TABLES

JD-D6D.1-1 WATER-LEVEL DATA FOR JANE DOUGH UNIT WELLS JD-D6D.1-7

JD-D6D.1 JANE DOUGH UNIT GROUND-WATER LEVELS

The ground-water levels for the Jane Dough Unit are presented in this section of Addendum JD-D6D. Figure JD-D 6D.1-1 presents the water levels for northeast cluster of Jane Dough wells, URZJA-1, URZJA-2, URZJB-3, URZJF-5 a nd URZJ1- 6. The water level elevation in the A and B Sands are sim ilar and lower than the head in the underlying 1 Sand and higher than the head in the overlying F Sand. Ta ble JD-D6D.1-1 presents the tabulation of the water levels for the Jane Dough monitoring wells.

Figure JD-D6D.1-2 presents southeast cluste r Jane Dough monitoring w ells. This figure shows water level elevations for the A, B and C Sands are fairly similar at this cluster of wells. The heads are higher in the underlying 1 Sand than in the A Sand. Heads are also higher in the G Sand which is above the C Sand.

The head in the southwest cluster of monitor wells (see Figure JD-D6D.1-3) is higher in the A Sand than the overlying B Sand. The head difference indidcates that the A and B Sands are s eparated in this a rea. The wate r-level elevation in the F Sand is slightly higher than the head in the B Sand.

An additional cluster of wells is located to the northwest portion of the Jane Dough Unit and these wells are U RZJA-19, URZJA-20, URZJB-21, URZJC-22, URZJF-17 and URZJ1-23-1 (see F igure JD-D6D.1-4 for a plot of water lev els for these wells). Th e A and B Sand wells have sim ilar heads at this location even though a thin aquitard exists at this clus ter. The G an d 1 Sand water -level elevations are higher than A and B Sand heads. The F Sand well URZJC-22 has lower water level elevations than those observed for the A and B Sands.

Figure JD-D6D.1-5 presents depths to water in the three alluvial we ll in the Jane Dough Unit. This f igure shows that the d epth to water in thes e three alluvia l wells incr eased from mid-2011 through 2013.

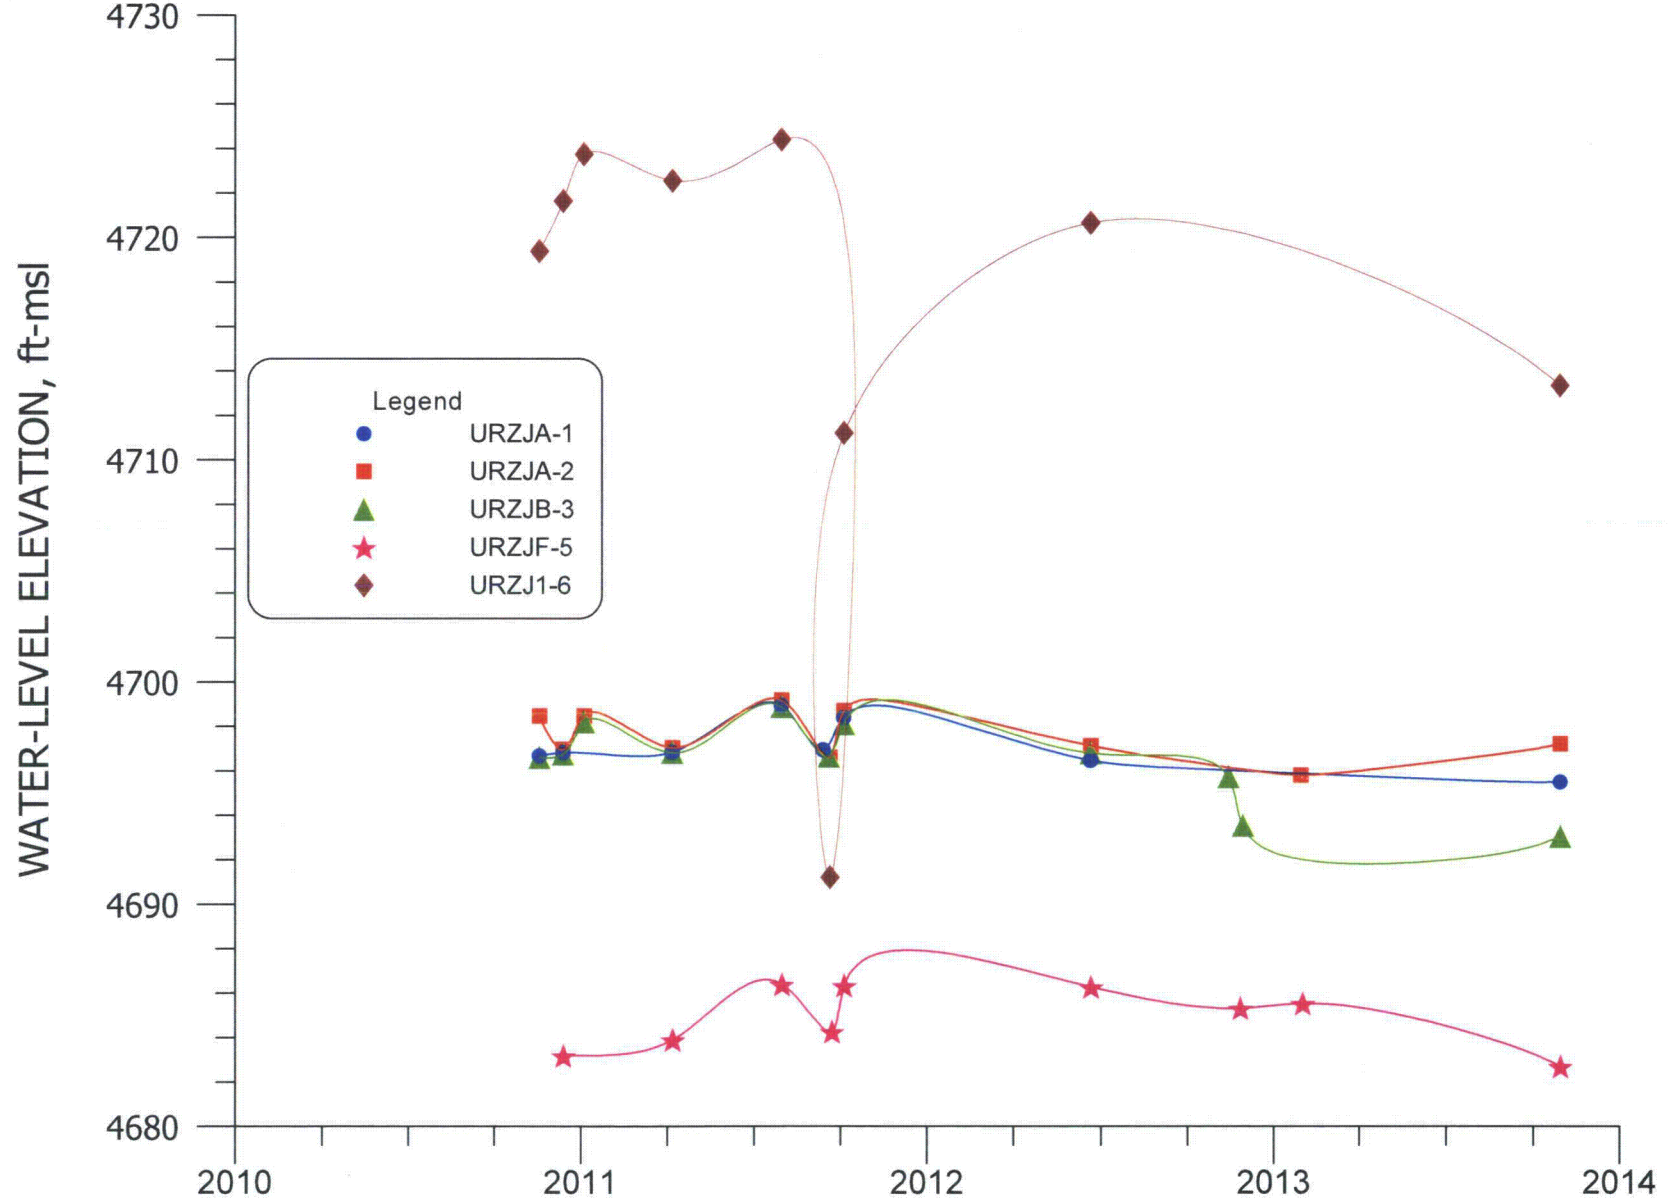

FIGURE JD-D6D.1-1. WATER-LEVEL ELEVATION VERSUS TIME FOR WELLS URZJA-1, URZJA-2, URZJB-3, URZJF-5, AND URZJ1-6

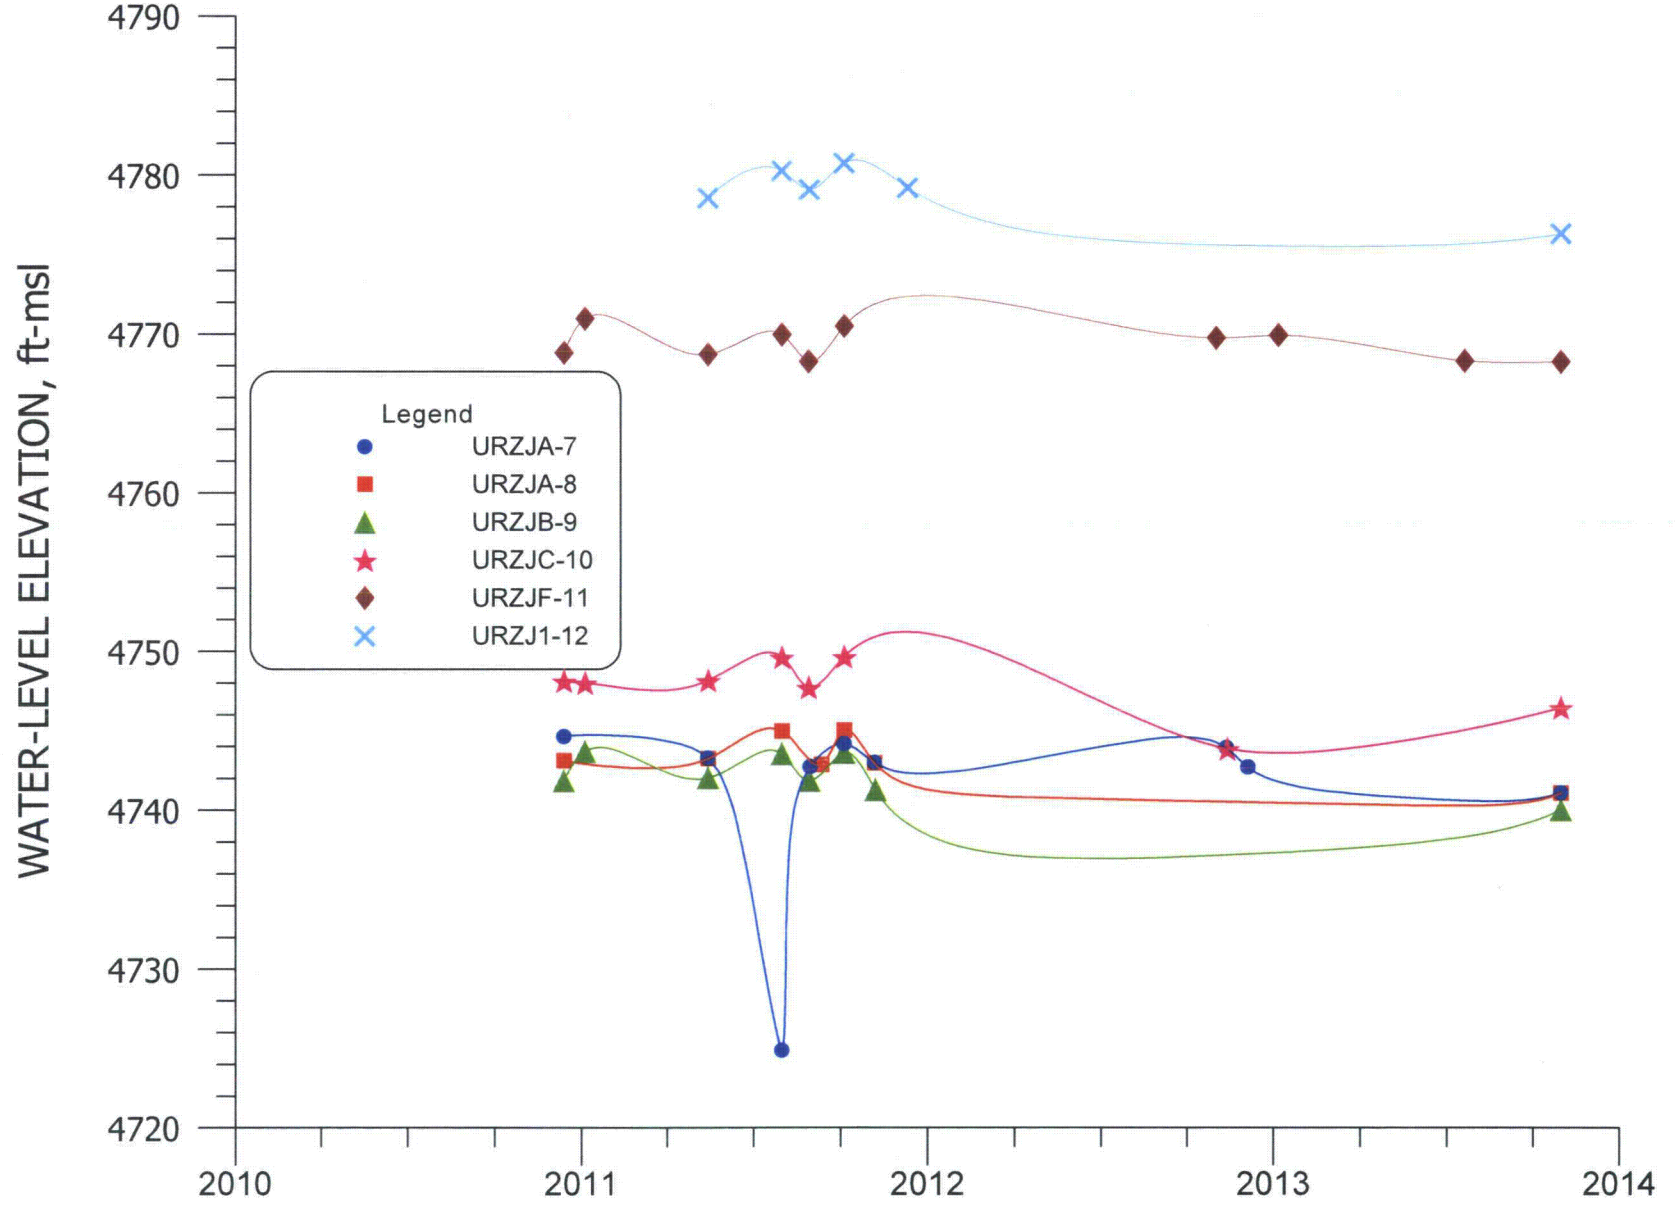

FIGURE JD-D6D.1-2. WATER-LEVEL ELEVATION VERSUS TIME FOR WELLS URZJA-7, URZJA-8, URZJB-9, URZJC-10, URZJF-11, AND URZJ1-12

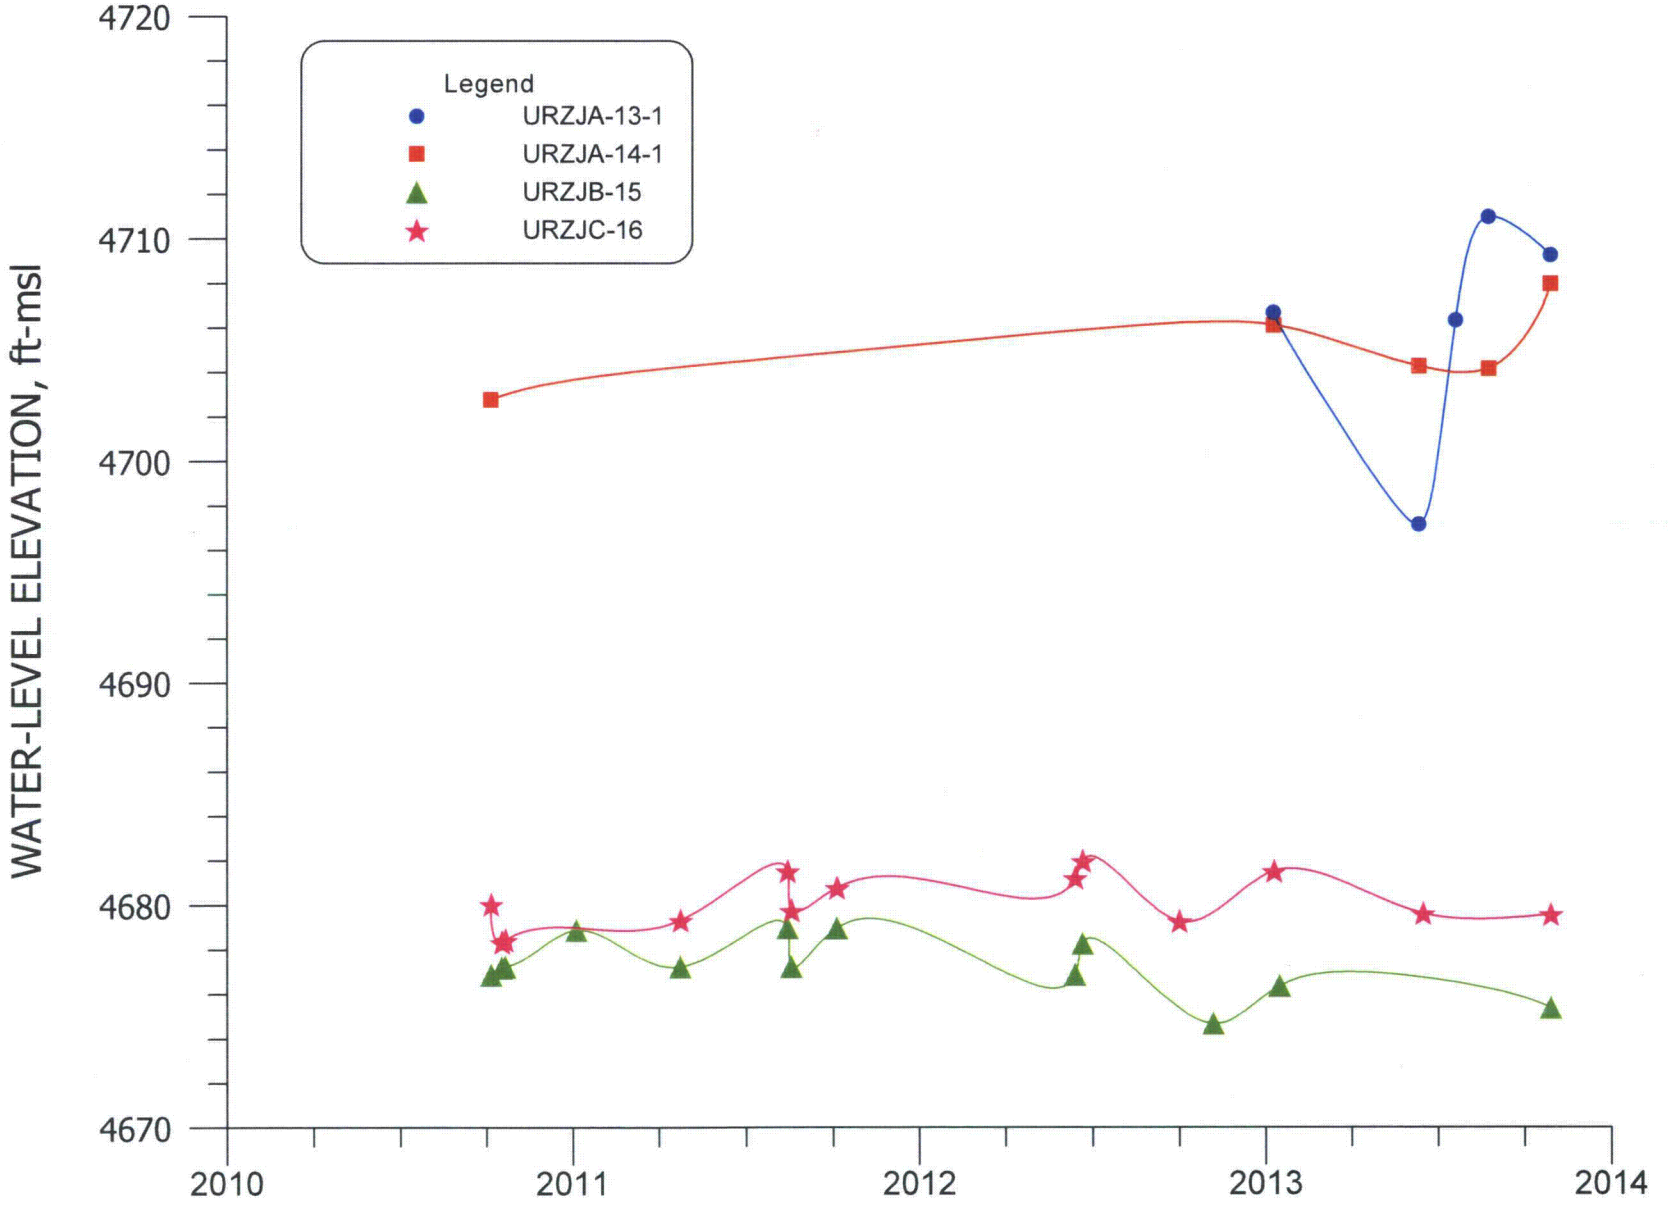

FIGURE JD-D6D.1-3. WATER-LEVEL ELEVATION VERSUS TIME FOR WELLS URZJA-13-1, URZJA-14-1, URZJB-15, AND URZJC-16

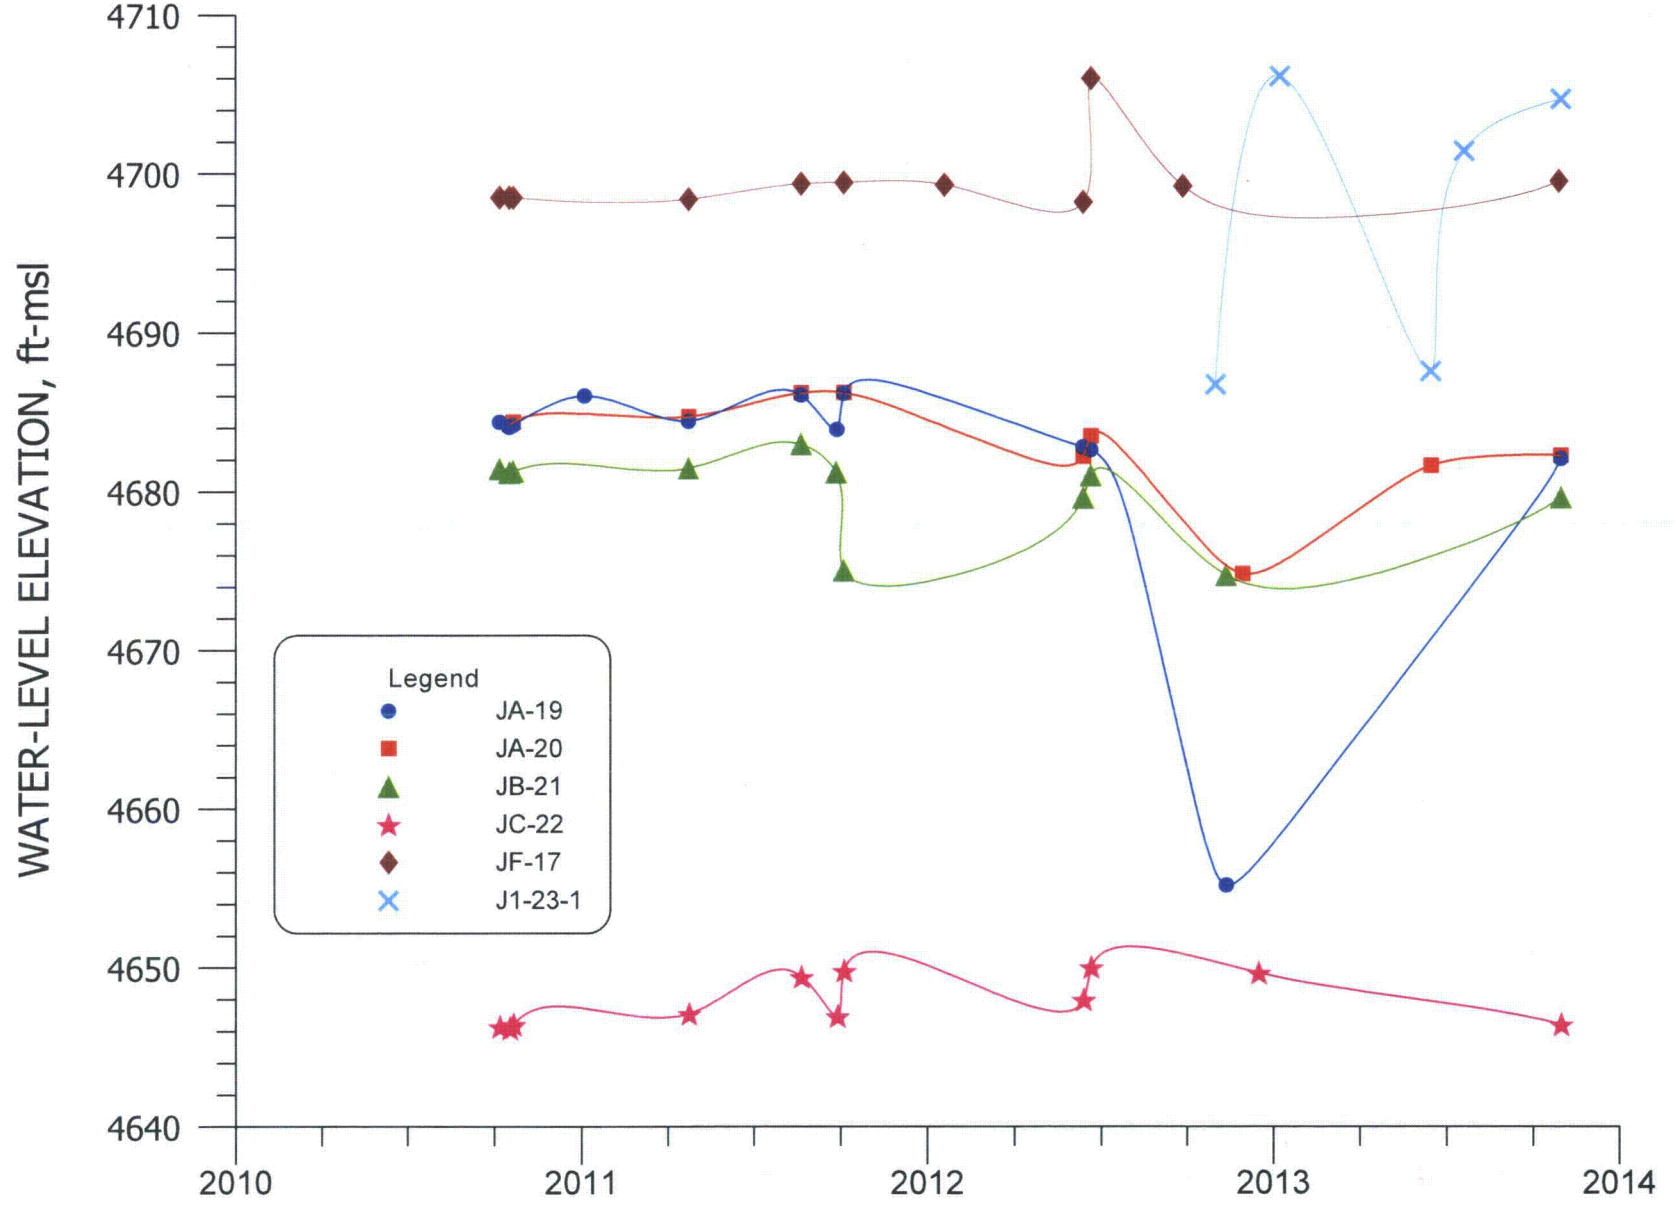

FIGURE JD-D6D.1-4. WATER-LEVEL ELEVATION VERSUS TIME FOR WELLS URZJA-19, URZJA-20, URZJB-21, URZJC-22, URZJF-17, AND URZJ1-23-1

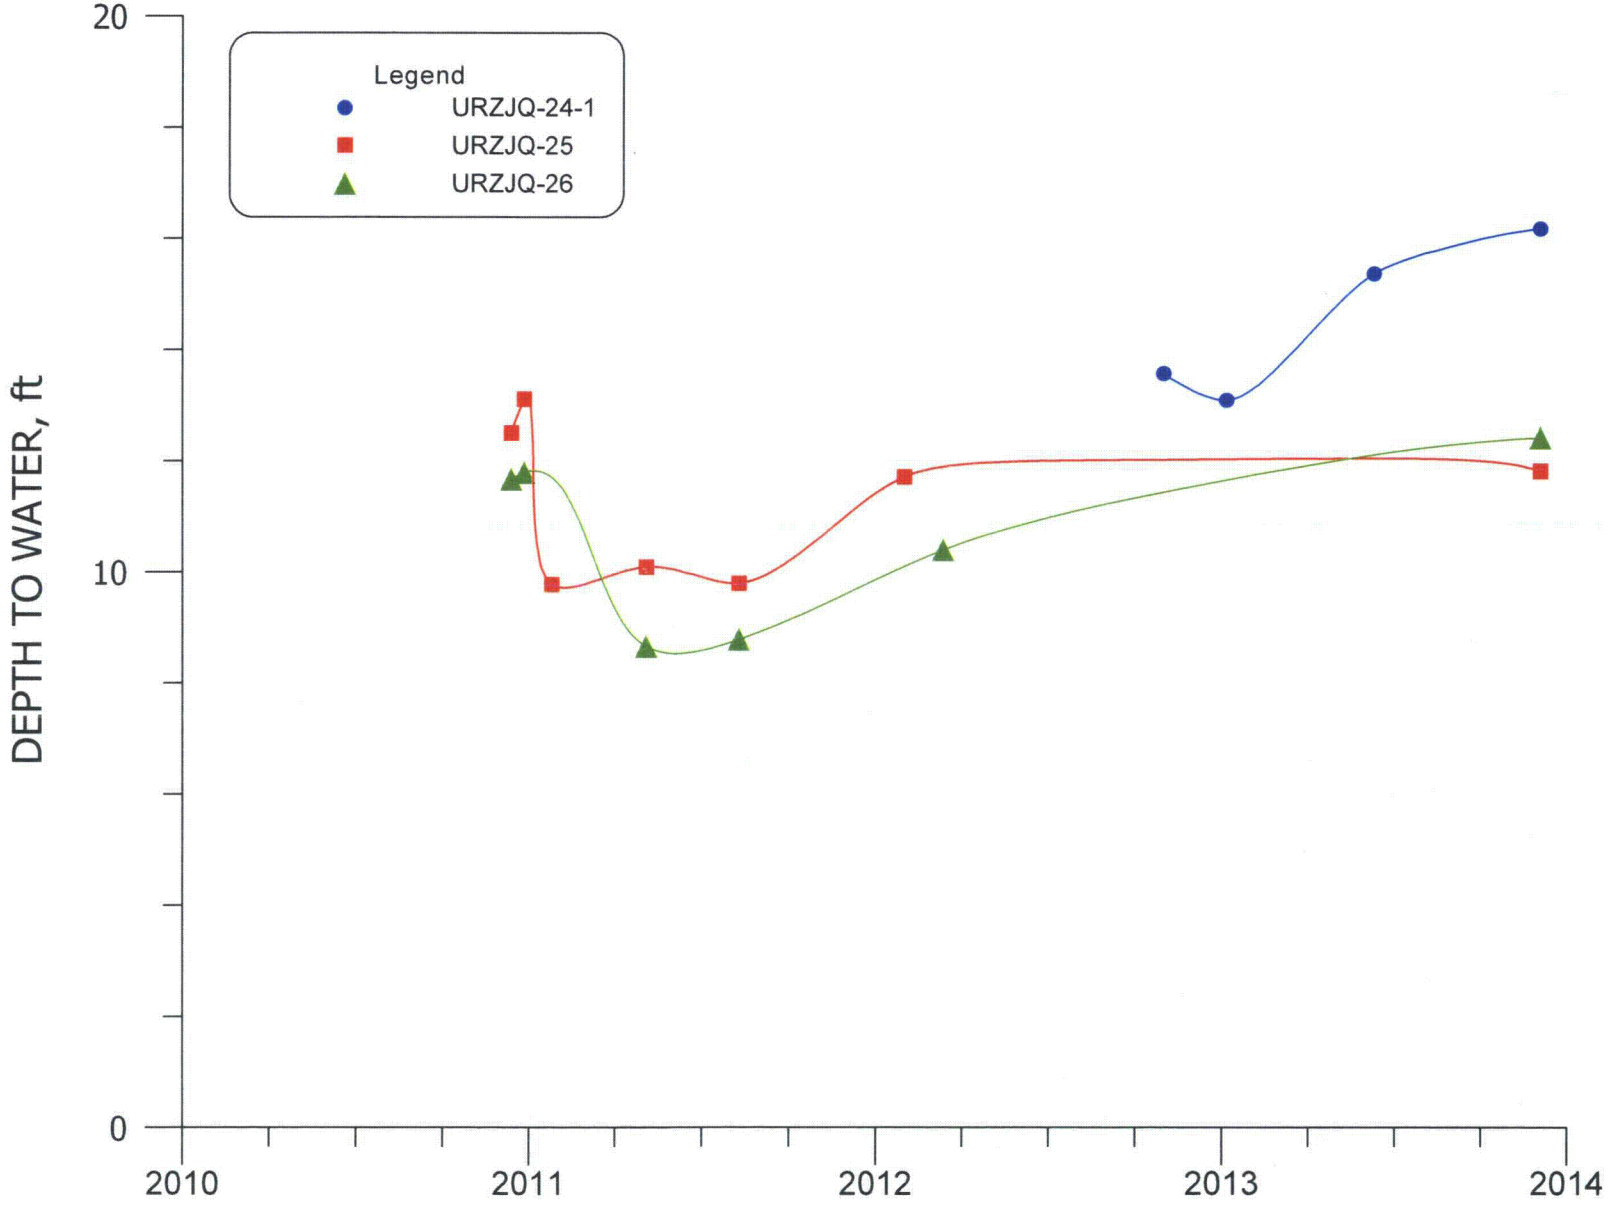

FIGURE JD-D6D.1-5. DEPTH TO WATER FOR ALLUVIAL FOR WELLS URZJQ-24-1, URZJQ-25, AND URZJQ-26

TABLE JD-D6D.1-1. WATER-LEVEL DATA FOR JANE DOUGH WELLS.

JD-D6D.2 COAL BED WATER LEVELS

This section of Addendum JD-D6D presents water levels in the coal aquifer and overlying sands that have been collected in this area by the Bureau of Land Management (BLM). Tabulation of these water levels is not presented in this addendum but can be obtained from the BLM. Figure JD-D6-12 shows the locations of these BLM monitoring wells.

Figure JD-D6D.2-1 presents the water level elevation changes for the Dry Willow Sand well, which is located to the northeast of the Jane Dough Unit, and the Pistol Coal well. The second water level elevation plot is presented for the Bullwacker Sand and Coal wells (see Figure JD-D6D.2-2). The water level elevations for both the sand well and the coal well are presented in this figure with the water level elevations on the left scale for the sand and on the right scale for the coal. These wells are approximately 5 miles to the southwest of the Jane Dough Unit.

The Streeter Coal and Sand wells are located approximately 9 miles west of the Jane Dough Unit. Figure JD-D6D.2-3 presents the water level elevation for this sand well, which is 621 feet above the coal well at this location.

Figure JD-D6D.2-4 presents the water level elevations for the All Night Coal and Sand wells which are located approximately 14 miles east of the Jane Dough Unit. The Beaver Federal Sand and Coal wells are located 23 miles north-northeast of the Jane Dough Unit. Figure JD-D6D.2-5 shows that the water levels in this sand and coal wells. The sand well is completed 561 feet above the coal, similar to the A Sand completion above the coal.

Figure JD-D6D.2-6 presents the water-level elevation changes for the Juniper Sand and Coal wells. The blue data on Figure JD-D 6D.2-6 shows sand water levels while the red data presents the coal.

Additional CBM monitoring wells were added 8 miles east-northeast of the Jane Dough Unit which are called the Fourmile Coal and Sand wells. Figure JD-D6D.2-7 presents the water level elevation for this sand well, which is 534 feet above the coal well at this location.

Figure JD-D6D.2-8 presents the water level elevations for the West Pine Tree Coal and Sand wells which are located slightly greater than 2 miles east of the Jane Dough Unit. The sand well is completed 782 feet above the coal, similar to the A S and completion above the coal.
