Licensee: Hospital del Maestro
License No.: 52-15086-01
Docket No.: 03008602
Control No.: 582935

Date: 6/17/2014

This correspondence is in reference to your letter dated January 13, 2014 requesting the renewal of Nuclear Regulatory Commission License No. 52-15086-01. In order to continue our review, we need the following additional information:

1. Your current license specifies the name of your facility as **Teacher's Hospital**. Your renewal application specifies the name of your facility as **Hospital del Maestro**. It appears from your renewal request that there may have been a possible change of ownership (control). If this is a change of name only, please so state. Otherwise please note that licensees must provide full information and obtain NRC's **prior written consent** before transferring control of the license. Control of a license is in the hands of the person or persons who are empowered to decide when and how that license will be used. That control is to be found in the person or persons who, because of ownership or authority explicitly delegated by the owners, possess the power to determine corporate policy and thus the direction of the activities under the license. A transferee is an entity that proposes to purchase or otherwise gain control of an NRC-licensed operation. A transferor is an NRC licensee selling or otherwise giving up control of a licensed operation. Provide the following information concerning changes of control by the applicant (transferor and/or transferee, as appropriate). If any items are not applicable, so state.
 - a. Provide a complete description of the transaction (transfer of stocks or assets, or merger).
 - b. Indicate whether the name has changed and include the new name. Include the name and telephone number of a licensee contact who NRC may contact if more information is needed.
 - c. Describe any changes in personnel or duties that relate to the licensed program. Include training and experience for any new personnel.
 - d. Describe any changes in the organization, location, facilities, equipment or procedures that relate to the licensed program.
 - e. Describe the status of the surveillance program (surveys, wipe tests, quality control) at the present time and the expected status at the time that control is to be transferred.
 - f. Confirm that all records concerning the safe and effective decommissioning of the facility will be transferred to the transferee or to NRC, as appropriate. These records include documentation of surveys of ambient radiation levels and fixed and/or removable contamination, including methods and sensitivity.

- g. Confirm that the transferee will abide by all constraints, conditions, requirements and commitments of the transferor or that the transferee will submit a complete description of the proposed licensed program.
 - h. If your license requires financial assurance for decommissioning, you will need to address changes to financial assurance for name changes and/or change in ownership (control). If your company's name is changing and there is no change of ownership, you will need to amend your financial assurance instruments and supporting documents to address the change in name. If there has been a change of ownership (control), the transferee must submit new financial assurance in accordance with Chapter 4 to Volume 3 of NUREG-1757, "Consolidated NMSS Decommissioning Guidance."
2. In your renewal application you state that "This is to confirm that we will not be using alpha-emitting unsealed byproducts materials except for Xofigo which, is authorized under 10 CFR 35.300". Please note that you are currently not authorized for the *parenteral* use of radiopharmaceuticals, which includes Xofigo. you are currently authorized for any sodium iodide iodine-131 permitted by 10 CFR 35.300. If you want this authorization, please submit training and experience of your authorized user for the *parenteral* use of radiopharmaceuticals permitted by 10 CFR 35.300.

Current NRC regulations and guidance are included on the NRC's website at www.nrc.gov; select **Nuclear Materials; Med, Ind, & Academic Uses**; then **Licensee Toolkits**, see our **toolkit index page**. You may also obtain these documents by contacting the Government Printing Office (GPO) toll-free at 1-866-512-1800. The GPO is open from 8:00 a.m. to 5:30 p.m. EST, Monday through Friday (except Federal holidays).

We will continue our review upon receipt of this information. Please reply to my attention at the Region I Office and refer to Mail Control No. 582935. If you have any technical questions regarding this deficiency letter, please call me at (610) 337-5358.

In order to continue prompt review of your application, we request that you submit your response to this letter within 15 calendar days from the date of this letter.
