Dear EPA Leader Gina Mc Carthy and Nuclear Regulatory commission,

I am writing you this letter in regards to the cleanup efforts of Nuclear Sites such as in Hanford Washington and to the containment and long-term storage of used nuclear fuels. After examining the different areas of environmental concerns, it has come to my attention that nuclear waste and chemical containment is a major source of anthropocentric environmental damage that creates more problems then assistance to society. Looking back on traumatic events such as the Fukushima Nuclear disaster, Chernobyl, and the incidents at both Love Canal and the Hanford Site, should be a clear indication of the extreme externalities that come from the waste created by nuclear activity for both electricity and military purposes. Due to the instability and imminent eventual aging of the manmade containment systems for all nuclear sites, laws must be put into place to ensure that nuclear sites are safely contained and managed. These sites must be away from large populations for the future safety of both rural and suburban communities and the ecosystems that survive in the surrounding areas.

For these reasons and more, I urge you to consider more stringent laws to ensure that nuclear sites are safely contained and managed. These sites must be away from large populations for the future safety of both rural and suburban communities and the ecosystems that survive in the surrounding areas.
