

October 3, 2014

Dear Chairman MacFarlane,

Enclosed please find a three petition regarding Indian Point with 716 signatures calling for the closure of Indian Point, with a 152 CREDO Mobilize petitions also calling for its closure, which were collected at Clearwater's Great Hudson River Revival on the weekend of June 21-22. Also enclosed are 807 signatures asking to Upgrade the Health and Safety Measures at Indian Point.

We have grave concerns that the overcrowded fuel pools with deteriorating Boraflex liners could cause a spontaneous fuel pool fire – and that we should do everything in our power to prevent a Fukushima-like disaster on the Hudson. In the case of an incident or accident at Indian Point, evacuation of the 20 million people that live or work within 50 miles of this aging, leaking nuclear power facility would be impossible.

Sincerely,

A handwritten signature in cursive script that reads "Manna Jo Greene".

Manna Jo Greene, Environmental Director
Hudson River Sloop Clearwater, Inc.
724 Wolcott Ave., Beacon, NY 12508
845-265-8080 x 7113 Fax: 845-831-2821
845-807-1270 (cell)

Support closed-cycle cooling to help reduce impacts of power plants on Hudson River fish

PETITION TO CLOSE INDIAN POINT – NOT RELICENSE IT

The safest thing we can do for our community is to close Indian Point; in the meantime here are important measures that need to be put into effect immediately.

We, the undersigned, strongly urge the following actions be implemented as soon as possible with regard to Indian Point Nuclear Power Plant:

- Move spent fuel rods into hardened dry cask storage as quickly as is safely possible
- Provide full containment for the spent fuel pools and control rooms; establish independent back up electricity and cooling for spent fuel pools
- Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
- Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
- Remedy the flaws and deficiencies regarding the emergency evacuation plan raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
- Consider all seismological information prior to relicensing

MAIL COPIES TO:

CHAIRWOMAN ALLISON MACFARLANE, US NUCLEAR REGULATORY COMMISSION, Mail Stop O-16G4, Washington, DC 20555-0001
HON. ANDREW CUOMO, New York State Capitol Bldg. Albany, NY 11224
 HUDSON RIVER SLOOP CLEARWATER, 724 Wolcott Ave., Beacon, NY 12508 and to IPSEC, PO Box 131, Ossining, NY 10562-0131

PETITION TO CLOSE INDIAN POINT – NOT RELICENSE IT

The safest thing we can do for our community is to close Indian Point; in the meantime here are important measures that need to be put into effect immediately.

We, the undersigned, strongly urge the following actions be implemented as soon as possible with regard to Indian Point Nuclear Power Plant:

- Move spent fuel rods into hardened dry cask storage as quickly as is safely possible
- Provide full containment for the spent fuel pools and control rooms; establish independent back up electricity and cooling for spent fuel pools
- Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
- Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
- Remedy the flaws and deficiencies regarding the emergency evacuation plan raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
- Consider all seismological information prior to relicensing

PETITION TO CLOSE INDIAN POINT – NOT RELICENSE IT

The safest thing we can do for our community is to close Indian Point; in the meantime here are important measures that need to be put into effect immediately.

We, the undersigned, strongly urge the following actions be implemented as soon as possible with regard to Indian Point Nuclear Power Plant:

- Move spent fuel rods into hardened dry cask storage as quickly as is safely possible
- Provide full containment for the spent fuel pools and control rooms; establish independent back up electricity and cooling for spent fuel pools
- Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
- Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
- Remedy the flaws and deficiencies regarding the emergency evacuation plan raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
- Consider all seismological information prior to relicensing

PETITION TO CLOSE INDIAN POINT – NOT RELICENSE IT

The safest thing we can do for our community is to close Indian Point; in the meantime here are important measures that need to be put into effect immediately.

We, the undersigned, strongly urge the following actions be implemented as soon as possible with regard to Indian Point Nuclear Power Plant:

- Move spent fuel rods into hardened dry cask storage as quickly as is safely possible
- Provide full containment for the spent fuel pools and control rooms; establish independent back up electricity and cooling for spent fuel pools
- Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
- Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
- Remedy the flaws and deficiencies regarding the emergency evacuation plan raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
- Consider all seismological information prior to relicensing

PETITION TO CLOSE INDIAN POINT – NOT RELICENSE IT

The safest thing we can do for our community is to close Indian Point; in the meantime here are important measures that need to be put into effect immediately.

We, the undersigned, strongly urge the following actions be implemented as soon as possible with regard to Indian Point Nuclear Power Plant:

- Move spent fuel rods into hardened dry cask storage as quickly as is safely possible
- Provide full containment for the spent fuel pools and control rooms; establish independent back up electricity and cooling for spent fuel pools
- Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
- Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
- Remedy the flaws and deficiencies regarding the emergency evacuation plan raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
- Consider all seismological information prior to relicensing

MAIL COPIES TO:

CHAIRWOMAN ALLISON MACFARLANE, US NUCLEAR REGULATORY COMMISSION, Mail Stop O-16G4, Washington, DC 20555-0001
HON. ANDREW CUOMO, New York State Capitol Bldg. Albany, NY 11224
HUDSON RIVER SLOOP CLEARWATER, 724 Wolcott Ave., Beacon, NY 12508 and to IPSEC, PO Box 131, Ossining, NY 10562-0131

PETITION TO CLOSE INDIAN POINT – NOT RELICENSE IT

The safest thing we can do for our community is to close Indian Point; in the meantime here are important measures that need to be put into effect immediately.

We, the undersigned, strongly urge the following actions be implemented as soon as possible with regard to Indian Point Nuclear Power Plant:

- Move spent fuel rods into hardened dry cask storage as quickly as is safely possible
- Provide full containment for the spent fuel pools and control rooms; establish independent back up electricity and cooling for spent fuel pools
- Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
- Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
- Remedy the flaws and deficiencies regarding the emergency evacuation plan raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
- Consider all seismological information prior to relicensing

Stop the Nuclear Regulatory Commission from relicensing the Indian Point nuclear reactors 2 and 3.

Why is this important?

The nuclear reactors at Indian Point are located on the Hudson River about 20 miles north of New York City. They sit about one mile from the intersection of two earthquake faults. Indian Point 3 has been identified as the US nuclear reactor most likely to suffer reactor core damage from seismic activity.

There are about 2700 metric tons of high level nuclear waste being stored on-site, most of it in vulnerable fuel pools in warehouse-type buildings, not containment structures like the reactors themselves.

Indian Point sucks in 2.5 billion gallons of Hudson River water every day and shoots it back into the river about 15 - 20 degrees hotter than when it went in, creating a thermal plume that kills fish and river life by the millions each year.

The spent fuel pools are leaking radioactive water into the ground and into the Hudson River.

There are 20 million people who live within 50 miles of Indian Point, including everyone in New York City.

In 2003, a study found that the Indian Point Emergency Evacuation Plan, was "inadequate to protect the public from an unacceptable dose of radiation."

In 1979, the NRC Director of the Office of State Programs, who was in charge of emergency planning for all US nuclear plants said, "Indian Point is one of the most inappropriate sites in existence" for a nuclear plant.

Relicensing the reactors is actually issuing a new 20-year license. Under current population and seismic standards, Indian Point could NEVER be licensed to operate. So a new license should not be issued.

The NRC is the only organization that can re-license nuclear plants and only the United States Congress can prevent it from doing so. This petition will be delivered to the Senators and Members of Congress listed above, due to their geographic locations, the committees they serve on, and their strong interest in the topic.

In 2003, a study found that the Indian Point Emergency Evacuation Plan, was "inadequate to protect the public from an unacceptable dose of radiation."

In 1979, the NRC Director of the Office of State Programs, who was in charge of emergency planning for all US nuclear plants said, "Indian Point is one of the most inappropriate sites in existence" for a nuclear plant.

Relicensing the reactors is actually issuing a new 20-year license. Under current population and seismic standards, Indian Point could NEVER be licensed to operate. So a new license should not be issued.

The NRC is the only organization that can re-license nuclear plants and only the United States Congress can prevent it from doing so. This petition will be delivered to the Senators and Members of Congress listed above, due to their geographic locations, the committees they serve on, and their strong interest in the topic.

To: Members of Congress: Senator Barbara Boxer, Senator Kirsten Gillibrand, Senator Chuck Schumer, Senator Ron Wyden, Senator Bernie Sanders, Representative Eliot Engel, Representative Nita Lowey, Representative Sean Patrick Maloney

Stop the Nuclear Regulatory Commission from relicensing the Indian Point nuclear reactors 2 and 3.

Why is this important?

The nuclear reactors at Indian Point are located on the Hudson River about 20 miles north of New York City. They sit about one mile from the intersection of two earthquake faults. Indian Point 3 has been identified as the US nuclear reactor most likely to suffer reactor core damage from seismic activity.

There are about 2700 metric tons of high level nuclear waste being stored on-site, most of it in vulnerable fuel pools in warehouse-type buildings, not containment structures like the reactors themselves.

Indian Point sucks in 2.5 billion gallons of Hudson River water every day and shoots it back into the river about 15 - 20 degrees hotter than when it went in, creating a thermal plume that kills fish and river life by the millions each year.

The spent fuel pools are leaking radioactive water into the ground and into the Hudson River.

There are 20 million people who live within 50 miles of Indian Point, including everyone in New York City.

In 2003, a study found that the Indian Point Emergency Evacuation Plan, was "inadequate to protect the public from an unacceptable dose of radiation."

In 1979, the NRC Director of the Office of State Programs, who was in charge of emergency planning for all US nuclear plants said, "Indian Point is one of the most inappropriate sites in existence" for a nuclear plant.

Close the Indian Point nuclear power plant

<https://www.credomobilize.com/petitions/close-the-indian-point-nuclear-power-plant>

To: Members of Congress: Senator Barbara Boxer, Senator Kirsten Gillibrand, Senator Chuck Schumer, Senator Ron Wyden, Senator Bernie Sanders, Representative Eliot Engel, Representative Nita Lowey, Representative Sean Patrick Maloney

Stop the Nuclear Regulatory Commission from relicensing the Indian Point nuclear reactors 2 and 3.

Why is this important?

The nuclear reactors at Indian Point are located on the Hudson River about 20 miles north of New York City. They sit about one mile from the intersection of two earthquake faults. Indian Point 3 has been identified as the US nuclear reactor most likely to suffer reactor core damage from seismic activity.

There are about 2700 metric tons of high level nuclear waste being stored on-site, most of it in vulnerable fuel pools in warehouse-type buildings, not containment structures like the reactors themselves.

Indian Point sucks in 2.5 billion gallons of Hudson River water every day and shoots it back into the river about 15 - 20 degrees hotter than when it went in, creating a thermal plume that kills fish and river life by the millions each year.

The spent fuel pools are leaking radioactive water into the ground and into the Hudson River.

There are 20 million people who live within 50 miles of Indian Point, including everyone in New York City.

In 2003, a study found that the Indian Point Emergency Evacuation Plan, was "inadequate to protect the public from an unacceptable dose of radiation."

In 1979, the NRC Director of the Office of State Programs, who was in charge of emergency planning for all US nuclear plants said, "Indian Point is one of the most inappropriate sites in existence" for a nuclear plant.

Relicensing the reactors is actually issuing a new 20-year license. Under current population and seismic standards, Indian Point could NEVER be licensed to operate. So a new license should not be issued.

The NRC is the only organization that can re-license nuclear plants and only the United States Congress can prevent it from doing so. This petition will be delivered to the Senators and Members of Congress listed above, due to their geographic locations, the committees they serve on, and their strong interest in the topic.

This petition will be delivered to the Senators and Members of Congress listed above, due to their geographic locations, the committees they serve on, and their strong interest in the topic.

PETITION TO UPGRADE HEALTH AND SAFETY MEASURES AT INDIAN POINT

The ongoing crisis at the Fukushima Daiichi Nuclear Power Plant in Japan brings home the disastrous consequences of a catastrophic release of high-level radiation from nuclear reactors or from spent fuel storage Indian Point Nuclear Power Plant. The measures embodied in this petition, if acted upon, would make us all safer, and are appropriate whether the plant is closed and decommissioned or is relicensed and continues to operate. Therefore, we, the undersigned, request that the following actions be implemented as soon as possible with regard to Indian Point Nuclear Power Plant:

1. Move spent fuel rods into hardened dry cask storage as soon as is safely possible
2. Provide full containment for the spent fuel pools and establish independent back up electricity and cooling for the spent fuel pools
3. Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
4. Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
5. Remedy the flaws and deficiencies regarding emergency evacuation raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
6. Consider all seismological data and upgrade infrastructure accordingly for continued operation

4. Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
5. Remedy the flaws and deficiencies regarding emergency evacuation raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
6. Consider all seismological data and upgrade infrastructure accordingly for continued operation

PETITION TO UPGRADE HEALTH AND SAFETY MEASURES AT INDIAN POINT

The ongoing crisis at the Fukushima Daiichi Nuclear Power Plant in Japan brings home the disastrous consequences of a catastrophic release of high-level radiation from nuclear reactors or from spent fuel storage Indian Point Nuclear Power Plant. The measures embodied in this petition, if acted upon, would make us all safer, and are appropriate whether the plant is closed and decommissioned or is relicensed and continues to operate. Therefore, we, the undersigned, request that the following actions be implemented as soon as possible with regard to Indian Point Nuclear Power Plant:

1. Move spent fuel rods into hardened dry cask storage as soon as is safely possible
2. Provide full containment for the spent fuel pools and establish independent back up electricity and cooling for the spent fuel pools
3. Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
4. Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
5. Remedy the flaws and deficiencies regarding emergency evacuation raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
6. Consider all seismological data and upgrade infrastructure accordingly for continued operation

PETITION TO UPGRADE HEALTH AND SAFETY MEASURES AT INDIAN POINT

The ongoing crisis at the Fukushima Daiichi Nuclear Power Plant in Japan brings home the disastrous consequences of a catastrophic release of high-level radiation from nuclear reactors **or from spent fuel storage** Indian Point Nuclear Power Plant. The measures embodied in this petition, if acted upon, would make us all safer, and are appropriate **whether the plant is closed and decommissioned or is relicensed and continues to operate.** Therefore, we, the undersigned, request that the following actions be implemented as soon as possible with regard to Indian Point Nuclear Power Plant:

1. Move spent fuel rods into hardened dry cask storage as soon as is safely possible
2. Provide full containment for the spent fuel pools and establish independent back up electricity and cooling for the spent fuel pools
3. Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
4. Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
5. Remedy the flaws and deficiencies regarding emergency evacuation raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
6. Consider all seismological data and upgrade infrastructure accordingly for continued operation

2. Provide full containment for the spent fuel pools and establish independent back up electricity and cooling for the spent fuel pools
3. Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
4. Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
5. Remedy the flaws and deficiencies regarding emergency evacuation raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
6. Consider all seismological data and upgrade infrastructure accordingly for continued operation

PETITION TO UPGRADE HEALTH AND SAFETY MEASURES AT INDIAN POINT

The ongoing crisis at the Fukushima Daiichi Nuclear Power Plant in Japan brings home the disastrous consequences of a catastrophic release of high-level radiation from nuclear reactors or from spent fuel storage Indian Point Nuclear Power Plant. The measures embodied in this petition, if acted upon, would make us all safer, and are appropriate whether the plant is closed and decommissioned or is relicensed and continues to operate. Therefore, we, the undersigned, request that the following actions be implemented as soon as possible with regard to Indian Point Nuclear Power Plant:

1. Move spent fuel rods into hardened dry cask storage as soon as is safely possible
2. Provide full containment for the spent fuel pools and establish independent back up electricity and cooling for the spent fuel pools
3. Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
4. Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
5. Remedy the flaws and deficiencies regarding emergency evacuation raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
6. Consider all seismological data and upgrade infrastructure accordingly for continued operation

PETITION TO UPGRADE HEALTH AND SAFETY MEASURES AT INDIAN POINT

The ongoing crisis at the Fukushima Daiichi Nuclear Power Plant in Japan brings home the disastrous consequences of a catastrophic release of high-level radiation from nuclear reactors or from spent fuel storage Indian Point Nuclear Power Plant. The measures embodied in this petition, if acted upon, would make us all safer, and are appropriate whether the plant is closed and decommissioned or is relicensed and continues to operate. Therefore, we, the undersigned, request that the following actions be implemented as soon as possible with regard to Indian Point Nuclear Power Plant:

1. Move spent fuel rods into hardened dry cask storage as soon as is safely possible
2. Provide full containment for the spent fuel pools and establish independent back up electricity and cooling for the spent fuel pools
3. Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
4. Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
5. Remedy the flaws and deficiencies regarding emergency evacuation raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
6. Consider all seismological data and upgrade infrastructure accordingly for continued operation

PETITION TO UPGRADE HEALTH AND SAFETY MEASURES AT INDIAN POINT

The ongoing crisis at the Fukushima Daiichi Nuclear Power Plant in Japan brings home the disastrous consequences of a catastrophic release of high-level radiation from nuclear reactors or from spent fuel storage Indian Point Nuclear Power Plant. The measures embodied in this petition, if acted upon, would make us all safer, and are appropriate whether the plant is closed and decommissioned or is relicensed and continues to operate. Therefore, we, the undersigned, request that the following actions be implemented as soon as possible with regard to Indian Point Nuclear Power Plant:

1. Move spent fuel rods into hardened dry cask storage as soon as is safely possible
2. Provide full containment for the spent fuel pools and establish independent back up electricity and cooling for the spent fuel pools
3. Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
4. Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
5. Remedy the flaws and deficiencies regarding emergency evacuation raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
6. Consider all seismological data and upgrade infrastructure accordingly for continued operation

PETITION TO UPGRADE HEALTH AND SAFETY MEASURES AT INDIAN POINT

The ongoing crisis at the Fukushima Daiichi Nuclear Power Plant in Japan brings home the disastrous consequences of a catastrophic release of high-level radiation from nuclear reactors or from spent fuel storage Indian Point Nuclear Power Plant. The measures embodied in this petition, if acted upon, would make us all safer, and are appropriate whether the plant is closed and decommissioned or is relicensed and continues to operate. Therefore, we, the undersigned, request that the following actions be implemented as soon as possible with regard to Indian Point Nuclear Power Plant:

1. Move spent fuel rods into hardened dry cask storage as soon as is safely possible
2. Provide full containment for the spent fuel pools and establish independent back up electricity and cooling for the spent fuel pools
3. Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
4. Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
5. Remedy the flaws and deficiencies regarding emergency evacuation raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
6. Consider all seismological data and upgrade infrastructure accordingly for continued operation
