Subject: ROBINSON 2 LAR - Modify TS 3.3.1, RPS Instrumentation Turbine Trip Function with Low Fluid Oil Pressure (TAC No. MF3463)

The NRC staff cannot find the calculation for the new setpoint, "Turbine Trip function on Low EH Fluid Oil Pressure," and the staff needs this calculation for the acceptance of your application. Please confirm whether you have included the setpoint calculation in your LAR and if not, please submit the new setpoint calculation with a supplemental letter.
