WASHINGTON, D.C. 20555-0001

October 8, 2014

Mr. Dean Curtland, Site Vice President
c/o Michael Ossing
Seabrook Station
NextEra Energy Seabrook, LLC
P.O. Box 300
Seabrook, NH 03874

SUBJECT: SEABROOK STATION, UNIT 1 – ACCEPTANCE OF PROPOSED LICENSING
AMENDMENT REQUEST REGARDING THE REMOVAL OF THE COLD LEG
INJECTION PERMISSIVE (P-15) FROM TECHNICAL SPECIFICATIONS
(TAC NO. MF4926)

Dear Mr. Curtland:

By letter dated September 24, 2014 (Agencywide Documents Access and Management System (ADAMS) Accession No. ML14273A012), NextEra Energy Seabrook, LLC (NextEra or the licensee) submitted a license amendment request (LAR) to the Technical Specifications (TSs) at Seabrook Station, Unit 1 (Seabrook). The LAR proposes to remove the cold leg injection permissive (P-15) from TS 3.3.2, "Engineered Safety Features Actuation System Instrumentation."

The purpose of this letter is to provide the results of the U.S. Nuclear Regulatory Commission (NRC) staff's acceptance review of this amendment request. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review is also intended to identify whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

Consistent with Section 50.90 of Title 10 of the *Code of Federal Regulations* (10 CFR), an amendment to the license (including the technical specifications) must fully describe the changes requested, and following as far as applicable, the form prescribed for original applications. Section 50.34 of 10 CFR addresses the content of technical information required. This section stipulates that the submittal address the design and operating characteristics, unusual or novel design features, and principal safety considerations.

The NRC staff has reviewed your application and concluded that it does provide technical information in sufficient detail to enable the NRC staff to complete its detailed technical review and make an independent assessment regarding the acceptability of the proposed amendment in terms of regulatory requirements and the protection of public health and safety and the environment. Given the lesser scope and depth of the acceptance review as compared to the detailed technical review, there may be instances in which issues that impact the NRC staff's ability to complete the detailed technical review are identified despite completion of an adequate acceptance review. You will be advised of any further information needed to support the NRC staff's detailed technical review by separate correspondence.

D. Curtland
