

April 18, 2014

Mr. Jay Baker  
P.O. Box 265  
Blackwell, OK 74631

Dear Mr. Baker,

I am responding to your letter dated February 4, 2014. The U.S. Nuclear Regulatory Commission (NRC) licenses and regulates the Nation's civilian use of radioactive materials to protect public health and safety, promote the common defense and security, and protect the environment. Specifically, the NRC regulates commercial nuclear power plants; research, test, and training reactors; nuclear fuel cycle facilities; and the use of radioactive materials in medical, academic, and industrial settings. The NRC also regulates the transport, storage, and disposal of radioactive materials and waste, and licenses the export and import of radioactive materials. The NRC regulates industries within the United States and works with agencies around the world to enhance global nuclear safety and security. In achieving our mission, the NRC adheres to the principles of good regulation such as independence, openness, efficiency, clarity, and reliability. These principles focus us on ensuring safety and security while appropriately balancing the interests of the NRC's stakeholders, including the public and licensees.

The NRC and Agreement States license hospitals and physicians to use radioactive materials in medical treatments. The NRC also issues licenses to academic institutions for education and research. The NRC and Agreement States review the facilities, personnel, program controls, and equipment involved in using radioactive materials in medical and academic settings. These reviews ensure the safety of the public, patients, and workers who might be exposed to radiation from those materials.

If you have a specific concern involving NRC licensed activities, you may send an email stating your concern to [allegation@nrc.gov](mailto:allegation@nrc.gov) or you may contact NRC's Toll-Free Safety Hotline at 1-800-695-7403.

Sincerely,

**/RA/**
