cures the omission, the contention of omission will become moot, and then intervenor must timely file a new or amended contention if it intends to challenge the sufficiency of the new information supplied by applicant; LBP-08-12, 68 NRC 5 (2008); LBP-08-15, 68 NRC 294 (2008); LBP-10-16, 72 NRC 361 (2010)
- if good cause is not shown for the late filing of a contention, petitioner must make a compelling showing on the four remaining factors; CLI-08-1, 67 NRC 1 (2008); CLI-08-8, 67 NRC 193 (2008); LBP-10-24, 72 NRC 720 (2010)

## SUBJECT INDEX

- if leave to file a motion for reconsideration is granted, the motion must show compelling circumstances, such as the existence of an unanticipated, clear, and material error, which could not have been anticipated, that renders the decision invalid; CLI-10-9, 71 NRC 245 (2010)
- if new and materially different information becomes available during the processing of the application, and a petitioner promptly files a new contention based on this new information, the contention is admissible if it also satisfies the general contention pleading standards; LBP-06-14, 63 NRC 568 (2006)
- if no expert opinion or supporting relevant documents are submitted with a contention, any fact-based argument that is provided must be reasonably specific, coherent, and logical, sufficient to show such a dispute and indicate the appropriateness of further inquiry; LBP-09-17, 70 NRC 311 (2009)
- if no particular procedure is required, then the board may conduct the proceeding for a particular contention under Subpart L; LBP-09-10, 70 NRC 51 (2009)
- if none of the affidavits submitted in support of a hearing request indicate that an organization seeking to intervene represents the interests of the submitter, the organization has failed to establish that it has standing; LBP-08-16, 68 NRC 361 (2008)
- if petitioner cannot establish the elements of proximity-based standing, then he must establish standing according to traditional principles; CLI-10-20, 72 NRC 185 (2010)
- if petitioner fails to offer alleged facts or expert opinion and a reasoned statement explaining any alleged inadequacy in the application, petitioner has not demonstrated a genuine dispute; LBP-10-6, 71 NRC 350 (2010)
- if petitioner fails to provide the requisite support for its contentions, the board may not make assumptions of fact that favor the petitioner or supply information that is lacking; LBP-08-16, 68 NRC 361 (2008); LBP-08-17, 68 NRC 431 (2008); LBP-09-18, 70 NRC 385 (2009); LBP-09-26, 70 NRC 939 (2009)
- if petitioner files a new contention within the 20-day time limit set by the board, and if it satisfies the remaining factors in section 2.309(f)(2), petitioner need not address the requirements under section 2.309(c), which apply to nontimely filings; LBP-06-16, 63 NRC 737 (2006)
- if petitioner has made a prima facie showing of special circumstances for rule waiver, then the board certifies the matter to the Commission; LBP-10-15, 72 NRC 257 (2010); LBP-10-22, 72 NRC 661 (2010)
- if petitioner identifies specific omissions in the combined license application, those omissions should be addressed in a contention to the board which, in turn, should refer such a contention to the Staff for consideration in the design certification rulemaking, and hold that contention in abeyance, if it is otherwise admissible; LBP-08-21, 68 NRC 554 (2008)
- if petitioner makes a prima facie allegation that the application omits information required by law, it necessarily presents a genuine dispute with applicant and raises an issue plainly material to an essential finding of regulatory compliance needed for license issuance; LBP-10-16, 72 NRC 361 (2010)
- if petitioner neglects to provide the requisite support for its contentions, it is not within the board's power to make assumptions of fact that favor the petitioner, nor may the board supply information that is lacking; LBP-07-10, 66 NRC 1 (2007); LBP-09-3, 69 NRC 139 (2009); LBP-10-6, 71 NRC 350 (2010); LBP-10-7, 71 NRC 391 (2010)
- if petitioner requests a remedy that is beyond the scope of the hearing, then the hearing request must be denied because redressability is an element of standing; LBP-07-16, 66 NRC 277 (2007); LBP-08-14, 68 NRC 279 (2008)
- if petitioner wishes to challenge a generic determination in a license renewal proceeding, it must seek and receive a waiver; LBP-08-26, 68 NRC 905 (2008)
- if petitioners believe that the specification for climate change no longer provides a reasonable basis for demonstrating compliance based on new scientific evidence, they can petition NRC to amend the rules; LBP-10-22, 72 NRC 661 (2010)
- if petitioners cannot show that their new or revised contentions could not have been submitted without the requested access to the redacted information in the license transfer application, then they will have to meet not only the contention pleading requirements, but also the late-filing requirements; CLI-07-18, 65 NRC 399 (2007)
- if petitioners offer a reason for needing safeguards information material to the findings a licensing board must make and otherwise explain why publicly available versions of the application would not be sufficient to provide the basis and specificity for a proffered contention, they would satisfy the need criterion; LBP-09-5, 69 NRC 303 (2009)

## SUBJECT INDEX

- if safety contentions filed before construction begins would be considered premature and/or speculative, NRC hearing opportunities could soon come to be viewed as chimerical; LBP-07-14, 66 NRC 169 (2007)
- if standards for reopening were not strict and demanding, there would be little hope of completing administrative proceedings if each newly arising allegation required an agency to reopen its hearings; LBP-08-12, 68 NRC 5 (2008)
- if summary disposition movant satisfies its initial burden and supports its motion by affidavit, opponent must either proffer rebutting evidence or submit an affidavit explaining why it is impractical to do so; LBP-07-12, 66 NRC 113 (2007)
- if the attorney or representative of a party is contacted pursuant to the consultation requirement, then that person (or his or her alternate) must make a sincere effort to make himself or herself available to listen and to respond to the moving party's explanation, and to resolve the factual and legal issues raised in the motion; LBP-09-22, 70 NRC 640 (2009)
- if the filings demonstrate the existence of a genuine material fact, the evidence submitted in support of a motion fails to show the nonmovant's position is a sham or fails to foreclose the possibility of a factual dispute, or there is an issue as to the credibility of movant's evidentiary material, movant will be found to have failed to meet its burden on summary disposition; LBP-07-12, 66 NRC 113 (2007)
- if the presiding officer determines from affidavits filed by the party opposing summary disposition that the opposing party cannot present by affidavit the facts essential to justify its opposition, the presiding officer may order a continuance to permit such affidavits to be obtained, or may take other appropriate action; LBP-07-12, 66 NRC 113 (2007)
- if the support a party offers, to demonstrate that a genuine dispute exists as to a material fact, indicates that, after expanding that support to its logical limits, it cannot support a finding of fact material to the determination the agency must make, that party's position cannot prevail; LBP-07-13, 66 NRC 131 (2007)
- if there are problems with meeting a filing date, participants should seek an extension of time or, if the time for filing has passed, submit a motion for leave to file out of time; LBP-08-16, 68 NRC 361 (2008)
- if there is doubt as to whether the parties should be required to proceed further, a motion for summary disposition should be denied; LBP-07-12, 66 NRC 113 (2007)
- if there is no prima facie showing for a rule waiver, the board may not further consider the matter; LBP-10-22, 72 NRC 661 (2010)
- if, within 60 days after pertinent information that would support the framing of a contention first becomes available, intervenors submit a particularized and otherwise admissible contention regarding the construction of the facility, then the contention will be deemed timely without the need to satisfy the balancing test for late-filing requirements; CLI-09-2, 69 NRC 55 (2009)
- imminent mootness of an issue has been cause for taking interlocutory review if the issue sought to be reviewed would have become moot by the time the board issued a final decision; CLI-10-29, 72 NRC 556 (2010)
- in a case involving an enforcement order, the standing requirement is based on the confirmatory order itself, and petitioner must show that he will be adversely affected by the terms of the order; LBP-08-14, 68 NRC 279 (2008)
- in a contention of omission, intervenors must show that what is allegedly omitted is required by law; LBP-10-10, 71 NRC 529 (2010)
- in a contested uranium enrichment facility proceeding, the licensing board shall make findings of fact and conclusions of law on admitted contentions; CLI-09-15, 70 NRC 1 (2009)
- in a license renewal proceeding, there is no mandatory or automatic default to Subpart L procedures; LBP-07-15, 66 NRC 261 (2007)
- in a license transfer case, a petitioner cannot, for purposes of standing, successfully claim injury based on the financial qualifications and assurances of the transferor; CLI-07-22, 65 NRC 525 (2007)
- in a materials licensing case, petitioner must show more than that he lives or works within a certain distance of the site where materials will be located; CLI-10-20, 72 NRC 185 (2010)
- in a materials licensing proceeding, petitioners have the burden to show a specific and plausible means whereby the licensing decision may harm them; CLI-09-9, 69 NRC 331 (2009)

## SUBJECT INDEX

- in a proceeding involving the safety of a proposed 20% increase in the power of a nuclear power reactor, the seriousness of the litigation and the issues involved weigh in favor of disclosing deliberative process documents; LBP-06-3, 63 NRC 85 (2006)
- in a Subpart L evidentiary hearing, the board may ask witnesses to appear in person and answer questions; LBP-09-22, 70 NRC 640 (2009)
- in a Subpart L proceeding, the board must apply the summary disposition standard set forth in Subpart G; LBP-10-20, 72 NRC 571 (2010)
- in a Subpart L proceeding, the mandatory disclosure provisions of 10 C.F.R. 2.336 apply; CLI-10-24, 72 NRC 451 (2010); CLI-10-25, 72 NRC 469 (2010)
- in addition to general contention admissibility requirements, amended or new contentions filed after an intervenor's initial filing will be admitted only upon leave of the presiding officer and a demonstration that information upon which the contention is based was not previously available, is materially different than information previously available, and has been submitted in a timely fashion based on the availability of the subsequent information; LBP-10-13, 71 NRC 673 (2010)
- in addressing a summary disposition motion and the opposition thereto, licensing boards must examine the substance of the information provided by the parties; LBP-07-13, 66 NRC 131 (2007)
- in addressing a summary disposition motion, guidance on determining whether an issue is "material" is taken from procedures for contention admissibility; LBP-07-13, 66 NRC 131 (2007)
- in addressing the section 2.309(e)(1) factors, failure to provide any specific discussion of most of these items or the weight they should be given in the balance is a potentially fatal omission; LBP-10-21, 72 NRC 616 (2010)
- in adjudicatory proceedings it is the license application, not the NRC Staff review, that is at issue; CLI-08-15, 68 NRC 1 (2008)
- in analyzing the abeyance question, the risk of harm that the subject of the enforcement action could suffer from an abeyance order is balanced against the risk of harm DOJ could suffer from the NRC Staff moving forward in its enforcement hearing; CLI-07-6, 65 NRC 112 (2007)
- in any conflict between a general rule in Part 2, Subpart C, and a special rule in Part 2, the special rule governs; LBP-08-16, 68 NRC 361 (2008)
- in assessing a petition to determine whether the requirements for standing are met, the board construes the petition in favor of the petitioner; LBP-07-3, 65 NRC 237 (2007); LBP-09-2, 69 NRC 87 (2009); LBP-09-3, 69 NRC 139 (2009)
- in assessing whether petitioner has standing, NRC has long applied contemporaneous judicial concepts of standing; CLI-09-20, 70 NRC 911 (2009)
- in balancing the six factors for discretionary hearing, assistance in developing a sound record is the most important; CLI-06-16, 63 NRC 708 (2006)
- in cases involving ISL uranium mining and other source materials licensing, petitioner must demonstrate injury, causation, and redressability because proximity to the proposed facility alone is not adequate to demonstrate standing; LBP-10-16, 72 NRC 361 (2010)
- in cases involving the possible construction or operation of a nuclear power reactor, the Commission has created a presumption that residing or regularly conducting activities within a 50-mile proximity of the proposed facility is considered sufficient to establish the requisite injury, causation, and redressability elements; LBP-07-10, 66 NRC 1 (2007); LBP-08-16, 68 NRC 361 (2008); LBP-09-3, 69 NRC 139 (2009); LBP-10-21, 72 NRC 616 (2010)
- in cases not involving nuclear power reactors, whether petitioner could be affected by the licensing action must be determined on a case-by-case basis, taking into account petitioner's distance from the source, the nature of the licensed activity, and the significance of the radioactive source; CLI-10-20, 72 NRC 185 (2010)
- in cases where the record fails to support the existence of a significant source of radioactivity producing an obvious potential for offsite consequences at a particular distance frequented by a petitioner, it becomes petitioner's burden to show a specific and plausible means of how the challenged action may harm him or her; LBP-10-4, 71 NRC 216 (2010)
- in conducting Subpart L hearings, board members pose questions to the parties' witnesses in those areas that, in the board's judgment, require additional clarification and development; LBP-07-17, 66 NRC 327 (2007)

## SUBJECT INDEX

- in construction permit and operating license proceedings for power reactors, petitioner is presumed to have standing to intervene if petitioner lives within, or otherwise has frequent contacts with, the zone of possible harm; CLI-09-20, 70 NRC 911 (2009)
- in construction permit proceedings, proximity to the proposed facility has been considered sufficient to establish standing; LBP-10-7, 71 NRC 391 (2010)
- in deciding a summary disposition motion the tribunal must examine the evidence in the light most favorable to the nonmoving party; LBP-08-7, 67 NRC 361 (2008)
- in deciding whether to grant a stay, the Commission considers whether the moving party has made a strong showing that it is likely to prevail on the merits, whether the party will be irreparably injured unless a stay is granted, whether the granting of a stay would harm the other parties, and where the public interest lies; CLI-09-23, 70 NRC 935 (2009)
- in demonstrating that a proposed action involves a significant source of radioactivity producing an obvious potential for offsite consequences, petitioner cannot rely on conclusory allegations about potential radiological harm, but must show how these various harms might result from the proposed action; LBP-09-20, 70 NRC 565 (2009)
- in determining whether a petitioner has established standing, boards are to construe the petition in favor of the petitioner; LBP-08-17, 68 NRC 431 (2008); LBP-08-26, 68 NRC 905 (2008); LBP-09-6, 69 NRC 367 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-09-21, 70 NRC 581 (2009); LBP-10-15, 72 NRC 257 (2010)
- in determining whether an individual or organization should be granted party status in a proceeding based on standing as of right, the agency has applies contemporaneous judicial standing concepts; LBP-07-3, 65 NRC 237 (2007); LBP-07-10, 66 NRC 1 (2007); LBP-08-9, 67 NRC 421 (2008); LBP-08-26, 68 NRC 905 (2008); LBP-09-1, 69 NRC 11 (2009); LBP-09-3, 69 NRC 139 (2009); LBP-09-6, 69 NRC 367 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-10-4, 71 NRC 216 (2010); LBP-10-15, 72 NRC 257 (2010); LBP-10-16, 72 NRC 361 (2010); LBP-10-21, 72 NRC 616 (2010)
- in determining whether petitioner is an “interested person” for the purposes of a standing determination, NRC is not strictly bound by judicial standing doctrines; CLI-09-20, 70 NRC 911 (2009)
- in establishing proximity-based standing, it is petitioner’s responsibility to provide enough detail to allow the board to distinguish a casual interest from a substantial one; LBP-10-1, 71 NRC 165 (2010)
- in evaluating a motion to reopen the record, a licensing board properly considers the movant’s new allegations and the nonmovant’s contrary evidence in determining whether there is a real issue at stake warranting a reopened hearing; LBP-08-12, 68 NRC 5 (2008)
- in evaluating petitions to intervene, licensing boards are not free to ignore the contention admissibility requirements of 10 C.F.R. 2.309(f)(1); CLI-09-8, 69 NRC 317 (2009)
- in evaluating the specificity of petitioners’ standing arguments, a licensing board must take into account the information provided by the applicant and the NRC Staff in the environmental impact statement; LBP-07-14, 66 NRC 169 (2007)
- in exceptional instances, the Commission may grant a petition for interlocutory review when a party demonstrates that a ruling threatens it with immediate and serious irreparable impact or affects the basic structure of the proceeding in a pervasive or unusual matter; CLI-07-2, 65 NRC 10 (2007)
- in five-factor analysis for admission of a late-filed contention, factors three and five are to be given more weight than factors two and four; CLI-08-1, 67 NRC 1 (2008); CLI-08-8, 67 NRC 193 (2008)
- in high-level waste repository proceedings, the burden of proof rests on the proponent of a motion to strike; LBP-08-5, 67 NRC 205 (2008)
- in license amendment cases, petitioner cannot base standing simply upon a residence or visits near the plant, unless the proposed action quite obviously entails an increased potential for offsite consequences; LBP-08-18, 68 NRC 533 (2008)
- in license transfer cases, the Commission determines on a case-by-case basis whether the proximity presumption should apply, considering the obvious potential for offsite radiological consequences, or lack thereof, from the application at issue, and specifically taking into account the nature of the proposed action and the significance of the radioactive source; CLI-07-19, 65 NRC 423 (2007)
- in light of the requirements that any new contention be based on material information that was not previously available, the timeliness determination required under 10 C.F.R. 2.309(f)(2) and the section 2.326(a) reopening standard can be closely equated; LBP-10-21, 72 NRC 616 (2010)

## SUBJECT INDEX

- in nonreactor cases, the potential for offsite consequences is not always clear, and thus the burden falls on petitioner to demonstrate that the proposed action involves a significant source of radioactivity producing an obvious potential for offsite consequences; LBP-09-20, 70 NRC 565 (2009)
- in operating license amendment cases, a petitioner must assert an injury-in-fact associated with the challenged license amendment, not simply a general objection to the facility; LBP-07-10, 66 NRC 1 (2007)
- in order to raise a timely contention, a party must piece together disparate shreds of information that, standing alone, have little apparent significance; CLI-10-27, 72 NRC 481 (2010)
- in power reactor license proceedings, proximity within 50 miles of a plant is often enough on its own to demonstrate standing; LBP-08-17, 68 NRC 431 (2008); LBP-08-24, 68 NRC 691 (2008)
- in proceedings involving nuclear power reactors, petitioner is presumed to have standing to intervene without the need to specifically plead injury, causation, and redressability if the petitioner lives within 50 miles of the nuclear power reactor; LBP-06-7, 63 NRC 188 (2006); LBP-06-10, 63 NRC 314 (2006); LBP-09-10, 70 NRC 51 (2009); LBP-09-13, 70 NRC 168 (2009); LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-09-20, 70 NRC 565 (2009); LBP-09-21, 70 NRC 581 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-10-1, 71 NRC 165 (2010); LBP-10-4, 71 NRC 216 (2010); LBP-10-15, 72 NRC 257 (2010); LBP-10-16, 72 NRC 361 (2010)
- in proceedings not involving power reactors, proximity alone is not sufficient to establish standing; LBP-08-6, 67 NRC 241 (2008)
- in proceedings other than for construction permits, operating licenses, or significant amendments thereto, the Commission decides on a case-by-case basis whether the proximity presumption should apply, taking into account any obvious potential for offsite radiological consequences, as well as the nature of the proposed action and the significance of the radioactive source; LBP-09-20, 70 NRC 565 (2009); LBP-09-28, 70 NRC 1019 (2009)
- in proceedings where petitioner's factual assertions in support of standing are challenged, untenable, conjectural, or conclusory, a board need not uncritically accept such assertions; LBP-10-4, 71 NRC 216 (2010)
- in ruling on a nontimely petition, boards are to consider eight factors that will excuse the tardiness of the petition if, on balance, they weigh in favor of the petitioner; CLI-10-12, 71 NRC 319 (2010)
- in ruling on admissibility of contentions, licensing boards do not consider anything found in a reply to an answer to an intervention petition that was not in petitioners' original contentions, unless it constitutes legitimate amplification of original contentions or properly late-filed material; LBP-06-10, 63 NRC 314 (2006)
- in ruling on contention admissibility a board is not to look to the merits of the contention; LBP-09-17, 70 NRC 311 (2009)
- in ruling on petitions to intervene in the high-level waste proceeding, boards must consider any failure of the petitioner to participate as a potential party in the pre-license application phase under 10 C.F.R. Part 2, Subpart J; LBP-09-6, 69 NRC 367 (2009)
- in ruling on requests for discretionary intervention, NRC's presiding officers and licensing boards traditionally consider the six factors of 10 C.F.R. 2.309(e)(1)-(2); CLI-06-16, 63 NRC 708 (2006)
- in ruling on standing, boards are to construe intervention petitions in favor of the petitioner; LBP-07-10, 66 NRC 1 (2007)
- in ruling on standing, NRC cannot automatically assume that an organization member necessarily considers him- or herself potentially aggrieved by a particular outcome of the proceeding; CLI-08-19, 68 NRC 251 (2008)
- in ruling on the qualified nature of deliberative process privilege, five factors are relevant in balancing the need for the documents against the government's interest in nondisclosure; LBP-06-3, 63 NRC 85 (2006)
- in situations in which a board denies a petition to intervene in its entirety or grants a petition to intervene that, according to an opposing litigant, should have been denied in its entirety, the losing litigant has a right to Commission review; CLI-09-6, 69 NRC 128 (2009)
- in the absence of a showing that the proposed operating license amendment obviously entails an increased potential for offsite consequences, petitioner must base its standing upon more than residence or activities within a particular proximity of the plant by making a showing of a plausible chain of events

## SUBJECT INDEX

that would result in offsite radiological consequences posing a distinct new harm or threat to the participant; LBP-07-10, 66 NRC 1 (2007)

in the case of the yet-to-issue NRC rules for the high-level waste proceeding, the Commission is dispensing in advance with all late-filing factors except the "good cause" factor; CLI-08-25, 68 NRC 497 (2008)

in the circumstances of the high-level waste proceeding, the criteria and procedures of 10 C.F.R. 2.326 are either irrelevant or redundant; LBP-09-6, 69 NRC 367 (2009)

in the context of a safety contention, petitioner must show a waiver of the regulation is necessary to reach a significant safety problem; LBP-10-15, 72 NRC 257 (2010)

in the event of some 11th-hour unforeseen development, a party may tender a document belatedly, but the tender must be accompanied by a motion for leave to file out-of-time which satisfactorily explains not only the reason for the lateness, but also why a motion for an extension of time could not have been seasonably submitted; CLI-10-26, 72 NRC 474 (2010)

in the high-level waste proceeding, the Commission conferred standing as of right on certain parties; LBP-09-6, 69 NRC 367 (2009)

in the interest of efficient case management and prompt resolution of adjudications, the Commission has generally enforced the 10-day deadline for appeals strictly, excusing it only in unavoidable and extreme circumstances; CLI-10-26, 72 NRC 474 (2010)

increased litigation delay and expense do not justify interlocutory review of an admissibility decision; CLI-09-6, 69 NRC 128 (2009)

individual petitioners living within 50 miles of a nuclear power plant may establish standing based on a longstanding proximity presumption principle; LBP-06-23, 64 NRC 257 (2006)

information required to show standing includes the nature of petitioner's right under a relevant statute to be made a party, the nature and extent of petitioner's property, financial, or other interest in the proceeding, and the possible effect of any decision or order that might be issued on petitioner's interest; LBP-10-15, 72 NRC 257 (2010)

information upon which an amended or new contention is based must be materially different than information previously available; LBP-09-27, 70 NRC 992 (2009)

information upon which an amended or new contention is based must not have been previously available; LBP-09-27, 70 NRC 992 (2009)

information, alleged facts, and expert opinions provided by a petitioner will be examined by the board to confirm that the petitioner does indeed supply adequate support for its contention; LBP-10-6, 71 NRC 350 (2010)

information, facts, and expert opinions provided by petitioner will be examined by the board to confirm that the petitioner does indeed supply adequate support for the contention; LBP-09-26, 70 NRC 939 (2009)

injury-in-fact may be either actual or threatened to establish standing, but must arguably lie within the zone of interests protected by the statutes governing the proceeding; LBP-08-6, 67 NRC 241 (2008)

injury-in-fact to establish standing requires more than a general interest in preserving the environment; LBP-09-28, 70 NRC 1019 (2009)

integration, consolidation, restatement, or collection of previously available information into a new document does not convert it into information that was not previously available within the meaning of 10 C.F.R. 2.309(f)(2)(i); LBP-09-10, 70 NRC 51 (2009)

interest in the promotion of economic use of energy falls outside the zone of interests protected by either the Atomic Energy Act or the National Environmental Policy Act; CLI-07-18, 65 NRC 399 (2007)

interests of an organization's member seeking representation must be germane to the organization's purpose; CLI-08-19, 68 NRC 251 (2008); LBP-08-17, 68 NRC 431 (2008)

interests that a representative organization seeks to protect must be germane to its own purpose, and neither the asserted claim nor the required relief must require an individual member to participate in the organization's legal action; LBP-09-18, 70 NRC 385 (2009); LBP-09-20, 70 NRC 565 (2009)

interlocutory review is granted only in extraordinary circumstances; CLI-06-24, 64 NRC 111 (2006); CLI-10-30, 72 NRC 564 (2010)

interlocutory review is granted only when the disputed ruling threatens the aggrieved party with serious, immediate, and irreparable harm or where it will have a pervasive or unusual effect on the proceedings below; CLI-06-24, 64 NRC 111 (2006); CLI-10-16, 71 NRC 486 (2010)

## SUBJECT INDEX

interlocutory review is granted where the issues are significant, have potentially broad impact, and may well recur in the likely license renewal proceedings for other plants; CLI-10-27, 72 NRC 481 (2010)

interlocutory review of the presiding officer's decision will be granted where the decision either threatens the party adversely affected by it with immediate and serious irreparable impact which, as a practical matter, could not be alleviated through a petition for review, or affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-09-2, 69 NRC 55 (2009); CLI-09-9, 69 NRC 331 (2009); CLI-10-30, 72 NRC 564 (2010)

interlocutory rulings may be reviewed, if necessary, on appeals from partial initial decisions or other final appealable orders; CLI-09-6, 69 NRC 128 (2009)

intervenor cannot establish good cause for filing a late contention when the information on which the contention is based was publicly available for some time prior to the filing of the contention; CLI-10-27, 72 NRC 481 (2010)

intervenor is entitled to submit a new safety contention, with leave of the board, upon three showings; CLI-10-17, 72 NRC 1 (2010)

intervenor is not required to make its case at the contention admission stage of the proceeding, but rather to indicate what facts or expert opinions of which it is aware at that point in time that provide the basis for its contention; LBP-09-1, 69 NRC 11 (2009); LBP-10-9, 71 NRC 493 (2010)

intervenor must comply with procedural requirements for the filing of new or amended contentions, including the requirement that the contentions be submitted in a timely fashion based on the availability of the subsequent information; LBP-10-17, 72 NRC 501 (2010)

intervenor should not be held to a prima facie burden at the contention admissibility stage of a proceeding, but its showing should be sufficient to require reasonable minds to inquire further; LBP-10-10, 71 NRC 529 (2010)

intervenor's appeal 3 days out of time was accepted when applicants' motion to strike failed to even hint at prejudice; LBP-10-21, 72 NRC 616 (2010)

intervenor's concise statement of alleged facts that support the contention and reliance on various parts of the application itself satisfy the requirement that mandates references to specific portions of the application; LBP-09-1, 69 NRC 11 (2009)

intervenor's expert is not required to create a written analysis, but only disclose the written analysis or other documentary authority, if any, that exists and is reasonably available at the time of the disclosure; LBP-09-30, 70 NRC 1039 (2009)

intervenor has a regulatory burden to present facts or expert opinion to support their contentions; CLI-09-2, 69 NRC 55 (2009); LBP-09-3, 69 NRC 139 (2009)

intervenor may not freely change the focus of an admitted contention at will to add a host of new issues and objections that could have been raised at the outset; CLI-10-11, 71 NRC 287 (2010)

intervenor must move for leave to file a timely new or amended contention under 10 C.F.R. 2.309(c), (f)(2); LBP-10-14, 72 NRC 101 (2010)

intervenor must provide sufficient information to show that a genuine dispute exists in regard to a material issue of law or fact, including references to specific portions of the application that intervenor dispute, or, in the case when the application is alleged to be deficient, the identification of such deficiencies and supporting reasons for this belief; LBP-10-9, 71 NRC 493 (2010)

intervenor must timely file a new or amended contention that addresses the factors in section 2.714(b) in order to raise specific challenges regarding new information; LBP-10-10, 71 NRC 529 (2010)

intervenor with contentions rooted in new material information need not make the same showing as intervenor who have simply delayed filing their contentions until after expiration of the regulatory deadline; LBP-10-9, 71 NRC 493 (2010)

intervention is permitted in the high-level waste repository proceeding by the state and local governmental body in which the geologic repository operations area is located, and by any affected federally recognized Indian tribe; LBP-09-6, 69 NRC 367 (2009)

intervention petitioner must be able to show how it would have personally suffered or will suffer a distinct and palpable harm that constitutes injury in fact; LBP-09-18, 70 NRC 385 (2009)

intervention petitioner must establish a concrete and particularized injury that is fairly traceable to the challenged action, is likely to be redressed by a favorable decision, and is arguably within the zone of interests protected by the governing statute; CLI-09-20, 70 NRC 911 (2009); LBP-08-24, 68 NRC 691 (2008); LBP-09-28, 70 NRC 1019 (2009)

## SUBJECT INDEX

- intervention petitioner must state the nature of its right to be made a party to the proceeding, the nature and extent of its property, financial, or other interest in the proceeding, and the possible effect of any decision or order that might be issued in the proceeding on its interest; LBP-09-26, 70 NRC 939 (2009)
- intervention petitioners are not required to demonstrate their asserted injury with certainty or to provide extensive technical studies in support of their standing argument; LBP-08-24, 68 NRC 691 (2008)
- intervention petitioner's claimed injury must be arguably within the zone of interests protected by the governing statute; LBP-08-24, 68 NRC 691 (2008)
- intervention petitioners have an automatic right to appeal a board decision wholly denying a petition to intervene; CLI-10-1, 71 NRC 1 (2010)
- intervention petitions are to be construed in favor of the petitioner; LBP-08-21, 68 NRC 554 (2008)
- intervention petitions must establish the nature of the petitioner's right under the governing statutes to be made a party, its interest in the proceeding, and the possible effect of any decision or order on the petitioner's interest; LBP-08-17, 68 NRC 431 (2008)
- intervention petitions must set forth with particularity petitioner's interest in the proceeding and how that interest may be affected by the results of the proceeding, and must also include at least one contention meeting the requirements of 10 C.F.R. 2.309(f)(1); CLI-09-15, 70 NRC 1 (2009); CLI-10-4, 71 NRC 56 (2010); LBP-09-17, 70 NRC 311 (2009); LBP-09-18, 70 NRC 385 (2009)
- issuance of a proposed rulemaking and requests for comments does not, in itself, constitute information not previously available that entitles a party to file a new contention; LBP-09-10, 70 NRC 51 (2009)
- "issues" in license transfer proceedings constitute "contentions" under 10 C.F.R. 2.309(f) and must therefore meet the standards for admissibility set forth in that regulation; CLI-07-18, 65 NRC 399 (2007)
- issues raised in contentions must be both within the scope of the proceeding and material to the findings the NRC must make to support the action that is involved in the proceeding; LBP-07-3, 65 NRC 237 (2007); LBP-10-9, 71 NRC 493 (2010)
- issues relating to threats to public health and safety and potential impacts on the environment arising out of water quality issues are within the scope of a license amendment proceeding; LBP-08-6, 67 NRC 241 (2008)
- it is a contention's proponent, not the licensing board, that is responsible for formulating the contention and providing the necessary information to satisfy the basis requirement for the admission of contentions; LBP-10-24, 72 NRC 720 (2010)
- it is a fundamental principle of statutory construction that the meaning of a word cannot be determined in isolation, but must be drawn from the context in which it is used; LBP-09-15, 70 NRC 198 (2009)
- it is an abuse of the adjudicatory process to use a motion for summary disposition as a subterfuge for the filing of interrogatories, requests for admission, or other discovery; LBP-06-5, 63 NRC 116 (2006)
- it is appropriate for a reply to respond to the legal, logical, and factual arguments presented in the answers, as long as new issues are not raised; LBP-07-4, 65 NRC 281 (2007)
- it is enough that petitioner has demonstrated a realistic threat of sustaining a direct injury as a result of contaminated groundwater flowing from the site to his property; LBP-10-16, 72 NRC 361 (2010)
- it is generally not sufficient to seek to establish standing in a proceeding by merely cross-referencing the showing made in another proceeding, rather than making a new presentation or at least providing a submission that updates the factual information that was provided previously; LBP-10-21, 72 NRC 616 (2010)
- it is inappropriate at the summary disposition stage for a board to attempt to untangle the expert affidavits and decide which experts are more correct; LBP-07-12, 66 NRC 113 (2007)
- it is inconsistent with dispute avoidance/resolution purposes, and thus insufficient, for the contacted attorney or representative to fail or refuse to consider the substance of the consultation attempt, or for the party to respond that it takes no position on the motion (or issues) and that it reserves the right to file a response to the motion when it is filed; LBP-09-22, 70 NRC 640 (2009)
- it is insufficient for petitioner to point to an Internet website or article and expect the board on its own to discern what particular issue a petitioner is raising and why; CLI-10-15, 71 NRC 479 (2010)
- it is not acceptable in NRC practice for petitioner to claim standing based on vague assertions, and when that fails, to attempt to repair the defective pleading with fresh details offered for the first time in its reply; LBP-09-2, 69 NRC 87 (2009)

## SUBJECT INDEX

- it is not necessary for petitioners to allege facts under section 2.309(f)(1)(v) or to provide an affidavit that sets out the factual and/or technical bases under section 51.109(a)(2) to support a purely legal contention; CLI-09-14, 69 NRC 580 (2009)
- it is not proper for a board to untangle conflicting expert affidavits and decide which experts are more correct; LBP-06-5, 63 NRC 116 (2006)
- it is not sufficient to rely on the standing of one petitioner because Commission practice requires each party to separately establish standing; CLI-07-18, 65 NRC 399 (2007)
- it is not the duty of an adjudicative body to dig through the reams of paper that litigants have deposited to construct and develop their arguments; LBP-06-19, 64 NRC 53 (2006)
- it is petitioner's responsibility to provide the necessary information to satisfy the basis requirement for the admission of its contentions and demonstrate that a genuine dispute exists within the scope of the proceeding; LBP-10-6, 71 NRC 350 (2010)
- it is proper for a reply to respond to the legal, logical, and factual arguments presented in answers, as long as new issues are not raised; LBP-09-1, 69 NRC 11 (2009)
- it is the admissibility of the contention, not the basis, that must be determined; LBP-08-17, 68 NRC 431 (2008)
- it is the petitioner's obligation to present factual information and/or expert opinion necessary to support its contention; LBP-07-3, 65 NRC 237 (2007)
- it is within Commission discretion to grant interlocutory review; CLI-10-29, 72 NRC 556 (2010)
- it may be necessary to examine the language of the bases to determine a contention's scope; LBP-06-16, 63 NRC 737 (2006)
- it might be sufficient to allow petitioner to rely on a prior standing demonstration if that prior demonstration is specifically identified and shown to correctly reflect the current status of petitioner's standing; LBP-10-21, 72 NRC 616 (2010)
- judicial concepts of standing are applied in NRC proceedings; LBP-08-6, 67 NRC 241 (2008); LBP-08-13, 68 NRC 43 (2008); LBP-08-14, 68 NRC 279 (2008); LBP-08-15, 68 NRC 294 (2008); LBP-08-16, 68 NRC 361 (2008); LBP-09-13, 70 NRC 168 (2009); LBP-09-16, 70 NRC 227 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-09-20, 70 NRC 565 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-09-28, 70 NRC 1019 (2009); LBP-10-1, 71 NRC 165 (2010)
- judicial concepts of standing require a petitioner to allege an actual or threatened, concrete and particularized injury that is fairly traceable to the challenged action, falls among the general interests protected by the Atomic Energy Act or other applicable statute, and is likely to be redressed by a favorable decision; LBP-08-13, 68 NRC 43 (2008); LBP-08-14, 68 NRC 279 (2008); LBP-08-16, 68 NRC 361 (2008); LBP-09-18, 70 NRC 385 (2009); LBP-10-4, 71 NRC 216 (2010)
- legal issue contentions do not require any supporting facts; LBP-10-11, 71 NRC 609 (2010)
- legal issues are reviewed de novo on appeal, but the Commission generally defers to board findings of fact, unless they are clearly erroneous; CLI-10-17, 72 NRC 1 (2010)
- license applicants may appeal contention admissibility rulings within 10 days after a board grants a petition to intervene, but only if the license applicant argues that the petition should have been wholly denied; CLI-06-25, 64 NRC 128 (2006)
- licensing board decisions denying a petition for waiver are interlocutory and not reviewable until the board has issued a final decision resolving the case, unless a party seeking review shows that one of the grounds for interlocutory review has been met; CLI-10-29, 72 NRC 556 (2010)
- licensing boards and the Commission have considered the late-filing criteria even in cases where the factors were not fully addressed by petitioners and/or the NRC Staff or were not addressed at all; LBP-10-24, 72 NRC 720 (2010)
- licensing boards are bound by Commission and appeal board precedent and therefore are not at liberty to reject the 50-mile proximity presumption; LBP-09-4, 69 NRC 170 (2009)
- licensing boards are expected to examine cited materials to verify that they support a contention, but are not expected to search through pleadings or other materials to uncover arguments and support never advanced by the petitioners themselves; CLI-06-10, 63 NRC 451 (2006)
- licensing boards are not authorized to admit conditionally, for any reason, contentions that fall short of meeting the specificity requirements set forth in NRC procedural rules; CLI-09-2, 69 NRC 55 (2009)

## SUBJECT INDEX

licensing boards are not foreclosed from considering docketed licensing material that has been submitted to the board and that, on its face, appears to be relevant to the disposition of a pending motion; LBP-08-12, 68 NRC 5 (2008)

licensing boards are required to reject treaty-based claims of ownership by Native American tribes; LBP-08-24, 68 NRC 691 (2008)

licensing boards are to look to judicial concepts of standing in determining whether a petitioner has established the necessary interest to intervene; CLI-06-6, 63 NRC 161 (2006); LBP-06-4, 63 NRC 99 (2006); LBP-06-10, 63 NRC 314 (2006); LBP-06-23, 64 NRC 257 (2006); LBP-07-11, 66 NRC 41 (2007)

licensing boards are to refer novel issues of law to the Commission; LBP-10-15, 72 NRC 257 (2010)

licensing boards do not have jurisdiction over matters properly before other regulatory bodies; LBP-06-8, 63 NRC 241 (2006)

licensing boards have authority to set a proceeding's schedule and to ensure compliance with that schedule; LBP-10-21, 72 NRC 616 (2010)

licensing boards have been lenient in permitting pro se petitioners the opportunity to cure procedural defects in petitions to intervene regarding standing; LBP-09-18, 70 NRC 385 (2009)

licensing boards have substantial authority to regulate hearing procedures; LBP-10-21, 72 NRC 616 (2010)

licensing boards may appropriately view a petitioner's supporting information in a light favorable to the petitioner, but failure to provide such information regarding a proffered contention requires the contention be rejected; LBP-07-10, 66 NRC 1 (2007)

licensing boards may not admit contentions that directly or indirectly challenges Table S-3; LBP-09-18, 70 NRC 385 (2009)

licensing boards must assess intervention petitions to determine whether elements for standing are met even though there are no objections to petitioner's standing; LBP-10-21, 72 NRC 616 (2010)

licensing boards must consider the nature of petitioner's right under the Atomic Energy Act or the National Environmental Policy Act to be made a party to the proceeding, the nature and extent of the petitioner's property, financial, or other interest in the proceeding, and the possible effect of any decision or order that may be issued on the petitioner's interest; LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-09-20, 70 NRC 565 (2009); LBP-09-21, 70 NRC 581 (2009)

licensing boards should not accept in individual license proceedings contentions which are, or are about to become, the subject of general rulemaking by the Commission; LBP-06-7, 63 NRC 188 (2006); LBP-09-21, 70 NRC 581 (2009)

licensing boards, in determining whether proffered contentions are premature, must apply norms in a manner that fits the circumstances and must consider whether to condition rejection of such contentions so as to preserve the opportunity for them to be re-presented later; LBP-07-14, 66 NRC 169 (2007)

litigation efforts that a litigant considers unnecessary because they relate to a contention that the litigant considers to have been improperly admitted do not affect the basic structure of a proceeding at all, much less in a pervasive and unusual manner; CLI-09-6, 69 NRC 128 (2009)

local governmental bodies within whose boundaries a facility is located do not need to make any further demonstration of standing; CLI-07-18, 65 NRC 399 (2007)

mandatory disclosure is the only form of discovery allowed in Subpart L proceedings, and all other forms are expressly prohibited; LBP-10-23, 72 NRC 692 (2010)

mandatory disclosures are updated every month; LBP-10-23, 72 NRC 692 (2010)

mandatory disclosures required by 10 C.F.R. 2.336 consist of an exchange of prescribed information and documents between the litigants, and do not need to be submitted to the board; LBP-09-30, 70 NRC 1039 (2009)

material provided in support of a contention will be carefully examined by the board to confirm that on its face it does supply adequate support for the contention; LBP-08-16, 68 NRC 361 (2008); LBP-09-3, 69 NRC 139 (2009)

materiality in the context of paragraph (f)(2) differs from materiality in the context of paragraph (f)(1) of 10 C.F.R. 2.309; LBP-10-1, 71 NRC 165 (2010)

materiality requires a showing that the alleged error or omission is of possible significance to the result of the proceeding; LBP-09-26, 70 NRC 939 (2009); LBP-10-6, 71 NRC 350 (2010)

## SUBJECT INDEX

members of intervenor organizations who reside, work, or recreate within 50 miles of the proposed nuclear power plant have proximity-based standing; LBP-10-9, 71 NRC 493 (2010)

mere conclusory allegations about potential harm to petitioner or others is insufficient to confer standing; LBP-08-24, 68 NRC 691 (2008)

mere mention of a document without providing its contents or an explanation of its significance cannot support admissibility of the contention; LBP-09-21, 70 NRC 581 (2009)

mere notice pleading is insufficient for contention admission; LBP-08-26, 68 NRC 905 (2008); LBP-10-6, 71 NRC 350 (2010)

mere reference to general materials on a website is insufficient to provide support for a contention; LBP-08-21, 68 NRC 554 (2008)

mere statements of government officials are insufficient to overturn 10 C.F.R. § 51.23; LBP-09-21, 70 NRC 581 (2009)

mootness occurs when a justiciable controversy no longer exists; LBP-10-10, 71 NRC 529 (2010)

more than mere notice pleading, which is a broad standard requiring only a short and plain statement of the claim, is required for contention admission; LBP-09-17, 70 NRC 311 (2009)

motions filed under 10 C.F.R. 2.323 are not a legitimate means to bring challenges to board decisions to the Commission; CLI-10-28, 72 NRC 553 (2010)

motions for reconsideration are appropriately considered under 10 C.F.R. 2.323(e); CLI-10-9, 71 NRC 245 (2010)

motions for reconsideration may not be filed except upon leave of the adjudicatory body that rendered the decision; CLI-10-9, 71 NRC 245 (2010)

motions for reconsideration must be filed within 10 days of the action for which reconsideration is requested; CLI-06-2, 63 NRC 9 (2006); CLI-10-9, 71 NRC 245 (2010)

motions for reconsideration will be denied if they point to no compelling circumstances warranting reconsideration; CLI-10-10, 71 NRC 281 (2010)

motions to reopen a closed proceeding must be timely; CLI-06-4, 63 NRC 32 (2006)

motions to reopen a proceeding to introduce an entirely new contention must successfully navigate at least nineteen different regulatory factors under 10 C.F.R. 2.326, 2.309(c), and 2.309(f)(1); LBP-10-19, 72 NRC 529 (2010)

motions to reopen must address a significant safety or environmental issue; CLI-08-23, 68 NRC 461 (2008)

motions to reopen must be accompanied by affidavits that set forth the factual and/or technical bases for the movant's claim that the criteria in 10 C.F.R. 2.326(a) have been satisfied; LBP-08-12, 68 NRC 5 (2008); LBP-10-19, 72 NRC 529 (2010)

motions to reopen must satisfy a multifactor test in 10 C.F.R. 2.326(a) and (d) that is governed by prescribed evidentiary requirements; LBP-08-12, 68 NRC 5 (2008)

motions will be rejected if they do not include certification by the attorney or representative of the moving party that they have made a sincere effort to contact the other parties in the proceeding, to explain to them the factual and legal issues raised in the motion, and to resolve those issues; LBP-09-22, 70 NRC 640 (2009)

movant must show that a balancing of eight factors of 10 C.F.R. 2.309(c)(1), to the extent they are relevant to the particular filing, weighs in favor of reopening; LBP-08-12, 68 NRC 5 (2008)

movant must show that it is more probable than not that it would have prevailed on the merits of the proposed new contention; LBP-10-19, 72 NRC 529 (2010)

multiple requests for reconsideration of the same decision are not allowed; CLI-10-9, 71 NRC 245 (2010)

Native American tribes are entitled to a reasonable opportunity to participate in NRC proceedings; LBP-08-6, 67 NRC 241 (2008)

neither legal ownership nor title is required in order for a party to have "possession, custody, or control" of a document; LBP-10-23, 72 NRC 692 (2010)

neither mere speculation nor bare or conclusory assertions, even by an expert, alleging that a matter should be considered will suffice to allow the admission of a proffered contention; LBP-07-3, 65 NRC 237 (2007); LBP-08-16, 68 NRC 361 (2008); LBP-09-3, 69 NRC 139 (2009); LBP-10-7, 71 NRC 391 (2010)

neither the asserted claim nor the requested relief must require an individual member to participate in the organization's legal action; CLI-07-18, 65 NRC 399 (2007); CLI-08-19, 68 NRC 251 (2008)

## SUBJECT INDEX

neither the Rules of Practice nor Commission precedent mandates the consideration at the threshold of every basis assigned for every contention advanced by the hearing requestor; LBP-06-27, 64 NRC 438 (2006)

new bases for a contention cannot be introduced in a reply brief, or any other time after the date the original contentions are due, unless the petitioner meets the late-filing criteria; CLI-06-17, 63 NRC 727 (2006); CLI-09-12, 69 NRC 535 (2009)

new contentions based on assumptions that cannot be considered information that was not previously available or materially different than information previously available do not meet admissibility requirements; CLI-10-17, 72 NRC 1 (2010)

new contentions filed by an intervenor must comply with timeliness standards; LBP-10-2, 71 NRC 190 (2010)

new information may constitute good cause for late intervention if petitioners file promptly thereafter; LBP-10-11, 71 NRC 609 (2010)

new or amended contentions can be filed with leave of the board if the information upon which the amended or new contention is based was not previously available, the information is materially different from information previously available, and the contention has been submitted in a timely fashion based on the availability of the subsequent information; LBP-08-27, 68 NRC 951 (2008); LBP-10-14, 72 NRC 101 (2010)

newly filed contentions must meet the requirements of 10 C.F.R. 2.309(f)(2) as well as the six basic contention admissibility standards set forth in section 2.309(f)(1)(i)-(vi); CLI-09-7, 69 NRC 235 (2009); LBP-08-27, 68 NRC 951 (2008)

no appeals may be taken from any presiding officer order or decision, except as otherwise permitted by 10 C.F.R. 2.1015(a); CLI-10-10, 71 NRC 281 (2010)

no contention will be admitted for litigation in any NRC adjudicatory proceeding unless the pleading requirements are met; CLI-06-9, 63 NRC 433 (2006); CLI-06-10, 63 NRC 451 (2006)

no obvious potential for offsite consequences sufficient to establish organizational standing was shown even though the organization's office was a mere 3 miles from the facility; LBP-09-28, 70 NRC 1019 (2009)

no proximity presumption applies in source materials cases; LBP-09-13, 70 NRC 168 (2009); LBP-10-16, 72 NRC 361 (2010)

no specific number of days whereby a board can measure or determine whether a contention is timely is specified by NRC regulations; LBP-06-14, 63 NRC 568 (2006)

nontimely contentions may be accepted only upon a showing of good cause for failure to file in a timely manner and a weighing of a number of factors; LBP-08-27, 68 NRC 951 (2008)

nontimely hearing requests and/or petitions and contentions will not be entertained absent a determination by the Commission or the licensing board that the petition and/or request should be granted and/or the contentions should be admitted based on a balancing of the factors specified in 10 C.F.R. 2.309(c)(1)(i)-(viii); CLI-10-4, 71 NRC 56 (2010); LBP-10-4, 71 NRC 216 (2010)

nontimely new contentions are subject to the more stringent eight-factor balancing test; LBP-07-15, 66 NRC 261 (2007)

nontimely petitions to intervene and contentions, amended petitions, and supplemental petitions will not be entertained absent a determination by the Commission, the licensing board, or a presiding officer that the petition should be granted and/or the contentions should be admitted based upon a balancing of eight factors; CLI-09-15, 70 NRC 1 (2009)

not all entities with governmental ties are entitled to participate in licensing proceedings as local governmental bodies; CLI-07-18, 65 NRC 399 (2007); LBP-09-13, 70 NRC 168 (2009)

not all of the contention admissibility requirements of 10 C.F.R. 2.309(f)(1) necessarily apply to legal-issue contentions; LBP-09-6, 69 NRC 367 (2009)

nothing in the NRC case law or regulations requires, at the contention admissibility stage, that a contention be supported by an expert opinion, substantive affidavits, or evidence; LBP-09-10, 70 NRC 51 (2009)

nothing precludes an individual from seeking to intervene both on his/her own behalf and as a representative of others; CLI-07-19, 65 NRC 423 (2007)

notice pleading is expressly prohibited; CLI-09-5, 69 NRC 115 (2009)

## SUBJECT INDEX

NRC applies judicial standing concepts that require a petitioner to establish a distinct and palpable harm that constitutes injury-in-fact, the harm is fairly traceable to the challenged action, and the harm is likely to be redressed by a favorable decision; LBP-07-14, 66 NRC 169 (2007); LBP-10-11, 71 NRC 609 (2010)

NRC generally defers to the Department of Justice when it seeks a delay in NRC enforcement proceedings pending the conclusion of DOJ's own criminal investigations or proceedings; CLI-06-12, 63 NRC 495 (2006)

NRC guidelines and regulatory guides are not legally binding on the Staff, the board, or the Commission; LBP-09-10, 70 NRC 51 (2009)

NRC has broad discretion to provide hearings or permit intervention in cases where these avenues of public participation would not be available as a matter of right; CLI-06-16, 63 NRC 708 (2006)

NRC intervention rules are strict by design; LBP-09-1, 69 NRC 11 (2009)

NRC must provide a hearing upon the request of any person whose interest may be affected by the proceeding; LBP-06-23, 64 NRC 257 (2006); LBP-08-6, 67 NRC 241 (2008)

NRC regulations do not provide a right to appeal interlocutory orders; CLI-06-12, 63 NRC 495 (2006)

NRC regulations teach that a fact cannot be material to a summary disposition ruling unless its consideration could materially affect the decision of the NRC vis-a-vis implementation of any particular severe accident mitigation alternative; LBP-07-13, 66 NRC 131 (2007)

NRC rules call for a clear statement of the basis for the contentions and the submission of supporting information and references to specific documents and sources that establish the validity of the contention; CLI-06-9, 63 NRC 433 (2006)

NRC rules governing the high-level waste proceeding do not provide for interlocutory review; CLI-10-13, 71 NRC 387 (2010)

NRC Staff communications are factual in nature and are not protected by the deliberative process privilege when the communications summarize the procedural aspects of Staff projects or report on the status of Staff work; LBP-06-3, 63 NRC 85 (2006)

NRC Staff communications concerning the appropriate wording and scope of a potential license condition are deliberative and thus may qualify for the deliberative process privilege; LBP-06-3, 63 NRC 85 (2006)

NRC Staff communications concerning whether a potential license condition should be imposed are deliberative and thus may qualify for the deliberative process privilege; LBP-06-3, 63 NRC 85 (2006)

NRC Staff verification that a licensee complies with preapproved design or testing criteria is a highly technical inquiry not particularly suitable for hearing; CLI-06-1, 63 NRC 1 (2006)

NRC Staff's revision of the final safety evaluation report to account for applicant's confirmatory analysis would not, standing alone, be a materially different result that justifies reopening the record, because it would neither change the outcome of the renewal proceeding nor impose a different licensing condition on an applicant; LBP-08-12, 68 NRC 5 (2008)

NRC would not accept incorporation by reference of another petitioner's issues in an instance where petitioner has not submitted at least one admissible issue of its own; LBP-10-11, 71 NRC 609 (2010)

NRC's adjudicatory process is not a forum for litigating matters that are primarily the responsibility of other federal or state/local regulatory agencies; LBP-07-10, 66 NRC 1 (2007)

NRC's adjudicatory process is not the proper venue for the evaluation of a petitioner's own view regarding the direction that regulatory policy should take; LBP-09-26, 70 NRC 939 (2009)

NRC's expanding adjudicatory docket makes it critically important that parties comply with NRC pleading requirements and that the board enforce those requirements; CLI-10-27, 72 NRC 481 (2010)

NRC's production-of-documents regulation, 10 C.F.R. 2.707(a)(1) is essentially the same as Fed. R. Civ. P. 34(a)(1); LBP-10-23, 72 NRC 692 (2010)

NRC's proximity presumption does not disregard contemporaneous judicial concepts of standing, but rather the Commission applied its expertise to determine that persons living within a 50-mile radius of a nuclear reactor face a realistic threat of harm if a release of radioactive material were to occur from the facility; LBP-09-16, 70 NRC 227 (2009)

NRC's regulatory scheme for balancing privacy interests arising in a law enforcement context against the need for party discovery combines elements of both FOIA and the Federal Rules of Civil Procedure; LBP-06-25, 64 NRC 367 (2006)

objections not raised at hearing are deemed waived; CLI-10-14, 71 NRC 449 (2010)

## SUBJECT INDEX

on appeal, the Commission usually defers to boards' fact-based decisions; CLI-06-12, 63 NRC 495 (2006)

on issues of whether a contention has been rendered moot by provision of information by an applicant, the applicant bears the burden of persuasion; LBP-10-10, 71 NRC 529 (2010)

once a party demonstrates that it has standing to intervene on its own accord, that party may then raise any contention that, if proved, will afford the party relief from the injury it relies upon for standing; LBP-09-16, 70 NRC 227 (2009); LBP-09-21, 70 NRC 581 (2009)

once a petition to intervene and request for hearing have been granted and contentions are admitted for hearing, appeals of board rulings on new or amended contentions are treated under section 2.341(f)(2), regardless of the subject matter of those contentions; CLI-10-16, 71 NRC 486 (2010)

once a petition to intervene has been granted, issues involving access to documents for use in the proceeding are governed by NRC discovery rules; CLI-10-24, 72 NRC 451 (2010)

once the deadline for filing an initial intervention petition has passed, a party wishing to submit new or amended contentions on matters not associated with issuance of the Staff's draft or final environmental impact statement must satisfy the requirements of 10 C.F.R. 2.309(f)(2); LBP-10-21, 72 NRC 616 (2010)

once the record of a proceeding is closed, new information may not be considered in the proceeding unless the reopening standards are met; LBP-10-21, 72 NRC 616 (2010)

one does not acquire standing as a consequence of being a member of a legislative tribunal; LBP-07-5, 65 NRC 341 (2007)

only disputes over facts that might affect the outcome of the suit under the governing law will properly preclude the entry of summary judgment; LBP-07-13, 66 NRC 131 (2007)

only in truly unavoidable and extreme circumstances are late filings to be accepted; LBP-10-21, 72 NRC 616 (2010)

only one admissible contention is required for each petitioner to intervene; LBP-10-11, 71 NRC 609 (2010)

opponent of summary disposition must counter any adequately supported material facts provided by the movant with its own separate, short, and concise statement of the material facts as to which it contends there exists a genuine issue to be heard; LBP-10-8, 71 NRC 433 (2010)

opponents of summary disposition cannot rest on the mere allegations or denials of a pleading, but must go beyond the pleadings and by the party's own affidavits, or by the depositions, answers to interrogatories, and admissions on file, designate specific facts showing that there is a genuine issue for trial; CLI-10-11, 71 NRC 287 (2010); LBP-08-7, 67 NRC 361 (2008)

opponents of summary disposition must counter any adequately supported material facts provided by the movant with their own separate, short, and concise statement of the material facts as to which it is contended there exists a genuine issue to be heard; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)

opponents of summary disposition must respond to each of the "material facts" listed by the movant, admitting or denying each of them, and must set forth specific facts, by affidavit or otherwise, showing that there are genuine issues of fact; LBP-06-5, 63 NRC 116 (2006)

opposing trial or litigation counsel may be deposed only if no other means exist to obtain the information, and the information sought is relevant and nonprivileged, and crucial to the preparation of the case; LBP-06-10, 63 NRC 314 (2006)

organizational standing requires the party to demonstrate a palpable injury in fact to its organizational interests that is within the zone of interests protected by the Atomic Energy Act or the National Environmental Policy Act; LBP-08-26, 68 NRC 905 (2008); LBP-09-21, 70 NRC 581 (2009)

organizations may demonstrate standing in either an organizational or a representational capacity; LBP-09-28, 70 NRC 1019 (2009)

organizations seeking to intervene in their own right must satisfy the same standing requirements as individuals seeking to intervene because an organization, like an individual, is considered a "person"; CLI-07-18, 65 NRC 399 (2007)

outside the context of petitions for interlocutory review, the Commission may take interlocutory review of questions or rulings that a licensing board either refers or certifies to the Commission; CLI-07-1, 65 NRC 1 (2007)

page limits on briefs are intended to encourage parties to make their strongest arguments as concisely as possible; CLI-06-10, 63 NRC 451 (2006)

## SUBJECT INDEX

participant filing out of time must offer a satisfactory explanation for its lateness, including, if necessary, an account as to why a request for extension could not have been filed beforehand; LBP-10-21, 72 NRC 616 (2010)

parties and licensing boards must be on notice of the issues being litigated, so that parties and boards may prepare for summary disposition or for hearing; CLI-10-15, 71 NRC 479 (2010)

parties are expected to file motions for extensions of time so that they are received by NRC well before the time specified expires; CLI-10-26, 72 NRC 474 (2010)

parties in NRC adjudications are generally entitled to obtain, through discovery and other pretrial activities, the fullest possible knowledge of the issues and facts before trial; LBP-06-25, 64 NRC 367 (2006)

parties provide proposed written questions prior to, and during the course of, a Subpart L hearing; LBP-07-17, 66 NRC 327 (2007)

pendency of a petition for Commission review does not absolve petitioner of its duty to file a motion to reopen in a timely fashion; LBP-10-19, 72 NRC 529 (2010)

permission to intervene should prove more readily available where petitioners show significant ability to contribute on substantial issues of law or fact that will not otherwise be properly raised or presented; LBP-10-11, 71 NRC 609 (2010)

persons who reside or frequent the area within a 50-mile radius of the reactor are presumed to have standing to participate in a proceeding involving that reactor; LBP-09-17, 70 NRC 311 (2009)

petitioner bears the burden of demonstrating standing, but in ruling on standing a licensing board is to construe the petition in favor of the petitioner; LBP-08-6, 67 NRC 241 (2008)

petitioner cannot rely on another board's finding of standing in a prior proceeding, even where the same licensed facility is involved; CLI-10-7, 71 NRC 133 (2010)

petitioner cannot satisfy NRC's standing requirement by offering a vague claim of 50-mile proximity in an initial petition and later using a petition for reconsideration to fill in gaps with more specific information that was available all along; CLI-07-21, 65 NRC 519 (2007)

petitioner does not become entitled to an evidentiary hearing merely on request, or on a bald or conclusory allegation that a dispute exists, but must make a minimal showing that material facts are in dispute, thereby demonstrating that an inquiry in depth is appropriate; LBP-09-17, 70 NRC 311 (2009)

petitioner does not have standing to assert rights of employees or caretakers on her land where caretakers are not minors or otherwise legally incapable of representing their own interests; LBP-08-18, 68 NRC 533 (2008)

petitioner does not have to prove its contention at the admissibility stage; LBP-09-26, 70 NRC 939 (2009); LBP-10-6, 71 NRC 350 (2010)

petitioner does not need to provide expert opinion or a substantive affidavit in order to satisfy 10 C.F.R. 2.309(f)(1)(v); LBP-10-15, 72 NRC 257 (2010)

petitioner failed to establish materiality of its contention related to management of low-level radioactive waste by referring to 10 C.F.R. Part 61 because applicant was not seeking a license under Part 61, and it was speculative whether such a license would ever be necessary; LBP-08-15, 68 NRC 294 (2008)

petitioner has alleged sufficient new information concerning the seismic situation to raise a prima facie showing that strict application of the generic NEPA analysis of the management of spent fuel in nuclear reactors would not serve the purpose for which Part 51, Appendix B and 10 C.F.R. 51.53(c)(2) were adopted; LBP-10-15, 72 NRC 257 (2010)

petitioner has an affirmative duty to demonstrate that it has standing in each proceeding in which it seeks to participate because a petitioner's status can change over time and the bases for its standing in an earlier proceeding may no longer apply; LBP-09-18, 70 NRC 385 (2009)

petitioner has an iron-clad obligation to examine the publicly available documentary material with sufficient care to enable it to uncover any information that could serve as the foundation for a specific contention; CLI-10-27, 72 NRC 481 (2010)

petitioner has an obligation to explain why cited testimony provides a basis for its contention; LBP-10-17, 72 NRC 501 (2010)

petitioner has presented a prima facie showing for waiver of the NRC regulation covering the environmental impacts of spent fuel pool accidents generically, and has shown that its contention concerning earthquake-induced spent fuel pool accidents is otherwise admissible; LBP-10-15, 72 NRC 257 (2010)

## SUBJECT INDEX

petitioner has standing to intervene without the need to specifically plead injury, causation, and redressability if the petitioner lives within, or otherwise has frequent contacts with, the zone of possible harm from the nuclear reactor or other source of radioactivity; LBP-08-9, 67 NRC 421 (2008)

petitioner is not required to prove its case at the contention stage and need not proffer facts in formal affidavit or evidentiary form sufficient to withstand a summary disposition motion; LBP-08-6, 67 NRC 241 (2008); LBP-09-17, 70 NRC 311 (2009)

petitioner is not required to provide an exhaustive discussion in its proffered contention, as long as it meets the Commission's admissibility requirements; LBP-06-4, 63 NRC 99 (2006)

petitioner is obligated to read the pertinent portions of the license application, state the applicant's position and the petitioner's opposing view, and explain why it disagrees with the applicant; LBP-09-25, 70 NRC 867 (2009)

petitioner is obliged to present factual information and/or expert opinion necessary to support its contention; LBP-10-4, 71 NRC 216 (2010); LBP-10-6, 71 NRC 350 (2010); LBP-10-7, 71 NRC 391 (2010)

petitioner is presumed to have standing to intervene without the need specifically to plead injury, causation, and redressability if the petitioner lives within 50 miles of the nuclear power reactor; LBP-08-13, 68 NRC 43 (2008); LBP-08-15, 68 NRC 294 (2008); LBP-08-26, 68 NRC 905 (2008)

petitioner is required merely to provide a simple nexus between the contention and the referenced factual or legal support; LBP-09-21, 70 NRC 581 (2009); LBP-09-25, 70 NRC 867 (2009)

petitioner may amend contentions or file new contentions on issues arising under NEPA if there are data or conclusions in NRC environmental documents that differ significantly from the data or conclusions in applicant's documents; LBP-10-1, 71 NRC 165 (2010)

petitioner may have standing based entirely upon its geographical proximity to a particular proposed facility; LBP-08-15, 68 NRC 294 (2008); LBP-08-26, 68 NRC 905 (2008); LBP-09-18, 70 NRC 385 (2009)

petitioner may in instances of exigent or unavoidable circumstances file a request for an extension of time to file an original hearing petition and contentions; LBP-09-17, 70 NRC 311 (2009)

petitioner may not be granted party status in the high-level waste proceeding if it cannot demonstrate substantial and timely compliance with the requirements in 10 C.F.R. 2.1003 concerning the availability of documentary material on the Licensing Support Network; LBP-09-6, 69 NRC 367 (2009)

petitioner may not claim standing based on vague assertions, and when that fails, attempt to repair the defective pleading with fresh details offered for the first time in a petition for reconsideration; CLI-08-19, 68 NRC 251 (2008)

petitioner may not demand a hearing to express generalized grievances about NRC policies or to attack the NRC's general competence; LBP-08-17, 68 NRC 431 (2008)

petitioner may not demand an adjudicatory hearing to attack generic NRC requirements or regulations or to express generalized grievances about NRC policies; LBP-07-11, 66 NRC 41 (2007)

petitioner may not establish standing by alleging injury on behalf of another entity, but rather, petitioner must be the object of the actual or threatened injury; LBP-10-4, 71 NRC 216 (2010)

petitioner may not simply incorporate massive documents by reference as the basis for a statement of his contentions; LBP-08-21, 68 NRC 554 (2008)

petitioner may not use its reply brief to cure pleading defects in its intervention petition; CLI-10-1, 71 NRC 1 (2010)

petitioner must allege a concrete and particularized injury that is fairly traceable to the challenged action and is likely to be redressed by a favorable decision; LBP-07-5, 65 NRC 341 (2007); LBP-09-13, 70 NRC 168 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-10-15, 72 NRC 257 (2010)

petitioner must demonstrate that the issue raised in a contention is both within the scope of the proceeding and material to the findings the NRC must make to support the action that is involved in the proceeding; LBP-07-10, 66 NRC 1 (2007); LBP-07-11, 66 NRC 41 (2007); LBP-08-16, 68 NRC 361 (2008); LBP-08-21, 68 NRC 554 (2008); LBP-08-26, 68 NRC 905 (2008); LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-21, 70 NRC 581 (2009); LBP-10-16, 72 NRC 361 (2010)

petitioner must establish standing and proffer at least one admissible contention that meets the requirements of 10 C.F.R. 2.309(f)(1); LBP-10-16, 72 NRC 361 (2010)

## SUBJECT INDEX

- petitioner must include sufficient information in its contention to show that a genuine dispute exists with the applicant/licensee on a material issue of fact; LBP-09-10, 70 NRC 51 (2009); LBP-09-27, 70 NRC 992 (2009)
- petitioner must make a fresh demonstration of standing for each proceeding in which he seeks intervention because petitioner's circumstances may change from one proceeding to the next; CLI-10-7, 71 NRC 133 (2010); LBP-10-21, 72 NRC 616 (2010)
- petitioner must meet the prudential standing requirement by showing that the asserted interest arguably falls within the zone of interests protected by the governing law; LBP-08-15, 68 NRC 294 (2008)
- petitioner must present factual information and/or expert opinion necessary to support its contention; LBP-07-10, 66 NRC 1 (2007)
- petitioner must present sufficient information to show a genuine dispute and reasonably indicate that a further inquiry is appropriate; LBP-08-6, 67 NRC 241 (2008)
- petitioner must provide a brief explanation of the basis for the contention; LBP-09-21, 70 NRC 581 (2009)
- petitioner must provide a concise statement of the alleged facts or expert opinions that support its position on the issue and on which it intends to rely at hearing, together with references to the specific sources and documents on which it intends to rely to support its position on the issue; LBP-08-16, 68 NRC 361 (2008); LBP-09-16, 70 NRC 227 (2009); LBP-09-21, 70 NRC 581 (2009); LBP-09-27, 70 NRC 992 (2009); LBP-10-16, 72 NRC 361 (2010)
- petitioner must provide basic information supporting its claim to standing in order to satisfy the requirements of 10 C.F.R. 2.309(d)(1)(ii)-(iv); LBP-08-13, 68 NRC 43 (2008)
- petitioner must provide more than vague assertions that it will be able to assist in developing the record to satisfy a requirement for late filing; CLI-10-12, 71 NRC 319 (2010)
- petitioner must provide only a brief explanation of the rationale underlying its contention; LBP-10-13, 71 NRC 673 (2010)
- petitioner must read the pertinent portions of the license application, including the safety analysis report and the environmental report, state the applicant's position and the petitioner's opposing view, and explain why petitioner disagrees with the applicant; LBP-07-4, 65 NRC 281 (2007); LBP-08-6, 67 NRC 241 (2008); LBP-09-17, 70 NRC 311 (2009)
- petitioner must set forth his or her interest in the proceeding, as well as the possible effect that any order or decision entered therein might have upon that interest; LBP-07-5, 65 NRC 341 (2007)
- petitioner must set forth with particularity the contentions sought to be raised; CLI-06-21, 64 NRC 30 (2006)
- petitioner must show a pattern of regular, significant contacts within the vicinity of the site to satisfy standing requirements; LBP-10-4, 71 NRC 216 (2010)
- petitioner must show some risk of discrete institutional injury to itself, other than the general environmental and policy interests of the sort repeatedly found insufficient for organizational standing; CLI-08-19, 68 NRC 251 (2008)
- petitioner must show that the information on which its new contention is based was not reasonably available to the public previously and that it filed its intervention petition promptly after learning of such new information; LBP-10-11, 71 NRC 609 (2010)
- petitioner must show that the subject matter of a contention would impact the grant or denial of a pending license application; LBP-09-26, 70 NRC 939 (2009); LBP-10-6, 71 NRC 350 (2010)
- petitioner must state its name, address, and telephone number, nature of its right under the Atomic Energy Act to be made a party to the proceeding, nature and extent of its property, financial, or other interest in the proceeding, and possible effect of any decision or order issued in the proceeding on its interest; LBP-10-7, 71 NRC 391 (2010)
- petitioner must support its contentions with documents, expert opinion, or at least a fact-based argument; LBP-08-6, 67 NRC 241 (2008)
- petitioner requesting a hearing on a confirmatory order must show that the request is within the scope of the proceeding by demonstrating that the petitioner will be adversely affected by the existing terms of the enforcement order; LBP-08-14, 68 NRC 279 (2008)
- petitioner should submit a fully developed showing regarding standing in each proceeding in which it seeks to intervene, regardless of whether it has previously been found to have standing relative to the facility that is the locus of the proceedings; LBP-07-10, 66 NRC 1 (2007)

## SUBJECT INDEX

petitioner who had frequently visited an area allegedly affected by the proposed action for recreational purposes showed injury in the standing context; LBP-10-1, 71 NRC 165 (2010)

petitioner who has not submitted an admissible contention is not allowed adopt the contentions of other petitioners; LBP-08-13, 68 NRC 43 (2008)

petitioner who might have had standing in an earlier proceeding will not automatically be granted standing in subsequent proceedings; LBP-09-18, 70 NRC 385 (2009)

petitioner, especially one represented by counsel, bears the burden of going forward and specifically addressing each of the six elements in 10 C.F.R. 2.309(f)(1); LBP-10-16, 72 NRC 361 (2010)

petitioner's claim that he routinely pierces the 50-mile radius around a reactor site is too vague to support standing; LBP-10-1, 71 NRC 165 (2010)

petitioner's claimed injury must be arguably within the zone of interests protected by the governing statute in the proceeding; LBP-10-16, 72 NRC 361 (2010)

petitioner's failure to carefully read the governing procedural regulations does not constitute good cause for its late filing; CLI-10-12, 71 NRC 319 (2010)

petitioner's issue will be ruled inadmissible if petitioner has offered no tangible information, no experts, no substantive affidavits, but instead only bare assertions and speculation; LBP-09-15, 70 NRC 198 (2009); LBP-09-16, 70 NRC 227 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-10-15, 72 NRC 257 (2010)

petitioner's lack of access to SUNSI may hinder it in its ability to demonstrate why publicly available versions of the application would not be sufficient to provide the basis and specificity for a proffered contention, but this does not absolve a petitioner from at least endeavoring to address this criterion; LBP-09-5, 69 NRC 303 (2009)

petitioner's participation in a licensing proceeding hinges on a demonstration that the petitioner has standing; LBP-10-16, 72 NRC 361 (2010)

petitioner's proximity to the pertinent facility triggers a presumption that it has standing to intervene without the need to specifically plead injury, causation, and redressability if the petitioner lives within, or otherwise has frequent contacts with, the zone of possible harm; LBP-08-17, 68 NRC 431 (2008)

petitioner's reply must be narrowly focused on the legal or logical arguments presented in the applicant/licensee or NRC Staff answer; LBP-06-12, 63 NRC 403 (2006)

petitioner's residence within a 50-mile radius of the proposed facility has established standing in his own right, and, accordingly, representational standing has been established through him; LBP-09-18, 70 NRC 385 (2009)

petitioner's right to participate in a proceeding concerns whether the petitioner has sufficient stake in a matter, as contrasted with whether there is a real dispute; LBP-08-6, 67 NRC 241 (2008)

petitioner's showing establishing standing in one proceeding need not be repeated to establish standing in another proceeding regarding that same facility; LBP-07-10, 66 NRC 1 (2007)

petitioner's standing showing can be corrected or supplemented to cure deficiencies by means of its reply pleading; LBP-10-21, 72 NRC 616 (2010)

petitioner's status as an anti-nuclear advocate and a source of information for its community is insufficient, without more, to qualify it for organizational standing; CLI-08-19, 68 NRC 251 (2008)

petitioner's tardiness due to its belated realization that it could present its arguments before the NRC did not constitute good cause for its late filing; CLI-10-12, 71 NRC 319 (2010)

petitioner's vague statements that it would rely on its experts and documents from various sources are insufficient to satisfy a requirement for late filing; CLI-10-12, 71 NRC 319 (2010)

petitioners and others who believe the Waste Confidence Rule needs revision must use rulemaking proceedings to express their concerns; LBP-09-4, 69 NRC 170 (2009)

petitioners are not required to demonstrate their asserted injury with certainty at the contention admission stage, or to provide extensive technical studies in support of their standing argument; LBP-07-14, 66 NRC 169 (2007); LBP-10-16, 72 NRC 361 (2010)

petitioners are not required to show standing for each contention separately; LBP-09-1, 69 NRC 11 (2009)

petitioners bear the burden of providing sufficient relevant, specific information, whether by good-faith estimate or otherwise, to establish the basis for their standing claims; LBP-10-1, 71 NRC 165 (2010)

petitioners have an automatic right to appeal a board decision wholly denying a petition to intervene; CLI-10-9, 71 NRC 245 (2010); CLI-10-12, 71 NRC 319 (2010)

## SUBJECT INDEX

petitioners have an ironclad obligation to search the public record for information supporting their contentions; LBP-08-6, 67 NRC 241 (2008)

petitioners may enforce procedural rights only if the procedures in question are designed to protect some threatened concrete interest of theirs that is the ultimate basis of their standing; LBP-10-11, 71 NRC 609 (2010)

petitioners may not seek to enhance the measures outlined in an enforcement order; LBP-08-14, 68 NRC 279 (2008)

petitioners may not seek to skirt contention rules by initially filing unsupported contentions, and later recasting or modifying their contentions on appeal with new arguments never raised before the board; CLI-08-17, 68 NRC 231 (2008)

petitioners may protect their interests by filing a request for Commission action under 10 C.F.R. 2.206 rather than a late-filed intervention petition; CLI-10-12, 71 NRC 319 (2010)

petitioners may protect their interests by participating as appropriate, as amici curiae; CLI-10-12, 71 NRC 319 (2010)

petitioners must demonstrate that their motion to reopen is timely; LBP-08-12, 68 NRC 5 (2008)

petitioners must offer specific contentions on material issues, supported by alleged facts or expert opinion; CLI-09-8, 69 NRC 317 (2009)

petitioners must provide a clear statement as to the basis for the contentions and submit supporting information and references to specific documents and sources that establish the validity of the contention; CLI-09-8, 69 NRC 317 (2009)

petitioners must raise NEPA contentions in response to the environmental report, rather than await the agency's draft environmental impact statement; LBP-09-4, 69 NRC 170 (2009)

petitioners must seek leave to request reconsideration of a decision and set forth compelling circumstances that petitioners could not reasonably have anticipated and that would render the decision invalid; CLI-10-21, 72 NRC 197 (2010)

petitioners must set forth their contentions with particularity; CLI-10-15, 71 NRC 479 (2010)

petitioners need not show a nexus between interest upon which standing is based and the substance of their proposed contentions; CLI-09-9, 69 NRC 331 (2009)

petitioners seeking admission of new or amended contentions under 10 C.F.R. 2.309(f)(2) must also satisfy the standard admissibility requirements in 10 C.F.R. 2.309(f)(1); LBP-06-11, 63 NRC 391 (2006)

petitioners seeking reconsideration of a Commission order must demonstrate that the Commission has committed clear error, must do so by raising new arguments, and must not previously have been able to make those arguments; CLI-07-22, 65 NRC 525 (2007)

petitioners seeking to introduce new contentions after the board has denied their initial petition to intervene need to address the reopening standards; LBP-10-21, 72 NRC 616 (2010)

petitioners who are not represented by counsel are held to less rigid pleading standards than would ordinarily be applied to litigants who are represented by counsel; LBP-10-4, 71 NRC 216 (2010)

petitioners who are not represented by counsel will be held to less rigid standards for pleading, although a totally deficient petition will not be admitted; LBP-08-15, 68 NRC 294 (2008)

petitioners who fail to provide specific information regarding proximity or frequency of contacts that may establish standing only complicate matters for themselves; LBP-10-1, 71 NRC 165 (2010)

petitioners who seek to introduce a new or amended contention based on allegedly new information must show that such information was not previously available and is materially different than information previously available and the amended or new contention has been submitted in a timely fashion based on the availability of the subsequent information; LBP-06-22, 64 NRC 229 (2006)

petitioners will not be denied the opportunity to participate in a proceeding because of an error that can easily be corrected and that has caused no prejudice to any other participant; LBP-09-4, 69 NRC 170 (2009)

petitions and contentions filed after the initial 60-day deadline are admissible only upon a balancing of eight factors of 10 C.F.R. 2.309(c); LBP-09-26, 70 NRC 939 (2009)

petitions for reconsideration are limited to 10 pages; CLI-07-22, 65 NRC 525 (2007)

petitions for review will be granted at the Commission's discretion, giving due weight to the existence of a substantial question with respect to the five considerations of 10 C.F.R. 2.341(b)(4)(i)-(v); CLI-10-14, 71 NRC 449 (2010)

## SUBJECT INDEX

pleading requirements call for a recitation of facts or expert opinion supporting the issue raised, but are inapplicable to a contention of omission beyond identifying the regulatively required missing information; LBP-09-16, 70 NRC 227 (2009)

pleading requirements calling for a recitation of facts or expert opinion supporting the issue raised are inapplicable to a contention of omission beyond identifying the legally required missing information; LBP-10-16, 72 NRC 361 (2010)

pleadings submitted by a petitioner acting pro se are not always expected to meet the same standards as pleadings drafted by lawyers, but late filing of documents is not condoned; LBP-06-14, 63 NRC 568 (2006)

portions of a reply that respond to legal, logical, and factual arguments raised in the answers are appropriate; LBP-06-20, 64 NRC 131 (2006)

post-contention admission events, such as issuance of a Staff draft environmental impact statement, can render a previously admitted contention of omission subject to dismissal as moot; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)

post-hearing resolution of licensing issues must not be employed to obviate the basic findings prerequisite to a license, including a reasonable assurance that the facility can be operated without endangering the health and safety of the public; CLI-06-1, 63 NRC 1 (2006)

preservation of cultural traditions is a protected interest under federal law, and its endangerment or harm qualifies as an injury for the purposes of establishing standing; LBP-08-24, 68 NRC 691 (2008)

prima facie case is defined as establishment of a legally required rebuttable presumption or a party's production of enough evidence to allow the fact-trier to infer the fact at issue and rule in the party's favor; LBP-10-15, 72 NRC 257 (2010)

prior to 2004, in addition to meeting the substantive admissibility criteria found in 10 C.F.R. 2.714(b)(2), the issue statement was based on environmental impact statement or environmental assessment information that differed significantly from the data or conclusions in the applicant's environmental report; LBP-10-1, 71 NRC 165 (2010)

pro se petitioners are not held to the same standard of pleading as those represented by counsel; LBP-08-6, 67 NRC 241 (2008)

proof of independent ability to litigate a contention by an adopting party is not required; LBP-06-20, 64 NRC 131 (2006)

properly formulated contentions must focus on the license application in question, challenging either specific portions of or alleged omissions from the application so as to establish that a genuine dispute exists with the applicant on a material issue of law or fact; LBP-09-3, 69 NRC 139 (2009); LBP-10-7, 71 NRC 391 (2010)

proponent of a motion to reopen must do more than simply raise a safety issue, but must show that the safety issue it raises is significant; LBP-10-19, 72 NRC 529 (2010)

proponent of a summary disposition motion bears the burden of making the requisite showing by providing a separate, short, and concise statement of the material facts as to which movant contends that there is no genuine issue to be heard; LBP-10-8, 71 NRC 433 (2010)

proponents of motions to reopen the record bear a heavy burden; LBP-08-12, 68 NRC 5 (2008); CLI-09-2, 69 NRC 55 (2009)

proponents of summary disposition bear the burden of making the requisite showing by providing a separate, short, and concise statement of the material facts as to which the moving party contends that there is no genuine issue to be heard; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)

proponents of summary disposition bear the initial burden of informing the tribunal of the basis for its motion and identifying those portions of the record that demonstrate the absence of a genuine issue of material fact; LBP-08-7, 67 NRC 361 (2008)

proposed questions that are proffered to the board during a Subpart L hearing must be kept by the board in confidence until they are either propounded by the board, or until issuance of the initial decision on the issue being litigated; LBP-07-17, 66 NRC 327 (2007)

providing any material or document as a basis for a contention, without setting forth an explanation of its significance, is inadequate to support the admission of the contention; LBP-07-3, 65 NRC 237 (2007); LBP-09-26, 70 NRC 939 (2009); LBP-10-6, 71 NRC 350 (2010)

proximity alone does not suffice for standing in materials licensing cases; CLI-09-12, 69 NRC 535 (2009); LBP-08-24, 68 NRC 691 (2008)

## SUBJECT INDEX

proximity standing in a license transfer proceeding has been recognized at close distances where a petitioner frequently engages in substantial business and related activities in the vicinity of the facility, engages in normal, everyday activities in the vicinity, has regular and frequent contacts in an area near a licensed facility, or otherwise has visits of a length and nature showing an ongoing connection and presence; CLI-07-21, 65 NRC 519 (2007)

proximity standing rests on the presumption that an accident associated with the nuclear facility could adversely affect the health and safety of people working, living, or regularly engaging in activities offsite but within a certain distance of that facility; CLI-08-19, 68 NRC 251 (2008)

proximity-based presumption of standing applies in proceedings for nuclear power plant construction permits, operating licenses, or significant amendments thereto; LBP-10-16, 72 NRC 361 (2010)

proximity-based standing has been denied when petitioner has demonstrated only occasional contact with the zone of possible harm; LBP-10-1, 71 NRC 165 (2010)

proximity-based standing has been denied where contact has been limited to mere occasional trips to areas located close to reactors; CLI-07-21, 65 NRC 519 (2007)

proximity-based standing in license transfer proceedings had been denied to petitioners within 5-10 miles, 12 miles, and 40 miles from licensed facilities; CLI-07-21, 65 NRC 519 (2007)

proximity-based standing will be denied when petitioner fails to supply more specific information regarding the frequency, nature, and length of his contacts within the proximity zone; LBP-10-1, 71 NRC 165 (2010)

purely factual material is not generally protected by the deliberative process privilege, except factual materials too intertwined with deliberative discussions and summaries of factual materials compiled to assist in agency decisionmaking; LBP-06-25, 64 NRC 367 (2006)

pursuant to the proximity-plus approach, a presumption based on geographical proximity (albeit at distances much closer than 50 miles) may be applied where there is a determination that the proposed action involves a significant source of radioactivity producing an obvious potential for offsite consequences; LBP-10-4, 71 NRC 216 (2010)

qualified privilege materials may be excluded from discovery, depending on the particular circumstances presented; LBP-06-25, 64 NRC 367 (2006)

reasonably specific factual and legal allegations are required at the outset to ensure that matters admitted for hearing have at least some minimal foundation, are material to the proceeding, and provide notice to opposing parties of the issues they will need to defend against; CLI-10-11, 71 NRC 287 (2010)

redressability requires petitioner to show that its alleged injury-in-fact could be cured or alleviated by some action of the tribunal; LBP-09-13, 70 NRC 168 (2009)

regular but intermittent residence 1 week a month in a house 35 miles from a facility is sufficient to establish standing; LBP-07-10, 66 NRC 1 (2007)

regulations governing appeals from the denial of intervention provide for a notice of appeal with a supporting brief, and for a brief opposing the appeal, but do not provide for reply briefs; CLI-06-9, 63 NRC 433 (2006)

rejection or admission of a contention where petitioner has been admitted as a party and has other contentions pending neither constitutes serious and irreparable impact nor affects the basic structure of the proceeding in a pervasive and unusual manner; CLI-10-16, 71 NRC 486 (2010)

reopening a closed record requires, among other things, a showing that the motion is timely; CLI-08-23, 68 NRC 461 (2008)

replies may provide only legitimate amplifications of the original contentions or a logical/legal response to the answers of the Staff and applicant; LBP-09-17, 70 NRC 311 (2009)

replies should be narrowly focused on the legal or logical arguments presented in the answers on a request for hearing/petition to intervene; CLI-10-1, 71 NRC 1 (2010)

reply briefs that raise new issues must address the late-filing and new-contention factors in 10 C.F.R. 2.309(c) or (f)(2); LBP-09-17, 70 NRC 311 (2009)

representational standing requires the organization to demonstrate that the licensing action will affect at least one of its members, identify the member by name and address, demonstrate that the member has standing, and show that the organization is authorized to request a hearing on that member's behalf; LBP-08-15, 68 NRC 294 (2008); LBP-08-26, 68 NRC 905 (2008)

## SUBJECT INDEX

representational standing will not be granted where petitioner has provided no supporting affidavits or other evidence that any member has authorized it to represent their interests in the proceeding; LBP-09-28, 70 NRC 1019 (2009)

request for waiver is required for contentions that challenge Commission's regulations; LBP-08-21, 68 NRC 554 (2008)

request for waiver of application of 10 C.F.R. 51.53(b), 51.95(b), and 51.106(c) precluding consideration of need for power and alternative energy sources from a Part 50 operating license proceeding fails to provide the prima facie showing required; LBP-10-12, 71 NRC 656 (2010)

requests for hearing or petitions for leave to intervene must set forth with particularity the contentions sought to be raised, addressing six pleading requirements; CLI-10-1, 71 NRC 1 (2010)

requests for rule waiver or exception must be accompanied by an affidavit that identifies with particularity the special circumstances alleged to justify the waiver or exception requested; LBP-09-6, 69 NRC 367 (2009)

requirement to show distinct new harm from a license amendment application would not preclude standing to contest commencement of new operations at a separate site, where petitioner showed potential for harm to himself from new operation; CLI-09-12, 69 NRC 535 (2009)

requirements for filing both new and nontimely contentions are stringent; LBP-09-27, 70 NRC 992 (2009)

requirements for representational standing apply to labor unions; CLI-08-19, 68 NRC 251 (2008)

requiring a petitioner to allege facts under section 2.309(f)(1)(v) or to provide an affidavit that sets out the factual and/or technical bases under section 51.109(a)(2) in support of a legal contention as opposed to a factual contention is not necessary; LBP-10-17, 72 NRC 501 (2010)

resolution of a summary disposition motion in a license renewal proceeding is governed by the standards for summary disposition set forth in Subpart G; LBP-07-12, 66 NRC 113 (2007)

resolution of factual disputes is not the appropriate subject of inquiry at the contention admissibility stage of the proceeding; LBP-06-4, 63 NRC 99 (2006)

review at the end of the case would be meaningless because the Commission cannot later, on appeal from a final board decision, rectify an erroneous disclosure order; CLI-10-29, 72 NRC 556 (2010)

rules on contention admissibility are strict by design; CLI-08-17, 68 NRC 231 (2008); LBP-08-14, 68 NRC 279 (2008); LBP-10-15, 72 NRC 257 (2010); LBP-10-16, 72 NRC 361 (2010)

rulings may be referred to the Commission if they raise significant and novel legal or policy issues, the resolution of which would materially advance the orderly disposition of the proceeding; LBP-09-16, 70 NRC 227 (2009)

sanctions have been imposed against a party seeking to file a written request for hearing only when that party has not followed established Commission procedures; LBP-08-19, 68 NRC 545 (2008); LBP-08-20, 68 NRC 549 (2008)

scope of the proceeding is defined by the Commission in its initial hearing notice and order referring the proceeding to the licensing board; LBP-10-17, 72 NRC 501 (2010)

section 2.107(a) does not authorize withdrawal of an application but rather clarifies that licensing boards have authority to impose reasonable conditions upon voluntary withdrawals in appropriate circumstances; LBP-10-11, 71 NRC 609 (2010)

section 2.1003's reference to "all documentary material (including circulated drafts but excluding preliminary drafts) generated by, or at the direction of, or acquired by" clearly conveys that possession or control of the documentary material is a prerequisite to the duty to produce it; CLI-08-12, 67 NRC 386 (2008)

selection of hearing procedures for contentions at the outset of a proceeding is not immutable, because the availability of Subpart G procedures depends critically on the credibility of eyewitnesses, and the identity of such witnesses may not be known until after the contentions are admitted; LBP-09-10, 70 NRC 51 (2009)

settlements that are presumably based on an analysis of litigation risk and optimum use of the NRC Staff's scarce resources are commonplace in litigation and have, in the past, received Commission approval; CLI-06-18, 64 NRC 1 (2006)

settling some but not all contentions is a routine feature of NRC litigation, but it does not affect the proceeding in a pervasive or unusual manner; CLI-06-18, 64 NRC 1 (2006)

showing necessary for grant of a petition for interlocutory review is described; CLI-10-29, 72 NRC 556 (2010)

## SUBJECT INDEX

showing that estimated dose consequences associated with operation under extended power uprate conditions can be expected to increase by the 20% power level change establishes that the proposed EPU creates an obvious potential for offsite consequences; LBP-07-10, 66 NRC 1 (2007)

simply attaching material or documents as a basis for a contention, without setting forth an explanation of that information's significance, is inadequate to support the admission of the contention; LBP-07-10, 66 NRC 1 (2007); LBP-08-16, 68 NRC 361 (2008); LBP-08-17, 68 NRC 431 (2008); LBP-09-3, 69 NRC 139 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-10-7, 71 NRC 391 (2010)

six basic requirements for an admissible contention can be summarized as specificity, brief explanation, within scope, materiality, concise statement of alleged facts or expert opinion, and genuine dispute; LBP-10-15, 72 NRC 257 (2010)

six requirements must be satisfied for a contention to be admissible; LBP-09-8, 69 NRC 736 (2009)

some circumstances exist in which petitioners may be presumed to have standing based on their geographic proximity to a facility or source of radioactivity, without the need to show injury in fact, causation, or redressability; LBP-08-6, 67 NRC 241 (2008)

somewhat greater latitude generally is afforded pro se petitioners in drafting their intervention petitions; LBP-07-10, 66 NRC 1 (2007)

specificity and support are required for the positions parties take in their filings; LBP-07-13, 66 NRC 131 (2007)

Staff counsel had a duty to inform the board of a telephone call from a former expert witness of petitioners because she knew that this information was conceivably relevant to a ruling on a contention; LBP-06-10, 63 NRC 314 (2006)

Staff's agreement with a summary disposition movant's factual or technical positions, either informally or in a formal document such as a safety evaluation report, does not "resolve" the dispute or mean that there is no genuine issue of material fact in dispute; LBP-06-5, 63 NRC 116 (2006)

Staff's propositions at the contention admission stage regarding what would effectively cure an omission from a license renewal application are matters for a merits decision, not for a determination of whether or not a contention of omission is admissible; LBP-10-15, 72 NRC 257 (2010)

standards for the admissibility of contentions originally came into being in 1989, when the Commission amended its rules to raise the threshold for the admission of contentions; LBP-09-17, 70 NRC 311 (2009)

standing cannot be based on unfounded conjecture; LBP-09-28, 70 NRC 1019 (2009)

standing generally has been denied when the threat of injury is not concrete and particularized; LBP-10-16, 72 NRC 361 (2010)

standing requires that petitioner allege a particularized injury that is fairly traceable to the challenged action and is likely to be redressed by a favorable decision; LBP-10-16, 72 NRC 361 (2010)

standing will be denied where contact has been limited to mere occasional trips to areas located close to reactors; LBP-10-1, 71 NRC 165 (2010)

state agencies may participate as nonparty interested states; LBP-08-15, 68 NRC 294 (2008)

stating that an allegation that some aspect of a license application is inadequate or unacceptable does not give rise to a genuine dispute unless it is supported by facts and a reasoned statement of why the application is unacceptable in some material respect; LBP-09-18, 70 NRC 385 (2009)

strict contention pleading requirements help to ensure that full adjudicatory hearings are triggered only by those able to proffer at least some minimal factual and legal foundation in support of their contentions; LBP-07-11, 66 NRC 41 (2007)

strict contention standards ensure that those admitted to NRC hearings bring actual knowledge of safety and environmental issues that bear on the licensing decision, and therefore can litigate issues meaningfully; CLI-08-17, 68 NRC 231 (2008)

strict pleading requirements under 10 C.F.R. 2.309(f)(1) must be satisfied for a contention to be admissible; LBP-08-21, 68 NRC 554 (2008)

subject matter of a contention must impact the grant or denial of the pending license application; LBP-10-17, 72 NRC 501 (2010)

subject to limited exceptions, legal determinations made on appeal in a case are controlling precedent, becoming the law of the case, for all later decisions in the same case; LBP-06-19, 64 NRC 53 (2006)

submission of a new contention within 30 days of the event giving rise to that contention is timely; LBP-10-17, 72 NRC 501 (2010)

## SUBJECT INDEX

Subpart G hearing procedures apply only to certain enumerated types of proceedings, not including materials license proceedings; LBP-09-1, 69 NRC 11 (2009)

Subpart J rules do not provide for the filing of reply briefs in the context of appeals from interlocutory decisions or initial or partial decisions; CLI-08-12, 67 NRC 386 (2008)

Subpart K procedures apply where invoked by a party; CLI-08-1, 67 NRC 1 (2008)

substantial deference is given to boards' determinations on threshold issues, such as standing and contention admissibility; CLI-09-20, 70 NRC 911 (2009)

substantive admissibility standards for contentions and the case law interpreting the requirements are discussed; LBP-06-23, 64 NRC 257 (2006)

sufficiency of an application is not a matter committed solely to the NRC Staff's discretion and thus is within the scope of an adjudicatory proceeding; LBP-10-17, 72 NRC 501 (2010)

sufficient information for assessing the claim of privilege or protected status of documents withheld from discovery must be provided to the requesting party; LBP-06-25, 64 NRC 367 (2006)

summary disposition is not a tool for trying to convince a licensing board to decide, on written submissions, genuine issues of material fact that warrant resolution at a hearing; LBP-07-12, 66 NRC 113 (2007); LBP-10-20, 72 NRC 571 (2010)

summary disposition is not the vehicle for untangling expert disputes so long as the experts are competent and the information they provide is adequately stated and explained; LBP-08-2, 67 NRC 54 (2008)

summary disposition may be entered with respect to all or any part of the matters involved in the proceeding if the motion, along with any appropriate supporting materials, shows that there is no genuine issue as to any material fact and that the moving party is entitled to a decision as a matter of law; CLI-10-11, 71 NRC 287 (2010); LBP-06-9, 63 NRC 289 (2006); LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008); LBP-08-7, 67 NRC 361 (2008)

summary disposition may be granted only if the truth is clear; LBP-10-20, 72 NRC 571 (2010); LBP-10-8, 71 NRC 433 (2010)

summary disposition motions are generally evaluated according to the same standards used by Federal District Courts in ruling on motions for summary judgment; LBP-07-12, 66 NRC 113 (2007)

summary disposition motions in informal, Subpart L, proceedings are to be resolved in accord with the standards for dispositive motions for formal hearings, as set forth in Part 2, Subpart G; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)

summary disposition movant must show that the matter entails no genuine issue as to any material fact and that movant is entitled to a decision as a matter of law; LBP-10-20, 72 NRC 571 (2010)

summary disposition opponent must set forth specific facts showing that there is a genuine issue, and may not rely on mere allegations or denials; LBP-07-12, 66 NRC 113 (2007)

summary disposition rules 2.1205 and 2.710 are substantially similar; LBP-10-20, 72 NRC 571 (2010)

summary disposition standards set forth in Subpart G are applied in Subpart L proceedings; LBP-06-5, 63 NRC 116 (2006)

SUNSI requests need not be accompanied by affidavits or include lengthy, detailed justifications addressing the likelihood of standing; LBP-09-5, 69 NRC 303 (2009)

SUNSI requests need to include the name and address of the potential party and a description of the potential party's particularized interest that could be harmed by the proposed licensing action sufficient to demonstrate a reasonable basis to conclude he or she could likely establish standing; LBP-09-5, 69 NRC 303 (2009)

support for a contention generally is fulfilled when the sponsor of an otherwise acceptable contention provides a brief recitation of the factors underlying the contention or references to documents and texts that provide such reasons; LBP-09-6, 69 NRC 367 (2009)

support for a contention, as reflected in its stated bases and any accompanying affidavits or documentary information, should be set forth with reasonable specificity; LBP-08-2, 67 NRC 54 (2008)

technical perfection is not an essential element of contention pleading, but the rules have nonetheless been held to bar contentions where petitioners have only what amounts to generalized suspicions, hoping to substantiate them later; LBP-08-6, 67 NRC 241 (2008); LBP-09-17, 70 NRC 311 (2009)

that interlocutory review will only be granted under extraordinary circumstances reflects the Commission's disfavor of piecemeal appeals during ongoing licensing board proceedings; CLI-10-16, 71 NRC 486 (2010)

## SUBJECT INDEX

- the “sound record” factor is foremost in importance in the balancing of six factors, but other factors, especially inappropriate broadening or delay of the proceeding, could overcome it; CLI-06-16, 63 NRC 708 (2006)
- the adequacy of the applicant’s license application, not the NRC Staff’s safety evaluation, is the safety issue in any licensing proceeding, and contentions on the adequacy of the content of the Safety Evaluation Report are not cognizable; LBP-06-27, 64 NRC 438 (2006)
- the affidavit accompanying a petition for rule waiver need not be prepared by an expert; LBP-10-15, 72 NRC 257 (2010)
- the affidavit asserting the deliberative process privilege should provide the basis for the withholding and a statement of specific harm, applicable to the circumstances of the case, that would result from disclosure; LBP-06-25, 64 NRC 367 (2006)
- the affidavit supporting a motion to reopen a license renewal proceeding must provide sufficient information to support a prima facie showing that a deficiency exists in the application and the deficiency presents a significant safety issue; LBP-08-12, 68 NRC 5 (2008)
- the amended late-filed contentions rule, 10 C.F.R. 2.309(f)(2), is not intended to alter the standards in section 2.714(a) of its rules of practice as interpreted by NRC case law; LBP-10-17, 72 NRC 501 (2010)
- the appropriate distance for proximity standing is decided on a case-by-case basis taking into account the nature of the proposed action and the significance of the radioactive source; LBP-07-14, 66 NRC 169 (2007)
- the argument that information provided in support of an intervenor’s response to a summary disposition motion should not be considered because the information is outside the scope of the intervenor’s admitted contention, if true, can be a meritorious assertion; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)
- the bar against corrective redrafting of contentions is particularly compelling in the context of a request for discretionary intervention because rewriting undermines the very basis for granting discretionary intervention, i.e., the petitioner’s demonstrated ability to contribute to the record; CLI-06-16, 63 NRC 708 (2006)
- the benefit of the doubt should be given to the potential intervenor in order to prevent the dismissal of a petition due to inarticulate draftsmanship or procedural or pleading defects; LBP-09-18, 70 NRC 385 (2009)
- the benefits of the proximity presumption are not limited to those who reside within the area in which the presumption applies, but can be extended to those who conduct everyday activities or visit within that area; LBP-07-10, 66 NRC 1 (2007)
- the better practice for an intervention petitioner is to submit a fully developed showing regarding standing in each proceeding in which it seeks to intervene, regardless of whether it has previously been found to have standing relative to the facility that is the locus of the proceedings; LBP-09-18, 70 NRC 385 (2009)
- the board declines to impose a requirement that petitioners perform an independent technical analysis at the standing phase of a proceeding, especially when the chain of plausible causation that could lead to offsite doses is abundantly clear; LBP-07-14, 66 NRC 169 (2007)
- the board determines the hearing procedure on a contention-by-contention basis, selecting the most appropriate for each contention; LBP-07-15, 66 NRC 261 (2007)
- the board grants intervenors’ motion to compel disclosure of certain groundwater modeling information associated with a combined license application; LBP-10-23, 72 NRC 692 (2010)
- the board may refer certain rulings to the Commission, and certain participants in the proceeding may request that the presiding officer certify to the Commission rulings not otherwise immediately appealable pursuant to section 2.1015(b); CLI-10-10, 71 NRC 281 (2010)
- the brief explanation of the basis that is required by section 2.309(f)(1)(ii) helps define the scope of a contention, but it is the contention, not bases, whose admissibility must be determined; LBP-08-6, 67 NRC 241 (2008)
- the brief explanation of the logical underpinnings of a contention does not require a petitioner to provide an exhaustive list of possible bases, but simply to provide sufficient alleged factual or legal bases to support the contention; LBP-08-26, 68 NRC 905 (2008)

## SUBJECT INDEX

- the burden is on opponents of a settlement to come forward and show that the public interest requires the rejection of the settlement and the adjudication of the issues; LBP-06-18, 63 NRC 830 (2006)
- the burden of a settlement with an intervenor regarding NEPA issues falls on the NRC Staff; CLI-06-18, 64 NRC 1 (2006)
- the chilling effect upon frank government discussions can be just as great when the release is limited only to those involved in particular litigation as when the documents are released publicly; LBP-06-25, 64 NRC 367 (2006)
- the Commission and licensing boards have imposed sanctions against a party seeking to file a written request for hearing only when that party has not followed established Commission procedures despite prior agency warnings; LBP-08-18, 68 NRC 533 (2008)
- the Commission customarily disregards briefs that contain personal attacks on the board; CLI-06-6, 63 NRC 161 (2006)
- the Commission customarily does not entertain discretionary interlocutory appeals, due in large part to a general unwillingness to engage in piecemeal interference in ongoing licensing board proceedings; CLI-07-1, 65 NRC 1 (2007)
- the Commission defers to a board's rulings on threshold issues such as standing and contention admissibility unless the appeal points to an error of law or abuse of discretion; CLI-06-24, 64 NRC 111 (2006); CLI-09-20, 70 NRC 911 (2009); CLI-09-8, 69 NRC 317 (2009); CLI-09-12, 69 NRC 535 (2009); CLI-09-22, 70 NRC 932 (2009)
- the Commission does not endorse deferring the consideration of proposed contentions because prompt consideration of contentions promotes the efficient and complete development of the record while conserving resources; CLI-07-20, 65 NRC 499 (2007)
- the Commission does not entertain on appeal arguments not raised before a licensing board; CLI-09-12, 69 NRC 535 (2009)
- the Commission elaborates on the standards for accepting an appeal filed out of time; LBP-10-21, 72 NRC 616 (2010)
- the Commission generally applies the same standard for summary disposition that federal courts apply when ruling on motions for summary judgment under Rule 56 of the Federal Rules of Civil Procedure; LBP-10-20, 72 NRC 571 (2010)
- the Commission grants discretionary interlocutory review only in extraordinary circumstances; CLI-09-6, 69 NRC 128 (2009)
- the Commission has a longstanding policy of supporting settlements; CLI-06-18, 64 NRC 1 (2006)
- the Commission has authority to review board rulings sua sponte, in the exercise of its inherent supervisory authority over NRC adjudications, regardless of whether the Commission accepts the referral; CLI-09-3, 69 NRC 68 (2009)
- the Commission has discretion to allow oral argument upon the request of a party made in a petition for review, brief on review, or upon its own initiative; CLI-10-9, 71 NRC 245 (2010)
- the Commission has discretion to grant a petition for review, giving due weight to the existence of a substantial question with respect to any of the grounds listed in the Commission's regulations as potential justification; LBP-06-11, 63 NRC 483 (2006)
- the Commission has discretion to grant interlocutory review at the request of a party in limited circumstances, but its longstanding general policy disfavors interlocutory review; CLI-06-24, 64 NRC 111 (2006)
- the Commission has discretion to review all underlying factual issues de novo, but it is disinclined to do so where a board has weighed arguments presented by experts and rendered reasonable, record-based factual findings; CLI-06-15, 63 NRC 687 (2006)
- the Commission has set forth a four-part test for grant of a rule waiver, and all four factors must be met; LBP-10-22, 72 NRC 661 (2010)
- the Commission has the authority to enter case-specific procedural orders to facilitate the efficient resolution of issues before a licensing board; LBP-07-3, 65 NRC 237 (2007)
- the Commission is entitled to review the record itself and amplify the board's findings; CLI-09-14, 69 NRC 580 (2009)
- the Commission is generally inclined to accommodate an abeyance request from DOJ as long as it provides at least some showing of potential detrimental effect on its parallel criminal case; CLI-07-6, 65 NRC 112 (2007)

## SUBJECT INDEX

the Commission itself may exercise its discretion to review a licensing board's interlocutory order if the Commission wants to address a novel or important issue; CLI-09-6, 69 NRC 128 (2009)

the Commission may consider a request for discretionary intervention when at least one requestor/petitioner has established standing and at least one admissible contention has been admitted so that a hearing will be held; CLI-08-19, 68 NRC 251 (2008)

the Commission may consider the criteria listed in 10 C.F.R. 2.786(b)(4) when reviewing interlocutory matters on the merits, but when determining whether to undertake such review, the standards in section 2.786(g) control the determination; CLI-10-29, 72 NRC 556 (2010)

the Commission may reject an appeal summarily for violating NRC procedural regulations; CLI-08-17, 68 NRC 231 (2008)

the Commission may, at its discretion, grant a party's request for interlocutory review of a board decision; CLI-10-30, 72 NRC 564 (2010)

the Commission often refers to the Statement of Considerations as an aid in interpreting its regulations; CLI-08-3, 67 NRC 151 (2008)

the Commission recognizes a 50-mile proximity presumption to establish standing in proceedings concerning nuclear power reactor construction and operating licenses; LBP-09-28, 70 NRC 1019 (2009)

the Commission routinely accords substantial deference to licensing boards on matters involving standing and credibility determinations, and thus does not lightly set aside a board's grant of discretionary intervention; CLI-06-16, 63 NRC 708 (2006)

the Commission seeks wherever possible to avoid the delays, such as an additional round of pleadings, caused by a petitioner's attempt to backstop elemental deficiencies in its original petition to intervene; CLI-08-19, 68 NRC 251 (2008)

the Commission usually defers to boards' fact-based decisions; CLI-06-19, 64 NRC 9 (2006)

the Commission will consider a petition for review if it raises a substantial question with respect to one or more of the five paragraphs of 10 C.F.R. 2.341(b)(4); CLI-10-17, 72 NRC 1 (2010)

the Commission will defer to a board's rulings on threshold issues absent an error of law or abuse of discretion; CLI-10-3, 71 NRC 49 (2010); CLI-10-12, 71 NRC 319 (2010)

the Commission will not consider information that was not raised before the board; CLI-10-9, 71 NRC 245 (2010)

the Commission will occasionally take review of an issue on its own motion when that issue is not otherwise before it on appeal; CLI-07-1, 65 NRC 1 (2007)

the Commission will reverse a licensing board's determination on discretionary intervention only if the board has abused its discretion; CLI-06-16, 63 NRC 708 (2006)

the Commission will review referred rulings only if the referral raises significant and novel legal or policy issues, and resolution of the issues would materially advance the orderly disposition of the proceeding; CLI-09-3, 69 NRC 68 (2009); CLI-09-13, 69 NRC 575 (2009); CLI-09-21, 70 NRC 927 (2009)

the Commission's denial of review is not a decision on the merits, but simply indicates that the appealing party identified no clearly erroneous factual finding or important legal error requiring Commission correction; LBP-06-1, 63 NRC 41 (2006)

the Commission's exercise of its discretion to review a licensing board's interlocutory order stems from its inherent supervisory authority over adjudications and in no way implies that parties have a right to seek interlocutory review on that same ground; CLI-09-6, 69 NRC 128 (2009)

the Commission's power to define the scope of a proceeding will lead to the denial of intervention when the Commission amends a license to require additional or better safety measures; LBP-09-20, 70 NRC 565 (2009)

the common thread in decisions applying the 50-mile proximity presumption is a recognition of the potential effects at significant distances from the facility of the accidental release of fissionable materials; LBP-09-4, 69 NRC 170 (2009)

the concept of control extends to situations in which the party has the practical ability to obtain materials in the possession of another, even if the party does not have the legal right to compel the other person or entity to produce the requested materials; LBP-10-23, 72 NRC 692 (2010)

the contention admissibility decision sometimes turns on a determination about when, as a cumulative matter, separate pieces of the information puzzle were sufficiently in place to make the particular concerns reasonably apparent; LBP-09-10, 70 NRC 51 (2009)

## SUBJECT INDEX

- the contention admissibility rule does not require a petitioner to prove its case at the contention stage; LBP-06-10, 63 NRC 314 (2006); LBP-09-27, 70 NRC 992 (2009)
- the contention admissibility threshold is less than is required at the summary disposition stage; LBP-09-26, 70 NRC 939 (2009)
- the contention requirements were never intended to be turned into a fortress to deny intervention; LBP-09-21, 70 NRC 581 (2009)
- the contention rule is strict by design and does not permit the filing of a vague, unparticularized contention, unsupported by affidavit, expert, or documentary support; CLI-07-18, 65 NRC 399 (2007); LBP-07-5, 65 NRC 341 (2007)
- the contention rule is strict by design, having been toughened in 1989 because in prior years licensing boards had admitted and litigated numerous contentions that appeared to be based on little more than speculation; LBP-08-6, 67 NRC 241 (2008); LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009)
- the current version of contention admissibility rules no longer incorporates provisions that permitted the supplementation of petitions and the filing of contentions after the original filing of petitions; LBP-07-4, 65 NRC 281 (2007)
- the decision as to whether an alleged environmental impact or alternative is significant or reasonable is the merits of a NEPA contention and should not be adjudicated at the contention admissibility stage under the guise of materiality or scope; LBP-09-10, 70 NRC 51 (2009)
- the decision of an appellate tribunal should ordinarily be followed in all subsequent phases of that case, provided that the particular question in issue was actually decided or decided by necessary implication; LBP-06-1, 63 NRC 41 (2006)
- the determinative factor in a summary disposition motion is whether there is any genuine issue of material fact remaining in dispute, and that determination is made through examination of the filings with respect to the motion; LBP-07-13, 66 NRC 131 (2007)
- the disclosing party can either provide the other parties with an actual copy of the document or data compilation or can simply describe it and provide it if the other party requests it; LBP-10-23, 72 NRC 692 (2010)
- the duty to produce all documentary material generated by, or at the direction of, or acquired by, a potential party pursuant to 10 C.F.R. 2.1003(a)(1) applies to extant documentary material and does not require that the potential party delay its initial certification until all documentary material that it intends to rely on is finished and complete; LBP-08-1, 67 NRC 37 (2008)
- the elements of standing will be presumed to be satisfied if an individual lives within the zone of possible harm from a significant source of radioactivity, which has been defined in proceedings involving nuclear power plants as being within a 50-mile radius of such a plant; LBP-07-11, 66 NRC 41 (2007)
- the fact that a party may have other obligations does not relieve that party of its hearing obligations; CLI-10-26, 72 NRC 474 (2010)
- the fact that deliberative process privilege documents contain important new analyses that are relevant to admitted contentions weighs in favor of their disclosure; LBP-06-3, 63 NRC 85 (2006)
- the fact that NRC Staff issues a request for additional information does not, per se, demonstrate that the combined license application is incomplete or ensure the admission of a new contention; LBP-09-10, 70 NRC 51 (2009)
- the fact that Staff issues a request for additional information does not immunize the combined license application from challenge or bar the admission of a new contention on the same subject, provided the contention satisfies the criteria of 10 C.F.R. 2.309(f)(1)(i)-(vi) and (f)(2) or (c); LBP-09-10, 70 NRC 51 (2009)
- the February 2004 revision of NRC procedural rules no longer permits the amendment and supplementation of petitions and the filing of contentions after the original filing of petitions; LBP-06-10, 63 NRC 314 (2006)
- the February 2004 revision of the rules no longer incorporates provisions that permitted the amendment and supplementation of petitions and filing of contentions after the original filing of petitions; LBP-08-6, 67 NRC 241 (2008)
- the Federal Rules of Criminal Procedure prescribe the disclosures necessary for a fair balance between criminal defendants' and prosecutors' interests; CLI-06-12, 63 NRC 495 (2006)

## SUBJECT INDEX

the filing in a reply brief of new arguments or new legal theories that opposing parties have not had the opportunity to address are not permitted; CLI-06-9, 63 NRC 433 (2006)

the filing of new or amended contentions based on new information is permitted if sufficient justification is provided; LBP-09-15, 70 NRC 198 (2009)

the first step in assessing the admissibility of a new contention is to determine if it is timely under 10 C.F.R. 2.309(f)(2)(iii) or nontimely under section 2.309(c); LBP-09-10, 70 NRC 51 (2009)

the foundation for the threshold criteria regarding the level of support required for summary disposition is found in the contention admissibility provisions; LBP-07-13, 66 NRC 131 (2007)

the fundamental purpose of a Notice of Hearing is to provide facility opponents a fair opportunity to be heard; LBP-07-14, 66 NRC 169 (2007)

the general purpose of the deliberative process privilege is to protect frank agency deliberations from public scrutiny and thus to prevent injury to the quality of agency decisions; LBP-06-25, 64 NRC 367 (2006)

the general rule on amicus briefs, 10 C.F.R. 2.315(d), as a formal matter applies only to petitions for review filed under section 2.341 or to matters taken up by the Commission sua sponte, not to appeals filed under section 2.1015; CLI-08-22, 68 NRC 355 (2008)

the good cause factor favors petitioners who have filed their petition within 30 days of the availability of the document they contend contains new and significant information so as to form the basis for their contention; LBP-10-1, 71 NRC 165 (2010)

the imminent availability of Staff's authoritative position on a subject that is discussed in deliberative process documents constitutes "other evidence" such that the immediate need for the documents does not outweigh the deliberative process privilege; LBP-06-3, 63 NRC 85 (2006)

the increased risk of living within 50 miles of a nuclear power plant constitutes injury-in-fact, is traceable to the challenged action, and is likely to be redressed by a favorable decision that either denies a license or mandates compliance with legal requirements that protect the interests of the petitioners; LBP-09-4, 69 NRC 170 (2009)

the injury-in-fact necessary to establish organizational standing must be more than a mere interest in a problem, no matter how longstanding the interest and no matter how qualified the organization is in evaluating the problem; LBP-09-13, 70 NRC 168 (2009); LBP-10-16, 72 NRC 361 (2010)

the interests that a representative organization seeks to protect must be germane to its own purpose, and neither the asserted claim nor the required relief must require an individual member to participate in the organization's legal action; LBP-09-16, 70 NRC 227 (2009)

the interests that the representative organization seeks to protect must be germane to its own purpose; CLI-07-18, 65 NRC 399 (2007)

the interlocutory review standard in 10 C.F.R. 2.323(f)(1) does not apply to litigants' petitions for interlocutory review; CLI-09-6, 69 NRC 128 (2009)

the issue that generally arises under 10 C.F.R. 2.309(f)(1)(i) is whether a contention is stated with sufficient specificity; LBP-09-17, 70 NRC 311 (2009)

the law generally recognizes a personal privacy interest not to have allegations of unlawful activity publicly disseminated after they have been shown to be insubstantial, but a privacy interest does not exist as a generalized theory; LBP-06-25, 64 NRC 367 (2006)

the Licensing Support Network functions as a mechanism for early collection of all extant documents that normally would be collected later through traditional discovery; CLI-08-22, 68 NRC 355 (2008)

the longest specific distance for which the Commission has granted proximity-based standing in a post-Vogtle license transfer case is 6 to 6-1/2 miles; CLI-07-21, 65 NRC 519 (2007)

the manner in which the Staff conducts its review is outside the scope of a proceeding; LBP-10-17, 72 NRC 501 (2010)

the materiality requirement for contention admission often dictates that any contention alleging deficiencies or errors in an application also indicate some significant link between the claimed deficiency and either the health and safety of the public or the environment; LBP-10-7, 71 NRC 391 (2010)

the member of an organization that seeks standing must qualify for standing in his or her own right, and the interests that the organization seeks to protect must be germane to its own purpose; LBP-09-6, 69 NRC 367 (2009)

the member of a petitioning organization seeking representation must qualify for standing in his or her own right; CLI-07-18, 65 NRC 399 (2007)

## SUBJECT INDEX

the mere potential for legal error in a contention admissibility decision is not a ground for interlocutory review; CLI-10-30, 72 NRC 564 (2010)

the most natural way to read a provision that sets forth a general obligation followed by a set of specific requirements is that the specific requirements provide the details necessary to fulfilling the general obligation; LBP-09-15, 70 NRC 198 (2009)

the nontrivial increased risk of living within 50 miles of a proposed reactor constitutes injury-in-fact, is traceable to the challenged action, and is likely to be redressed by a favorable decision that either denies a license or mandates compliance with legal requirements that protect the interests of the petitioners; CLI-09-20, 70 NRC 911 (2009); LBP-09-16, 70 NRC 227 (2009)

the party supporting abeyance of an enforcement proceeding based on the pendency of a criminal case involving the same facts carries the burden of proof and must make at least some showing of potential detrimental effect on the criminal case; CLI-06-12, 63 NRC 495 (2006)

the phrase "possession, custody, or control" as found in the Federal Rules of Civil Procedure and 10 C.F.R. 2.336(a) is in the disjunctive, and thus only one of the enumerated requirements needs to be met; LBP-10-23, 72 NRC 692 (2010)

the plain language of a contention will reveal whether it is a claim of omission, a specific substantive challenge to an application, or a combination of both; LBP-06-16, 63 NRC 737 (2006)

the possibility that an interlocutory ruling may be wrong does not in itself justify interlocutory review; CLI-09-6, 69 NRC 128 (2009)

the possibility that the prevailing party would use the board's order in his favor to persuade a District Court to reconsider part of the penalty imposed on him in a parallel criminal proceeding did not constitute immediate, irreparable harm to the NRC Staff; CLI-09-23, 70 NRC 935 (2009)

the potential for litigation expense and delay is the kind of burden that licensees and applicants voluntarily assume when filing applications with the Commission; CLI-09-6, 69 NRC 128 (2009)

the practice of granting or denying discretionary intervention should develop not through precedent, but through attention to the concrete facts of particular situations; CLI-06-16, 63 NRC 708 (2006)

the precedential value of a licensing board decision that is not affirmed by the Commission is limited to its power to persuade; LBP-06-1, 63 NRC 41 (2006)

the preliminary question for a judge deciding a summary disposition motion is whether there is any evidence upon which a jury could properly proceed to find a verdict for the nonmovant; LBP-07-13, 66 NRC 131 (2007)

the presiding officer may refer a ruling to the Commission if the ruling involves a novel issue that merits Commission review at the earliest opportunity or a prompt decision is necessary to prevent detriment to the public interest or unusual delay or expense; CLI-09-6, 69 NRC 128 (2009)

the presiding officer must assess a petition to intervene even if there are no objections to a petitioner's standing; LBP-08-16, 68 NRC 361 (2008)

the presiding officer must determine whether petitioner is a person whose interest may be affected by the proceeding; LBP-10-7, 71 NRC 391 (2010)

the privacy interests for which protection is sought can be amply preserved by a protective order that limits the disclosures to those involved in the litigation and thus having a need to know; LBP-06-25, 64 NRC 367 (2006)

the procedure for seeking access to SUNSI does not provide a method for general or topical access, but only access to information necessary to meaningfully participate in an adjudicatory proceeding and to provide the basis and specificity of a proffered contention; LBP-09-5, 69 NRC 303 (2009)

the process of sifting and weighing participants' factual proffers often calls upon a board to make difficult choices, so that a petitioner who fails to provide specific information regarding the geographic proximity or the timing and duration of its visits only complicates matters for itself; LBP-09-18, 70 NRC 385 (2009)

the proper purpose of a reply is to discuss alleged deficiencies in a petition, not to try to fix them; LBP-08-17, 68 NRC 431 (2008)

the protected interests are so strong that federal courts and NRC adjudicators are generally unwilling to compel discovery of deliberative materials unless there is a particular and compelling reason for the privilege to be suspended; LBP-06-25, 64 NRC 367 (2006)

the proximity presumption applies in proceedings for nuclear power plant construction permits, operating licenses, or significant amendments thereto; LBP-08-13, 68 NRC 43 (2008); LBP-08-15, 68 NRC 294

## SUBJECT INDEX

(2008); LBP-09-13, 70 NRC 168 (2009); LBP-09-16, 70 NRC 227 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-10-15, 72 NRC 257 (2010)

the proximity presumption applies when petitioners live within 50 miles of the proposed facility or when they have frequent contacts with the area affected by the proposed facility; LBP-08-18, 68 NRC 533 (2008); LBP-10-1, 71 NRC 165 (2010)

the proximity presumption does not permit persons with no actual or imminent claim of injury to obtain a hearing; LBP-09-4, 69 NRC 170 (2009)

the purpose of contention pleading requirements is to focus litigation on concrete issues and result in a clearer and more focused record for decision; LBP-08-14, 68 NRC 279 (2008); LBP-09-26, 70 NRC 939 (2009); LBP-10-15, 72 NRC 257 (2010); LBP-10-16, 72 NRC 361 (2010)

the question whether to hold an NRC enforcement proceeding in abeyance pending a related criminal prosecution is generally suitable for interlocutory Commission review because, unlike most interlocutory questions, the abeyance issue cannot await the end of the proceeding because it becomes moot; CLI-06-19, 64 NRC 9 (2006); CLI-07-6, 65 NRC 112 (2007); CLI-10-29, 72 NRC 556 (2010)

the radioactive source posing the danger in a reactor license renewal case is the identical source giving rise to the 50-mile proximity presumption rule for standing in reactor construction permit and operating license proceedings; LBP-06-7, 63 NRC 188 (2006)

the rationale for the 50-mile presumption does not depend upon the probability that a proposed reactor is likely to generate an accidental release of radioactive materials, but rather the fact that, if such an accident were to occur, it could realistically impact the geographic area within which the petitioners reside; LBP-09-4, 69 NRC 170 (2009)

the reach of a contention necessarily hinges upon its terms coupled with its stated bases; CLI-10-11, 71 NRC 287 (2010)

the regulations do not define the phrase “differ significantly” but in the absence of a statutory definition, courts normally define a term by its ordinary meaning; LBP-10-24, 72 NRC 720 (2010)

the relevance standard of 10 C.F.R. 2.336 is more flexible than the relevance standard of Fed. R. Evid. 401; LBP-10-23, 72 NRC 692 (2010)

the representative of an interested governmental entity participating under section 2.315(c) shall identify those contentions on which it will participate in advance of any hearing held; LBP-06-20, 64 NRC 131 (2006); LBP-08-24, 68 NRC 691 (2008)

the requirement of 10 C.F.R. 2.309(f)(1)(ii) that the petition include a brief explanation of the basis for the contention requires an explanation of the rationale or theory of the contention; LBP-09-10, 70 NRC 51 (2009)

the requirement of materiality often dictates that any contention alleging deficiencies or errors in an application also indicate some significant link between the claimed deficiency and either the health and safety of the public or the environment; LBP-09-3, 69 NRC 139 (2009)

the requirement that an injury or threat of injury be concrete and particularized perforce means that the injury must not be conjectural or hypothetical; LBP-10-4, 71 NRC 216 (2010)

the requirement that contentions be supported by alleged facts or expert opinion generally is fulfilled when the sponsor of an otherwise acceptable contention provides a brief recitation of the factors underlying the contention or references to documents and text that provide such reasons; LBP-10-14, 72 NRC 101 (2010)

the requirement to discuss the basis for a proffered contention to obtain access to SUNSI is not to be equated with the discussion that would be necessary to support an admissible contention; LBP-09-5, 69 NRC 303 (2009)

the requirement to establish standing does not apply to petitions for discretionary intervention because discretionary intervention was created to afford party status to petitioners unable to demonstrate standing; CLI-06-16, 63 NRC 708 (2006)

the requisite injury to establish standing may be either actual or threatened but must nonetheless be concrete and particularized, not conjectural or hypothetical; LBP-09-28, 70 NRC 1019 (2009)

the role of “private attorney general” is not contemplated under the Atomic Energy Act; CLI-08-19, 68 NRC 251 (2008)

the scope of a contention is limited to issues of law and fact pleaded with particularity in the intervention petition, including its stated bases, unless the contention is satisfactorily amended in accordance with the Commission’s rules; CLI-10-5, 71 NRC 90 (2010); CLI-10-15, 71 NRC 479 (2010)

## SUBJECT INDEX

the scope of a license renewal proceeding is limited to a review of the plant structures and components that will require an aging management review for the period of extended operation and the plant's systems, structures, and components that are subject to an evaluation of time-limited aging analyses; LBP-06-22, 64 NRC 229 (2006)

the scope of a proceeding is defined in the Commission's initial hearing notice and order referring the proceeding to the licensing board; LBP-09-25, 70 NRC 867 (2009); LBP-09-26, 70 NRC 939 (2009)

the scope of an enforcement proceeding is limited to whether an enforcement order should be sustained; LBP-07-16, 66 NRC 277 (2007)

the scope of discovery is broader than the scope of admissible evidence; LBP-10-23, 72 NRC 692 (2010)

the scope of the mandatory disclosure obligations under 10 C.F.R. 2.336, which apply to Subpart L proceedings, is wide-reaching; LBP-10-23, 72 NRC 692 (2010)

the significance of the issue being raised by a new contention would be a relevant "good cause" consideration; LBP-10-21, 72 NRC 616 (2010)

the six criteria that govern the admissibility of contentions are discussed; LBP-09-21, 70 NRC 581 (2009)

the six-factor contention admissibility test in 10 C.F.R. 2.309(f)(1) applies regardless of whether a contention is submitted at the beginning of a proceeding, as a timely new contention under section 2.309(f)(2), or as a nontimely new contention under section 2.309(c); LBP-07-15, 66 NRC 261 (2007)

the source of the practice in NRC proceedings of referring to judicial standing concepts is a 1976 Commission decision in which it affirmed the Appeal Board's determination that petitioners in the case did not meet the judicial standing test; LBP-09-1, 69 NRC 11 (2009)

the standard for admitting a new contention after the record is closed is higher than for an ordinary late-filed contention; CLI-08-28, 68 NRC 658 (2008)

the standard for amendment of a contention is whether the information was available to the public, not whether the petitioner has recently found it; LBP-09-26, 70 NRC 939 (2009)

the standard for review of an interlocutory board order is whether the ruling threatens the petitioner with immediate and serious, irreparable impact or will affect the basic structure of the proceeding in a pervasive and unusual manner; CLI-08-7, 67 NRC 187 (2008)

the standard of review in an appeal from an NRC Staff denial of a SUNSI request is de novo; LBP-09-5, 69 NRC 303 (2009)

the standard of review on appeal is abuse of discretion; CLI-10-24, 72 NRC 451 (2010)

the statement of purpose and need in the final environmental impact statement is independent of any specific project area, and thus a prior decision of the Commission adjudicating an intervenor's challenge to the statement of purpose and need applies with equal force to all areas of a proposed project; LBP-06-19, 64 NRC 53 (2006)

the strict contention rule serves multiple interests; LBP-07-11, 66 NRC 41 (2007); LBP-08-6, 67 NRC 241 (2008); LBP-09-17, 70 NRC 311 (2009)

the strict contention rule serves to focus the hearing process on real disputes susceptible of resolution in an adjudication, to put other parties on notice of petitioners' specific grievances, and to ensure that full adjudicatory hearings are triggered only by those able to proffer at least some minimal factual and legal foundation in support of their contentions; LBP-06-10, 63 NRC 314 (2006); LBP-06-23, 64 NRC 257 (2006)

the subject matter of a contention must impact the grant or denial of a pending license application; LBP-07-3, 65 NRC 237 (2007); LBP-09-27, 70 NRC 992 (2009)

the substantive standard for allowing parties to conduct cross-examination is the same under 10 C.F.R. Part 2, Subparts G and L; LBP-09-10, 70 NRC 51 (2009)

the term "likely" in section 2.326(a)(3) is construed to be synonymous with "probable" or "more likely than not"; LBP-08-12, 68 NRC 5 (2008)

the threshold question in determining if certain items must be made available on the High-Level Waste Repository Licensing Support Network is whether the particular items fall within any of the three classes of documentary material; CLI-06-5, 63 NRC 143 (2006)

the time an E-Filing submission is received by the system server is not necessarily controlling relative to the timeliness of the filing; LBP-08-16, 68 NRC 361 (2008)

the timeliness of a motion to reopen depends on what/when was the trigger that provided the footing for the new contention and was the motion seeking record reopening/contention admission timely filed after that trigger event; LBP-10-21, 72 NRC 616 (2010)

## SUBJECT INDEX

the ultimate test for standing is not whether NRC's test conforms to that applied by federal courts, but whether NRC's test represents a reasonable construction of section 189a of the Atomic Energy Act; LBP-09-4, 69 NRC 170 (2009)

the unavailability of documents does not constitute a showing of good cause for admitting a late-filed contention when the factual predicate for that contention is available from other sources in a timely manner; CLI-10-27, 72 NRC 481 (2010)

the underlying purpose of NEPA as an information-gathering and disclosure mechanism requires a different view of the concept of "materiality" under 10 C.F.R. 2.309(f)(1)(iv) than might be applied to a contention seeking to establish a health and safety issue; LBP-08-16, 68 NRC 361 (2008)

the universal understanding of relevance, applicable to the NRC Staff and others, includes matters that appear reasonably calculated to lead to the discovery of admissible evidence; LBP-06-25, 64 NRC 367 (2006)

the weight to be given the proponent's reason for seeking an abeyance turns on the quality of the factual record on which the proponent relies; CLI-06-12, 63 NRC 495 (2006)

there is a difference between contentions that allege that a license application suffers from an improper omission and contentions that raise a specific substantive challenge to how particular information or issues have been discussed in a license application; LBP-08-12, 68 NRC 5 (2008)

there is an automatic right to appeal a licensing board standing and contention admissibility decision on the issue of whether the request for hearing or petition to intervene should have been wholly denied; CLI-09-22, 70 NRC 932 (2009)

there is no conflict between the basic requirements for standing, as applied in the federal courts, and the NRC's proximity presumption; CLI-09-22, 70 NRC 932 (2009); LBP-09-4, 69 NRC 170 (2009)

there is no requirement for any nexus between an asserted injury and a contention; LBP-09-1, 69 NRC 11 (2009)

there is no requirement that information provided to the board by Staff counsel about a telephone call from petitioner's former expert witness be in the form of a motion; LBP-06-10, 63 NRC 314 (2006)

there is no right to reply to an answer to a motion for summary disposition, but if the answer contains an allegation that is plainly and factually incorrect, the moving party can request the opportunity to respond and to correct the record; LBP-06-5, 63 NRC 116 (2006)

there simply would be no end to NRC licensing proceedings if petitioners could disregard timeliness requirements and add new contentions at their convenience during the course of a proceeding based on information that could have formed the basis for a timely contention at the outset of the proceeding; CLI-10-27, 72 NRC 481 (2010)

third parties have no absolute right to veto settlements that the agreeing parties find to their advantage; CLI-06-18, 64 NRC 1 (2006)

threat of terrorist attack at spent fuel pools has been evaluated generically by NRC, and special circumstances for rule waiver have not been shown; LBP-10-15, 72 NRC 257 (2010)

three conditions must be satisfied for the proximity presumption to afford standing as of right; LBP-07-10, 66 NRC 1 (2007)

three regulations govern the admissibility of contentions added after an adjudicatory hearing has commenced; LBP-06-14, 63 NRC 568 (2006)

threshold admissibility requirements for contentions should not be turned into a fortress to deny intervention; CLI-07-18, 65 NRC 399 (2007)

threshold contention standards are imposed to avoid admission of contentions based on little more than speculation and intervenors who have negligible knowledge of nuclear power issues; CLI-08-17, 68 NRC 231 (2008)

threshold contention standards require petitioners to review application materials and set forth their contentions with particularity; CLI-10-11, 71 NRC 287 (2010)

timeliness as measured under NRC regulations is from the point at which new information is discovered relevant to the question; LBP-08-12, 68 NRC 5 (2008)

timeliness of a motion to reopen in which the proponent of the motion proffers a new contention depends primarily on an assessment as to when the proponent of the motion first knew, or should have known, enough information to raise the issues presented in the new contention; LBP-10-19, 72 NRC 529 (2010)

## SUBJECT INDEX

timeliness of a new or amended contention based on material new information is based on the timing of the availability of the information on which the contention is based, not the timing of the NRC Staff NEPA document; LBP-10-24, 72 NRC 720 (2010)

timely new non-NEPA contentions are subject to a three-factor test; LBP-07-15, 66 NRC 261 (2007)

to amend a contention, petitioner must demonstrate that the information upon which the amended contention is based was not previously available and is materially different from information previously available, and that the amended contention has been submitted in a timely fashion; LBP-09-26, 70 NRC 939 (2009)

to assert an appropriate injury for organizational standing, an organization must demonstrate a palpable injury in fact to its organizational interests; LBP-09-13, 70 NRC 168 (2009); LBP-10-16, 72 NRC 361 (2010)

to be admissible, a contention must assert an issue of law or fact that is material to the findings the NRC must make to support the action that is involved in the proceeding; LBP-09-26, 70 NRC 939 (2009); LBP-10-6, 71 NRC 350 (2010)

to be admissible, a contention must satisfy the six pleading requirements of 10 C.F.R. 2.309(f)(1)(i)-(vi); LBP-10-4, 71 NRC 216 (2010)

to be admissible, a contention must show that some significant link exists between the claimed deficiency and either the health and safety of the public or the environment; LBP-10-6, 71 NRC 350 (2010)

to be admissible, a proposed contention must include specific statements of law or fact to be raised or controverted; LBP-10-9, 71 NRC 493 (2010)

to be admissible, contentions must assert an issue of law or fact that is material to the outcome of a licensing proceeding, meaning that the subject matter of the contention must impact the grant or denial of a pending license application; LBP-10-7, 71 NRC 391 (2010)

to be admissible, contentions must satisfy the six factors of 10 C.F.R. 2.309(f)(1); LBP-06-4, 63 NRC 99 (2006)

to be appealable, a disputed order must dispose of the entire petition so that a successful appeal by a nonpetitioner will terminate the proceeding as to the appellee petitioner; CLI-09-18, 70 NRC 859 (2009)

to be considered timely, a document must be submitted to the E-Filing system for docketing and service by 11:59 p.m. Eastern Time; LBP-08-16, 68 NRC 361 (2008)

to be sincere, movant should contact other parties sufficiently in advance to provide enough time for the possible resolution of the matter or issues in question; LBP-09-22, 70 NRC 640 (2009)

to challenge a regulation, petitioner must submit a supporting affidavit setting forth with particularity the special circumstances that justify the waiver or exception requested; LBP-07-11, 66 NRC 41 (2007); LBP-09-18, 70 NRC 385 (2009)

to counter a board's normal assumption that protective orders will not be breached, the withholding party must show evidence of the likelihood of a breach; LBP-06-25, 64 NRC 367 (2006)

to demonstrate organizational standing, petitioner must show injury in fact to the interests of the organization itself; LBP-08-15, 68 NRC 294 (2008)

to demonstrate standing to intervene, petitioner must state, and boards must assess, the nature of petitioner's right under the governing statutes to be made a party, the nature and extent of petitioner's property, financial, or other interest, and the possible effect of the outcome of the proceeding on petitioner's interest; CLI-09-20, 70 NRC 911 (2009)

to demonstrate standing, an organization seeking to intervene in a proceeding must allege that the challenged action will cause a cognizable injury to the organization's interests or to the interests of its members; LBP-09-26, 70 NRC 939 (2009)

to demonstrate standing, petitioner must identify an interest in the proceeding and specify the facts pertaining to that interest; CLI-08-19, 68 NRC 251 (2008)

to derive standing from a member, an organization must demonstrate that the individual member has standing to participate and has authorized the organization to represent his or her interests; CLI-10-1, 71 NRC 1 (2010); LBP-10-16, 72 NRC 361 (2010)

to determine whether an interest is in the zone of interests of a statute, it is necessary first to discern the interests arguably to be protected by the statutory provision at issue and then to inquire whether petitioner's interests affected by the agency action are among them; LBP-10-16, 72 NRC 361 (2010)

to determine whether petitioner has an interest potentially affected by a proceeding, the licensing board considers the nature of the petitioner's right under the Atomic Energy Act to be made a party, the

## SUBJECT INDEX

- nature and extent of petitioner's property, financial, or other interest in the proceeding, and the possible effect of any decision or order on petitioner's interest; LBP-08-14, 68 NRC 279 (2008)
- to determine whether petitioners have standing, boards accept as true all material allegations of the complaint and construe the complaint in favor of the complaining party; CLI-10-20, 72 NRC 185 (2010)
- to establish causation, petitioner must show that there is a causal connection between the injury-in-fact and the conduct complained of; LBP-09-13, 70 NRC 168 (2009); LBP-10-16, 72 NRC 361 (2010)
- to establish organizational standing, an organization must demonstrate that the action at issue will cause an injury-in-fact to the organization's interests or the interests of its members and that the injury is within the zone of interests protected by the National Environmental Policy Act or the Atomic Energy Act; LBP-07-4, 65 NRC 281 (2007); LBP-07-11, 66 NRC 41 (2007); LBP-09-13, 70 NRC 168 (2009); LBP-09-16, 70 NRC 227 (2009); LBP-09-20, 70 NRC 565 (2009); LBP-10-16, 72 NRC 361 (2010)
- to establish proximity-based standing, it is petitioner's responsibility to provide enough detail to allow the board to distinguish a casual interest from a substantial one; LBP-10-7, 71 NRC 391 (2010)
- to establish representational standing, an organization must show that at least one of its members may be affected by the licensing action and would have standing to sue in his or her own right, identify that member by name and address, and show that the organization is authorized to request a hearing on behalf of that member; LBP-06-7, 63 NRC 188 (2006); LBP-07-11, 66 NRC 41 (2007); LBP-10-11, 71 NRC 609 (2010)
- to establish representational standing, the member must qualify for standing in his or her own right, the interests that the organization seeks to protect must be germane to its own purpose, and neither petitioner's contentions nor the requested relief must require an individual member to participate in the proceeding; LBP-08-17, 68 NRC 431 (2008)
- to establish standing based on frequent contacts, petitioner must show that it frequently engages in substantial business and related activities in the vicinity of the facility, engages in normal, everyday activities in the vicinity, has regular and frequent contacts in an area near a licensed facility, or otherwise has visits of a length and nature showing an ongoing connection and presence; LBP-10-1, 71 NRC 165 (2010)
- to establish standing in federal court, a party must show injury-in-fact, causation, and redressability; LBP-10-16, 72 NRC 361 (2010)
- to establish standing petitioner must show that it has suffered or will suffer a distinct and palpable injury that constitutes injury-in-fact within the zones of interests arguably protected by the governing statutes, the injury is fairly traceable to the challenged action, and the injury is likely to be redressed by a favorable decision; CLI-06-21, 64 NRC 30 (2006); LBP-07-16, 66 NRC 277 (2007); LBP-08-15, 68 NRC 294 (2008); LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-20, 70 NRC 565 (2009); LBP-10-1, 71 NRC 165 (2010); LBP-10-21, 72 NRC 616 (2010)
- to establish standing, petitioner must show that its alleged injury in fact could be cured or alleviated by some action of the tribunal; LBP-10-16, 72 NRC 361 (2010)
- to establish standing, petitioner's claimed injury must be arguably within the zone of interests protected by the governing statute in the proceeding; LBP-09-13, 70 NRC 168 (2009)
- to establish the requisite proximity for standing, petitioner must clearly indicate where he lives and/or what contact he has with the site; LBP-10-1, 71 NRC 165 (2010); LBP-10-7, 71 NRC 391 (2010)
- to force intervenors to file contentions before the results of an ongoing NRC investigation are announced to the public would effectively force intervenors to speculate about the results of such investigations and the conclusions the Staff might reach; LBP-10-9, 71 NRC 493 (2010)
- to interpose a new contention after a proceeding has been terminated requires submission of a fresh intervention petition that fulfills the applicable standards for such filings, including an appropriate standing demonstration; LBP-10-21, 72 NRC 616 (2010)
- to intervene as of right in any Commission licensing proceeding, a petitioner must demonstrate that its interest may be affected by the proceeding and specify the facts pertaining to that interest; CLI-07-18, 65 NRC 399 (2007)
- to intervene in an NRC proceeding, a petitioner must, in addition to demonstrating standing, submit at least one contention meeting the pleading requirements of 10 C.F.R. § 2.309(f)(1); CLI-08-17, 68 NRC 231 (2008); LBP-08-24, 68 NRC 691 (2008); LBP-06-10, 63 NRC 314 (2006); LBP-06-23, 64 NRC

## SUBJECT INDEX

- 257 (2006); LBP-07-4, 65 NRC 281 (2007); LBP-07-11, 66 NRC 41 (2007); LBP-09-16, 70 NRC 227 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-10-2, 71 NRC 190 (2010)
- to intervene in NRC proceedings, petitioner must file a written petition for leave to intervene in accordance with the requirements of 10 C.F.R. 2.309; CLI-09-15, 70 NRC 1 (2009)
- to intervene in the high-level waste repository proceeding, petitioner must establish that it has standing, be able to demonstrate substantial and timely Licensing Support Network compliance, and proffer at least one admissible contention; LBP-09-6, 69 NRC 367 (2009)
- to justify reopening the record to admit a new contention, the moving papers must be strong enough, in the light of any opposing filings, to avoid summary disposition, and the new information must be significant and plausible enough to require reasonable minds to inquire further; LBP-10-21, 72 NRC 616 (2010)
- to meet its burden, it is generally sufficient if petitioner provides plausible factual allegations that satisfy each element of standing; LBP-10-4, 71 NRC 216 (2010)
- to obtain discretionary interlocutory review, petitioner must demonstrate that the licensing board's ruling at issue either threatens the party adversely affected by it with immediate and serious irreparable impact which, as a practical matter, could not be alleviated through a petition for review of the presiding officer's final decision, or affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-07-1, 65 NRC 1 (2007)
- to qualify for standing, a petitioner must allege a concrete and particularized injury that is fairly traceable to the challenged action and likely to be redressed by a favorable decision; LBP-06-23, 64 NRC 257 (2006)
- to raise a timely contention, a party is not expected to piece together disparate shreds of information that, standing alone, have little apparent significance; LBP-10-9, 71 NRC 493 (2010)
- to raise an admissible contention with respect to a Staff finding of no significant impact, petitioner need not demonstrate that there will be a significant environmental impact as a consequence of the proposed action, but it must allege facts that, if true, show that the proposed project may significantly degrade some human environmental factor; LBP-06-27, 64 NRC 438 (2006)
- to reopen a closed record to introduce a new issue, movant has the burden of showing that the new information will likely trigger a different result; LBP-08-12, 68 NRC 5 (2008)
- to rule that disclosure under 10 C.F.R. 2.336(a)(2)(i) is limited to formal contractual deliverables would encourage applicants to draft consulting contracts to insulate themselves from the obligation to disclose critical computer modeling information; LBP-10-23, 72 NRC 692 (2010)
- to satisfy the "clearly erroneous" standard, a litigant must show that the board's findings are not even plausible in light of the record viewed in its entirety; CLI-10-17, 72 NRC 1 (2010)
- to satisfy the likelihood of establishing standing criteria in the context of a SUNSI request, petitioner organizations are required to provide sufficient information to allow the NRC Staff to conclude that the requirements for standing could likely be satisfied; LBP-09-5, 69 NRC 303 (2009)
- to show good cause for the late filing of a contention, petitioner must show that the information on which the new contention is based was not reasonably available to the public, not merely that the petitioner recently found out about it; CLI-10-27, 72 NRC 481 (2010)
- to succeed, a petition for reconsideration must demonstrate a compelling circumstance, such as the existence of a clear and material error in a decision, which could not have been reasonably anticipated, which renders the decision invalid; CLI-07-21, 65 NRC 519 (2007)
- to support a contention challenging a Commission rule, petitioner must request, and demonstrate any supporting reasons for, a waiver of the rule; CLI-10-9, 71 NRC 245 (2010)
- to support their contentions, petitioners need not proffer facts in formal affidavit or evidentiary form, sufficient to withstand a summary disposition motion; LBP-09-17, 70 NRC 311 (2009)
- to the degree the response to a summary disposition motion fails to contravene the material facts proffered by the movant, the movant's facts will be considered to be admitted; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008); LBP-10-8, 71 NRC 433 (2010)
- to the extent applicant may be subject to unreasonable or burdensome discovery requests in the future, it is free to seek relief from the board, which has ample authority to prevent or modify unreasonable discovery demands; CLI-09-6, 69 NRC 128 (2009)
- to the extent that the draft or final supplemental environmental impact statement contains data or conclusions that differ significantly from the data or conclusions in the applicant's environmental report

## SUBJECT INDEX

or in the generic environmental impact statement, a petitioner is entitled to use 10 C.F.R. 2.309(f)(2) as the grounds to file a new or amended contention; LBP-06-20, 64 NRC 131 (2006)

under 10 C.F.R. 2.309(g) and 2.310, the board determines which hearing procedure will be used (Subpart G or L) on a contention-by-contention basis; LBP-09-10, 70 NRC 51 (2009)

under pre-2004 rules, the fact that a petition or new/amended contention was filed after the hearing opportunity notice deadline because the document or other item relied upon as the submission trigger was not available was considered good cause for the late filing; LBP-10-1, 71 NRC 165 (2010)

under Subpart L informal hearing procedures, summary disposition motions are to be resolved in accord with the same standards for dispositive motions that are utilized for formal hearings under Subpart G; LBP-10-8, 71 NRC 433 (2010)

under Subpart L, a party seeking to conduct cross-examination must file a written motion and obtain leave from the board; LBP-09-10, 70 NRC 51 (2009)

under the 2004 Part 2 revisions, contentions are now required to be included with, rather than being submitted sometime subsequent to the filing of, the intervention petition; LBP-10-1, 71 NRC 165 (2010)

unfamiliarity with NRC's Rules of Practice is not sufficient excuse for late filings, particularly when the order that is being challenged expressly advised petitioner of his appellate rights and of the time within which those rights had to be exercised; CLI-10-26, 72 NRC 474 (2010)

unless a deadline has been specified in the scheduling order for the proceeding, the determination of timeliness is subject to a reasonableness standard that depends on the facts and circumstances of each situation; LBP-10-24, 72 NRC 720 (2010)

unless a proposed action involves obvious potential for offsite consequences, such as with construction or operation of reactor or certain major alterations to facility, petitioner must allege some specific injury in fact that will result from the action taken; LBP-08-18, 68 NRC 533 (2008)

unlike federal court practice, the Commission does not accept mere notice pleading in support of an admissible contention; LBP-08-24, 68 NRC 691 (2008)

use of the permissive term, "may," in 10 C.F.R. 2.310(a) indicates that licensing boards have some discretion in determining whether to hold hearings under Subpart L or Subpart G; LBP-08-6, 67 NRC 241 (2008)

vague assertions of possible harm do not amount to a showing of concrete and particularized injury to petitioner's interests that is actual or imminent, not conjectural or hypothetical; LBP-08-18, 68 NRC 533 (2008)

waiver of a rule can be granted only in unusual and compelling circumstances; LBP-08-17, 68 NRC 431 (2008)

waiver of a rule or regulation is granted on the sole ground that special circumstances with respect to the subject matter of the particular proceeding are such that the application of the rule or regulation would not serve the purposes for which the rule or regulation was adopted; LBP-09-6, 69 NRC 367 (2009)

were the Commission to accept and consider a belatedly submitted representative-standing affidavit attached to a reply brief, the applicant would be deprived of the right to challenge the substantive sufficiency of the affidavit; CLI-08-19, 68 NRC 251 (2008)

were the Commission to permit litigants to successfully invoke interlocutory review based merely on an assertion that the licensing board erred in admitting or excluding a contention, then the Commission would be opening the floodgates to a potential deluge of interlocutory appeals from any number of participants who lose admissibility rulings; CLI-09-6, 69 NRC 128 (2009)

when a board has not made even a threshold ruling on petitioner's standing and contentions, the Commission considers a petition under its usual standard for review of an interlocutory board order; CLI-08-7, 67 NRC 187 (2008)

when a claim becomes moot, a decision on the merits may be appropriate if the same basic dispute is likely to recur in the future, unless it seems sufficient to await the event or better to defer to another court; LBP-09-15, 70 NRC 198 (2009)

when a contention of omission has been rendered moot, and the intervenor wishes to raise specific challenges regarding the new information, it may timely file a new contention that addresses the admissibility factors of 10 C.F.R. 2.309(f)(1); LBP-06-16, 63 NRC 737 (2006)

when a contested proceeding has been terminated following the resolution of all submitted contentions, an individual, group, or governmental entity that wishes to interpose an additional issue must submit a new

## SUBJECT INDEX

intervention petition that addresses the standards in section 2.309(c)(1) that govern nontimely intervention petitions; LBP-10-21, 72 NRC 616 (2010)

when a federal court dismisses a claim as moot and avoids any further consideration of the merits of that claim, it does so because the claim no longer satisfies the case or controversy requirement of Article III; LBP-09-15, 70 NRC 198 (2009)

when a new contention is filed challenging new data or conclusions in NRC's environmental documents, the timeliness of the new contention is based on whether it was filed promptly after the NRC's NEPA document became publicly available, not whether it was filed promptly after the information on which the intervenor bases its challenge became publicly available; LBP-10-24, 72 NRC 720 (2010)

when a Notice of Hearing is issued before construction is commenced, additional petitions to intervene or statements of contentions may be filed as construction unfolds and reveals potential shortcomings; LBP-07-14, 66 NRC 169 (2007)

when a participant fails to meet its obligations, a board should consider the imposition of sanctions against the offending party; LBP-09-1, 69 NRC 11 (2009)

when a petitioner cannot establish proximity-plus standing, he or she must resort to establishing standing under traditional principles; LBP-10-4, 71 NRC 216 (2010)

when a reopening motion is untimely, the section 3.326(a)(1) "exceptionally grave circumstances" test supplants the "significant issue" standard under section 2.326(a)(2); LBP-10-21, 72 NRC 616 (2010)

when a state advises a licensing board that a proceeding involves a facility within its borders, the board shall not require a further demonstration of standing; LBP-06-7, 63 NRC 188 (2006)

when a substantial and important question of law is presented, Commission review is appropriate; CLI-06-7, 63 NRC 165 (2006)

when an entity seeks to intervene on behalf of its members, that entity must show that it has an individual member who can fulfill all the necessary standing elements and has authorized the organization to represent those interests; LBP-07-3, 65 NRC 237 (2007); LBP-09-3, 69 NRC 139 (2009)

when an intervenor's challenges in an admitted contention are directed at a draft environmental impact statement because the FEIS has not yet been issued by the Staff, the contention can be construed as a challenge to the FEIS without the need for further modification; LBP-06-8, 63 NRC 241 (2006)

when an investigation is open and notorious, the interview transcripts are not confidential, and the public has constructive knowledge that those interviewed had a sufficient relationship to the root problem to warrant being interviewed, the right of personal privacy being asserted is weak compared to the privacy rights in other circumstances of unsubstantiated allegation; LBP-06-25, 64 NRC 367 (2006)

when an issue is no longer live, such that a party no longer has a legal interest in the issue, then it is moot; LBP-10-10, 71 NRC 529 (2010)

when an organization takes formal corporate action to initiate litigation not only germane but integral to its purpose, that action can constitute the requisite, if implicit, proof of authorization; LBP-09-6, 69 NRC 367 (2009)

when assessing whether petitioner has set forth a sufficient interest to intervene, licensing boards apply judicial concepts of standing; LBP-08-18, 68 NRC 533 (2008)

when balancing the six discretionary intervention factors, licensing boards must keep in mind that discretionary intervention is an extraordinary procedure; CLI-06-16, 63 NRC 708 (2006)

when character or integrity issues are raised, they are expected to be directly germane to the challenged licensing action; CLI-10-9, 71 NRC 245 (2010)

when conflicting expert opinions are involved, summary disposition is rarely appropriate; LBP-06-5, 63 NRC 116 (2006)

when considering whether to undertake pendent appellate review of otherwise unappealable issues, the Commission has expressed a willingness to take up otherwise unappealable issues that are "inextricably intertwined" with appealable issues; CLI-08-27, 68 NRC 655 (2008)

when critical information has been submitted to the NRC under a claim of confidentiality and was not available to petitioners when framing their issues, it is appropriate to defer ruling on the admissibility of an issue until the petitioner has had an opportunity to review this information and submit a properly documented issue; CLI-07-18, 65 NRC 399 (2007)

when deciding whether to grant standing to a petitioner, a board shall consider the nature of the petitioner's right under AEA to be made a party to the proceeding, the nature and extent of the

## SUBJECT INDEX

- petitioner's property, financial, or other interest in the proceeding, and the possible effect of any order that may be entered in the proceeding on the petitioner's interest; LBP-07-4, 65 NRC 281 (2007)
- when denial of a license would alleviate a petitioner's asserted potential injury, any admissible contention with such a result can be prosecuted by a petitioner, regardless of whether that contention is directly related to that petitioner's articulated injury; LBP-09-16, 70 NRC 227 (2009)
- when determining whether a petitioner has established the necessary "interest" under Commission rules, licensing boards are directed by Commission precedent to look to judicial concepts of standing for guidance; LBP-07-4, 65 NRC 281 (2007)
- when environmental issues are dealt with in a separate proceeding, environmental contentions are beyond the scope of the safety proceeding unless they meet requirements beyond the ordinary contention admissibility tests; LBP-07-14, 66 NRC 169 (2007)
- when information becomes available piecemeal over time, and the foundation for a new contention does not become reasonably apparent until the last piece of information becomes available and falls into place, the test for good cause for late filing may be met; LBP-09-10, 70 NRC 51 (2009)
- when new contentions are based on breaking developments of information, they are to be treated as new or amended, not as nontimely; LBP-07-14, 66 NRC 169 (2007); LBP-08-27, 68 NRC 951 (2008)
- when NRC issues the environmental impact statement, petitioners have the opportunity to file a second wave of environmental contentions, which focus on the adequacy of the NRC Staff's EIS (or EA) under NEPA; LBP-09-25, 70 NRC 867 (2009)
- when NRC Staff is a party in a proceeding and not merely an indifferent bystander to private-party litigation, the role of the government in the litigation weighs in favor of disclosure; LBP-06-3, 63 NRC 85 (2006)
- when petitioner addresses 10 C.F.R. 2.309(c)(1)(viii), it should set out with as much particularity as possible the precise issues it plans to cover, identify its prospective witnesses, and summarize their proposed testimony; CLI-10-12, 71 NRC 319 (2010)
- when petitioner seeks to introduce a new contention after the record has been closed, it should address the reopening standards contemporaneously with a late-filed intervention petition, which must satisfy the standards for both contention admissibility and late filing; LBP-10-21, 72 NRC 616 (2010)
- when seeking to intervene in a representational capacity, an organization must identify by name and address at least one member who is affected by the licensing action and who qualifies for standing in his or her own right, and show that the member has authorized the organization to intervene on his or her behalf; LBP-10-15, 72 NRC 257 (2010)
- when standing in a prior proceeding related to the same facility is based on an issue that is outside the scope of the new proceeding, it cannot serve as the basis for standing in the new proceeding; LBP-07-14, 66 NRC 169 (2007)
- when taking the extraordinary action of allowing discretionary intervention, boards are expected to set out specific findings on each of the six factors; CLI-06-16, 63 NRC 708 (2006)
- when the Commission endorsed the use of the Federal Rules of Evidence as guidance for the boards, it did so with the express proviso that boards must apply the Part 2 rules with greater flexibility than the FRE; LBP-10-23, 72 NRC 692 (2010)
- when the Commission reviews board rulings on contention admissibility, it employs the clear error and abuse of discretion standards of review; CLI-10-17, 72 NRC 1 (2010)
- when the contested portion of a proceeding is terminated following an unchallenged merits determination in favor of applicant regarding the proceeding's sole admitted contention, the board's focus must be on the requirements applicable to reopening a closed record set out in 10 C.F.R. 2.326; LBP-10-21, 72 NRC 616 (2010)
- when the record of a proceeding has long been closed, the burden on a party seeking to reopen the record is significant; CLI-06-19, 63 NRC 19 (2006)
- where a contention alleges the omission of particular information or an issue from an application, and the information is later supplied by the applicant or considered by the Staff in a draft EIS, intervenors must timely file a new or amended contention that addresses the factors in section 2.714(b) in order to raise specific challenges regarding the new information; LBP-09-27, 70 NRC 992 (2009); LBP-10-10, 71 NRC 529 (2010)
- where a contention challenges applicant's compliance with the Commission's rules implementing the National Environmental Policy Act, materiality relates not only to the Commission's determination

## SUBJECT INDEX

regarding denial, issuance, or conditioning of the requested combined license, but also to the Commission's fulfillment of its obligations under NEPA; LBP-10-6, 71 NRC 350 (2010)

where a contention is superseded by the subsequent issuance of licensing-related documents, the contention must be disposed of or modified; LBP-10-17, 72 NRC 501 (2010)

where a hearing request was granted, but no actual notice of hearing was issued, the board approves of the settlement agreement; LBP-06-2, 63 NRC 80 (2006)

where a motion to reopen a proceeding to introduce a new contention founders on several of the initial criteria, the board find it unnecessary to prolong the ruling by analyzing all of the other factors; LBP-10-19, 72 NRC 529 (2010)

where a motion to reopen the record seeks to admit a new contention that has not previously been in controversy among the parties, movant must show that a balancing of the factors of 10 C.F.R. 2.309(c)(1) weighs in favor of reopening; LBP-08-12, 68 NRC 5 (2008)

where a petitioner is accorded standing in one proceeding, that petitioner need not make a separate demonstration of standing in another proceeding regarding that same facility and the same parties; LBP-08-24, 68 NRC 691 (2008)

where a petitioner is not conferred automatic standing in the high-level waste proceeding, a petition to intervene must provide information supporting petitioner's claim to standing, including the nature of petitioner's right under the governing statutes to be made a party, the nature of petitioner's interest in the proceeding, and the possible effect of any decision or order on petitioner's interest; LBP-09-6, 69 NRC 367 (2009)

where a potential intervenor claims that the board wrongly rejected all contentions, an appeal lies; CLI-06-24, 64 NRC 111 (2006)

where a presiding officer has reviewed an extensive record in detail, with the assistance of a technical advisor, the Commission is generally disinclined to upset his findings and conclusions, particularly on matters involving fact-specific issues or where the affidavits or submissions of experts must be weighed; CLI-06-1, 63 NRC 1 (2006)

where any issue arises over the proper scope of a contention, NRC opinions have long referred back to the bases set forth in support of the contention; CLI-10-11, 71 NRC 287 (2010)

where applicant is required to include measures to prevent nuclear criticality, an applicant's assertion that petitioners have not demonstrated that the facility involves a significant source of radioactivity with an obvious potential for offsite consequences does not stand up; LBP-07-14, 66 NRC 169 (2007)

where appropriate, the Commission will exercise its authority to instruct the board to certify novel license renewal issues; CLI-07-1, 65 NRC 1 (2007)

where intervenors have filed new contentions based on a supplement to the combined license application, in advance of a full board ruling on the original contentions, no appeal lies until the board acts on all contentions, both the original and the newly filed ones; CLI-09-18, 70 NRC 859 (2009)

where NRC Staff or the license applicant argues that the board ought to have rejected all contentions, an appeal lies; CLI-06-24, 64 NRC 111 (2006)

where petitioner conceded that information in its addendum was previously available, admitted the lateness of her filing, and made no effort at the time of its submission to justify its lateness or explain why the board should consider it, her request to supplement her submission was denied; LBP-10-4, 71 NRC 216 (2010)

where petitioner has established standing to intervene, but has not submitted an admissible contention, its request for an evidentiary hearing is denied; LBP-08-17, 68 NRC 431 (2008)

where petitioner was admitted to the case as a party at the time it filed an amended contention, consideration of the contention's admissibility is also governed by the general contention admissibility requirements of section 2.309(f)(1); CLI-10-18, 72 NRC 56 (2010)

where petitioners failed to file on time or seek an extension because they had not yet decided whether to seek to intervene, such indecision does not constitute good cause; LBP-09-26, 70 NRC 939 (2009)

where the nonmoving party declines to oppose a motion for summary disposition, the moving party is not perforce entitled to a favorable judgment, but has the burden to show that he is entitled to judgment under established principles; LBP-08-7, 67 NRC 361 (2008)

where the privilege and the need may be equally weak, but the privilege can be protected by other means, adjudicators return to the norms of full and open discovery, so that relevancy, not need, becomes the determinative standard; LBP-06-25, 64 NRC 367 (2006)

## SUBJECT INDEX

where there is no obvious potential for offsite harm, petitioner must show a specific and plausible means of how the challenged action may harm him or her; CLI-09-9, 69 NRC 331 (2009)

whether a nontimely petition and its associated contentions should be considered is based upon a balancing of eight factors; LBP-10-1, 71 NRC 165 (2010)

whether and at what distance a petitioner can be presumed to be affected must be judged on a case-by-case basis, taking into account the nature of the proposed action and the significance of the radioactive source; LBP-10-4, 71 NRC 216 (2010)

whether applicant has a valid NPDES permit is outside the scope of a power uprate proceeding; LBP-08-9, 67 NRC 421 (2008)

whether good cause exists to excuse the late-filing of a contention is the most important factor; CLI-08-8, 67 NRC 193 (2008)

whether the party seeking a stay faces potentially irreparable harm is the most important factor considered in the Commission's determination whether to grant a stay; CLI-09-23, 70 NRC 935 (2009)

with limited exceptions, no rule or regulation of the Commission is subject to attack in any adjudicatory proceeding; LBP-09-26, 70 NRC 939 (2009)

with respect to 10 C.F.R. 2.309(c)(1)(vi), the presence of another admitted party to the proceeding, particularly when that party previously raised the issue that is the subject of the new contention, weighs against a petitioner; LBP-10-1, 71 NRC 165 (2010)

with respect to an applicant's appeal, applicant must contend that, after considering all pending contentions, the board has erroneously granted a hearing to the petitioner; CLI-09-18, 70 NRC 859 (2009)

with respect to orders modifying a license, petitioner must always request a remedy that falls within the scope of the proceeding, as articulated in the notice of hearing; LBP-09-20, 70 NRC 565 (2009)

withdrawal of an application after the issuance of a notice of hearing shall be on such terms as the presiding officer may prescribe; CLI-10-13, 71 NRC 387 (2010)

within 25 days after service of a motion and proposed contention, any other party may file an answer responding to all elements of the motion and contention, and within 7 days of service of the answer, the movant may file a reply; LBP-09-22, 70 NRC 640 (2009)

without written authorization for representation, the Commission would have no concrete indication that, in fact, the member wishes to have the organization represent its interests in the proceeding; CLI-07-18, 65 NRC 399 (2007)

### RULES OF PROCEDURE

a motion to stay issuance of a license might be granted where the factors usually considered in granting emergency injunctive relief are satisfied, including the likelihood of success on the merits, irreparable harm, absence of harm to others, and the public interest; CLI-08-13, 67 NRC 396 (2008)

arguments on a separate matter, which petitioner adopts in a motion for reconsideration but could have made earlier, do not provide a compelling substantive basis for reconsidering a decision; CLI-09-8, 69 NRC 317 (2009)

as for conclusions of law, the Commission will review legal questions de novo and reverse a licensing board's legal rulings if they are a departure from or contrary to established law; CLI-10-5, 71 NRC 90 (2010)

asserted procedural defects should be called to an agency's attention when, if in fact they were defects, they would have been correctable; CLI-10-14, 71 NRC 449 (2010)

Commission rules and longstanding precedent bar discovery in connection with the preparation of proposed contentions; CLI-08-28, 68 NRC 658 (2008)

discretionary review is granted based on petitioner's showing that there is a substantial question with respect to the five considerations listed in 10 C.F.R. 2.341(b)(4); CLI-10-5, 71 NRC 90 (2010)

even if late-filed contention criteria are satisfied, proposed contentions still must meet the threshold admissibility standards contained in 10 C.F.R. 2.309(f)(1); CLI-09-7, 69 NRC 235 (2009)

failure to address the four stay factors in a motion to stay issuance of a license is reason enough to deny the motion; CLI-08-13, 67 NRC 396 (2008)

grant of petitions for review is discretionary, giving due weight to the existence of a substantial question with respect to the five considerations listed in 10 C.F.R. 2.341(b)(4); CLI-09-7, 69 NRC 235 (2009); CLI-10-18, 72 NRC 56 (2010)

## SUBJECT INDEX

in Subpart L proceedings, NRC Staff must produce a hearing file and make it available to all parties; LBP-09-22, 70 NRC 640 (2009)

license renewal may be set aside or appropriately conditioned even after it has been issued, upon subsequent administrative or judicial review; CLI-08-13, 67 NRC 396 (2008)

mere speculation concerning a nuclear accident does not demonstrate immediate and irreparable harm necessary for a stay; CLI-06-8, 63 NRC 235 (2006)

motions to reopen are governed by 10 C.F.R. 2.326, which requires satisfaction of three listed criteria and that the motion be accompanied by an affidavit that meets certain specific requirements; CLI-09-7, 69 NRC 235 (2009)

motions to reopen must be accompanied by affidavits of qualified experts presenting the factual and/or technical bases for the claim that there is a significant safety issue, together with evidence that satisfies NRC admissibility standards; CLI-08-28, 68 NRC 658 (2008); CLI-09-7, 69 NRC 235 (2009)

new bases for a contention cannot be introduced in a reply brief or at any other time after the date the original contentions are due, unless the petitioner meets the late-filing criteria set forth in 10 C.F.R. 2.309(c), (f)(2); CLI-09-7, 69 NRC 235 (2009)

no rule exists for a motion to stay issuance of a license while proceedings are pending before the board; CLI-08-13, 67 NRC 396 (2008)

NRC rules do not provide for multiple requests for reconsideration of the same decision; CLI-09-8, 69 NRC 317 (2009)

parties and the NRC Staff have a continuing duty to update their mandatory disclosures; LBP-09-22, 70 NRC 640 (2009)

petitioners may not raise entirely new arguments in a reply brief unless the standards for late-filed contentions are met; CLI-09-7, 69 NRC 235 (2009)

petitioners must examine the publicly available material and set forth their claims and the support for their claims at the outset; CLI-09-7, 69 NRC 235 (2009)

scheduling orders are to include provisions for disclosure of electronically stored information; LBP-09-22, 70 NRC 640 (2009)

Subpart G procedures focus on issues where the credibility of an eyewitness and/or issues of motive or intent of the party or eyewitness may reasonably be expected to be at issue; LBP-09-22, 70 NRC 640 (2009)

the burden of participating in a proceeding is not a harm that can form the basis for holding a proceeding in abeyance; CLI-09-8, 69 NRC 317 (2009)

the burden of satisfying the reopening requirements is a heavy one, and proponents of a reopening motion bear the burden of meeting all of these requirements; CLI-09-7, 69 NRC 235 (2009)

the Commission may grant a petition for review at its discretion, giving due weight to the existence of a substantial question with respect to the five considerations listed in 10 C.F.R. 2.341(b)(4); CLI-08-28, 68 NRC 658 (2008)

the informal procedural rules of Part 2, Subpart L place greater emphasis and responsibility on the presiding officer to oversee the development of a full and complete record; CLI-10-17, 72 NRC 1 (2010)

the opportunity for cross-examination under Subpart L is equivalent to the opportunity for cross-examination under the Administrative Procedure Act; LBP-07-4, 65 NRC 281 (2007)

the presiding officer is allowed to resolve factual and legal disputes in spent fuel storage controversies, including disagreements between experts, on the basis of a brief discovery period and written submissions and oral argument without a full trial-type evidentiary hearing; CLI-08-26, 68 NRC 509 (2008)

under Subpart K and the Nuclear Waste Policy Act, the Commission resorts to full evidentiary hearings on spent fuel storage controversies only when necessary for accuracy; CLI-08-26, 68 NRC 509 (2008)

where a motion to reopen proposes a contention not previously part of the proceeding, the requirements for late-filed contentions set out in 10 C.F.R. 2.309(c) must also be satisfied; CLI-08-28, 68 NRC 658 (2008)

See also Subpart G Procedures; Subpart L Procedures

**SAFE SHUTDOWN SYSTEMS**

evaluation of the fire protection properties of Thermo-Lag, Hemyc, and Kaowool materials and licensees' responses to those findings are discussed; DD-06-1, 63 NRC 133 (2006)

## SUBJECT INDEX

### SAFEGUARDS INFORMATION

- a 10-day deadline from the date of the hearing notice is reasonable for filing requests for access to safeguards information or sensitive, unclassified, nonsafeguards information; CLI-09-4, 69 NRC 80 (2009)
- a completed Form FD-258 (fingerprint card), signed in original ink, and submitted in accordance with 10 C.F.R. 73.57(d) is required for access to SGI; CLI-09-15, 70 NRC 1 (2009)
- a completed Form SF-85, "Questionnaire for Non-Sensitive Positions" is required for each individual who would have access to SGI; CLI-09-15, 70 NRC 1 (2009); CLI-10-4, 71 NRC 56 (2010)
- a requester may challenge an adverse determination with respect to access to safeguards information by filing a request for review; CLI-09-15, 70 NRC 1 (2009)
- after a closed hearing, parties can propose creation of a public copy of the transcript, with appropriate redactions for protected information; LBP-10-5, 71 NRC 329 (2010)
- an individual requesting access must provide a statement that explains the individual's need to know; CLI-10-4, 71 NRC 56 (2010)
- applicant requested that its mitigative strategies report be withheld from public disclosure because it contained security-related information; CLI-10-24, 72 NRC 451 (2010)
- before an adverse determination on trustworthiness and reliability for access to SGI is made, the proposed recipient must be provided any records that were considered in the determination and given an opportunity to correct or explain the information; CLI-09-15, 70 NRC 1 (2009)
- before the Office of Administration makes an adverse determination regarding a proposed recipient's trustworthiness and reliability for access to safeguards information, it must provide the proposed recipient any records that were considered in the trustworthiness and reliability determination, so that the proposed recipient will have an opportunity to correct or explain the record; CLI-10-4, 71 NRC 56 (2010)
- content of a statement that explains an individual's "need to know" safeguards information is described; CLI-09-15, 70 NRC 1 (2009)
- documents containing classified information or SGI must be evaluated paragraph by paragraph and those paragraphs containing classified information or SGI are to be redacted and the remaining paragraphs (not containing such sensitive material) are to be made available for disclosure to the public; LBP-10-2, 71 NRC 190 (2010)
- during closed portions of oral argument, only the board, NRC Staff, applicant, and individuals who signed nondisclosure affidavits pursuant to protective order would be permitted to remain in the hearing room; LBP-10-5, 71 NRC 329 (2010)
- even if the Commission could waive the application fee for access to safeguards information, the mere fact that petitioners are public interest organizations provides no special reason for departing from well-established NRC practice; CLI-09-4, 69 NRC 80 (2009)
- hearings on alternative terrorist scenario claims could not be conducted in a meaningful way without substantial disclosure of classified and safeguards information on threat assessments and security arrangements and without substantial litigation over their significance; CLI-08-1, 67 NRC 1 (2008); CLI-08-26, 68 NRC 509 (2008)
- if NRC Staff determines that the requestor has satisfied its requirements, the Office of Administration will then determine, based upon completion of the background check, whether the proposed recipient is trustworthy and reliable; CLI-09-15, 70 NRC 1 (2009)
- individuals requesting access to safeguards information who believe they belong to one or more of the categories of individuals that are exempt from the criminal history records check and background check requirements should specifically state which exemption the requestor is invoking and explaining the requestor's basis for believing that the exemption is applicable; CLI-09-15, 70 NRC 1 (2009); CLI-10-4, 71 NRC 56 (2010)
- legal authority exists for nondisclosure and protection of security-related information concerning the physical protection of nuclear power plants under 10 C.F.R. 2.390(d)(1); LBP-10-5, 71 NRC 329 (2010)
- NRC is explicitly prohibited by law from paying the expenses of or otherwise compensating intervenors, and thus cannot grant petitioners funds to prepare requests for access to safeguards information or sensitive unclassified nonsafeguards information; CLI-09-4, 69 NRC 80 (2009)

## SUBJECT INDEX

NRC Staff must file a notice of intent if, at the time of publication of Notice of Hearing, it appears that it will be impracticable for the Staff to avoid the introduction of restricted data or national security information into a proceeding; CLI-10-4, 71 NRC 56 (2010)

petitioners' request for additional information on redacted portions of the combined license application is denied because the public record indicates the nature of the redacted information; CLI-09-4, 69 NRC 80 (2009)

prior to providing safeguards information to a requestor, NRC Staff will conduct (as necessary) an inspection to confirm that the recipient's information protection system is sufficient to satisfy the requirements of 10 C.F.R. 73.22; CLI-09-15, 70 NRC 1 (2009); CLI-10-4, 71 NRC 56 (2010)

requester may challenge NRC Staff's or Office of Administration's adverse determination with respect to access to safeguards information by filing a request for review; CLI-10-4, 71 NRC 56 (2010)

section 2.390(d)(1) of 10 C.F.R. provides legal authority for nondisclosure and protection of security-related information concerning the physical protection of nuclear power plants, and for the closing of portions of hearings and other sessions in which such information will necessarily be discussed; LBP-10-5, 71 NRC 329 (2010)

SIGI qualifies for the exemption from disclosure; LBP-10-2, 71 NRC 190 (2010)

Staff may withhold some facts underlying its findings and conclusions on terrorism-related risks; CLI-07-11, 65 NRC 148 (2007)

the condition that requires investigation of an individual's character to grant access to restricted data is not linked to the general license criteria; LBP-09-6, 69 NRC 367 (2009)

the fee for access to SIGI documents is used by NRC to pay the costs it incurs in determining whether the individual should be granted access to SIGI; CLI-09-4, 69 NRC 80 (2009)

the newness of a deadline, along with petitioners' companion requests for additional resources to support their requests for such safeguards information justify a 10-day extension to request access to the information; CLI-09-4, 69 NRC 80 (2009)

the Office of Administration must determine, based upon completion of the background check, whether a proposed recipient is trustworthy and reliable, as required for access to safeguards information; CLI-10-4, 71 NRC 56 (2010)

the Secretary will assess initially whether the proposed recipient has shown a need for sensitive unclassified nonsafeguards information or SIGI; LBP-10-2, 71 NRC 190 (2010)

### SAFETY

severe accident mitigation alternatives analysis must be site specific and given careful consideration in order to comply with the Atomic Energy Act; LBP-09-10, 70 NRC 51 (2009)

the questions of the safety and environmental impacts of onsite low-level waste storage are, in the Commission's view, largely site- and design-specific, and appropriately decided in an individual licensing proceeding, provided that litigants proffer properly framed and supported contentions; CLI-09-3, 69 NRC 68 (2009)

### SAFETY ANALYSIS

a preclosure safety analysis must be performed for the high-level waste repository and it must demonstrate, among other things, that the requirements of 10 C.F.R. 63.111(a) are met; CLI-09-14, 69 NRC 580 (2009)

although the analysis required by 10 C.F.R. 50.59 is not the same as the final safety analysis, it is nevertheless a formal, written analysis involving safety issues (accident probabilities and/or consequences); LBP-10-20, 72 NRC 571 (2010)

applicant's safety analysis report is a required part of its license application and must include a preclosure safety analysis; LBP-08-1, 67 NRC 37 (2008)

early site permit applicants must submit a safety assessment that includes an analysis of a fission product release from an accident, using the expected demonstrable containment leak rate and any fission product cleanup systems intended to mitigate the consequences of the accidents; LBP-09-19, 70 NRC 433 (2009)

fission product releases are associated with accidents that have generally been assumed to result in substantial meltdown of the core with subsequent release into the containment of appreciable quantities of fission products; LBP-09-19, 70 NRC 433 (2009)

## SUBJECT INDEX

the function of 10 C.F.R. 50.59 is to deal with changes to a nuclear power plant, and it requires, as a prerequisite to any such change, that the licensee perform safety analyses in addition to those contained in the final safety analysis report; LBP-10-20, 72 NRC 571 (2010)

the preclosure safety analysis for the high-level waste repository must demonstrate that in the event of Category 1 or Category 2 event sequences, prescribed dose limits will be met; CLI-09-14, 69 NRC 580 (2009)

the purpose of the severe accident mitigation alternatives review is to ensure that any plant changes that have a potential for significantly improving severe accident safety performance are identified and assessed; CLI-10-11, 71 NRC 287 (2010)

### SAFETY ANALYSIS REPORT

a limited work authorization applicant must submit design information related to activities within the scope of the requested LWA; LBP-09-19, 70 NRC 433 (2009)

applicant's SAR is a required part of its license application and must include a preclosure safety analysis; LBP-08-1, 67 NRC 37 (2008)

the high-level waste repository application must contain information pertaining to evaluation of potential exposures during the post-closure period beyond 10,000 years following disposal; CLI-08-20, 68 NRC 272 (2008)

the SAR component of an application for a standard design certification must analyze and address the problem of extremely low probability for accidents that could result in the release of significant quantities of radioactive fission products; LBP-09-10, 70 NRC 51 (2009)

the site SAR submitted with an early site permit application must contain the seismic, meteorological, hydrologic, and geologic characteristics of the proposed site; LBP-09-19, 70 NRC 433 (2009)

See also Final Safety Analysis Report

### SAFETY CULTURE

allegations of historical improprieties are relevant in a license renewal proceeding because NRC must assure the public that the facility's current management encourages a safety-conscious attitude and must provide reasonable assurance that the facility can be safely operated; LBP-08-24, 68 NRC 691 (2008)

although not required by regulation, settlement agreements that contain language reinforcing employees' rights to raise safety concerns and communicate with the NRC avoid the possibility of being construed in a way that could be a violation; DD-10-1, 72 NRC 149 (2010)

broad-based issues akin to safety culture, such as operational history, quality assurance, quality control, management competence, and human factors, are beyond the bounds of a license renewal proceeding; CLI-10-27, 72 NRC 481 (2010)

Green inspection finding indicates that the deficiency in licensee performance has a very low-risk significance and has little or no impact on safety, but White, Yellow, and Red findings indicate increasingly serious safety problems; CLI-10-27, 72 NRC 481 (2010)

if the Commission were to permit fundamentally routine inspection findings and regulatory determinations to form the basis for safety culture contentions, this result could lead to a potentially never-ending stream of minitrials on operational issues, in which the applicant would be required to demonstrate how each issue was satisfactorily resolved; CLI-10-27, 72 NRC 481 (2010)

nondisparagement clauses in retention bonus agreements are common in employment agreements and NRC should not interfere with these agreements unless it finds such a clause violates 10 C.F.R. 50.7(f) or is applied in a fashion that prevents or retaliates against an employee for engaging in protected activities such as communicating with NRC; DD-10-1, 72 NRC 149 (2010)

NRC continually takes measures to include the monitoring of safety culture in its oversight programs and internal management processes; CLI-10-27, 72 NRC 481 (2010)

operating reactor licensees are not required to implement an employee concerns program, but are required to establish and implement an effective corrective action program; DD-10-1, 72 NRC 149 (2010)

petitioner's request for action concerning deficiencies in licensee's employee concerns program is denied; DD-10-1, 72 NRC 149 (2010)

requests for diagnostic evaluation team examination, safety culture assessment, and the NRC investigation at other licensee facilities are rejected for review because they are not requests for enforcement-type actions; DD-08-1, 67 NRC 347 (2008)

## SUBJECT INDEX

the purpose of 10 C.F.R. 50.7(f) is to ensure that licensees do not enter into employment agreements that would prohibit, restrict, or otherwise discourage an employee or former employee from providing the NRC with information of regulatory significance; DD-10-1, 72 NRC 149 (2010)

to the extent petitioner believes that NRC Staff has overlooked facts indicating an inadequate safety culture as a matter separate and apart from license renewal, then its remedy is to direct Staff's attention to the supporting facts via a petition for enforcement action; CLI-10-27, 72 NRC 481 (2010)

### SAFETY EVALUATION

early site permit applicants must perform an evaluation and analysis of the postulated fission product release to evaluate the offsite radiological consequences; LBP-09-19, 70 NRC 433 (2009)

Part 54 compliance is not dependent on complete fulfillment of Part 51 requirements given that the Commission has explicitly excluded SAMA analysis from Part 54 and distinguished the safety requirements of Part 54 from the environmental evaluation commanded by Part 51; LBP-10-13, 71 NRC 673 (2010)

requiring a full reassessment of safety issues that were thoroughly reviewed when the facility was first licensed and continue to be routinely monitored and assessed by ongoing agency oversight and agency-mandated licensee programs would be both unnecessary and wasteful at the license renewal stage; LBP-07-4, 65 NRC 281 (2007)

seismic siting factors are part of the safety determination a board must make in an early site permit proceeding; LBP-07-9, 65 NRC 539 (2007)

### SAFETY EVALUATION REPORT

adequacy of the applicant's license application, not NRC Staff's safety evaluation, is the safety issue in any licensing proceeding, and contentions on the adequacy of the content of the Safety Evaluation Report are not cognizable in a proceeding; LBP-06-27, 64 NRC 438 (2006)

for purposes of the mandatory/uncontested portion of an early site permit proceeding, the board takes official notice of publicly available documents associated with NRC Staff's safety and environmental reviews; LBP-09-19, 70 NRC 433 (2009)

### SAFETY INFORMATION

early site permit applications must contain a description and safety assessment of the site that includes an analysis and evaluation of the major structures, systems, and components of the facility that bear significantly on the acceptability of the site under radiological consequence evaluation factors; LBP-09-19, 70 NRC 433 (2009)

### SAFETY ISSUES

a board appropriately rejected the contention of a petitioner who failed to support his premise that a river water intake valve is a safety-related system with information or expert opinion; CLI-07-25, 66 NRC 101 (2007)

a board must determine whether an ESP application and the record of the proceeding contain sufficient information, and the review of the application by the NRC Staff has been adequate, to support a negative finding on the question of whether the issuance of an early site permit will be inimical to the common defense and security or to the health and safety of the public; LBP-07-6, 65 NRC 429 (2007); LBP-07-9, 65 NRC 539 (2007)

a finding of reasonable assurance that there will be adequate protection to the health and safety of the public is based on judgment, not on the application of a mechanical verbal formula, a set of objective standards, or specific confidence interval; LBP-08-25, 68 NRC 763 (2008)

a new issue is raised only when the argument itself (as distinct from its chances of success) was not apparent at the time of the application; CLI-09-7, 69 NRC 235 (2009)

a new safety contention can be filed, with leave of the board, on a showing that the new contention is based on information that was not previously available and is materially different from previously available information, and the new contention has been submitted in a timely fashion based on the availability of the subsequent information; LBP-09-9, 70 NRC 41 (2009)

a safety contention arising from a matter resolved in an early site permit proceeding is within the scope of a combined license proceeding that references the ESP if it concerns whether the site characteristics and design parameters or terms or conditions specified in the ESP have been met or a requested variance from the ESP is unwarranted or should be modified; LBP-08-15, 68 NRC 294 (2008)

## SUBJECT INDEX

- a technically accurate projection of the time-limited aging analysis that predicts that the component will fail due to aging during the 20-year period of extended operation will not suffice; LBP-08-25, 68 NRC 763 (2008)
- a timely motion to reopen may be denied if it raises issues that are not of major significance to plant safety whereas a nontimely motion may be granted if it raises an issue of sufficient gravity; LBP-10-21, 72 NRC 616 (2010)
- adequate aging management programs are both a required element of the license renewal application and a central finding that NRC must make before it can issue a license renewal; LBP-08-25, 68 NRC 763 (2008)
- because a contention focuses on the safety-related aspects of a COL application, it is not apparent that the issue resolved in the board's admissibility ruling has any particular implications for a contention challenging the environmental impacts of long-term onsite low-level radioactive waste storage admitted and pending in another proceeding; LBP-10-8, 71 NRC 433 (2010)
- boards must perform two types of inquiries with respect to safety matters in uncontested early site permit proceedings; LBP-06-28, 64 NRC 460 (2006)
- boards should conduct a simple sufficiency review of uncontested issues; LBP-06-28, 64 NRC 460 (2006)
- burden is on applicant to show that concrete in containment structures will maintain its integrity during the extended period of operations or to develop an aging management plan that ensures that any indication of degradation is detected and remediated; LBP-08-13, 68 NRC 43 (2008)
- current licensing basis represents an evolving set of requirements and commitments for a specific plant that are modified as necessary over the life of a plant to ensure continuation of an adequate level of safety; LBP-08-25, 68 NRC 763 (2008)
- during the license renewal term, the current licensing basis incorporates the CLB for the current license, including all licensee commitments, plus any new commitments to monitor, manage, and correct age-related degradation unique to license renewal; LBP-08-25, 68 NRC 763 (2008)
- each application must contain an integrated plant assessment for which specified components will demonstrate that the effects of aging will be adequately managed so that the intended function(s) will be maintained consistent with the current licensing basis for the period of extended operation; LBP-08-13, 68 NRC 43 (2008)
- each license renewal application must contain an evaluation of time-limited aging analyses, a list of TLAAs, a demonstration relating to TLAAs, and the actual TLAAs; LBP-08-25, 68 NRC 763 (2008)
- even if the time-limited aging analyses predict that the component will fail during the period of extended operation, a license renewal can still be granted if the applicant demonstrates that the effects of aging will be adequately managed during the period of extended operation; LBP-08-25, 68 NRC 763 (2008)
- if a matter as presented is devoid of safety significance, there is no likelihood whatsoever that a materially different result would have been likely had the newly proffered evidence been considered initially; LBP-08-12, 68 NRC 5 (2008)
- if safety contentions filed before construction begins would be considered premature and/or speculative, NRC hearing opportunities could soon come to be viewed as chimerical; LBP-07-14, 66 NRC 169 (2007)
- if the problem raised in a late-filed contention presents a sufficiently grave threat to public safety, a board should reopen the record to consider it even if it is not newly discovered and could have been raised in timely fashion; LBP-08-12, 68 NRC 5 (2008)
- in a license renewal proceeding, contentions must focus on topics related to the detrimental effects of aging and related time-limited issues; LBP-07-15, 66 NRC 261 (2007)
- in a license renewal proceeding, petitioners must demonstrate that an issue focuses on the potential impacts of an additional 20 years of nuclear power plant operation, not on everyday operational issues; CLI-06-4, 63 NRC 32 (2006)
- in a mandatory proceeding, a licensing board is to determine whether the application and record of the proceeding contain sufficient information and whether the NRC Staff's review of the application has been adequate; LBP-06-17, 63 NRC 747 (2006)
- in an uncontested uranium enrichment proceeding, a licensing board, without conducting a de novo evaluation of the application, will determine whether the application and record of the proceeding contain sufficient information to support licensing and whether NRC Staff's review of the application has been adequate; LBP-06-17, 63 NRC 747 (2006)

## SUBJECT INDEX

in evaluating metal fatigue, a component's cumulative usage factor is the fundamental parameter used to determine whether it will likely develop cracks during the license renewal period and thus is subject to an aging management plan; LBP-08-13, 68 NRC 43 (2008)

in the context of a safety contention, petitioner must show that a waiver of the regulation is necessary to reach a significant safety problem; LBP-10-15, 72 NRC 257 (2010)

in the mandatory hearing, NRC must address whether issuance of an early site permit will be inimical to the common defense and security or to the health and safety of the public; CLI-07-27, 66 NRC 215 (2007)

in the mandatory hearing, NRC must address whether, taking into consideration the site criteria contained in 10 C.F.R. Part 100, a reactor or reactors having the characteristics that fall within the parameters for the site can be constructed and operated without undue risk to the health and safety of the public; CLI-07-27, 66 NRC 215 (2007)

in the mandatory proceeding on an early site permit application, the board must review the sufficiency of the record and the sufficiency of the NRC Staff's review, and decide if they are adequate to support the Staff's proposed findings; LBP-07-9, 65 NRC 539 (2007)

issues that were reviewed for the initial license and that have been closely monitored by NRC inspection during the license term need not be reviewed again in the context of a license renewal application; LBP-08-13, 68 NRC 43 (2008)

metal fatigue is an example of age-related degradation that properly falls within the scope of a license renewal proceeding; LBP-07-15, 66 NRC 261 (2007)

new information concerning safety may be new evidence, but not necessarily raise a new issue; CLI-09-7, 69 NRC 235 (2009)

NRC hearings on safety issues concern the adequacy of the license application, not the NRC Staff's work, but NRC hearings on NEPA issues focus entirely on the adequacy of the NRC Staff's work; CLI-07-17, 65 NRC 392 (2007)

power reactor licensees have safely stored and managed low-level radioactive waste under NRC oversight for years without the development of immediate safety problems or concerns; LBP-09-16, 70 NRC 227 (2009)

proponent of a motion to reopen must do more than simply raise a safety issue, but must show that the safety issue it raises is significant; LBP-10-19, 72 NRC 529 (2010)

protection against a highly unlikely loss-of-coolant accident has long been an essential part of the defense-in-depth concept used by the nuclear power industry and the AEC to ensure the safety of nuclear power plants; LBP-08-12, 68 NRC 5 (2008)

safety issues other than age-related degradation may arise in connection with renewal that are not relevant to safety during the initial operating license term but, because of their plant-specific nature, must be addressed in renewals case by case; LBP-08-25, 68 NRC 763 (2008)

site characterization issues are safety-related because, in determining the acceptability of a site, factors important to hydrological radionuclide transport must be obtained from onsite measurements; LBP-07-9, 65 NRC 539 (2007)

technical accuracy of the time-limited aging analyses is necessary, but not sufficient, to demonstrate that it remains valid because a technically accurate TLAA that shows that the component will fail during the period of extended operation does not satisfy 10 C.F.R. 54.21(c)(1)(i); LBP-08-25, 68 NRC 763 (2008)

the "demonstrations" mandated by 10 C.F.R. 54.21(c)(1)(i) and (ii) require that the time-limited aging analyses both be performed in a technically accurate manner and produce a prediction that the component will not fail due to aging during the period of extended operation; LBP-08-25, 68 NRC 763 (2008)

the board in an uncontested early site permit proceeding must decide whether, taking into consideration the site criteria contained in 10 C.F.R. Part 100, a reactor or reactors having the characteristics that fall within the parameters for the site can be constructed without undue risk to the health and safety of the public; LBP-07-9, 65 NRC 539 (2007)

the board may not consider that long-term erosion might entirely eliminate the proposed repository's upper geologic barrier unless the erosion is also shown to be a safety concern in the relatively near term; LBP-10-22, 72 NRC 661 (2010)

## SUBJECT INDEX

the licensing basis for a nuclear power plant during the renewal term consists of the current licensing basis together with new commitments to monitor, manage, and correct age-related degradation unique to license renewal; LBP-08-25, 68 NRC 763 (2008)

the only safety issue where the regulatory process may not adequately maintain a plant's current licensing basis involves the potential detrimental effects of aging on the functionality of certain systems, structures, and components during the period of extended operations; CLI-10-27, 72 NRC 481 (2010)

the potential for tritium contamination of water is primarily a NEPA issue because it involves the environmental impacts of the proposed early site permit and possible mitigation measures, but also has a safety element because safety regulations require that exposure to radiation be as low as reasonably achievable; LBP-07-9, 65 NRC 539 (2007)

the presiding officer or licensing board has discretion to accelerate the merits hearing on safety issues, but not on environmental issues; CLI-07-17, 65 NRC 392 (2007)

the required low-level radioactive waste storage information is tied to a combined license applicant's particular plans for compliance through design, operational organization, and procedures; CLI-10-2, 71 NRC 27 (2010)

the statutory conditions for grant of a license renewal are described; LBP-08-25, 68 NRC 763 (2008)

there is no requirement that such concerns must be raised in the environmental report; LBP-10-10, 71 NRC 529 (2010)

threshold environmental legal and policy issues need not await issuance of the final environmental impact statement; CLI-07-17, 65 NRC 392 (2007)

under 10 C.F.R. 2.325, applicant has the burden of proving that it has met the reasonable assurance standard of 10 C.F.R. 54.29; LBP-08-25, 68 NRC 763 (2008)

whether excessive safety design could lead to licensing uncertainty, unnecessary costs, or delays are not issues material to the high-level waste repository construction authorization proceeding; CLI-09-14, 69 NRC 580 (2009)

whether NEPA requires the NRC to consider potential health effects of consuming irradiated food raises the kind of broad legal question appropriate for Commission interlocutory review; CLI-08-4, 67 NRC 171 (2008)

See also Generic Safety Issues

### SAFETY REVIEW

aging management review for license renewal focuses on structures and components that perform passive functions, with no moving parts or changes in configuration or properties; CLI-10-14, 71 NRC 449 (2010)

aging management review for license renewal focuses on those systems, structures, and components that are of principal importance to safety; CLI-10-14, 71 NRC 449 (2010)

all non-safety-related structures, systems, and components whose failure could prevent satisfactory accomplishment of any of the safety functions identified in 10 C.F.R. 54.4(a)(1), including auxiliary systems necessary for the function of safety-related systems, are subject to aging management review for license renewal; CLI-10-14, 71 NRC 449 (2010)

all structures, systems, and components relied on in safety analyses or plant evaluations to perform a function that demonstrates compliance with the NRC's regulations for fire protection, environmental qualification, pressurized thermal shock, anticipated transients without scram, and station blackout are subject to aging management review for license renewal; CLI-10-14, 71 NRC 449 (2010)

claims about the adequacy of the Staff's review are not litigable in licensing proceedings; CLI-08-23, 68 NRC 461 (2008)

cracking of a nonsafety-related steam dryer could cause a release of loose parts that could have an adverse impact on safety-related equipment and thus it is within the scope of aging management review in a license renewal proceeding; LBP-08-25, 68 NRC 763 (2008)

findings that a board must make for issuance of an early site permit are clarified; LBP-09-19, 70 NRC 433 (2009)

for license renewal, the focus is on those potential detrimental effects of aging that are not routinely addressed by ongoing regulatory oversight programs; LBP-07-11, 66 NRC 41 (2007); LBP-08-22, 68 NRC 590 (2008)

general categories of structures, systems, and components falling within the initial focus of the safety review for license renewal are outlined; CLI-10-14, 71 NRC 449 (2010)

## SUBJECT INDEX

if a structure or component is already required to be replaced at mandated, specified time periods, it would fall outside the scope of license renewal review; LBP-06-23, 64 NRC 257 (2006); LBP-08-22, 68 NRC 590 (2008)

in an exceptional case, NRC may conduct an irradiator facility siting review if a unique threat is involved which may not be addressed by state and local requirements; CLI-08-3, 67 NRC 151 (2008)

issues relating to a plant's current licensing basis are ordinarily beyond the scope of a license renewal review, because those issues already are monitored, reviewed, and commonly resolved as needed by ongoing regulatory oversight; LBP-06-7, 63 NRC 188 (2006)

it is neither possible nor necessary for the Staff to verify each and every factual assertion in complex license applications; CLI-08-23, 68 NRC 461 (2008)

monitoring, and the installation of monitoring wells, is a matter for ongoing operation and maintenance, and not within the scope of matters properly considered in a license renewal; LBP-08-22, 68 NRC 590 (2008)

NRC provides detailed guidance for Staff personnel reviewing the safety aspects of early site permit applications; LBP-09-19, 70 NRC 433 (2009)

NRC Staff review for license renewals focuses on certain aging effects that would not reveal themselves through performance indicators associated with active functions; CLI-08-23, 68 NRC 461 (2008)

NRC Staff's review of the safety-related aspects of each license renewal application focuses on the adequacy of the applicant's aging management programs and an evaluation of the applicant's time-limited aging analyses; LBP-08-25, 68 NRC 763 (2008)

NRC's public health and safety review for a license renewal ordinarily is limited to a review of the plant structures and components that will require an aging management review for the period of extended operation and the plant's systems, structures, and components that are subject to an evaluation of time-limited aging analyses; LBP-06-7, 63 NRC 188 (2006); LBP-06-10, 63 NRC 314 (2006)

petitioner alleges failure to conduct safety review of the modification of the controlled access area by the addition of an undocumented roof access for a siphon breaker experiment; DD-10-3, 72 NRC 171 (2010)

renewal applicants must demonstrate that they will adequately manage the detrimental effects of aging for all important components and structures, with attention, for example, to metal fatigue, erosion, corrosion, thermal and radiation embrittlement, microbiologically induced effects, creep, and shrinkage; CLI-06-24, 64 NRC 111 (2006)

review of a license renewal application does not reopen issues relating to a plant's current licensing basis, or any other issues that are subject to routine and ongoing regulatory oversight and enforcement; CLI-06-24, 64 NRC 111 (2006)

Staff's audit, or sampling, method of verifying a license renewal applicant's aging management programs, together with the other components of its review, enables the Staff to make the safety findings necessary for issuance of a renewed license; CLI-08-23, 68 NRC 461 (2008)

Staff's review must support a conclusion that a proposed irradiator would protect health and minimize danger to life or property; CLI-08-3, 67 NRC 151 (2008)

the aging management review for license renewal does not focus on all aging-related issues; CLI-10-27, 72 NRC 481 (2010)

the general scope of the license renewal safety review is outlined in 10 C.F.R. 54.4; CLI-10-14, 71 NRC 449 (2010)

the only severe accident mitigation alternatives that applicant must implement as part of a license renewal safety review are those dealing with aging management; LBP-10-13, 71 NRC 673 (2010)

the Part 54 review is limited to those potentially detrimental effects of aging that are not routinely addressed by ongoing regulatory oversight programs; CLI-06-24, 64 NRC 111 (2006); LBP-06-23, 64 NRC 257 (2006)

the scope of the licensing board's review in an uncontested early site permit proceeding is described; LBP-07-1, 65 NRC 27 (2007)

there is no legal requirement that the Staff find that the proposed design is not too conservative or that the associated costs are not excessive as part of its safety review of the high-level waste repository construction authorization application; CLI-09-14, 69 NRC 580 (2009)

to the extent that any analyses performed during the initial licensing process were limited to the initial 40-year license period, a license renewal applicant must show that it has reassessed these time-limited

## SUBJECT INDEX

aging analyses and that these analyses remain valid for the period of extended operation; CLI-06-24, 64 NRC 111 (2006)

### SAFETY-RELATED

all non-safety-related structures, systems, and components whose failure could prevent satisfactory accomplishment of any of the safety functions identified in 10 C.F.R. 54.4(a)(1), including auxiliary systems necessary for the function of safety-related systems, are subject to aging management review for license renewal; CLI-10-14, 71 NRC 449 (2010)

cracking of a nonsafety-related steam dryer could cause a release of loose parts that could have an adverse impact on safety-related equipment and thus it is within the scope of aging management review in a license renewal proceeding; LBP-08-25, 68 NRC 763 (2008)

each engineered or administrative criticality control/control system must be designated an item relied on for safety; LBP-06-17, 63 NRC 747 (2006)

motion to reopen to introduce a new contention asserting issues related to aging management of effects of moist or wet environments on buried, below-grade, underground, or hard-to-access safety-related electrical cables is denied; LBP-10-19, 72 NRC 529 (2010)

structures, systems, and components that are relied upon to remain functional during and following design-basis events to ensure the integrity of the reactor coolant pressure boundary, the capability to shut down the reactor and maintain it in a safe shutdown condition, or the capability to prevent or mitigate the consequences of accidents that could result in potential offsite exposures are subject to aging management review for license renewal; CLI-10-14, 71 NRC 449 (2010)

the design basis flood is the magnitude of the flood event that is used to evaluate safety structures, systems, and components important to safety during facility design; LBP-09-25, 70 NRC 867 (2009)

### SANCTIONS

a board may impose sanctions including dismissal of the specific contentions, dismissal of the adjudication, or dismissal of the application for any continuing unexcused failure to make the required mandatory disclosures; LBP-09-30, 70 NRC 1039 (2009)

a key factor in establishing the length of a potential employment ban is whether the subject has taken responsibility for his actions and expressed the appropriate remorse; LBP-09-24, 70 NRC 676 (2009)

a licensing board is clearly authorized to dismiss a party who obstructs the discovery process, disobeys the board orders, and engages in willful, bad-faith, and prejudicial conduct toward another party; CLI-08-29, 68 NRC 899 (2008)

a single charge, if serious enough, could justify a 5-year employment ban; LBP-09-24, 70 NRC 676 (2009)

a spectrum of sanctions from minor to severe may be employed by a board to assist in the management of a proceeding; LBP-10-21, 72 NRC 616 (2010)

an attempt to circumvent page-limit rules by incorporating documents by reference could be grounds for sanctions; CLI-10-9, 71 NRC 245 (2010)

because of an attorney's previous disregard of the NRC's practices and procedures, the Commission orders the Office of the Secretary to screen all filings bearing the offender's signature and not to accept or docket them unless they meet all procedural requirements; CLI-06-4, 63 NRC 32 (2006)

boards lack authority to establish prospective sanctions for any failure by the Staff and/or the applicant to comply with the Board's notice conditions; CLI-09-2, 69 NRC 55 (2009)

boards may reprimand, censure, or suspend intervenors for contemptuous conduct; CLI-07-28, 66 NRC 275 (2007)

carefully crafted restraints in the Constitution preserve freedom by curbing the exercise of power; LBP-09-24, 70 NRC 676 (2009)

courts have been careful to strictly limit the exercise of summary contempt power to cases in which it was clear that all of the elements of misconduct were personally observed by the judge; LBP-09-24, 70 NRC 676 (2009)

dismissal due to counsel's malfeasance is a logical extension of the board's disciplinary authority to reprimand, censure, or suspend from a proceeding any party or representative who refuses to comply with its directions; CLI-08-29, 68 NRC 899 (2008)

dismissal of a party falls within the spectrum of sanctions available to the boards to assist in the management of proceedings, although dismissal should be reserved for severe cases; CLI-08-29, 68 NRC 899 (2008)

## SUBJECT INDEX

- examples include warning a party that offending conduct will not be tolerated in the future, refusing to consider a filing, denying the right to cross-examine or present evidence, dismissing contentions, imposing sanctions on counsel, or dismissing the party from the proceeding; LBP-10-21, 72 NRC 616 (2010)
- exercise of the power of compulsory process must be carefully circumscribed when the investigative process tends to impinge upon such highly sensitive areas as freedom of speech or press, freedom of political association, and freedom of communication of ideas; LBP-09-24, 70 NRC 676 (2009)
- factors considered in selecting an appropriate sanction include relative importance of the unmet obligation, its potential for harm to other parties or the orderly conduct of the proceeding, whether its occurrence is an isolated incident or a part of a pattern of behavior, the importance of the safety or environmental concerns raised by the party, and all of the circumstances; LBP-10-21, 72 NRC 616 (2010)
- failure of an organizational participant to have a representative provide an appearance notice in accord with section 2.314(b) might provide cause for an appropriate sanction for failure to properly prosecute the litigation; LBP-10-7, 71 NRC 391 (2010)
- failure under 10 C.F.R. 2.309(d) to support an intervention petition with affidavits providing necessary information regarding the basis for representational standing could interpose a jurisdictional flaw potentially warranting the participant's dismissal from the proceeding; LBP-10-7, 71 NRC 391 (2010)
- immediately effective deprivation of the legally acknowledged right to pursue one's livelihood should not be imposed without the Staff having substantial reason to do so and explaining its reasons in advance and in some detail; LBP-09-24, 70 NRC 676 (2009)
- licensing boards have awarded payment of litigation fees and expenses from a licensee to an intervenor if there has been legal harm to the intervenors caused by some activity or action of the licensee; LBP-09-1, 69 NRC 11 (2009)
- licensing boards have broad discretion to sanction willful, prejudicial, and bad-faith behavior; LBP-09-1, 69 NRC 11 (2009)
- sanctions have been imposed against a party seeking to file a written request for hearing only when that party has not followed established Commission procedures; LBP-08-18, 68 NRC 533 (2008); LBP-08-19, 68 NRC 545 (2008); LBP-08-20, 68 NRC 549 (2008)
- states can be required to carefully tailor the means of satisfying a legitimate state interest when fundamental liberties and rights are threatened; LBP-09-24, 70 NRC 676 (2009)
- the appropriateness of a 5-year employment ban may not depend on a board's upholding all of the several charges and then imposing a multiyear ban on a sort of "1 year for each violation" approach; LBP-09-24, 70 NRC 676 (2009)
- the Commission may reject an appeal summarily for violating NRC procedural regulations; CLI-08-17, 68 NRC 231 (2008)
- the target of an immediately effective enforcement order has the right to challenge the immediate effectiveness and the promise of an expedited hearing; LBP-09-24, 70 NRC 676 (2009)
- to succeed in imposing pretrial detention because the accused is a danger to the community, the government must, among other things, prove in an adversary hearing by clear and convincing evidence that no conditions of release can reasonably ensure the community's safety; LBP-09-24, 70 NRC 676 (2009)
- when a participant fails to meet its obligations, a board should consider the imposition of sanctions against the offending party; LBP-09-1, 69 NRC 11 (2009)
- where the government has deprived an individual of a property interest without a hearing, the government must be prepared to show an important government interest, accompanied by a substantial assurance that the deprivation is not baseless or unwarranted; LBP-09-24, 70 NRC 676 (2009)
- with an eye toward mitigating prejudice to nonbreaching participants, boards must tailor sanctions to bring about improved future compliance; LBP-10-21, 72 NRC 616 (2010)
- SCHEDULE, BRIEFING**
- allowing discovery or an evidentiary hearing with respect to safety-related issues to proceed before the final safety evaluation report is issued will serve to further the Commission's objective to ensure a fair, prompt, and efficient resolution of contested issues; CLI-09-15, 70 NRC 1 (2009)
- although participants generally must comply with the schedule established by the presiding officer, they might sometimes be unable to meet established deadlines; LBP-10-21, 72 NRC 616 (2010)

## SUBJECT INDEX

Commission has authority to issue case-specific orders modifying procedural regulations, including milestone schedules; CLI-08-18, 68 NRC 246 (2008)

in establishing and enforcing schedule deadlines, boards must take care not to compromise the Commission's fundamental commitment to a fair and thorough hearing process; LBP-10-21, 72 NRC 616 (2010)

licensing boards have authority to set a proceeding's schedule and to ensure compliance with that schedule; LBP-10-21, 72 NRC 616 (2010)

obligations of parties include participation within the schedule established for the proceeding despite the burden on a participant's time and resources and despite uncertainties engendered by the potential for new information; CLI-09-8, 69 NRC 317 (2009)

the presiding officer may grant extensions of time for individual milestones for the participants' filings, and may delay its own issuances for up to 30 days beyond the date of the milestone set in the hearing schedule; CLI-08-18, 68 NRC 246 (2008)

### SCHEDULING

an initial scheduling order is designed to ensure proper case management of the proceeding; LBP-09-22, 70 NRC 640 (2009)

application for approval of an alternate schedule for the submission of a decommissioning plan for a site containing expended depleted uranium munitions is approved; LBP-08-4, 67 NRC 105 (2008)

boards have an obligation to establish a case scheduling order, and to advise the Commission of any significant delay in meeting major activities set forth in the hearing schedule; CLI-09-17, 70 NRC 309 (2009)

hearing schedule milestones have been modified for the high-level-waste proceeding; CLI-08-25, 68 NRC 497 (2008)

licensing boards have authority to control the schedule for a proceeding to ensure that intervenors have adequate time to prepare new or amended contentions in response to new information; LBP-10-17, 72 NRC 501 (2010)

no later than 1 year after issuance of the combined license or at the start of construction, whichever is later, the COL licensee must submit its schedule for completing the inspections, tests, or analyses and provide schedule updates; LBP-09-19, 70 NRC 433 (2009)

orders are to include provisions for disclosure of electronically stored information; LBP-09-22, 70 NRC 640 (2009)

the Commission has the authority to enter into case-specific procedural orders to facilitate the efficient resolution of issues before the board; CLI-07-17, 65 NRC 392 (2007)

the initial scheduling order is to be issued within 55 days of the board decision granting intervention and admitting contentions; LBP-09-22, 70 NRC 640 (2009)

the licensing board is directed to revise its mandatory hearing schedule with a goal of issuing a final Commission decision on the pending application within 30 months from the date that the application was received; CLI-07-5, 65 NRC 109 (2007)

the presiding officer or licensing board has discretion to accelerate the merits hearing on safety issues, but not on environmental issues; CLI-07-17, 65 NRC 392 (2007)

to be granted, an alternate schedule for submission of a decommissioning plan must be necessary to the effective conduct of decommissioning operations; LBP-07-7, 65 NRC 507 (2007)

under certain conditions, the Commission may approve an alternative schedule for the submittal of a decommissioning plan; LBP-06-6, 63 NRC 167 (2006)

within 45 days after the filing of answers and replies the presiding officer must issue a decision on each request for hearing/petition to intervene, absent an extension from the Commission; CLI-07-20, 65 NRC 499 (2007)

### SECRETARY OF THE COMMISSION

referral of petitioner's motion to admit a late-filed contention effectively returns jurisdiction to the licensing board to rule on the motion; CLI-09-5, 69 NRC 115 (2009)

the Secretary is authorized to establish procedures for obtaining access to sensitive unclassified nonsafeguards information prior to granting intervention in a licensing proceeding; LBP-10-2, 71 NRC 190 (2010)

the Secretary of the Commission has authority to refer a motion to the board for any action the board deems appropriate; CLI-09-5, 69 NRC 115 (2009)

## SUBJECT INDEX

the Secretary will assess initially whether the proposed recipient has shown a need for sensitive unclassified nonsafeguards information or safeguards information; LBP-10-2, 71 NRC 190 (2010)

### SECURITY

- a contention that applicant has failed to identify non-safety-related systems, structures, and components in the security area whose failure could prevent satisfactory accomplishment of the functions of safety-related systems, structures, and components is not admissible because security-related issues are not within the scope of a license renewal proceeding; LBP-06-20, 64 NRC 131 (2006)
- a domestic corporation in which a foreign entity has an ownership interest is considered controlled or dominated if its will is subjugated to the will of the foreign entity on primary safety matters or access policies that may be inimical to the national defense and security of the United States; LBP-09-4, 69 NRC 170 (2009)
- a person may be denied access at a licensee facility based on falsification of information, trustworthiness or reliability issues, and issues related to fitness for duty; DD-10-2, 72 NRC 163 (2010)
- a senior plant supervisor's deliberate failure to contact the appropriate site security manager to initiate an assessment of the trustworthiness and reliability of two contract technicians who falsified a maintenance report is a violation; LBP-08-14, 68 NRC 279 (2008)
- access control measures to prevent exposure to radiation from slag and baghouse dust piles until final decommissioning is completed are discussed; CLI-09-1, 69 NRC 1 (2009)
- an individual requiring clarification or resolution of an access authorization concern must resolve the issue with the licensee where unescorted access was last held or otherwise denied; DD-10-2, 72 NRC 163 (2010)
- disclosure of documents under the National Environmental Policy Act is expressly governed by the Freedom of Information Act; CLI-08-8, 67 NRC 193 (2008)
- each licensee must evaluate access denial status on a case-by-case basis and make a determination of trustworthiness and reliability; DD-10-2, 72 NRC 163 (2010)
- if petitioners wish to propose security measures in addition to those laid out in a Staff enforcement order, their remedy is to petition NRC under 10 C.F.R. 2.206 for further enforcement action or to ask NRC to institute a rulemaking to impose broader security measures; CLI-10-3, 71 NRC 49 (2010)
- issuance of a post-9/11 security order does not amount to unlawfully promulgated regulations; CLI-10-3, 71 NRC 49 (2010)
- measures the NRC has imposed upon its licensees since September 11, 2001, and national anti-terrorist measures, coupled with the robust nature of spent fuel pools, make the probability of a successful terrorist attack, though numerically indeterminable, very low; LBP-08-21, 68 NRC 554 (2008)
- NRC has not established an ownership interest threshold or plateau above which a foreign entity is presumed to have control or domination over the applicant; LBP-09-4, 69 NRC 170 (2009)
- nuclear industry was required to develop, implement, and maintain an industry database accessible by NRC-licensed facilities to share information, including determination of whether an individual is denied access at any other NRC-licensed facility; DD-10-2, 72 NRC 163 (2010)
- petitioner alleges failure to conduct safety review of the modification of the controlled access area by the addition of an undocumented roof access for a siphon breaker experiment; DD-10-3, 72 NRC 171 (2010)
- potentially disqualifying information for unescorted access authorization may include unfavorable information from an employer, developed or disclosed criminal history, credit history, judgments, unfavorable reference information, evidence of drug or alcohol abuse, discrepancies between information disclosed and developed; DD-10-2, 72 NRC 163 (2010)
- terrorism contentions are directly related to security and are therefore, under NRC license renewal rules, unrelated to the detrimental effects of aging, and consequently are beyond the scope of, not material to, and inadmissible in, a license renewal proceeding; CLI-07-8, 65 NRC 124 (2007); CLI-07-9, 65 NRC 139 (2007)
- the "design basis threat" rule describes general adversary characteristics that designated NRC licensees, including nuclear power plant licensees, are required to defend against with high assurance; CLI-07-8, 65 NRC 124 (2007)
- the Atomic Energy Act restriction on foreign ownership focuses on safeguarding access to nuclear materials, and not on other licensing matters; LBP-09-4, 69 NRC 170 (2009)

## SUBJECT INDEX

the decision of whether or not to grant a license to a corporation hinges on whether the applicant is being controlled or dominated by the foreign entity; LBP-09-4, 69 NRC 170 (2009)  
until decommissioning is completed, a licensee must limit actions to those related to decommissioning and control access to restricted areas until they are suitable for release; CLI-09-1, 69 NRC 1 (2009)  
See also Common Defense and Security; National Security Information

### SECURITY CLEARANCES

high assurance must be provided that individuals granted unescorted access are trustworthy and reliable, and do not constitute an unreasonable risk to the public health and safety, including a potential to commit radiological sabotage; LBP-08-14, 68 NRC 279 (2008)

### SECURITY PLANS

hearings on alternate terrorist scenario claims could not be conducted in a meaningful way without substantial disclosure of classified and safeguards information on threat assessments and security arrangements and without substantial litigation over their significance; CLI-08-26, 68 NRC 509 (2008)

### SEISMIC ANALYSIS

adequacy of the analysis for the site found in the Final Safety Analysis Report is not a litigable issue; LBP-08-16, 68 NRC 361 (2008)

applicant's site safety analysis report must include seismic and geologic characteristics of the proposed site with appropriate consideration of the most severe historical natural phenomena that have been reported for the site; LBP-09-19, 70 NRC 433 (2009)

in providing information on seismic and geologic characteristics of a proposed site, applicants must conform to the requirements of 10 C.F.R. 100.23; LBP-09-19, 70 NRC 433 (2009)

the site safety analysis report submitted with an early site permit application must contain the seismic, meteorological, hydrologic, and geologic characteristics of the proposed site; LBP-09-19, 70 NRC 433 (2009)

### SEISMIC DESIGN

a nuclear power plant must be designed so that, if the safe shutdown earthquake occurs, certain structures, systems, and components will remain functional and within applicable stress, strain, and deformation limits; LBP-07-9, 65 NRC 539 (2007)

panoramic irradiators to be built in seismic areas must have concrete shielding meeting the seismic design requirements of appropriate industry or local building codes; CLI-08-3, 67 NRC 151 (2008)

the stability of ISFSI concrete pads holding dry spent fuel storage casks during earthquakes is addressed; DD-07-2, 65 NRC 365 (2007)

### SEISMIC ISSUES

petitioner has alleged sufficient new information concerning the seismic situation to raise a prima facie showing that strict application of the generic NEPA analysis of the management of spent fuel in nuclear reactors would not serve the purpose for which Part 51 Appendix B and 10 C.F.R. 51.53(c)(2) were adopted; LBP-10-15, 72 NRC 257 (2010)

petitioner has presented a prima facie showing for waiver of the NRC regulation covering the environmental impacts of spent fuel pool accidents generically, and has shown that its contention concerning earthquake-induced spent fuel pool accidents is otherwise admissible; LBP-10-15, 72 NRC 257 (2010)

See also Earthquakes

### SEISMIC RISK

seismic siting factors are part of the safety determination a board must make in an early site permit proceeding; LBP-07-9, 65 NRC 539 (2007)

### SENIOR REACTOR OPERATOR LICENSE

license automatically expires upon termination of employment with the facility licensee; LBP-09-14, 70 NRC 193 (2009)

license is limited to the facility for which it is issued; LBP-09-14, 70 NRC 193 (2009)

no license that petitioner might be awarded could be active because (not having been at the facility for more than 6 months) petitioner could not have performed the functions of an operator or senior operator for the necessary minimum number of hours during each calendar quarter; LBP-09-14, 70 NRC 193 (2009)

## SUBJECT INDEX

where applicant had proposed that a senior reactor operator license be both issued and cancelled retroactively, the Commission declined to engage in such an empty exercise; LBP-09-14, 70 NRC 193 (2009)

### SENSITIVE UNCLASSIFIED NONSAFEGUARDS INFORMATION

a board's determination on a request for access is reviewed de novo; CLI-10-24, 72 NRC 451 (2010)

a participant in administrative litigation, having an even greater interest in obtaining access to SUNSI than does the general public, is entitled to obtain documents under standards no more restrictive than would be accorded the general public under the Freedom of Information Act; LBP-10-2, 71 NRC 190 (2010)

a SUNSI access order is issued by the Commission or NRC in its role as supervisor of NRC Staff and does not constitute an adjudicatory ruling by the Commission; LBP-10-2, 71 NRC 190 (2010)

a SUNSI requester files a challenge to NRC Staff's adverse determination with respect to access to SUNSI with the presiding officer, and the NRC Staff may file a reply to the requester's challenge; LBP-09-5, 69 NRC 303 (2009)

although 10 C.F.R. 2.390(d) never uses the term "sensitive unclassified nonsafeguards information," this regulation seems to fit NRC Staff's claim that SUNSI is security-related; LBP-10-2, 71 NRC 190 (2010)

although the NRC public website states that SUNSI encompasses a wide variety of categories (e.g., personnel privacy, attorney-client privilege, confidential source), there is no legal basis for sweeping aside the well-established and long-recognized privileges such as the Privacy Act, 5 U.S.C. § 552(a), and the attorney-client privilege; LBP-10-2, 71 NRC 190 (2010)

although the SUNSI access procedures do not impose a high threshold for demonstrating need, they must be applied consistent with the principle that it is important to prevent unnecessary disclosure of sensitive information; LBP-09-5, 69 NRC 303 (2009)

an appeal as of right by NRC Staff is permitted on the question of whether a request for access to SUNSI should have been denied in whole or in part; CLI-10-24, 72 NRC 451 (2010)

because of the security-related SUNSI categorization of a Staff guidance document used to assess an application's compliance with NRC rules, the Staff would not have to produce the document but would be required to identify the document as part of its continuing duty of disclosure; CLI-10-24, 72 NRC 451 (2010)

documents that qualify as exempt from FOIA disclosure are described; LBP-10-2, 71 NRC 190 (2010)

excessively broad claims of SUNSI in a licensing proceeding impact not just an intervenors' access to documents, but also the public's access to the adjudicatory process; LBP-10-2, 71 NRC 190 (2010)

for documents that are otherwise discoverable, but for which there is a claim of privilege or protected status, NRC Staff must list them and provide sufficient information for assessing their privilege or protected status; CLI-10-24, 72 NRC 451 (2010); CLI-10-25, 72 NRC 469 (2010)

handling of confidential commercial or financial (proprietary) information that has been submitted to the agency is governed by 10 C.F.R. 2.390; CLI-10-24, 72 NRC 451 (2010)

if a SUNSI request is denied, the NRC Staff shall briefly state the reasons for the denial; LBP-09-5, 69 NRC 303 (2009)

if petitioners offer a reason for needing information material to the findings a licensing board must make and otherwise explain why publicly available versions of the application would not be sufficient to provide the basis and specificity for a proffered contention, they would satisfy the need criterion; LBP-09-5, 69 NRC 303 (2009)

in adjudicating petitioners' appeal from the NRC Staff's denial of their request for access to sensitive unclassified nonsafeguards information, boards consider whether Staff correctly applied the criteria established by the Commission; LBP-09-5, 69 NRC 303 (2009)

in its supervisory capacity, the Commission provides guidance on the "need for SUNSI" analysis, for use in those instances when an access order applies; CLI-10-24, 72 NRC 451 (2010)

interlocutory appeal to the Commission of certain rulings relating to SUNSI is authorized; LBP-10-2, 71 NRC 190 (2010)

NRC is explicitly prohibited by law from paying the expenses of or otherwise compensating intervenors, and thus cannot grant petitioners funds to prepare requests for access to safeguards information or sensitive unclassified nonsafeguards information; CLI-09-4, 69 NRC 80 (2009)

## SUBJECT INDEX

- petitioner's lack of access to SUNSI may hinder it in its ability to demonstrate why publicly available versions of the application would not be sufficient to provide the basis and specificity for a proffered contention, but this does not absolve a petitioner from at least endeavoring to address this criterion; LBP-09-5, 69 NRC 303 (2009)
- procedures and schedules set forth in the SUNSI access order are intended only to deal with issues arising before intervention occurs and a board is created; LBP-10-2, 71 NRC 190 (2010)
- requests for access must demonstrate a reasonable basis to believe that a potential party is likely to establish standing to intervene and that the proposed recipient has a need for the SUNSI; LBP-09-5, 69 NRC 303 (2009)
- Staff's designation of its own material as SUNSI is inconsistent with SUNSI's purported objective of protecting licensee or applicant data; LBP-10-2, 71 NRC 190 (2010)
- SUNSI requests need not be accompanied by affidavits or include lengthy, detailed justifications addressing the likelihood of standing; LBP-09-5, 69 NRC 303 (2009)
- SUNSI requests need to include the name and address of the potential party and a description of the potential party's particularized interest that could be harmed by the proposed licensing action sufficient to demonstrate a reasonable basis to conclude that he or she could likely establish standing; LBP-09-5, 69 NRC 303 (2009)
- the "need for SUNSI" inquiry is essentially a relevance inquiry just as a federal court litigant must show that information sought in discovery is relevant to its claims or defenses; CLI-10-24, 72 NRC 451 (2010)
- the procedure for seeking access to SUNSI does not provide a method for general or topical access, but only access to information necessary to meaningfully participate in an adjudicatory proceeding and to provide the basis and specificity of a proffered contention; LBP-09-5, 69 NRC 303 (2009)
- the requirement to discuss the basis for a proffered contention to obtain access to SUNSI is not to be equated with the discussion that would be necessary to support an admissible contention; LBP-09-5, 69 NRC 303 (2009)
- the Secretary of the Commission is authorized to establish procedures for obtaining access to SUNSI prior to granting intervention in a licensing proceeding; LBP-10-2, 71 NRC 190 (2010)
- the Secretary will assess initially whether the proposed recipient has shown a need for SUNSI or safeguards information; LBP-10-2, 71 NRC 190 (2010)
- the showing required for "need" for SUNSI could include, but does not require (nor is it limited to), an explanation that the information will be used as support for a contention; CLI-10-24, 72 NRC 451 (2010)
- the standard of review in an appeal from an NRC Staff denial of a SUNSI request is de novo; LBP-09-5, 69 NRC 303 (2009)
- to demonstrate a need for SUNSI, intervenors must discuss the basis for a proffered contention and describe why the information available to the intervenors is not sufficient to provide the basis and specificity for a proffered contention; LBP-10-5, 71 NRC 329 (2010)
- to satisfy the likelihood of establishing standing criteria in the context of a SUNSI request, petitioner organizations are required to provide sufficient information to allow the NRC Staff to conclude that the requirements for standing could likely be satisfied; LBP-09-5, 69 NRC 303 (2009)
- upon a showing of need, petitioners' request to obtain access to an unredacted application was granted; CLI-10-24, 72 NRC 451 (2010)
- withholding from public access an entire document just because it may contain some SUNSI information is not only a misuse of the SUNSI designator, but fails the logic test by excluding the public from access to information that is not security-related; LBP-10-2, 71 NRC 190 (2010)
- SERVICE OF DOCUMENTS**
- a filing will be considered complete by electronic transmission when the filer performs the last act that it must perform to transmit a document, in its entirety, electronically; LBP-08-16, 68 NRC 361 (2008)
- any ambiguity relative to the filing date for hearing requests arising from the language of the agency's hearing opportunity notice should be construed in favor of a participant who was seeking to comply with the notice; LBP-08-16, 68 NRC 361 (2008)
- electronic production, filing, and service of all documents are required in the high-level waste proceeding; CLI-08-25, 68 NRC 497 (2008)

## SUBJECT INDEX

the language of the Commission's case-specific notice establishing 11:59 p.m. Eastern Standard Time as the filing time for hearing petitions controls over the agency's rule of general applicability for all cases that refers only to 11:59 p.m. Eastern Time; LBP-08-16, 68 NRC 361 (2008)

the time an E-filing submission is received by the system server is not necessarily controlling relative to the timeliness of the filing; LBP-08-16, 68 NRC 361 (2008)

to be considered timely, a document must be submitted to the E-filing system for docketing and service by 11:59 p.m. Eastern Time; LBP-08-16, 68 NRC 361 (2008)

### SETTLEMENT AGREEMENTS

a clause in a settlement agreement regarding standing does not apply to NRC Staff, nor would it bind a future licensing board to make any particular determination regarding whether any of the petitioners has established its standing, either as of right or as a matter of discretion; LBP-09-23, 70 NRC 659 (2009)

a notice of hearing having been issued by the Commission in a COL proceeding, the board has jurisdiction to approve a settlement agreement; LBP-09-23, 70 NRC 659 (2009)

a notice of withdrawal combined with an attached memorandum of understanding whereby applicant agrees to perform certain actions and testing, in return for which the intervenor agrees to withdraw, with prejudice, from the litigation, constitutes a *quid pro quo* arrangement which is a settlement agreement within the meaning of 10 C.F.R. 2.338; LBP-06-18, 63 NRC 830 (2006)

allowance is made for petitioner's military service in Iraq that interrupted his operator license testing; LBP-06-2, 63 NRC 80 (2006)

although not required by regulation, settlement agreements that contain language reinforcing employees' rights to raise safety concerns and communicate with the NRC avoid the possibility of being construed in a way that could be a violation; DD-10-1, 72 NRC 149 (2010)

boards are authorized to impose additional requirements as part of a settlement; LBP-06-18, 63 NRC 830 (2006)

finding that a settlement agreement is consistent with the content and form requirements and is in the public interest, the board approves the agreement and terminates this contested hearing; LBP-09-23, 70 NRC 659 (2009)

for a licensing board to review a settlement agreement for compliance with agency regulations, and to evaluate whether the agreement is plainly in the public interest, the wording of the agreement must be clear enough for the board to ascertain unambiguously what its terms signify; LBP-06-26, 64 NRC 431 (2006)

if approved by the presiding officer, the terms of the settlement or compromise shall be embodied in a decision or order settling and discontinuing the proceeding; LBP-06-18, 63 NRC 830 (2006)

licensing boards must be satisfied that the terms of a proposed agreement reflect a fair and reasonable resolution of the matter at hand, are in keeping with the objectives of NRC's enforcement policy, and satisfy the requirements of 10 C.F.R. 2.338(g) and (h); LBP-09-11, 70 NRC 151 (2009); LBP-09-12, 70 NRC 159 (2009)

NRC has a longstanding policy of encouraging the fair and reasonable settlement of contested licensing proceedings; LBP-06-18, 63 NRC 830 (2006)

opponents of a settlement may not simply object to settlement in order to block it, but must show some substantial basis for disapproving the settlement or the existence of some material issue that requires resolution; LBP-06-18, 63 NRC 830 (2006)

Severity Level III violation for licensee's failure to develop and implement a formalized procedure to neutralize a spill involving hydrofluoric acid, resulting in exposure to licensee operators, is recategorized to a violation with no assigned severity level; LBP-10-18, 72 NRC 519 (2010)

the agreement becomes effective upon its execution by both parties, but the agreement is contingent upon approval by the board; LBP-09-12, 70 NRC 159 (2009)

the form, content, and board approval provisions of 10 C.F.R. 2.338 are not limited to settlement agreements achieved via alternative dispute resolution, but apply to all settlement agreements that purport to be binding on the proceeding and that are submitted to a board after the notice of hearing; LBP-06-18, 63 NRC 830 (2006)

the process for determining whether a proposed settlement is in the public interest is left to the discretion of the board; LBP-06-18, 63 NRC 830 (2006)

the section 2.341(a)(2) sua sponte review process that applies to a licensing board determination approving a settlement agreement affords the Commission the opportunity to correct any participant or

## SUBJECT INDEX

- board misapprehensions regarding the items contemplated in the settlement agreement; LBP-09-23, 70 NRC 659 (2009)
- upon submitting for approval to work under a reciprocity agreement licensee will send a copy of the board order confirming the settlement agreement to the regulator processing the reciprocity application at least 2 weeks prior to engaging in activity authorized by the reciprocity agreement; LBP-09-12, 70 NRC 159 (2009)
- when an adjudicatory proceeding has been terminated before a licensing board pursuant to a settlement agreement, the board loses its jurisdiction over, and thus its authority to act with respect to, that licensing action; LBP-09-23, 70 NRC 659 (2009)
- when evaluating whether a settlement in an enforcement proceeding is in the public interest, four factors are considered; LBP-06-18, 63 NRC 830 (2006)
- SETTLEMENT NEGOTIATIONS
  - although interested governmental entities would not have a formal role in a proceeding absent the admission of parties and contentions, boards expect that such entities would be kept appropriately apprised of the other participants' settlement efforts; LBP-09-23, 70 NRC 659 (2009)
- SETTLEMENTS
  - administrative agencies and their adjudicators routinely approve stipulations and settlements to which fewer than all the parties in a case subscribe; CLI-06-18, 64 NRC 1 (2006)
  - basing settlements on an analysis of litigation risk and optimum use of the NRC Staff's scarce resources is commonplace in litigation and has, in the past, received Commission approval; CLI-06-18, 64 NRC 1 (2006)
  - in a challenge to an NRC Staff immediately effective enforcement order prohibiting a former licensee employee from working in NRC-licensed activities for 5 years, the licensing board finds a proposed settlement to be in the public interest; LBP-06-21, 64 NRC 219 (2006)
  - no adjudication is required where a licensing board finds a settlement to be in the public interest; LBP-06-21, 64 NRC 219 (2006)
  - the burden of a settlement with an intervenor regarding NEPA issues falls on the NRC Staff; CLI-06-18, 64 NRC 1 (2006)
  - the Commission has a longstanding policy of supporting settlements; CLI-06-18, 64 NRC 1 (2006)
  - third parties have no absolute right to veto settlements that the agreeing parties find to their advantage; CLI-06-18, 64 NRC 1 (2006)
- SEVERE ACCIDENT MITIGATION ALTERNATIVES ANALYSIS
  - a contention that applicant's SAMA analysis is deficient regarding input data on evacuation times, economic consequences, and meteorological patterns, resulting in incorrect conclusions about the costs versus benefits of possible mitigation alternatives, is admitted; LBP-06-23, 64 NRC 257 (2006)
  - a contention that fails to provide even a ballpark figure for the cost of implementing any proposed SAMAs is inadmissible because it is difficult to assess whether a SAMA may be cost-beneficial and thus warrant serious consideration; LBP-09-26, 70 NRC 939 (2009)
  - a license renewal applicant need not discuss severe accident mitigation alternatives for generic, or Category 1, issues; CLI-07-3, 65 NRC 13 (2007)
  - a NEPA analysis of the potential impacts of deliberate attacks on a spent fuel pool and analysis of alternatives to mitigate spent fuel pool accidents are beyond the scope of a license renewal proceeding and therefore inadmissible; CLI-09-10, 69 NRC 521 (2009)
  - a SAMA analysis contention was found to be inadmissible because it lacked supporting information regarding the relative costs and benefits of that proposed alternative; LBP-10-15, 72 NRC 257 (2010)
  - additional briefing is requested on whether any additional SAMAs should have been identified as potentially cost-beneficial, not whether further analysis may refine the details in the SAMA NEPA analysis; CLI-09-11, 69 NRC 529 (2009)
  - adequacy or inadequacy of applicant's SAMA analysis is within the scope of a license renewal proceeding; LBP-10-15, 72 NRC 257 (2010)
  - all nuclear safety and environmental issues concerning severe accident mitigation design alternatives associated with NRC's environmental assessment for the AP1000 design and Appendix 1B of the generic Design Control Document are considered resolved by the Commission; LBP-09-2, 69 NRC 87 (2009)

## SUBJECT INDEX

alternatives to mitigate severe accidents must be considered for all plants that have not previously considered such alternatives; LBP-07-4, 65 NRC 281 (2007)

although "severe accident," "severe accident mitigation alternatives," and "SAMA" are not defined in NRC's NEPA regulations, the NRC policy documents that originated the terms clearly limit them to nuclear reactors and do not include spent fuel pools or storage; LBP-10-15, 72 NRC 257 (2010)

although the methodology is available to provide the required analysis, neither NEPA nor NRC regulations require that the analysis under 10 C.F.R. 51.45(c) be performed using that methodology; LBP-09-26, 70 NRC 939 (2009)

an early site permit is conditioned to require that radioactive waste management systems, structures, and components for a future reactor must include features to preclude accidental releases of radionuclides into potential liquid pathways; CLI-07-14, 65 NRC 216 (2007)

an environmental impact statement must disclose measures that will mitigate potential adverse environmental impacts; LBP-09-4, 69 NRC 170 (2009)

analyses are not required for the spent fuel storage impacts associated with license renewals; LBP-10-15, 72 NRC 257 (2010)

analyses are rooted in a cost-benefit assessment, and the purpose of the assessment is to identify plant changes whose costs would be less than their benefit; LBP-10-14, 72 NRC 101 (2010)

analyses must be site specific and given careful consideration in order to comply with safety and environmental requirements; LBP-09-10, 70 NRC 51 (2009)

applicant requested that its mitigative strategies report be withheld from public disclosure because it contained security-related information; CLI-10-24, 72 NRC 451 (2010)

applicant's environmental report for its license renewal application must include a SAMA analysis, outlining the costs and benefits of potential mitigation measures to reduce severe accident risk or consequences; CLI-10-30, 72 NRC 564 (2010)

applicant's environmental report is required to analyze the alternatives available for reducing or avoiding adverse environmental effects; LBP-09-10, 70 NRC 51 (2009); LBP-09-19, 70 NRC 433 (2009); LBP-09-26, 70 NRC 939 (2009)

challenge to specific input data to the SAMA analysis could bring a contention on adequacy of an evacuation plan within the scope of license renewal; LBP-07-11, 66 NRC 41 (2007)

completeness and clarity are of paramount importance in meeting the hydrology requirements; LBP-07-9, 65 NRC 539 (2007)

contention challenging a particular use of a straight-line Gaussian air dispersion model in the applicant's SAMA analysis is admissible in a license renewal proceeding; CLI-09-11, 69 NRC 529 (2009)

contention raising question of whether a quantitative as opposed to qualitative analysis of terrorist attacks and the alternatives for mitigation and prevention is necessary is referred to the Commission as a novel issue; LBP-10-15, 72 NRC 257 (2010)

environmental reports must include an analysis that considers and balances the environmental effects of the proposed action, the environmental impacts of alternatives to the proposed action, and alternatives available for reducing or avoiding adverse environmental effects; LBP-10-16, 72 NRC 361 (2010)

existence of another independent nuclear power plant within the 10-mile-radius emergency planning zone of a proposed new nuclear power plant is a significant factor for purposes of emergency planning for the new reactor; LBP-09-10, 70 NRC 51 (2009)

factors to be considered when evaluating a proposed site include population density and use characteristics, the nature and proximity of man-related hazards such as airports, and the physical characteristics of the site including seismology, meteorology, geology, and hydrology; LBP-07-9, 65 NRC 539 (2007)

for a fact to be material with regard to the SAMA analysis, it must be a fact that can reasonably be expected to impact the Staff's conclusion that any particular mitigation alternative may or may not be cost-effective; LBP-07-13, 66 NRC 131 (2007)

for all issues designated as Category 1 the Commission has concluded that (generically) additional site-specific mitigation alternatives are unlikely to be beneficial; CLI-07-3, 65 NRC 13 (2007)

if NRC Staff finds any SAMA conferring a substantial benefit compared to its cost of implementation, it must make such SAMA a license condition for the renewed operating license; LBP-10-13, 71 NRC 673 (2010)

## SUBJECT INDEX

- if NRC Staff has not previously considered severe accident mitigation alternatives for the applicant's plant in an environmental impact statement or related supplement or in an environmental assessment, a consideration of alternatives to mitigate severe accidents must be provided; LBP-07-13, 66 NRC 131 (2007)
- if the accident sought to be considered is sufficiently unlikely that it can be characterized fairly as remote and speculative, then consideration under NEPA is not required as a matter of law; LBP-09-26, 70 NRC 939 (2009)
- if the benefit-to-cost ratio is glaringly large for a potentially cost-beneficial SAMA, NRC Staff must, as a prerequisite to extending a license, impose implementation of that SAMA as a license condition or, in the alternative, explain why it is not requiring implementation of that SAMA; LBP-10-13, 71 NRC 673 (2010)
- in evaluating early site permit applications, where detailed design information is not available, the Commission may defer resolution of SAMAs until the construction permit or combined license stage; LBP-09-19, 70 NRC 433 (2009)
- issues are safety-related because, in determining the acceptability of a site, factors important to hydrological radionuclide transport must be obtained from onsite measurements; LBP-07-9, 65 NRC 539 (2007)
- license renewal environmental reports must include a SAMA analysis if not previously considered by NRC Staff; CLI-10-11, 71 NRC 287 (2010); LBP-10-15, 72 NRC 257 (2010)
- low probability is the key to applying NEPA's rule-of-reason test to contentions that allege that a specified accident scenario presents a significant environmental impact that must be evaluated; LBP-09-26, 70 NRC 939 (2009)
- motion for summary disposition of contention questioning applicant's handling of its SAMA analysis concerning evacuation times, economic consequences, and meteorological patterns is granted; LBP-07-13, 66 NRC 131 (2007)
- NEPA implicitly requires agencies to consider measures to mitigate environmental impacts; LBP-09-10, 70 NRC 51 (2009); LBP-09-19, 70 NRC 433 (2009)
- NEPA requires dealing with uncertainties by inclusion in an environmental impact statement of a summary of existing credible scientific evidence relevant to evaluating the reasonably foreseeable significant adverse impacts regarding those events with potential catastrophic consequences even if their probability is low; LBP-09-26, 70 NRC 939 (2009)
- NEPA requires the NRC to provide a reasonable mitigation alternatives analysis, containing reasonable estimates, including full disclosures of any known shortcomings in methodology, incomplete or unavailable information and significant uncertainties; CLI-10-22, 72 NRC 202 (2010)
- NRC cannot generically dispense with the consideration of SAMAs, under NEPA, through a policy statement issued pursuant to its Atomic Energy Act authority; LBP-10-13, 71 NRC 673 (2010)
- NRC regulations require the use of probabilistic rather than deterministic methodology because modeling of extremely complex time- and physical condition-dependent phenomena is involved; LBP-07-13, 66 NRC 131 (2007)
- NRC Staff is obligated to consider severe accident mitigation alternatives if it has not already done so as part of its NEPA obligations in a license renewal review; LBP-10-13, 71 NRC 673 (2010)
- NRC Staff's hard look at all potentially cost-beneficial severe accident mitigation alternatives under NEPA and Part 51 ensures that it has given proper consideration to all relevant factors in granting a license renewal; LBP-10-13, 71 NRC 673 (2010)
- onsite storage of spent fuel during the license renewal term is a Category 1 issue and as such does not warrant any additional site-specific analysis of mitigation measures; CLI-10-14, 71 NRC 449 (2010)
- Part 54 compliance is not dependent on complete fulfillment of Part 51 requirements given that the Commission has explicitly excluded SAMA analysis from Part 54 and distinguished the safety requirements of Part 54 from the environmental evaluation commanded by Part 51; LBP-10-13, 71 NRC 673 (2010)
- petitioner is not required to redo SAMA analyses in order to raise a material issue; LBP-08-13, 68 NRC 43 (2008)
- petitioner need not submit a sensitivity analysis in order to establish that a SAMA-related contention is material; LBP-10-15, 72 NRC 257 (2010)

## SUBJECT INDEX

- petitioner's assumption that, because it cannot check all SAMA analysis details, the analysis is incomplete or incorrect is mere speculation and is insufficient to support the admissibility of its contention; LBP-08-13, 68 NRC 43 (2008)
- potential plant modifications as well as plant procedural changes or training program changes that can reduce the risks of severe accidents are considered; LBP-09-19, 70 NRC 433 (2009)
- probabilistic risk assessment is the Commission's accepted and standard practice in SAMA analyses; LBP-10-15, 72 NRC 257 (2010)
- the analysis of reasonably foreseeable significant adverse impacts regarding those events with potential catastrophic consequences must be supported by credible scientific evidence, must not be based on pure conjecture, and must be within the rule of reason; LBP-09-26, 70 NRC 939 (2009)
- the manner in which NRC meets its obligation to consider these alternatives is to perform a cost-benefit analysis; LBP-07-13, 66 NRC 131 (2007)
- the National Environmental Policy Act demands no fully developed plan or detailed examination of specific measures that will be employed to mitigate adverse environmental effects; CLI-10-11, 71 NRC 287 (2010)
- the only SAMAs that applicant must implement as part of a license renewal safety review are those dealing with aging management; LBP-10-13, 71 NRC 673 (2010)
- the purpose of the SAMA review is to ensure that any plant changes that have a potential for significantly improving severe accident safety performance are identified and assessed; CLI-10-11, 71 NRC 287 (2010)
- under the National Environmental Policy Act, Staff is obliged to perform a SAMA analysis; LBP-07-13, 66 NRC 131 (2007)
- unless it looks genuinely plausible that inclusion of an additional factor or use of other assumptions or models may change the cost-benefit conclusions for the SAMA candidates evaluated, no purpose would be served to further refine the SAMA analysis, whose goal is only to determine what safety enhancements are cost-effective to implement; CLI-10-11, 71 NRC 287 (2010)
- where it is shown that even with no evacuation a severe accident mitigation alternative is still not cost-effective, any errors in assumptions regarding the evacuation time or pattern cannot reasonably be expected to rise to a level necessary to cause implementation of any SAMA to become cost-effective; LBP-07-13, 66 NRC 131 (2007)
- where these analyses are customarily prepared using the MACCS2 code, and where this code has been widely used and accepted as an appropriate tool in a large number of similar instances, the Staff is fully justified in finding that analysis using this code is an acceptable method; LBP-07-13, 66 NRC 131 (2007)
- whether a SAMA must be analyzed in an environmental report hinges on whether it could potentially be cost-beneficial; LBP-08-13, 68 NRC 43 (2008)
- SEVERE ACCIDENT MITIGATION DESIGN ALTERNATIVES ANALYSIS**
- all environmental issues concerning SAMDAs associated with the information in the NRC's environmental assessment for a certified design are considered resolved; LBP-09-19, 70 NRC 433 (2009)
- challenge to the SAMDA analysis performed for the AP1000 certified design constitutes an impermissible challenge to NRC regulations; CLI-10-1, 71 NRC 1 (2010); CLI-10-9, 71 NRC 245 (2010); LBP-10-10, 71 NRC 529 (2010)
- challenges to a SAMDA analysis are within the scope of a combined license proceeding; LBP-10-14, 72 NRC 101 (2010)
- design certification applicants are required to address SAMDAs; LBP-09-19, 70 NRC 433 (2009)
- early site permit applicants must submit a safety assessment that includes an analysis of a fission product release from an accident, using the expected demonstrable containment leak rate and any fission product cleanup systems intended to mitigate the consequences of the accidents; LBP-09-19, 70 NRC 433 (2009)
- if a combined license application references a design certification, then the presiding officer shall not admit contentions concerning SAMDAs unless the contention demonstrates that the site characteristics fall outside of the site parameters in the standard design certification; LBP-09-10, 70 NRC 51 (2009)
- if intervenors provide no facts or expert opinion explaining why a conclusion in applicant's environmental report is incorrect, or fail to identify any SAMDAs that should be adopted if some unspecified new

## SUBJECT INDEX

- analysis were performed or any cost-beneficial SAMAs, their contention should be dismissed; LBP-10-10, 71 NRC 529 (2010)
- issue of whether location of a nuclear plant in a densely populated area allowed adoption of generic risk factors and a SAMDA decision supported by a policy statement rather than a rulemaking was confronted; LBP-10-10, 71 NRC 529 (2010)
- issues are resolved for an application referencing a design control document if the specific site parameters are covered by the site parameters assumed in the DCD SAMDA analysis; LBP-09-19, 70 NRC 433 (2009)
- the environmental report associated with each application for a standard design certification must address the costs and benefits of SAMDAs; LBP-09-10, 70 NRC 51 (2009)
- this analysis focuses on severe accident mitigation dealing with reactor design and hardware issues; LBP-09-10, 70 NRC 51 (2009)
- SHOW-CAUSE PROCEEDINGS**
- challenges to a licensee's current compliance with its current licensing basis or other operational requirements may be raised via a section 2.206 petition; LBP-07-17, 66 NRC 327 (2007)
- invocation of a 10 C.F.R. 2.206 procedure requires that NRC Staff give serious consideration to requests concerning a licensed facility as long as the request specifies the action sought and sets forth the facts that constitute the basis of the request; LBP-10-7, 71 NRC 391 (2010)
- the proper vehicle to challenge the adequacy of the Updated Final Safety Analysis Report would be a section 2.206 petition, not a challenge to the license renewal; LBP-08-13, 68 NRC 43 (2008)
- See also Request for Action
- SITE CHARACTERIZATION**
- a decommissioning plan for a restricted release site will be judged exclusively upon whether residual radioactivity levels will be as low as is reasonably achievable and the total effective dose equivalent to offsite human beings will be below 25 mrem; LBP-08-4, 67 NRC 105 (2008)
- a decommissioning plan must include an adequate site characterization; LBP-08-4, 67 NRC 105 (2008)
- applicant's site safety analysis report must include seismic and geologic characteristics of the proposed site with appropriate consideration of the most severe historical natural phenomena that have been reported for the site; LBP-09-19, 70 NRC 433 (2009)
- description of the conditions of the site or separate building or outdoor area must be sufficient to evaluate the acceptability of the decommissioning plan; LBP-08-4, 67 NRC 105 (2008)
- DOE is prohibited from characterizing a second repository site unless Congress has specifically authorized and appropriated funds for such activities; LBP-10-11, 71 NRC 609 (2010)
- DOE may determine that the Yucca Mountain site is unsuitable for development as a repository during site characterization; LBP-10-11, 71 NRC 609 (2010)
- in providing information on seismic and geologic characteristics of a proposed site, applicants must conform to the requirements of 10 C.F.R. 100.23; LBP-09-19, 70 NRC 433 (2009)
- petitioner raises a genuine dispute with the application with respect to the adequacy of information needed to characterize the site and offsite hydrogeology to ensure confinement of the extraction fluids; LBP-10-16, 72 NRC 361 (2010)
- the scope of admissible issues in the high-level waste repository proceeding is discussed; LBP-09-6, 69 NRC 367 (2009)
- the site safety analysis report submitted with an early site permit application must contain the seismic, meteorological, hydrologic, and geologic characteristics of the proposed site; LBP-09-19, 70 NRC 433 (2009)
- SITE CHARACTERIZATION PLANS**
- if a board finds that licensee's field sampling plan is not acceptable, it could deny licensee's alternate schedule for submission of a decommissioning plan; LBP-07-7, 65 NRC 507 (2007)
- sufficient information must be included so that pathways for significant offsite contamination can be effectively tracked and the quantity of those pathways estimated; LBP-08-4, 67 NRC 105 (2008)
- sufficient information should be provided to allow the NRC to determine the extent and range of expected radioactive contamination; LBP-08-4, 67 NRC 105 (2008)
- what constitutes "sufficient information," depends, to a large extent, on site-specific conditions; LBP-08-4, 67 NRC 105 (2008)

## SUBJECT INDEX

### SITE HYDROLOGY

- factors important to hydrological radionuclide transport must be obtained from onsite measurements; LBP-09-19, 70 NRC 433 (2009)
- in its review of early site permit applications, Staff must consider physical characteristics of the site, specifically noting that factors important to hydrological radionuclide transport must be obtained from onsite measurements; LBP-09-19, 70 NRC 433 (2009)
- the site safety analysis report submitted with an early site permit application must contain the seismic, meteorological, hydrologic, and geologic characteristics of the proposed site; LBP-09-19, 70 NRC 433 (2009)

### SITE REMEDIATION

- a provision for ALARA determinations allows the use of cost as a factor for determining what level of remediation is cost-effective below the standards, but is not allowed by the New Jersey Agreement State Program; CLI-10-8, 71 NRC 142 (2010)
- an early site permit applicant may submit a plan for redress of the site, which if accepted as part of an approved ESP would allow an applicant to perform certain preconstruction activities without additional authorization; LBP-06-28, 64 NRC 460 (2006)
- boards are to determine whether the site redress plan will adequately redress the activities performed under a limited work authorization should the activities be terminated by either the holder of the LWA or by Commission denial of any corresponding early site permit or combined license; LBP-09-19, 70 NRC 433 (2009)
- filing of a petition for alternative soil remediation standards is permitted as long as the resulting dose would not exceed 15 mrem per year; CLI-10-8, 71 NRC 142 (2010)

### SITE RESTORATION

- a limited work authorization authorizes activities for which either a construction permit or combined license is otherwise required, but the LWA application must include a plan for site redress that provides for restoration if the project is cancelled, the LWA is revoked, or a construction permit or COL is denied; LBP-09-19, 70 NRC 433 (2009)
- a site redress plan remains in effect for an early site permit applicant even if the ESP with which the LWA is issued is not referenced in a construction permit or COL application during the period that the ESP remains valid; LBP-09-19, 70 NRC 433 (2009)
- challenges to the adequacy of the NRC's groundwater restoration standards are impermissible; LBP-08-6, 67 NRC 241 (2008)
- if a combined operating license or construction permit is never issued or ultimately denied, the early site permit holder would be required to redress even limited site preparation activities and restore the site; LBP-07-9, 65 NRC 539 (2007)

### SITE SAFETY ANALYSIS REPORT

- a combined license application reference to an early site permit must include an SSAR that either includes or incorporates by reference the ESP site safety analysis report and that contains additional information and analyses sufficient to demonstrate that the design of the facility falls within the site characteristics and design parameters specified in the ESP; LBP-09-19, 70 NRC 433 (2009)
- applicant must include seismic and geologic characteristics of the proposed site with appropriate consideration of the most severe historical natural phenomena that have been reported for the site; LBP-09-19, 70 NRC 433 (2009)
- in providing information on seismic and geologic characteristics of a proposed site, applicants must conform to the requirements of 10 C.F.R. 100.23; LBP-09-19, 70 NRC 433 (2009)
- the SSAR filed with an early site permit application must include information that identifies physical characteristics of the proposed site, such as egress limitations from the area surrounding the site, that could pose a significant impediment to the development of emergency plans; LBP-09-19, 70 NRC 433 (2009)
- whether a safety analysis of the risks asserted to be endemic should be performed for a proposed irradiator site at an airport is questioned; CLI-07-26, 66 NRC 109 (2007)

### SITE SELECTION

- all reasonable alternatives to the site proposed for the early site permit are to be identified; LBP-09-19, 70 NRC 433 (2009)

## SUBJECT INDEX

although substantial weight is accorded to a license applicant's preferences, if the identified purpose of a proposed project reasonably may be accomplished at locations other than the proposed site, the board may require consideration of those alternative sites; CLI-10-18, 72 NRC 56 (2010)  
applicant's initial consideration of DOE's Portsmouth, Ohio, and SRS sites as alternative sites was reasonable as part of its alternative site analysis for an early site permit; LBP-09-19, 70 NRC 433 (2009)

brownfield sites owned by companies other than the applicant may reasonably be excluded as alternative sites; LBP-09-19, 70 NRC 433 (2009)

DOE was directed to limit its site selection efforts to Yucca Mountain and to provide for an orderly phase-out of site-specific activities at all other candidate sites; LBP-10-11, 71 NRC 609 (2010)

exclusion of DOE sites in alternative sites analysis that are far outside applicant's region of interest is reasonable; LBP-09-19, 70 NRC 433 (2009)

when reviewing a license application filed by a private applicant, NRC may appropriately accord substantial weight to the preferences of the applicant and/or sponsor and should take into account the needs and goals of the parties involved in the application; CLI-06-10, 63 NRC 451 (2006); LBP-09-7, 69 NRC 613 (2009)

### SITE SUITABILITY

DOE's environmental impact statement is not to consider the need for the repository, the time of initial availability of a repository, alternative sites to the Yucca Mountain site, or nongeologic alternatives to such site; LBP-10-11, 71 NRC 609 (2010)

existence of another independent nuclear power plant within the 10-mile-radius emergency planning zone of a proposed new nuclear power plant is a significant factor for purposes of emergency planning for the new reactor; LBP-09-10, 70 NRC 51 (2009)

in an exceptional case, NRC may conduct an irradiator facility siting review if a unique threat is involved which may not be addressed by state and local requirements; CLI-08-3, 67 NRC 151 (2008)

licensing board may disapprove a site for a new reactor only upon one of two findings; LBP-10-24, 72 NRC 720 (2010)

the Commission's discussion of the Staff's underlying review adds necessary additional details and constitutes a supplement to the final environmental impact statement's alternative site review; CLI-07-27, 66 NRC 215 (2007)

the main differences between an early partial decision and an early site permit are that the early partial decision lasts only 5 years and resolves only those site suitability issues that the applicant specifically asks to resolve, whereas the early site permit lasts for 20 years and once it is issued it covers the site; LBP-07-9, 65 NRC 539 (2007)

the Statement of Considerations for Part 36 indicates that in developing those regulations, the NRC considered whether there was a need to impose limits on irradiator siting, but determined that no specific siting limitations were warranted; CLI-08-3, 67 NRC 151 (2008)

with regard to alternative sites for an early site permit, NRC Staff must evaluate both the process (i.e., methodology) used by the applicant and the reasonableness of the product (e.g., potential sites) identified by that process; LBP-09-19, 70 NRC 433 (2009)

### SOIL

contention alleging that the Army employs truckers to remove depleted uranium-contaminated soil its site and dump it in the community is inadmissible; LBP-10-4, 71 NRC 216 (2010)

filing of a petition for alternative soil remediation standards is permitted as long as the resulting dose would not exceed 15 mrem per year; CLI-10-8, 71 NRC 142 (2010)

### SOLAR POWER

wind or solar power are not considered as stand-alone alternatives because neither source is deemed capable of serving the purpose and need of the project, generating 1600 MWe of baseload power; LBP-10-24, 72 NRC 720 (2010)

### SOURCE MATERIAL

all uranium and thorium are source material, but the NRC does not regulate source material in unprocessed ores and source material with insignificant concentrations of radionuclides; CLI-06-14, 63 NRC 510 (2006)

an NRC license is not required to "possess" source material in the form of unprocessed and unrefined ore so long as the ore is not processed or refined; CLI-06-14, 63 NRC 510 (2006)

## SUBJECT INDEX

because pyrochlore contains more than 0.05 wt % uranium and thorium, it is subject to NRC regulation as a source material; CLI-10-8, 71 NRC 142 (2010); LBP-08-8, 67 NRC 409 (2008)

petitioner alleges that routine unprotected handling of an unshielded neutron source by licensed operators and uncontrolled access by untrained and unlicensed facility visitors to this neutron source violated ALARA requirements; DD-10-3, 72 NRC 171 (2010)

### SOURCE MATERIALS LICENSE AMENDMENT

proximity alone is not sufficient to establish standing for a petitioner's proximity to a source materials activity; LBP-08-24, 68 NRC 691 (2008)

### SOURCE MATERIALS LICENSES

burden is on petitioner to allege a specific and plausible means by which contaminants from mining activities may adversely affect him or her; LBP-10-16, 72 NRC 361 (2010)

in cases involving ISL uranium mining and other source materials licensing, petitioner must demonstrate injury, causation, and redressability because proximity to the proposed facility alone is not adequate to demonstrate standing; LBP-10-16, 72 NRC 361 (2010)

intervention petitioner has the burden of showing a specific and plausible means by which the proposed license activities may affect him or her; LBP-10-16, 72 NRC 361 (2010)

no proximity presumption applies in source materials cases; LBP-10-16, 72 NRC 361 (2010)

there is no statutory or regulatory bar, per se, on a foreign-owned or -controlled company holding a source materials license, whether as a licensee or as a parent entity; CLI-09-9, 69 NRC 331 (2009)

### SOURCE TERM

in making its determination on the postulated source terms at the early site permit stage, Staff need not authorize proposed reactors to release radioactivity in the amounts used in connection with the dose estimates; CLI-07-27, 66 NRC 215 (2007)

the definition, origin, and derivation of source terms are discussed; LBP-07-9, 65 NRC 539 (2007)

### SPECIAL CIRCUMSTANCES

an agency must affirmatively provide a reasoned explanation of the applicability of a categorical exclusion; LBP-06-4, 63 NRC 99 (2006)

### SPECIAL NUCLEAR MATERIALS

creditor regulations in 10 C.F.R. 70.44 apply to the creation of creditor interests in special nuclear material; CLI-10-4, 71 NRC 56 (2010)

### SPENT FUEL

there is reasonable assurance that a geologic repository will be available by 2025 and that sufficient repository capacity will be available within 30 years beyond the licensed life to dispose of high-level waste and spent fuel generated by any reactor up to that time; LBP-09-18, 70 NRC 385 (2009)

### SPENT FUEL POOLS

a contention on spent fuel pool fires is rejected as an impermissible challenge to NRC regulations and the license renewal generic environmental impact statement; CLI-10-11, 71 NRC 287 (2010)

a NEPA analysis of the potential impacts of deliberate attacks on a spent fuel pool and analysis of alternatives to mitigate spent fuel pool accidents are beyond the scope of a license renewal proceeding and therefore inadmissible; CLI-09-10, 69 NRC 521 (2009)

environmental impacts from the spent fuel pool, including potential beyond-design-basis accidents and the need for mitigation measures, are addressed generically in the NRC's generic environmental impact statement for license renewal, and do not require a site-specific analysis as part of an individual license renewal environmental review; CLI-10-14, 71 NRC 449 (2010)

fires are Category 1 environmental issues and therefore are addressed generically in the generic environmental impact statement for license renewals; LBP-08-13, 68 NRC 43 (2008)

petitioner has presented a prima facie showing for waiver of the NRC regulation covering the environmental impacts of spent fuel pool accidents generically, and has shown that its contention concerning earthquake-induced spent fuel pool accidents is otherwise admissible; LBP-10-15, 72 NRC 257 (2010)

petitioner's concerns regarding underground leakage of contaminated water from a crack in the spent fuel pool at Indian Point are addressed; DD-08-2, 68 NRC 339 (2008)

security and mitigation measures the NRC has imposed upon its licensees since September 11, 2001, and national anti-terrorist measures coupled with the robust nature of SFPs, make the probability of a successful terrorist attack, though numerically indeterminable, very low; LBP-08-21, 68 NRC 554 (2008)

## SUBJECT INDEX

the National Environmental Policy Act does not require NRC to revisit matters related to high-density spent fuel pool coolant loss or other SFP events in combined license proceedings; LBP-08-21, 68 NRC 554 (2008)

threat of terrorist attack at spent fuel pools has been evaluated generically by NRC and special circumstances for rule waiver have not been shown; LBP-10-15, 72 NRC 257 (2010)

### SPENT FUEL STORAGE

a claim that the pads for storing spent fuel are defective is outside the scope of a nuclear power plant operating license renewal proceeding; CLI-06-17, 63 NRC 727 (2006)

a request that the Commission require licensees to return spent fuel pools to their original low-density storage configuration and to use dry storage for any excess fuel is not appropriate for litigation in a license renewal hearing; CLI-06-26, 64 NRC 225 (2006)

although "severe accident," "severe accident mitigation alternatives," and "SAMA" are not defined in NRC's NEPA regulations, the NRC policy documents that originated the terms clearly limit them to nuclear reactors and do not include spent fuel pools or storage; LBP-10-15, 72 NRC 257 (2010)

contentions on the environmental impacts of spent fuel storage are inadmissible; LBP-09-18, 70 NRC 385 (2009)

environmental effects of storing spent fuel for an additional 20 years at the site of nuclear reactors would be not significant; CLI-07-3, 65 NRC 13 (2007)

environmental impacts pertaining to onsite spent fuel storage are a Category 1 issue; CLI-10-14, 71 NRC 449 (2010)

failure of applicant to include new and significant information concerning a Category 1 issue relating to regarding the dangers of high-density racking of spent fuel in its environmental report does not give rise to an admissible contention; LBP-06-20, 64 NRC 131 (2006)

for a contention regarding environmental impacts of spent fuel storage to be within the scope of an operating license renewal proceeding, petitioner must obtain a waiver under 10 C.F.R. 2.335(d); LBP-10-15, 72 NRC 257 (2010)

impacts of design basis accidents at spent fuel storage are characterized as small, and so, no site-specific NEPA review is required; CLI-07-8, 65 NRC 124 (2007)

issues related to the environmental impact of onsite spent fuel storage after the license renewal term are covered by NRC's Waste Confidence Rule and are outside the scope of a license renewal proceeding because contentions may not challenge a regulation; LBP-06-20, 64 NRC 131 (2006)

no discussion of any environmental impact of spent fuel storage for the period following the term of the reactor combined license is required in any environmental report or environmental impact statement prepared in connection with the requested action; LBP-09-17, 70 NRC 311 (2009); LBP-09-18, 70 NRC 385 (2009)

NRC cannot, under NEPA, categorically refuse to consider the consequences of a terrorist attack against a spent fuel storage facility; CLI-10-1, 71 NRC 1 (2010)

petitioner's inaccurate reading and presentation of applicant's spent fuel storage plan cannot serve as a litigable basis for a contention; LBP-09-27, 70 NRC 992 (2009)

recoverability of spent nuclear fuel storage expenses is equally applicable to greater-than-Class-C waste, which is stored onsite in the same manner as spent nuclear fuel; CLI-10-2, 71 NRC 27 (2010)

severe accident mitigation alternatives analyses are not required for the spent fuel storage impacts associated with license renewals; LBP-10-15, 72 NRC 257 (2010)

spent fuel can be stored safely onsite for at least 30 years beyond a plant's licensed life for operation; LBP-09-17, 70 NRC 311 (2009)

spent fuel from an additional 20 years of operation can be stored safely, with small environmental effects, at all plants and such impacts are classified as Category 1 issues that are not within the scope of individual license renewal proceedings; LBP-10-15, 72 NRC 257 (2010)

such issues are outside the scope of a license renewal proceeding; LBP-06-10, 63 NRC 314 (2006)

the Commission has issued a general license for the storage of spent fuel at an onsite independent spent fuel storage installation to all persons authorized to possess or operate nuclear power reactors under 10 C.F.R. Part 50 or Part 52; LBP-09-20, 70 NRC 565 (2009)

the environmental impacts related to storage of spent fuel under Part 72 have been generically evaluated under two previous rulemakings and the Commission's waste confidence proceedings, and thus need not be reassessed; LBP-09-21, 70 NRC 581 (2009)

## SUBJECT INDEX

- the Waste Confidence Rule applies to spent fuel discharged from any new generation of reactor designs; LBP-08-21, 68 NRC 554 (2008)
- the Waste Confidence Rule covers the storage of spent fuel in new or existing facilities; LBP-09-10, 70 NRC 51 (2009)
- to the extent that petitioners argue that the provisions of 10 C.F.R. 50.54(hh) should be applied to dry cask storage, they may file a rulemaking petition with the Commission; LBP-09-17, 70 NRC 311 (2009)
- See also Independent Spent Fuel Storage Installation
- SPENT FUEL STORAGE CASKS
  - the stability of ISFSI concrete pads holding dry spent fuel storage casks during earthquakes is addressed; DD-07-2, 65 NRC 365 (2007)
- STANDARD OF PROOF
  - a touchstone for determining whether the reasonable assurance standard is satisfied is compliance with Commission regulations; LBP-07-17, 66 NRC 327 (2007)
  - constructive knowledge is knowledge of facts sufficient to prompt an inquiry that would have uncovered misrepresentations and is not actual knowledge; LBP-09-24, 70 NRC 676 (2009)
  - contention admissibility standards do not call for a dispositive standard of proof for a contention or its bases, but rather petitioner must present a clear statement of the basis for the contention and submit supporting information and references to specific documents and sources that establish the validity of the contention; CLI-10-1, 71 NRC 1 (2010)
  - in the context of license renewal proceedings, whether the reasonable assurance standard is satisfied is directly linked to an assessment of the adequacy of the aging management program; LBP-07-17, 66 NRC 327 (2007)
  - instruction to juries on deliberate ignorance or willful blindness can relieve the government of its constitutional obligation to prove the defendant's knowledge beyond a reasonable doubt; LBP-09-24, 70 NRC 676 (2009)
  - instruction to juries on deliberate ignorance or willful blindness should be used with caution to avoid the possibility that the jury convicts on the lesser standard that the defendant should have known his conduct was illegal; LBP-09-24, 70 NRC 676 (2009)
  - license renewal applicant must demonstrate, by a preponderance of the evidence, that its aging management program provides reasonable assurance that activities authorized by the renewed license will be conducted in a manner consistent with the current licensing basis, and that the effects of aging will be detected and corrected; LBP-07-17, 66 NRC 327 (2007)
  - plaintiff may prove his case by direct or circumstantial evidence; CLI-10-23, 72 NRC 210 (2010)
  - the danger of instruction to juries on deliberate ignorance or willful blindness in an inappropriate case is that juries will convict on a basis akin to a standard of negligence; LBP-09-24, 70 NRC 676 (2009)
  - the warning to jurors that the added instruction on deliberate ignorance or willful blindness is not intended to allow them to base guilt on negligence or carelessness is sufficient to legitimize the instruction; LBP-09-24, 70 NRC 676 (2009)
  - there is a presumption that governmental officials, acting in their official capacities, have properly discharged their duties, and clear evidence is usually required to rebut this presumption; CLI-06-22, 64 NRC 37 (2006)
  - to convict a person accused of making a false statement, the government must prove not only that the statement was false, but that the accused knew it to be false; CLI-10-23, 72 NRC 210 (2010)
  - to prevail in establishing that the accused's actions constituted a violation, Staff must demonstrate by a preponderance of the evidence that the accused had actual knowledge of the information associated with his actions and that he deliberately acted contrary to that knowledge; LBP-09-24, 70 NRC 676 (2009)
  - to prevail on factual issues, the position must be supported by a preponderance of the evidence; CLI-08-26, 68 NRC 509 (2008)
  - to satisfy the reasonable assurance standard for its aging management program, a license renewal applicant must make a showing that meets the preponderance of the evidence threshold of compliance with the applicable regulations, not a 95% confidence level of compliance; CLI-09-7, 69 NRC 235 (2009)
  - to succeed in imposing pretrial detention because the accused is a danger to the community, the government must, among other things, prove in an adversary hearing by clear and convincing evidence

## SUBJECT INDEX

- that no conditions of release can reasonably ensure the community's safety; LBP-09-24, 70 NRC 676 (2009)
- where the record in an enforcement proceeding may be devoid of direct evidence to establish knowledge, the Staff may have to build its case upon circumstantial evidence alone; LBP-09-24, 70 NRC 676 (2009)
- whether the "reasonable assurance" standard is satisfied is based on sound technical judgment applied on a case-by-case basis not susceptible to formalistic quantification or mechanistic application; LBP-07-17, 66 NRC 327 (2007)
- STANDARD OF REVIEW**
- a board appropriately reviews the materials cited in support of a contention, while making no pronouncements on whether the information contained in the application or the claims made in the petition are valid; CLI-10-9, 71 NRC 245 (2010)
- a board's determination on a request for access to sensitive unclassified nonsafeguards information is reviewed de novo; CLI-10-24, 72 NRC 451 (2010)
- a board's role in an early site permit proceeding is to carefully probe Staff findings by asking appropriate questions and by requiring supplemental information when necessary, but Staff's underlying technical and factual findings are not open to board reconsideration unless, after a review of the record, the board finds the NRC Staff review inadequate or its findings insufficient; LBP-09-19, 70 NRC 433 (2009)
- a licensing board's review of a petition for standing is to avoid the familiar trap of confusing the standing determination with the assessment of a petitioner's case on the merits; LBP-08-24, 68 NRC 691 (2008)
- although boards should not "flyspeck" environmental documents, petitioners may raise contentions seeking correction of significant inaccuracies and omissions in the environmental report; LBP-10-24, 72 NRC 720 (2010)
- although the Commission has authority to make de novo findings of fact, it does not do so where a licensing board has issued a plausible decision that rests on carefully rendered findings of fact; CLI-09-7, 69 NRC 235 (2009)
- an abuse of discretion standard is applied to Commission review of decisions on evidentiary questions; CLI-10-18, 72 NRC 56 (2010)
- an appeal from an NRC Staff denial of a SUNSI request is reviewed de novo; LBP-09-5, 69 NRC 303 (2009)
- appellant may not simply establish that the licensing board might justifiably have reached the same conclusion as the appellant regarding the petition for discretionary intervention, but must persuade the Commission that a reasonable mind could reach no other result; CLI-06-16, 63 NRC 708 (2006)
- because the burden is on the summary disposition movant, the board must examine the record in the light most favorable to the nonmoving party and give the nonmoving party the benefit of all favorable inferences that can be drawn from the evidence; LBP-10-20, 72 NRC 571 (2010)
- discretionary review is granted based on petitioner's showing that there is a substantial question with respect to the five considerations listed in 10 C.F.R. 2.341(b)(4); CLI-10-5, 71 NRC 90 (2010)
- for conclusions of law, the Commission will review legal questions de novo and reverse a licensing board's legal rulings if they are a departure from or contrary to established law; CLI-10-5, 71 NRC 90 (2010)
- if a board erroneously rejected petitioner's motions, but the record does not suggest that petitioner suffered any prejudicial error, Commission review is not warranted; CLI-10-14, 71 NRC 449 (2010)
- if issuing a license involves oversight of a private project rather than a federally sponsored project, the agency is entitled to give the applicant's preferences substantial weight when considering project design alternatives; LBP-10-14, 72 NRC 101 (2010)
- in an uncontested early site permit proceeding, the licensing board will inquire whether the NRC Staff performed an adequate review and made findings with reasonable support in logic and fact; LBP-07-1, 65 NRC 27 (2007); LBP-07-6, 65 NRC 429 (2007); LBP-07-9, 65 NRC 539 (2007)
- in evaluating a petitioner's standing, boards are to construe the petition in favor of the petitioner; LBP-09-21, 70 NRC 581 (2009)
- in mandatory hearings on uncontested license applications, the board must narrow its inquiry to those topics or sections in Staff documents that it deems most important and should concentrate on portions

## SUBJECT INDEX

of the documents that do not on their face adequately explain the logic, underlying facts, and applicable regulations and guidance; LBP-07-1, 65 NRC 27 (2007); LBP-09-19, 70 NRC 433 (2009)

interlocutory review is granted only in extraordinary circumstances; CLI-10-30, 72 NRC 564 (2010)

interlocutory review is permitted at the Commission's discretion only upon a showing that the issue for which interlocutory review is sought threatens the party adversely affected by it with immediate and serious irreparable impact or affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-10-16, 71 NRC 486 (2010); CLI-10-30, 72 NRC 564 (2010)

legal issues are reviewed de novo on appeal, but the Commission generally defers to board findings of fact, unless they are clearly erroneous; CLI-10-17, 72 NRC 1 (2010)

licensing board findings of fact that turn on witness credibility receive the Commission's highest deference on appeal; CLI-10-23, 72 NRC 210 (2010)

licensing boards have authority to regulate the course of proceedings, and the Commission generally defers to the boards on case management decisions; CLI-10-28, 72 NRC 553 (2010)

licensing boards review NRC Staff's enforcement orders de novo to determine on the basis of the hearing record whether the charges are sustained and the sanction imposed is warranted; LBP-09-24, 70 NRC 676 (2009)

mandatory hearings do not involve a de novo review of the NRC Staff's findings, but rather whether the safety and environmental record is sufficient to support license issuance; CLI-07-5, 65 NRC 109 (2007)

NEPA imposes procedural requirements on the NRC to take a hard look at the environmental impacts of building and operating a nuclear reactor; LBP-10-14, 72 NRC 101 (2010)

NRC has broad discretion to determine how thoroughly it needs to analyze a particular subject for NEPA compliance; LBP-10-14, 72 NRC 101 (2010)

on appeal, abuse of discretion is the standard; CLI-10-24, 72 NRC 451 (2010)

on baseline NEPA issues in early site permit cases, boards must reach their own independent determination, but should do so without second-guessing underlying technical or factual findings by the NRC Staff; LBP-07-1, 65 NRC 27 (2007); LBP-07-9, 65 NRC 539 (2007); LBP-09-19, 70 NRC 433 (2009)

on uncontested issues in an early site permit proceeding, the board must independently evaluate the record and the adequacy of the Staff's review and then to decide six fundamental issues that are specified by the law and regulations; LBP-07-9, 65 NRC 539 (2007)

petition for review satisfies 10 C.F.R. 2.341(b)(4)(ii), (iii), and (v) of the standards for review because the challenged portions of the initial decision address significant issues of law and policy that lack governing precedent and raise issues that could affect other license renewal determinations; CLI-10-17, 72 NRC 1 (2010)

petitioner's argument regarding rejection of its contention satisfies the prejudicial procedural error standard for review; CLI-10-17, 72 NRC 1 (2010)

petitioners may request, and the Commission, in its discretion, may grant interlocutory review if it is shown that the issue threatens petitioners with immediate and serious irreparable impacts or affects the basic structure of the proceeding in a pervasive manner; LBP-09-10, 70 NRC 51 (2009)

petitions for review will be granted at the Commission's discretion, giving due weight to the existence of a substantial question with respect to the five considerations of 10 C.F.R. 2.341(b)(4)(i)-(v); CLI-10-14, 71 NRC 449 (2010)

regarding safety issues, boards must determine whether the application and the record of the proceeding contain sufficient information and the review of the application by the NRC Staff has been adequate to support findings pursuant to 10 C.F.R. 30.33, 40.32, and 70.23; LBP-07-6, 65 NRC 429 (2007)

reports before a board are subject to scrutiny both as to those portions that support an intervenor's assertion and those that do not; LBP-09-21, 70 NRC 581 (2009)

Staff must evaluate alternatives to determine whether there are any obviously superior options to the proposed action; LBP-07-6, 65 NRC 429 (2007)

the board's role in mandatory hearings on early site permit applications is analogous to that of an appellate court applying the substantial evidence test; LBP-07-9, 65 NRC 539 (2007)

the Commission addresses a board's additional views when the board refers its decision to the Commission; CLI-10-9, 71 NRC 245 (2010)

## SUBJECT INDEX

- the Commission cannot find clear error in a board's failing to acknowledge an argument that was not brought to its attention and to which the petitioners had no opportunity to respond; CLI-09-12, 69 NRC 535 (2009)
- the Commission declined to review licensing board referred rulings because the contentions were rejected by the board due to legal insufficiency; CLI-09-21, 70 NRC 927 (2009)
- the Commission defers to a board's factual findings and generally steps in only to correct clearly erroneous findings, that is, findings not even plausible in light of the record viewed in its entirety; CLI-10-5, 71 NRC 90 (2010)
- the Commission defers to a board's rulings on standing and contention admissibility unless the appeal points to an error of law or abuse of discretion; CLI-08-17, 68 NRC 231 (2008); CLI-09-7, 69 NRC 235 (2009); CLI-09-12, 69 NRC 535 (2009); CLI-09-16, 70 NRC 33 (2009); CLI-09-22, 70 NRC 932 (2009); CLI-10-1, 71 NRC 1 (2010); CLI-10-5, 71 NRC 90 (2010); CLI-10-7, 71 NRC 133 (2010); CLI-10-9, 71 NRC 245 (2010); CLI-10-12, 71 NRC 319 (2010); CLI-10-20, 72 NRC 185 (2010); CLI-10-21, 72 NRC 197 (2010)
- the Commission elaborates on the standards for accepting an appeal filed out of time; LBP-10-21, 72 NRC 616 (2010)
- the Commission generally steps in only to correct a licensing board's clearly erroneous findings; CLI-06-15, 63 NRC 687 (2006)
- the Commission gives substantial deference to boards' determinations on threshold issues, such as standing and contention admissibility; CLI-06-24, 64 NRC 111 (2006)
- the Commission may consider the criteria listed in 10 C.F.R. 2.786(b)(4) when reviewing interlocutory matters on the merits, but when determining whether to undertake such review the standards in section 2.786(g) control the determination; CLI-10-29, 72 NRC 556 (2010)
- the Commission refrains from exercising its authority to make de novo findings of fact in situations where a licensing board has issued a plausible decision that rests on carefully rendered findings of fact; CLI-10-18, 72 NRC 56 (2010)
- the Commission reviews legal questions de novo and will reverse a licensing board's legal rulings if they are a departure from or contrary to established law; CLI-10-18, 72 NRC 56 (2010)
- the Commission routinely accords substantial deference to licensing boards on matters involving standing and credibility determinations, and thus does not lightly set aside a board's grant of discretionary intervention; CLI-06-16, 63 NRC 708 (2006)
- the Commission will consider a petition for review if it raises a substantial question with respect to one or more of the five paragraphs of 10 C.F.R. 2.341(b)(4); CLI-10-17, 72 NRC 1 (2010)
- the Commission will not consider cursory, unsupported arguments; CLI-10-23, 72 NRC 210 (2010)
- the Commission will not consider information that was not raised before the board; CLI-10-9, 71 NRC 245 (2010)
- the Commission will not overturn a hearing judge's findings simply because the Commission might have reached a different result; CLI-10-23, 72 NRC 210 (2010)
- the Commission will review legal questions de novo, and will reverse a licensing board's legal rulings if they are a departure from or contrary to established law; CLI-09-7, 69 NRC 235 (2009)
- the Commission will review referred rulings only if the referral raises significant and novel legal or policy issues, and resolution of the issues would materially advance the orderly disposition of the proceeding; CLI-09-21, 70 NRC 927 (2009)
- the Commission's standard of clear error for overturning a board's factual finding is quite high, and the Commission defers to its boards' findings unless clearly erroneous, that is, not even plausible in light of the record viewed in its entirety; CLI-09-7, 69 NRC 235 (2009)
- the fact that the board accorded greater weight to one party's evidence than to the other's is not a basis for overturning the initial decision; CLI-10-23, 72 NRC 210 (2010)
- the licensing board's responsibilities regarding its review of environmental issues in an uncontested mandatory hearing on a uranium enrichment facility application are described; LBP-07-6, 65 NRC 429 (2007)
- the mere potential for legal error in a contention admissibility decision is not a ground for interlocutory review; CLI-10-30, 72 NRC 564 (2010)

## SUBJECT INDEX

- the scope of early review of an enforcement order is severely limited and the order's immediate effectiveness depriving the accused of the freedom to work pending trial is presumptively valid, placing the burden on the accused to demonstrate its invalidity; LBP-09-24, 70 NRC 676 (2009)
- the scope of the licensing board's environmental review in an uncontested early site permit proceeding is discussed; LBP-07-1, 65 NRC 27 (2007)
- the scope of the licensing board's safety review in an uncontested early site permit proceeding is described; LBP-07-1, 65 NRC 27 (2007)
- the standard for review of an interlocutory board order is whether the ruling threatens the petitioner with immediate and serious irreparable impact or will affect the basic structure of the proceeding in a pervasive and unusual manner; CLI-08-7, 67 NRC 187 (2008)
- the standard of clear error for overturning a board's factual finding is quite high; CLI-10-5, 71 NRC 90 (2010); CLI-10-18, 72 NRC 56 (2010)
- to satisfy the "clearly erroneous" standard, a litigant must show that the board's findings are not even plausible in light of the record viewed in its entirety; CLI-10-17, 72 NRC 1 (2010); CLI-10-23, 72 NRC 210 (2010)
- unless there is a strong reason to believe that in a particular case a board has overlooked or misunderstood important evidence, the Commission will defer to its findings of fact; CLI-09-7, 69 NRC 235 (2009)
- when reviewing an early site permit application in an uncontested proceeding, licensing boards are to conduct a simple sufficiency review rather than a de novo review on both Atomic Energy Act and National Environmental Policy Act issues; LBP-07-1, 65 NRC 27 (2007); LBP-07-6, 65 NRC 429 (2007); LBP-09-19, 70 NRC 433 (2009)
- when the Commission reviews board rulings on contention admissibility, it employs the clear error and abuse of discretion standards of review; CLI-10-17, 72 NRC 1 (2010)
- where a party merely complains that the board improperly weighed the evidence and identifies no clear board factual or legal error requiring further Commission consideration on appellate review, the Commission is disinclined to second-guess the board's assessment of the party's affidavits; CLI-08-28, 68 NRC 658 (2008)
- where the final environmental impact statement discussion of alternative sites was insufficient, the board independently reviewed the record on greenfield, competitors' brownfield, noncompetitors' brownfield, and applicant's other nuclear sites to conclude that the Staff's underlying alternative site review was adequate; LBP-09-19, 70 NRC 433 (2009)
- while generally accepting the technical and factual findings of NRC Staff, the board must independently decide whether NEPA has been complied with, the final balance among conflicting factors, and whether the ESP should be issued, denied, or appropriately conditioned; LBP-07-9, 65 NRC 539 (2007)
- with respect to certain NEPA findings, boards in early site permit proceedings are to make independent environmental judgments, though they need not rethink or redo every aspect of the NRC Staff's environmental findings or undertake their own fact-finding activities; LBP-09-19, 70 NRC 433 (2009)
- STANDARD REVIEW PLANS**
- one acceptable methodology for calculating the environmentally adjusted cumulative usage factor is presented in the SRP; CLI-10-17, 72 NRC 1 (2010)
- the plan provides guidance but does not impose requirements on license renewal applicants; CLI-10-17, 72 NRC 1 (2010)
- where applicant is required to include measures to prevent nuclear criticality, an applicant's assertion that petitioners have not demonstrated that the facility involves a significant source of radioactivity with an obvious potential for offsite consequences does not stand up; LBP-07-14, 66 NRC 169 (2007)
- with respect to an adequate site characterization, it is reasonable to interpret the regulations as requiring decommissioning plan submissions to contain the type of information discussed in the NUREG-1700 acceptance criteria; LBP-08-4, 67 NRC 105 (2008)
- STANDING TO INTERVENE**
- a board did not act unreasonably in basing standing on potential harm from new operations that would be similar to harm petitioner claims he has suffered from existing operations; CLI-09-12, 69 NRC 535 (2009)
- a board in one proceeding is not constrained to follow the rulings of another board, absent explicit affirmation by the Commission; LBP-07-10, 66 NRC 1 (2007); LBP-08-24, 68 NRC 691 (2008)

## SUBJECT INDEX

- a board is not at liberty to abandon the Commission's 50-mile proximity presumption; LBP-09-16, 70 NRC 227 (2009)
- a board may grant party status only to a single representative for each affected federally recognized Indian tribe; LBP-09-6, 69 NRC 367 (2009)
- a board's decision on one of the admission elements does not necessarily render any discussion of the other superfluous because a decision addressing only one of the two items creates the potential for significant delay if that single determination is later overturned on appeal; LBP-07-10, 66 NRC 1 (2007)
- a board's determination of standing does not depend on whether the cause of the injury flows directly from the challenged action, but whether the chain of causation is plausible; LBP-09-13, 70 NRC 168 (2009); LBP-10-16, 72 NRC 361 (2010)
- a board's standing analysis must avoid the familiar trap of confusing the standing determination with the assessment of a petitioner's case on the merits; LBP-10-16, 72 NRC 361 (2010)
- a clause in a settlement agreement regarding standing does not apply to NRC Staff, nor would it bind a future licensing board to make any particular determination regarding whether any of the petitioners has established its standing, either as of right or as a matter of discretion; LBP-09-23, 70 NRC 659 (2009)
- a declaration in support of petitioner's standing based on geographic proximity must include a specific statement of distance from the licensed facility; CLI-07-18, 65 NRC 399 (2007)
- a determination that an injury is fairly traceable to the challenged action does not depend on whether the cause of the injury flows directly from the challenged action, but whether the chain of causation is plausible; LBP-08-6, 67 NRC 241 (2008); LBP-08-24, 68 NRC 691 (2008); LBP-10-4, 71 NRC 216 (2010)
- a federally recognized Indian tribe may seek to participate in a proceeding; LBP-10-16, 72 NRC 361 (2010)
- a hearing must be held upon the request of any person whose interest may be affected by the proceeding; LBP-08-14, 68 NRC 279 (2008)
- a lack of specificity will be sufficient to reject a claim of standing; LBP-09-18, 70 NRC 385 (2009)
- a licensing board can take official notice of the locations and the distances to the various locations specified by a petitioner as denominated on Mapquest and an American Automobile Association roadmap; LBP-07-10, 66 NRC 1 (2007)
- a licensing board must assess an intervention petition to determine whether the elements of standing are met even if there are no objections to a petitioner's standing; LBP-09-3, 69 NRC 139 (2009)
- a licensing board shall consider three factors when deciding whether to grant standing to a petitioner; LBP-08-6, 67 NRC 241 (2008)
- a licensing board will grant a request for a hearing if it determines that the requestor has standing and has proposed at least one admissible contention; LBP-10-4, 71 NRC 216 (2010)
- a licensing board's review of a petition for standing is to avoid the familiar trap of confusing the standing determination with the assessment of a petitioner's case on the merits; LBP-08-24, 68 NRC 691 (2008)
- a local governmental body need not address standing requirements if it wishes to be a party in a proceeding for a facility located within its boundaries; LBP-08-10, 67 NRC 450 (2008)
- a party claiming violations of their procedural right to protect their interests in cultural resources is to be accorded a special status when it comes to standing, without meeting all the normal standards for redressability and immediacy; LBP-10-16, 72 NRC 361 (2010)
- a person who has been accorded a procedural right to protect his concrete interests can assert that right without meeting all the normal standards for redressability and immediacy; CLI-09-9, 69 NRC 331 (2009)
- a petition for review and request for hearing must include a showing that the petitioner has standing; LBP-09-13, 70 NRC 168 (2009)
- a petitioner awarded standing in one proceeding need not restate all of its case to establish standing in another proceeding related to the same facility; LBP-07-14, 66 NRC 169 (2007)
- a petitioner must demonstrate a concrete and particularized injury that is fairly traceable to the challenged action and is likely to be redressed by a favorable decision; LBP-06-4, 63 NRC 99 (2006); LBP-06-7, 63 NRC 188 (2006); LBP-06-10, 63 NRC 314 (2006)

## SUBJECT INDEX

- a petitioner who fails to provide specific information regarding the geographic proximity or the timing and duration of its visits only complicates matters for itself; LBP-07-10, 66 NRC 1 (2007)
- a presumption of standing applies when an individual, an organization, or an individual authorizing an organization to represent his or her interests resides within 50 miles of the proposed facility or has frequent contacts with the area affected by the proposed facility; LBP-10-7, 71 NRC 391 (2010)
- a regular commute that takes petitioner past a plant entrance once or twice a week is sufficient to establish standing; LBP-10-1, 71 NRC 165 (2010)
- a ruling on standing does not constitute dicta simply because the board also concluded that the petitioner had failed to proffer an admissible contention; LBP-07-10, 66 NRC 1 (2007)
- a showing that anyone who uses a substantial quantity of water personally or for livestock from a source that is reasonably contiguous to either an injection or processing site is sufficient to demonstrate an injury in fact for standing; LBP-08-6, 67 NRC 241 (2008)
- a significant pattern of regular contacts within the 50-mile radius around the plant is sufficient to establish proximity-based standing; LBP-09-18, 70 NRC 385 (2009)
- a small or minor unwanted exposure, even one well within regulatory limits, is sufficient to establish an injury in fact; LBP-08-6, 67 NRC 241 (2008)
- a standing ruling in one proceeding is not dispositive of a determination in another proceeding with the same petitioner because the ruling was not the subject of appellate review; LBP-09-18, 70 NRC 385 (2009)
- a state or local governmental entity that wishes to be a party in a proceeding that involves a facility located within its boundaries is automatically deemed to have standing; LBP-06-7, 63 NRC 188 (2006); LBP-06-23, 64 NRC 257 (2006); LBP-08-13, 68 NRC 43 (2008)
- a statement purporting to show a real potential for injury sufficient for standing will be rejected if it is too vague and general; CLI-06-2, 63 NRC 9 (2006)
- a threatened unwanted exposure to radiation, even a minor one, is sufficient to establish an injury; LBP-06-4, 63 NRC 99 (2006)
- a union in one facility lacks standing to participate in other interrelated license transfer proceedings, given that the union did not represent employees at the other facilities; CLI-08-19, 68 NRC 251 (2008)
- absent an obvious potential for harm, it is a petitioner's burden to show how harm will or may occur; LBP-09-28, 70 NRC 1019 (2009)
- agencies should be accorded broad discretion in establishing and applying rules for public participation, including rules for determining which community representatives are to be allowed to participate; CLI-08-19, 68 NRC 251 (2008)
- although a board in another materials license renewal proceeding allowed an Indian organization to participate in that proceeding as an interested Indian tribe under 10 C.F.R. 2.315(c), that ruling is not binding on other boards; LBP-09-13, 70 NRC 168 (2009)
- although a proximity presumption has been invoked when resolving issues of standing for cases involving reactor licensing, in a case involving an enforcement order, the standing requirement is also based on the confirmatory order itself and the adverse effect of the confirmatory order; LBP-07-16, 66 NRC 277 (2007)
- although Article III of the Constitution does not constrain the NRC hearing process, and NRC hearings therefore are not governed by judicially created standing doctrine, the Commission nonetheless has generally looked to judicial concepts of standing where appropriate to determine those interests affected within the meaning of section 189a of the Atomic Energy Act; LBP-09-1, 69 NRC 11 (2009)
- although boards should afford greater latitude to a pleading submitted by a pro se petitioner, that petitioner ultimately bears the burden to provide facts sufficient to show standing; CLI-10-20, 72 NRC 185 (2010)
- although further analysis may show that there is no way for the radioactive materials and byproducts from ISL mining operations to cause harm to persons living nearby, a board cannot decide, when making a standing determination, that there is no reasonable possibility that such harm could occur; LBP-08-6, 67 NRC 241 (2008)
- although petitioner bears the burden of demonstrating standing, in ruling on standing a licensing board is to construe the petition in favor of the petitioner; LBP-09-1, 69 NRC 11 (2009); LBP-09-2, 69 NRC 87 (2009); LBP-09-3, 69 NRC 139 (2009)

## SUBJECT INDEX

although petitioner has established the requisite standing, the hearing request must be denied because of a failure to proffer one admissible contention; CLI-10-7, 71 NRC 133 (2010); LBP-10-1, 71 NRC 165 (2010)

although the Army has the burden to protect the public from depleted uranium, that issue is not relevant to a standing inquiry; LBP-10-4, 71 NRC 216 (2010)

although the Commission customarily follows judicial concepts of standing, it is not bound to do so given that it is not an Article III court; CLI-08-19, 68 NRC 251 (2008); LBP-08-24, 68 NRC 691 (2008)

although the pleading requirements of 10 C.F.R. 2.309 are strict by design, a licensing board may permit potential intervenors to cure defects in petitions in order to obviate dismissal of an intervention petition because of inarticulate draftsmanship or procedural or pleading defects; LBP-08-6, 67 NRC 241 (2008)

an administrative agency may establish administrative standing criteria that are less rigorous than those for judicial standing; CLI-09-20, 70 NRC 911 (2009)

an affected federally recognized Indian tribe is automatically entitled to participate in the high-level waste proceeding; LBP-09-6, 69 NRC 367 (2009)

an alleged injury to health and safety, shared equally by many, can form the basis for standing; LBP-09-18, 70 NRC 385 (2009)

an attack on the Commission's proximity presumption is rejected; LBP-09-18, 70 NRC 385 (2009)

an entity wishing to participate as a governmental body must demonstrate that it goes beyond an advisory role and exercises executive or legislative responsibilities; LBP-09-13, 70 NRC 168 (2009)

an extended power uprate is directly associated with continuing reactor operation, and thus the potential geographic scope of the consequences of EPU operation can be considered to be similar to that which supported the creation of a 50-mile presumption for construction permit and operating license proceedings; LBP-07-10, 66 NRC 1 (2007)

an Indian tribe claims a procedural interest in identifying, evaluating, and establishing protections for historic and cultural resources; LBP-10-16, 72 NRC 361 (2010)

an Indian Tribe whose reservation is adjacent to facilities where spent nuclear fuel is currently stored, the nearest of which resides just 600 yards from an ISFSI, has more than a mere interest in a problem; LBP-10-11, 71 NRC 609 (2010)

an individual may satisfy the standing requirements by demonstrating that his or her residence is within the geographical area that might be affected by an accidental release of fission products, and in proceedings involving nuclear power plants this area has been defined as being within a 50-mile radius of such a plant; CLI-07-19, 65 NRC 423 (2007); LBP-06-4, 63 NRC 99 (2006); LBP-06-7, 63 NRC 188 (2006); LBP-07-3, 65 NRC 237 (2007); LBP-07-4, 65 NRC 281 (2007)

an individual petitioner may not request to intervene in his or her own right while simultaneously authorizing other petitioners to represent his or her interests in the proceeding; LBP-10-16, 72 NRC 361 (2010)

an injury in fact must go beyond generalized grievances to affect a petitioner in a personal and individual way; LBP-09-13, 70 NRC 168 (2009); LBP-10-16, 72 NRC 361 (2010)

an injury may be either actual or threatened, but must lie arguably within the zone of interests protected by the statutes governing the proceeding; LBP-06-10, 63 NRC 314 (2006)

an interested governmental entity that has not been admitted as a party under section 2.309 must be provided a reasonable opportunity to participate in a hearing; LBP-08-21, 68 NRC 554 (2008)

an organization's promotion of the public interest, environmental protection, and consumer protection are broad interests shared with many others and too general to constitute a protected interest under the Atomic Energy Act or the National Environmental Policy Act; CLI-07-18, 65 NRC 399 (2007)

any affected unit of local government need not address standing in the high-level waste proceeding, but rather shall be considered a party provided that it files at least one admissible contention in accordance with 10 C.F.R. 2.309(f); LBP-09-6, 69 NRC 367 (2009)

any Native American treaty-based claims to ownership of the land upon which a mining site sits cannot support standing; LBP-08-24, 68 NRC 691 (2008)

any potential harm associated with petitioner's use of water from a water source connecting to a mining site is fairly traceable to the proposed action; LBP-10-16, 72 NRC 361 (2010)

as long as petitioners reside within an area that could realistically be impacted if an accidental release occurs, it is reasonable and consistent with Atomic Energy Act § 189a to find that they have standing

## SUBJECT INDEX

to challenge applicant's safety claims and its environmental analysis under the National Environmental Policy Act; LBP-09-4, 69 NRC 170 (2009)

asserted harm need not be great to establish an injury in fact for standing; LBP-08-6, 67 NRC 241 (2008)

because agencies are not constrained by Article III of the Constitution, nor are they governed by judicially created standing doctrines restricting access to federal courts, the criteria for establishing administrative standing may permissibly be less demanding than the criteria for judicial standing; LBP-08-24, 68 NRC 691 (2008); LBP-09-18, 70 NRC 385 (2009)

because petitioner must show an injury, the issue of standing is directly related to the issue of the scope of the proceeding; LBP-07-16, 66 NRC 277 (2007)

because petitioner's circumstances may change from one proceeding to the next, it is important that the presiding officer have up-to-date information regarding any standing claims; LBP-10-21, 72 NRC 616 (2010)

boards apply a proximity-plus test to establish standing in materials cases, where the petitioner must show that the proposed licensing action involves a significant source of radiation that has an obvious potential for offsite consequences; CLI-10-20, 72 NRC 185 (2010)

boards are to consider whether a petitioner has alleged a concrete and particularized injury that is fairly traceable to the challenged action and likely to be redressed by a favorable decision; LBP-08-6, 67 NRC 241 (2008)

boards are to construe intervention petitions in favor of the petitioner; LBP-07-10, 66 NRC 1 (2007); LBP-08-16, 68 NRC 361 (2008); LBP-08-17, 68 NRC 431 (2008); LBP-08-21, 68 NRC 554 (2008)

boards must avoid the familiar trap of confusing the standing determination with the assessment of petitioner's case on the merits; LBP-08-6, 67 NRC 241 (2008)

boards must consider the extent a petitioner's interests are represented by existing parties, not potential parties; LBP-10-11, 71 NRC 609 (2010)

boards shall consider the nature of the petitioner's right under AEA to be made a party to the proceeding, the nature and extent of the petitioner's property, financial, or other interest in the proceeding, and the possible effect of any order that may be entered in the proceeding on the petitioner's interest; LBP-07-4, 65 NRC 281 (2007)

broad and conclusory statements by petitioners that they have direct information concerning the threat to health and safety posed by the license applicant are insufficient to establish standing; LBP-10-4, 71 NRC 216 (2010)

burden is on petitioner to allege a specific and plausible means by which contaminants from mining activities may adversely affect him or her; LBP-10-16, 72 NRC 361 (2010)

contemporaneous judicial standing concepts are applied in NRC proceedings; LBP-10-7, 71 NRC 391 (2010)

contemporaneous judicial standing concepts require that participant establish that it has suffered or will suffer a distinct and palpable injury that constitutes injury-in-fact within the zones of interests arguably protected by the governing, the injury is fairly traceable to the challenged action, and the injury is likely to be redressed by a favorable decision; LBP-10-7, 71 NRC 391 (2010)

contentions are comparable to neither "forms of relief" nor Article III "claims," but are instead comparable to various "grounds" that may be asserted in opposition to a proposed agency action at issue; LBP-09-1, 69 NRC 11 (2009)

courts' refusal to grant automatic standing to labor unions may lie in the fact that unions are formed to represent their members in collective bargaining and other employment-related negotiations, not in administrative or judicial litigation; CLI-08-19, 68 NRC 251 (2008)

daily commute near vicinity of a reactor is sufficient to establish standing; LBP-08-9, 67 NRC 421 (2008)

damage to a nuclear power facility's reputation does not constitute a threatened injury to the interests of the Local's members who work at the facility; CLI-08-19, 68 NRC 251 (2008)

delaying the opening of the Yucca Mountain repository would inflict concrete harm on members of an organization who expend substantial sums to operate their own storage facilities; LBP-09-6, 69 NRC 367 (2009)

## SUBJECT INDEX

demonstrating proximity-based standing in a power uprate proceeding requires a determination that the proposed action involves a significant source of radioactivity producing an obvious potential for offsite consequences; LBP-08-9, 67 NRC 421 (2008)

demonstrating proximity-based standing requires a determination that the proposed action involves a significant source of radioactivity producing an obvious potential for offsite consequences; LBP-06-4, 63 NRC 99 (2006)

descriptions of activities as being “near,” in “close proximity,” or “in the vicinity” of the facility in question are insufficient to establish standing; CLI-07-18, 65 NRC 399 (2007)

discretionary intervention is allowed because petitioner’s interests are within the zone of interests related to the proceeding and its extensive participation in similar proceedings in the past would provide valuable insight in developing a sound record; LBP-09-6, 69 NRC 367 (2009)

discretionary standing is appropriate only when one petitioner has been shown to have standing as of right and an admissible contention so that a hearing will be conducted; LBP-07-10, 66 NRC 1 (2007)

each intervening participant that wishes to be a party to a proceeding must establish its own standing; LBP-10-7, 71 NRC 391 (2010)

economic harm itself has been held sufficient to establish standing under the Nuclear Waste Policy Act; LBP-10-11, 71 NRC 609 (2010)

establishing standing for a contention involves a showing of a concrete and particularized injury that is fairly traceable to the challenged action and likely to be redressed by a favorable decision; LBP-09-1, 69 NRC 11 (2009)

even if a party seeking standing has some intent to return to an area, when such intentions are not supported by concrete plans or a specification of when future visits would take place, they do not support a finding of injury in the standing context; LBP-10-1, 71 NRC 165 (2010)

even if injury sufficient to show an existing case or controversy is established, this does not confer standing with regard to injunctive relief; LBP-09-1, 69 NRC 11 (2009)

even if neither applicant nor NRC Staff challenges petitioner’s standing, the board must make its own determination; LBP-07-10, 66 NRC 1 (2007); LBP-08-15, 68 NRC 294 (2008)

even if NRC’s proximity presumption is viewed as more lenient than judicial standing requirements, NRC may choose to retain it; CLI-09-20, 70 NRC 911 (2009)

even in nonreactor construction permit/operating license cases involving an increased potential for offsite consequences in which proximity can be the primary basis for establishing standing, the distance at which a petitioner can be presumed to be affected must take into account the nature of the proposed action and the significance of the radioactive source; LBP-07-10, 66 NRC 1 (2007)

every petitioner bears the burden of demonstrating standing in order to participate in hearings before a licensing board; LBP-09-18, 70 NRC 385 (2009)

failure to indicate how alleged harms might result from license amendments, particularly given not only the shutdown status of the facility, but also the continued applicability of the NRC’s safety-oriented regulations governing defueled nuclear plants, is grounds for denial; LBP-10-11, 71 NRC 609 (2010)

failure to specify any radiological contacts with enough concreteness to establish some impact on petitioner will result in denial of standing; LBP-10-11, 71 NRC 609 (2010)

federal courts have long recognized the right of agencies to tailor their own standing requirements to fit their specific needs; CLI-08-19, 68 NRC 251 (2008)

for a request for hearing and petition to intervene to be granted, petitioner must establish that it has standing and propose at least one admissible contention; LBP-10-15, 72 NRC 257 (2010)

for proximity-based standing, distance from a facility can be verified using the Google Maps distance measurement tool; LBP-10-1, 71 NRC 165 (2010)

general counsel for an Indian tribe is not required to submit a declaration stating the basis of his or her authority to represent the tribe; LBP-08-26, 68 NRC 905 (2008)

having established proximity standing, petitioner need not separately establish the requisite injury, causation, and redressability elements; LBP-09-18, 70 NRC 385 (2009)

how the Commission determines proximity-based standing in license transfer cases is described; CLI-08-19, 68 NRC 251 (2008)

if petitioner cannot establish the elements of proximity-based standing, then he must establish standing according to traditional standing principles; CLI-10-20, 72 NRC 185 (2010)

## SUBJECT INDEX

- if petitioner fails to show that a particular licensing action raises an obvious potential for offsite consequences, then the standing inquiry reverts to a traditional standing analysis of whether the petitioner has made a specific showing of injury, causation, and redressability; CLI-08-19, 68 NRC 251 (2008)
- if petitioner is found not to be in substantial and timely compliance with the LSN requirements, that petitioner may request party status upon a subsequent showing of compliance, but any grant of a request is conditioned on accepting the status of the proceeding at the time of admission; LBP-09-6, 69 NRC 367 (2009)
- if petitioner requests a remedy that is beyond the scope of the hearing, then the hearing request must be denied because redressability is an element of standing; LBP-08-14, 68 NRC 279 (2008)
- if the agencies do not see fit to calculate projected doses at several different distances from a facility and to differentiate areas that might receive radiation doses from those that will not, it is hardly reasonable, or fair, to expect petitioners to do better in making their arguments for standing; LBP-07-14, 66 NRC 169 (2007)
- in a case involving an enforcement order, the standing requirement is based on the confirmatory order itself, and petitioner must show that he will be adversely affected by the terms of the order; LBP-08-14, 68 NRC 279 (2008)
- in a decommissioning proceeding, where the proximity presumption does not apply, a petitioner who commuted past the entrance of the plant once or twice a week was found to have standing; CLI-10-7, 71 NRC 133 (2010)
- in a license transfer case, a petitioner cannot successfully claim injury based on the financial qualifications and assurances of the transferor; CLI-07-22, 65 NRC 525 (2007)
- in a materials licensing case, petitioner must show more than that he lives or works within a certain distance of the site where materials will be located; CLI-10-20, 72 NRC 185 (2010)
- in a materials licensing proceeding, petitioners have the burden to show a specific and plausible means whereby the licensing decision may harm them; CLI-09-9, 69 NRC 331 (2009)
- in an indirect license transfer case involving no change in the facility, its operation, licensees, personnel, or financing, petitioners living within 5-10 miles of the plant did not qualify for proximity-based standing; CLI-08-19, 68 NRC 251 (2008)
- in assessing a petition to determine whether the elements for standing are met, boards are to construe the petition in favor of the petitioner; LBP-07-3, 65 NRC 237 (2007)
- in assessing intervention petitions, licensing boards must determine whether standing elements are met even though there are no objections to petitioner's standing; LBP-09-23, 70 NRC 659 (2009)
- in assessing whether petitioner has standing, NRC has long applied contemporaneous judicial concepts of standing; CLI-09-20, 70 NRC 911 (2009)
- in cases involving ISL uranium mining and other source materials licensing, petitioner must demonstrate injury, causation, and redressability because proximity to the proposed facility alone is not adequate to demonstrate standing; LBP-10-16, 72 NRC 361 (2010)
- in cases involving possible construction or operation of a nuclear power reactor, proximity within a 50-mile radius of the proposed facility has been considered sufficient to establish the requisite standing elements; LBP-07-10, 66 NRC 1 (2007); LBP-08-13, 68 NRC 43 (2008); LBP-08-15, 68 NRC 294 (2008); LBP-08-16, 68 NRC 361 (2008); LBP-09-3, 69 NRC 139 (2009); LBP-10-21, 72 NRC 616 (2010)
- in cases not involving nuclear power reactors, whether petitioner could be affected by the licensing action must be determined on a case-by-case basis, taking into account petitioner's distance from the source, the nature of the licensed activity, and the significance of the radioactive source; CLI-10-20, 72 NRC 185 (2010)
- in cases where the record fails to support the existence of a significant source of radioactivity producing an obvious potential for offsite consequences at a particular distance frequented by a petitioner, it becomes petitioner's burden to show a specific and plausible means of how the challenged action may harm him or her; LBP-10-4, 71 NRC 216 (2010)
- in demonstrating that a proposed action involves a significant source of radioactivity producing an obvious potential for offsite consequences, petitioner cannot rely on conclusory allegations about potential radiological harm, but must show how these various harms might result from the proposed action; LBP-09-20, 70 NRC 565 (2009)

## SUBJECT INDEX

- in determining whether a petitioner has established standing, boards are to construe the petition in favor of the petitioner; LBP-08-26, 68 NRC 905 (2008); LBP-09-10, 70 NRC 51 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-09-21, 70 NRC 581 (2009); LBP-10-15, 72 NRC 257 (2010)
- in determining whether an individual or organization should be granted party status in a proceeding based on standing as of right, the agency applies contemporaneous judicial standing concepts; LBP-07-3, 65 NRC 237 (2007); LBP-07-4, 65 NRC 281 (2007); LBP-07-10, 66 NRC 1 (2007); LBP-08-6, 67 NRC 241 (2008); LBP-08-9, 67 NRC 421 (2008); LBP-08-26, 68 NRC 905 (2008); LBP-09-1, 69 NRC 11 (2009); LBP-09-3, 69 NRC 139 (2009); LBP-09-6, 69 NRC 367 (2009); LBP-10-4, 71 NRC 216 (2010); LBP-10-21, 72 NRC 616 (2010)
- in determining whether petitioner is an “interested person” for the purposes of a standing determination, NRC is not strictly bound by judicial standing doctrines; CLI-09-20, 70 NRC 911 (2009)
- in establishing proximity-based standing, it is petitioner’s responsibility to provide enough detail to allow the board to distinguish a casual interest from a substantial one; LBP-10-1, 71 NRC 165 (2010)
- in evaluating the specificity of petitioners’ standing arguments, a licensing board must take into account the information provided by the applicant and the NRC Staff in the environmental impact statement; LBP-07-14, 66 NRC 169 (2007)
- in in-situ leach mining cases the geographical areas that may be affected by mining operations are largely dependent on the size and other characteristics of underground aquifers; LBP-08-6, 67 NRC 241 (2008)
- in license amendment cases, petitioner cannot base standing simply upon a residence or visits near the plant, unless the proposed action quite obviously entails an increased potential for offsite consequences; LBP-08-18, 68 NRC 533 (2008)
- in license transfer cases, the Commission determines on a case-by-case basis whether the proximity presumption should apply, considering the obvious potential for offsite radiological consequences, or lack thereof, from the application at issue, and specifically taking into account the nature of the proposed action and the significance of the radioactive source; CLI-07-19, 65 NRC 423 (2007)
- in nonreactor cases, the potential for offsite consequences is not always clear, and thus the burden falls on petitioner to demonstrate that the proposed action involves a significant source of radioactivity producing an obvious potential for offsite consequences; LBP-09-20, 70 NRC 565 (2009)
- in operating license amendment cases, petitioner must assert an injury-in-fact associated with the challenged license amendment, not simply a general objection to the facility; LBP-07-10, 66 NRC 1 (2007)
- in power reactor license proceedings, proximity within 50 miles of a plant is often enough on its own to demonstrate standing; LBP-08-24, 68 NRC 691 (2008)
- in proceedings involving nuclear power reactors, the Commission has adopted a proximity presumption, whereby a petitioner who resides within 50 miles of the reactor is presumed to have standing without the need to plead injury, causation, and redressability; CLI-09-20, 70 NRC 911 (2009); CLI-10-7, 71 NRC 133 (2010); LBP-06-7, 63 NRC 188 (2006); LBP-06-10, 63 NRC 314 (2006); LBP-06-23, 64 NRC 257 (2006); LBP-09-10, 70 NRC 51 (2009); LBP-09-13, 70 NRC 168 (2009); LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-09-20, 70 NRC 565 (2009); LBP-09-21, 70 NRC 581 (2009); LBP-10-1, 71 NRC 165 (2010); LBP-10-4, 71 NRC 216 (2010); LBP-10-7, 71 NRC 391 (2010); LBP-10-15, 72 NRC 257 (2010); LBP-10-16, 72 NRC 361 (2010)
- in proceedings not involving power reactors, proximity alone is not sufficient to establish standing; LBP-08-6, 67 NRC 241 (2008)
- in proceedings other than for construction permits, operating licenses, or significant amendments thereto, the Commission decides on a case-by-case basis whether the proximity presumption should apply, taking into account any obvious potential for offsite radiological consequences, as well as the nature of the proposed action and the significance of the radioactive source; LBP-09-20, 70 NRC 565 (2009); LBP-09-28, 70 NRC 1019 (2009)
- in proceedings where petitioner’s factual assertions in support of standing are challenged, untenable, conjectural, or conclusory, a board need not uncritically accept such assertions; LBP-10-4, 71 NRC 216 (2010)
- in reactor license proceedings, that zone of possible harm for proximity-based standing is generally deemed to constitute the areas within a 50-mile radius of the site; LBP-08-17, 68 NRC 431 (2008)

## SUBJECT INDEX

- in ruling on a hearing request, a licensing board must determine whether petitioner has an interest potentially affected by the proceeding; LBP-08-15, 68 NRC 294 (2008)
- in ruling on a request for a hearing, a licensing board is to consider the nature of petitioner's right under the Atomic Energy Act or the National Environmental Policy Act to be made a party to the proceeding, the nature and extent of petitioner's property, financial, or other interest in the proceeding, and the possible effect of any decision or order that may be issued in the proceeding on the petitioner's interest; LBP-09-10, 70 NRC 51 (2009); LBP-09-13, 70 NRC 168 (2009); LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-09-20, 70 NRC 565 (2009); LBP-09-21, 70 NRC 581 (2009)
- in source materials cases, petitioner has the burden of showing a specific and plausible means by which the proposed license activities may affect him or her; LBP-09-13, 70 NRC 168 (2009); LBP-10-16, 72 NRC 361 (2010)
- in the absence of a showing that the proposed operating license amendment obviously entails an increased potential for offsite consequences, petitioner must base its standing upon more than residence or activities within a particular proximity of the plant by making a showing of a plausible chain of events that would result in offsite radiological consequences posing a distinct new harm or threat to the participant; LBP-07-10, 66 NRC 1 (2007)
- in the high-level waste proceeding, the Commission conferred standing as of right on certain parties; LBP-09-6, 69 NRC 367 (2009)
- in the high-level waste proceeding, the presiding officer shall consider the factors in 10 C.F.R. 2.309; CLI-08-25, 68 NRC 497 (2008)
- in the high-level waste repository proceeding, a state can meet the requirements for standing as a matter of right, based on the threat posed by transportation of radioactive waste through that state; LBP-09-6, 69 NRC 367 (2009)
- information required to show standing includes the nature of petitioner's right under a relevant statute to be made a party, the nature and extent of petitioner's property, financial, or other interest in the proceeding, and the possible effect of any decision or order that might be issued on petitioner's interest; LBP-09-26, 70 NRC 939 (2009); LBP-10-15, 72 NRC 257 (2010); LBP-10-16, 72 NRC 361 (2010)
- injury in fact is defined as an invasion of a legally protected interest that is concrete and particularized and actual or imminent rather than conjectural or hypothetical; LBP-09-13, 70 NRC 168 (2009); LBP-10-16, 72 NRC 361 (2010)
- injury in fact may be either actual or threatened to establish standing, but must arguably lie within the zone of interests protected by the statutes governing the proceeding; LBP-06-23, 64 NRC 257 (2006); LBP-07-11, 66 NRC 41 (2007); LBP-08-6, 67 NRC 241 (2008)
- interest in the promotion of economic use of energy falls outside the zone of interests protected by either the Atomic Energy Act or the National Environmental Policy Act; CLI-07-18, 65 NRC 399 (2007)
- intervenors may not act as private attorneys-general and raise issues that are of concern to them but do not affect them directly; CLI-07-18, 65 NRC 399 (2007)
- intervention is allowable to those who wish to support a proposal that will affect their interests if the proceeding has one outcome rather than another; LBP-09-6, 69 NRC 367 (2009)
- intervention is permitted in the high-level waste repository proceeding by the state and local governmental bodies in the geologic repository operations area, and by any affected federally recognized Indian tribe; LBP-09-6, 69 NRC 367 (2009)
- intervention petitioners are not required to demonstrate their asserted injury with certainty or to provide extensive technical studies in support of their standing argument; LBP-08-24, 68 NRC 691 (2008)
- it is enough that petitioner has demonstrated a realistic threat of sustaining a direct injury as a result of contaminated groundwater flowing from the site to his property; LBP-10-16, 72 NRC 361 (2010)
- it is generally not sufficient to seek to establish standing in a proceeding by merely cross-referencing the showing made in another proceeding, rather than making a new presentation or at least providing a submission that updates the factual information that was provided previously; LBP-10-21, 72 NRC 616 (2010)

## SUBJECT INDEX

it is not acceptable in NRC practice for petitioner to claim standing based on vague assertions, and when that fails, to attempt to repair the defective pleading with fresh details offered for the first time in its reply; LBP-09-2, 69 NRC 87 (2009)

it is not sufficient to rely on the standing of one petitioner because Commission practice requires each party to separately establish standing; CLI-07-18, 65 NRC 399 (2007)

it is unlikely that petitioners will often obtain hearings on confirmatory enforcement orders; LBP-08-14, 68 NRC 279 (2008)

it might be sufficient to allow petitioner to rely on a prior standing demonstration if that prior demonstration is specifically identified and shown to correctly reflect the current status of the petitioner's standing; LBP-10-21, 72 NRC 616 (2010)

judicial concepts of standing are applied in NRC proceedings; CLI-06-6, 63 NRC 161 (2006); LBP-06-4, 63 NRC 99 (2006); LBP-06-10, 63 NRC 314 (2006); LBP-06-23, 64 NRC 257 (2006); LBP-07-11, 66 NRC 41 (2007); LBP-07-14, 66 NRC 169 (2007); LBP-08-13, 68 NRC 43 (2008); LBP-08-14, 68 NRC 279 (2008); LBP-08-15, 68 NRC 294 (2008); LBP-08-16, 68 NRC 361 (2008); LBP-08-18, 68 NRC 533 (2008); LBP-09-10, 70 NRC 51 (2009); LBP-09-13, 70 NRC 168 (2009); LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-09-20, 70 NRC 565 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-09-28, 70 NRC 1019 (2009); LBP-10-1, 71 NRC 165 (2010); LBP-10-15, 72 NRC 257 (2010); LBP-10-16, 72 NRC 361 (2010)

judicial concepts of standing require a showing that petitioner has suffered or will suffer palpable harm that constitutes an injury in fact, the injury can fairly be traced to the challenged action, and the injury is likely to be redressed by a favorable decision; LBP-08-13, 68 NRC 43 (2008); LBP-08-14, 68 NRC 279 (2008); LBP-08-15, 68 NRC 294 (2008); LBP-08-16, 68 NRC 361 (2008); LBP-09-10, 70 NRC 51 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-10-1, 71 NRC 165 (2010); LBP-10-4, 71 NRC 216 (2010); LBP-10-11, 71 NRC 609 (2010)

"justiciable controversy" is defined; LBP-08-6, 67 NRC 241 (2008)

licensing boards are bound by Commission and appeal board precedent and therefore are not at liberty to reject the 50-mile proximity presumption; LBP-09-4, 69 NRC 170 (2009)

licensing boards have been lenient in permitting pro se petitioners the opportunity to cure procedural defects in petitions to intervene regarding standing; LBP-09-18, 70 NRC 385 (2009)

licensing boards must assess intervention petitions to determine whether elements for standing are met even though there are no objections to petitioner's standing; LBP-10-21, 72 NRC 616 (2010)

local governmental bodies within whose boundaries a facility is located do not need to make any further demonstration of standing; CLI-07-18, 65 NRC 399 (2007)

members of intervenor organizations who reside, work, or recreate within 50 miles of the proposed nuclear power plant have proximity-based standing; LBP-10-9, 71 NRC 493 (2010)

membership of a petitioning Indian group must be composed principally of persons who are not members of any other acknowledged North American Indian tribe; LBP-09-13, 70 NRC 168 (2009)

mere conclusory allegations about potential harm to petitioner or others is insufficient to confer standing; LBP-08-24, 68 NRC 691 (2008)

merely because a petitioner may have had standing in an earlier proceeding does not automatically grant standing in subsequent proceedings, even if the scope of the earlier and later proceedings is similar; LBP-07-16, 66 NRC 277 (2007)

no proximity presumption applies in source materials cases; LBP-09-13, 70 NRC 168 (2009); LBP-10-16, 72 NRC 361 (2010)

not all entities with governmental ties are entitled to participate in licensing proceedings as local governmental bodies; LBP-09-13, 70 NRC 168 (2009)

NRC has acknowledged the analogous standing of the part-owner of a facility; LBP-09-6, 69 NRC 367 (2009)

NRC must provide a hearing upon the request of any person whose interest may be affected by the proceeding; LBP-07-11, 66 NRC 41 (2007); LBP-08-6, 67 NRC 241 (2008)

NRC's proximity presumption does not disregard contemporaneous judicial concepts of standing, but rather the Commission applied its expertise to determine that persons living within a 50-mile radius of a nuclear reactor face a realistic threat of harm if a release of radioactive material were to occur from the facility; LBP-09-16, 70 NRC 227 (2009)

## SUBJECT INDEX

occasional contact with an affected area is not sufficient to establish standing; LBP-07-4, 65 NRC 281 (2007)

occasional trips to areas located close to reactors have been found to be insufficient grounds to demonstrate a risk to the intervenor's health and safety; LBP-08-9, 67 NRC 421 (2008)

offsite consequences need only be plausible, not necessarily probable or likely, and thus standing can be based on plausible but unlikely scenarios; LBP-07-14, 66 NRC 169 (2007)

once a party demonstrates that it has standing to intervene on its own accord, that party may then raise any contention that, if proved, will afford the party relief from the injury it relies upon for standing; CLI-09-9, 69 NRC 331 (2009); LBP-09-16, 70 NRC 227 (2009)

one does not acquire standing as a consequence of being a member of a legislative tribunal; LBP-07-5, 65 NRC 341 (2007)

one who asserts a procedural right to protect a concrete interest can assert that right without meeting all the normal standards for redressability and immediacy; LBP-10-11, 71 NRC 609 (2010)

one who does something "frequently" does so at frequent or short intervals, "frequent" being defined as often or habitually; LBP-10-1, 71 NRC 165 (2010)

one who performs an act "regularly" does so in a regular, orderly, or methodical way; LBP-10-1, 71 NRC 165 (2010)

organizations may demonstrate standing in either an organizational or a representational capacity; LBP-09-28, 70 NRC 1019 (2009)

permission to intervene should prove more readily available where petitioners show significant ability to contribute on substantial issues of law or fact that will not otherwise be properly raised or presented; LBP-10-11, 71 NRC 609 (2010)

petitioner bears the burden of demonstrating standing, but in ruling on standing a licensing board is to construe the petition in favor of the petitioner; LBP-08-6, 67 NRC 241 (2008)

petitioner bears the burden of establishing its standing in a proceeding; LBP-07-10, 66 NRC 1 (2007)

petitioner cannot base standing or a contention on the possibility that the licensee will violate the terms of its license; CLI-10-20, 72 NRC 185 (2010)

petitioner cannot rely on another board's finding of standing in a prior proceeding, even where the same licensed facility is involved; CLI-10-7, 71 NRC 133 (2010)

petitioner cannot satisfy NRC's standing requirement by offering a vague claim of 50-mile proximity in an initial petition and later using a petition for reconsideration to fill in gaps with more specific information that was available all along; CLI-07-21, 65 NRC 519 (2007)

petitioner does not have standing to assert rights of employees or caretakers on her land where caretakers are not minors or otherwise legally incapable of representing their own interests; LBP-08-18, 68 NRC 533 (2008)

petitioner has an affirmative duty to demonstrate that it has standing in each proceeding in which it seeks to participate because a petitioner's status can change over time and the bases for its standing in an earlier proceeding may no longer apply; LBP-09-18, 70 NRC 385 (2009)

petitioner has standing to intervene without the need to specifically plead injury, causation, and redressability if the petitioner lives within, or otherwise has frequent contacts with, the zone of possible harm from the nuclear reactor or other source of radioactivity; LBP-08-9, 67 NRC 421 (2008); LBP-08-26, 68 NRC 905 (2008)

petitioner has the burden to plead sufficient, plausible facts to demonstrate standing; CLI-10-7, 71 NRC 133 (2010); LBP-10-4, 71 NRC 216 (2010)

petitioner may not be granted party status in the high-level waste proceeding if it cannot demonstrate substantial and timely compliance with the requirements in 10 C.F.R. 2.1003 concerning the availability of documentary material on the Licensing Support Network; LBP-09-6, 69 NRC 367 (2009)

petitioner may not establish standing by alleging injury on behalf of another entity, but rather, petitioner must be the object of the actual or threatened injury; LBP-10-4, 71 NRC 216 (2010)

petitioner must allege a concrete and particularized injury that is fairly traceable to the challenged action and is likely to be redressed by a favorable decision; CLI-09-20, 70 NRC 911 (2009); LBP-07-3, 65 NRC 237 (2007); LBP-07-4, 65 NRC 281 (2007); LBP-07-5, 65 NRC 341 (2007); LBP-07-11, 66 NRC 41 (2007); LBP-09-13, 70 NRC 168 (2009); LBP-09-16, 70 NRC 227 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-09-20, 70 NRC 565 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-09-28, 70 NRC 1019 (2009); LBP-10-16, 72 NRC 361 (2010)

## SUBJECT INDEX

petitioner must establish standing and proffer at least one admissible contention that meets the requirements of 10 C.F.R. 2.309(f)(1); LBP-10-16, 72 NRC 361 (2010)

petitioner must make a fresh demonstration of standing for each proceeding in which he seeks intervention because petitioner's circumstances may change from one proceeding to the next; CLI-10-7, 71 NRC 133 (2010); LBP-10-21, 72 NRC 616 (2010)

petitioner must meet the prudential standing requirement by showing that the asserted interest arguably falls within the zone of interests protected by the governing law; LBP-08-15, 68 NRC 294 (2008)

petitioner must provide basic information supporting its claim to standing in order to satisfy the requirements of 10 C.F.R. 2.309(d)(1)(ii)-(iv); LBP-08-13, 68 NRC 43 (2008)

petitioner must set forth his or her interest in the proceeding, as well as the possible effect that any order or decision entered therein might have upon that interest; LBP-07-5, 65 NRC 341 (2007)

petitioner must show (among other things) that its potential injury is fairly traceable to a grant of the application; CLI-06-21, 64 NRC 30 (2006)

petitioner must show a pattern of regular, significant contacts within the vicinity of the site to satisfy standing requirements; LBP-10-4, 71 NRC 216 (2010)

petitioner must show an injury in fact that is fairly traceable to the challenged action and likely to be redressed by a favorable decision; LBP-07-16, 66 NRC 277 (2007)

petitioner must show that it has suffered or will suffer a distinct and palpable harm that constitutes injury-in-fact within the zone of interests arguably protected by the governing statute and that this injury can fairly be traced to the challenged action; CLI-06-2, 63 NRC 9 (2006); LBP-10-15, 72 NRC 257 (2010); LBP-10-21, 72 NRC 616 (2010)

petitioner must state its name, address, and telephone number, nature of its right under the Atomic Energy Act to be made a party to the proceeding, nature and extent of its property, financial, or other interest in the proceeding, and possible effect of any decision or order issued in the proceeding on its interest; LBP-10-7, 71 NRC 391 (2010)

petitioner should submit a fully developed showing regarding standing in each proceeding in which it seeks to intervene, regardless of whether it has previously been found to have standing relative to the facility that is the locus of the proceedings; LBP-07-10, 66 NRC 1 (2007)

petitioner who had frequently visited an area allegedly affected by the proposed action for recreational purposes had shown injury in the standing context; LBP-10-1, 71 NRC 165 (2010)

petitioner who might have had standing in an earlier proceeding will not automatically be granted standing in subsequent proceedings; LBP-09-18, 70 NRC 385 (2009)

petitioner who seeks to base standing on contacts within a 50-mile radius of a proposed facility must provide enough detail to allow the board to distinguish a casual interest from a substantial one; CLI-10-7, 71 NRC 133 (2010)

petitioner whose daily commute took her within less than one-half mile of a research reactor had standing based on the obvious potential for offsite consequences; CLI-10-7, 71 NRC 133 (2010)

petitioner whose office was located within one-half mile from a research reactor may be presumed to be affected by operation of the facility; CLI-10-7, 71 NRC 133 (2010)

petitioner's claim that he routinely pierces the 50-mile radius around a reactor site is too vague to support standing; LBP-10-1, 71 NRC 165 (2010)

petitioner's claimed injury must be arguably within the zone of interests protected by the governing statute in the proceeding; LBP-10-16, 72 NRC 361 (2010)

petitioner's participation in a licensing proceeding hinges on a demonstration that the petitioner has standing; LBP-10-16, 72 NRC 361 (2010)

petitioner's present circumstances or the extent to which activities in the recent past reflect a likely pattern of future conduct are considered; LBP-07-10, 66 NRC 1 (2007)

petitioner's proximity to the pertinent facility triggers a presumption that it has standing to intervene without the need to specifically plead injury, causation, and redressability if the petitioner lives within, or otherwise has frequent contacts with, the zone of possible harm; LBP-08-15, 68 NRC 294 (2008); LBP-08-17, 68 NRC 431 (2008); LBP-08-26, 68 NRC 905 (2008)

petitioner's right to participate in a proceeding concerns whether the petitioner has sufficient stake in a matter, as contrasted with whether there is a real dispute; LBP-08-6, 67 NRC 241 (2008)

petitioner's showing establishing standing in one proceeding need not be repeated to establish standing in another proceeding regarding that same facility; LBP-07-10, 66 NRC 1 (2007)

## SUBJECT INDEX

petitioner's standing showing can be corrected or supplemented to cure deficiencies by means of its reply pleading; LBP-10-21, 72 NRC 616 (2010)

petitioners are not required to demonstrate their asserted injury with certainty at the contention admission stage, or to provide extensive technical studies in support of their standing argument; LBP-07-14, 66 NRC 169 (2007); LBP-10-16, 72 NRC 361 (2010)

petitioners are not required to show standing for each contention separately; LBP-09-1, 69 NRC 11 (2009)

petitioners bear the burden of providing sufficient relevant, specific information, whether by good-faith estimate or otherwise, to establish the basis for their standing claims; LBP-10-1, 71 NRC 165 (2010)

petitioners in direct license transfer cases who qualified for proximity-based standing lived within a 5-1/2-mile radius of their plant; CLI-08-19, 68 NRC 251 (2008)

petitioners may enforce procedural rights only if the procedures in question are designed to protect some threatened concrete interest of theirs that is the ultimate basis of their standing; LBP-10-11, 71 NRC 609 (2010)

petitioners need not demonstrate a substantial likelihood of redressability, but rather need only show that redress is likely as opposed to speculative; LBP-10-11, 71 NRC 609 (2010)

petitioners need not show a nexus between interest upon which standing is based and the substance of their proposed contentions; CLI-09-9, 69 NRC 331 (2009)

petitioners who fail to provide specific information regarding proximity or frequency of contacts that may establish standing only complicate matters for themselves; LBP-10-1, 71 NRC 165 (2010)

petitioners who rely on water supplies adjacent to a mining site have a right to a hearing; LBP-08-24, 68 NRC 691 (2008)

plaintiffs have been found to have a right to apply for preventive relief where copper mining tailings were carried 25 miles to plaintiff's farm; LBP-08-6, 67 NRC 241 (2008)

preservation of cultural traditions is a protected interest under federal law, and its endangerment or harm qualifies as an injury for the purposes of establishing standing; LBP-08-24, 68 NRC 691 (2008)

preservation of Native American cultural traditions is a protected interest under federal law; LBP-10-16, 72 NRC 361 (2010)

procedural violations of the National Historic Preservation Act have resulted in a grant of standing to tribes; LBP-08-24, 68 NRC 691 (2008)

proximity alone does not suffice for standing in materials licensing cases; CLI-09-12, 69 NRC 535 (2009); LBP-08-24, 68 NRC 691 (2008)

proximity standing in a license transfer proceeding has been recognized at close distances where a petitioner frequently engages in substantial business and related activities in the vicinity of the facility, engages in normal, everyday activities in the vicinity, has regular and frequent contacts in an area near a licensed facility, or otherwise has visits of a length and nature showing an ongoing connection and presence; CLI-07-21, 65 NRC 519 (2007)

proximity standing rests on the presumption that an accident associated with the nuclear facility could adversely affect the health and safety of people working, living, or regularly engaging in activities offsite but within a certain distance of that facility; CLI-08-19, 68 NRC 251 (2008)

proximity-based presumption of standing applies in proceedings for nuclear power plant construction permits, operating licenses, or significant amendments thereto; LBP-10-15, 72 NRC 257 (2010); LBP-10-16, 72 NRC 361 (2010)

proximity-based standing has been denied when petitioner has demonstrated only occasional contact with the zone of possible harm; CLI-07-21, 65 NRC 519 (2007); LBP-10-1, 71 NRC 165 (2010)

proximity-based standing in license transfer proceedings had been denied to petitioners within 5-10 miles, 12 miles, and 40 miles from licensed facilities; CLI-07-21, 65 NRC 519 (2007)

proximity-based standing must be based on the factual circumstances presented by the information before the licensing board regarding the petitioner's activities, which may include consideration of the proximity, timing, and duration of those activities; LBP-07-10, 66 NRC 1 (2007)

proximity-based standing will be denied when petitioner fails to supply more specific information regarding the frequency, nature, and length of his contacts within the proximity zone; LBP-10-1, 71 NRC 165 (2010)

pursuant to the proximity-plus approach, a presumption based on geographical proximity (albeit at distances much closer than 50 miles) may be applied where there is a determination that the proposed

## SUBJECT INDEX

action involves a significant source of radioactivity producing an obvious potential for offsite consequences; LBP-10-4, 71 NRC 216 (2010)

redressability requires petitioner to show that its alleged injury-in-fact could be cured or alleviated by some action of the tribunal; LBP-09-13, 70 NRC 168 (2009); LBP-10-16, 72 NRC 361 (2010)

regardless of whether there is a challenge to a petitioner's standing, given the jurisdictional nature of standing under the Atomic Energy Act, the board has an independent obligation to make a standing determination; LBP-10-1, 71 NRC 165 (2010)

regular but intermittent residence 1 week a month in a house 35 miles from a facility is sufficient for standing purposes; LBP-07-10, 66 NRC 1 (2007)

requirement to show distinct new harm from a license amendment application would not preclude standing to contest commencement of new operations at a separate site, where petitioner showed potential for harm to himself from new operation; CLI-09-12, 69 NRC 535 (2009)

showing that estimated dose consequences associated with operation under extended power uprate conditions can be expected to increase by the 20% power level change establishes that the proposed EPU creates an obvious potential for offsite consequences; LBP-07-10, 66 NRC 1 (2007)

significant contacts with an affected area can be sufficient to establish standing, even when full-time residence within the 50-mile zone is not shown; LBP-07-4, 65 NRC 281 (2007)

some circumstances exist in which petitioners may be presumed to have standing based on their geographical proximity to a facility or source of radioactivity, without the need to show injury in fact, causation, or redressability; LBP-08-6, 67 NRC 241 (2008)

someone living adjacent to the site for proposed construction of a federally licensed facility has standing to challenge the licensing agency's failure to prepare an environmental impact statement, even though he cannot establish with any certainty that the statement will cause the license to be withheld or altered, and even though the facility will not be completed for many years; LBP-10-24, 72 NRC 720 (2010)

standing as of right is not available in export license proceedings but the Commission has exercised its discretion to hold an open legislative-type hearing; LBP-09-1, 69 NRC 11 (2009)

standing cannot be based on unfounded conjecture; LBP-09-28, 70 NRC 1019 (2009)

standing generally has been denied when the threat of injury is not concrete and particularized; LBP-09-13, 70 NRC 168 (2009); LBP-10-16, 72 NRC 361 (2010)

standing is granted to an Indian tribe based on its interest in cultural artifacts onsite that could be affected by a proposed licensing action; CLI-09-9, 69 NRC 331 (2009)

"standing to sue" doctrine is defined; LBP-08-6, 67 NRC 241 (2008)

standing was not granted where litigant tried to rely on very narrow statutory provisions to challenge the much broader aspects of a statute that had no meaningful relationship to the litigant's situation; LBP-09-6, 69 NRC 367 (2009)

standing will be denied where contact has been limited to mere occasional trips to areas located close to reactors; LBP-10-1, 71 NRC 165 (2010)

state and federally recognized Indian tribes do not need to address standing requirements if the facility is located within their boundaries; CLI-09-15, 70 NRC 1 (2009); CLI-10-4, 71 NRC 56 (2010)

state and local governmental bodies in which the geologic repository operations area is located and any affected federally recognized Indian tribe need not address the standing requirements; CLI-08-25, 68 NRC 497 (2008)

substantial deference is given to boards' determinations on threshold issues, such as standing and contention admissibility; CLI-09-20, 70 NRC 911 (2009)

SUNSI requests need not be accompanied by affidavits or include lengthy, detailed justifications addressing the likelihood of standing; LBP-09-5, 69 NRC 303 (2009)

SUNSI requests need to include the name and address of the potential party and a description of the potential party's particularized interest that could be harmed by the proposed licensing action sufficient to demonstrate a reasonable basis to conclude he or she could likely establish standing; LBP-09-5, 69 NRC 303 (2009)

the appropriate distance for proximity standing is decided on a case-by-case basis taking into account the nature of the proposed action and the significance of the radioactive source; LBP-07-14, 66 NRC 169 (2007)

## SUBJECT INDEX

- the benefits of the proximity presumption are not limited to those who reside within the area in which the presumption applies, but can be extended to those who conduct everyday activities or visit within that area; LBP-07-10, 66 NRC 1 (2007)
- the better practice for an intervention petitioner is to submit a fully developed showing regarding standing in each proceeding in which it seeks to intervene, regardless of whether it has previously been found to have standing relative to the facility that is the locus of the proceedings; LBP-09-18, 70 NRC 385 (2009)
- the board declines to impose a requirement that petitioners perform an independent technical analysis at the standing phase of a proceeding, especially when the chain of plausible causation that could lead to offsite doses is abundantly clear; LBP-07-14, 66 NRC 169 (2007)
- the Commission defers to a board's rulings on standing and contention admissibility in the absence of clear error or abuse of discretion; CLI-09-9, 69 NRC 331 (2009); CLI-09-12, 69 NRC 535 (2009); CLI-10-1, 71 NRC 1 (2010); CLI-10-3, 71 NRC 49 (2010); CLI-10-7, 71 NRC 133 (2010); CLI-10-20, 72 NRC 185 (2010)
- the Commission has accepted a proximity presumption granting standing to residents within 50 miles of a reactor, but has not accepted any such presumption in nonreactor cases; LBP-07-14, 66 NRC 169 (2007)
- the Commission recognizes a 50-mile proximity presumption to establish standing in proceedings concerning nuclear power reactor construction and operating licenses; LBP-09-28, 70 NRC 1019 (2009)
- the common thread in decisions applying the 50-mile proximity presumption is a recognition of the potential effects at significant distances from the facility of the accidental release of fissionable materials; LBP-09-4, 69 NRC 170 (2009)
- the definition of "party" under the Nuclear Waste Policy Act implies that local governments enjoy standing as of right; LBP-08-10, 67 NRC 450 (2008)
- the distinction between "frequently" and "regularly" highlights the importance of making a more detailed factual showing, rather than relying on conclusory adjectives and adverbs, when a standing claim rests on the nature of petitioner's activities purportedly near to, or bearing some connection with, the reactor facility at issue; LBP-10-1, 71 NRC 165 (2010)
- the elements of standing will be presumed to be satisfied if an individual lives within the zone of possible harm from a significant source of radioactivity, which has been defined in proceedings involving nuclear power plants as being within a 50-mile radius of such a plant; LBP-07-11, 66 NRC 41 (2007)
- the fact that an ancestor of a member of the Oglala Delegation of the Great Sioux Nation Treaty Council signed several treaties with the United States more than 100 years ago does not establish that the delegation is a current and official successor to the delegation that signed such treaties, or that the delegation is a local governmental entity that currently exercises executive authority; LBP-09-13, 70 NRC 168 (2009)
- the increased risk of living within 50 miles of a nuclear power plant constitutes injury-in-fact, is traceable to the challenged action, and is likely to be redressed by a favorable decision that either denies a license or mandates compliance with legal requirements that protect the interests of the petitioners; LBP-09-4, 69 NRC 170 (2009)
- the lateness of petitioner's filing is justifiable because a relevant document was not revealed in a search of NRC's public database because of deficiencies in tagging; LBP-08-6, 67 NRC 241 (2008)
- the longest specific distance for which the Commission has granted proximity-based standing in a license transfer case is 6 to 6-1/2 miles; CLI-07-21, 65 NRC 519 (2007)
- the nontrivial increased risk of living within 50 miles of a proposed reactor constitutes injury-in-fact, is traceable to the challenged action, and is likely to be redressed by a favorable decision that either denies a license or mandates compliance with legal requirements that protect the interests of the petitioners; CLI-09-20, 70 NRC 911 (2009); LBP-09-16, 70 NRC 227 (2009)
- the person who has been accorded a procedural right to protect his concrete interests can assert that right without meeting all the normal standards for redressability and immediacy; LBP-08-24, 68 NRC 691 (2008)
- the presiding officer must assess a petition to intervene even if there are no objections to a petitioner's standing; LBP-08-16, 68 NRC 361 (2008)

## SUBJECT INDEX

the presiding officer must determine whether petitioner is a person whose interest may be affected by the proceeding; LBP-10-7, 71 NRC 391 (2010)

the process of sifting and weighing participants' factual proffers often calls upon a board to make difficult choices, so that a petitioner who fails to provide specific information regarding the geographic proximity or the timing and duration of its visits only complicates matters for itself; LBP-09-18, 70 NRC 385 (2009)

the proximity presumption applies in proceedings for nuclear power plant construction permits, operating licenses, or significant amendments thereto; LBP-08-13, 68 NRC 43 (2008); LBP-08-15, 68 NRC 294 (2008); LBP-09-26, 70 NRC 939 (2009)

the proximity presumption does not permit persons with no actual or imminent claim of injury to obtain a hearing; LBP-09-4, 69 NRC 170 (2009)

the proximity presumption extends to petitioners living in or having frequent contacts with an area within a 50-mile radius of a nuclear reactor; LBP-08-18, 68 NRC 533 (2008)

the radioactive source posing the danger in a reactor license renewal case is the identical source giving rise to the 50-mile proximity presumption rule for reactor construction permit and operating license proceedings; LBP-06-7, 63 NRC 188 (2006)

the rationale for the 50-mile presumption does not depend upon the probability that a proposed reactor is likely to generate an accidental release of radioactive materials, but rather the fact that, if such an accident were to occur, it could realistically impact the geographic area within which the petitioners reside; LBP-09-4, 69 NRC 170 (2009)

the requirement that an injury or threat of injury be concrete and particularized perforce means that the injury must not be conjectural or hypothetical; LBP-09-28, 70 NRC 1019 (2009); LBP-10-4, 71 NRC 216 (2010)

the requirement to establish standing does not apply to petitions for discretionary intervention because discretionary intervention was created to afford party status to petitioners unable to demonstrate standing; CLI-06-16, 63 NRC 708 (2006)

the requirement to show actual injury derives ultimately from the doctrine of standing, a constitutional principle that prevents courts of law from undertaking tasks assigned to the political branches; LBP-09-1, 69 NRC 11 (2009)

the requisite injury may be either actual or threatened, but must arguably lie within the zone of interests protected by the statutes governing the proceeding; LBP-07-4, 65 NRC 281 (2007)

the role of "private attorney general" is not contemplated under the Atomic Energy Act; CLI-08-19, 68 NRC 251 (2008)

the source of the practice in NRC proceedings of referring to judicial standing concepts is a 1976 Commission decision in which it affirmed the appeal board's determination that petitioners in the case did not meet the judicial standing test; LBP-09-1, 69 NRC 11 (2009)

the standing requirement for showing injury in fact has always been significantly less than for demonstrating an acceptable contention; LBP-08-6, 67 NRC 241 (2008)

the test to demonstrate prudential standing is not meant to be especially demanding; LBP-09-6, 69 NRC 367 (2009)

the ultimate test for standing is not whether NRC's test conforms to that applied by federal courts, but whether NRC's test represents a reasonable construction of section 189a of the Atomic Energy Act; LBP-09-4, 69 NRC 170 (2009)

there is no conflict between the basic requirements for standing, as applied in the federal courts, and the NRC's proximity presumption; CLI-09-22, 70 NRC 932 (2009); LBP-09-4, 69 NRC 170 (2009)

there is no obvious potential for harm at petitioner's property 20 miles from an uranium enrichment facility location; LBP-08-6, 67 NRC 241 (2008)

there is no requirement for any nexus between an asserted injury and a contention; LBP-09-1, 69 NRC 11 (2009)

three conditions must be satisfied for the proximity presumption to afford standing as of right; LBP-07-10, 66 NRC 1 (2007)

to demonstrate standing to intervene, petitioner must state, and boards must assess, the nature of petitioner's right under the governing statutes to be made a party, the nature and extent of petitioner's property, financial, or other interest, and the possible effect of the outcome of the proceeding on petitioner's interest; CLI-09-20, 70 NRC 911 (2009)

## SUBJECT INDEX

- to demonstrate standing, petitioner must identify an interest in the proceeding and specify the facts pertaining to that interest; CLI-08-19, 68 NRC 251 (2008)
- to determine whether an interest is in the zone of interests of a statute, it is necessary first to discern the interests arguably to be protected by the statutory provision at issue, and then to inquire whether petitioner's interests affected by the agency action are among them; LBP-09-13, 70 NRC 168 (2009); LBP-10-16, 72 NRC 361 (2010)
- to determine whether petitioner has an interest potentially affected by a proceeding, the licensing board considers the nature of the petitioner's right under the Atomic Energy Act to be made a party, the nature and extent of petitioner's property, financial, or other interest in the proceeding, and the possible effect of any decision or order on petitioner's interest; LBP-08-14, 68 NRC 279 (2008)
- to determine whether petitioners have standing, boards accept as true all material allegations of the complaint and construe the complaint in favor of the complaining party; CLI-10-20, 72 NRC 185 (2010)
- to determine whether there is potential for offsite consequences at specific sites, licensing boards have authority to infer obvious intermediate steps in a chain of causation that could lead to offsite doses; LBP-07-14, 66 NRC 169 (2007)
- to establish an injury in fact, a party merely has to show some threatened concrete interest personal to the party that the National Historic Preservation Act was designed to protect; LBP-08-24, 68 NRC 691 (2008); LBP-10-16, 72 NRC 361 (2010)
- to establish causation, petitioner must show that there is a causal connection between the injury-in-fact and the conduct complained of; LBP-09-13, 70 NRC 168 (2009); LBP-10-16, 72 NRC 361 (2010)
- to establish proximity-based standing, it is petitioner's responsibility to provide enough detail to allow the board to distinguish a casual interest from a substantial one; LBP-10-7, 71 NRC 391 (2010)
- to establish standing based on frequent contacts, petitioner must show that he frequently engages in substantial business and related activities in the vicinity of the facility, engages in normal, everyday activities in the vicinity, has regular and frequent contacts in an area near a licensed facility, or otherwise has visits of a length and nature showing an ongoing connection and presence; LBP-10-1, 71 NRC 165 (2010)
- to establish standing, economic interests must be linked to potential radiological or environmental risks; LBP-09-6, 69 NRC 367 (2009)
- to establish standing in federal court, a party must show injury in fact, causation, and redressability; LBP-09-13, 70 NRC 168 (2009); LBP-10-16, 72 NRC 361 (2010)
- to establish standing, petitioner's claimed injury must be arguably within the zone of interests protected by the governing statute in the proceeding; LBP-09-13, 70 NRC 168 (2009)
- to establish the requisite proximity for standing, petitioner must clearly indicate where he lives and/or what contact he has with the site; LBP-10-1, 71 NRC 165 (2010); LBP-10-7, 71 NRC 391 (2010)
- to interpose a new contention after a proceeding has been terminated requires submission of a fresh intervention petition that fulfills the applicable standards for such filings, including an appropriate standing demonstration; LBP-10-21, 72 NRC 616 (2010)
- to intervene as of right in any Commission licensing proceeding, a petitioner must demonstrate that its interest may be affected by the proceeding and specify the facts pertaining to that interest; CLI-07-18, 65 NRC 399 (2007)
- to meet its burden, it is generally sufficient if petitioner provides plausible factual allegations that satisfy each element of standing; LBP-10-4, 71 NRC 216 (2010)
- to qualify for standing, a petitioner must allege a concrete and particularized injury that is fairly traceable to the challenged action and (likely to be redressed by a favorable decision; LBP-06-23, 64 NRC 257 (2006)
- to the extent contaminants can plausibly migrate from leach mining operations to the aquifer from which a petitioner obtains his or her water, a petitioner would have a claim of a cognizable injury and could be accorded standing; LBP-08-24, 68 NRC 691 (2008)
- "transmission services" is a concept central to the determination of standing in a license transfer proceeding; CLI-06-2, 63 NRC 9 (2006)
- tribes that have addressed procedural violations of the National Historic Preservation Act have uniformly been granted standing under the relaxed standard and have proceeded directly to the merits of the NHPA claim; LBP-10-16, 72 NRC 361 (2010)

## SUBJECT INDEX

- under the proximity presumption, petitioner in an operating license proceeding who lives within 50 miles of a nuclear power reactor is presumed to have standing without the need specifically to plead injury, causation, and redressability; LBP-09-26, 70 NRC 939 (2009)
- under the proximity presumption, petitioner need not specifically plead injury, causation, and redressability if the petitioner lives within, or otherwise has frequent contacts with, the zone of possible harm from the nuclear reactor or other source of radioactivity; LBP-06-4, 63 NRC 99 (2006)
- under the test for prudential standing, a party's attempt to establish standing will fail only if the petitioner's interests are so marginally related to or inconsistent with the purposes implicit in the statute that it cannot reasonably be assumed that Congress intended to permit the suit; LBP-09-6, 69 NRC 367 (2009)
- unless a proposed action involves obvious potential for offsite consequences, such as with construction or operation of reactor or certain major alterations to facility, petitioner must allege some specific injury in fact that will result from the action taken; LBP-08-18, 68 NRC 533 (2008)
- vague assertions of possible harm do not amount to a showing of concrete and particularized injury to petitioner's interests that is actual or imminent, not conjectural or hypothetical; LBP-08-18, 68 NRC 533 (2008)
- when a petitioner cannot establish proximity-plus standing, he or she must resort to establishing standing under traditional standing principles; LBP-10-4, 71 NRC 216 (2010)
- when a state advises a licensing board that a proceeding involves a facility within its borders, the board shall not require a further demonstration of standing; LBP-06-7, 63 NRC 188 (2006)
- when denial of a license would alleviate a petitioner's asserted potential injury, any admissible contention with such a result can be prosecuted by a petitioner, regardless of whether that contention is directly related to that petitioner's articulated injury; LBP-09-16, 70 NRC 227 (2009)
- when standing in a prior proceeding related to the same facility is based on an issue that is outside the scope of the new proceeding, it cannot serve as the basis for standing in the new proceeding; LBP-07-14, 66 NRC 169 (2007)
- where a facility will not be located within an Indian tribe's boundaries, the tribe must meet the standing requirements imposed by 10 C.F.R. 2.309(d)(1); LBP-10-16, 72 NRC 361 (2010)
- where a party's procedural right has been violated, that party has standing to contest the procedural violation even when the underlying interest that the procedural right seeks to protect does not face an "immediate" threat; CLI-09-9, 69 NRC 331 (2009)
- where a petitioner is accorded standing in one proceeding, that petitioner need not make a separate demonstration of standing in another proceeding regarding that same facility and the same parties; LBP-08-24, 68 NRC 691 (2008)
- where an abrogated treaty was the only grounds supporting an Indian group's claim of standing, the board correctly found that the Indian group did not have standing as a party to the proceeding; CLI-09-9, 69 NRC 331 (2009)
- where there is no obvious potential for offsite harm, petitioner must show a specific and plausible means of how the challenged action may harm him or her; CLI-09-9, 69 NRC 331 (2009)
- whether and at what distance a petitioner can be presumed to be affected must be judged on a case-by-case basis, taking into account the nature of the proposed action and the significance of the radioactive source; LBP-08-6, 67 NRC 241 (2008); LBP-10-4, 71 NRC 216 (2010)
- STANDING TO INTERVENE, ORGANIZATIONAL
- a board properly found no standing where petitioner failed to demonstrate that it, or any of its members, would suffer any concrete or particularized harm from a proposed license renewal; CLI-06-6, 63 NRC 161 (2006)
- a broadly stated interest in a problem is not sufficient by itself to render the organization adversely affected or aggrieved; LBP-09-13, 70 NRC 168 (2009)
- a Native American group that has failed to establish that it is a federally recognized Indian tribe is denied standing based on its tribal status; LBP-09-13, 70 NRC 168 (2009)
- a "same zip code" test for standing is inappropriate, given that the sizes of zip-code areas vary greatly throughout the country; CLI-07-22, 65 NRC 525 (2007)
- affidavits by an individual with standing authorizing an organization to represent him must be filed with specific reference to the proceeding in which standing is sought for the organization; CLI-09-9, 69 NRC 331 (2009)

## SUBJECT INDEX

an advisory body that lacks executive or legislative responsibilities is so far removed from having the representative authority to speak and act for the public that it does not qualify as a governmental entity; CLI-07-18, 65 NRC 399 (2007)

an organization may base its standing on immediate or threatened injury to either its organizational interests or to the interests of identified members; LBP-09-2, 69 NRC 87 (2009); LBP-10-15, 72 NRC 257 (2010); LBP-10-16, 72 NRC 361 (2010)

an organization must demonstrate that the action at issue will cause an injury in fact to the organization's interests and the injury is within the zone of interests protected by NEPA or the AEA; LBP-06-23, 64 NRC 257 (2006); LBP-10-16, 72 NRC 361 (2010)

an organization seeking to intervene in a representational capacity must demonstrate that the licensing action will affect at least one of its members, identify that member by name and address, and show that it is authorized by that member to request a hearing on his or her behalf; LBP-09-6, 69 NRC 367 (2009)

an organization seeking to intervene in its own right must demonstrate a palpable injury in fact to its organizational interests that is within the zone of interests protected by the Atomic Energy Act or the National Environmental Policy Act; LBP-08-24, 68 NRC 691 (2008); LBP-08-26, 68 NRC 905 (2008)

an organization that is neither a federally recognized Indian tribe nor a local governmental body does not qualify for standing; LBP-09-13, 70 NRC 168 (2009)

because petitioner's pleadings fail to provide adequate information about the interests of the organization to which he belongs and how those interests would be adversely affected by the licensing proceeding, the board is precluded from granting organizational standing; LBP-10-4, 71 NRC 216 (2010)

economic interests of an organization representing nuclear utility members confer standing on the organization; LBP-09-6, 69 NRC 367 (2009)

failure of an organizational participant to have a representative provide an appearance notice in accord with section 2.314(b) might provide cause for an appropriate sanction for failure properly to prosecute the litigation; LBP-10-7, 71 NRC 391 (2010)

for an organization to qualify for the proximity presumption, a bare assertion that a member lives within 50 miles is not sufficient; LBP-07-4, 65 NRC 281 (2007)

for an organizational petitioner to establish standing, it must show immediate or threatened injury to either its organizational interests or to the interest of identified members; LBP-08-6, 67 NRC 241 (2008); LBP-08-24, 68 NRC 691 (2008)

general policy interests alone are not sufficient to establish organizational standing, but rather, a petitioner must demonstrate a discrete institutional injury to the organization itself; LBP-07-4, 65 NRC 281 (2007); LBP-09-20, 70 NRC 565 (2009)

injury-in-fact to establish standing requires more than a general interest in preservation of the environment; LBP-09-28, 70 NRC 1019 (2009)

neither the asserted claim nor the requested relief must require an individual member to participate in the organization's legal action; CLI-07-18, 65 NRC 399 (2007)

no obvious potential for offsite consequences sufficient to establish organizational standing was shown even though the organization's office was a mere 3 miles from the facility; LBP-09-28, 70 NRC 1019 (2009)

not all organizations with governmental ties are entitled to participate in NRC proceedings as a local governmental body (county, municipality, or other subdivision); CLI-07-18, 65 NRC 399 (2007)

organizations seeking to challenge regulations of a government agency failed to demonstrate standing where they did not demonstrate a concrete application of the regulations that threatened imminent harm to their interests; CLI-09-20, 70 NRC 911 (2009)

organizations seeking to intervene in their own right must satisfy the same standing requirements as individuals seeking to intervene because an organization, like an individual, is considered a "person"; CLI-07-18, 65 NRC 399 (2007)

petitioner cannot rely on an affidavit authorizing representation that was executed with respect to one proceeding to authorize representation in a separate proceeding involving the same license; CLI-10-7, 71 NRC 133 (2010)

petitioner must demonstrate that the action at issue will cause an injury-in-fact to the organization's interests or the interests of its members and that the injury is within the zone of interests protected by the National Environmental Policy Act or the Atomic Energy Act; LBP-09-10, 70 NRC 51 (2009);

## SUBJECT INDEX

- LBP-07-11, 66 NRC 41 (2007); LBP-07-14, 66 NRC 169 (2007); LBP-09-13, 70 NRC 168 (2009); LBP-09-16, 70 NRC 227 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-20, 70 NRC 565 (2009); LBP-09-21, 70 NRC 581 (2009); LBP-09-26, 70 NRC 939 (2009)
- petitioner must show some risk of discrete institutional injury to itself, other than the general environmental and policy interests of the sort repeatedly found insufficient for organizational standing; CLI-08-19, 68 NRC 251 (2008); CLI-10-3, 71 NRC 49 (2010); LBP-08-13, 68 NRC 43 (2008); LBP-08-15, 68 NRC 294 (2008)
- petitioner organizations have established standing based on their members' proximity to transportation routes, even where it was not possible to predict with accuracy which of its members were most likely to be harmed or the extent of the damage; LBP-09-6, 69 NRC 367 (2009)
- petitioner's status as an anti-nuclear advocate and a source of information for its community is insufficient, without more, to qualify it for organizational standing; CLI-08-19, 68 NRC 251 (2008)
- petitioner's use of litigation to speed the licensing of the Yucca Mountain repository is germane to its purpose and does not require the actual participation of any of its members individually; LBP-09-6, 69 NRC 367 (2009)
- standing was found for an organization representing three members living in close proximity to a decommissioning site, who expressed concern that depleted uranium materials could affect a waterway abutting the property of two members; CLI-10-20, 72 NRC 185 (2010)
- the injury-in-fact necessary to establish organizational standing must be more than a mere interest in a problem, no matter how longstanding the interest and no matter how qualified the organization is in evaluating the problem; LBP-09-13, 70 NRC 168 (2009); LBP-10-16, 72 NRC 361 (2010)
- the interests that the representative organization seeks to protect must be germane to its own purpose; CLI-07-18, 65 NRC 399 (2007)
- the member of an organization that seeks standing must qualify for standing in his or her own right, and the interests that the organization seeks to protect must be germane to its own purpose; LBP-09-6, 69 NRC 367 (2009)
- the organization must show that the interests of the organization will be harmed by the proposed licensing action; LBP-07-4, 65 NRC 281 (2007)
- the organization must, in its own right, satisfy the same requirements of injury, causation, and redressability as an individual; LBP-09-28, 70 NRC 1019 (2009)
- there are certain organizations for which member authorization for organizational standing might be presumed; LBP-09-6, 69 NRC 367 (2009)
- to assert an appropriate injury, an organization must demonstrate a palpable injury in fact to its organizational interests; LBP-10-16, 72 NRC 361 (2010)
- to derive standing from a member, an organization must demonstrate that the individual member has standing to participate and has authorized the organization to represent his or her interests; LBP-10-16, 72 NRC 361 (2010)
- to establish representational standing, an organization must show that at least one of its members may be affected by the licensing action and, accordingly, would have standing to sue in his or her own right, must identify that member by name and address, and must show that the organization is authorized to request a hearing on behalf of that member; LBP-07-3, 65 NRC 237 (2007); LBP-07-4, 65 NRC 281 (2007)
- to satisfy the likelihood of establishing standing criteria in the context of a SUNSI request, petitioner organizations are required to provide sufficient information to allow the NRC Staff to conclude that the requirements for standing could likely be satisfied; LBP-09-5, 69 NRC 303 (2009)
- when an organization takes formal corporate action to initiate litigation not only germane but integral to its purpose, that action can constitute the requisite, if implicit, proof of authorization for intervention; LBP-09-6, 69 NRC 367 (2009)
- STANDING TO INTERVENE, REPRESENTATIONAL**
- a member must qualify for standing in his or her own right, the interests that the organization seeks to protect must be germane to its own purpose, and neither petitioner's contentions nor the requested relief must require an individual member to participate in the proceeding; CLI-08-19, 68 NRC 251 (2008); LBP-08-15, 68 NRC 294 (2008); LBP-08-17, 68 NRC 431 (2008); LBP-09-16, 70 NRC 227 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-09-20, 70 NRC 565 (2009)

## SUBJECT INDEX

a public interest group may establish representational standing by having its affected members authorize the organization to represent them; LBP-06-10, 63 NRC 314 (2006)

affidavits authorizing organizational representation are to be filed with specific reference to the proceeding in which standing is sought and petitioners given the opportunity to cure such defects in their affidavits; LBP-09-13, 70 NRC 168 (2009)

an affidavit supporting representational standing must describe precisely how the affiant is aggrieved, whether based on employment, residence, or activities; CLI-08-19, 68 NRC 251 (2008)

an entity seeking to intervene on behalf of its members must show it has an individual member who can fulfill all the necessary standing elements and who has authorized the organization to represent his or her interests; LBP-08-16, 68 NRC 361 (2008)

an individual petitioner may not request to intervene in his or her own right while simultaneously authorizing other petitioners to represent his or her interests in the proceeding; CLI-07-19, 65 NRC 423 (2007); LBP-10-16, 72 NRC 361 (2010)

an organization asserting representational standing must demonstrate that the interest of at least one of its members will be harmed, demonstrate that the member would have standing in his or her own right, identify that member by name and address, and demonstrate that the organization is authorized to request a hearing on behalf of that member; CLI-07-18, 65 NRC 399 (2007); LBP-06-23, 64 NRC 257 (2006); LBP-07-4, 65 NRC 281 (2007); LBP-08-6, 67 NRC 241 (2008); LBP-08-9, 67 NRC 421 (2008); LBP-08-24, 68 NRC 691 (2008); LBP-08-26, 68 NRC 905 (2008); LBP-09-10, 70 NRC 51 (2009); LBP-09-13, 70 NRC 168 (2009); LBP-09-16, 70 NRC 227 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-09-20, 70 NRC 565 (2009); LBP-09-21, 70 NRC 581 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-09-28, 70 NRC 1019 (2009); LBP-10-15, 72 NRC 257 (2010); LBP-10-16, 72 NRC 361 (2010); LBP-10-21, 72 NRC 616 (2010)

an organization that wishes to intervene in a proceeding may do so either in its own right by demonstrating harm to its organizational interests, or in a representational capacity by demonstrating harm to its members; LBP-09-2, 69 NRC 87 (2009)

assertions that a member lives within the service area of the utility that operates a licensed facility or within the same county as the facility is insufficiently specific to justify a finding of standing; CLI-07-18, 65 NRC 399 (2007)

authorization affidavits for representational standing may not be filed with a reply; CLI-08-19, 68 NRC 251 (2008)

because petitioner fails to establish his own standing as an individual, the board is precluded from granting representational standing on behalf of an organization; LBP-10-4, 71 NRC 216 (2010)

even though members' affidavits did not explicitly authorize the organizations to represent them, this was implicit in their providing the affidavits; LBP-07-11, 66 NRC 41 (2007)

failure under 10 C.F.R. 2.309(d) to support an intervention petition with affidavits providing necessary information regarding the basis for representational standing could interpose a jurisdictional flaw potentially warranting the participant's dismissal from the proceeding; LBP-10-7, 71 NRC 391 (2010)

if an organization does not identify the members it purportedly represents, the Commission cannot determine whether the organization actually does represent members who consider that they will be affected by the licensing action or is simply seeking the vindication of its own value preference; CLI-07-18, 65 NRC 399 (2007)

if none of the affidavits submitted in support of a hearing request indicate that an organization seeking to intervene represents the interests of the submitter, the organization has failed to establish it has standing; LBP-08-16, 68 NRC 361 (2008)

in ruling on standing, NRC cannot automatically assume that an organization member necessarily considers him- or herself potentially aggrieved by a particular outcome of the proceeding; CLI-08-19, 68 NRC 251 (2008)

it might be reasonably inferred that by joining an organization, the members are implicitly authorizing it to represent any personal interests which might be affected by the proceeding; LBP-09-6, 69 NRC 367 (2009)

neither the asserted claim nor the requested relief must require an individual member to participate in the organization's legal action; CLI-07-18, 65 NRC 399 (2007); CLI-08-19, 68 NRC 251 (2008)

nothing precludes an individual from seeking to intervene both on his/her own behalf and as a representative of others; CLI-07-19, 65 NRC 423 (2007)

## SUBJECT INDEX

- organization must identify a member by name and address, show how that member would be affected by the licensing action, and demonstrate that the member has authorized the organization to request a hearing on his or her behalf; CLI-08-19, 68 NRC 251 (2008); LBP-08-13, 68 NRC 43 (2008); LBP-08-15, 68 NRC 294 (2008); LBP-08-17, 68 NRC 431 (2008)
- petitioner may not claim standing based on vague assertions, and when that fails, attempt to repair the defective pleading with fresh details offered for the first time in a petition for reconsideration; CLI-08-19, 68 NRC 251 (2008)
- petitioner must demonstrate that at least one of its members would have standing to intervene on his or her own behalf, and that such a specifically identified member has authorized the organization to represent the member's interests; CLI-10-1, 71 NRC 1 (2010); LBP-06-7, 63 NRC 188 (2006); LBP-07-11, 66 NRC 41 (2007); LBP-07-14, 66 NRC 169 (2007); LBP-09-3, 69 NRC 139 (2009); LBP-10-11, 71 NRC 609 (2010)
- requirements apply to labor unions; CLI-08-19, 68 NRC 251 (2008)
- the interests that the representative organization seeks to protect must be germane to its own purpose; CLI-07-18, 65 NRC 399 (2007)
- the member of a petitioning organization seeking representation must qualify for standing in his or her own right; CLI-07-18, 65 NRC 399 (2007)
- the principle regarding the representational standing of unions is also applicable to public interest groups, who also, in significant part, exist to represent the interests of their members; CLI-08-19, 68 NRC 251 (2008)
- there are certain organizations for which member authorization for organizational standing might be presumed; LBP-09-6, 69 NRC 367 (2009)
- to satisfy the likelihood of establishing standing criteria in the context of a SUNSI request, petitioner organizations are required to provide sufficient information to allow the NRC Staff to conclude that the requirements for standing could likely be satisfied; LBP-09-5, 69 NRC 303 (2009)
- when an organization takes formal corporate action to initiate litigation not only germane but integral to its purpose, that action can constitute the requisite, if implicit, proof of authorization; LBP-09-6, 69 NRC 367 (2009)
- when an organization takes formal corporate action to initiate litigation not only germane but integral to its purpose, that action can constitute the requisite, if implicit, proof of authorization for intervention; LBP-09-6, 69 NRC 367 (2009)
- without written authorization for representation, the Commission would have no concrete indication that, in fact, the member wishes to have the organization represent its interests in the proceeding; CLI-07-18, 65 NRC 399 (2007)
- STATE GOVERNMENT**
- a state or local governmental entity that wishes to be a party in a proceeding that involves a facility located within its boundaries is automatically deemed to have standing; LBP-06-7, 63 NRC 188 (2006); LBP-08-13, 68 NRC 43 (2008)
- a state that wishes to be a party in a proceeding for a facility located within its boundaries need not address the standing requirements; LBP-06-23, 64 NRC 257 (2006)
- if applicant chooses to submit a complete and integrated emergency plan at the early site permit stage, applicant also is required to make a good-faith effort to obtain a certification from federal, state, and local governmental agencies with emergency planning responsibilities; LBP-09-19, 70 NRC 433 (2009)
- in the high-level waste repository proceeding, a state can meet the requirements for standing as a matter of right, based on the threat posed by transportation of radioactive waste through that state; LBP-09-6, 69 NRC 367 (2009)
- intervention is permitted in the high-level waste repository proceeding by the state and local governmental bodies in the geologic repository operations area; LBP-09-6, 69 NRC 367 (2009)
- the Atomic Energy Act does not give a state an absolute right of cross-examination, but requires only that the Commission afford reasonable opportunity for state representatives to interrogate witnesses; LBP-06-20, 64 NRC 131 (2006)
- the Commission shall permit intervention by the state governmental body in which the geologic repository operations area is located if the contention requirements in 10 C.F.R. 2.309(f) are satisfied with respect to at least one contention; CLI-08-25, 68 NRC 497 (2008)
- See also Agreement State Programs

## SUBJECT INDEX

### STATE REGULATORY REQUIREMENTS

for purposes of NPDES permits, effluent is defined as liquid waste that is discharged into a river, lake, or other body of water, and it includes heat; CLI-07-16, 65 NRC 371 (2007)

issues concerning alleged violations of state law or regulations are outside the scope of, and not material to, an NRC power uprate proceeding; CLI-07-25, 66 NRC 101 (2007)

nothing in the National Environmental Policy Act shall be deemed to authorize any federal agency to review any effluent limitation or other requirement established pursuant to the Clean Water Act or to authorize any such agency to impose any effluent limitation other than those set by EPA or a state agency that has been delegated such authority; LBP-09-25, 70 NRC 867 (2009)

to enter into an Agreement State program, a state's regulations must be found compatible with the performance objectives and technical requirements set forth in Subparts C and D, respectively, of the 10 C.F.R. Part 61 regulations; LBP-06-8, 63 NRC 241 (2006)

when water quality decisions have been made by a state pursuant to the Clean Water Act and these decisions are raised in NRC licensing proceedings, the NRC is bound to take the Environmental Protection Agency's considered decisions at face value; LBP-09-25, 70 NRC 867 (2009)

### STATE STATUTES

before it is granted authority to participate in the Agreement State program, a state must pass legislation establishing the authority for that state to conduct a radiation control program, and must further assume and implement that authority through the promulgation of state regulations; LBP-06-8, 63 NRC 241 (2006)

issues concerning alleged violations of state law or regulations are outside the scope of, and not material to, an NRC power uprate proceeding; CLI-07-25, 66 NRC 101 (2007); LBP-08-24, 68 NRC 691 (2008)

### STATEMENT OF CONSIDERATIONS

as guidance reached in a rulemaking following notice and comment, and endorsed by the Commission, the SOC is entitled to special weight; CLI-08-3, 67 NRC 151 (2008)

the Commission often refers to the SOC as an aid in interpreting its regulations; CLI-08-3, 67 NRC 151 (2008)

the SOC for Part 36 indicates that in developing those regulations, the NRC considered whether there was a need to impose limits on irradiator siting, but determined that no specific siting limitations were warranted; CLI-08-3, 67 NRC 151 (2008)

### STATES

when a state advises a licensing board that a proceeding involves a facility within its borders, the board shall not require a further demonstration of standing; LBP-06-7, 63 NRC 188 (2006)

See also Agreement States

### STATION BLACKOUT

all structures, systems, and components relied on in safety analyses or plant evaluations to perform a function that demonstrates compliance with the NRC's regulations are subject to aging management review for license renewal; CLI-10-14, 71 NRC 449 (2010)

### STATUTES

adjudication is not the proper forum for challenging applicable statutory requirements or the basic structure of the agency's regulatory process; CLI-09-14, 69 NRC 580 (2009); LBP-07-10, 66 NRC 1 (2007); LBP-08-16, 68 NRC 361 (2008); LBP-08-17, 68 NRC 431 (2008); LBP-09-3, 69 NRC 139 (2009)

contentions challenging applicable statutory requirements or Commission regulations are not admissible in agency adjudications; LBP-07-4, 65 NRC 281 (2007); LBP-09-16, 70 NRC 227 (2009); LBP-09-26, 70 NRC 939 (2009); LBP-10-21, 72 NRC 616 (2010)

See also Atomic Energy Act; Energy and Water Development Appropriations Act; Energy Policy Act of 1992; Energy Reorganization Act; Federal Food, Drug, and Cosmetic Act; National Environmental Policy Act

### STATUTORY CONSTRUCTION

a court should not adopt an interpretation that would render a statutory provision redundant or nonsensical; LBP-09-16, 70 NRC 227 (2009)

a specific policy embodied in a later federal statute should control the construction of the earlier statute, even though it has not been expressly amended; LBP-10-11, 71 NRC 609 (2010)

## SUBJECT INDEX

a text should be construed so that effect is given to all its provisions, so that no part will be inoperative or superfluous, void or insignificant, and so that one section will not destroy another unless the provision is the result of obvious mistake or error; LBP-09-16, 70 NRC 227 (2009); LBP-10-22, 72 NRC 661 (2010)

an inference drawn from congressional silence cannot be credited when it is contrary to all other textual and contextual evidence of congressional intent; LBP-10-11, 71 NRC 609 (2010)

Congress can be presumed to be aware of one specific agency rule only when that rule has been expressly discussed in the legislative history; LBP-10-11, 71 NRC 609 (2010)

Congress does not alter the fundamental details of a regulatory scheme in vague terms or ancillary provisions, i.e., hiding elephants in mouseholes; LBP-10-11, 71 NRC 609 (2010)

“coordination” does not mean that National Environmental Policy Act regulations govern National Historic Preservation Act analysis or vice versa; LBP-06-11, 63 NRC 483 (2006)

courts generally accord considerable weight to an agency’s construction of the statutes it administers; CLI-10-13, 71 NRC 387 (2010)

each word that Congress used must be given a separate and distinct significance that is consistent with its ordinary meaning; LBP-09-30, 70 NRC 1039 (2009)

effect should be given to all of a statute’s provisions; LBP-06-11, 63 NRC 483 (2006)

federal statutes cannot be construed to negate their own stated purposes; LBP-06-1, 63 NRC 41 (2006)

if the intent of Congress is clear, the court as well as the agency must give effect to the unambiguously expressed intent of Congress; LBP-10-11, 71 NRC 609 (2010)

it is a fundamental principle that the meaning of a word cannot be determined in isolation, but must be drawn from the context in which it is used; LBP-09-15, 70 NRC 198 (2009)

not only the bare meaning of the word but also its placement and purpose in the statutory scheme are considered; LBP-09-15, 70 NRC 198 (2009)

references to the word “private” in the legislative history of the Atomic Energy Act appear in the context of a general discussion of the purpose of the AEA, which recognized that the prior law placed prohibitions on private participation in atomic energy; LBP-09-6, 69 NRC 367 (2009)

rights under a construction permit are forfeited only when a construction permit has expired and has not been extended; CLI-10-6, 71 NRC 113 (2010)

since most words admit of different shades of meaning, susceptible of being expanded or abridged to conform to the sense in which they are used, the presumption that identical words in a statute always have identical meaning readily yields to the controlling force of the circumstance that the words, though in the same act, are found in such dissimilar connections as to warrant the conclusion that they were employed in the different parts of the act with different intent; LBP-09-30, 70 NRC 1039 (2009)

statutes should not be interpreted so as to create internal inconsistencies, an absurd result, or an interpretation inconsistent with congressional intent; LBP-10-11, 71 NRC 609 (2010)

the “direct participation of local citizens in nuclear reactor licensing” is not a right to have all legal arguments on contention admissibility take place near the facility at issue, but rather the right of persons with standing to file contentions in licensing proceedings and litigate admissible contentions; LBP-08-23, 68 NRC 679 (2008)

the Department of Energy is not a “person” for purposes of AEA §11s; CLI-09-14, 69 NRC 580 (2009)

the doctrine of *expressio unis est exclusio alterius* instructs that where a law expressly describes a particular situation to which it shall apply, what was omitted or excluded was intended to be omitted or excluded; LBP-08-24, 68 NRC 691 (2008)

the most natural way to read a provision that sets forth a general obligation followed by a set of specific requirements is that the specific requirements provide the details necessary to fulfilling the general obligation; LBP-09-15, 70 NRC 198 (2009)

the specific prevails over the general; CLI-08-26, 68 NRC 509 (2008)

the term “reinstatement” is not directly or indirectly mentioned in section 185 of the Atomic Energy Act; CLI-10-6, 71 NRC 113 (2010)

the ultimate test for standing is not whether NRC’s test conforms to that applied by federal courts, but whether NRC’s test represents a reasonable construction of section 189a of the Atomic Energy Act; LBP-09-4, 69 NRC 170 (2009)

## SUBJECT INDEX

the voluntary surrender of a construction permit that has not expired, that is, where the construction completion date had not yet arrived, does not constitute a situation to which the “forfeiture” provision of the Atomic Energy Act applies; CLI-10-6, 71 NRC 113 (2010)

where Congress includes particular language in one section of a statute but omits it in another section of the same Act, it is generally presumed that Congress acts intentionally and purposely in the disparate inclusion or exclusion; LBP-10-11, 71 NRC 609 (2010)

words of a statute must be read in their context and with a view to their place in the overall statutory scheme; LBP-10-11, 71 NRC 609 (2010); LBP-10-20, 72 NRC 571 (2010)

### STAY

a court inclined to apply collateral estoppel based on a judgment that is subject to appeal may want to avoid the question by staying the case pending the appeal; LBP-09-24, 70 NRC 676 (2009)

a government motion for an indefinite enforcement hearing delay must be denied when the government fails to show that the prompt conduct of the NRC hearing process would interfere with the government’s prosecution of the criminal charges and when the subject of the order has shown that the delay would continue to deprive him of his chosen livelihood and its anticipated income; LBP-06-13, 63 NRC 523 (2006)

a mandate for stay must issue 7 calendar days after the time to request rehearing expires or a timely filed rehearing petition is denied, whichever is later; CLI-08-9, 67 NRC 353 (2008)

a motion to stay issuance of a license might be granted where the factors usually considered in granting emergency injunctive relief are satisfied; CLI-08-13, 67 NRC 396 (2008)

a party opposing a renewed license does not face irreparable harm by the mere issuance of a renewed license; CLI-08-13, 67 NRC 396 (2008)

a showing of a threat of immediate and irreparable harm that will result absent a stay is required for grant of the stay; CLI-10-8, 71 NRC 142 (2010)

a stay of the close of hearings in both license renewal proceedings for 14 days following the date of issuance of mandate is ordered to afford a state the opportunity to request participant status; CLI-08-9, 67 NRC 353 (2008)

a stay pending appeal is granted where the absence of a stay would mean the destruction of the business in its current form; CLI-10-8, 71 NRC 142 (2010)

although a request for suspension of a proceeding does not fit cleanly into NRC procedural rules for stays, the Commission exercises discretion and consider petitioner’s request; CLI-10-17, 72 NRC 1 (2010)

although technically not applicable to a request for a stay of NRC Staff action, the 10 C.F.R. 2.342(e) standards simply restate commonplace principles of equity universally followed when judicial or quasi-judicial bodies consider stays or other forms of temporary injunctive relief; CLI-10-8, 71 NRC 142 (2010)

as litigation moves forward or terminates, the equities that traditionally govern stays or injunctive relief may change; CLI-06-23, 64 NRC 107 (2006)

because the board’s declining to refer petitioners’ request for a stay of construction to the Commission is the equivalent of the direct denial of a stay motion, a petition for review may be filed; LBP-08-11, 67 NRC 460 (2008)

by its terms, 10 C.F.R. 2.342(a) applies to a stay of a decision or action of a presiding officer or licensing board and therefore does not apply to NRC’s approval of a state’s application to become an Agreement State; CLI-10-8, 71 NRC 142 (2010)

factors that influence the grant of a stay are addressed; LBP-08-11, 67 NRC 460 (2008)

failure to address the four stay factors in a motion to stay issuance of a license is reason enough to deny the motion; CLI-08-13, 67 NRC 396 (2008)

failure to satisfy the first two stay factors renders it unnecessary to make determinations on the two remaining factors, harm to other parties and where the public interest lies; CLI-10-8, 71 NRC 142 (2010)

if proponent cannot show irreparable harm, it must make an overwhelming showing that it is likely to succeed on the merits; CLI-08-13, 67 NRC 396 (2008)

in reviewing a stay application, the Commission considers whether the moving party has made a strong showing that it is likely to prevail on the merits, whether the party will be irreparably injured unless a

## SUBJECT INDEX

- stay is granted, whether the granting of a stay would harm other parties, where the public interest lies; CLI-10-8, 71 NRC 142 (2010)
- likelihood of success on the merits and irreparable harm are the most important factors in determining stay motions; CLI-08-13, 67 NRC 396 (2008)
- mere injuries, however substantial, in terms of money, time, and energy necessarily expended in the absence of a stay are not enough to establish irreparable injury; CLI-10-8, 71 NRC 142 (2010)
- no instance has occurred in NRC jurisprudence where either the Commission or its boards have ruled that expenses of any kind constituted irreparable injury; CLI-09-6, 69 NRC 128 (2009)
- NRC has entertained requests for stays of final agency action in anticipation of judicial review; CLI-10-8, 71 NRC 142 (2010)
- NRC rules of procedure do not provide for a motion to stay issuance of a license while proceedings are pending before the board; CLI-08-13, 67 NRC 396 (2008)
- only a party to a proceeding, or an interested governmental entity participating under section 2.315, may file a request to stay proceedings pending a rulemaking; CLI-07-13, 65 NRC 211 (2007)
- participants in ongoing adjudicatory proceedings that have filed a rulemaking petition should be provided an opportunity to seek a stay of the adjudication pending a resolution of the rulemaking petition; LBP-08-16, 68 NRC 361 (2008)
- proponent must show that likelihood of success on the merits, irreparable harm, absence of harm to others, and the public interest weigh in its favor; CLI-08-13, 67 NRC 396 (2008)
- the possibility that adequate compensatory or other corrective relief will be available at a later date, in the ordinary course of litigation, weighs heavily against a claim of irreparable harm; CLI-10-8, 71 NRC 142 (2010)
- there are no grounds to stay the proceeding to permit petitioners' counsel to depose Staff counsel; LBP-06-10, 63 NRC 314 (2006)
- when evaluating a motion for a stay the Commission places the greatest weight on irreparable injury to the moving party unless a stay is granted; CLI-10-8, 71 NRC 142 (2010)
- without a showing of irreparable harm, the moving party must show that success on the merits is a virtual certainty to warrant issuance of a stay; CLI-10-8, 71 NRC 142 (2010)
- See also Abeyance of Proceeding
- STAY OF EFFECTIVENESS**
- a party seeking a stay must show that it faces imminent, irreparable harm that is both certain and great; CLI-09-23, 70 NRC 935 (2009)
- in deciding whether to grant a stay, the Commission considers whether the moving party has made a strong showing that it is likely to prevail on the merits, whether the party will be irreparably injured unless a stay is granted, whether the granting of a stay would harm the other parties, and where the public interest lies; CLI-09-23, 70 NRC 935 (2009)
- issuance of a license is not stayed by a petition for review; CLI-09-7, 69 NRC 235 (2009)
- mere speculation concerning a nuclear accident does not demonstrate immediate and irreparable harm; CLI-06-8, 63 NRC 235 (2006)
- party seeking a stay did not show an overwhelming probability of success on the merits of its appeal sufficient to overcome its lack of showing of irreparable harm; CLI-09-23, 70 NRC 935 (2009)
- the possibility that the prevailing party would use the board's order in his favor to persuade a District Court to reconsider part of the penalty imposed on him in a parallel criminal proceeding did not constitute immediate, irreparable harm to the NRC Staff; CLI-09-23, 70 NRC 935 (2009)
- whether the party seeking a stay faces potentially irreparable harm is the most important factor considered in the Commission's determination whether to grant a stay; CLI-09-23, 70 NRC 935 (2009)
- STEAM DRYER**
- cracking of a dryer could cause a release of loose parts that could have an adverse impact on safety-related equipment and thus it is within the scope of aging management review in a license renewal proceeding; LBP-08-25, 68 NRC 763 (2008)
- STEAM GENERATORS**
- applicant normally is required to perform a load rejection test before an extended power uprate can be granted; LBP-07-2, 65 NRC 153 (2007)

## SUBJECT INDEX

generator load rejection transients occasionally occur and are classified as anticipated operational occurrences that nuclear power stations must be designed and built to withstand; LBP-07-2, 65 NRC 153 (2007)

### STRUCTURAL ANALYSIS

the Commission asks the parties to address whether the structural analysis that applicant has committed to perform on its primary containment drywell shell matches or bounds the sensitivity analyses that one of the ALSBP judges would impose; CLI-08-10, 67 NRC 357 (2008)

### SUBPART G PROCEDURES

a board would only be allowed to choose a Subpart G hearing process if issues of motive or intent of the party or eyewitness material to the resolution of the contested matter are in dispute; LBP-08-24, 68 NRC 691 (2008)

Commission rules in 10 C.F.R. 2.311(d) set a 10-day limit for appealing the selection of a particular hearing procedure because an appeal cannot wait until a board issues a decision on the merits of a contention; CLI-09-7, 69 NRC 235 (2009)

cross-examination occurs virtually automatically, subject to normal judicial management and the requirement to file a cross-examination plan; LBP-09-10, 70 NRC 51 (2009)

in a Subpart L proceeding, the board must apply the summary disposition standard set forth in Subpart G; LBP-10-20, 72 NRC 571 (2010)

parties are permitted to propound interrogatories, take depositions, and cross-examine witnesses without leave of the board; LBP-10-16, 72 NRC 361 (2010)

petitioner requesting a Subpart G hearing must demonstrate, by reference to the contention and the bases provided and the specific procedures in Subpart G of Part 2, that resolution of the contention necessitates resolution of material issues of fact which may be best determined through the use of the identified procedures; LBP-08-24, 68 NRC 691 (2008)

requirements for applying Subpart G to a particular proceeding are set out in 10 C.F.R. 2.700; CLI-09-7, 69 NRC 235 (2009)

the rule for Subpart G procedures explicitly applies to eyewitnesses, not expert witnesses; CLI-09-7, 69 NRC 235 (2009)

the standard for allowing the parties to conduct cross-examination is the same under Subparts G and L; LBP-10-15, 72 NRC 257 (2010)

these hearing procedures apply only to certain enumerated types of proceedings, not including materials license proceedings; LBP-09-1, 69 NRC 11 (2009)

these procedures focus on issues where the credibility of an eyewitness may reasonably be expected to be at issue, and/or issues of motive or intent of the party or eyewitness; LBP-09-22, 70 NRC 640 (2009)

use of the permissive term, "may," in 10 C.F.R. 2.310(a) indicates that licensing boards have some discretion in determining whether to hold hearings under Subpart L or Subpart G; LBP-08-6, 67 NRC 241 (2008)

### SUBPART G PROCEEDINGS

cross-examination occurs virtually automatically, subject to normal judicial management and the requirement to file a cross-examination plan; LBP-10-15, 72 NRC 257 (2010)

each expert witness is required to create, sign, and submit a written expert report; LBP-09-30, 70 NRC 1039 (2009)

under Subpart L informal hearing procedures, summary disposition motions are to be resolved in accord with the same standards for dispositive motions that are utilized for formal hearings under Subpart G; LBP-10-8, 71 NRC 433 (2010)

### SUBPART J PROCEEDINGS

Class 1 documentary material covers information a party intends to rely upon in support of its position; CLI-06-5, 63 NRC 143 (2006)

Class 2 documentary material is material that the party in possession knows does not support its position; CLI-06-5, 63 NRC 143 (2006)

Class 3 documentary materials are "reports and studies" prepared on behalf of potential parties to the proceeding that are relevant to the issues listed in the Topical Guidelines contained in Regulatory Guide 3.69 and must be relevant to the license application; CLI-06-5, 63 NRC 143 (2006)

## SUBJECT INDEX

drafts of the license application are not Class 1, Class 2, or Class 3 documentary material under Subpart J, so the regulations do not require making draft license applications available on the Licensing Support Network; CLI-06-5, 63 NRC 143 (2006)

material that falls within Class 1 or Class 2 is the underlying independent documentary material used (or not used if nonsupporting) by the Department of Energy in formulating its license application; CLI-06-5, 63 NRC 143 (2006)

NRC rules do not provide for the filing of reply briefs in the context of appeals from an interlocutory decision or initial or partial decisions; CLI-08-12, 67 NRC 386 (2008)

section 2.1003's reference to "all documentary material (including circulated drafts but excluding preliminary drafts) generated by, or at the direction of, or acquired by" conveys that possession or control of documentary material is a prerequisite to the duty to produce it; CLI-08-12, 67 NRC 386 (2008)

the distinction between "preliminary" and "circulated" drafts is a significant one in the Commission's Subpart J regulations; CLI-06-5, 63 NRC 143 (2006)

the general rule on amicus briefs, 10 C.F.R. 2.315(d), as a formal matter applies only to petitions for review filed under section 2.341 or to matters taken up by the Commission *sua sponte*, not to appeals filed under section 2.1015; CLI-08-22, 68 NRC 355 (2008)

the Licensing Support Network functions as a mechanism for early collection of all extant documents that normally would be collected later through traditional discovery; CLI-08-22, 68 NRC 355 (2008)

the purpose of 10 C.F.R. 2.1003 is to define the availability of material, not to provide definitions of types of materials; CLI-06-5, 63 NRC 143 (2006)

the threshold question in determining if certain items must be made available on the High-Level Waste Repository Licensing Support Network is whether the particular items fall within any of the three classes of documentary material; CLI-06-5, 63 NRC 143 (2006)

**SUBPART K PROCEDURES**

the Commission's rules in 10 C.F.R. 2.1113 do not provide for supplementing Subpart K presentations; CLI-08-26, 68 NRC 509 (2008)

the presiding officer is allowed to resolve factual and legal disputes in spent fuel storage controversies, including disagreements between experts, on the basis of a brief discovery period and written submissions and oral argument without a full trial-type evidentiary hearing; CLI-08-26, 68 NRC 509 (2008)

**SUBPART L PROCEDURES**

a board has discretion to allow parties to cross-examine witnesses in Subpart L proceedings if the board deems this practice necessary to establish an adequate record; LBP-08-24, 68 NRC 691 (2008)

a board may ask witnesses to appear in person and answer questions; LBP-09-22, 70 NRC 640 (2009)

a party seeking to conduct cross-examination must file a written motion and obtain leave from the board; LBP-09-10, 70 NRC 51 (2009)

boards may allow parties to conduct cross-examination in Subpart L proceedings; LBP-09-22, 70 NRC 640 (2009)

in conducting Subpart L hearings, board members pose questions to the parties' witnesses in those areas that, in the board's judgment, require additional clarification and development; LBP-08-22, 68 NRC 590 (2008)

NRC Staff must produce a hearing file and make it available to all parties; LBP-09-22, 70 NRC 640 (2009)

parties may file motions with the board to request cross-examination if they choose; LBP-08-24, 68 NRC 691 (2008)

the board has the primary responsibility for questioning the witnesses at any evidentiary hearing; LBP-10-16, 72 NRC 361 (2010)

the standard for allowing the parties to conduct cross-examination is the same under Subparts G and L; LBP-10-15, 72 NRC 257 (2010)

use of the permissive term, "may," in 10 C.F.R. 2.310(a) indicates that boards have discretion in determining whether to hold hearings under Subpart L or Subpart G; LBP-08-6, 67 NRC 241 (2008)

witness panels may be questioned in areas that, in the board's judgment, require additional clarification and parties may be asked to provide proposed written questions both before and during the hearing in order to assist the board in its questioning; CLI-09-7, 69 NRC 235 (2009)

## SUBJECT INDEX

### SUBPART L PROCEEDINGS

- a party seeking to conduct cross-examination must file a written motion and obtain leave of the board; LBP-10-15, 72 NRC 257 (2010)
- after the board issues its initial decision, it must provide questions proffered by the parties to the Commission's Secretary for inclusion in the official record of the proceeding; LBP-07-17, 66 NRC 327 (2007)
- boards must apply the summary disposition standard set forth in Subpart G; LBP-10-20, 72 NRC 571 (2010)
- cross-examination by the parties is allowed only when the presiding officer decides that it is necessary to ensure an adequate record for decision; CLI-09-7, 69 NRC 235 (2009)
- discovery is generally prohibited except for specified mandatory disclosures under 10 C.F.R. 2.336(f), (a), and (b) and the mandatory production of the hearing file under 10 C.F.R. 2.1203(a); LBP-10-16, 72 NRC 361 (2010)
- each witness is not required to generate an analysis, but rather must disclose the analysis or other authority upon which the witness bases his or her opinion; LBP-09-30, 70 NRC 1039 (2009)
- if the duty to make disclosures applied only to parties who have claims and contentions, it would create an unintended and invidious asymmetry in mandatory disclosures, which are the only form of discovery available in Subpart L proceedings; LBP-09-30, 70 NRC 1039 (2009)
- in a license renewal proceeding, there is no mandatory or automatic default to Subpart L procedures; LBP-07-15, 66 NRC 261 (2007)
- in conducting Subpart L hearings, board members pose questions to the parties' witnesses in those areas that, in the board's judgment, require additional clarification and development; LBP-07-17, 66 NRC 327 (2007)
- mandatory disclosure is the only form of discovery allowed, and all other forms are expressly prohibited; LBP-10-23, 72 NRC 692 (2010)
- proposed questions that are proffered to the board during a hearing must be kept by the board in confidence until they are either propounded by the board, or until issuance of the initial decision on the issue being litigated; LBP-07-17, 66 NRC 327 (2007)
- proposed questions, submitted by the parties, for the board, that were originally filed under seal with the board, will be made public in a separate issuance; LBP-08-4, 67 NRC 105 (2008)
- summary disposition is proper only if parties' filings in the proceeding show that there is no genuine issue as to any material fact and that the moving party is entitled to a decision as a matter of law; LBP-06-5, 63 NRC 116 (2006)
- summary disposition may be entered with respect to any matter in a proceeding if the motion, along with any appropriate supporting materials, shows that there is no genuine issue as to any material fact and that the moving party is entitled to a decision as a matter of law; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)
- summary disposition motions are to be resolved in accord with the same standards for dispositive motions that are utilized for formal hearings under Subpart G; LBP-10-8, 71 NRC 433 (2010)
- the mandatory disclosure provisions of 10 C.F.R. 2.336 apply; CLI-10-24, 72 NRC 451 (2010); CLI-10-25, 72 NRC 469 (2010)
- the opportunity for cross-examination under Subpart L is equivalent to the opportunity for cross-examination under the Administrative Procedure Act; LBP-07-4, 65 NRC 281 (2007); LBP-08-6, 67 NRC 241 (2008)
- the Staff elects whether or not to be a party to some or all contentions; CLI-07-20, 65 NRC 499 (2007)
- See also Informal Proceedings

### SUBPART N PROCEDURES

- if a hearing on a contention is expected to take no more than 2 days to complete, the board can impose the Subpart N procedures for expedited proceedings with oral hearings specified at 10 C.F.R. 2.1400-1407; LBP-10-16, 72 NRC 361 (2010)

### SUMMARY DISPOSITION

- a licensing board cannot make a determination of whether there is a genuine issue of material fact without carefully examining the evidence presented in the parties' affidavits; LBP-07-13, 66 NRC 131 (2007)

## SUBJECT INDEX

- a licensing board ruling on a summary disposition motion must view the record in the light most favorable to the party opposing such a motion and deny the motion if movant fails to meet its burden, even in the face of an inadequate response; LBP-07-12, 66 NRC 113 (2007)
- a motion must be granted if the filings in the proceeding together with the statements of the parties and the affidavits, if any, show that there is no genuine issue as to any material fact and that the moving party is entitled to a decision as a matter of law; LBP-09-15, 70 NRC 198 (2009)
- a motion to strike is an inappropriate vehicle to address whether arguments in a summary disposition answer raise matters outside the scope of a contention; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)
- a party is not required to prove its case in making or opposing a motion for summary disposition; LBP-07-13, 66 NRC 131 (2007)
- a properly supported request to reply to a summary disposition response would seem to be a reasonable candidate for a favorable board discretionary decision permitting the filing; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)
- a ruling granting summary disposition on a single contention, where other contentions are still pending in an adjudication, is not a final decision, and is not susceptible to Commission review; CLI-08-2, 67 NRC 31 (2008)
- a showing that there is no genuine issue as to any material fact and that the moving party is entitled to a decision as a matter of law is necessary; LBP-06-9, 63 NRC 289 (2006)
- affidavits must set forth facts that would be admissible in evidence; LBP-07-13, 66 NRC 131 (2007)
- all material facts set forth in the statement required to be served by the moving party will be considered to be admitted unless controverted by the statement required to be served by the opposing party; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)
- all or any part of the matters involved in a proceeding may be summarily dismissed if the motion, along with any appropriate supporting materials, shows that there is no genuine issue as to any material fact and that the moving party is entitled to a decision as a matter of law; LBP-10-8, 71 NRC 433 (2010)
- although wholly conclusory statements for which no supporting evidence is offered need not be taken as true for summary judgment purposes, a court may not make credibility determinations or weigh the evidence at the summary judgment stage; LBP-07-12, 66 NRC 113 (2007)
- an answer supporting or opposing a motion for summary disposition or other dispositive motion shall be filed within 20 days after service of the motion; LBP-09-22, 70 NRC 640 (2009)
- any doubt as to the existence of a genuine issue of material fact is resolved against the proponent of summary disposition; LBP-10-20, 72 NRC 571 (2010)
- applicable NRC standards governing summary disposition are set forth in 10 C.F.R. 2.710; CLI-10-11, 71 NRC 287 (2010)
- applicant may challenge an expert opinion in the disclosure stage, via a motion for summary disposition, if it can show that there is no genuine issue as to any material fact and that it is entitled to a decision as a matter of law; LBP-09-30, 70 NRC 1039 (2009)
- applicant moves for summary disposition of a contention involving whether leak detection through monitoring wells is necessary as part of the plant's aging management program; LBP-07-12, 66 NRC 113 (2007)
- at issue in summary disposition is not whether evidence unmistakably favors one side or the other, but whether there is sufficient evidence favoring the nonmoving party for a reasonable trier of fact to find in favor of that party; CLI-10-11, 71 NRC 287 (2010)
- because the burden is on the summary disposition movant, the board must examine the record in the light most favorable to the nonmoving party and give the nonmoving party the benefit of all favorable inferences that can be drawn from the evidence; LBP-10-20, 72 NRC 571 (2010)
- boards should not, at the summary disposition stage, try to untangle the expert affidavits' and decide which experts are more correct; CLI-08-2, 67 NRC 31 (2008)
- caution should be exercised in granting summary disposition, which may be denied if there is reason to believe that the better course would be to proceed to a full hearing; CLI-10-11, 71 NRC 287 (2010)
- compliance with the requirement that a summary disposition movant make a sincere effort to contact other parties in the proceeding and to resolve the issues raised in the motion can only be determined from the objective reasonableness of the movant's efforts, as shown by all the facts and circumstances, not by his or her subjective intent; LBP-06-5, 63 NRC 116 (2006)

## SUBJECT INDEX

- even if the basic facts are uncontroverted, summary disposition is inappropriate when the evidence is susceptible of different interpretations or inferences; LBP-07-12, 66 NRC 113 (2007)
- facts are "material" if they will affect the outcome of a proceeding under the governing law; LBP-07-12, 66 NRC 113 (2007)
- failure to raise any challenge to a Staff environmental impact statement correction essentially renders that aspect of an intervenor challenge moot, because the intervenor has failed to raise a litigable challenge to the previously identified error; LBP-06-9, 63 NRC 289 (2006)
- FOIA litigation is ordinarily resolved in summary disposition without discovery and without evidentiary trials or hearings; CLI-08-5, 67 NRC 174 (2008); LBP-08-7, 67 NRC 361 (2008)
- guidance on determining whether an issue is "material" is taken from procedures for contention admissibility; LBP-07-13, 66 NRC 131 (2007)
- if an expert asserts a factual or technical position that is so patently incorrect or absurd, a presiding officer must reject that position as constituting a genuine dispute; LBP-06-5, 63 NRC 116 (2006)
- if it appears from the affidavits of the opposing party that the opposing party cannot, for reasons stated, present by affidavit facts essential to justify the party's opposition, the board may refuse the application for summary disposition or may order a continuance as may be necessary or just; LBP-09-22, 70 NRC 640 (2009)
- if movant satisfies its initial burden and supports its motion by affidavit, opponent must either proffer rebutting evidence or submit an affidavit explaining why it is impractical to do so; LBP-07-12, 66 NRC 113 (2007)
- if reasonable minds could differ as to the import of the evidence, summary disposition is not appropriate; CLI-10-11, 71 NRC 287 (2010)
- if the evidence in favor of the nonmoving party is merely colorable or not significantly probative, summary disposition may be granted; CLI-10-11, 71 NRC 287 (2010)
- if the filings demonstrate the existence of a genuine material fact, the evidence submitted in support of a motion fails to show the nonmovant's position is a sham or fails to foreclose the possibility of a factual dispute, or there is an issue as to the credibility of movant's evidentiary material, movant will be found to have failed to meet its burden on summary disposition; LBP-07-12, 66 NRC 113 (2007)
- if the filings in the proceeding together with the statements of the parties and the affidavits show that there is no genuine issue as to any material fact and that the moving party is entitled to a decision as a matter of law, such a motion shall be granted; LBP-08-7, 67 NRC 361 (2008)
- if the presiding officer determines from affidavits filed by the opposing party that the opposing party cannot present by affidavit the facts essential to justify its opposition, the presiding officer may order a continuance to permit such affidavits to be obtained, or may take other appropriate action; LBP-07-12, 66 NRC 113 (2007)
- if the support a party offers, to demonstrate that a genuine dispute exists as to a material fact, indicates that, after expanding that support to its logical limits, it cannot support a finding of fact material to the determination the agency must make, that party's position cannot prevail; LBP-07-13, 66 NRC 131 (2007)
- if there is doubt as to whether the parties should be required to proceed further, a motion for summary disposition should be denied; LBP-07-12, 66 NRC 113 (2007)
- in addressing the motion and the opposition thereto, licensing boards must examine the substance of the information provided by the parties; LBP-07-13, 66 NRC 131 (2007)
- in an evidentiary hearing, the board may weigh competing evidence and expert opinion and may resolve/decide factual disputes, whereas this is not possible when ruling on motions for summary disposition, which are restricted to situations where there is no genuine issue as to any material fact; LBP-09-22, 70 NRC 640 (2009)
- in deciding a summary disposition motion the tribunal must examine the evidence in the light most favorable to the nonmoving party; LBP-08-7, 67 NRC 361 (2008)
- in informal, Subpart L, proceedings, summary disposition motions are to be resolved in accord with the standards for dispositive motions for formal hearings, as set forth in Part 2, Subpart G; LBP-06-5, 63 NRC 116 (2006); LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008); LBP-10-20, 72 NRC 571 (2010)
- in ruling on a motion for summary disposition, a licensing board or presiding officer should not conduct a trial on affidavits; CLI-10-11, 71 NRC 287 (2010)

## SUBJECT INDEX

in ruling on summary disposition motions, the evidence of the nonmovant is to be believed, and all justifiable inferences are to be drawn in his favor; CLI-10-11, 71 NRC 287 (2010)

it is an abuse of the adjudicatory process to use a motion as a subterfuge for the filing of interrogatories, requests for admission, or other discovery; LBP-06-5, 63 NRC 116 (2006)

it is inappropriate at the summary disposition stage for a board to attempt to untangle the expert affidavits and decide which experts are more correct; LBP-06-5, 63 NRC 116 (2006); LBP-07-12, 66 NRC 113 (2007)

it is not sufficient for there to be merely the existence of some alleged factual dispute between the parties, but rather that there be no genuine issue of material fact; CLI-10-11, 71 NRC 287 (2010)

mere allegations are insufficient, including speculative or bare conclusory statements by an expert; LBP-07-13, 66 NRC 131 (2007)

motion concerning contention questioning applicant's handling of its severe accident mitigation alternatives analysis concerning evacuation times, economic consequences, and meteorological patterns is granted; LBP-07-13, 66 NRC 131 (2007)

motions may be filed 20 days after the occurrence or circumstance from which the motion arises, rather than the 10-day time frame, provided that the moving party commences sincere efforts to contact and consult all other parties within 10 days of the occurrence or circumstance, and the accompanying certification so states; LBP-09-22, 70 NRC 640 (2009)

motions may be granted only if the truth is clear; LBP-10-20, 72 NRC 571 (2010)

movant bears the initial burden of making the requisite showing that there is no genuine issue as to any material fact, which it attempts to do by means of a required statement of material facts not at issue and any supporting materials (including affidavits, discovery responses, and documents) that accompany its dispositive motion; LBP-06-9, 63 NRC 289 (2006)

movant must show that the matter entails no genuine issue as to any material fact and that movant is entitled to a decision as a matter of law; LBP-07-12, 66 NRC 113 (2007); LBP-10-20, 72 NRC 571 (2010)

NRC regulations teach that a fact cannot be material to a ruling unless its consideration could materially affect the decision of the NRC vis-a-vis implementation of any particular severe accident mitigation alternative; LBP-07-13, 66 NRC 131 (2007)

NRC standards governing summary disposition are based on those the federal courts apply to motions for summary judgment under Rule 56 of the Federal Rules of Civil Procedure; CLI-10-11, 71 NRC 287 (2010)

only disputes over facts that might affect the outcome of a proceeding would preclude summary disposition, factual disputes that are unnecessary not being counted; CLI-10-11, 71 NRC 287 (2010); LBP-07-13, 66 NRC 131 (2007)

opponent does not have to show that it would prevail on the issues, but must demonstrate that there is a genuine factual issue to be tried; LBP-07-12, 66 NRC 113 (2007)

opponent must counter each adequately supported material fact with its own statement of material facts in dispute and supporting materials, or the movant's facts will be deemed admitted; LBP-06-9, 63 NRC 289 (2006)

opponent must set forth specific facts showing that there is a genuine issue, and may not rely on mere allegations or denials; CLI-10-11, 71 NRC 287 (2010); LBP-07-12, 66 NRC 113 (2007); LBP-07-13, 66 NRC 131 (2007)

opponent of summary disposition must counter any adequately supported material facts provided by the movant with its own separate, short, and concise statement of the material facts as to which it is contended there exists a genuine issue to be heard; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008); LBP-10-8, 71 NRC 433 (2010)

opponents of summary disposition must respond to each of the "material facts" listed by the movant, admitting or denying each of them, and must set forth specific facts, by affidavit or otherwise, showing that there are genuine issues of fact; LBP-06-5, 63 NRC 116 (2006)

proponent of a summary disposition motion bears the burden of making the requisite showing by providing a separate, short, and concise statement of the material facts as to which the moving party contends that there is no genuine issue to be heard; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008); LBP-08-7, 67 NRC 361 (2008); LBP-10-8, 71 NRC 433 (2010)

representations of movant are described; LBP-09-22, 70 NRC 640 (2009)

## SUBJECT INDEX

resolution of a summary disposition motion in a license renewal proceeding is governed by the standards for summary disposition set forth in Subpart G; LBP-07-12, 66 NRC 113 (2007)

specificity and support are required for the positions parties take in their filings; LBP-07-13, 66 NRC 131 (2007)

specificity standards for contention admissibility serve as minimum conditions for setting out specific facts showing there is a genuine issue of fact; LBP-07-13, 66 NRC 131 (2007)

Staff's agreement with a movant's factual or technical positions, either informally or in a formal document such as a Safety Evaluation Report, does not "resolve" the dispute or mean that there is no genuine issue of material fact in dispute; LBP-06-5, 63 NRC 116 (2006)

such motions are not a tool for trying to convince a licensing board to decide, on written submissions, genuine issues of material fact that warrant resolution at a hearing; LBP-10-20, 72 NRC 571 (2010)

summary disposition motions are generally evaluated according to the same standards used by Federal District Courts in ruling on motions for summary judgment; LBP-07-12, 66 NRC 113 (2007)

summary disposition rules 10 C.F.R. 2.1205 and 2.710 are substantially similar; LBP-10-20, 72 NRC 571 (2010)

summary disposition standards are not applicable to and do not replace the standards applicable to motions to reopen; CLI-08-28, 68 NRC 658 (2008)

the appropriate vehicle to address whether arguments in a summary disposition answer raise matters outside the scope of a contention is a reply pleading; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)

the argument that information provided in support of an intervenor's response to a summary disposition motion should not be considered because the information is outside the scope of the intervenor's admitted contention, if true, can be a meritorious assertion; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)

the Commission generally applies the same standard for summary disposition that federal courts apply when ruling on motions for summary judgment under Rule 56 of the Federal Rules of Civil Procedure; LBP-10-20, 72 NRC 571 (2010)

the Commission grants review of a licensing board decision that dismissed a contention on summary disposition, reversing the decision in part, and remanding the contention to the board for hearing, as limited by the Commission's ruling; CLI-10-11, 71 NRC 287 (2010)

the contention admissibility threshold is less than is required at the summary disposition stage; LBP-09-26, 70 NRC 939 (2009)

the correct inquiry in deciding summary motions is whether there are material factual issues that can be properly resolved only by a finder of fact because they may reasonably be resolved in favor of either party; CLI-10-11, 71 NRC 287 (2010)

the determinative factor in a summary disposition motion is whether there is any genuine issue of material fact remaining in dispute, and that determination is made through examination of the filings in respect of the motion; LBP-07-13, 66 NRC 131 (2007)

the foundation for the threshold criteria regarding the required level of support is found in the contention admissibility provisions; LBP-07-13, 66 NRC 131 (2007)

the judge's function in ruling on summary disposition motions is not to weigh the evidence and determine the truth of the matter but to determine whether there is a genuine issue for hearing; CLI-10-11, 71 NRC 287 (2010)

the licensing board shall not entertain motions for summary disposition unless the board finds that such motions, if granted, are likely to expedite the proceeding; CLI-09-15, 70 NRC 1 (2009); CLI-10-4, 71 NRC 56 (2010); LBP-09-22, 70 NRC 640 (2009)

the preliminary question for a judge deciding a summary disposition motion is whether there is any evidence upon which a jury could properly proceed to find a verdict for the nonmovant; LBP-07-13, 66 NRC 131 (2007)

the quality of evidentiary support is expected to be of a higher level than that at the contention filing stage; CLI-10-15, 71 NRC 479 (2010)

there is no right to reply to an answer to a motion for summary disposition, but if the answer contains an allegation that is plainly and factually incorrect, the moving party can request the opportunity to respond and to correct the record; LBP-06-5, 63 NRC 116 (2006)

## SUBJECT INDEX

this is not a tool for trying to convince a licensing board to decide, on written submissions, genuine issues of material fact that warrant resolution at a hearing; LBP-07-12, 66 NRC 113 (2007)

this is not the vehicle for untangling expert disputes so long as the experts are competent and the information they provide is adequately stated and explained; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008)

to justify reopening the record to admit a new contention, the moving papers must be strong enough, in the light of any opposing filings, to avoid summary disposition, and the new information must be significant and plausible enough to require reasonable minds to inquire further; LBP-10-21, 72 NRC 616 (2010)

to the degree the response to a summary disposition motion fails to contravene the material facts proffered by the movant, the movant's facts will be considered to be admitted; LBP-08-2, 67 NRC 54 (2008); LBP-08-3, 67 NRC 85 (2008); LBP-10-8, 71 NRC 433 (2010)

under Subpart L informal hearing procedures, summary disposition motions are to be resolved in accord with the same standards for dispositive motions that are utilized for formal hearings under Subpart G; LBP-10-8, 71 NRC 433 (2010)

weighing the affidavits of competing experts is not appropriate at the summary disposition stage; LBP-07-2, 65 NRC 153 (2007)

when conflicting expert opinions are involved, summary disposition is rarely appropriate; LBP-06-5, 63 NRC 116 (2006)

where applicant's amended license application has eliminated the dispute, there remains no genuine dispute of material fact and applicant is entitled to summary disposition as a matter of law; LBP-06-24, 64 NRC 360 (2006)

where relevant documents and affidavits show that there is no genuine issue as to any material fact and that the moving party is entitled to a decision as a matter of law, summary disposition is appropriate; CLI-10-11, 71 NRC 287 (2010)

where the nonmoving party declines to oppose a motion for summary disposition, the moving party is not perforce entitled to a favorable judgment, but has the burden to show that he is entitled to judgment under established principles; LBP-08-7, 67 NRC 361 (2008)

**SUMMARY JUDGMENT**

NRC standards governing summary disposition are based on those the federal courts apply to motions for summary judgment under Rule 56 of the Federal Rules of Civil Procedure; CLI-10-11, 71 NRC 287 (2010)

plaintiffs have prevailed against a motion for summary judgment where chloride spillage was allegedly carried 100 miles to plaintiff's farm; LBP-08-6, 67 NRC 241 (2008)

**SUPPLEMENTAL ENVIRONMENTAL IMPACT STATEMENT**

compliance with NEPA requires that, if new and significant information arises after the date of the issuance of the EIS and before the agency decision, then NRC Staff must supplement or revise its EIS and consider such information; CLI-10-29, 72 NRC 556 (2010); LBP-10-15, 72 NRC 257 (2010); LBP-10-17, 72 NRC 501 (2010)

contentions relating to the conclusions that the NRC Staff reaches in its NEPA analysis with regard to the environmental impacts from radiological releases to groundwater must await future publication of its SEIS; LBP-08-13, 68 NRC 43 (2008)

for license renewals, Staff's review must take account of public comments concerning new and significant information on Category 1 findings; LBP-06-20, 64 NRC 131 (2006)

if a rule is suspended for analysis, each SEIS would reflect the corrected analysis until such time as the rule is amended; CLI-07-3, 65 NRC 13 (2007)

new information must raise significant environmental impacts that may affect the overall view of the project's impacts; CLI-06-19, 63 NRC 19 (2006)

new information that may call for a supplement must present a seriously different picture of the environmental impact of the proposed project from what was previously envisioned; CLI-06-29, 64 NRC 417 (2006); LBP-06-19, 64 NRC 53 (2006)

pending resolution of a rulemaking petition, NRC Staff may, where appropriate, seek the Commission's permission to suspend the generic determination of a Category 1 issue and include a new analysis in the plant-specific environmental impact statements; CLI-07-3, 65 NRC 13 (2007)

Staff must address adverse environmental effects that cannot be avoided; LBP-07-4, 65 NRC 281 (2007)

## SUBJECT INDEX

Staff shall supplement an environmental impact statement if there are substantial changes in the proposed action that are relevant to environmental concerns or there are significant new circumstances or information relevant to environmental concerns and bearing on the proposed action or its impacts; LBP-06-19, 64 NRC 53 (2006); LBP-08-11, 67 NRC 460 (2008)

the fact that an Integrated Resource Plan revision process has been instituted does not support a claim that the final SEIS is inadequate because of its reliance on earlier studies; LBP-09-26, 70 NRC 939 (2009)

### SUSPENSION OF PROCEEDING

a state could seek to have licensing proceedings suspended pending an NRC decision on its rulemaking petition, if it participated in the proceedings as an interested state; CLI-09-10, 69 NRC 521 (2009)

although a request for suspension of a proceeding does not fit cleanly into NRC procedural rules for stays, the Commission exercises discretion and consider petitioner's request; CLI-10-17, 72 NRC 1 (2010)

although NRC regulations do not provide for a motion to suspend a proceeding, the Commission has considered similar requests in the exercise of its inherent supervisory powers over proceedings; CLI-08-23, 68 NRC 461 (2008)

an interested state may petition to suspend proceedings; CLI-08-9, 67 NRC 353 (2008)

consideration of pending issues will not be postponed until the resolution of other issues unrelated to the adjudication; CLI-10-17, 72 NRC 1 (2010)

NRC's general policy is to avoid unnecessary delays in adjudicatory proceedings, and intervenors have not provided a sufficient justification to show that delay is necessary; LBP-10-9, 71 NRC 493 (2010)

this drastic action is not warranted absent immediate threats to public health and safety; CLI-08-23, 68 NRC 461 (2008)

### TAILINGS

See Uranium Mill Tailings

### TECHNICAL SPECIFICATIONS

licensee requests that operating licenses for both units be amended to change the associated technical specifications to implement uprated power operation; LBP-07-10, 66 NRC 1 (2007)

### TECHNOLOGICALLY ENHANCED NATURALLY OCCURRING RADIOACTIVE MATERIALS

at the time NRC drafted the regulation defining "background radiation," the term naturally occurring radioactive material was understood to include TENORM; CLI-06-14, 63 NRC 510 (2006)

TENORM is any naturally occurring material not subject to regulation under the Atomic Energy Act whose radionuclide concentrations or potential for human exposure have been increased above levels encountered in the natural state by human activities; LBP-06-1, 63 NRC 41 (2006)

### TERMINATION OF LICENSE

a license is terminated even if the licensee decommissions the site in accordance with alternative decommissioning criteria pursuant to 10 C.F.R. 20.1404; CLI-09-1, 69 NRC 1 (2009)

decommissioning is not complete, and an operating license cannot be terminated, in effect, until all spent fuel and high-level waste has been removed from the site; LBP-09-17, 70 NRC 311 (2009)

the 1987 Commission Policy Statement on Deferred Plants sets forth the process under which a plant could be placed in a terminated status pending withdrawal of the CP, as well as procedures and requirements for reactivating the facility from terminated status; LBP-10-7, 71 NRC 391 (2010)

the criteria for acceptability of a site for license termination under restricted conditions are discussed; CLI-09-1, 69 NRC 1 (2009)

when a nuclear power plant ceases operations, the owner must apply for a license to terminate, which cannot be granted until the NRC is satisfied that the plant has been properly dismantled and decommissioned so that residual radiation meets established rules, and that no spent fuel or high-level wastes would be onsite; LBP-09-21, 70 NRC 581 (2009)

whether a site is suitable for unrestricted or restricted release, the license is terminated upon the completion of decommissioning; CLI-09-1, 69 NRC 1 (2009)

### TERMINATION OF PROCEEDING

dismissal of one contention on mootness grounds would not terminate a case where the board had expressly retained jurisdiction to decide whether to admit another contention; LBP-09-27, 70 NRC 992 (2009)

## SUBJECT INDEX

extended power uprate proceeding that has been terminated may not be reopened; CLI-10-17, 72 NRC 1 (2010)

following termination of a proceeding, the proper avenue for a person challenging an existing license is to file a request to modify, suspend, or revoke a license; CLI-09-5, 69 NRC 115 (2009)

grant of a motion for summary disposition on intervenor's sole remaining contention terminates the contested portion of the proceeding; LBP-06-24, 64 NRC 360 (2006)

if a previously terminated contested hearing is subsequently renoticed, a new licensing board would need to be established to preside over the renoticed litigation; LBP-09-23, 70 NRC 659 (2009)

proceedings on license amendments continue until they are over, even if the amendment is issued in the interim; CLI-09-5, 69 NRC 115 (2009)

the licensing board finds that petitioners have standing to intervene but have not submitted a contention that is admissible, and that therefore the proceeding must be terminated; LBP-07-11, 66 NRC 41 (2007)

when an adjudicatory proceeding has been terminated before a licensing board pursuant to a settlement agreement, the board loses its jurisdiction over, and thus its authority to act with respect to, that licensing action; LBP-09-23, 70 NRC 659 (2009)

with grant of an unopposed motion to withdraw the sole intervention petition, the proceeding is terminated; LBP-10-3, 71 NRC 213 (2010)

### TERRORISM

a contention challenging the failure to include in the environmental impact statement for license renewal any consideration of the effects of an aircraft attack is inadmissible; LBP-10-10, 71 NRC 529 (2010)

a NEPA analysis is not the vehicle for exploring questions about the potential for a terrorist attack on a proposed nuclear facility; LBP-08-16, 68 NRC 361 (2008)

a NEPA analysis of the potential impacts of deliberate attacks on a spent fuel pool and analysis of alternatives to mitigate spent fuel pool accidents are beyond the scope of a license renewal proceeding and therefore inadmissible; CLI-09-10, 69 NRC 521 (2009)

although a contention regarding the risks of terrorism related to the high-density racking of spent fuel in pools is new and significant information concerning a Category 1 matter, the contention is not admissible in a license renewal proceeding; LBP-06-20, 64 NRC 131 (2006)

although the Commission has complied with the court's ruling for facilities within the Ninth Circuit, that experience is very limited and does not demonstrate that conducting environmental analyses of terrorist scenarios for the licensing of all major facilities would be practicable or lead to meaningful additional information; CLI-10-9, 71 NRC 245 (2010)

although the U.S. Court of Appeals for the Ninth Circuit has held that the NRC must address certain terrorism-related matters to satisfy its NEPA obligations, the Commission has stated that it does not consider itself bound by that holding outside the Ninth Circuit; LBP-09-2, 69 NRC 87 (2009)

an appeals court ruling does not constitute new information on which a party can base a new contention; CLI-07-9, 65 NRC 139 (2007)

because of the questions of law and policy about the environmental impacts of terrorist attacks, the Commission decides to consider this issue itself; LBP-06-28, 64 NRC 404 (2006)

contention raising question of whether a quantitative as opposed to qualitative analysis of terrorist attacks and the alternatives for mitigation and prevention is necessary is referred to the Commission as a novel issue; LBP-10-15, 72 NRC 257 (2010)

contentions asserting that the risks associated with terrorist attacks require that the agency prepare an environmental assessment or an environmental impact statement are outside the scope of agency NEPA review and are inadmissible; LBP-06-4, 63 NRC 99 (2006)

for licensing decisions involving facilities located within the jurisdictional boundaries of the U.S. Court of Appeals for the Ninth Circuit, the NRC Staff will consider, as part of its NEPA analysis, the potential environmental consequences, if any, of a terrorist attack on the proposed facility to occur; CLI-09-15, 70 NRC 1 (2009)

given that consideration of terrorist attacks is part of the NRC's NEPA obligations in the Ninth Circuit, the issue of whether terrorist attacks have been fully considered in the NEPA analysis for a power plant in that jurisdiction is plainly material to the decision the NRC must make; LBP-10-15, 72 NRC 257 (2010)

hearings on alternative terrorist scenario claims could not be conducted in a meaningful way without substantial disclosure of classified and safeguards information on threat assessments and security

## SUBJECT INDEX

arrangements and without substantial litigation over their significance; CLI-08-1, 67 NRC 1 (2008); CLI-08-26, 68 NRC 509 (2008)

licensing boards are required to apply the Commission's directive that outside the Ninth Circuit, NEPA does not require the evaluation of the impact of terrorist attacks by aircraft or other means; LBP-09-10, 70 NRC 51 (2009); LBP-09-18, 70 NRC 385 (2009); LBP-09-17, 70 NRC 311 (2009)

NEPA does not require applicants or licensees to consider terrorist attacks as part of their environmental reviews; LBP-09-26, 70 NRC 939 (2009)

NEPA imposes no legal duty on the NRC to consider intentional malevolent acts on a case-by-case basis in conjunction with commercial power reactor license renewal applications; LBP-07-11, 66 NRC 41 (2007); LBP-08-13, 68 NRC 43 (2008)

NEPA is not an appropriate vehicle for exploring questions about the potential for a terrorist attack upon a proposed nuclear facility; CLI-10-1, 71 NRC 1 (2010)

NRC cannot, under NEPA, categorically refuse to consider the consequences of a terrorist attack against a spent fuel storage facility; CLI-10-1, 71 NRC 1 (2010)

NRC has maximum procedural leeway in how it addresses the environmental impacts; LBP-06-27, 64 NRC 399 (2006)

NRC has no legal duty to consider the environmental impacts of terrorism at NRC licensed facilities; LBP-08-6, 67 NRC 241 (2008)

NRC's categorical refusal to consider the environmental effects of a terrorist attack is found to be unreasonable under the National Environmental Policy Act; CLI-06-23, 64 NRC 107 (2006)

petitioner failed to provide any evidence to challenge NRC's conclusion that the environmental effects of a hypothetical terrorist attack on a nuclear plant would be no worse than those caused by a severe accident; LBP-10-10, 71 NRC 529 (2010)

petitioner's assertion that terrorist-act-originated SAMA analysis is required by Ninth Circuit law satisfies the requirements of 10 C.F.R. 2.309(f)(1)(iii) that the issue be within the scope of a license renewal proceeding; LBP-10-15, 72 NRC 257 (2010)

security and mitigation measures the NRC has imposed upon its licensees since September 11, 2001, and national anti-terrorist measures, coupled with the robust nature of SFPs, make the probability of a successful terrorist attack, though numerically indeterminable, very low; LBP-08-21, 68 NRC 554 (2008)

Staff failed to disclose data underlying its terrorism analysis in the final environmental assessment and thus failed to meet the NEPA-mandated hard-look standard; CLI-10-18, 72 NRC 56 (2010)

Staff's generic environmental impact statement for license renewal has already performed a discretionary analysis of terrorist acts in connection with license renewal and concluded that the core damage and radiological release from such acts would be no worse than the damage and release to be expected from internally initiated events; CLI-07-8, 65 NRC 124 (2007)

terrorism contentions are directly related to security and are therefore, under NRC license renewal rules, unrelated to the detrimental effects of aging, and consequently are beyond the scope of, not material to, and inadmissible in, a license renewal proceeding; CLI-07-8, 65 NRC 124 (2007); CLI-07-9, 65 NRC 139 (2007)

terrorist attacks are not to be considered part of the NEPA analysis required for licensing actions; LBP-07-14, 66 NRC 169 (2007)

the agency decided not to include the threat of air attacks in the 2007 revision to the design basis threat rule, a decision upheld by the Ninth Circuit; CLI-10-9, 71 NRC 245 (2010)

the Commission addresses the problem of terrorist attacks at nuclear facilities in cooperation with other agencies, including the military, and outside the hearing process; LBP-07-14, 66 NRC 169 (2007)

the environmental effect caused by third-party miscreants is simply too far removed from the natural or expected consequences of agency action to require a study under NEPA; CLI-10-1, 71 NRC 1 (2010)

the level of risk of a terrorist attack depends upon political, social, and economic factors external to the NRC licensing process, and thus it is not sensible to hold an NRC licensing decision, rather than terrorists themselves, as the proximate cause of an attack on an NRC-licensed facility; CLI-07-8, 65 NRC 124 (2007)

the National Environmental Policy Act does not require NRC to revisit matters related to high-density spent fuel pool coolant loss or other SFP events in combined license proceedings; LBP-08-21, 68 NRC 554 (2008)

## SUBJECT INDEX

the National Infrastructure Protection Plan is concerned with security issues, not environmental quality standards and requirements, and it is environmental quality standards and requirements that the environmental analysis is obliged to address, not security issues; CLI-08-1, 67 NRC 1 (2008)

there is no NEPA requirement that NRC consider the environmental consequences of hypothetical terrorist attacks on NRC-licensed facilities; CLI-07-8, 65 NRC 124 (2007); CLI-07-10, 65 NRC 144 (2007); CLI-07-11, 65 NRC 148 (2007); LBP-08-21, 68 NRC 554 (2008); LBP-09-2, 69 NRC 87 (2009); LBP-10-10, 71 NRC 529 (2010)

there is no proximate-cause link between an NRC licensing action, such as renewing an operating license, and any altered risk of terrorist attack; CLI-07-8, 65 NRC 124 (2007)

threat of terrorist attack at spent fuel pools has been evaluated generically by NRC and special circumstances for rule waiver have not been shown; LBP-10-15, 72 NRC 257 (2010)

under NEPA the Commission looks to the reasonably foreseeable impacts of simply licensing the facility, not the reasonably foreseeable effects of a successful terrorist attack; LBP-09-26, 70 NRC 939 (2009)

where petitioner has not shown a reasonably close causal relationship between an aircraft attack and the relicensing proceeding at issue, such an attack does not warrant NEPA evaluation; CLI-10-9, 71 NRC 245 (2010)

with respect to aircraft crash as an element of the design basis threat, adequate protection against an air threat is ensured by the active defenses provided by other federal agencies, together with what reasonably could be expected of licensees; CLI-10-1, 71 NRC 1 (2010)

### TESTIMONY

a long delay in an enforcement proceeding could result in the fading of witnesses' memories and runs the risk of witnesses' unavailability; CLI-06-12, 63 NRC 495 (2006)

a non-expert witness who was identified as the source of information but who had been removed from applicant's witness list could have been subjected to discovery and compelled to provide testimony before the board; LBP-06-15, 63 NRC 591 (2006)

in a Subpart L evidentiary hearing, the board may ask witnesses to appear in person and answer questions; LBP-09-22, 70 NRC 640 (2009)

rebuttal testimony shall be under oath or by affidavit so that it is suitable for being received into evidence directly, in exhibit form; LBP-09-22, 70 NRC 640 (2009)

### TESTING

adequacy of methods used to evaluate plant performance during large transients is discussed; LBP-06-5, 63 NRC 116 (2006)

applicant normally is required to perform two large-transient tests before an extended power uprate can be granted; LBP-07-2, 65 NRC 153 (2007)

each nuclear power plant must implement a program that includes all testing required to demonstrate that the structures, systems, and components will perform satisfactorily in service; LBP-07-2, 65 NRC 153 (2007)

leach rate testing protocol for slag and baghouse dust piles is discussed; CLI-09-1, 69 NRC 1 (2009)

preconstruction monitoring and testing to establish background information is exempted from the prohibition on commencement of construction; LBP-10-16, 72 NRC 361 (2010)

the final safety analysis report must include the applicant's plans for preoperational testing and initial operations; LBP-07-2, 65 NRC 153 (2007)

### THERMAL ANALYSIS

thermal effluent discharge impacts of the proposed cooling system intake and discharge structures on aquatic resources are discussed; LBP-09-7, 69 NRC 613 (2009)

### THERMAL DISCHARGE IMPACTS

applicant is required to provide in its environmental report a site-specific analysis of entrainment, impingement, and heat shock/thermal discharge impacts from its once-through cooling systems; LBP-08-13, 68 NRC 43 (2008)

### THORIUM

although thorium is source material, NRC does not regulate it in unprocessed ores and in material with insignificant concentrations of radionuclides; CLI-06-14, 63 NRC 510 (2006)

## SUBJECT INDEX

### TIME LIMITED AGING ANALYSES

- a license renewal applicant seeking to satisfy aging management requirements by reliance upon existing TLAAAs in its current licensing basis would rely on 10 C.F.R. 54.21(c)(1)(i) or (ii); CLI-10-17, 72 NRC 1 (2010)
- a technically accurate projection of the TLAA that predicts that the component will fail due to aging during the 20-year period of extended operation will not suffice; LBP-08-25, 68 NRC 763 (2008)
- allowing applicant to postpone performance of an analysis-of-record TLAA until after the license renewal is issued is inconsistent with the language, structure, and intent of the Part 54 regulations and inconsistent with NRC precedent; LBP-08-25, 68 NRC 763 (2008)
- analysis of metal fatigue that ignores the known and substantial effects of the light-water reactor environment is insufficient, as both a technical and a legal matter; LBP-08-25, 68 NRC 763 (2008)
- applicant's use of a conservative number of transients in the calculations of the environmentally adjusted cumulative usage factor is adequate to provide the degree of assurance required by 10 C.F.R. 54.29(a); LBP-08-25, 68 NRC 763 (2008)
- as the threshold parameter of the TLAA for metal fatigue, applicant must complete the analysis of the cumulative usage factors for the license renewal period and include the results in the license renewal application; LBP-08-13, 68 NRC 43 (2008)
- because environmentally adjusted cumulative usage factors are not contained in licensee's current licensing basis, they cannot be TLAAAs and thereby a prerequisite to license renewal; CLI-10-17, 72 NRC 1 (2010)
- each license renewal application must contain an evaluation of TLAAAs, a list of TLAAAs, a demonstration relating to TLAAAs, and the actual TLAAAs; LBP-08-25, 68 NRC 763 (2008)
- each license renewal application must demonstrate that the TLAAAs remain valid for the period of extended operation, have been projected to the end of the period of extended operation, or that the effects of aging on the intended function(s) will be adequately managed for the period of extended operation; LBP-08-25, 68 NRC 763 (2008)
- even if the TLAAAs predict that the component will fail during the period of extended operation, a license renewal can still be granted if applicant demonstrates that the effects of aging will be adequately managed during the PEO; LBP-08-25, 68 NRC 763 (2008)
- if applicant's metal fatigue analyses on Class I components do not comply with the ASME Code and do not provide reasonable assurance as required by 10 C.F.R. 54.21(c)(1) and 54.29(a), then a license renewal cannot be issued; LBP-08-25, 68 NRC 763 (2008)
- license renewal applicant who chooses to rely upon an existing TLAA may demonstrate compliance with 10 C.F.R. 54.21(c)(1)(i) by showing that the existing cumulative usage factor calculations remain valid because the number of assumed transients would not be exceeded during the period of extended operation; CLI-10-17, 72 NRC 1 (2010)
- license renewal applications must include an evaluation of TLAAAs demonstrating that the analyses will remain valid for the period of extended operation, have been projected to the end of the period of extended period of operation, or the effects of aging on the intended functions will be adequately managed for the period of extended operation; CLI-10-17, 72 NRC 1 (2010)
- NRC Staff's guidance document NUREG/CR-6909, which prescribes guidance on the calculation of metal fatigue on reactor components in a light water reactor environment, is built upon a larger and more recent database than NUREG/CR-5704 and -6583 but use of the earlier NUREGs is sufficient; LBP-08-25, 68 NRC 763 (2008)
- section 54.21(c)(1)(i)-(iii) requires that the applicant make its demonstration that the effects of aging will be adequately managed during the period of extended operation in the application, which is necessarily before the license may be granted; LBP-08-25, 68 NRC 763 (2008)
- section 54.29(a) speaks of both past and future actions, referring specifically to those that have been or will be taken with respect to managing the effects of aging and TLAAAs; CLI-10-17, 72 NRC 1 (2010)
- technical accuracy of the TLAAAs is necessary, but not sufficient, to demonstrate that it remains valid because a technically accurate TLAA that shows that the component will fail during the period of extended operation does not satisfy 10 C.F.R. 54.21(c)(1)(i); LBP-08-25, 68 NRC 763 (2008)
- the "demonstrations" mandated by 10 C.F.R. 54.21(c)(1)(i) and (ii) require that the TLAAAs be performed in a technically accurate manner and produce a prediction that the component will not fail due to aging during the period of extended operation; LBP-08-25, 68 NRC 763 (2008)

## SUBJECT INDEX

the differences between predictive and tracking TLAAs is discussed; LBP-08-25, 68 NRC 763 (2008)  
the scope of a license renewal proceeding under 10 C.F.R. Part 54 encompasses a review of the plant structures and components that will require an aging management review for the period of extended operation and the plant's systems, structures, and components that are subject to TLAAs; CLI-10-17, 72 NRC 1 (2010)  
the statutory conditions for grant of a license renewal are described; LBP-08-25, 68 NRC 763 (2008)  
use of a simplified Green's function methodology for the environmentally adjusted cumulative usage factor metal fatigue analyses for the core spray and reactor recirculation outlet nozzles is inconsistent with the ASME Code and thus cannot serve as the analysis-of-record and does not satisfy the requirements of 10 C.F.R. 54.21(c)(1) or 54.29(a); LBP-08-25, 68 NRC 763 (2008)

### TIME LIMITS

the only timing requirement for giving notice of participation by an interested state is that a representative shall identify those contentions on which it will participate in advance of any hearing held; LBP-06-20, 64 NRC 131 (2006)

### TOTAL EFFECTIVE DOSE EQUIVALENT

a decommissioning plan for a restricted release site will be judged exclusively upon whether residual radioactivity levels will be as low as is reasonably achievable and the total effective dose equivalent to offsite human beings will be below 25 mrem; LBP-08-4, 67 NRC 105 (2008)  
emissions not directly tied to licensed activity are excluded; CLI-06-14, 63 NRC 510 (2006)  
individuals located at the boundary of the exclusion area cannot be exposed to more than 25 rem total effective dose equivalent in any 2-hour period, and any individual located at the outer boundary of the low population zone cannot be exposed to more than 25 rem TEDE during the entire period of any radioactive release; LBP-09-19, 70 NRC 433 (2009)  
licensees must ensure that the TEDE to individual members of the public from a licensed operation does not exceed 0.1 rem per year exclusive of the dose contributions from background radiation; LBP-06-1, 63 NRC 41 (2006)  
the TEDE is defined as the sum of the deep-dose equivalent (for external exposures) and the committed effective dose equivalent (for internal exposures); LBP-08-4, 67 NRC 105 (2008)

### TRANSCRIPTS

after a closed hearing, parties can propose creation of a public copy of the transcript, with appropriate redactions for protected information; LBP-10-5, 71 NRC 329 (2010)  
the public is entitled to copies of the transcripts of all hearings; LBP-10-2, 71 NRC 190 (2010)

### TRANSFER OF OWNERSHIP

if, at some point in the future, applicant were to decide to change the ownership structure and to enter into a joint venture with another entity, its license would have to be amended to reflect this change; LBP-09-18, 70 NRC 385 (2009)

### TRANSIENTS

adequacy of licensee's analytical tools to predict plant performance in large transient events is questioned; LBP-06-5, 63 NRC 116 (2006)  
an MSIV transient is classified as an anticipated operational occurrence, and nuclear power stations must be designed and built to withstand them; LBP-07-2, 65 NRC 153 (2007)  
generator load rejection transients occasionally occur and are classified as anticipated operational occurrences that nuclear power stations must be designed and built to withstand; LBP-07-2, 65 NRC 153 (2007)  
transients can be, and often are, anticipated operational occurrences which are conditions of normal operation; LBP-07-2, 65 NRC 153 (2007)  
when an MSIV transient occurs, the reactor operator is required to analyze what happened and how the reactor systems responded and performed, and to report to the NRC; LBP-07-2, 65 NRC 153 (2007)

### TRANSMISSION SERVICES

this concept is central to the determination of standing in a license transfer proceeding; CLI-06-2, 63 NRC 9 (2006)

### TRANSPORTATION OF RADIOACTIVE MATERIALS

in the high-level waste repository proceeding, a state can meet the requirements for standing as a matter of right, based on the threat posed by transportation of radioactive waste through that state; LBP-09-6, 69 NRC 367 (2009)

## SUBJECT INDEX

petitioner alleges release of controlled byproduct nuclear materials in containers not certified for transport of such materials on public roads and not labeled with the required labeling; DD-10-3, 72 NRC 171 (2010)

petitioner organizations have established standing based on their members' proximity to transportation routes, even where it was not possible to predict with accuracy which of its members were most likely to be harmed or the extent of the damage; LBP-09-6, 69 NRC 367 (2009)

### TREATIES

a Native American nation retains its water rights even after its land rights have been extinguished, but those reserved rights must originate in a treaty in order to survive; LBP-09-6, 69 NRC 367 (2009)  
Congress's plenary power with respect to Native Americans entitles it to abrogate treaties with Native American nations; LBP-09-13, 70 NRC 168 (2009)

licensing boards are required to reject treaty-based claims of ownership by Native American tribes; LBP-08-24, 68 NRC 691 (2008)

plenary authority over the tribal relations of the Indians has been exercised by Congress from the beginning, and the power has always been deemed a political one, not subject to be controlled by the judicial department of the government; LBP-08-24, 68 NRC 691 (2008)

the United States is no longer bound by the terms of the 1868 Fort Laramie Treaty; LBP-09-13, 70 NRC 168 (2009)

where an abrogated treaty was the only grounds supporting an Indian group's claim of standing, the board correctly found that the Indian group did not have standing as a party to the proceeding; CLI-09-9, 69 NRC 331 (2009)

### TRITIUM

NRC includes the EPA drinking water standard in the technical specifications that a licensee must meet; LBP-07-9, 65 NRC 539 (2007)

the potential for contamination of water is primarily a NEPA issue because it involves the environmental impacts of the proposed early site permit and possible mitigation measures, but also has a safety element because safety regulations require that exposure to radiation be as low as reasonably achievable; LBP-07-9, 65 NRC 539 (2007)

### TRUST RELATIONSHIP DOCTRINE

a trust duty in the NRC as a federal permitting agency arises out of 1851 and 1868 treaties with Indian tribes; LBP-08-6, 67 NRC 241 (2008)

federal agencies are required to take actions or refrain from taking actions in fulfillment of Congress's duty to protect the Indians; LBP-09-13, 70 NRC 168 (2009)

trust responsibility imposes a fiduciary duty on NRC, as a federal agency, to Indian tribes and their members; LBP-08-24, 68 NRC 691 (2008)

### TSUNAMIS

licensees must have and follow emergency procedures for natural phenomena as appropriate for the geographical location of the facility; LBP-06-12, 63 NRC 403 (2006)

### TURBINES

licensee's report to NRC of a manual reactor trip due to main turbine high vibrations included the details of the event, provided an analysis of the event, including estimated change in conditional core damage probability, and provided a list of corrective actions; DD-09-2, 70 NRC 899 (2009)

### UNCONTESTED ISSUES

the presiding officer has no authority or duty to resolve uncontested issues in the high-level waste proceeding; CLI-08-25, 68 NRC 497 (2008)

### UNCONTESTED LICENSE APPLICATIONS

for early site permits, section 52.21, the notice requirements of section 2.104(b)(2), and the Notice of Hearing itself outline a board's review obligation; LBP-06-28, 64 NRC 460 (2006)

for uranium enrichment facilities, licensing boards must determine whether NRC Staff's review of the application has been adequate to support the finding to be made by the Director of the Office of Nuclear Materials Safety and Safeguards; CLI-09-15, 70 NRC 1 (2009); CLI-10-4, 71 NRC 56 (2010)  
in an early site permit proceeding, the board must narrow its inquiry to those topics or sections in NRC Staff documents that it deems most important and should concentrate on portions of the documents that do not on their face adequately explain the logic, underlying facts, and applicable regulations and guidance; LBP-07-1, 65 NRC 27 (2007); LBP-07-6, 65 NRC 429 (2007)

## SUBJECT INDEX

licensing boards do not conduct a de novo review of the application; CLI-09-15, 70 NRC 1 (2009)  
licensing boards must determine whether the applicant and record of the proceeding contain sufficient information to support license issuance; CLI-09-15, 70 NRC 1 (2009)  
NRC Staff is authorized to issue a renewed license once the Director of the Office of Nuclear Reactor Regulation has made the appropriate findings; CLI-09-7, 69 NRC 235 (2009)  
regarding safety issues, boards must determine whether the application and the record of the proceeding contain sufficient information and the review of the application by the NRC Staff has been adequate to support findings pursuant to 10 C.F.R. 30.33, 40.32, and 70.23; LBP-07-6, 65 NRC 429 (2007)  
the scope of the licensing board's environmental review in an early site permit proceeding is discussed; LBP-07-1, 65 NRC 27 (2007)  
the scope of the licensing board's safety review in an uncontested early site permit proceeding is described; LBP-07-1, 65 NRC 27 (2007)  
when a proceeding involving an application for a construction permit is uncontested the Board will not conduct a de novo review, but rather will conduct a simple sufficiency review of the uncontested issues; LBP-07-1, 65 NRC 27 (2007); LBP-07-6, 65 NRC 429 (2007)

### UNIONS

See Labor Unions

### UNRESTRICTED RELEASE

a license is terminated upon the completion of decommissioning; CLI-09-1, 69 NRC 1 (2009)  
the unavailability of funding for decommissioning adequate to achieve unrestricted release of a site is not one of the conditions specified in 10 C.F.R. 20.1403(a); CLI-09-1, 69 NRC 1 (2009)

### UPDATED FINAL SAFETY ANALYSIS REPORT

adequacy of the UFSAR and compliance with the current licensing basis are outside the scope of license renewal proceedings; LBP-08-13, 68 NRC 43 (2008)

### URANIUM

although uranium is source material, NRC does not regulate it in unprocessed ores and in material with insignificant concentrations of radionuclides; CLI-06-14, 63 NRC 510 (2006)  
contention that worldwide uranium supplies will be inadequate to permit the anticipated power production benefits during the license term is potentially material to the licensing proceeding; LBP-08-15, 68 NRC 294 (2008)  
petitioner's failure to cite any document that, read as a whole, supports its theory that uranium supplies will be insufficient to support operation of a reactor unit during its licensed period renders it inadmissible; LBP-08-16, 68 NRC 361 (2008)

See also Depleted Uranium

### URANIUM ENRICHMENT FACILITIES

although not legally binding, Staff guidance documents provide further information about the content of the integrated safety analysis summary and how an applicant can comply with criticality safety regulations; LBP-06-17, 63 NRC 747 (2006)  
an affirmative finding by the Commission that issuance of a license for a uranium enrichment facility will not be inimical to the common defense and security is required; CLI-09-15, 70 NRC 1 (2009)  
an approach for disposition of depleted tails that is consistent with the USEC Privatization Act, such as transfer to DOE for disposal, constitutes a plausible strategy; CLI-10-4, 71 NRC 56 (2010)  
an enrichment facility is not a production or utilization facility and, therefore, NRC does not have antitrust responsibilities for it; CLI-09-15, 70 NRC 1 (2009)  
an environmental report and an environmental impact statement for a materials license must include a statement on the alternatives to the proposed action, including a discussion of the no-action alternative; CLI-09-15, 70 NRC 1 (2009)  
applicant is required to provide NRC Staff with a site-specific estimate of the costs for decommissioning the facility, and a description and certification of the means by which funds for decommissioning will be assured; LBP-06-17, 63 NRC 747 (2006)  
applicant must comply with certain performance requirements regarding nuclear criticality safety; LBP-06-17, 63 NRC 747 (2006)  
applicant must provide documentation of its compliance with the performance requirements of section 70.61 in its integrated safety analysis summary; LBP-06-17, 63 NRC 747 (2006)

## SUBJECT INDEX

applicant must submit a decommissioning funding plan for its proposed facility; LBP-06-15, 63 NRC 591 (2006); LBP-07-6, 65 NRC 429 (2007)

before a facility can be licensed, a hearing is required to be held on that license application; CLI-09-15, 70 NRC 1 (2009)

containers are exempted from labeling requirements if they are attended by an individual who takes the precautions necessary to prevent the exposure of individuals in excess of the established limits; LBP-07-6, 65 NRC 429 (2007)

creditor regulations in 10 C.F.R. 50.81 apply to the creation of creditor interests in equipment, devices, or important parts thereof, capable of separating the isotopes of uranium or enriching uranium in the isotope U-235; CLI-10-4, 71 NRC 56 (2010)

creditor regulations in 10 C.F.R. 70.44 apply to the creation of creditor interests in special nuclear material; CLI-10-4, 71 NRC 56 (2010)

creditor regulations may be augmented by license conditions as necessary to allow ownership arrangements, such as sale and leaseback, provided it can be found that such arrangements are not inimical to the common defense and security of the United States; CLI-09-15, 70 NRC 1 (2009); CLI-10-4, 71 NRC 56 (2010)

depleted uranium from an enrichment facility is appropriately classified as a low-level radioactive waste; CLI-09-15, 70 NRC 1 (2009); CLI-10-4, 71 NRC 56 (2010)

design of new facilities must provide for criticality control including adherence to the double contingency principle; LBP-06-17, 63 NRC 747 (2006)

DOE must accept for dispositioning, depleted uranium from a private uranium enrichment facility upon request of the facility operator or appropriate third party; LBP-06-15, 63 NRC 591 (2006)

DOE will indemnify a licensee against claims arising from nuclear incidents to the extent that licensee cannot obtain commercial insurance at reasonable rates; LBP-07-6, 65 NRC 429 (2007)

financial criteria of 10 C.F.R. 70.22(a)(8) and 70.23(a)(5) can be met by conditioning the license to require funding commitments to be in place prior to construction and operation; CLI-10-4, 71 NRC 56 (2010)

for license applications for uranium enrichment facilities, NRC shall conduct a single adjudicatory hearing on the record with regard to the licensing of the construction and operation of the facility; LBP-07-6, 65 NRC 429 (2007)

if a facility is licensed, prior to commencement of operations NRC will verify through an inspection that the facility meets the construction and operation requirements of the license; CLI-10-4, 71 NRC 56 (2010)

neither a uranium enrichment facility nor a nuclear power plant may be owned, controlled, or dominated by a foreign entity; CLI-09-9, 69 NRC 331 (2009)

proof of adequate liability insurance must be filed with the NRC before a license for the operation of a facility may be issued; LBP-07-6, 65 NRC 429 (2007)

Staff must evaluate alternatives to determine whether there are any obviously superior options to the proposed action; LBP-07-6, 65 NRC 429 (2007)

Staff's draft and final environmental impact statements are to include a statement that will briefly describe and specify the need for the proposed action; LBP-06-17, 63 NRC 747 (2006)

the environmental costs of the facility must be compared to the Staff's assessment of the benefits derived from the additional domestic supply of enriched uranium and the presence of upgraded enrichment technology in the United States; LBP-07-6, 65 NRC 429 (2007)

the occupational radiation protection measures that the radiation protection program must address are discussed; LBP-07-6, 65 NRC 429 (2007)

there is no obvious potential for harm at petitioner's property 20 miles from the facility location; LBP-08-6, 67 NRC 241 (2008)

under the double contingency principle, process designs should incorporate sufficient factors of safety to require at least two unlikely, independent, and concurrent changes in process conditions before a criticality accident is possible; LBP-06-17, 63 NRC 747 (2006)

use of conspicuously posted signs, in conjunction with the applicant's radiation work permit program, is an acceptable alternative to section 20.1601(a) requirements; LBP-07-6, 65 NRC 429 (2007)

## SUBJECT INDEX

### URANIUM ENRICHMENT FACILITY PROCEEDINGS

- a hearing on a uranium enrichment facility application will be held under the authority of sections 53, 63, 189, 191, and 193 of the Atomic Energy Act; CLI-10-4, 71 NRC 56 (2010)
- a hearing will be conducted according to the rules of practice in 10 C.F.R. Part 2, Subparts A, C, G, and to the extent that classified information becomes involved, Subpart I; CLI-10-4, 71 NRC 56 (2010)
- a licensing board is to determine, with respect to safety matters, whether the application and record of the proceeding contain sufficient information and whether the NRC Staff's review of the application has been adequate; LBP-06-17, 63 NRC 747 (2006)
- a licensing board must determine in its initial decision whether the requirements of section 102(2)(A), (C), and (E) of the National Environmental Policy Act have been complied with; CLI-09-15, 70 NRC 1 (2009)
- a state, county, municipality, federally recognized Indian tribe, or agencies thereof may submit a petition to the Commission to participate as a party or nonparty; CLI-10-4, 71 NRC 56 (2010)
- all parties, except NRC Staff, shall make mandatory disclosures within 45 days of the issuance of the licensing board order admitting contentions; CLI-10-4, 71 NRC 56 (2010)
- any person who does not wish, or is not qualified, to become a party to the proceeding may request permission to make a limited appearance pursuant to the provisions of 10 C.F.R. 2.315(a); CLI-09-15, 70 NRC 1 (2009); CLI-10-4, 71 NRC 56 (2010)
- before a uranium enrichment facility can be licensed, a hearing is required to be held on that license application; LBP-06-17, 63 NRC 747 (2006)
- boards must determine whether the review conducted by the NRC Staff pursuant to 10 C.F.R. Part 51 has been adequate; LBP-06-17, 63 NRC 747 (2006)
- contested and uncontested designations apply issue-by-issue, and not to proceedings-at-large; LBP-06-17, 63 NRC 747 (2006)
- discovery under 10 C.F.R. 2.709 shall not commence until the issuance of the safety evaluation report or environmental impact statement unless the licensing board, in its discretion, finds that commencing discovery against NRC Staff on safety issues before the SER is issued, or on environmental issues before the FEIS is issued will expedite the hearing without adversely affecting the Staff's ability to complete its evaluation in a timely manner; CLI-10-4, 71 NRC 56 (2010)
- in a contested proceeding, the licensing board shall make findings of fact and conclusions of law on admitted contentions; CLI-09-15, 70 NRC 1 (2009)
- in an uncontested proceeding, the licensing board will not conduct a de novo evaluation of the application, but will determine whether there is sufficient information to support license issuance and whether the NRC Staff's review of the application is adequate; CLI-09-15, 70 NRC 1 (2009); CLI-10-4, 71 NRC 56 (2010); LBP-06-17, 63 NRC 747 (2006)
- in uncontested proceedings, licensing boards must determine whether the application and record of the proceeding contain sufficient information to support license issuance; CLI-09-15, 70 NRC 1 (2009)
- intervention petitions must address the nature of petitioner's right under the Atomic Energy Act to be made a party to the proceeding, the nature and extent of petitioner's property, financial, or other interest in the proceeding, and the possible effect of any order that may be entered in the proceeding on petitioner's interest; CLI-10-4, 71 NRC 56 (2010)
- intervention petitions must provide the name, address, and telephone number of the petitioner and specifically explain the reasons why intervention should be permitted; CLI-10-4, 71 NRC 56 (2010)
- intervention petitions shall set forth with particularity the interest of the petitioner in the proceeding and how that interest may be affected by the results of the proceeding; CLI-10-4, 71 NRC 56 (2010)
- licensing boards must promptly certify to the Commission all novel legal or policy issues that would benefit from early Commission consideration should such issues arise in this proceeding; CLI-10-4, 71 NRC 56 (2010)
- matters of fact and law to be considered are whether the application satisfies the applicable standards in 10 C.F.R. 30.33, 40.32, and 70.23, and whether the requirements of Part 51 have been met; LBP-06-17, 63 NRC 747 (2006)
- matters of fact and law to be considered in a proceeding on an application for a license to construct and operate a uranium enrichment facility are whether the application satisfies the applicable standards in 10 C.F.R. Parts 30, 40, and 70, and whether the requirements of the National Environmental Policy Act

## SUBJECT INDEX

- and the NRC's implementing regulations in 10 C.F.R. Part 51 have been met; CLI-09-15, 70 NRC 1 (2009); CLI-10-4, 71 NRC 56 (2010)
- no later than 30 days before the commencement of the hearing at which an issue is to be presented, all parties other than the NRC Staff shall make the required pretrial disclosures; CLI-10-4, 71 NRC 56 (2010)
- participants who believe that they have a good cause for not submitting documents electronically must file an exemption request with their initial paper filing requesting authorization to continue to submit documents in paper format; CLI-10-4, 71 NRC 56 (2010)
- regarding safety issues, boards must determine whether the application and the record of the proceeding contain sufficient information and the review of the application by the NRC Staff has been adequate to support findings pursuant to 10 C.F.R. 30.33, 40.32, and 70.23; LBP-07-6, 65 NRC 429 (2007)
- regardless of whether the proceeding is contested or uncontested, a licensing board must consider three baseline NEPA issues; LBP-06-17, 63 NRC 747 (2006)
- state and federally recognized Indian tribes do not need to address standing requirements if the facility is located within their boundaries; CLI-10-4, 71 NRC 56 (2010)
- the Commission gives notice of hearing, guidance on conduct of the proceeding, and procedures for access to sensitive unclassified nonsafeguards information and safeguards information for contention preparation; CLI-10-4, 71 NRC 56 (2010)
- the Commission retains its inherent supervisory authority over the proceeding to provide additional guidance to the licensing board and participants and to resolve any matter in controversy itself; CLI-09-15, 70 NRC 1 (2009)
- the Commission will endeavor to identify efficiencies, and provide pertinent resources, to further reduce the time the agency needs to complete reviews and reach decisions in these proceedings; CLI-07-17, 65 NRC 392 (2007)
- the licensing board must narrow its inquiry to those topics or sections in Staff documents that it deems most important and should concentrate on portions of the documents that do not on their face adequately explain the logic, underlying facts, and applicable regulations and guidance; LBP-07-6, 65 NRC 429 (2007)
- the licensing board shall not entertain motions for summary disposition unless it finds that such motions, if granted, are likely to expedite the proceeding; CLI-09-15, 70 NRC 1 (2009); CLI-10-4, 71 NRC 56 (2010)
- the licensing board's standard of review on environmental issues in a mandatory uncontested proceeding is discussed; LBP-07-6, 65 NRC 429 (2007)
- to avoid unnecessary delays in the proceeding, the licensing board should not routinely grant requests for extensions of time and should manage the schedule such that the overall hearing process is completed within 28-1/2 months; CLI-09-15, 70 NRC 1 (2009)
- when a proceeding involving an application for a construction permit is uncontested, the board will not conduct a de novo review, but rather will conduct a simple sufficiency review of the uncontested issues; LBP-07-6, 65 NRC 429 (2007)
- URANIUM FUEL CYCLE**
- both temporary and permanently committed land resources are specified as part of the uranium fuel cycle; LBP-09-21, 70 NRC 581 (2009)
- carbon dioxide emissions are to be listed as zero; LBP-09-21, 70 NRC 581 (2009)
- each environmental report prepared for the combined license stage must take Table S-3 as the basis for evaluating the contribution of the environmental effects of the fuel cycle to the environmental costs of licensing the reactor; CLI-09-21, 70 NRC 927 (2009)
- inadequacy of environmental report's reliance on Table S-3 regarding radioactive effluents from the uranium fuel cycle is not litigable in a combined license proceeding; LBP-08-16, 68 NRC 361 (2008)
- URANIUM MILL TAILINGS**
- for tailings or wastes to fall within the definition of byproduct material, the plain statutory and regulatory language requires that such tailings or wastes be produced from ore that has been processed for its source material content; LBP-06-1, 63 NRC 41 (2006)
- URANIUM MILL TAILINGS DISPOSAL**
- byproduct material from in situ extraction operations must be disposed of at existing large mill tailings disposal sites; LBP-10-16, 72 NRC 361 (2010)

## SUBJECT INDEX

transfer of depleted uranium from enrichment operations to DOE for deconversion and disposal constitutes a plausible strategy for dispositioning; LBP-06-15, 63 NRC 591 (2006)

### URANIUM MINING AND MILLING

allegations that mining activities may cause harm to public health and safety are within the scope of a materials license renewal proceeding and material to the findings the NRC must make; LBP-08-27, 68 NRC 951 (2008)

in cases involving ISL uranium mining and other source materials licensing, petitioner must demonstrate injury, causation, and redressability because proximity to the proposed facility alone is not adequate to demonstrate standing; LBP-10-16, 72 NRC 361 (2010)

NRC does not regulate conventional uranium mining; CLI-06-14, 63 NRC 510 (2006)

proximity alone is not sufficient to establish standing for a petitioner's proximity to a source materials activity; LBP-08-24, 68 NRC 691 (2008)

### U.S. CONSTITUTION

a First Amendment basis for public access to administrative proceedings is recognized; LBP-10-2, 71 NRC 190 (2010)

the First Amendment requires a presumption of openness in civil proceedings; LBP-10-2, 71 NRC 190 (2010)

the First Amendment requires public access to deportation hearings despite government's strenuous objections that open hearings would enable terrorists to obtain information useful to their malevolent goals; LBP-10-2, 71 NRC 190 (2010)

the right to hold specific private employment and to follow a chosen profession free from unreasonable governmental interference comes within the liberty and property concepts of the Fifth Amendment; LBP-06-13, 63 NRC 523 (2006)

### USEC PRIVATIZATION ACT

an approach for disposition of depleted tails that is consistent with the Act, such as transfer to DOE for disposal, constitutes a plausible strategy; CLI-09-15, 70 NRC 1 (2009); CLI-10-4, 71 NRC 56 (2010)

DOE must accept for dispositioning depleted uranium from a private uranium enrichment facility upon request of the facility operator or appropriate third party; LBP-06-15, 63 NRC 591 (2006)

### VAUGHN INDEX

when access to documents is disputed in FOIA litigation, the government must submit detailed public affidavits identifying the documents withheld, the FOIA exemptions claimed, and a particularized explanation of why each document falls within the claimed exemption; LBP-08-7, 67 NRC 361 (2008)

### VIOLATIONS

a licensee employee who contributes to submission of information to the NRC that the employee knows is not complete or accurate in some material respect places the licensee in violation; LBP-09-24, 70 NRC 676 (2009)

a senior plant supervisor's deliberate failure to contact the appropriate site security manager in order to initiate an assessment of the trustworthiness and reliability of the two contract technicians who falsified a maintenance report is a violation; LBP-08-14, 68 NRC 279 (2008)

an employee of a licensee may not deliberately submit to the NRC information that he knows to be incomplete or inaccurate in some respect material to the NRC; CLI-10-23, 72 NRC 210 (2010); LBP-09-24, 70 NRC 676 (2009)

careless disregard in the execution of one's duties does not amount to deliberate misconduct or a violation; LBP-09-24, 70 NRC 676 (2009)

deliberate misconduct refers to an intentional act or omission that the person knows would cause a licensee to be in violation of any rule; LBP-09-24, 70 NRC 676 (2009)

failure to document a falsified work order is a violation of 10 C.F.R. 50.9; LBP-08-14, 68 NRC 279 (2008)

in the absence of evidence to the contrary, NRC does not presume that a licensee will violate agency regulations wherever the opportunity arises; CLI-10-20, 72 NRC 185 (2010)

information submitted to an NRC inspector that was not complete and accurate in all material respects is a violation; LBP-09-12, 70 NRC 159 (2009)

issues concerning alleged violations of state law or regulations are outside the scope of, and not material to, an NRC power uprate proceeding; CLI-07-25, 66 NRC 101 (2007)

## SUBJECT INDEX

licensee's failure to develop and implement a formalized procedure to neutralize a spill involving hydrofluoric acid, resulting in exposure to licensee operators, is a Severity Level III violation; LBP-10-18, 72 NRC 519 (2010)

materially incorrect responses to the NRC's communications are violations; CLI-10-23, 72 NRC 210 (2010)

perfection in applicant's QA program is not required, but once a pattern of QA violations has been shown, applicant has the burden of showing that the license may be granted notwithstanding the violations; LBP-10-9, 71 NRC 493 (2010)

Severity Level III violation is recategorized to a violation with no assigned severity level, based on settlement agreement; LBP-10-18, 72 NRC 519 (2010)

substantial delay in both the submittal and approval of a decommissioning plan might involve a violation of 10 C.F.R. 40.42; LBP-08-8, 67 NRC 409 (2008)

### VOLCANOES

contention asserting that DOE's description of its expert elicitation relating to a probabilistic volcanic hazard analysis update fails to comply with this section or the NRC guidance document that DOE formally committed to follow, is admissible; LBP-09-29, 70 NRC 1028 (2009)

### WAIVER

a party's failure to advance a collateral estoppel argument does not perforce trigger the waiver principle, thus precluding a tribunal from applying collateral estoppel; LBP-09-24, 70 NRC 676 (2009)

a privilege that is not claimed is waived; LBP-06-25, 64 NRC 367 (2006)

attorney-client privilege belongs to the client, not to the lawyer, and thus the client may waive the privilege, either by an express waiver or by an implied waiver; CLI-08-6, 67 NRC 179 (2008)

even if the Commission could waive the application fee for access to safeguards information, the mere fact that petitioners are public interest organizations provides no special reason for departing from well-established NRC practice; CLI-09-4, 69 NRC 80 (2009)

if a company claims that its internal investigation establishes that it has met its obligation, then the company has waived the attorney-client privilege associated with the internal investigation; CLI-08-6, 67 NRC 179 (2008)

implied waiver of the attorney-client privilege exists when a regulated company voluntarily discloses investigative materials to a government agency; CLI-08-6, 67 NRC 179 (2008)

### WAIVER OF OBJECTION

a licensing board is authorized to accept assertions of the applicant and Staff that have not been controverted by a party; LBP-06-7, 63 NRC 188 (2006)

a party's failure to raise a matter in its proposed findings of fact and conclusions of law seemingly waives these items as grounds for its challenge to the final environmental impact statement; LBP-09-7, 69 NRC 613 (2009)

a petitioner that fails to submit a reply brief is foreclosed from challenging the assertions advanced by the licensee and the NRC Staff in their answers, unless it put such assertions in issue in its petition; LBP-06-7, 63 NRC 188 (2006)

arguments that an intervenor fails to adequately develop are treated as waived; LBP-06-19, 64 NRC 53 (2006)

arguments that are not mentioned on appeal are considered waived; CLI-10-3, 71 NRC 49 (2010)

it is not the duty of an adjudicative body to dig through the reams of paper that litigants have deposited to construct and develop their arguments; LBP-06-19, 64 NRC 53 (2006)

### WAIVER OF RULE

a petition for rule waiver must be accompanied by an affidavit that describes with particularity the special circumstances that justify the waiver; CLI-10-10, 71 NRC 281 (2010)

a petition for rule waiver must show that special circumstances with respect to the subject matter of the particular proceeding are such that the application of the rule or regulation (or a provision of it) would not serve the purposes for which the rule or regulation was adopted; CLI-10-10, 71 NRC 281 (2010); LBP-10-12, 71 NRC 656 (2010)

a petition to waive a Commission regulation can be granted only in unusual and compelling circumstances; LBP-10-22, 72 NRC 661 (2010)

a petitioner may, within the adjudicatory context, submit a request for waiver of a rule; LBP-07-4, 65 NRC 281 (2007)

## SUBJECT INDEX

- a prima facie showing merely requires the presentation of enough information to allow a board to infer (absent disproof) that special circumstances exist to support a rule waiver; LBP-10-15, 72 NRC 257 (2010)
- absent a waiver pursuant to 10 C.F.R. 2.335, any challenge brought to aspects of a referenced certified reactor design is outside the scope of a combined operating license proceeding; LBP-08-16, 68 NRC 361 (2008)
- absent a waiver pursuant to 10 C.F.R. 2.335, Category 1 issues cannot be addressed in a license renewal proceeding; LBP-08-13, 68 NRC 43 (2008)
- absent a waiver pursuant to 10 C.F.R. 2.335, no rule or regulation of the Commission is subject to attack in any adjudicatory proceeding; CLI-07-16, 65 NRC 371 (2007); CLI-09-20, 70 NRC 911 (2009); LBP-08-17, 68 NRC 431 (2008); LBP-08-21, 68 NRC 554 (2008); LBP-09-10, 70 NRC 51 (2009); LBP-09-21, 70 NRC 581 (2009); LBP-10-12, 71 NRC 656 (2010); LBP-10-15, 72 NRC 257 (2010); LBP-10-16, 72 NRC 361 (2010)
- as a general matter, a board ruling denying a waiver request is interlocutory in nature, and therefore not appealable until the board has issued a final decision resolving the case; CLI-08-27, 68 NRC 655 (2008)
- because petitioner had not made a prima facie case for rule waiver, the Board declined to certify the matter to the Commission and found that it was prohibited from considering the matter further; CLI-10-29, 72 NRC 556 (2010)
- boards must certify the matter of rule waiver to the Commission for a determination of whether the application of the regulation should be waived or an exception granted under the specific circumstances presented; LBP-10-12, 71 NRC 656 (2010)
- board's role in considering a petition for waiver under 10 C.F.R. 2.335 is limited to deciding whether petitioner has made a prima facie showing of special circumstances that would support a waiver; LBP-10-15, 72 NRC 257 (2010)
- deferral of review of board denial of rule waiver petition did not cause irreparable injury; CLI-10-29, 72 NRC 556 (2010)
- for a contention regarding environmental impacts of spent fuel storage to be within the scope of an operating license renewal proceeding, petitioner must obtain a waiver under 10 C.F.R. 2.335(d); LBP-10-15, 72 NRC 257 (2010)
- if petitioner has made a prima facie showing of special circumstances for rule waiver, then the board certifies the matter to the Commission; LBP-10-15, 72 NRC 257 (2010); LBP-10-22, 72 NRC 661 (2010)
- if there is no prima facie showing for a rule waiver, the board may not further consider the matter; LBP-10-22, 72 NRC 661 (2010)
- in addressing a petition for a rule waiver, the board, in lieu of holding oral argument to obtain answers to its questions, poses questions for NRC Staff about the waiver petition; LBP-09-29, 70 NRC 1028 (2009)
- in the context of a safety contention, petitioner must show a waiver of the regulation is necessary to reach a significant safety problem; LBP-10-15, 72 NRC 257 (2010)
- licensing board decisions denying a petition for waiver are interlocutory and not immediately reviewable; CLI-10-29, 72 NRC 556 (2010)
- matters at issue must involve special circumstances with respect to the subject matter of the particular proceeding; LBP-06-23, 64 NRC 257 (2006)
- new and significant information about a Category 1 issue is not a proper subject for a contention, absent a waiver of section 51.53(c)(3)(i); LBP-07-4, 65 NRC 281 (2007)
- NRC regulations may not be attacked in individual NRC adjudicatory proceedings, unless the Commission waives the rule at issue for a particular proceeding, or the rule is changed or suspended due to a rulemaking review; CLI-09-3, 69 NRC 68 (2009); CLI-09-10, 69 NRC 521 (2009); LBP-09-6, 69 NRC 367 (2009)
- one way to challenge a generic finding, or Category 1 issue, in a license renewal proceeding is to apply for a waiver when special circumstances are such that the application of the rule or regulation would not serve the purposes for which the rule or regulation was adopted; CLI-07-3, 65 NRC 13 (2007)
- participants may not submit paper copies of their filings unless they seek a waiver; CLI-09-15, 70 NRC 1 (2009)

## SUBJECT INDEX

petition for waiver of regulation excluding consideration of alternatives and the need for power from the operating license phase must establish that all of applicant's fossil fuel baseload generation that is less efficient than the facility under consideration has been accounted for; LBP-10-12, 71 NRC 656 (2010)

petitioner has alleged sufficient new information concerning the seismic situation to raise a prima facie showing that strict application of the generic NEPA analysis of the management of spent fuel in nuclear reactors would not serve the purpose for which Part 51 Appendix B and 10 C.F.R. 51.53(c)(2) were adopted; LBP-10-15, 72 NRC 257 (2010)

petitioner has presented a prima facie showing for waiver of the NRC regulation covering the environmental impacts of spent fuel pool accidents generically, and has shown that its contention concerning earthquake-induced spent fuel pool accidents is otherwise admissible; LBP-10-15, 72 NRC 257 (2010)

petitioner has the burden of demonstrating that there is warrant for waiver of a rule prohibiting consideration of the need for power and energy alternatives at the operating license stage; LBP-10-12, 71 NRC 656 (2010)

"prima facie showing" means that the affidavits supporting a petition for rule waiver must present each element of the case for waiver in a persuasive manner with adequate supporting facts; LBP-10-12, 71 NRC 656 (2010)

request for waiver of application of 10 C.F.R. 51.53(b), 51.95(b), and 51.106(c) precluding consideration of need for power and alternative energy sources from a Part 50 operating license proceeding fails to provide the prima facie showing required; LBP-10-12, 71 NRC 656 (2010)

requests for rule waiver or exception must be accompanied by an affidavit that identifies with particularity the special circumstances alleged to justify the waiver or exception requested; LBP-08-17, 68 NRC 431 (2008); LBP-09-6, 69 NRC 367 (2009)

the affidavit accompanying a petition for rule waiver need not be prepared by an expert; LBP-10-15, 72 NRC 257 (2010)

the appropriate standard for determining whether a waiver petition is timely is reasonableness; LBP-10-12, 71 NRC 656 (2010)

the Commission does not grant waivers where the circumstances on which the waiver's proponent relies are common to a large class of applicants or facilities; CLI-09-3, 69 NRC 68 (2009)

the Commission has set forth a four-part test for grant of a rule waiver, and all four factors must be met; LBP-10-22, 72 NRC 661 (2010)

the sole ground for petition of waiver or exception is that special circumstances with respect to the subject matter of the particular proceeding are such that the application of the rule or regulation would not serve the purposes for which the rule or regulation was adopted; LBP-08-17, 68 NRC 431 (2008)

the special circumstances necessary to obtain waiver of a rule must be set forth with particularity and supported by an affidavit or other proof; LBP-10-9, 71 NRC 493 (2010)

threat of terrorist attack at spent fuel pools has been evaluated generically by NRC and special circumstances for rule waiver have not been shown; LBP-10-15, 72 NRC 257 (2010)

to certify a waiver petition to the Commission, the board must find that petitioner has met extremely high standards showing the existence of compelling circumstances in which the rationale of the regulation is undercut; LBP-10-12, 71 NRC 656 (2010)

to challenge a generic determination in a license renewal proceeding, petitioner must seek and receive a waiver; LBP-08-26, 68 NRC 905 (2008)

to challenge a regulation, petitioner must submit a supporting affidavit setting forth with particularity the special circumstances that justify the waiver or exception requested; LBP-09-18, 70 NRC 385 (2009)

to meet its burden to justify certification of its request to waive 10 C.F.R. 51.53(b), 51.95(b), and 51.106(c), petitioner must make a prima facie showing that the proposed facility would not be needed to meet increased energy needs or to replace older, less economical operating capacity, and that there are viable alternatives likely to exist that could tip the NEPA cost-benefit balance against issuance of the operating license; LBP-10-12, 71 NRC 656 (2010)

to support a contention challenging a Commission rule, petitioner must request, and demonstrate any supporting reasons for, a waiver of the rule; CLI-10-9, 71 NRC 245 (2010)

waiver of a rule or regulation is granted on the sole ground that special circumstances with respect to the subject matter of the particular proceeding are such that the application of the rule or regulation would not serve the purposes for which the rule or regulation was adopted; LBP-09-6, 69 NRC 367 (2009)

## SUBJECT INDEX

waivers are limited to very unusual cases, such as where it appears that an alternative exists that is clearly and substantially environmentally superior; LBP-10-12, 71 NRC 656 (2010)  
when considering whether to undertake pendent appellate review of otherwise unappealable issues, the Commission has expressed a willingness to take up otherwise unappealable issues that are “inextricably intertwined” with appealable issues; CLI-08-27, 68 NRC 655 (2008)

### WASTE CONFIDENCE RULE

a challenge to the Waste Confidence Rule, which is the subject of a rulemaking, is inadmissible; CLI-10-9, 71 NRC 245 (2010)  
a low-level waste confidence rule would not, if it followed the pattern set by the high-level waste confidence rule, alter any requirements to consider in the adjudicatory proceeding the environmental impacts of waste storage during the term of the license; CLI-09-3, 69 NRC 68 (2009)  
a waste confidence rulemaking is not the appropriate instrument for resolving low-level radioactive waste issues, particularly issues of disposal; CLI-09-3, 69 NRC 68 (2009)  
challenges to the Waste Confidence Rule must be made in the context of a rulemaking, not in the context of an adjudicatory proceeding; CLI-10-19, 72 NRC 98 (2010)  
contentions challenging the Waste Confidence Rule are inadmissible; LBP-08-17, 68 NRC 431 (2008); LBP-09-17, 70 NRC 311 (2009); LBP-09-18, 70 NRC 385 (2009)  
contentions that concern greater-than-Class-C waste, seek to require a change to the decommissioning cost estimate, or constitute a challenge to Table S-3 of 10 C.F.R. 51.51 are inadmissible; LBP-09-16, 70 NRC 227 (2009)  
if new information becomes available in the course of waste confidence rulemaking proceedings that contravenes a combined license application, petitioner may file a motion to admit a new or amended contention; LBP-09-18, 70 NRC 385 (2009)  
if petitioners are dissatisfied with the Commission’s generic approach to a problem, their remedy lies in the rulemaking process, not in adjudication; LBP-08-23, 68 NRC 679 (2008)  
ISL mining does not involve fuel rod waste and to the extent such waste is indirectly relevant, the Waste Confidence rule would prohibit its consideration in a license amendment proceeding; LBP-08-6, 67 NRC 241 (2008)  
issues related to the environmental impact of onsite spent fuel storage after the license renewal term are covered by NRC’s Waste Confidence Rule and are outside the scope of a license renewal proceeding because contentions may not challenge a regulation; LBP-06-20, 64 NRC 131 (2006)  
NRC has made a generic determination that there is reasonable assurance that at least one mined geologic repository will be available within the first quarter of the twenty-first century with sufficient capacity for any reactor to dispose of the high-level waste that it generates; LBP-09-10, 70 NRC 51 (2009); LBP-09-18, 70 NRC 385 (2009)  
petitioners and others who believe the Waste Confidence Rule needs revision must use rulemaking proceedings to express their concerns; LBP-09-4, 69 NRC 170 (2009)  
regulations cover the storage of spent fuel in new or existing facilities; LBP-09-10, 70 NRC 51 (2009); LBP-09-17, 70 NRC 311 (2009); LBP-09-18, 70 NRC 385 (2009)  
the Commission addresses a certified question by a licensing board on the admissibility of proposed contentions involving the Waste Confidence Rule; CLI-10-19, 72 NRC 98 (2010)  
the Commission has made a determination, on a generic basis, that spent fuel generated by any reactor can be safely managed and that sufficient repository capacity will be available; LBP-08-17, 68 NRC 431 (2008)  
the environmental impacts related to storage of spent fuel under Part 72 have been generically evaluated under two previous rulemakings and the Commission’s waste confidence proceedings, and thus need not be reassessed; LBP-09-21, 70 NRC 581 (2009)  
the rule applies to the spent fuel discharged from any new generation of reactor designs; LBP-08-21, 68 NRC 554 (2008)  
the rule is applicable to all new reactor proceedings, and contentions challenging the rule or seeking its reconsideration are not admissible; LBP-08-16, 68 NRC 361 (2008)  
to support a contention challenging a Commission rule, petitioner must request, and demonstrate any supporting reasons for, a waiver of the rule; CLI-10-9, 71 NRC 245 (2010)  
See also Radioactive Waste Disposal

## SUBJECT INDEX

### WASTE DISPOSAL

because disposal of Greater-Than-Class-C waste is the responsibility of the federal government, the disposal of GTCC radioactive waste is not directly affected by the partial closure of the Barnwell disposal facility and so is not an admissible aspect of a contention; LBP-08-16, 68 NRC 361 (2008)

before any waste may be received at the high-level waste repository, DOE must update its application with additional information, including, specifically, additional design data obtained during construction; LBP-10-22, 72 NRC 661 (2010)

byproduct material from in situ extraction operations must be disposed of at existing large mill tailings disposal sites; LBP-10-16, 72 NRC 361 (2010)

further inquiry is warranted into the safety-related matter of whether the Final Safety Analysis Report has failed to include necessary information concerning applicant's plans for onsite management of Class B and C waste; LBP-08-16, 68 NRC 361 (2008)

neither an intervenor nor an applicant/licensee (nor seemingly the NRC) has the authority to challenge or direct DOE's estimates of the fees it will charge to a uranium enrichment facility that requests DOE to disposition its depleted uranium waste; CLI-06-22, 64 NRC 37 (2006)

whether applicant might someday require a permit under 10 C.F.R. Part 61 for a disposal facility is too speculative and therefore not material to the findings the NRC must make to support the action that is involved; LBP-08-16, 68 NRC 361 (2008)

See also Radioactive Waste Disposal; Radioactive Waste Management

### WASTE STORAGE

See Radioactive Waste Storage

### WASTE DISPOSAL SITES

contention alleging that the Army employs truckers to remove depleted uranium-contaminated soil from its site and dump it in the community is inadmissible; LBP-10-4, 71 NRC 216 (2010)

See also Radioactive Waste Disposal

### WASTEWATER

NRC is prohibited from using NEPA to impose additional effluent limitations on an applicant's wastewater discharges to surface waters; LBP-10-14, 72 NRC 101 (2010)

### WATER

applicant's climate change analysis for the 990,000-year period may be limited to the effects of increased water flow through the high-level waste repository as a result of climate change; LBP-10-22, 72 NRC 661 (2010)

contention that concerns onsite and offsite impacts of active and passive dewatering associated with the proposed project satisfies the admissibility criteria; LBP-09-10, 70 NRC 51 (2009)

### WATER POLLUTION

a general assessment of radioactivity within waters of the Great Lakes Basin does not address specific issues with regard to the proposed reactor, and it does not provide any support for the petitioners' assertions needed to advance an admissible contention; LBP-09-16, 70 NRC 227 (2009)

allegations of radiological and nonradiological contamination of drinking water are outside the scope of license renewal proceedings because they involve no aging-related issues and are Category 1, or generic, issues; LBP-06-10, 63 NRC 314 (2006)

any potential harm associated with petitioner's use of water from a water source connecting to a mining site is fairly traceable to the proposed action; LBP-10-16, 72 NRC 361 (2010)

contention is rejected as lacking support for the premise that ongoing mining operations will drain or contaminate wetlands, such that their economic benefits will be decreased; LBP-10-16, 72 NRC 361 (2010)

effects of heat shock on the protection and propagation of fish and shellfish is a Category 2 environmental issue and must be addressed on a case-by-case basis in a license renewal application; CLI-07-16, 65 NRC 371 (2007)

heat shock falls within the scope of the Clean Water Act; CLI-07-16, 65 NRC 371 (2007)

NPDES permits may address thermal discharges into bodies of water; CLI-07-16, 65 NRC 371 (2007)

NRC is prohibited from reviewing any effluent limitation or other requirement established pursuant to the Clean Water Act; CLI-07-16, 65 NRC 371 (2007)

NRC is prohibited from using NEPA to impose additional effluent limitations on applicant's wastewater discharges to surface waters; LBP-10-14, 72 NRC 101 (2010)

## SUBJECT INDEX

standing was found for an organization representing three members living in close proximity to decommissioning site, who expressed concern that depleted uranium materials could affect a waterway abutting the property of two members; CLI-10-20, 72 NRC 185 (2010)

the environmental baseline reflects the effects of all currently existing pollution sources in the relevant watershed, including contributions of all nuclear power plants, and petitioners failed to provide information indicating that this aggregate analysis was insufficient under NEPA; LBP-09-16, 70 NRC 227 (2009)

the potential for tritium contamination of water is primarily a NEPA issue because it involves the environmental impacts of the proposed early site permit and possible mitigation measures, but also has a safety element because safety regulations require that exposure to radiation be as low as reasonably achievable; LBP-07-9, 65 NRC 539 (2007)

to the extent contaminants can plausibly migrate from leach mining operations to the aquifer from which a petitioner obtains his or her water, a petitioner would have a claim of a cognizable injury and could be accorded standing; LBP-08-24, 68 NRC 691 (2008)

See also Groundwater Contamination

### WATER QUALITY

abdication of water quality effects entirely to other agencies' certifications subverts the special purpose of NEPA; LBP-09-16, 70 NRC 227 (2009)

although applicant's description of existing water quality conditions did not separately evaluate the contributions of specific sources, it nonetheless formed an environmental baseline against which to measure the cumulative impact of the proposed new reactor; LBP-09-16, 70 NRC 227 (2009)

challenge to the technical adequacy of baseline water quality data and adequate confinement of the host aquifer in applicant's environmental report is admissible; LBP-10-16, 72 NRC 361 (2010)

extent and duration of dredging, its impacts on water quality, the disposal of any dredged material, and the impacts on aquatic biota are discussed; LBP-09-7, 69 NRC 613 (2009)

issues relating to threats to public health and safety and potential impacts on the environment arising out of water quality issues are within the scope of a license amendment proceeding; LBP-08-6, 67 NRC 241 (2008)

nothing in the National Environmental Policy Act shall be deemed to authorize any federal agency to review any effluent limitation or other requirement established pursuant to the Clean Water Act or to authorize any such agency to impose any effluent limitation other than those set by EPA or a state agency that has been delegated such authority; LBP-09-25, 70 NRC 867 (2009)

NRC is barred from imposing or second-guessing effluent limitations or water quality certification requirements imposed by EPA or an authorized state, but it may address water quality matters in its assessment of the environmental impact of a license renewal; LBP-06-20, 64 NRC 131 (2006)

petitioner demonstrates a genuine dispute with the applicant on the adequacy of the water quality analysis; LBP-09-16, 70 NRC 227 (2009)

the field sampling plan's analysis of waterways is intended to identify groundwater, possible cave, and surface water paths and to assess the contents of those waters to determine if depleted uranium is leaching or will leach off the site in quantities significant enough that humans might receive more than 25 mrems of total radioactive exposure from all of the site's pathways; LBP-08-4, 67 NRC 105 (2008)

the reach of 33 U.S.C. § 1371(c)(2) is confined to navigable waters, which do not even encompass all surface waters; LBP-09-25, 70 NRC 867 (2009)

when decisions have been made by a state pursuant to the Clean Water Act and these decisions are raised in NRC licensing proceedings, the NRC is bound to take the Environmental Protection Agency's considered decisions at face value; LBP-09-25, 70 NRC 867 (2009)

### WATER SUPPLY

a Native American nation retains its water rights even after its land rights have been extinguished, but those reserved rights must originate in a treaty in order to survive; LBP-09-6, 69 NRC 367 (2009)

### WETLANDS

contention is rejected as lacking support for the premise that ongoing mining operations will drain or contaminate wetlands, such that their economic benefits will be decreased; LBP-10-16, 72 NRC 361 (2010)

## SUBJECT INDEX

the board erred in admitting a contention concerning the economic value of wetlands without requiring petitioners to demonstrate that the proposed licensing action or no-action alternative would have any effect on wetlands; CLI-09-9, 69 NRC 331 (2009)

the fact that disposal of dredged or fill material in wetlands is regulated by EPA and the U.S. Army Corps of Engineers does not render a contention inadmissible; LBP-09-10, 70 NRC 51 (2009)

### WHISTLEBLOWERS

although not required by regulation, settlement agreements that contain language reinforcing employees' rights to raise safety concerns and communicate with the NRC avoid the possibility of being construed in a way that could be a violation; DD-10-1, 72 NRC 149 (2010)

nondisparagement clauses in retention bonus agreements are common in employment agreements and NRC should not interfere with these agreements unless it finds such a clause violates 10 C.F.R. 50.7(f) or is applied in a fashion that prevents or retaliates against an employee for engaging in protected activities such as communicating with NRC; DD-10-1, 72 NRC 149 (2010)

the purpose of 10 C.F.R. 50.7(f) is to ensure that licensees do not enter into employment agreements that would prohibit, restrict, or otherwise discourage an employee or former employee from providing the NRC with information of regulatory significance; DD-10-1, 72 NRC 149 (2010)

### WIND POWER

wind or solar power are not considered as stand-alone alternatives because neither sources is deemed capable of serving the purpose and need of the project, generating 1600 MWe of baseload power; LBP-10-24, 72 NRC 720 (2010)

### WITHDRAWAL

after issuance of a notice of hearing, withdrawal of an application shall be on such terms as the presiding officer may prescribe; CLI-10-13, 71 NRC 387 (2010)

an attorney is not permitted to withdraw from representing a client unless withdrawal can be accomplished without material adverse effect to the client's interests; LBP-10-21, 72 NRC 616 (2010)

an unopposed motion to withdraw the sole intervention petition is granted and the proceeding is terminated; LBP-10-3, 71 NRC 213 (2010)

section 2.107(a) does not authorize withdrawal of an application but rather clarifies that licensing boards have authority to impose reasonable conditions upon voluntary withdrawals in appropriate circumstances; LBP-10-11, 71 NRC 609 (2010)

the law on withdrawal of an application does not require a determination of whether applicant's decision to withdraw is sound where the applicant's filing was wholly voluntary in the first place; LBP-10-11, 71 NRC 609 (2010)

the public interest would best be served by leaving the option open to the applicant should changed conditions warrant pursuit of a withdrawn application; LBP-10-11, 71 NRC 609 (2010)

the Secretary of the Department of Energy does not have the discretion to substitute his policy for the one established by Congress that mandates progress toward a merits decision by NRC on a construction permit for the high-level waste repository; LBP-10-11, 71 NRC 609 (2010)

when a hearing notice has been issued, withdrawal of an application would be subject to such terms as the presiding officer may prescribe; LBP-09-23, 70 NRC 659 (2009)

when applicant decides it no longer wishes to have the agency evaluate its application, the usual approach is for the applicant to request that the agency permit it to withdraw its licensing request; LBP-09-23, 70 NRC 659 (2009)

when applicant withdraws an application, all agency consideration of the matter ends, including any Staff technical review and any adjudicatory proceeding, either as to contested matters raised by any intervenors or any uncontested/mandatory hearing that might be required; LBP-09-23, 70 NRC 659 (2009)

See also Motions to Withdraw

### WITNESSES

a board's findings regarding a particular witness's knowledge or state of mind depend, as a general rule, largely on that witness's credibility; CLI-10-23, 72 NRC 210 (2010)

a long delay in an enforcement proceeding could result in the fading of witnesses' memories and runs the risk of witnesses' unavailability; CLI-06-12, 63 NRC 495 (2006)

## SUBJECT INDEX

a non-expert witness who was identified as the source of information but who had been removed from applicant's witness list could have been subjected to discovery and compelled to provide testimony before the board; LBP-06-15, 63 NRC 591 (2006)

diligent, even aggressive, probing for weaknesses in a witness's or counsel's position may be necessary if presiding officers are to fulfill their duty to develop an adequate record that will contribute to informed decisionmaking; CLI-10-17, 72 NRC 1 (2010)

in a Subpart L evidentiary hearing, the board may ask witnesses to appear in person and answer questions; LBP-09-22, 70 NRC 640 (2009)

licensing board findings of fact that turn on witness credibility receive the Commission's highest deference on appeal; CLI-10-23, 72 NRC 210 (2010)

selection of hearing procedures for contentions at the outset of a proceeding is not immutable, because the availability of Subpart G procedures depends critically on the credibility of eyewitnesses, and the identity of such witnesses may not be known until after the contentions are admitted; LBP-09-10, 70 NRC 51 (2009)

Subpart G procedures focus on issues where the credibility of an eyewitness may reasonably be expected to be at issue, and/or issues of motive or intent of the party or eyewitness; LBP-09-22, 70 NRC 640 (2009)

### WITNESSES, EXPERT

a petitioner denied discretionary intervention could still participate as amicus curiae or as an expert witness; CLI-06-16, 63 NRC 708 (2006)

although an expert may be misinterpreting data submitted by applicant, this is not considered at the contention admissibility stage; LBP-09-27, 70 NRC 992 (2009)

an expert opinion that merely states a conclusion (e.g., the application is deficient, inadequate, or wrong) without providing a reasoned basis or explanation for that conclusion is inadequate because it deprives the board of the ability to make the necessary, reflective assessment of the opinion; CLI-06-10, 63 NRC 451 (2006); LBP-09-16, 70 NRC 227 (2009)

applicant may challenge an expert opinion in the disclosure stage, via a motion for summary disposition, if it can show that there is no genuine issue as to any material fact and that it is entitled to a decision as a matter of law; LBP-09-30, 70 NRC 1039 (2009)

boards need not accept an expert's bare conclusions that an application is deficient, inadequate, or wrong as support for a contention; CLI-10-2, 71 NRC 27 (2010)

disclosure of the name and telephone number of an expert witness, if this information is not known to the party, is not required; LBP-09-30, 70 NRC 1039 (2009)

each witness is not required to generate an analysis, but rather must disclose the analysis or other authority upon which the witness bases his or her opinion; LBP-09-30, 70 NRC 1039 (2009)

experience with and information about past direct and indirect effects of individual past actions may be useful in illuminating or predicting the direct and indirect effects of a proposed action; LBP-09-16, 70 NRC 227 (2009)

expert opinion that merely states a conclusion (e.g., the application is deficient, inadequate, or wrong) without providing a reasoned basis or explanation for that conclusion is inadequate because it deprives the board of the ability to make the necessary, reflective assessment of the opinion; LBP-09-6, 69 NRC 367 (2009); LBP-10-6, 71 NRC 350 (2010); LBP-10-10, 71 NRC 529 (2010)

for Subpart G proceedings, each expert witness is required to create, sign, and submit a written expert report; LBP-09-30, 70 NRC 1039 (2009)

if an expert witness has a copy of the analysis or other authority upon which his or her opinion is based, and it is extant and reasonably available to that witness and/or the party, then the mandatory disclosure should include that analysis or other authority; LBP-09-30, 70 NRC 1039 (2009)

if an expert witness is subsequently selected, or any analysis or other authority is subsequently amended or newly developed, then this information must be promptly disclosed; LBP-09-30, 70 NRC 1039 (2009)

it is the petitioner's obligation to present factual information and/or expert opinion necessary to support its contention; LBP-07-3, 65 NRC 237 (2007)

mandatory disclosures by parties include the disclosure of the name of any person, including any expert, upon whose opinion the party bases its claims and contentions and may rely upon as a witness, and a

## SUBJECT INDEX

copy of the analysis or other authority upon which that person bases his or her opinion; LBP-09-22, 70 NRC 640 (2009)

neither mere speculation nor bare or conclusory assertions, even by an expert, alleging that a matter should be considered will suffice to allow the admission of a proffered contention; LBP-07-3, 65 NRC 237 (2007); LBP-08-16, 68 NRC 361 (2008)

on appeal, the Commission is loath to address complaints concerning a board's skepticism of expert witness's testimony, given that the Commission lacks the Board's ability to observe the demeanor of the parties' expert witnesses in general and petitioner's witness in particular; CLI-10-17, 72 NRC 1 (2010)

petitioner does not have to provide a complete or final list of its experts or evidence or prove the merits of its contention at the admissibility stage; CLI-09-12, 69 NRC 535 (2009); LBP-09-6, 69 NRC 367 (2009)

petitioner does not need to provide expert opinion or a substantive affidavit in order to satisfy 10 C.F.R. 2.309(f)(1)(v); LBP-10-15, 72 NRC 257 (2010)

summary disposition is not the vehicle for untangling expert disputes so long as the experts are competent and the information they provide is adequately stated and explained; LBP-07-2, 65 NRC 153 (2007); LBP-07-12, 66 NRC 113 (2007); LBP-08-2, 67 NRC 54 (2008)

support for a contention that consisted of brief quotes from the petitioners' correspondence with a physicist were found to be bare conclusory remarks with respect to which the petitioner offered no explanation or analysis; CLI-10-2, 71 NRC 27 (2010)

there is no requirement that an expert's opinion must include specific references to supporting sources and documents; LBP-09-6, 69 NRC 367 (2009)

when specialists express conflicting views, an agency must have discretion to rely on the reasonable opinions of its own qualified experts; CLI-08-26, 68 NRC 509 (2008)

**WORK ENVIRONMENT**

petitioner's request that NRC scrutinize the steps taken to improve the handling of safety concerns brought to management by workers is granted in part and denied in part; DD-07-1, 65 NRC 195 (2007)

**ZONE OF INTERESTS**

injury in fact may be either actual or threatened to establish standing, but must arguably lie within the zone of interests protected by the statutes governing the proceeding; LBP-08-6, 67 NRC 241 (2008)

petitioner's claimed injury must be arguably within the zone of interests protected by the governing statute in the proceeding; LBP-10-16, 72 NRC 361 (2010)

preservation of Native American cultural traditions is a protected interest under federal law; LBP-10-16, 72 NRC 361 (2010)

the breadth of the applicable zone of interests will vary according to the particular statutory provisions at issue; LBP-08-24, 68 NRC 691 (2008)

to determine whether an interest is in the zone of interests of a statute, it is necessary first to discern the interests arguably to be protected by the statutory provision at issue and then to inquire whether petitioner's interests affected by the agency action are among them; LBP-08-24, 68 NRC 691 (2008); LBP-10-16, 72 NRC 361 (2010)

## FACILITY INDEX

AMERICAN CENTRIFUGE PLANT; Docket No. 70-7004  
MATERIALS LICENSE; April 3, 2006; MEMORANDUM AND ORDER; CLI-06-9, 63 NRC 433 (2006); CLI-06-10, 63 NRC 451 (2006)  
MATERIALS LICENSE; February 1, 2007; MEMORANDUM AND ORDER; CLI-07-5, 65 NRC 109 (2007)  
MATERIALS LICENSE; April 13, 2007; INITIAL DECISION (Authorizing the Issuance of the American Centrifuge Plant License); LBP-07-6, 65 NRC 429 (2007)

ARKANSAS NUCLEAR ONE, Units 1 and 2; Docket Nos. 50-313, 50-368  
REQUEST FOR ACTION; January 9, 2006; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206; DD-06-1, 63 NRC 133 (2006)

BEAVER VALLEY POWER STATION, Units 1 and 2; Docket Nos. 50-334, 50-412  
LICENSE TRANSFER; January 31, 2006; MEMORANDUM AND ORDER; CLI-06-2, 63 NRC 9 (2006)

BELL BEND NUCLEAR POWER PLANT; Docket No. 52-039-COL  
COMBINED LICENSE; August 10, 2009; MEMORANDUM AND ORDER (Ruling on Petitions to Intervene and Requests for Hearing); LBP-09-18, 70 NRC 385 (2009)  
COMBINED LICENSE; January 7, 2010; MEMORANDUM AND ORDER; CLI-10-7, 71 NRC 133 (2010)

BELLEFONTE NUCLEAR PLANT, Units 1 and 2; Docket Nos. 50-438, 50-439  
CONSTRUCTION PERMIT; January 7, 2010; MEMORANDUM AND ORDER; CLI-10-6, 71 NRC 113 (2010)  
CONSTRUCTION PERMIT; April 2, 2010; MEMORANDUM AND ORDER (Ruling on Intervention Petition); LBP-10-7, 71 NRC 391 (2010)  
CONSTRUCTION PERMIT; September 29, 2010; MEMORANDUM AND ORDER; CLI-10-26, 72 NRC 474 (2010)

BELLEFONTE NUCLEAR POWER PLANT, Units 3 and 4; Docket Nos. 52-014, 52-015  
COMBINED LICENSE; September 12, 2008; MEMORANDUM AND ORDER (Ruling on Standing, Hearing Petition Timeliness, and Contention Admissibility); LBP-08-16, 68 NRC 361 (2008)  
COMBINED LICENSE; February 17, 2009; MEMORANDUM AND ORDER; CLI-09-3, 69 NRC 68 (2009)  
COMBINED LICENSE; November 3, 2009; MEMORANDUM AND ORDER; CLI-09-21, 70 NRC 927 (2009)

BIG ROCK POINT INDEPENDENT SPENT FUEL STORAGE INSTALLATION; Docket Nos. 50-155, 72-043  
LICENSE TRANSFER; April 26, 2007; MEMORANDUM AND ORDER; CLI-07-19, 65 NRC 423 (2007)  
LICENSE TRANSFER; June 28, 2007; MEMORANDUM AND ORDER; CLI-07-21, 65 NRC 519 (2007)

BIG ROCK POINT PLANT; Docket Nos. 50-155, 72-043  
LICENSE TRANSFER; August 22, 2008; MEMORANDUM AND ORDER; CLI-08-19, 68 NRC 251 (2008)

CALLAWAY PLANT, Unit 2; Docket No. 52-037  
COMBINED LICENSE; August 28, 2009; MEMORANDUM AND ORDER (Approving Settlement Agreement and Terminating Contested Adjudicatory Proceeding); LBP-09-23, 70 NRC 659 (2009)

## FACILITY INDEX

CALVERT CLIFFS INDEPENDENT SPENT FUEL STORAGE INSTALLATION; Docket No. 72-8  
LICENSE TRANSFER; July 26, 2006; MEMORANDUM AND ORDER; CLI-06-21, 64 NRC 30 (2006)

COMBINED LICENSE; December 29, 2009; ORDER (Denying Motion to Compel Disclosure of Bases for Expert Opinion); LBP-09-30, 70 NRC 1039 (2009)

COMBINED LICENSE; January 7, 2010; MEMORANDUM AND ORDER; CLI-10-2, 71 NRC 27 (2010)

COMBINED LICENSE; November 18, 2010; MEMORANDUM AND ORDER (Denying Motion for Summary Disposition of Contention 8A); LBP-10-20, 72 NRC 571 (2010)

COMBINED LICENSE; December 22, 2010; MEMORANDUM AND ORDER (Granting Motion to Compel Disclosure of Groundwater Modeling Information); LBP-10-23, 72 NRC 692 (2010)

MCGUIRE NUCLEAR STATION, Units 1 and 2; Docket Nos. 50-369, 50-370

REQUEST FOR ACTION; January 9, 2006; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206; DD-06-1, 63 NRC 133 (2006)

MILLSTONE NUCLEAR POWER STATION, Unit 3; Docket No. 50-423

OPERATING LICENSE AMENDMENT; June 4, 2008; MEMORANDUM AND ORDER (Ruling on Petition to Intervene and Request for Hearing); LBP-08-9, 67 NRC 421 (2008)

OPERATING LICENSE AMENDMENT; August 13, 2008; MEMORANDUM AND ORDER; CLI-08-17, 68 NRC 231 (2008)

OPERATING LICENSE AMENDMENT; March 5, 2009; MEMORANDUM AND ORDER; CLI-09-5, 69 NRC 115 (2009)

MILLSTONE NUCLEAR POWER STATION, Units 2 and 3; Docket Nos. 50-336, 50-423

OPERATING LICENSE RENEWAL; January 31, 2006; MEMORANDUM OPINION AND ORDER; CLI-06-4, 63 NRC 32 (2006)

MIXED OXIDE FUEL FABRICATION FACILITY; Docket No. 70-3098

MATERIALS LICENSE AMENDMENT; October 31, 2007; MEMORANDUM AND ORDER (Ruling on Standing and Contentions); LBP-07-14, 66 NRC 169 (2007)

MATERIALS LICENSE AMENDMENT; June 27, 2008; MEMORANDUM AND ORDER (Ruling on Contentions and All Other Pending Matters); LBP-08-11, 67 NRC 460 (2008)

MATERIALS LICENSE AMENDMENT; February 4, 2009; MEMORANDUM AND ORDER; CLI-09-2, 69 NRC 55 (2009)

MONTICELLO NUCLEAR GENERATING PLANT; Docket No. 50-263

LICENSE RENEWAL; February 2, 2006; MEMORANDUM AND ORDER; CLI-06-6, 63 NRC 161 (2006)

## FACILITY INDEX

NATIONAL ENRICHMENT FACILITY; Docket No. 70-3103  
MATERIALS LICENSE; March 3, 2006; MEMORANDUM AND ORDER (Ruling on Summary Disposition Cross-Motions Relating to Remand from CLI-05-20); LBP-06-9, 63 NRC 289 (2006)  
MATERIALS LICENSE; March 3, 2006; SECOND PARTIAL INITIAL DECISION (Environmental Impacts of Disposal of Depleted Uranium); LBP-06-8, 63 NRC 241 (2006)  
MATERIALS LICENSE; May 31, 2006; THIRD PARTIAL INITIAL DECISION (Safety-Related Contentions); LBP-06-15, 63 NRC 591 (2006)  
MATERIALS LICENSE; June 2, 2006; MEMORANDUM AND ORDER; CLI-06-15, 63 NRC 687 (2006)  
MATERIALS LICENSE; June 23, 2006; FINAL PARTIAL INITIAL DECISION (Mandatory Hearing/Uncontested Issues); LBP-06-17, 63 NRC 747 (2006)  
MATERIALS LICENSE; August 17, 2006; MEMORANDUM AND ORDER; CLI-06-22, 64 NRC 37 (2006)

NINE MILE POINT NUCLEAR STATION, Units 1 and 2; Docket Nos. 50-220, 50-410  
LICENSE TRANSFER; July 26, 2006; MEMORANDUM AND ORDER; CLI-06-21, 64 NRC 30 (2006)

NORTH ANNA POWER STATION, Unit 3; Docket No. 52-017  
COMBINED LICENSE; August 15, 2008; MEMORANDUM AND ORDER (Ruling on Petitioner's Standing and Contentions and NCUC's Request to Participate as a Nonparty Interested State); LBP-08-15, 68 NRC 294 (2008)  
COMBINED LICENSE; November 7, 2008; ORDER (Denying the Motion of the Blue Ridge Environmental Defense League to Reconsider the Board's Order of August 15, 2008); LBP-08-23, 68 NRC 679 (2008)  
COMBINED LICENSE; November 25, 2009; MEMORANDUM AND ORDER (Admitting Contention 10 in Part); LBP-09-27, 70 NRC 992 (2009)  
COMBINED LICENSE; September 2, 2010; MEMORANDUM AND ORDER (Rulings on Motion to Dismiss Contention 10 and Proposed New Contention 11); LBP-10-17, 72 NRC 501 (2010)

OYSTER CREEK NUCLEAR GENERATING STATION; Docket No. 50-219  
LICENSE RENEWAL; February 27, 2006; MEMORANDUM AND ORDER (Denying New Jersey's Request for Hearing and Petition To Intervene, and Granting NIRS's Request for Hearing and Petition to Intervene); LBP-06-7, 63 NRC 188 (2006)  
LICENSE RENEWAL; March 22, 2006; MEMORANDUM AND ORDER (Denying NIRS's Motion for Leave to Add Contentions or Supplement the Basis of the Original Contention); LBP-06-11, 63 NRC 391 (2006)  
LICENSE RENEWAL; June 6, 2006; MEMORANDUM AND ORDER (Contention of Omission Is Moot, and Motions Concerning Mandatory Disclosure Are Moot); LBP-06-16, 63 NRC 737 (2006)  
LICENSE RENEWAL; September 6, 2006; MEMORANDUM AND ORDER; CLI-06-24, 64 NRC 111 (2006)  
LICENSE RENEWAL; October 10, 2006; MEMORANDUM AND ORDER (Granting Petition to File a New Contention); LBP-06-22, 64 NRC 229 (2006)  
LICENSE RENEWAL; February 26, 2007; MEMORANDUM AND ORDER; CLI-07-8, 65 NRC 124 (2007)  
LICENSE RENEWAL; December 18, 2007; INITIAL DECISION (Rejecting Citizens' Challenge to AmerGen's Application to Renew Its Operating License for the Oyster Creek Nuclear Generating Station); LBP-07-17, 66 NRC 327 (2007)  
LICENSE RENEWAL; May 28, 2008; ORDER (Requesting Additional Briefs); CLI-08-10, 67 NRC 357 (2008)  
LICENSE RENEWAL; June 17, 2008; MEMORANDUM AND ORDER; CLI-08-13, 67 NRC 396 (2008)  
LICENSE RENEWAL; July 24, 2008; MEMORANDUM AND ORDER (Denying Citizens' Motion to Reopen the Record and to Add a New Contention); LBP-08-12, 68 NRC 5 (2008)  
LICENSE RENEWAL; October 6, 2008; MEMORANDUM AND ORDER; CLI-08-23, 68 NRC 461 (2008)  
LICENSE RENEWAL; November 6, 2008; MEMORANDUM AND ORDER; CLI-08-28, 68 NRC 658 (2008)  
LICENSE RENEWAL; April 1, 2009; MEMORANDUM AND ORDER; CLI-09-7, 69 NRC 235 (2009)

## FACILITY INDEX

PALISADES NUCLEAR PLANT; Docket No. 50-255  
LICENSE RENEWAL; March 7, 2006; MEMORANDUM AND ORDER (Ruling on Standing, Contentions, and Other Pending Matters); LBP-06-10, 63 NRC 314 (2006)  
LICENSE RENEWAL; June 23, 2006; MEMORANDUM AND ORDER; CLI-06-17, 63 NRC 727 (2006)  
LICENSE RENEWAL; February 26, 2007; MEMORANDUM AND ORDER; CLI-07-9, 65 NRC 139 (2007)  
LICENSE TRANSFER; April 26, 2007; MEMORANDUM AND ORDER; CLI-07-18, 65 NRC 399 (2007)  
LICENSE TRANSFER; June 28, 2007; MEMORANDUM AND ORDER; CLI-07-22, 65 NRC 525 (2007)  
PALISADES NUCLEAR PLANT; Docket Nos. 50-255, 72-7  
LICENSE TRANSFER; August 22, 2008; MEMORANDUM AND ORDER; CLI-08-19, 68 NRC 251 (2008)  
REQUEST FOR ACTION; March 20, 2007; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206; DD-07-2, 65 NRC 365 (2007)  
PERRY NUCLEAR POWER PLANT, Unit 1; Docket No. 50-440  
LICENSE TRANSFER; January 31, 2006; MEMORANDUM AND ORDER; CLI-06-2, 63 NRC 9 (2006)  
PILGRIM NUCLEAR POWER STATION; Docket No. 50-293  
LICENSE RENEWAL; October 10, 2006; ORDER; CLI-06-26, 64 NRC 225 (2006)  
LICENSE RENEWAL; October 16, 2006; MEMORANDUM AND ORDER (Ruling on Standing and Contentions of Petitioners Massachusetts Attorney General and Pilgrim Watch); LBP-06-23, 64 NRC 257 (2006)  
LICENSE RENEWAL; January 11, 2007; MEMORANDUM AND ORDER; CLI-07-2, 65 NRC 10 (2007)  
LICENSE RENEWAL; January 22, 2007; MEMORANDUM AND ORDER; CLI-07-3, 65 NRC 13 (2007)  
LICENSE RENEWAL; March 15, 2007; MEMORANDUM AND ORDER; CLI-07-13, 65 NRC 211 (2007)  
LICENSE RENEWAL; October 17, 2007; MEMORANDUM AND ORDER (Ruling on Entergy's Motion for Summary Disposition of Pilgrim Watch Contention 1, Regarding Adequacy of Aging Management Program for Buried Pipes and Tanks and Potential Need for Monitoring Wells to Supplement Program); LBP-07-12, 66 NRC 113 (2007)  
LICENSE RENEWAL; October 30, 2007; MEMORANDUM AND ORDER (Ruling on Motion to Dismiss Petitioners' Contention 3 Regarding Severe Accident Mitigation Alternatives); LBP-07-13, 66 NRC 131 (2007)  
LICENSE RENEWAL; January 15, 2008; MEMORANDUM AND ORDER; CLI-08-2, 67 NRC 31 (2008)  
LICENSE RENEWAL; May 16, 2008; MEMORANDUM AND ORDER; CLI-08-9, 67 NRC 353 (2008)  
LICENSE RENEWAL; October 6, 2008; MEMORANDUM AND ORDER; CLI-08-23, 68 NRC 461 (2008)  
LICENSE RENEWAL; October 30, 2008; INITIAL DECISION; LBP-08-22, 68 NRC 590 (2008)  
LICENSE RENEWAL; June 4, 2009; MEMORANDUM AND ORDER; CLI-09-10, 69 NRC 521 (2009)  
LICENSE RENEWAL; June 4, 2009; MEMORANDUM AND ORDER (Requesting Additional Briefing); CLI-09-11, 69 NRC 529 (2009)  
LICENSE RENEWAL; March 26, 2010; MEMORANDUM AND ORDER; CLI-10-11, 71 NRC 287 (2010)  
LICENSE RENEWAL; June 17, 2010; MEMORANDUM AND ORDER; CLI-10-14, 71 NRC 449 (2010); CLI-10-15, 71 NRC 479 (2010)  
LICENSE RENEWAL; August 27, 2010; MEMORANDUM AND ORDER; CLI-10-22, 72 NRC 202 (2010)  
LICENSE RENEWAL; November 5, 2010; MEMORANDUM AND ORDER; CLI-10-28, 72 NRC 553 (2010)  
LICENSE TRANSFER; August 22, 2008; MEMORANDUM AND ORDER; CLI-08-19, 68 NRC 251 (2008)

## FACILITY INDEX

- POHAKULOA TRAINING AREA, Island of Hawaii, Hawaii; Docket No. 40-9083  
MATERIALS LICENSE; August 12, 2010; MEMORANDUM AND ORDER; CLI-10-20, 72 NRC 185 (2010)
- POINT BEACH NUCLEAR PLANT, Unit 1; Docket No. 50-266  
LICENSE AMENDMENT; October 14, 2008; MEMORANDUM AND ORDER (Denying Request for Hearing); LBP-08-19, 68 NRC 545 (2008)
- PRAIRIE ISLAND NUCLEAR GENERATING PLANT, Units 1 and 2; Docket Nos. 50-282, 50-306  
LICENSE RENEWAL; December 5, 2008; MEMORANDUM AND ORDER (Ruling on Petition to Intervene, Request for Hearing, and Motion to Strike); LBP-08-26, 68 NRC 905 (2008)  
LICENSE RENEWAL; September 30, 2010; MEMORANDUM AND ORDER; CLI-10-27, 72 NRC 481 (2010)  
REQUEST FOR ACTION; July 20, 2010; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206; DD-10-2, 72 NRC 163 (2010)
- R.E. GINNA NUCLEAR POWER PLANT; Docket No. 50-244  
LICENSE TRANSFER; July 26, 2006; MEMORANDUM AND ORDER; CLI-06-21, 64 NRC 30 (2006)  
REQUEST FOR ACTION; January 9, 2006; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206; DD-06-1, 63 NRC 133 (2006)
- SCHOFIELD BARRACKS, Oahu, Hawaii; Docket No. 40-9083  
MATERIALS LICENSE; February 24, 2010; MEMORANDUM AND ORDER (Denying Requests for Hearing); LBP-10-4, 71 NRC 216 (2010)  
MATERIALS LICENSE; August 12, 2010; MEMORANDUM AND ORDER; CLI-10-20, 72 NRC 185 (2010)
- SEABROOK STATION, Unit 1; Docket No. 50-443  
LICENSE TRANSFER; July 26, 2006; MEMORANDUM AND ORDER; CLI-06-21, 64 NRC 30 (2006)  
OPERATING LICENSE AMENDMENT; October 14, 2008; MEMORANDUM AND ORDER (Denying Request for Hearing); LBP-08-20, 68 NRC 549 (2008)
- SHEARON HARRIS NUCLEAR POWER PLANT, Unit 1; Docket No. 50-400  
LICENSE RENEWAL; August 3, 2007; MEMORANDUM AND ORDER (Ruling on Standing and Contentions of Petitioners North Carolina Waste Awareness and Reduction Network and Nuclear Information and Resource Service); LBP-07-11, 66 NRC 41 (2007)  
REQUEST FOR ACTION; January 9, 2006; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206; DD-06-1, 63 NRC 133 (2006)  
REQUEST FOR ACTION; June 13, 2007; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206; DD-07-3, 65 NRC 643 (2007)
- SHEARON HARRIS NUCLEAR POWER PLANT, Units 2 and 3; Docket Nos. 52-022, 52-023  
COMBINED LICENSE; July 23, 2008; MEMORANDUM AND ORDER; CLI-08-15, 68 NRC 1 (2008)  
COMBINED LICENSE; October 30, 2008; MEMORANDUM AND ORDER (Ruling on Standing and Contention Admissibility); LBP-08-21, 68 NRC 554 (2008)  
COMBINED LICENSE; May 18, 2009; MEMORANDUM AND ORDER; CLI-09-8, 69 NRC 317 (2009)  
COMBINED LICENSE; June 30, 2009; MEMORANDUM AND ORDER (Ruling on Admissibility of Contention TC-1 in Response to the Commission's Remand in CLI-09-8)  
COMBINED LICENSE; March 11, 2010; MEMORANDUM AND ORDER; CLI-10-9, 71 NRC 245 (2010)
- SOUTH TEXAS PROJECT, Units 1 and 2; Docket Nos. 50-498, 50-499  
REQUEST FOR ACTION; February 24, 2007; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206; DD-07-1, 65 NRC 195 (2007)
- SOUTH TEXAS PROJECT, Units 3 and 4; Docket Nos. 52-012, 52-013  
COMBINED LICENSE; April 20, 2009; MEMORANDUM AND ORDER (Affirming Denial of Access to SUNSI); LBP-09-5, 69 NRC 303 (2009)  
COMBINED LICENSE; August 27, 2009; MEMORANDUM AND ORDER (Ruling on Standing and Admissibility of Certain Contentions); LBP-09-21, 70 NRC 581 (2009)  
COMBINED LICENSE; September 23, 2009; MEMORANDUM AND ORDER; CLI-09-18, 70 NRC 859 (2009)  
COMBINED LICENSE; September 29, 2009; MEMORANDUM AND ORDER (Ruling on Admissibility of Contentions 8-16); LBP-09-25, 70 NRC 867 (2009)

## FACILITY INDEX

COMBINED LICENSE; January 29, 2010; ORDER (Rulings on the Admissibility of New Contentions and on Intervenor's Challenge to Staff Denial of Documentary Access); LBP-10-2, 71 NRC 190 (2010)

COMBINED LICENSE; June 17, 2010; MEMORANDUM AND ORDER; CLI-10-16, 71 NRC 486 (2010)

COMBINED LICENSE; July 2, 2010; MEMORANDUM AND ORDER (Rulings on Motions to Dismiss Contentions 8, 9, 14, 16, 21; Amended Contentions 8 and 21; New Colocation Contentions; and New Main Cooling Reservoir Contentions); LBP-10-14, 72 NRC 101 (2010)

COMBINED LICENSE; September 29, 2010; MEMORANDUM AND ORDER; CLI-10-24, 72 NRC 451 (2010)

SPECIAL NUCLEAR FACILITY; Docket No. 70-143

ENFORCEMENT; December 13, 2007; MEMORANDUM AND ORDER (Denying Requests for Hearing); LBP-07-16, 66 NRC 277 (2007)

ST. LUCIE NUCLEAR POWER PLANT, Units 1 and 2; Docket Nos. 50-335, 50-389

ENFORCEMENT; August 15, 2008; MEMORANDUM AND ORDER (Denying Request for Hearing); LBP-08-14, 68 NRC 279 (2008)

LICENSE TRANSFER; July 26, 2006; MEMORANDUM AND ORDER; CLI-06-21, 64 NRC 30 (2006)

SUSQUEHANNA STEAM ELECTRIC STATION, Units 1 and 2; Docket Nos. 50-387, 50-388

OPERATING LICENSE RENEWAL; March 22, 2007; MEMORANDUM AND ORDER (Ruling on Standing and Contentions of Petitioner Eric Joseph Epstein); LBP-07-4, 65 NRC 281 (2007)

OPERATING LICENSE RENEWAL; July 27, 2007; MEMORANDUM AND ORDER (Ruling on Standing and Contentions); LBP-07-10, 66 NRC 1 (2007)

OPERATING LICENSE RENEWAL; October 5, 2007; MEMORANDUM AND ORDER; CLI-07-25, 66 NRC 101 (2007)

TURKEY POINT NUCLEAR GENERATING PLANT, Units 3 and 4; Docket Nos. 50-250, 50-251

LICENSE TRANSFER; July 26, 2006; MEMORANDUM AND ORDER; CLI-06-21, 64 NRC 30 (2006)

OPERATING LICENSE AMENDMENT; October 14, 2008; MEMORANDUM AND ORDER (Denying Request for Hearing); LBP-08-18, 68 NRC 533 (2008)

REQUEST FOR ACTION; July 9, 2010; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206; DD-10-1, 72 NRC 149 (2010)

VERMONT YANKEE NUCLEAR POWER STATION; Docket No. 50-271

LICENSE RENEWAL; September 22, 2006; MEMORANDUM AND ORDER (Ruling on Standing, Contentions, Hearing Procedures, State Statutory Claim, and Contention Adoption); LBP-06-20, 64 NRC 131 (2006)

LICENSE RENEWAL; October 10, 2006; ORDER; CLI-06-26, 64 NRC 225 (2006)

LICENSE RENEWAL; January 11, 2007; MEMORANDUM AND ORDER; CLI-07-1, 65 NRC 1 (2007)

LICENSE RENEWAL; January 22, 2007; MEMORANDUM AND ORDER; CLI-07-3, 65 NRC 13 (2007)

LICENSE RENEWAL; March 15, 2007; MEMORANDUM AND ORDER; CLI-07-13, 65 NRC 211 (2007)

LICENSE RENEWAL; April 11, 2007; MEMORANDUM AND ORDER; CLI-07-16, 65 NRC 371 (2007)

LICENSE RENEWAL; November 7, 2007; MEMORANDUM AND ORDER (Ruling on NEC Motions to File and Admit New Contention); LBP-07-15, 66 NRC 261 (2007)

LICENSE RENEWAL; October 6, 2008; MEMORANDUM AND ORDER; CLI-08-23, 68 NRC 461 (2008)

LICENSE RENEWAL; November 24, 2008; PARTIAL INITIAL DECISION (Ruling on Contentions 2A, 2B, 3, and 4); LBP-08-25, 68 NRC 763 (2008)

LICENSE RENEWAL; June 4, 2009; MEMORANDUM AND ORDER; CLI-09-10, 69 NRC 521 (2009)

LICENSE RENEWAL; July 8, 2009; FULL INITIAL DECISION (Denying NEC's Motion to File a New Contention); LBP-09-9, 70 NRC 41 (2009)

LICENSE RENEWAL; July 8, 2010; MEMORANDUM AND ORDER; CLI-10-17, 72 NRC 1 (2010)

LICENSE RENEWAL; October 28, 2010; MEMORANDUM AND ORDER (Ruling on Motion to Reopen Proffering New Contention); LBP-10-19, 72 NRC 529 (2010)

## FACILITY INDEX

LICENSE TRANSFER; August 22, 2008; MEMORANDUM AND ORDER; CLI-08-19, 68 NRC 251 (2008)

OPERATING LICENSE AMENDMENT; January 17, 2006; MEMORANDUM AND ORDER (Ruling on Deliberative Process Privilege Claims); LBP-06-3, 63 NRC 85 (2006)

OPERATING LICENSE AMENDMENT; January 31, 2006; MEMORANDUM AND ORDER (Denying Motion for Summary Disposition of New England Coalition Contention 3); LBP-06-5, 63 NRC 116 (2006)

OPERATING LICENSE AMENDMENT; March 3, 2006; MEMORANDUM AND ORDER; CLI-06-8, 63 NRC 235 (2006)

OPERATING LICENSE AMENDMENT; May 25, 2006; MEMORANDUM AND ORDER (Ruling on Admissibility of Three Additional Contentions); LBP-06-14, 63 NRC 568 (2006)

OPERATING LICENSE AMENDMENT; June 23, 2006; MEMORANDUM AND ORDER (Approving Settlement Agreement, Granting Dismissal of Contentions, and Accepting Withdrawal of Vermont Department of Public Service); LBP-06-18, 63 NRC 830 (2006)

OPERATING LICENSE AMENDMENT; February 26, 2007; INITIAL DECISION (Ruling on NEC Contention 3); LBP-07-2, 65 NRC 153 (2007)

REQUEST FOR ACTION; January 9, 2006; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206; DD-06-1, 63 NRC 133 (2006)

REQUEST FOR ACTION; March 4, 2006; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206; DD-06-2, 63 NRC 425 (2006)

REQUEST FOR ACTION; April 28, 2008; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206; DD-08-1, 67 NRC 347 (2008)

VIRGIL C. SUMMER NUCLEAR STATION, Units 2 and 3; Docket Nos. 52-027-COL, 52-028-COL  
COMBINED LICENSE; February 18, 2009; ORDER (Ruling on Standing and Contention Admissibility); LBP-09-2, 69 NRC 87 (2009)

COMBINED LICENSE; January 7, 2010; MEMORANDUM AND ORDER; CLI-10-1, 71 NRC 1 (2010)

COMBINED LICENSE; March 17, 2010; MEMORANDUM AND ORDER ON REMAND (Denying on Remand the Sierra Club and Friends of the Earth's Petition to Intervene)

COMBINED LICENSE; August 27, 2010; MEMORANDUM AND ORDER; CLI-10-21, 72 NRC 197 (2010)

VOGTLE ELECTRIC GENERATING PLANT, Units 3 and 4; Docket Nos. 52-025, 52-026

COMBINED LICENSE; March 5, 2009; MEMORANDUM AND ORDER (Ruling on Standing and Contention Admissibility); LBP-09-3, 69 NRC 139 (2009)

COMBINED LICENSE; June 25, 2009; MEMORANDUM AND ORDER; CLI-09-13, 69 NRC 575 (2009)

COMBINED LICENSE; July 31, 2009; MEMORANDUM AND ORDER; CLI-09-16, 70 NRC 33 (2009)

COMBINED LICENSE; January 8, 2010; MEMORANDUM AND ORDER (Ruling on Petition to Intervene); LBP-10-1, 71 NRC 165 (2010)

COMBINED LICENSE; May 19, 2010; MEMORANDUM AND ORDER (Ruling on Dispositive Motion Regarding Contention SAFETY-1); LBP-10-8, 71 NRC 433 (2010)

COMBINED LICENSE; November 30, 2010; MEMORANDUM AND ORDER (Ruling on Request to Admit New Contention); LBP-10-21, 72 NRC 616 (2010)

WALTZ MILL FACILITY; Docket No. 70-00698

MATERIALS LICENSE; March 29, 2007; MEMORANDUM AND ORDER; CLI-07-15, 65 NRC 221 (2007)

WATERFORD STEAM ELECTRIC STATION, Unit 3; Docket No. 50-382

REQUEST FOR ACTION; January 9, 2006; DIRECTOR'S DECISION UNDER 10 C.F.R. § 2.206; DD-06-1, 63 NRC 133 (2006)

WATTS BAR NUCLEAR PLANT, Unit 2; Docket No. 50-391

OPERATING LICENSE; November 19, 2009; MEMORANDUM AND ORDER (Granting Petition to Intervene); LBP-09-26, 70 NRC 939 (2009)

OPERATING LICENSE; March 26, 2010; MEMORANDUM AND ORDER; CLI-10-12, 71 NRC 319 (2010)
