Luke McMahan - Project Geologist  
Wyoming Department of Environmental Quality  
Land Quality Division  
2100 West 5<sup>th</sup> Street  
Sheridan, WY 82801

RE: Willow Creek ISR Project – Permit to Mine No. 478,  
2013 Annual Report – Response to WDEQ-LQD Comments.

Dear Mr. McMahan:

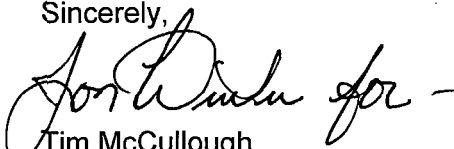

Uranium One has reviewed the comments on the Willow Creek Annual Report provided by the WDEQ-LQD under cover of your letter dated November 18, 2014. Responses to these comments can be found in Attachment A of this cover letter. A page replacement package and "change guide" are also enclosed. All changes made to the Annual Report text, in response to the comments, have been underlined.

It should also be noted that WDEQ comment two (2), requesting a "Well Summary Table," is specific to the WDEQ In Situ Annual Report Format (ISARF) requirements. Thus, the electronic material supplied (Microsoft Excel spreadsheet) in response to comment 2 has not been included in the copy response package sent to the NRC.

Uranium One would like to apologize for the time delay in responding to these comments and hopes that the attached responses and information are adequate enough for you to quickly close out your Annual Report review.

Please contact me should you have any questions regarding this report.

Sincerely,

Tim McCullough  
Manager Site SHE

## ATTACHMENT A

### WDEQ Comments

1. Submittal of Electronic Data: Electronic surface water flow data and surface water station details are not provided. Please provide this information on disc.

#### Uranium One Response

Uranium One (U1) does not have permanent flow measuring equipment at the Willow Creek (W.C.) surface water sampling sites that record the data requested in the WDEQ-LQD spreadsheets:

"Uranium\_Surface\_Water\_Flow\_Data" and "Uranium\_Surface\_Water\_Station\_Details."

Six of the seven surface water sampling locations at the W.C. project consist of ephemeral drainages that are often dry and cannot be sampled; or, if water is present there is little to no flow. Due to the ephemeral nature of the surface water sampling sites U1 environmental personnel estimate the flow, as shown in Table 3 of Appendix 1. In light of these circumstances concerning the surface water sampling sites, U1 requests that the WDEQ-LQD wave this requirement of the Permit 478 ISARF.

2. Submittal of Electronic Data: The Annual Report provides well completion details via links embedded in each well symbol on the ArcGIS electronic maps. This format is very useful and LQD appreciates Uranium One's submittal of such detailed information. However, this format does not provide a summary table listing the wells and associated data which I believe is the intent of the data request in the ISARF document. Please provide a summary table of the available data for those wells indicated on the "All Wells" map. An example of such a table can be found at:  
[http://deg.state.wy.us/lqd/Uranium\\_Data.htm](http://deg.state.wy.us/lqd/Uranium_Data.htm).

#### Uranium One Response

An electronic summary table representing the available data for the wells indicated on the "All Wells" map has been included with this response package. However, it should be noted that the total number of wells in the summary table is not congruent with the total number of wells on Worksheet 5 "Well Plugging and Abandonment" of the 2013-2014 surety estimate. The summary table shows a total of 4,165 wells including monitor, production and injection wells for Mine Units (MUs) 2-8 and MU10 while the surety shows a total of 4,192 wells. Given the 20 plus year history of the Christensen Ranch ISR project, multiple owners over that time, and that the well data for MUs 2-6 has been taken from a number of different sources; U1, believes that this is a notably accurate number of wells in comparison between the summary table and the surety.

3. Page 7, Item #6, Wellfield Disturbance: This section indicates that during the reporting period the total area disturbance associated with wellfield installation is approximately 58.4 acres. The areas of disturbance discussed in the rest of this section suggest that this number is a typo and should be increased to 114.7 acres. Please respond and/or revise the text to indicate the appropriate area of disturbance.

#### Uranium One Response

The approximate area of wellfield disturbance has been corrected to 114.7 acres.

## ATTACHMENT A

4. Page 7, Section G, New Wells/Wellfields Installed During the Reporting Period: This section states that 15 monitor wells were installed in MU10B. Only 11 monitoring wells (perimeter wells) are indicated on the "Installed Wells Map" for MU10B. Are some of these monitor wells located within the interior of the MU? Additionally, the "Installed Wells Map" shows three (3) wells (two deep monitor and one baseline) located in MU8. These wells are not discussed in the Annual Report text under this section. Please reference the installation of these wells under this section.

### Uranium One Response

This section has been revised to state that 11 perimeter monitor wells and three (3) interior shallow monitor wells were installed in MU10B. The wells installed in MU8 during the reporting period have also been addressed. Additionally, the associated maps and electronic files have been updated accordingly.

5. Map "Environmental Monitoring Station Locations": Regional Ranch Well "Christensen Del Gulch Lower #13" is not indicated on this map. Please update the map with this environmental monitoring location.

### Uranium One Response

The "Environmental Monitoring Station Locations Map" has been updated to show the location of Regional Ranch Well "Christensen Del Gulch Lower #13."

6. Page 11, Section K, Projected Operations: Please add information to this section regarding the plans to temporarily surface cap 200 pilot holes associated with Mine Unit 10B, Modules 10-7 and 10-8. Additionally, indicate that this activity was approved by LQD (7/3/13 letter), that U1 plans to re-enter the holes on or before January 1, 2015, and that the status of these holes will be further addressed in the next Annual Report.

### Uranium One Response

Information regarding the temporary surface capping of approximately 200 pilot holes in MU10B, Modules 10-7 and 10-8, and future plans regarding them has been added to Section K, Projected Operations, as requested.

## **Reclamation Performance Bond Estimate Review**

7. Appendix 6, Page 3, Table I, Section II, Decommissioning and Surface Reclamation: An inflation adjustment ("1% Adjustment for inflation (A-G)") was not applied to this Section as was in the previous Annual Report (2012-2013). Please provide an explanation why it is not applicable for the 2013-2014 surety estimate. If this adjustment is found to be omitted in error, please apply the adjustment to the surety estimate accordingly.

### Uranium One Response

The "1% Adjustment for Inflation" was not applied to surety Sections A-G as in the 2012-2013 Annual Report because the 2013-2014 surety estimate had a number of costs updated using current operating costs where applicable and the most recent version of WDEQ-LQD Guideline

## ATTACHMENT A

(G.L) 12 available at the time. Whereas, the G.L. 12 costs in the 2012-2013 estimate were not updated from the 2011-2012 surety estimate; hence, an inflation adjustment was applied to account for escalating costs that were not updated. Uranium One chose not to adjust costs to reflect current operating conditions and G.L. 12 and apply an inflation factor as well.

8. Appendix 6, Cost Summary Sheet, Page 1 of 21, Transportation and Disposal:  
"On-site Disposal" is listed as \$0.26 per cubic foot (\$6.97 per cubic yard) and referenced from the October 2012 WDEQ Guideline 12, Appendix K. The referenced Guideline lists Concrete disposal on-site as \$8.25/cubic yard (\$0.31/cubic foot). It appears that this should be adjusted through-out the surety estimate to reflect this cost referenced from the October 2012 Guideline. Please revise accordingly.

### Uranium One Response

The cost for "On-site Disposal" has been updated to reflect the October 2012 WDEQ-LQD G.L. 12 cost of \$8.25/ cubic yard (\$0.31/cubic foot).

9. Appendix 6, Worksheet #4, Page 11 of 21, Pond Reclamation Cost, Leak Detection System Removal: Based on review of Section 4.2.1.1 and Figure 4.3 of the Permit, the construction design indicates that leak detection media (sand) is placed on the bottom of the pond, over the leak detection gravel and piping, and is a part of the leak detection system. As indicated in the Annual Report under Section V, Reclamation Performance Surety Estimate, Page 18; the amount for Leak Detection System Removal was revised to specifically address the leak detection system. Does the estimated cost for Leak Detection System Removal include the leak detection media (sand)? Or, does this cost just include the gravel and piping? It appears that the sand would be part of the leak detection system. Please Respond.

### Uranium One Response

The estimated cost of the Leak Detection System Removal for C.R. Ponds 1 & 2 has been revised to account for a portion of the sand media.

10. Appendix 6, Worksheet #5, Page 13 of 21, Well P&A, Equipment Rental: Well Plugging and Abandonment Costs include equipment rental "Backhoe w/ Operator" for all other mine units, however this cost is not included for MU10 & MU11. Please provide a response regarding why this cost is not applicable to well plugging and abandonment for these mine units. If it is applicable, please revise the surety estimate to include this cost.

### Uranium One Response

Worksheet Five (5) "Well P&A" has been revised to include the equipment rental cost for "Backhoe w/ Operator" for MU10 and 11.

11. Per the ISARF document (Section V, Reclamation Performance Bond Estimate, Item C): "The bond estimate must be accompanied by a projected time schedule (Gantt Chart) showing the completion schedule for each major reclamation operation/task". A projected time schedule of this nature is not included with the Annual Report. Although

## ATTACHMENT A

very little is planned for the 2013-2014 reporting period, please provide a projected time schedule for any significant reclamation work such as surface reclamation activities at the Irigaray Site.

### Uranium One Response

A projected time schedule or "Life of Mine" has been provided with this submittal as requested and required by WDEQ-LQD ISARF guidance.

# Uranium One

## **A. Operating Wellfields**

### **1. Wells in Operation**

The location of wells in operating Christensen Ranch wellfields is available in electronic format in Appendix 2 as "W.C. Operating Wellfields 2012-2013.pdf." In addition to this map an ArcGIS Map Package titled "W.C. Operating Wellfields.mpk" is also included. This Map Package contains a table with locations and completion details for all wells currently in operation at Christensen Ranch.

### **2. Well Completion Details**

The location of all wells installed in conjunction with Willow Creek (Irigaray and Christensen Ranch Projects) mining activities is available in electronic format in Appendix 2 as "W.C. All Wells 2012-2013.pdf." In addition to this map an ArcGIS Map Package titled "W.C. All Wells 2012-2013.mpk" is also included. This Map Package includes the location details for all of the wells installed in conjunction with mining operations; however, the completion details are not available for all of the wells that are not currently in operation. Uranium One has been in the process of transitioning to an ArcSDE data platform during the current 2012-2013 reporting period. Consequently, the completion information for wells in restored mine units has not yet been integrated into the database with the primary focus being on wells currently in operation.

Additionally, Uranium One would like to note that due to the lengthy history of the Willow Creek Project, and the exuberant amount of data from numerous different sources, this is an enormous task. However, the database will continue to be updated as much as possible during the 2013-2014 reporting period and submitted with the next annual report. A well completion table for MUs 2-6 and MUs 10 A & B has also been included in Appendix 2.

## **B. Water Balance/Hydrology**

### **1. Injection and Production Flow Rates**

Willow Creek's injection and production flow rates are continuously recorded from instrumentation at the Wellfield Module Buildings and electronically stored on the wellfield computer system (PLC). Table 1 located in Appendix 1 contains the monthly production, injection and bleed flow volumes for each wellfield area obtained during the reporting period. A review of Table 1 shows that the overall bleed rate for the Willow Creek Project was maintained at 1.2% of the production flow rate.

### **2. Potentiometric Surface Maps**

Potentiometric maps of the monitored aquifers shallow zone, production zone and deep zone for the Willow Creek Project are included in Appendix 3. The maps were constructed using water level data from monitor wells and trend wells where applicable. This data was collected during June 2013.

### **3. Handling of Wastewater Stream**

To control lixiviant migration in the wellfield at the Willow Creek Project, a bleed is taken from the process stream after the fluid exits the IX columns. The fluid then is treated in

## **Irigaray Site**

During the reporting period there were no construction activities that occurred at the Irigaray site. A Irigaray Project Area Facilities Map has been provided in Appendix 4.

### **4. New Pond Construction**

No new ponds were constructed at the Willow Creek Project during the reporting period.

### **5. New Roads and Utilities**

During the reporting period the estimated disturbance associated with wellfield access roads attributed to a total of 2.64 acres with 2.4 acres of this total occurring in Mine Unit 8 and 0.24 acres occurring in Mine Unit 10B.

Trunklines were installed at the Willow Creek Project with the construction activities associated with the wellfields in Mine Unit 8, Mine Unit 10A and Mine Unit 10B. The total estimated disturbance associated with the trunkline installation is 7.7 acres. Of this total acreage the trunkline disturbance for Mine Unit 8 was approximately 1.7 acres, the trunkline disturbance for Mine Unit 10A was approximately 1.5 acres and the trunkline disturbance for Mine Unit 10B was approximately 2.3 acres.

Powerlines were installed at the Willow Creek Project with the construction activities associated with the wellfields in Mine Unit 8, Mine Unit 10A and Mine Unit 10B. It is estimated that the total disturbance associated with the powerline install is 7.5 acres. Due to the nature of minimal disturbance associated with installing powerlines this estimated disturbance will not be included with the overall disturbance during this reporting period.

All referenced locations that have been constructed during the reporting period are shown on the Christensen Project Area Facilities Map located in Appendix 4.

### **6. Wellfield Disturbance**

During the reporting period the surface disturbance associated with wellfield installation is approximately 114.7 acres. Of this total, it is estimated that 56.3 acres were disturbed in Mine Unit 8, 18.2 acres were disturbed in Mine Unit 10A and 40.2 acres were disturbed in Mine Unit 10B.

### **G. New Wells/Wellfields Installed During the Reporting Period**

During this reporting period the Willow Creek Project installed 10 monitor wells, 122 injection wells and 60 production wells in Mine Unit 10A. All of Mine Unit 10A is currently in operation. Additionally, 14 monitor wells (11 perimeter and 3 interior shallow), 240 Injection wells and 135 production wells were installed in Mine Unit 10B. As of June 30, 2013 only one wellfield module is in operation in the Mine Unit 10B field. Also three wells in MU8 that failed MIT were plugged and re-drilled.

All referenced wells that have been installed during the reporting period are shown on the

## **K. Projected Operations**

Mining is scheduled to continue at Willow Creek Project with Mine Unit 5-2, Mine Unit 7, Mine Unit 8, Mine Unit 10A and Mine Unit 10B.

During the next reporting period, it is not anticipated that any new wellfield packages will be submitted for approval as any additional development activities have been suspended for the reporting period Aug 19, 2013 to Aug 18, 2014. Incidentally, U1 has already drilled approximately 200 pilot holes in MU10-B Modules 10-7 and 10-8 that still needed to be cased and completed. With the "sudden" cessation of development activities, this was put on hold and by letter dated June 24, 2013 U1 requested WDEQ-LQD permission to temporarily surface cap these pilot holes with plans to re-enter them on or before January 1, 2015. This request was approved by WDEQ-LQD by letter dated July 3, 2013. Uranium One plans to complete this temporary surface capping during July and August of 2013. The status of these pilot holes will be discussed in the 2013-2014 Annual Report.

## **III. Reclamation / Restoration Activities**

### **A. Groundwater Restoration Activities**

All groundwater restoration activities, including stabilization monitoring, ended at Christensen Ranch on May 30, 2005. The results of all wellfield restoration were compiled and submitted to the WDEQ-LQD and NRC on April 8, 2008 in the *Wellfield Restoration Report Christensen Ranch Project* (March 5, 2008). Uranium One (U1) received comments in the NRC Restoration Technical Evaluation Report (TER), dated October 23, 2012 concerning the CR Wellfield Restoration Report. The WDEQ-LQD District III staff had provided comments related to their review of the NRC TER in a letter dated January 7, 2013. The WDEQ-LQD staff had stated that the NRC TER was quite sufficient and the TER had affirmed the WDEQ review of the 2008 Report. In the January letter WDEQ had requested that Uranium One address the NRCs outlined issues accordingly and logically. By letters dated July 8, 2013 and July 9, 2013 Uranium One provided an update of activities and plans to address comments in the NRC TER to the NRC and WDEQ-LQD, respectively.

Currently Uranium One, with consultation and assistance from Petrotek, has conducted additional data collection efforts during the month of July and throughout September. These new data, in conjunction with the recent data collected by Uranium One, will be used to compare current production zone water quality concentrations with the stabilization water quality concentrations presented in the 2008 Restoration Report and ultimately respond to the comments and requests in the NRC Restoration TER in a timely manner.

### **B. Well Plugging and Abandonment Reports**

During the reporting period, a total of 65 wells were properly plugged and abandoned in accordance to WDEQ guidelines. This information has been submitted in the Quarterly WDEQ Reports and will not be duplicated in this report. This referenced data from July 1, 2012 through June 30, 2013 has been summarized and submitted to the WDEQ in the Quarterly Reports and an electronic copy of this data has been included in Appendix 2. All

of the referenced abandoned wells are shown on the Abandoned Wells map located in Appendix 4. Additionally, this map can be found in electronic format in Appendix 2 as "W.C. Abandoned Wells 2012-2013.pdf" and the associated details are included in an ArcGIS Map Package titled "W.C. Abandoned Wells 2012-2013.mpk."

based on the Consumer Price Index (CPI) for all urban consumers from September 2006 to June 2013.

It should be noted that currently in Mine Unit 10 (MU10) U1 has only completed wellfield modules 10-1 (Mod 10-1) through 10-6 and as previously mentioned no further development is planned during the next reporting period. However, U1 has chosen to retain the reclamation costs associated with the development of MU10 Modules 10-7 & 10-8 and for the installation of the monitoring well network and baseline restoration wells in MU11. This was done so that in the event uranium market prices become favorable during the 2013-2014 reporting period, the surety estimate will not require updating to resume development activities. A projected time schedule or "Life of Mine" for the W.C. project has been provided at the end of Appendix 6.

### **Cost Summary Sheet**

- All costs taken from WDEQ-LQD Guideline 12 have been updated based on the October 2012 revision.
- Operational costs have been updated as needed.

### **Worksheet 1: Groundwater Restoration**

- The wellfield area and number of wells for MU10 and MU11 has been adjusted to reflect actual conditions and development plans.
- The required WDEQ-WQD 3% annual adjustment for the plugging and abandonment of deep disposal wells CR DW-1 and CR 18-3 has been adjusted.
- Credit for completion of groundwater sweep for Christensen Ranch Mine Units 2-6 has been granted by the WDEQ but has not been authorized by NRC; therefore, separate WDEQ estimates and NRC estimates are provided.

### **Worksheet 2: Plant Equipment Removal and Disposal**

- During the 2012-2013 reporting period Uranium One planned to add an additional nine wellfield module buildings. However, only six were constructed in MU10 and none in MU11. The volume has been adjusted accordingly, and still includes reclamation costs for two additional module buildings in MU10.

### **Worksheet 3: Building Demolition and Disposal**

- During the 2012-2013 reporting period Uranium One planned to add an additional nine wellfield module buildings. However, only six were constructed in MU10 and none in MU11. The volume has been adjusted accordingly, and still includes reclamation costs for two additional module buildings in MU10.
- During the 2012-2013 reporting period U1 constructed a bicarbonate building in MU10 and a manifold building near the MU8 booster pump building, the volume of these structures has been accounted for.
- The soil under the Christensen satellite restoration extension has been added to the "Soil Removal and Disposal" section of worksheet 3.

#### **Worksheet 4: Pond Reclamation Cost**

- Uranium One planned to reline Pond A and Pond C at the Irigaray facility during the 2012-2013 reporting period and accordingly placed the reclamation costs for these ponds in the 2012-2013 surety estimate. This did not occur during the 2012-2013 reporting is not planned to be completed during the 2013-2014 reporting period; thus, these costs have been removed from the surety.
- During the 2012-2013 reporting period a leak was detected in Christensen Ranch Evaporation Pond CR-2. The Leak Detection System Removal section of Worksheet 4 assumes that contamination will be found in the leak detection system whenever a leak has been detected in a pond during its operating life. During the reporting period a leak was detected in Christensen Ranch Brine Pond 1. Associated costs of leak detection system removal and 11(e)2 byproduct disposal for pond CR-2 have been added. It was also discovered that the costs for removal of the leak detection system for pond CR-1 included a miscalculation of the amount of volume and gravel to be removed from the leak detect system. The amount was based on the entire square footage of the pond bottom and not specifically the leak detection system. This volume has been corrected to account for a portion of the leak detection system sand media and the leak detection system gravel and piping.

#### **Worksheet 5: Well Plugging and Abandonment**

- The total number of wells for CR MU10 has been increased to to reflect the actual number of wells installed during the 2012-2013 reporting period, and the possible development of Mods 10-7 & 10-8.
- The estimated number of wells to be installed in MU11 has been adjusted.

#### **Worksheet 6: Wellfield Equipment Removal & Disposal**

##### **Section I: Wellfield Piping**

- The number of wells and amount of piping in CR MU10 and MU11 has been revised to reflect actual numbers and plans for the 2013-2014 reporting period.

##### **Section II: Production Well Pumps**

- The number of production well pumps has been revised to reflect the current number for CR MU10, and the projected number for MU11 has been revised.

##### **Section IV: Buried Trunkline**

- The quantity of trunkline for CR MU10 and CR MU11 has been revised to reflect the actual footage and the possible development of Mods 10-7 & 10-8.

##### **Section V: Manholes**

- The number of manholes for CR MU10 and MU11 has been changed to reflect the actual number and the possible additional development of MU10.

### **Worksheet 7: Topsoil Replacement & Revegetation**

- Worksheet 7 has been revised to reflect no wellfield development is planned for CR MU11 during the 2013-2014 reporting period.

### **Worksheet 8: Miscellaneous Reclamation**

- For CR MU10 Sections I, II, and III have been adjusted to reflect actual numbers.
- For CR MU11 Sections I-IX have been adjusted to reflect that no wellfield development will take place during the 2013-2014 reporting period.

### **Table 1, Summary:**

The overall difference from the changes made to Worksheets 1 through 8 results in a decrease for the 2013-2014 WDEQ surety estimate in the amount of \$584,248 and a decrease of \$575,517 for the NRC estimate in comparison to the approved 2012-2013 surety estimate.

In summary, the new grand total surety estimate for WDEQ is \$20,715,064 and the NRC estimate is \$20,588,779. This represents a decrease of \$359,936 for the WDEQ estimate and a decrease of \$486,221 for the NRC estimate, under the current Irrevocable Letter of Credit issued in the favor of the State of Wyoming-DEQ in the amount of \$21,075,000 (NRC License SUA-1341 Amendment No. 1, Condition 9.5). Uranium One respectfully requests that WDEQ approve the new surety amount of \$20,715,064. Due to the differences between WDEQ and NRC surety estimates, Uranium One will carry an Irrevocable Standby Letter of Credit issued in favor of the WDEQ for the highest surety estimate of \$20,715,064.

**RECURRING COST**

Item	Amount (\$)	Units	Cost Basis
<b>ELECTRICAL</b>			
Power Cost (actual costs)	\$0.04850	kw/hr	Current operating cost of electricity - Powder River Energy - Dec. 2012

**LABOR RATES**

Supervisor	\$30.73	Hour	Operator Wage below + \$5.00 referenced in WDEQ Guideline 12, Section I
Operating Engineers (Group 1 & 2)	\$24.97	Hour	From 2013 State Building Construction Prevailing Wages (referenced WDEQ-LQD Guideline 12 I).
Operating Engineers (Group 3)	\$25.73	hour	From 2013 State Building Construction Prevailing Wages (referenced WDEQ-LQD Guideline 12 I).
Laborers (Group 1)	\$15.10	hour	From 2013 State Building Construction Prevailing Wages (referenced WDEQ-LQD Guideline 12 I).
Laborers (Group 2)	\$16.90	hour	From 2013 State Building Construction Prevailing Wages (referenced WDEQ-LQD Guideline 12 I).

**ANALYTICAL**

Guideline 8	\$150.00	batch	Current rate used in worksheet 1
-------------	----------	-------	----------------------------------

**TRANSPORTATION**

**AND DISPOS:**

Distance to Landfill	115	(miles)	The distance from Christensen Ranch/Irigary to Casper Landfill is ~115 miles
Transportation Cost	\$0.21	(\$/Ton-Mile)	Estimate from local trucking company (Dec. 2012)
Solid Waste landfill disposal cost	\$58.50	Ton	Casper City landfill rates for outside of Natrona County commercial trailer over 8 feet in length.
Quantity Per Truck Load	20	(Tons)	
Quantity Per Truck Load	20.0	(Yds <sup>3</sup> )	
11e2 disposal cost	\$100.00	cubic yard	Average cost of graduated fee schedule for disposal of soils, sands, rubble etc., at NRC Licensed Facility (Shirley Basin) (August 2010)
11e2 disposal cost	\$3.70	cubic foot	Average cost of graduated fee schedule for disposal of soils, sands, rubble etc., at NRC Licensed Facility (Shirley Basin) (August 2010)
11e2 disposal cost	\$11.00	cubic foot	Average cost of graduated fee schedule for disposal of sludge, resin beads, filter media, etc., at NRC Licensed Facility (Shirley Basin) (August 2010)
11e2 disposal cost	\$297.00	cubic yard	Average cost of graduated fee schedule for disposal of sludge, resin beads, filter media, etc., at NRC Licensed Facility (Shirley Basin) (August 2010)
Onsite Disposal	\$0.31	cubic foot	WDEQ Guideline 12, Appendix K, Concrete Disposal On Site $\$8.25\text{yd}^3 = \$0.31\text{ft}^3$
11e2 Transportation Cost Per Truck	\$2,100.00		Constant cost per load based on current contract with local trucking company

**VEHICLE**

**OPERATION**

Pick up 4X4 (diesel)	\$27.47	unit	Cost per WDEQ Guideline 12 Table D-1
----------------------	---------	------	--------------------------------------

**PLANT**

**DISMANTLING**

Concrete Floor Demolition	\$5.31	square foot	Costs per WDEQ Guideline 12, Appendix K
Cost of Demolition Per Ft <sup>3</sup>	\$0.28	Cubic foot	WDEQ Guideline 12, Appendix K

**PLANT/EQUIPMENT**

**DECONTAMINATION**

**AND DISPOSAL**

Decontamination	\$0.13	square foot	Based on actual costs
Decontamination	\$435.00	truck load	Based on actual costs

**WELL PLUGGING AND ABANDONMENT**

Bentonite Chips	\$5.20	50# bag	Based on current costs from Casper Well Supply
Cement Cones	\$10.00	per hole	Costs per WDEQ Guideline 12, App. L, Abandonment and Sealing of Drill and Monitor Wells

**EQUIPMENT**

Dozer	\$93.42	acre	<i>Cost per WDEQ Guideline 12, App M, rough grading/backfill</i>
Backhoe Loader (Cat 430E 4WD)	\$36.24	hour	<i>Cost per WDEQ Guideline 12, Table D-1</i>
Loader (Cat 980H)	\$115.78	hour	<i>Cost per WDEQ Guideline 12, Table D-1</i>
Pick up 4X4 (gasoline)	\$32.91	hour	<i>Cost per WDEQ Guideline 12, Table D-1</i>
Hose Reel	\$45.00	hour	<i>Costs for equipment from operating ISR facility</i>

**CULVERT REMOVAL**

20 foot culvert	\$137.83		<i>Cost per WDEQ Guideline 12, Appendix J</i>
per foot	\$6.89	foot	

**ELECTRICAL POWERLINES & TRANSFORMERS**

Distribution/Transmission Lines	\$0.00		<i>Tri-County Electric will remove at no cost, WDEQ Guideline 12, Appendix H</i>
Transformers	\$0.00		<i>Tri-County Electric will remove at no cost, WDEQ Guideline 12, Appendix H</i>

**FENCING**

Removal	\$0.32	linear foot	<i>WDEQ Guideline 12, Appendix H</i>
---------	--------	-------------	--------------------------------------

**RECLAMATION**

Discing and Seeding	\$280	acre	<i>Operator Experience based on Current Contractor Pricing</i>
Top Soil Application	\$1.084	cu/yd	<i>Costs per WDEQ Guideline 12, App. B</i>
Unit Cost - Haul/Place (\$/Yd <sup>3</sup> )	\$1.084	cu/yd	<i>Costs are for 1000 foot haul based on WDEQ Guideline 12, Appendix B, cost of \$.842/cubic yard</i>
Unit Cost - Grading (\$/Ac)	\$93.42	acre	<i>Costs per WDEQ Guideline 12, Appendix M D9 dozer</i>

**References**

Guideline 12 costs were updated using Oct. 2012 version.
