King of Prussia, PA 19406

Subject: Notification of Change of Ownership  
**NRC License No. 047-01876-01**

Dear Mr. Lawyer :

This letter is to notify the Nuclear Regulatory Commission of the change of name and ownership plans pertaining to the DuPont Washington Works site. This change is to occur in the following manner:

Effective February 1, 2015, the E. I. du Pont de Nemours and Company ("DuPont") facility located in Washington, West Virginia will undergo a name change to The Chemours Company FC, LLC ("Chemours"). DuPont will maintain a presence on this property and continue to operate; Chemours will operate the facility as the landlord.

Between February 1, 2015 and June 30, 2015, Chemours will be a wholly owned subsidiary of DuPont. On July 1, 2015, Chemours will become an independent, publicly traded company and undergo a change in ownership and operational control.

The corporate reorganization will create, after separation, world-leading businesses in Titanium Technologies and Chemicals & Fluoroproducts, with well-established positions in attractive markets, and strong cash flow generation. The Performance Chemicals segment, from which Chemours will arise, employs approximately 9,000 people and, in 2013, generated about \$7 billion in revenue. DuPont expects that upon launch it will take its place as a new "Fortune 500" company.

For nuclear source and radiation safety purposes there will be no change of control until July, 1, 2015. Herb Whitlatch will continue to serve as the Site Radiation Safety Officer until that time. After July 1, 2015 Mr. Whitlatch will continue to serve as the RSO for Dupont operations at Washington, Works.

Chemours will be submitting a license application with NRC, likely before the end of March 2015, with a request for Walter B. "Brian" Lucas to be approved as RSO for the Washington Works Chemours operation. The total of the existing nuclear sources on site will be split by business, as appropriate, between the remaining DuPont operations and the new Chemours operations. Each business will be providing formal

NMSS/RGN1 MATERIALS-002

communication with NRC to ensure a clear delineation is made concerning those sources (process nuclear gauges, etc.).

We thank you for your cooperation and attention in this matter. If you have any questions or need additional information, please do not hesitate to contact me at (304) 863-2906.

Best Regards,
