Subject: NRC Acceptance Review of Oconee License Amendment Request for the Adoption of TSTF-479 and TSTF-497 (TAC Nos. MF3000-MF3002)

April 21, 2014

Sandra,

By letter dated March 14, 2014, Duke Energy Carolinas, LLC (Duke Energy) submitted a license amendment request (LAR) to revise the Technical Specifications (TSs) for Oconee Nuclear Station, Units 1, 2, and 3. The LAR would revise the TS Administrative Controls Inservice Testing Program (TS 5.5.9) and associated references in the TS Bases to reflect the current edition of the American Society of Mechanical Engineers (ASME) Code that is referenced in 10 CFR 50.55a(b).

The purpose of this e-mail is to provide the results of the U.S. Nuclear Regulatory Commission (NRC) staff's acceptance review. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review is also intended to identify whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

Consistent with 10 CFR 50.90, an amendment to the license (including the technical specifications) must fully describe the changes requested, and following as far as applicable, the form prescribed for original applications. Section 50.34 of 10 CFR addresses the content of technical information required. This section stipulates that the submittal address the design and operating characteristics, unusual or novel design features, and principal safety considerations.

The NRC staff has reviewed the application and concludes that it does provide technical information in sufficient detail to enable the NRC staff to complete its detailed technical review and make an independent assessment regarding the acceptability of the proposed amendment in terms of regulatory requirements and the protection of public health and safety and the environment. Given the lesser scope and depth of the acceptance review as compared to the detailed technical review, there may be instances in which issues that impact the NRC staff's ability to complete the detailed technical review are identified despite completion of an adequate acceptance review.

You will be advised of any further information needed to support the NRC staff's detailed technical review by separate correspondence. This message will be added to ADAMS as an official agency record. If you have any questions, please contact me.
