6663000245 PRESORT

NRC Chair Allison Macfarlane
United States Nuclear Regulatory Commission
Washington, DC 20555-0001

Dear Chair Macfarlane,

New York's Indian Point is quite likely America's most hazardous nuclear power plant. And yet the NRC is now considering a 20-year renewal of the plant's operating licenses.

I'm writing to urge you to deny new licenses for Indian Point and shut the plant down.

Indian Point is a threat to the environment and the people of the region. It vents billions of gallons of hot water into the Hudson River daily, killing millions of fish each year. Radioactive waste in its overfilled storage ponds is leaking into the ground and the Hudson. In its 40-year history, Indian Point has seen broken warning sirens, transformer explosions and oil spills.

And the danger of Indian Point is greatly magnified by its location. It sits at the intersection of two earthquake faults and 20 million people live within 50 miles of the plant. That's why it has been dubbed "Fukushima on the Hudson." A 2003 study found the plant's emergency plans "inadequate to protect the public from an unacceptable dose of radiation."

Indian Point would not qualify for new licenses under the NRC's current safety, seismic and population standards. You should not renew the plant's existing licenses now.

Please let me know how you intend to address this issue.

Sincerely,

Nancy Brothers

NRC Chair Allison Macfarlane
United States Nuclear Regulatory Commission
Washington, DC 20555-0001

Dear Chair Macfarlane,

New York's Indian Point is quite likely America's most hazardous nuclear power plant. And yet the NRC is now considering a 20-year renewal of the plant's operating licenses.

I'm writing to urge you to deny new licenses for Indian Point and shut the plant down.

Indian Point is a threat to the environment and the people of the region. It vents billions of gallons of hot water into the Hudson River daily, killing millions of fish each year. Radioactive waste in its overfilled storage ponds is leaking into the ground and the Hudson. In its 40-year history, Indian Point has seen broken warning sirens, transformer explosions and oil spills.

And the danger of Indian Point is greatly magnified by its location. It sits at the intersection of two earthquake faults and 20 million people live within 50 miles of the plant. That's why it has been dubbed "Fukushima on the Hudson." A 2003 study found the plant's emergency plans "inadequate to protect the public from an unacceptable dose of radiation."

Indian Point would not qualify for new licenses under the NRC's current safety, seismic and population standards. You should not renew the plant's existing licenses now.

Please let me know how you intend to address this issue.

Sincerely,

Nancy Smith

CitizenLetter®

An urgent message from a concerned citizen.

09/12/2014

1764000124 PRESORT <>

NRC Chair Allison Macfarlane
United States Nuclear Regulatory Commission
Washington, DC 20555-0001

Dear Chair Macfarlane,

New York's Indian Point is quite likely America's most hazardous nuclear power plant. And yet the NRC is now considering a 20-year renewal of the plant's operating licenses.

I'm writing to urge you to deny new licenses for Indian Point and shut the plant down.

Indian Point is a threat to the environment and the people of the region. It vents billions of gallons of hot water into the Hudson River daily, killing millions of fish each year. Radioactive waste in its overfilled storage ponds is leaking into the ground and the Hudson. In its 40-year history, Indian Point has seen broken warning sirens, transformer explosions and oil spills.

And the danger of Indian Point is greatly magnified by its location. It sits at the intersection of two earthquake faults and 20 million people live within 50 miles of the plant. That's why it has been dubbed "Fukushima on the Hudson." A 2003 study found the plant's emergency plans "inadequate to protect the public from an unacceptable dose of radiation."

Indian Point would not qualify for new licenses under the NRC's current safety, seismic and population standards. You should not renew the plant's existing licenses now.

Please let me know how you intend to address this issue.

Sincerely,

Susan Hammond

And the danger of Indian Point is greatly magnified by its location. It sits at the intersection of two earthquake faults and 20 million people live within 50 miles of the plant. That's why it has been dubbed "Fukushima on the Hudson." A 2003 study found the plant's emergency plans "inadequate to protect the public from an unacceptable dose of radiation."

Indian Point would not qualify for new licenses under the NRC's current safety, seismic and population standards. You should not renew the plant's existing licenses now.

Please let me know how you intend to address this issue.

Sincerely,

Maydelle Fason Liss

NRC Chair Allison Macfarlane
United States Nuclear Regulatory Commission
Washington, DC 20555-0001

Dear Chair Macfarlane,

New York's Indian Point is quite likely America's most hazardous nuclear power plant. And yet the NRC is now considering a 20-year renewal of the plant's operating licenses.

I'm writing to urge you to deny new licenses for Indian Point and shut the plant down.

Indian Point is a threat to the environment and the people of the region. It vents billions of gallons of hot water into the Hudson River daily, killing millions of fish each year. Radioactive waste in its overfilled storage ponds is leaking into the ground and the Hudson. In its 40-year history, Indian Point has seen broken warning sirens, transformer explosions and oil spills.

And the danger of Indian Point is greatly magnified by its location. It sits at the intersection of two earthquake faults and 20 million people live within 50 miles of the plant. That's why it has been dubbed "Fukushima on the Hudson." A 2003 study found the plant's emergency plans "inadequate to protect the public from an unacceptable dose of radiation."

Indian Point would not qualify for new licenses under the NRC's current safety, seismic and population standards. You should not renew the plant's existing licenses now.

Please let me know how you intend to address this issue.

Sincerely,

Joan Stern Kiok

Washington, DC 20555-0001

Dear Chair Macfarlane,

New York's Indian Point is quite likely America's most hazardous nuclear power plant. And yet the NRC is now considering a 20-year renewal of the plant's operating licenses.

I'm writing to urge you to deny new licenses for Indian Point and shut the plant down.

Indian Point is a threat to the environment and the people of the region. It vents billions of gallons of hot water into the Hudson River daily, killing millions of fish each year. Radioactive waste in its overfilled storage ponds is leaking into the ground and the Hudson. In its 40-year history, Indian Point has seen broken warning sirens, transformer explosions and oil spills.

And the danger of Indian Point is greatly magnified by its location. It sits at the intersection of two earthquake faults and 20 million people live within 50 miles of the plant. That's why it has been dubbed "Fukushima on the Hudson." A 2003 study found the plant's emergency plans "inadequate to protect the public from an unacceptable dose of radiation."

Indian Point would not qualify for new licenses under the NRC's current safety, seismic and population standards. You should not renew the plant's existing licenses now.

Please let me know how you intend to address this issue.

Sincerely,

Dan Temple

Indian Point is a threat to the environment and the people of the region. It vents billions of gallons of hot water into the Hudson River daily, killing millions of fish each year. Radioactive waste in its overfilled storage ponds is leaking into the ground and the Hudson. In its 40-year history, Indian Point has seen broken warning sirens, transformer explosions and oil spills.

And the danger of Indian Point is greatly magnified by its location. It sits at the intersection of two earthquake faults and 20 million people live within 50 miles of the plant. That's why it has been dubbed "Fukushima on the Hudson." A 2003 study found the plant's emergency plans "inadequate to protect the public from an unacceptable dose of radiation."

Indian Point would not qualify for new licenses under the NRC's current safety, seismic and population standards. You should not renew the plant's existing licenses now.

Please let me know how you intend to address this issue.

Sincerely,

Rita Angelopoulos

Dear Chair Macfarlane,

New York's Indian Point is quite likely America's most hazardous nuclear power plant. And yet the NRC is now considering a 20-year renewal of the plant's operating licenses.

I'm writing to urge you to deny new licenses for Indian Point and shut the plant down.

Indian Point is a threat to the environment and the people of the region. It vents billions of gallons of hot water into the Hudson River daily, killing millions of fish each year. Radioactive waste in its overfilled storage ponds is leaking into the ground and the Hudson. In its 40-year history, Indian Point has seen broken warning sirens, transformer explosions and oil spills.

Radioactive waste in its overfilled storage ponds is leaking into the ground and the Hudson. In its 40-year history, Indian Point has seen broken warning sirens, transformer explosions and oil spills.

And the danger of Indian Point is greatly magnified by its location. It sits at the intersection of two earthquake faults and 20 million people live within 50 miles of the plant. That's why it has been dubbed "Fukushima on the Hudson." A 2003 study found the plant's emergency plans "inadequate to protect the public from an unacceptable dose of radiation."

Indian Point would not qualify for new licenses under the NRC's current safety, seismic and population standards. You should not renew the plant's existing licenses now.

Please let me know how you intend to address this issue.

Sincerely,

Oliver Swift
