Subject: Big Drones Flying Near New York Nuclear Powerplants

Hello Jill and Tammy,

You may remember that, about one year ago, I tried to report a drone flying about 8 miles away from our three operating nuclear powerplants.

Guess what? I believe there was one up this morning. At coffee at his house this morning, my brother-in-law told me that, while walking to the end of our dead end street today (in the dark) at about 5:30 am, (9-17-2014) , he saw a light up in the air. The location would have been approximately north of the boundary between the City of Oswego and the Town of Scriba. I think it was a drone (with a spotlight) and I guess it would have been flying in some direction in the quadrant due south to due east.

Did you see anything?

Thank you,

Tom
