

TABLE OF CONTENTS

Chapter

1.0 INTRODUCTION

1.1 Conduct of Operations

2.0 CLASS EXERCISES (under development)

2.1 Case Study #1

2.2 Case Study #2

3.0 TECHNICAL SPECIFICATIONS

3.1 Technical Specifications

4.0 TECHNICAL ISSUES

4.1 Buried Piping and Tritium Problems

4.2 Anticipated Transient Without Scram (ATWS)

4.3 Power Oscillation and OPRM

4.4 ECCS Piping Voiding Issues

4.5 Station Blackout (SBO)

4.6 Air System Problems

4.7 Distributed Control Systems

4.8 Service Water System Problems

4.9 Stress Corrosion Cracking

4.10 Shutdown Plant Problems

4.11 Power Uprates

4.12 Emergency Action Levels

4.13 Operability Determinations

4.14 Reportability

4.15 Independent Spent Fuel Storage Installations (ISFSI)

4.16 Reactor License Renewal

5.0 TRANSIENTS

5.1 Transient Analysis Introduction

TABLE OF CONTENTS (cont.)

6.0 BWR DIFFERENCES

- 6.1 Emergency Core Cooling Systems and RCIC
- 6.2 Primary Containment

7.0 PLANT EVENTS

- 7.1 Fukushima Daiichi Accident
- 7.2 Natural Phenomena Events
