

UNITED STATES  
NUCLEAR REGULATORY COMMISSION  
REGION III  
2443 WARRENVILLE RD. SUITE 210  
LISLE, IL 60532-4352

DEC 17 2014

Donald Peck, PhD, DABR  
Radiation Safety Officer  
Henry Ford Hospital  
2799 West Grand Blvd.  
Detroit, MI 48202

Dear Mr. Peck:

Enclosed is Amendment No. 80 to your NRC Materials License No. 21-04109-16 in accordance with your request. Please note that the changes made to your license are printed in **bold font**.

In your letter dated September 19, 2014, you indicated that two locations of use listed on your license had been decommissioned and you requested that they be released and removed from the license. You provided a decommissioning report for each location to support your request. The NRC staff has reviewed all of this information, including the final status surveys. Based on its review, the staff has concluded that all licensable radioactive material has been removed from 440 Burroughs Street, Detroit, Michigan ("Techtown") and from 159 Kercheval Avenue, Grosse Pointe Farms, Michigan ("Cottage Hospital"). Residual radioactive material attributable to licensed activities does not exceed current NRC criteria. Therefore, you may release the Techtown and Cottage Hospital facilities for unrestricted use. License Condition 10 has been amended to reflect these removals.

The aforementioned letter also requested a change in a listed radiopharmacist (authorized nuclear pharmacist or ANP); however, as discussed by telephone with Mr. Alan Jackson of your staff on December 17, 2014, you do not have ANPs listed on your license but rather you are authorized to approve authorized users, including ANPs through your Radiation Safety Committee.

Please review the enclosed documents carefully and be sure that you understand all conditions. If there are any errors or questions, please notify the U. S. Nuclear Regulatory Commission, Region III office at (630) 829-9887 so that we can provide appropriate corrections and answers.

The regulations specified in Title 10 of the Code of Federal Regulations Part 37 (Part 37) "Physical Protection of Byproduct Material," impose physical security requirements for the possession and use of the most risk significant radioactive materials. The most risk significant radioactive materials are referred to as Category 1 and Category 2, based on quantities, and are listed in Appendix A of 10 CFR Part 37. The list is based on the International Atomic Energy Agency's rankings of radiation sources. NRC licensees were required to fully implement the new regulation by March 19, 2014. The requirements of Part 37 supersede the requirements of the "Order Imposing Increased Controls" and the "Order Imposing Fingerprinting and Criminal History Records Check Requirements for Unescorted Access to Certain Radioactive Materials."

The enclosed document contains sensitive security-related information.  
When separated from this cover letter this letter is uncontrolled.

D. Peck

-2-

**Please note that we have amended your license to remove License Condition No. 24, which required implementation of the Orders listed above. Accordingly, you are now required to comply with the security requirements of Part 37.**

New license applicants and licensees newly subject to 10 CFR Part 37 must implement the requirements before taking possession of an aggregated Category 1 or Category 2 quantity of radioactive material. The NRC would consider the licensee to have taken possession of an "aggregated" Category 1 or Category 2 quantity of radioactive material when and if it places an accumulated quantity at or above the Category 2 threshold behind a single physical barrier. A licensee that has not previously implemented the security orders or had not been subject to the provisions of Part 37 must notify the U.S. Nuclear Regulatory Commission, Region III, Materials Licensing Branch, 2443 Warrenville Road, Suite 210, Lisle, IL 60532-4352 in writing at least 90 days before aggregating radioactive material to a quantity that equals or exceeds the Category 2 threshold.

The new rule is available on NRC's public website at <http://www.nrc.gov/reading-rm/doccollections/cfr/part037/>. Also, NRC has created a website for 10 CFR Part 37 that can be found at <http://www.nrc.gov/security/byproduct/10-cfr-part-37.html>. This site contains helpful information, such as hyperlinks to the final rule language as published in the Federal Register (<http://www.gpo.gov/fdsys/pkg/FR-2013-03-19/pdf/2013-05895.pdf>), types of licensees that may be subject to 10 CFR Part 37 requirements, the implementation guidance for the rule (NUREG-2155) (<http://www.nrc.gov/reading-rm/doc-collections/nuregs/staff/sr2155/>), as well as some frequently asked questions that have been developed during the implementation process. This website is updated as needed, and it is recommended that licensees review this information periodically. In addition, the NRC issued a Regulatory Issue Summary 2014-03 Notice of 10 CFR Part 37 Implementation Deadline for NRC Licensees on March 13, 2014 (ADAMS ML14052A157).

You will be periodically inspected by NRC. Failure to conduct your program in accordance with NRC regulations, license conditions, and representations made in your license application and supplemental correspondence with NRC will result in enforcement action against you. This could include issuance of a notice of violation, or imposition of a civil penalty, or an order suspending, modifying or revoking your license as specified in the General Statement of Policy and Procedure for NRC Enforcement Actions. Since serious consequences to employees and the public can result from failure to comply with NRC requirements, prompt and vigorous enforcement action will be taken when dealing with licensees who do not achieve the necessary meticulous attention to detail and the high standard of compliance which NRC expects of its licensees.

The NRC's Safety Culture Policy Statement became effective in June 2011. While a policy statement and not a regulation, it sets forth the agency's *expectations* for individuals and organizations to establish and maintain a positive safety culture. You can access the policy statement and supporting material that may benefit your organization on NRC's safety culture Web site at <http://www.nrc.gov/about-nrc/regulatory/enforcement/safety-culture.html>. We strongly encourage you to review this material and adapt it to your particular needs in order to develop and maintain a positive safety culture as you engage in NRC-regulated activities.

NRC's Regulatory Issue Summary (RIS) 2005-31 provides criteria to identify security-related sensitive information and guidance for handling and marking of such documents. This ensures that potentially sensitive information is not made publicly available through ADAMS, the NRC's

electronic document system. Pursuant to NRC's RIS 2005-31 and in accordance with Title 10 of the *Code of Federal Regulations* Section 2.390, the enclosed license document is exempt from public disclosure because its disclosure to unauthorized individuals could present a security vulnerability. The RIS may be located on the NRC Web site at: <http://www.nrc.gov/reading-rm/doc-collections/gen-comm/reg-issues/2005/ri200531.pdf> and the link for frequently asked questions regarding protection of security related sensitive information may be located at: <http://www.nrc.gov/reading-rm/sensitive-info/faq.html>.

A copy of this letter will be available electronically for public inspection in the NRC Public Document Room or from the NRC's Agencywide Documents Access and Management System (ADAMS), accessible from the NRC Web site at <http://www.nrc.gov/reading-rm/adams.html>.

Sincerely,

Bryan A. Parker  
Health Physicist
