NRC Semi-annual Discharge Report
January - June 2014

August 28, 2014

Dear Sir:

The following report fulfills regulatory requirements as listed in 10 CFR 40.65 and 10 CFR 70.59 "Effluent Monitoring Requirements." For the six-month period January 1, 2014 through June 30, 2014, the following quantities of radionuclides were released to the unrestricted area by the Westinghouse Electric Company's Columbia, South Carolina Nuclear Fuel Plant:

| | | | |
|--------------------|---------|-----|-----------------------------------|
| A. Gaseous | 192.3 | uCi | Uranium (Analyzed as gross alpha) |
| B. Liquid Effluent | 1,680.1 | uCi | U-234 |
| | 64.9 | uCi | U-235 |
| | 226.2 | uCi | U-238 |
| | 5,294.7 | uCi | Tc-99 |

Gaseous effluent results were obtained from point source gross alpha analysis of stack gas effluent, and the individual radionuclide activity composition (84.8% U-234, 3.3% U-235, and 11.9% U-238) is inferred from the calculated average enrichment. A detailed summary report by stack is provided as Attachment "A."

Liquid effluent values were obtained by analysis of composite proportional samples prior to discharge to the Congaree River and basing the activity on the calculated average enrichment. All liquid discharges are pumped through a single discharge line to the Congaree River. A detailed summary liquid discharge report is provided as Attachment "B."

Also, to meet the requested dosage information outlined in Regulatory Guide 4.16, section 6.1, the internal Westinghouse letter LTR-EHS-14-59 entitled "Semi-Annual Assessment of Public Dose from Liquid and Gaseous Effluents" has been provided as Attachment "C."

Sincerely,

Carl Snyder, Manager Nuclear Criticality Safety and Environmental Engineering

LIQUID EFFLUENT DISCHARGES
FIRST HALF 2014

- A. Report Period: January 1, 2014 through June 30, 2014
 B. Sample Location: Composite Sampler at Waste Treatment, prior to discharge to Congaree River
 C. Total Liquid Flow: 6.463 E+07 liters
 D. Sample Collection: Effluent Composite Sampler

| Radioisotope | Concentration | LLD, uCi/mL | Quantity Released, uCi |
|--------------|--------------------------|-------------|------------------------|
| | uCi/mL Error | | |
| U-234 | 26.0 E-09 +/- 3.03 E-09 | 6.00 E-10 | 1,680.1 |
| U-235 | 1.00 E-09 +/- 0.746 E-09 | 6.00 E-10 | 64.9 |
| U-238 | 3.50 E-09 +/- 1.14 E-09 | 6.00E-10 | 226.2 |
| Tc-99 | 81.9 E-09 +/- 136 E-09 | 6.00E-10 | 5,294.7 |
| Total | | | 7,265.9 |

Note:

- Liquid effluent composites were analyzed by alpha spectroscopy, and significant quantities of U-236 were not detected using this method.
- Tc-99 is not reported for gaseous effluents, as significant quantities of Tc-99 were not detected during benchmark testing of gaseous emissions.

Subject: Semi-Annual Assessment of Public Dose from Liquid and Gaseous Effluents

Effluents released from plant operations are monitored to determine the quantities of radionuclides discharged into the environment. The cumulative radioactivity released is summarized semi-annually and annually and input into dose models developed by the NRC/EPA to estimate the dose to the public.

The whole body and organ dose via the following pathways is determined in this assessment:

- **Dose due to Gaseous Effluents by Direct Inhalation**
 - The whole body dose was estimated using EPA's COMPLY Code at level 2 complexity. The organ dose was estimated by calculating the X/Q factor using the results of the COMPLY analysis for stack number 1247, the measured release quantity, and the dose conversion factors from Federal Guidance Report No 11, "Limiting Values of Radionuclide Intake and Air concentration Factors for Inhalation, Submersion, and Ingestion" (FGR 11).
- **Dose due to Liquid Effluents by Ingestion of Potable Water**
 - Estimated using equations and recommended values in Regulatory Guide 1.109, Doses from Liquid Effluent Pathways (RG1.109). Dose conversion factors were taken from FGR 11.
- **Dose due to Liquid Effluents by Ingestion of Fish**
 - Estimated using equations and recommended values in RG 1.109. Dose conversion factors were taken from FGR 11.
- **Dose due to Liquid Effluents by Irradiation from Shoreline Deposition**
 - Estimated using equations and recommended values in RG 1.109. Dose conversion factors were taken from Federal Guidance report No 12, "External Exposure to Radionuclides in Air, Water, and Soil"

The inhalation dose is determined at the nearest site boundary at a distance of 595 meters. The ingestion dose from liquid and external dose from sediment deposition is determined at the point at which the liquid effluent leaves the diffuser in the Congaree River.

The release rates for gaseous effluent are determined by gross alpha measurements performed on daily air samples, one per stack for 47 stacks (Attachment 1). The release rates for liquid effluent are determined by isotopic analysis of liquid effluent samples taken monthly (Attachment 3). Based on these results, the following quantities were released in the 1st half of calendar year 2014:

- 192.3 μ Ci of Uranium in gaseous effluent
- 2.0 mCi of Uranium in liquid effluent
- 5.3 mCi of Technetium in liquid effluent

Using these results and the methods previously mentioned the whole body dose, dose to the bone, and dose to the lung were determined for an individual present at the nearest site boundary. Table 1 provides a summary of the results for each pathway. The gaseous and liquid effluents released during the 1st half of 2014 resulted in a potential whole body dose of 0.08 mrem and a lung dose of 0.61 mrem to an individual present at the nearest site boundary. The dose to the bone is negligible. These doses are well below the 12.5 mrem (1/2 of the 25 mrem annual dose limit) and the 5 mrem ALARA limit (1/2 of 10 mrem annual ALARA limit) for a member of the public.

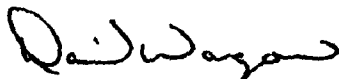

Table 1. 2014 Semi-Annual Dose to the Public from Liquid and Gaseous Effluents

| | Whole Body Dose (mrem/6 months) | Organ Dose - Bone (mrem/6 months) | Organ Dose - Lung (mrem/6 months) |
|------------------------------|--|--|--|
| Gaseous Effluents | | | |
| Direct inhalation* | 0.08 | 2.30E-03 | 0.61 |
| Liquid Effluents | | | |
| Potable Water | 2.39E-05 | 3.47E-04 | - |
| Aquatic Food (Fish) | 1.50E-06 | 2.00E-05 | - |
| Shoreline Deposition | 8.04E-10 | - | - |
| <i>Total (mrem/6 months)</i> | <i>0.08</i> | <i>2.67E-03</i> | <i>0.61</i> |

* Assumes 80 % residence time

There were no significant changes in our process, compounds, or release points between 2013 and the 1st half of 2014. The attachments below illustrate the method used to calculate each result listed in Table 1. The annual dose calculation will be completed when the data is available for the entire calendar year.
