General Comment

The future of the American way of life depends on an immediate, Manhattan-Project level development and deployment of Thorium MSR technology. All other programs and projects should be halted immediately and all attention focused on the Liquid Fluoride Thorium Reactor (LFTR). Perfect it, commercialize it, mass produce it and get it online everywhere. The Chinese are working on it already, and if we don't beat them to the punch here, our economy will collapse. Please, do something right for a change!
