# VIRGINIA ELECTRIC AND POWER COMPANY SURRY POWER STATION UNIT 2 INSERVICE INSPECTION OWNER'S ACTIVITY REPORT (OAR)

In accordance with the requirements of ASME Code Case N-532-4, Virginia Electric and Power Company (Dominion) hereby submits the Inservice Inspection Owner's Activity Report (Form OAR-1) for Surry Unit 2 refueling outage S2R25. This document contains the reporting requirements for the second refueling outage of the third period in the fourth ten-year inservice inspection interval for Surry Unit 2.

If you have any questions concerning this information, please contact Mrs. Candee G. Lovett at (757) 365-2178.

Very truly yours

Douglas C. Lawrence

Director Station Safety & Licensing

**Surry Power Station** 

Attachment: Owner's Activity Report (Form OAR-1), Surry Unit 2 Refueling

Outage S2R25, Third Period of the Fourth ISI Interval

Commitments made in this letter: None

## TABLE 1 ITEMS WITH FLAWS OR RELEVANT CONDITIONS THAT REQUIRED EVALUATION FOR CONTINUED SERVICE

Examination Category and Item	Item Description	Evaluation Description
B-P, B15.70	2-RC-MOV-2595 / Body to bonnet	During the performance of an ASME Section XI system pressure test (2-NPT-RC-002), boric acid was discovered on the body to bonnet joint of 2-RC-MOV-2595. (CR545855) Code Case N-566-2 was used to perform an evaluation of the bolting and component material. This evaluation determined the bolting and component to be acceptable for continued service.
B-P, B15.70	2-RC-PCV-2455A / Body to bonnet	During the performance of an ASME Section XI system pressure test (2-NPT-RC-002), boric acid was discovered on the body to bonnet joint of 2-RC-PCV-2455A. (CR545868) In accordance with IWA-5250(a)(2), a VT-3 examination of the flange fastener closest to the source of the leakage was performed. This evaluation determined the fastener to be acceptable with no degradation.
B-P, B15.70	2-SI-79 / Body to bonnet	During the performance of an ASME Section XI system pressure test (2-NPT-RC-002), boric acid was discovered on the body to bonnet joint of 2-SI-79. (CR545846) Code Case N-566-2 was used to perform an evaluation of the bolting and component material. This evaluation determined the bolting and component to be acceptable for continued service.
B-P, B15.70	2-SI-91 / Body to bonnet	During the performance of an ASME Section XI system pressure test (2-NPT-RC-002), boric acid was discovered on the body to bonnet joint of 2-SI-91. (CR545714) Code Case N-566-2 was used to perform an evaluation of the bolting and component material. This evaluation determined the bolting and component to be acceptable for continued service.

# TABLE 1 ITEMS WITH FLAWS OR RELEVANT CONDITIONS THAT REQUIRED EVALUATION FOR CONTINUED SERVICE

Examination Category and Item	Item Description	Evaluation Description
С-Н, С7.10	2-CH-MOV-2269B / Body to bonnet	During the performance of an ASME Section XI system pressure test (2-NPT-CH-006), boric acid was discovered on the body to bonnet joint of 2-CH-MOV-2269B. (CR516235) Code Case N-566-2 was used to perform an evaluation of the bolting and component material. This evaluation determined the bolting and component to be acceptable for continued service.
C-H, C7.10	2-SI-MOV-2842 / Body to bonnet	During the performance of an ASME Section XI system pressure test (2-NPT-CH-006), boric acid was discovered on the body to bonnet joint of 2-SI-MOV-2842. (CR516208) Code Case N-566-2 was used to perform an evaluation of the bolting and component material. This evaluation determined the bolting and component to be acceptable for continued service.
F-A, F1.20	2-SI-H004 / Loose bolt and incorrect load setting	A VT-3 examination of spring support 2-SI-H004 on line 6"-SI-353-1502 identified a loose upper pipe clamp bolt and a load setting outside the +/-10 % allowance. (CR547901) Engineering evaluation concluded the spring support could perform its design function in this condition. Adjustments were made in accordance with work order 38103501760 as permitted by IWF 3112.3(b).
F-A, F1.30	2-CC-H003 / Missing welds	A VT-3 examination of pipe support 2-CC-H003 on line 6"-CC-165-151 identified missing welds according to the as-built drawing. (CR546933) Engineering evaluation concluded the support could perform its design function in this condition. The as-built drawing will be updated to reflect the correct configuration.

### FORM OAR-1 OWNER'S ACTIVITY REPORT

## TABLE 1 ITEMS WITH FLAWS OR RELEVANT CONDITIONS THAT REQUIRED EVALUATION FOR CONTINUED SERVICE

Examination Category and Item	Item Description	Evaluation Description
F-A, F1.30	2-WS-H002B / Loose bolts	A VT-3 examination of pipe support 2-WS-H002B on line 24"-WS-132-10 identified the inner bolt on both sides of the pipe clamp were not tight against the side of the clamp. (CR547325) Engineering evaluation concluded the support could perform its design function in this condition. The loose bolts were adjusted with work order 38103498205 as permitted by IWF 3112.3(b).
F-A, F1.40	2-RC-PAD-2 / Broken cap screw	A VT-3 examination of a reactor vessel sliding foot support identified a broken cap screw on the monoball retaining plate. (CR546069) Engineering evaluation concluded by calculation CE-1653 that the sliding foot assembly remains functional with one capscrew non-functional. Prompt Operability Determination OD000584 requires inspection of the Unit 2 sliding foot assembly during the next scheduled RFO and development of a plan for restoration to full qualification.
F-A, F1.40	2-RS-P-2B / 2-RS-H001 Loose and missing nuts	A VT-3 examination of pump support 2-RS-H001 for 2-RS-P-2B identified one loose nut and two nuts that were flame-cut. (CR548863) Engineering evaluation ETE-CEM-2014-0009 concluded that the support could perform its design function in this condition. The loose nut is scheduled to be tightened with work order 38103499372 during the next scheduled maintenance of pump 2-RS-P-2B as permitted by IWF 3112.3(b).
