RE: Lisence application for Tapio Paper Variabilty Analyzer, State of Georgia

Hello !

We have got almost all done by now. I will fax and mail you our response to your questions next week when I get back from a business trip. Right now I have one question concerning the quality assurance.

We discussed once about those radiation measurements (300 g/m² and 7 g/m²). Our question is that since the proto type has been measured by above transducers is it OK for quality assurance to use 100 g/m² transducer, which have here. Or should we get the finnish radiation office to make the measurements using the 300 and 7 g/m² transducers.

If possible could you pls fax your comments, so that our people can work with this this week while I will be travelling (again).

BR Jukka
