Hello I'm the Owner and CEO of the AFP. LLC. and I have the perfect solution to the problem of creating electricity and it would in one fell swoop end many of the social problems we have today like homelessness, unemployment, low public moral and faith in the US. and our Gov., it would rid the need for recycling, it would provide a virtually endless and inexhaustible supply of electricity and at the same time help to repair the depleted OZONE layer. the Need for Nuclear power is None. . its dirty, dangerous, and costly. It also has a problem with disposal that I can also help to solve. I do hope to hear from some one soon because I have contacted everyone I can think of concerning this type of power source and NO ONE has responded. . my next step is to leave the country and see if another nation will be receptive to this idea. IF so then it would be a slap in the face of America and its Gov. I have been trying to get attention brought to the AFP but have been unsuccessfully to date. .

Thank you for your time ( that is IF anyone really reads these things,)

Respectfully

Chris.
