Mike//

I took care of the last week. This was a sealed source that could not be abandoned 10 years ago as it was in the production zone. The well is to be abandoned in accordance with Weatherfords procedures.

Thx//JackW

The Perry message states "Attached you will find Fieldwood's well schematics showing the proposed abandonment of the source and well."

I did not see any attached file.

Sean//

Good to talk to you yesterday. Based on the information provided in today's e-mail you have NRC approval to abandon in accordance with your abandonment procedures. Once completed. Follow-up with the appropriate written report to NRC.

Mr. Whitten,

As per our conversation, Weatherford is requesting approval to abandon one 45 mCi Cs-137 source in Fieldwood Energy, LLC's well. Well information is as follows:

<b>Well Operator:</b>	Fieldwood Energy, LLC
<b>Well Name:</b>	OCS-G 01216 #A-7E
<b>API Number:</b>	17-708-40210-00
<b>Well Location (Surface):</b>	Gulf of Mexico (South Marsh Island Block 142)
<b>Lat &amp; Long:</b>	Lat: 28.251478 Long: -91.863282

The source is located between 6238' and 6423' in the well's short string. It will be cemented in place and ½ gallon of steel ball bearings will be placed on top of the cement plug. These ball bearings will provide the required deflection device preventing future intrusion on the source.

A cement plug and steel ball bearings will also be placed in the well's long string. This plug and ball bearing's will prevent intrusion in the well adjacent to the radioactive source.

A plaque will be constructed upon completion of the abandonment procedures and installed by Fieldwood personnel.

Attached you will find Fieldwood's well schematics showing the proposed abandonment of the source and well.

Regards,

Christopher Sean Perry
