Subject: Acceptance review for Application for Technical Specifications Change to Permanently Extend the Integrated (MF4694 and MF4695)

Importance: High

Ken,

In accordance with LIC-109, Acceptance Review Procedures, Revision 1, the Nuclear Regulatory Commission (NRC) staff has completed the acceptance review of the License Amendment Request dated August 26, 2014 (ADAMS Accession No. ML14241A496) by Florida Power & Light for St. Lucie Nuclear Plant Units 1 and 2. The proposed amendments would modify TS requirements for containment leakage rate testing by extending the 10-year ILRT (Type A test) interval to 15 years on a permanent basis in accordance with the provisions of NEI 94-01, Revision 3-A, "Industry Guideline for Implementing Performance-Based Option of 10 CFR Part 50 Appendix J."

A determination has been made by the NRC staff that the amendment request reasonably appears to contain sufficient technical information, both in scope and depth, for the NRC staff to complete the detailed technical review and render, in an appropriate time frame for the associated action, an independent assessment of the proposed action with regard to applicable regulatory requirements and the protection of public health, safety, and security.

If additional information is needed for the staff to complete its technical review, you will be advised by separate correspondence.

Thanks,

Farideh
