SUBJECT: NOTICE OF VIOLATION  
(NRC INSPECTION REPORT NO. 50-261/95-13)

Gentlemen:

This refers to the inspection conducted by William P. Kleinsorge of this office on April 17-21, and May 15-19, 1995. The inspection included a review of activities authorized for your Robinson facility. At the conclusion of the inspection, the findings were discussed with those members of your staff identified in the enclosed report.

Based on the results of this inspection, certain of your activities appeared to be in violation of NRC requirements, as specified in the enclosed Notice of Violation (Notice). The violation is of concern because a failure to provide adequate instructions requiring direct or indirect visual inspection of the C Reactor Coolant Pump (RCP) main flange studs after the removal of the boric acid residue and the associated corrosion products, permitted degraded studs to remain in the RCP without an evaluation of operability.

You are required to respond to this letter and should follow the instructions specified in the enclosed Notice when preparing your response. In your response, you should document the specific actions taken and any additional actions you plan to prevent recurrence. After reviewing your response to this Notice, including your proposed corrective actions and the results of future inspections, the NRC will determine whether further NRC enforcement action is necessary to ensure compliance with NRC regulatory requirements.

In accordance with 10 CFR 2.790 of the NRC's "Rules of Practice," a copy of this letter and its enclosure will be placed in the NRC Public Document Room.

The responses directed by this letter and the enclosed Notice are not subject to the clearance procedures of the Office of Management and Budget as required by the Paperwork Reduction Act of 1980, Pub. L. No. 96-511.
