Subject: INDIAN POINT NUCLEAR GENERATING UNIT 2 – ACCEPTANCE OF AMENDMENT TO CHANGE SURVEILLANCE REQUIREMENT 3.1.4.2 FOR CONTROL ROD G-3 (TAC NO. MF5747)

By letter dated February 12, 2015 (Agencywide Document Access and Management System (ADAMS) Accession No(s). ML15044A471 and ML15050A169), Entergy Nuclear Operations, Inc. submitted a license amendment request for Indian Point Nuclear Generating Unit 2. The purpose of this email is to provide the results of the U.S. Nuclear Regulatory Commission (NRC) staff's acceptance review of this amendment request. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review is also intended to identify whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

The NRC staff has reviewed your application and concluded that it does provide technical information in sufficient detail to enable the NRC staff to complete its detailed technical review and make an independent assessment regarding the acceptability of the proposed amendment in terms of regulatory requirements and the protection of public health and safety and the environment. Given the lesser scope and depth of the acceptance review as compared to the detailed technical review, there may be instances in which issues that impact the NRC staff's ability to complete the detailed technical review are identified despite completion of an adequate acceptance review. You will be advised of any further information needed to support the NRC staff's detailed technical review by separate correspondence.

If you have any questions, please contact Douglas Pickett at (301) 415-1364.

Sincerely,

Diane Render, Project Manager
Plant Licensing Branch I-1
Division of Operating Reactor Licensing
Office of Nuclear Reactor Regulation
