Tim is on leave, Brycen is acting. Attached is his response to my telephone call earlier. This doesn't match the OC from a previous RAI response, so that will have to be resolved at some point. Anyway, please advise if you need anything else.

Thanks

**Subject:** Aluminum-clad fuel

Hi Geoff,

The GSTR possesses 55 aluminum-clad TRIGA fuel elements. All 55 of these elements are in-core. Let me know if you have any further questions.

Thanks,  
Brycen
