Re: Updates to Radiation Safety procedures for Radioactive Material License Number 24-32827-01MD.

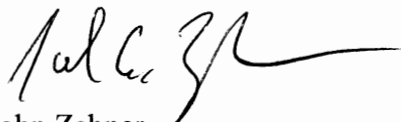

To Whom It May Concern:

The original RAM license application made by Zevacor Molecular contained a Radiation Safety Manual (RSM) describing the radiation safety program. These procedures are periodically reviewed and updated as necessary to ensure the continued safe and effective operation of the radiopharmacy, including the irradiator. The following is an outline of current procedures Zevacor undertakes when updating RSM procedures.

- Changes may be made in the procedures if items are identified that may improve safety or efficiency, provided that the changes do not compromise safety of irradiator operation, are in compliance with the applicable NRC or Agreement State regulations, and are consistent with the remaining outline.
- Any necessary changes proposed must follow the Zevacor process on submitting procedure change requests, which includes review of the proposed change by the affected individuals.
- All revisions to the RSM must be reviewed and approved by the Corporate RSO and Vice President of Regulatory Affairs.
- Prior to implementation, all affected personnel will receive training on procedure revisions.
- Any procedures that may be included with the license application are examples of current practice and are subject to revision under the preceding guidelines.

Thank you for your help with this matter. If you have any questions, please feel free to contact me at 317-459-8315.

Sincerely,

John Zehner
COO & Executive Vice President of Operations
