Hello to whomever reads this letter,

25

I am writing in regard to the permit to build one or two new facilities at the Salem nuclear site in N.J. I am a resident of Newark Del. and would like to express a few points of concern that I have:

The solution to the safe storage of nuclear waste has been just around the corner since 1970. We are no closer now. One of the main dangers at the Fukushima disaster involved the waste stored on site. I could not build a house without having a plan to deal with the waste I generate. How is the nuclear industry exempt from this requirement? I suggest a moratorium on new plants if not the shutting down of existing sites.

Regarding the future of my granddaughter and the other children of the area in the event of a big problem at Salem, in the aftermath of past disasters (Hiroshima, Nagasaki, Chernobyl, Fukushima). Once a person is branded as a "survivor" they face many social stigmas. They become undesirable marriage partners. Many people at the public meetings in N.J. and D.C. expressed their thankfulness for the jobs the site provided them, but at whose expense are these jobs? Possibly their children

(2)

I wish to state that the following opinion is not directed at you or your co-workers who are trying to figure this mess out. I think I express the opinion of many of my fellow citizens when I say that the nuclear industry and regulatory agencies have a strong record of not being straight with the public. They only tell half truth when their lips are moving. This goes back to before the Nantuxat Project. Not straight with the people of the Marshall Islands, not straight with my personal involved in bomb tests, not straight with people down wind of tests, the list is endless. I recently read of the bolts shearing off the fan blades in a back up cooling unit at Salem. Wrong bolts used instead of manufacturer's warning. Bolts on the fan blades in a cooling unit in a nuclear reactor! The operator's response to the public<sup>was</sup> that it never posed a problem. That's all the explanation you get. One can only ask "what kind of fools do they take us for?" The answer is "first class".

As regards our need for an alternative fuel to combat global warming, I would rather have my grand children deal with the results of global warming than the results of Fukushima like disaster.

Best of luck in coming to a proper decision on this issue. Thank you for your attention.

Sincerely,  
George R. Campion
