Revision 2

UCI Evaluation of Customer Returned Orders for Part 21 Evaluation

Prepared By: J. R. [Signature]
Engineering

Date: 5/30/14

Reviewed By: Diya Pandey
Engineering

Date: 5/30/14

Approved By: Kouma Wood
Quality Assurance

Date: 5/30/14

Revision History:

Date	Revision	Description
04/24/14	0	Initial Issue
05/16/14	1	Updated Part 21 evaluations for NCRs 3909 and 5670. Removed NCR 4679, this is for an international plant. Added Part 21 evaluation for job 95581 (NCRs 6189). NCR 7065 removed as it was a customer DNR and was voided. ECO# 205473
05/30/14	2	Remove Confidentiality statement as this EER is for Public Release with the UCI NRC Inspection Results. ECO# 205489

1.0: Customer:
UCI

2.0: Sales Order Numbers:

95443, 6144, 95581, 91103, 93049, 94597, 94900, 95108, 95245, 95581, 91103, 94860, 91980

3.0: NCR Numbers:

6256, 6916, 6331, 4679, 5180, 4980, 4413, 5669, 5670, 4924, 6189, 3905, 3909, 6029, 6859

4.0: References:

- A. UCI QCP 21.1
- B. UCI QCP 15.2
- C. UCI CAR 13-14

6.0: Description:

This engineering evaluation is being written to document the part 21 evaluations performed on the above listed NCRs and Sales Order Lines.

7.0: Technical Evaluation / Analysis / Disposition:

Per findings listed on the NRC Inspection Report 99901436-2014201 and the Notice of Violation received on 4/11/2014, UCI has reviewed all customer returned items for the past 3 years. This time frame was chosen as it covers all orders since the last NUPIC audit of UCI. The above listed NCRs were determined to need further evaluation to meet the requirements of UCI QCP 21.1, QCP 15.2 and 10CFR 21.21. Upon further evaluation, all orders were determined to have no defects and no reportable findings.

8.0 Conclusions:

As documented in the attached QA 21.1F Forms for all the NCRs listed in section 3.0 above, no defects were found after performance of the part 21 evaluation process.

9.0 Attachments:

1. Part 21 Evaluations for NCRs listed in section 3.

Evaluation Disposition is (B) No Defect:

Evaluation Disposition Notes:

Relays, all from the same date code and that had manufacturing witnessed by UCI, underwent 100% functional testing and were all found to be in working order prior to shipment to the customer. When the customer notified UCI of the in storage bench test failure, UCI pulled an additional relay from the same date code from UCI stock. This relay had been kept in level B storage. The replacement relay was tested to the same dedication procedure and passed all testing. Due to the sensitive nature of these relays, UCI has concluded that the contact failure is an isolated incident that was caused by shipping and handling issues.

Evaluation Disposition is (B) No Defect:

Evaluation Disposition Notes:

The returned power supply was part of a blanket refurbishment order carried out by UCI. The failure was linked to a low voltage inside one of the control loops of the power supply. No other refurbished power supplies have been reported with this failure. The power supply was reworked to acceptable condition.

Evaluation Disposition is (B) No Defect:

Evaluation Disposition Notes:

Item was found to be in working order during original dedication. No shorts were found during insulation testing during the original dedication. The item was originally shipped to the customer in 2003 and the failure at the customer site was in 2010. Failure analysis has determined that the shorted contacts are fused together. UCI's determination is that the failure is an isolated incident and most likely due to in proper installation or testing.

Evaluation Disposition is (B) No Defect:

Evaluation Disposition Notes:

The item passed all original dedication testing acceptably. Customer received item with apparent internal component damage and limited functionality. Because the item passed original UCI testing, and the internal parts shifted sometime between UCI testing and customer bench testing, UCI is reasonably assured that the item failure is due to shipping and handling issues.
