NRC Names New Resident Inspector at Fort Calhoun Station

Nuclear Regulatory Commission officials in Arlington, Texas, have selected Brian Cummings as the new Resident Inspector at the Fort Calhoun Station located north of Omaha, Neb.

“Brian Cummings’ technical expertise will assist the NRC in carrying out its mission to protect people and the environment by ensuring the safe operation of Fort Calhoun Station,” said NRC Region IV Administrator Marc Dapas.

Cummings joined the Region IV office in February 2014 as a project engineer in the Division of Reactor Projects. Prior to the NRC, he was an officer in the U.S. Navy. Cummings was an assistant professor at the U.S. Naval Academy and also served as ship’s engineer officer of the submarine USS Bremerton. He earned a bachelor’s degree in chemistry from the Naval Academy and a master’s in chemistry from the University of Maryland.

Each U.S. commercial nuclear power plant site has at least two NRC Resident Inspectors. Cummings joins Senior Resident Inspector Max Schneider. They serve as the agency’s eyes and ears at the facility, conducting inspections, monitoring significant work projects, and interacting with plant workers and the public.

The Fort Calhoun Station Resident Inspectors can be reached at 402-426-9611.
