Prof. Asencio,

This letter is to report the wipe test results taken from one or more of your gamma-emitting radioactive sealed sources taken on March 20, 2014. The sample analysis was performed on April 18, 2014 in a high efficiency sodium iodide well counter. Results were evaluated by comparison with standard sources whose activity is directly traceable to NIST standards. The sample indicated removable activity of less than 0.005 microCurie. All tests were performed under authorization of State of Wisconsin Agreement License #025-1356-01 issued to Wisconsin Radiological Laboratories (WRL). Tabular summaries of the test results are attached for your permanent records.

If you have any questions or require further assistance, please do not hesitate to call upon me at (608) 877-0636.

Sincerely,

Lawrence J. McDonnell, Director,

Comments: Results are reported as Net CPM (net counts per minute), Activity in disintegrations per minute (DPM) and in units of microcuries (uCi). The reported error is the two sigma statistical counting uncertainty, and the MDA is the minimum detectable amount of radioactivity that can be detected by the counting instrument and is reported in units of microcuries (uCi). All results below the MDA are reported as less than the MDA.
